Reductions in rates expected to result from popular control after State purchase of Irish railways, 40010.
Suggested advance by the Government of the capital necessary for railway extensions in Ireland, 40016.
A portion of the savings from unified working to be applied to the reductions of rates, 40022, 40037.
The provision of capital for new railway works by the Government on Irish security, 40026.
The sale of Irish barley in the home markets restricted by insufficient transit conditions and excessive rates, 40029.
The findings of the Financial Relations Commission, 40044.
Ireland's claim on the Imperial Exchequer to a grant as a set-off against its overtaxation, 40046.
The suggested application of this money to the improvement of Irish transit facilities 40050.
Estimated cost of a thousand additional miles of railway, 40051.
The area in the Callan district unprovided with railway accommodation, 40053.

Mr. P. A. MEEHAN, M.P.

Queen's County—
Area, 40057.
Acres under tillage, etc., 40059.
Population, 40060.
Industries—agricultural and manufacturing, 40061A.
Mineral resources, 40081.

Industries handicapped through want of railway accommodation, 40081.

Industries of Queen's County—
Building stone and lime, 40089.
Former woollen manufactures, 40092.
Vote of £40,000 by the Irish Parliament for the woollen industry at Cullenagh, 40092.
Causes of the decay of that industry, 40093.
Hostile legislation of the British Parliament against Irish industries in the eighteenth and nineteenth centuries, 40094, 40305.
Decline of Irish textile industries since the Act of Union, 40095.
Closing of flour mills, 40098.
Extinction of pottery industries, 40101.
Caused by evictions and decrease in population, 40102.
Flag quarries lying undeveloped, 40104.
Disastrous effects of expensive transit and emigration on the industries, 40107.
The County at one time famous for sugar, and bit and stirrup manufactures, 40109.
Closing of extensive tanneries, 40112.
Hides now exported untanned and leather imported, 40113.
Iron ore abundant, but unworked for sixty years owing to the want of transit facilities, 40120.
The extensive coal seams in the County undeveloped, 40122.
Existing collieries unworked because of the transit difficulty, 40123.
Former projects for canal construction in the district, 40126.
Scheme for a canal from Monasterevan to Castlecomer, 40126.
Industries to be served, 40129.
Estimate (of 1800) of cost of construction, 40130.
Failure of project to construct a tramway from Clough (Castlecomer) to Athy, 40133.
Guarantee refused by Grand Jury, 40133.
Risk incurred by baronies in giving unlimited guarantees in connection with railway construction, 40133.
Sallins to Tullow extension instanced, 40133.
Existing railways and canals in Queen's County, 40143.
Important towns without railway accommodation, 40143.
Necessity for the suggested railway from Castlecomer to Portarlington, 40147, 40465.
Present system of railway and canal management denounced, 40148.
Nationalisation of the Irish Railways and control by a Central Irish Authority as suggested by Mr. J. Sweetman and Mr. W. Field, M.P., and adopted by the General Council of the County Councils approved, 40148, 40282, 40349, 40501.
Queen's Co. County Council unanimously in favour of the resolution, 40151.
Proposed Railway extensions:—from Mountmellick to Mullingar (40159), and from Ballybrophy to Rathdowney, 40160.
Proposed new canals from Kilnacash to Castlecomer and from Vicarstown to Stradbally, 40160.
Suggested light railway to the collieries, 40162.
The passenger train service for town and district of Maryborough satisfactory, 40164.
Complaint that passenger fares in Ireland are too high, 40165.
Comparison of English and Irish fares, 40167.
Complaints as to train delays (40169), and inconvenient train service from the South to Maryborough, 40173.
The Railway Company's indifference to complaints and memorials from the public, 40174.
Some improvements consequent on the Great Southern and Western and Waterford and Limerick amalgamation, but complaints as to insufficient working staff at Maryborough station still obtain, 40177, 40385.

Mr. P. A. MEEHAN, M.P.—*continued.*

Project in 1896 to extend the Grand Canal to Maryborough, 40177.
Staff at Maryborough prior to amalgamation, 40178.
Present arrangements and the inconvenience experienced by the public, 40180.
Defective station equipment at Maryborough, 40184, 40383.
Telephonic communication between the station and the goods store suggested, 40195.
Complaint as to inconvenience to passengers on the Great Southern and Western Railway owing to faulty train connections at junctions, 40200, 40435.
Local goods traffic not carried as carefully and expeditiously as cross-Channel traffic, 40202, 40399, 40403.
But preferential treatment not suggested, 40206.
Instances of serious delays in transit to Irish manufactured goods, 40210.
Allegation that business is impeded by insufficient wagon supply on the Great Southern and Western and Midland Great Western Railways, 40216.
Injuries to home industries occasioned by the system of Continental through booking over Irish transit routes, 40221.
Comparison of bacon rates, Limerick and Liverpool to Maryborough, 40221.
Continuance of horse transit as being cheaper and more expeditious than the railways to certain places, 40222.
Complaint as to excessive charges for small lots of goods sent by passenger trains, 40222, 40409.
Suggestion that these rates should be modified in the case of goods so sent in emergencies, 40225.
Allegation that there were lower rates at Maryborough previous to the amalgamation of the Waterford and Central Ireland line with the Great Southern and Western Railway, 40227.
Comparison of rates by the former competing routes to Dublin, 40227A.
Withdrawal of the competing rates between Dublin and Maryborough *via* canal and Mountmellick, 40228.
Retention of the higher Great Southern rates by rail between the same points, 40230.
Comparison of present rates showing effect of canal competition—Dublin to Carlow and Waterford, 40224; Dublin to Kildare and Monasterevan, 40250.
Advantage of canal competition in cheapening rates, 40252.
Rates for agricultural produce (foreign) to London:—from Esbjerg, Copenhagen (Denmark), Caen (France), compared with rates from Limerick, Cork, Waterford, Dublin, etc., 40254.
Importance of the cattle traffic, 40266.
Complaints as to slow transit and high rates, 40268.
Cattle train service, Maryborough and Dublin, 40271.
Extension of through booking facilities required, 40272.
Delay in the despatch of cattle from Kilkenny fairs, 40274, 40463.
Poultry industry injured by excessive transit cost and delays, 40276.
Complaint as to excessive rate for dead poultry, Maryborough to Leicester, 40277.
Rates for butter from various Irish stations to London compared with the rate from Copenhagen to Dublin, 40283.
Alleged inequitable apportionment of the receipts on the Tullow Extension Railway arising on through traffic, 40292.
Actual receipts on branch only credited, 40294.
The vesting of the Irish railways and canals in an Irish authority urged, 40298.
Ability of Ireland to finance a railway purchase scheme and provide money for reduced rates and fares and extensions, 40299.
Contrast between the past and present condition of industries in Queen's County, 40301.
Disastrous effect of British fiscal policy on Irish industries since the Union, 40313, 40365.
Annual value of woollen goods, leather, boots and shoes, also wearing apparel, 40317.
Depopulation of the country and its effect on the railways, 40325.

Mr. P. A. MEEHAN, M.P.—*continued.*

Contrast of the population of Great Britain and Ireland after a century of Union, 40327.
Causes of the depopulation of Ireland, 40331.
Effect of the repeal of the Corn Laws on Irish tillage, 40333, 40359.
Effects of high export rates on Irish agricultural produce in conjunction with Continental rates to Great Britain, 40336.
Difficulty in reviving past industries, 40339.
The analogy of former trade and navigation laws and existing railway rates as affecting Irish industries, 40342.
A complete change in the railway and canal systems and improvement in the modes of transit necessary, 40345.
Suggested assimilation of the Irish export rates proportionately with the foreign import rates to Great Britain, 40347.
Policy of the Irish Railway Companies with regard to home industries, 40353.
Predominance of English influence in Irish railway policy, 40356.
English and Scotch appointments on the staff of Irish railways objected to, 40357.
Tullow and Sallins line—working agreement with Great Southern and Western Company, 40360A.
Conditions under which the Baronial guarantee was given, 40362.
Irish industrial progress under Grattan's Parliament, 40371.
Decline of certain English manufactures, 40377.
Cause of the stopping of the Dysart iron ore industry, 40382.
Savings to be effected by amalgamation of the Irish lines under popular control, 40387.
Improvements in staff and equipment to follow from amalgamation, 40391.
Complaint as to train service to the Tullow line from the South, 40393.
Recent changes for the better on the Great Southern and Western Railway, 40407.
Rates (ordinary and owner's risk) for eggs, Limerick to London and Esbjerg to London, 40414.
Danish butter rates to London compared with those from Mallow to London, 40423.
The politics of the Queen's Co. County Council, 40425.
Appointments made by the Council irrespective of religion or politics, 40428.
Religion of the existing officers, 40428.
The position of affairs under the Grand Jury, 40429.
The desirability of a railway direct from Mountmellick to Mullingar, 40431.
Advantages of unity in the management of the lines, 40436.
A reduction in second class fares advocated, 40440.
The baneful effect of past British legislation on Irish industries, 40445.
Ireland's claim to Government aid to develop industries, 40446.
Effect of low rates for butter from Denmark on the Irish cross-Channel trade, 40450.
Instances of high Irish export rates, 40451.
Lower rates and improved facilities for transit required by the Irish agriculturist, 40453.
Imports of Danish butter for winter competition, 40454.
Effect of the amalgamation of the G. S. & W. and W. C. I. Railways on the competition by canal for Maryborough traffic, 40455.
Effect of water competition on railway rates, 40456.
Unequal rates between Maryborough and Carlow and Dublin, 40458.
The necessity for canal accommodation for certain classes of traffic, 40461.
Acreage of waste land in Queen's County, 40466.
Large decrease in tillage, 40467.
Land lying waste through decline in population, 40472.
Lands flooded owing to want of drainage, 40478.
Cause of eviction of small farmers, 40479.
Prospect of successfully working the limestone industry, 40481.
The proposed connecting of Ballyroan with Monasterevan by canal, 40483.
The £40,000 for canals voted by the Irish Parliament not received owing to the Union, 40484.

Mr. P. A. MEEHAN, M.P.—*continued.*

The excessive number of railway Directors and chief officials, 40488.
Complaint as to passenger train delay at Abbeyleix, 40492.
Continuance of horse haulage in Maryborough district due to unsatisfactory railway rates and facilities, 40493
Queen's County land not suitable for flax growing, 40496.

Mr. P. GANNON.

The guarantee for the Cavan and Leitrim Railway given under a misapprehension, 40505.
The guarantors in a minority on the Board, 40506.
Excess of the baronial levy for the Cavan and Leitrim Railway over the amount stipulated, 40510.
Preponderance of Shareholders' Directors on the Board, 40513.
Charge of extravagant management of the line, 40515.
Charge of undue preference, 40516.
Complaint that as Baronial Auditor he was denied the facilities necessary to fulfil his duties, 40519.
The documents submitted to the Baronial Auditors by the Company alleged to be incomplete, 40520, 40528.
Allegation that the Cavan and Leitrim Company perform services for the Arigna Mining Company gratis, 40523.
A special train for hay traffic instanced, 40524.
Complaint that access to the books at the railway stations was refused, 40525.
Therefore the supervision authorised by the Order in Council is not possible, 40526.
Correspondence with the Railway Company as to the right to inspect the station accounts, 40527.
Sections 42 and 44 of the Order in Council dealing with the keeping and auditing of the accounts of the railway, 40529A.
The Company's objection to the examination of books and accounts at the stations, 40530.
Opinion of the Board of Works as to the auditor's claim to inspect the station accounts, 40532.
Practice of the Board of Works as regards the auditing of the accounts of light railways (as explained by the Secretary), 40533.
Allegation that abuses exist in connection with the working of the railway, 40534A.
Charge of forgery in connection with the accounts of the railway twenty years ago withdrawn, 40536.
Instances of undue preference, 40540.
Complaint as to abuse of the system of issuing free passes, 40548.
Alleged use of the locomotive works for the private purposes of a Director, 40558.
Allegation that passes are issued to representatives of the local press to silence criticism, 40562.
A full list of the passes issued not obtainable by the Auditor, 40566.
The representations made to the ratepayers when the guarantee was sought, 40568.
Resolution of the Leitrim County Council regarding the claim of the Auditor to inspect the station books, 40578.
Action of the railway company on the resolution, 40579.
Free access to the station books still denied to the Auditor, 40579A.
Alleged perfunctory discharge of his duties by a previous Baronial Auditor, 40584.
Cause of the refusal by the Leitrim County Council of the grant of £24,000 to extend the railway to the Arigna mines, 40585.

Mr. J. P. RAFFERTY.

Comparison of grass seed rates, Monaghan to Belfast and Lurgan, 40596, 40709, 40773.
Effect of canal competition, 40607, 40700, 40706.
Equal mileage rates between all stations advocated, 40608.
Complaint as to disparity in grass seed rates, Belfast to Monaghan and Monaghan to Belfast, 40609.

Mr. J. P. RAFFERTY—*continued.*

The flax-growing industry, 40617.
Excessive rate for flax, Ballina to Monaghan, compared with the rate, Ballina to Sion Mills, 40618, 40716.
Necessity for a reduction in the rate from Ballina to Monaghan, 40628.
Further instances of excessive rates for flax, 40632.
Traffic conveyed from Ballina to Cork *via* Glasgow more cheaply than by direct rail, 40639, 40771-2.
Alleged preferential treatment of certain traders by the Great Northern Railway Company, 40640.
High dividends on Great Northern Stock objected to, 40641.
Traffic in turnips over the Great Northern Railway Company's system curtailed owing to high rates, 40642.
Rate for turnips, Monaghan to Ballyshannon, 40644, 40722, 40789.
Complaint as to difficulty in getting the railway company to quote low rates to develop traffic, 40645.
Export traffic in hay killed by excessive rates, 40652.
Comparison of freight on cheese, New York to Monaghan and Cork to Monaghan, 40657, 40795.
Complaint of unsatisfactory train service between Enniskillen and Monaghan and Mullingar (40663), and want of suitable train connections between the Great Northern and Donegal lines, 40667.
Disregard by the Companies to public convenience in arranging passenger train services, 40669.
Parcels rates excessive and anomalous, 40673.
Instances:—Donegal to Bundoran, and Leeds to Bundoran, 40679.
Complaint as to insufficient postal service with Bundoran and Ballyshannon, 40684.
Suggested amplification of Postmaster-General's powers as to use of trains for mails purposes, 40685.
Ineffective intervention of the Department of Agriculture to assist traders, 40687.
Nationalisation of the railways under the control of an Irish representative body advocated, 40693, 40811.
Suggested scheme, 40695.
Financial arrangements for State Purchase 40696.
Disparity in the rates for agricultural seeds, Newry to Monaghan and Monaghan to Newry 40702.
Want of enterprise of the Great Northern Railway Company in developing traffic alleged, 40725.
Suggested control by an Irish Authority under a railway State purchase scheme, 40726.
Question of compensation to existing railway shareholders in the event of purchase, 40729.
Improved passenger train service between Monaghan and Dublin required, 40734.
The intervention of the Commission suggested, 40736.
The right of the public to examine railway rate books, 40741.
Futility of seeking redress from the railway companies, 40744.
Alleged failure of the railway companies to foster industries, 40746.
Their action opposed to their own interests, 40749.
Suitability of the climate of Ireland for flax growing, 40751.
Effect of railway rates on the industry, 40755.
Extent of the flax imports, 40757.
Average price of flax, 40758.
Capacity of Ireland for the growth of larger quantities of flax, 40761.
The development of the flax-growing industry prevented by high railway rates, 40765.
The through rate for pork, Cavan to Glasgow, in excess of the locals, 40778.
Effect of the high pork rate, 40779.
Effect of high local rates, 40795.
Anomaly in rates for confectionery Belfast to Enniskillen and Belfast to Sligo, 40797.
Injurious effect of high local parcels charges Donegal and Bundoran, 40799.

Mr. J. P. RAFFERTY—*continued.*

Treatment of live stock in transit at Belfast, 40802.
Inconvenient situation of the cattle veterinary inspection pens, 40802.
Suggestion as to an improved site, 40802.
The financial aspect of State purchase, 40805.
Source from which the purchase money could be derived, 40806.
Suggestion as to financing a scheme for the State purchase of Irish railways, 40807.

Mr. J. MURLAND, J.P.

Annsborough (Co. Down) flax spinning industry, 40815.
Co. Down railway rates and facilities satisfactory, 40821, 40844.
Suggestion to amalgamate the Co. Down and the Great Northern Railways disapproved, 40830.
Appeals to the Board of Trade, 40833.
Flax traffic from the interior, 40836.
Sources of flax supply to Annsborough spinning mills, 40841.
A general reduction in rates impossible under the existing conditions, 40852.
The substitution of a system of public ownership not objected to if it benefited trade, 40854.
The linen industry centred in Belfast, 40859.
Foreign flax imported through Belfast to Castlewellan (40864), and coal through Dundrum, 40867.
Principal supply of flax for the Annsborough mills drawn from the surrounding district, 40873.
Commercial value of linen, 40876.
Proportion of the railway freight Castlewellan and Belfast to its value, 40879.
Volume of the firm's traffic, 40883.
Exceptionally favourable position of Castlewellan with regard to railway rates and facilities, 40886.
The advantage of having a cheap tribunal to settle disputes between the public and the railways, 40889.
The fostering treatment of the firm by the Co. Down Company, 40890.
A general reduction in rates, if possible, wanted, 40903.
Suggested disadvantages of centralised control, 40906.
Possibility of local interests suffering under centralised management, 40907.
The Belgian State railway administration not an ideal one, 40910.
The procedure to be followed on a central system, 40913.
The system of separate lines preferred to unified management of the railways, 40921.
Management of the Co. Down Railway satisfactory, 40922.
Excessive rate for flax Ballina to Monaghan compared with the low rate Belfast to Dundrum, 40926.
The cultivation of flax not connected with railway rates, 40931.
Unification of management not objected to provided it produced reform, 40933.
Profits accruing in Belgium from the working of the State railways, 40935.
Desirability of maintaining competition to ensure good working, 40938.
Benefit of competition, 40939.
Employment given by the Annsborough flax spinning industry, 40942.

REV. P. J. DOWLING, C.M.

Experience obtained of the transit problem in Ireland, 40945.
Lecturing centres, 40949.
The present railway system a hindrance to the development of the country, 40952.
Difficulties to be contended with by the Irish Companies, 40954.
State purchase of the Irish railways the only remedy, 40954.
The existing railway system rather than its administration at fault, 40955.
Importance of the transit question to struggling industries, 40956.

REV. P. J. DOWLING, C.M.—*continued.*

The agricultural development of the Foxford district, 40957.
Vegetables and fruit grown, but excluded from profitable markets by high rates, 40961.
Complaint as to excessive rate for vegetables Foxford to Dublin, 40962.
Foxford fruit and vegetable industry killed by high railway freights, 40964.
Effect on other industries, 40968.
Possibilities of improvement in the district, 40971.
Cork fishing industries handicapped by unsatisfactory transit facilities, 40972.
Dunmanway flower farm given up owing to high railway rates, 40977.
English and Continental flowers marketed more cheaply in Cork than those from Dunmanway, 40978.
Necessity for creating an Irish export trade if the country is to prosper, 40982.
Success of the Clonakilty early potato trade due to the railway facilities afforded, 40986.
Practice of the railway companies to grant facilities only when a business has been created, 40994.
Success of the Barony of Forth fruit farming when relieved of one-half the transit cost by the Department of Agriculture, 40995.
Successful poultry farm at Tagoat due to railway facilities, 40998.
Cheap transit facilities a necessity to industrial progress, 41000.
Transfer of the railways free to an Irish governing body advocated, 41003.
The alleged excessive rate for vegetables, Foxford to Dublin, 41005, 41029.
Range of witness's experience of railway working, 41009.
Suitability of the State ownership system to Ireland, 41010.
Existing Irish railway management a hindrance to progress, 41013.
Effect of low import rates on the Irish leather trade, 41017.
Continental methods of creating new industries by affording free railway transit, 41025.
Easy transit conditions a necessity to the development of industries in Ireland, 41026.
Effect of high railway rates on the Moy fruit trade, 41033.
Policy of a State owned system with regard to fostering home industries, 41035.
The effect of high rates on the Dunmanway and Kinsale flower and fishing industries, 41043, 41081.
Transit arrangements at Kinsale, 41047.
Tramway or railway connecting the harbour with the station suggested, 41049.
Room for greatly increasing Ireland's export of goods to England in view of the quantities imported from the Continent, 41055.
A splendid system of transport and rates required, 41057.
Difference in test of successful administration of public and private systems of railway management, 41059.
Advantages of a public system of railways worked in the interests of the prosperity of the country, apart from the question of earning the payments for dividends, 41062.
Free use of railways to the public may come to pass, 41064, 41126.
Results of Belgium public railway system such as to render profits of slight importance, 41067.
Ireland's claim on the Imperial funds in respect of overtaxation, 41068.
Beneficial effect on land purchase engagements, 41068.
Nationalisation of the railways under the control of an Irish authority advocated, 41070.
Postal facilities not an adequate substitute for railway transit of flowers, 41078.
Irish versus Continental packing, 41092.
Extent to which transit cost affects industrial development, 41094.
Winter dairying as affecting Danish and Irish butter competition, 41098.
Irish fishing industries handicapped by lack of facilities as well as high rates, 41104.

REV. P. J. DOWLING, C.M.—*continued.*

Fish exported from Kinsale imported from Grimsby for consumption in Cork, 41105, 41139.
Australian railway rates and facilities compared with Irish, 41111.
Passenger fares compared, 41114.
Difference in the purchasing power of money in Australia and Ireland, 41116.
Australian railway rates and facilities reasonable and moderate, 41122.
The cost of the railways to be provided for by recoupment of the over-taxation of Ireland, 41130.
Necessity for improved railway facilities between Kinsale and Cork for fish traffic, 41135.
Extent of foreign competition with Irish specialities in English markets, 41141.
Necessity for low export rates for agricultural produce, 41143.
Development of winter dairying in Ireland dependent on lower rates, 41143.
Comparison of the rates for leather, Liverpool and Limerick to Dublin, 41146.
Anticipated savings from unification in management of the Irish railways, 41152.
The substitution of one system for the numerous existing Irish undertakings advocated, 41154.
Railway construction in Ireland follows rather than precedes population, 41158.
Development of passenger train traffic retarded by high fares, 41162.
The advantage of cheap travelling facilities to traders, 41164.
Suggestion as to the constitution and administration of the controlling body of the nationalised railways, 41165.

CAPTAIN H. MACTERNAN, D.L.

State purchase of the railways and control by an Irish authority advocated, 41170.
Railway charges alleged to be generally too high, 41173.
Anomaly in the rates for cattle from Dublin to Castlerea and Ballyhaunis, 41174.
Midland Great Western Railway 3rd class carriages condemned, 41177, 41216.
Necessity for further railway extension in Ireland, 41180.
Proposed extension from Arigna to Sligo, 41181.
The Government Grant for an extension in the Arigna Valley, 41181.
Refused by Leitrim County Council, 41182.
Omission from the Sligo project of a link to the Arigna mines, 41182.
Reason for the refusal by the Leitrim County Council of a grant for railway extensions at Arigna, 41186.
Guarantee offered by the Great Northern Company, 41187.
Necessity for a railway up the Arigna Valley to the coal mines, 41191.
Question of obtaining money for further necessary railway extensions, 41193.
Creation of an authority to control the railways advocated, 41198.
Excessive railway rates a subject of general complaint, 41201.
Necessity for any surplus arising from State owned working being available for rate reductions, 41204.
Nationalisation and control of the railways by a central Irish authority advocated, 41205.
Parliamentary Bill for a railway from Arigna to Collooney and Sligo, 41207.
The claim of Arigna Valley for railway connection in any extension scheme from Arigna station, 41210.
Intention of the promoters to construct a private branch, 41210.
Importance of the third-class traffic, 41218.
Reduction in second-class fares suggested, 41221.

Mr. J. W. MANNING.

Complaints as to the Burtonport Railway:—
Unsatisfactory passenger train service, 41227.
Serious breakdowns to trains, 41227.
Carriages not heated, 41231.
Insufficiency of rolling stock, 41235.
Failures to make train connections at junctions, 41237, and
Goods traffic delayed in transit, 41239.

Mr. J. W. MANNING—*continued.*

Ineffectual appeals to the Board of Trade for redress, 41241.
Desirability of a general reduction in fares and rates, 41250.
Industrial development would be assisted by lower rates, 41251.
Unification of the railways under Irish control advocated, 41252.
Petitions from traders complaining of unsatisfactory working of the Burtonport extension line (41256), which is due to defective rolling stock and engines, 41260.
Question of Letterkenny Railway, 41261.
Opening of the Strabane to Letterkenny extension, 41261.
Effect on the traffic of the Burtonport line, 41264.

Mr. J. O'DEA.

Clarecastle industries, 41269.
Comparison of rates for hay, etc., by steamer and by rail Clarecastle to Cardiff, 41273.
Complaint of excessive rate for hardware from Southampton, 41278.
Overcharges refunded by Great Southern and Western Company, 41285.
Comparison of the rate for hardware Chicago to New York with the Wolverhampton to Clarecastle rate, 41291.
The trade of West and South Clare districts injured by high rates, 41294.
Suggestion as to the provision of experimental road motor services, 41299.
Renard road train instanced, 41299.
Recent improvement in goods service to Clarecastle, 41302.
Former steamboat service, Clarecastle to Limerick, discontinued owing to unsatisfactory working, 41304.
A renewal of the service expected if motor transit scheme progressed, 41306.
No immediate prospects of traffic to warrant further railway construction in Clare, 41307.
Rate for petroleum, Limerick to Clarecastle, 41310, 41321.
Charge of undue preference, 41312, 41321.
The transfer of the management of the Irish railways to a publicly elected body advocated, 41316.
Prospects of traffic to justify a steamship service between Clarecastle and Limerick, 41339.
Benefit of competition, 41340.
Suggested motor service in the Kilrush district, 41343.
Failure of a former subsidised coach service between Ennistymon and Ballyvaughan, 41344.
Prospects of traffic for proposed road motor services, 41345.
Hay traffic from Clarecastle, 41349.
Disparity between Irish and American rates, 41351.
Unification of the railways and their management under Irish control advocated, 41355.

Mr. GEORGE de BELLE BALL.

Tables of Great Northern Railway (Ireland) Company's rates and charges, 41360 (pp. 85 to 88 inclusive).
Complaint as to the omission of the rates from Great Northern Railway dockets, 41361.
Instances of Drogheda rates in excess of the maximum statutory powers (41367):—
Limerick to Drogheda, 41368.
Belfast to Drogheda, 41374.
Instances of overcharges on goods booked locally where through rates exist:—Belfast and Florencecourt, 41382, 41398; Derry and Florencecourt, 41393.
Overcharge on bacon from Liverpool, 41394.
Improper application of the scale for "smalls," 41394.
Overcharges on bacon Belfast to Florencecourt, and timber Derry to Florencecourt, 41395.
Rate for soda, Dundalk to Florencecourt, compared with rates from Derry and Belfast, 41400-1.
Overcharges on oats Drogheda to Laytown, 41400-1.

Mr. GEORGE de BELLE BALL—*continued.*

Complaint as to excessive percentage of errors in charges on dockets issued at Drogheda station, 41406.
Railway dockets taken at random, and 75 per cent. found to be erroneous, 41412.
Rates not quoted by the Railway Company in Drogheda, 41417.
A regular system not specially due to steamer competition, 41419.
Complaint as to alleged systematic overcharging of freights by the railway company, 41419.
A few Drogheda traders insist on having the rates quoted by the Company, 41421.
Difficulty of checking railway charges properly by traders, 41423.
Consequently overcharges cannot be detected, and the trader is prejudiced, 41425.
Necessity for a simpler system of classification and rating of goods, 41426.

Mr. BRIAN E. F. SHEEHY, C.E.

Complaint as to excessive charges for a telescopic ladder sent by the Great Southern and Western Railway, 41437, 41541.
Varying rates for the same consignment, 41440, 41544.
Suggested concession in passenger fares to regular travellers, 41459.
A general reduction in passenger fares recommended, 41466.
Suggestion as to improved speed of trains and general accommodation for passengers on branch lines, 41468.
Complaints:—
Inconvenient train services and unsuitable connections at junctions, 41475.
Passenger service from Dublin to Limerick disimproved since opening of Rosslare route, 41482.
Insufficient carriage accommodation on trains and neglect of the comfort of travellers (41487), and insufficient sanitary accommodation at stations, and want of cleanliness where it exists, 41488.
Periodical disinfecting of railway carriages suggested, 41490.
Insufficient staff at stations, 41493.
Nationalisation and unification of the railways suggested, 41495.
The control of the railways by an Irish representative body advocated, 41500.
Alleged preferential treatment of cross-Channel goods as against local traffic, 41503.
Train service between Dublin and Limerick disimproved since the amalgamation of the Waterford and Limerick Railway with the Great Southern Railway, 41505.
Train connections with the Midland Great Western and West Clare Railways, 41515.
Reduced second-class fares recommended, 41519.
An easier method of checking railway charges required, 41524.
Constitution of the suggested controlling body to administer the railways, 41528.
The Rosslare route to England unduly favoured by the Great Southern and Western Railway Company, 41535.
Inconvenience caused thereby to passengers from Limerick, 41539.
Objection to any further partial railway amalgamation, 41540.
The practice of the Company as regards charges on long articles requiring more than one wagon, 41542.
Reform in the Irish railway system urgently needed, 41545.
Difficulties under the existing system of reducing rates, 41551.
But if reductions were made larger profits would follow, 41553.
Public ownership the only remedy, 41555.
Proper consideration for vested interests essential to any purchase scheme, 41557.
Satisfactory working under a unified system anticipated, 41561.
Any surplus earned to be secured for the benefit of Ireland, 41565.
Necessity for the railways if nationalised to be worked by and in the interest of the Irish public solely, 41568.

Mr. WALTER B. RONAN.

The scheme of 1906 for a link line connecting the railways in Cork, 41579.
Practically taken over by the Great Western of England and the Cork and Bandon Railway Companies, 41580.
The capital, and how raised, 41582.
Suggestion to construct a line from Youghal to Cappagh, 41586.
Length and estimated cost, 41590.
Substantial saving in mileage between Queenstown and Rosslare to be effected, 41592.
Advantages of the proposed railway, 41594, 41631.
The superiority of Queenstown as an American mail station, 41608.
Circumstances in connection with the inauguration of the Fishguard and Rosslare route, 41610.
The proposed railway from Fermoy to Cork included in Rosslare scheme not carried out, 41613.
The agreement between the promoters and the Treasury, 41613.
Suggested application of the Government Grant intended for the Fermoy and Cork line to the Youghal and Cappagh scheme, 41614.
The Companies interested in the Rosslare and Fishguard route, 41618.
Constitution of the Fishguard Board of Directors, 41618.
The advantage of the route to Cork, 41619.
The improvement of connection in the South a direct interest to the Great Western Company, 41620.
Treasury agreement with the Fishguard Company, relative to the Waterford and Dungarvan line and other matters (Act of 1898), 41623.
The proposed line from Youghal to Cappagh a good substitute for the Cork and Fermoy line (authorised, but not constructed), 41632.
A suitable route for American mail and passenger traffic, 41641.
Present time allowed American mail service Queenstown and London *via* Dublin, 41644.
Estimated saving in time by proposed new route, 41648.
Claim for a Government Grant for the Youghal and Cappagh railway, 41653.
Suggested contribution of the sum earmarked for the Cork and Fermoy direct railway, 41658.
The Fishguard Company's obligations under the Act of 1898, 41664.
The promise to construct a bridge over the Lee in Cork to connect all the railways, 41670.
The retention of the American mails at Queenstown, 41676.
The proposal to select Holyhead as a port of call for the American Mails, 41677.

Mr. THOMAS FARRELL.

Advantages of the proposed route for railway from Youghal to Cappagh, 41686.
Suggested route for the line, 41691.
Inconvenient position of the existing Youghal station, 41695.
Industries to be developed by the extension, 41699.
The promoters' claim for the Treasury grant promised for a line, Cork to Fermoy, 41701.
The Baronial guarantee for the Dungarvan line, 41704A.
Mineral wealth of the district, 41705.
Usefulness of the proposed line for military and naval purposes, 41706.
Tourist traffic to be developed, 41708.
The railway likely to be remunerative, 41709.
The Baronial guarantee for the Dungarvan line paid by the district to be benefited by the proposed railway, 41716.
Development of industries anticipated if line be constructed, 41720.
Probable cost, 41723.
Prospects of revenue, 41725.
Probable attitude of Fermoy people towards the proposed line, 41732.

Mr. J. HURLEY, J.P.

Proposed railway communication between Clonakilty and Glandore Harbour, 41737, 41761.
Extensive mackerel fishing industry to be developed at Glandore, 41738.
Long cartage of the fish under existing conditions, 41741.
Other industries in the district awaiting development, 41745.
The slate quarrying industry dwindling through want of transit facilities, 41749.
Present cartage ten or eleven miles, 41757.
Importance of having a railway terminus at Glandore Harbour, 41762.
No physical obstacles to the construction of the line, 41763.
Proposed position for the station at Glandore, 41767.
A good live stock producing district to be served, 41769.
Local fairs dwindling owing to absence of railway communication, 41769.
Present cost of transit a serious handicap to all local industries, 41770.
Comparison of the cost of marketing butter in Dublin from Cork and from Leap, 41772.
Danish butter landed in Dublin at a cheaper rate than butter from Leap, 41778.
Development of early potato growing anticipated if railway communication established, 41780.
Distribution of fish landed at Glandore, 41783.
Glandore industry principally in cured fish—extent of the trade, 41788.
Other sources of revenue for the railway, 41792.
The valuable slate quarries to be developed, 41792.
Extent of former quarrying operations, 41794.
Manganese and copper mines recently re-opened capable of much development, 41804.
The brick-making industry, 41806.
Probable cost of the new railway, 41808.
Improbability of a baronial guarantee, 41810.
A line of standard gauge preferable to a light railway, 41813.
The prospects of revenue, 41816.
Probability of suitable transit facilities being provided under an Irish authority, 41818.
Unsatisfactory nature of the present system of obtaining State aid for railway extensions, 41820.
The necessity for establishing an Irish authority to deal with the transit question, 41822.
Decline in population caused by emigration due to want of employment, 41825.
Welsh slates imported at low rates, to the injury of the Leap industry, 41827.
Extent of the employment formerly afforded by the Benduff Slate Quarry, 41830.
Annual value of imported slates and other stones, 41834.
Failure to obtain through rates from the railway companies, 41835.
Inconvenience and loss at present occasioned to the fishing industry, 41838.
Fish trade obstructed owing to want of pier accommodation, 41838.
Butter trade with Dublin handicapped by absence of railway accommodation, 41841.
Average loss per ton, 41844.
Rates for Danish butter to Dublin compared with similar traffic from Leap, 41848.
The importance of extending winter dairying in Ireland, 41853.

Mr. JOSEPH W. SHEA, J.P.

Necessity for low rates for butter to meet foreign competition, 41863.
Need for change in the working of the present Irish railway system, 41865.
Development of the dairy industry retarded by foreign competition and expensive transit, 41866.
Value of butter greatly reduced in recent years, 41870.
Falling off in the value of hay, 41875.
No reduction in railway rates to correspond with the fall in price of commodities, 41879.
Complaint as to the expense of the Railway and Canal Commission Court; Substitution of a cheaper local tribunal suggested, 41883, 41935.

Mr. JOSEPH W. SHEA, J.P.—*continued.*

Powers of the Department of Agriculture as to action before that Court, 41884.
Successful intervention in a dispute with the Great Southern and Western Railway Company, 41884.
Possibility of a large development of the egg trade if reasonable rates granted, 41890.
Comparison of the rates for eggs Limerick and Tipperary to Bolton, 41892.
Comparison of butter rates, Tipperary to Liverpool and Manchester, and Clonmel to Liverpool and Manchester, 41896.
Complaint as to excessive milk rate, Tipperary to London, 41899.
Creation of a fresh milk trade with South Wales *via* Fishguard practicable if suitable rates were given, 41901.
Comparison of the rates for bacon, Tralee and Tipperary to Liverpool, 41908.
Establishment of a bacon factory at Roscrea, 41909.
Improvement in the loading and despatch of cattle since the Department of Agriculture was established, 41910.
Complaint as to the agreement between the London and North-Western and Lancashire and Yorkshire Railways with regard to Irish traffic, 41913.
Motor car services suggested to collect and convey produce to the railway stations, 41917.
Nationalisation of the railways under an Irish Board of Control advocated, 41924, 41954.
Claim of the present shareholders and officials to just compensation admitted, 41926.
Suggestion as to the *personnel* of the proposed controlling body, 41927.
Amalgamation of the Clare railways with the Great Southern and Western, and their conversion into a broad gauge line recommended, 41929.
The tourist traffic and fisheries of the County Clare possible of great development, 41930.
But deep water piers required at Kilrush and Ballyvaughan, 41932.
Impossibility of cheapening litigation while the private ownership system continues, 41941.
Adequate reductions of the rates on Irish produce required, 41945.
Great and increasing pressure of Colonial and foreign competition with Irish produce, 41947.
Foreign producers assisted by low rates and expeditious transit to British markets, 41948.
Supplemented by subsidies in respect of sea carriage, 41948.
Danger of the Irish farmers being unable to meet their liabilities under the Land Acts if existing conditions continue, 41952.
Ireland's claim to restitution of overtaxation (Financial Relations Commission Report), 41955.
Fall in price of butter and hay in thirty years, 41958.
Increase in output of eggs, 41959.
Necessity for the protection of the dairy industries of Ireland in British markets, 41960.
Action taken in the matter by the Department of Agriculture, 41960.
Injustice to Tipperary in the matter of rates for bacon and butter to Liverpool, 41962.
The disparity between the Tralee through rates and those with other Irish towns, 41963.
The Irish rates generally abound in anomalies, 41966.
Present railway system expensive and unsatisfactory to the public, 41967.
Unreality of the rates competition between Irish railway companies, 41969.
The Irish companies exercising running powers, 41975.
Gradual disappearance of competition as to facilities anticipated, 41979.
Pooling arrangements between competitive points, 41981.
Their extension to Ireland equivalent to a deprivation of competition, 41982.
A unified centrally controlled system a necessity to progress in Ireland, 41987.
State subsidies to agricultural products necessary pending national control of the railways, 41989.
Cheap transit a necessity to fight foreign subsidised competition, 41990.

Mr. JOSEPH W. SHEA, J.P.—*continued.*

Danish Government subsidies quoted, 41990.
Efficacy of the Department of Agriculture in assisting industries hampered by want of funds, 41995.
View of the late Vice-President on the subject, 41999.
Impossibility of private companies affording adequate reductions in rates, 42000.
Public ownership of the railways the only remedy, 42002.

Mr. JOHN HILLIARD.

Importance of Killarney as a tourist resort, 42025.
Amount of private capital invested in hotels, 42026, 42145.
The private and railway hotels open, 42029.
Alleged preferential treatment of the railway hotels by the railway companies, 42033.
Combined railway and hotel tickets and their effect on the private houses, 42034.
Ordinary and excursion fares to Killarney, 42049, 42166.
The privilege of combined tickets only withdrawn when the railway hotels are full, 42070.
Claim that the same concession should be made to the private hotels, 42076.
Complaint as to the exclusion of representatives of the private hotels from Killarney station up to a recent date, 42085.
This concession attributed to the influence of the Viceregal Railway Commission, 42089.
Farranfore and Killorglin extension—baronial guarantee, 42092.
Killorglin and Valentia—Treasury and baronial guarantee, 42094.
Areas of charge, 42098.
Apportionment of the levy over the various baronies, 42103.
Statutory provision for the appointment of an arbitrator from time to time to apportion the levies, 42109.
Maximum amount payable and the period of the guarantee, 42112.
Letter from the Board of Trade as to the appointment of an arbitrator by that Department, 42114.
Action only possible on the motion of the Great Southern and Western Railway, 42119.
The statutory provision for the appointment of an arbitrator to apportion the levy for the Farranfore and Killorglin Extension, 42119.
The last apportionment made by a previous arbitrator, 42119.
A revision of that award now required, 42120.
The responsibility of the Great Southern and Western Railway Company for the non-appointment of an arbitrator to readjust the levy, 42122, 42133.
Complaint that Killarney district is unfairly mulcted under the present arrangement, 42123.
Reduction in the amount paid by the Killarney district claimed, 42125.
Undertaking given by the Great Southern and Western Railway Company's Solicitor to inquire, 42126.
Traffic diverted from Killarney to Tralee since the opening of the Killorglin line, 42129.
Complaint as to train connections at Killarney, 42131.
Importance of the tourist traffic to Killarney, 42143.
Injury to the private hotel owners by the concessions granted in the case of visitors to the railway hotels, 42150.
The arrangements of the Great Southern and Western Railway as to the working of hotels owned by them, 42159.
Complaint that the combined railway and hotel tickets restrict tourist traffic, 42201.
The management of the railways by a public authority advocated, 42203.
A Government railway department objected to, 42206.

Mr. CHARLES CULHANE.

Complaint as to insufficient train service between Thurles and southern stations, 42216.
Complaints as to unsatisfactory goods train service, 42218.

Mr. CHARLES CULHANE—*continued.*

Delays in the delivery of goods, 42220.
Futility of making complaints to the railway company, 42222, 42286.
Representations on this subject not made to them, 42223.
Complaint as to inconvenient arrangements for traffic at Thurles station, 42223.
Delay to goods at Thurles owing to insufficient staff, 42230.
Terminals charged by the railway company for station services not rendered, 42230.
Redress refused by the company, 42236.
Grain rate, Thurles and Dublin, reduced by competition previous to the amalgamation of the Great Southern and Western and Waterford, Limerick and Western Railways, 42240.
Comparison of the Dublin rate with the rates to towns where no competition exists, 42244.
Comparison of the rates for hides, Tralee to Cork and Liverpool, with the rate from Tralee to Thurles, 42247.
The rates between inland stations generally prohibitive, 42248.
Hides carried at a cheaper rate from Liverpool to New York or Boston as from Thurles to Dublin, 42249.
Rate for feathers, Hamburg to Munich, the same as from Killorglin to Thurles, 42251.
Anomalies in rates for cattle, eggs, poultry, etc., local and through, 42252.
The Great Southern rates generally regarded as excessive, 42255.
Necessity for some tribunal to enforce reductions of excessive rates, 42257.
The Great Southern and Western Railway Co. charged with repudiating just claims for losses in transit, 42257.
Claim for hides refused by the Company and enforced by the Court, 42265.
Powers of the Railway and Canal Commission as to railway rates, 42269.
Action of the Department of Agriculture as to complaints *re* excessive rates, 42271.
Desirability of that Department or some other public body having mandatory powers to enforce reductions in rates, 42272.
The present administration of the railways condemned, 42273.
Desirability of transferring the control of the railways to a public body, 42276.
The through rate for feathers from Thurles to London in excess of the sum of the locals *via* Dublin or Waterford, 42277.
Transfer of the railways to a central authority responsible to public opinion advocated, 42282.
Company's general practice to pay no claims unless compelled by legal process, 42290.
Any attempt to move the railway companies through the Board of Trade or Department of Agriculture unavailing, 42297.
Inadequacy of the staff at Thurles station—a great centre for grain and agriculture, 42301.
Export rates for goods to English markets ruinous to trade, 42309.
Crippling effect of high export rates on Irish industries, 42311.
Increasing difficulty in fighting subsidised foreign competition in the English markets under the present system of railway rates, 42313.
Probability of the expansion of the Irish export trade under improved conditions as to rates, 42319.
Importance to England of being less dependent on foreigners for food supplies, 42323.
Improved transit arrangements would expand the Irish exports and admit of a larger population being supported, 42326.
Disastrous effect on home industries of the increasing imports of foreign products, 42328.
Russian eggs imported and sold in Ireland, 42331.
Cheap and speedy transit for home produce necessary to fight foreign competition, 42331.
Imports of American bacon, 42335.
Existing industries handicapped by the present system of rates and the creation of new industries prevented, 42341.
Unsuitability of the privately-owned system of railways to Ireland, 42342.

Mr. CHARLES CULHANE—*continued.*

Decline of the tannery industry in Ireland, 42346.
Lack of enterprise on the part of railways in encouraging home industries, 42352.
Disastrous effects of the railway companies' policy with regard to rates, 42353.
Consequent shrinkage and disappearance of traffic, 42356.
Necessity for the railways to be run sympathetically in the public interest, not for private gain, 42360.
The development of home industries the only remedy for excessive emigration, 42362—But impossible without reductions in rates, 42367.
The purchase of the railways by public credit and the unification of the management would provide a surplus for reduction of rates and fares, 42370.
Irish administration of the railways if State purchased recommended, 42376.

Mr. PETER LAWLER.

Proposed railway extension to Newtownbarry, 42390.
Scheme for a line from Shillelagh promoted by the Dublin and South-Eastern Company in 1888 but not carried out, 42391.
Present desire of the district for a connection with Tullow, not Shillelagh, 42394.
The Great Southern and Western Company more likely to construct a railway than the Dublin and South Eastern, 42394.
New line, Shillelagh to Newtownbarry and Scarawalsh, approved by the Privy Council in 1884, 42396.
Baronial guarantees given, but line not constructed, 42398.
Industries of the district described and the necessity for railway communication explained, 42403.
Breeding of live stock a special feature, 42407.
Value of cattle depreciated by the long drives to fairs and railways, 42407.
Cost of cartage, 42407.
Slate quarries undeveloped and mills idle owing to absence of railway accommodation, 42407.
Inaction of the Dublin and South Eastern Railway in connection with their Bill for a line from Shillelagh, 42409.
Company's recent refusal to construct the line (powers having lapsed), 42410.
Negotiations with the Great Southern and Western Company ten years ago as to an extension from Tullow, 42415.
The route surveyed but nothing further done, 42415.
The South Eastern Company having the traffic under existing conditions don't want to build a railway, 42417.
The Company, although financially in low water, had constructed an extension from New Ross to Waterford a few years ago, 42418.
Position of Newtownbarry with respect to railway accommodation, 42421.
The policy of the D. & S. E. Rly. as to railway extension, 42433.
Objection to the D. & S. E. Rly. Co. getting renewed powers to construct, 42435.
Renewals already obtained four times and allowed to expire, 42440.
A baronial guarantee not contemplated, 42441.
Traffic over the Tullow branch of the Great Southern and Western Railway imperfectly developed owing to the existence of a guarantee, 42443.
Difficulty in getting new lines constructed unless guaranteed, 42448.
Injustice of the baronial guarantee system for railways to the localities, 42452.
The transit problem to be dealt with as a whole by an Irish authority, 42456.

Mr. JAMES KELLY.

Complaint as to excessive rates from Templemore, 42462, 42492.
Comparison of rates from Templemore to Dublin and Thurles and Nenagh to Dublin, 42464.
Great Southern and Western Company's refusal to concede lower rates for quantities above one ton, 42487, 42529.

Mr. JAMES KELLY—*continued.*

Canal competition to Nenagh, 42502.
Templemore traders unfairly handicapped by high rates from Dublin, 42504.
Complaint as to passenger train service with the South, 42508.
Thurles in this respect better served than Templemore, 42513.
Failure to obtain redress of these grievances from the G. S. & W. Rly. Co., 42516.
Complaint as to differential treatment to other towns as compared with Templemore, 42517.
Injury caused to traders, 42522.
Some of the rates anomalies due to the rates stereotyped by the Amalgamation Act of 1900, 42537.
Proportionate mileage rates to those at Thurles and Nenagh claimed for Templemore, 42538.
The computation of rates under the statutory maxima (Act of 1892), 42547.
An impartial system of Irish railway management advocated, 42550.
Impartial treatment of all towns by the issue of rates on a mileage basis suggested, 42550.

Mr. THOMAS D. M'CARTHY.

Complaint of the withdrawal of annual third class tickets for school children between Croom and Limerick, 42565, 42580.
The system in vogue on the Belgian railways, 42578.
Improvement in the connections at Charleville between the main line trains and those on the Limerick branch required, 42583.
Injury to Croom fairs owing to faulty train service, 42585, 42594.
The Company informed that evidence was to be given before the Viceregal Commission, 42589.
Instances of imperfect and inconvenient train connections, 42603.
Difficulties under the private ownership system of railways as to the provision of proper transit facilities, 42607.
The necessity for substitution of administration of the railways by a public authority urged, 42608.
The example of Colonial and Continental State-owned railways in catering for school children and students quoted, 42611.
The difference between a public and a private system of railways explained, 42612.
The policy of facilitating scholars in reaching centres of education advocated, 42615.

Mr. R. A. ANDERSON.

Object and work of the Irish Agricultural Organisation Society, 43033.
Number and distribution of its agencies, 43034.
Railway Companies have not done as much as was expected of them, 43037.
Advantages of organised co-operation, 43037.
Better rates and transit conditions for farm produce obtained, 43038.
Membership and turnover of the affiliated Societies in 1907, 43038.
Number of creameries, membership and yearly turnover, 43042.
Number of agricultural wholesale societies, membership and extent of trade, 43044.
Membership and object, 43044.
Number of credit societies, 43047.
Poultry Societies, 43048.
The importance of the egg industry, 43049.
Flax societies and their work, 43053.
Miscellaneous societies, 43056.
Large increase in the artificial manures used in Ireland between 1900 and 1906, 43058.
Co-operative societies have not affected manufacturers' prices, but excessive "middleman's" charges saved, 43058.
The Society's relations with the railway companies, 43059.
Desirability of further encouraging co-operation by reduced rates for large consignments, 43061.
The remedy largely in the hands of the people, 43063.
Through rates to North-Eastern English towns from Limerick and other stations required, 43065.

Mr. R. A. ANDERSON—*continued.*

The matter in correspondence between the Railway Companies concerned, 43066.
Proposal that the granting of through rates should be made compulsory on the railways, 43066, 43347.
Difficulty in obtaining settlement of claims on goods sent over two or more systems, 43066.
Contracting company to be sued in every case, 43066, 43175, 43348.
Butter sent by passenger train—Claims only paid when lost, 43066.
Establishment of an agricultural produce parcels post recommended, 43066, 43350.
Unfairness of present "Owner's Risk" conditions, 43068.
"Owner's Risk" rates not sufficiently low to justify their existence, having regard to the difficulty of obtaining compensation, 43072, 43074, 43352.
The advantage of the company's risk rates from the point of view of risk, 43079.
Extension of through bookings to all goods stations urged, 43084.
Low rates for butter sent to grading stations required, 43086, 43317, 43370.
Question discussed at the Railway Clearing House, 43086.
Increased rate demanded by railway companies on butter intercepted at grading stations and reconsigned, 43086, 43186, 43325, 43372.
The proposal to make Dublin a grading centre abandoned in consequence, 43086.
Suggestion that the Viceregal Commission might make a recommendation on the subject, 43086.
The necessity and advantage of grading centres for butter traffic, 43087.
The system in vogue in the Colonies, 43090.
Development of butter traffic hindered by high rates for cream, 43092, 43390.
Reductions in the rates proposed by the Great Southern and Western Company, but refused by the other Companies, 43092.
Disproportionate rates for the manufactured and the unmanufactured article, 43092.
Rates for butter and egg traffic reasonable, 43097.
Arran Islands early potato growing industry handicapped by excessive rates, 43098, 43203-4, 43341.
Improved handling of perishable traffic in transit, 43102.
Necessity of protecting egg packages from the weather, 43102.
Reductions in the rates for natural fertilisers, 43104.
Complaint as to excessive milk rates, 43106, 43365.
Contention that the rates for agricultural produce should be lower in Ireland than in England, 43110.
The milk trade in Belfast and Dublin, 43113.
Necessity for guaranteeing the railway companies against loss arising from compulsory reductions in rates, 43122.
State Ownership of Irish railways not fully considered, 43124.
Suggested amalgamation of the railways into three or four systems, 43126.
The influence of English railway companies over Irish lines regarded as bad, 43129.
Suggestion of a State guarantee against loss arising from compulsory amalgamation (43133), which would involve State supervision, 43135.
Present system of management preferred to State control, 43137.
Necessary railway extensions in Ireland, 43139, 43235.
  Sligo and Bundoran.
  Ballywillan and Oldcastle.
  Kingscourt and Carrickmacross.
  Shillelagh and Carlow.
Cost of those extensions to be borne by the existing railway companies (43141), who have been given the monopoly of large territories, 43145.
State Ownership—opinion of the society, 43145.
No demand for 10-ton rates for butter or egg traffic, 43146.
Low ordinary tonnage rates the desideratum, 43147.
Rates for small parcels of perishables by passenger trains, 43151.

Mr. R. A. ANDERSON—*continued.*

The 20lb. package rate excessive, 43152.
The development of traffic in consignments of large lots recommended (43155), and a reduction of parcels rates if money is available, 43158.
The ordinary shopkeeper the best medium for distribution of produce to consumers, 43159.
Relative importance of the conditions of production and transit facilities, 43165.
The development of winter dairying probable, 43168.
Damages in transit arising from careless handling of traffic, 43170, 43353.
Undesirability of consigning at "Owner's risk," 43178.
Comparison of average rates between the two risks not available, 43179.
General application of a low rate for small parcels recommended, 43181.
Grading and packing of butter in transit, 43185.
The increased rate together with the expense of grading prohibitive, 43192.
The average appreciation in the price of graded butter, 43193.
Reason why the railway companies should agree to more generous terms for this traffic, 43198.
Question of low rates for raw material inwards, 43213.
Adverse effect on railway profits of reduced rates would be neutralised largely by increased output and larger traffic, 43216.
Proposed guarantees to railways against loss on reduced rates, 43223.
Practicability of working the scheme, 43223.
Resolution in favour by the Department of Agriculture, 43223.
Objections to nationalisation, 43227.
A Government railway board would not be sufficiently responsive to public opinion, 43229.
The present system of local administration preferable, 43233.
Railway extensions:—Shillelagh and Carlow connection, 43236.
Responsibility for its construction: South Eastern or Great Southern, or apportionment of cost between both Companies, 43239.
Effect of English companies' influence over Irish lines not beneficial, 43246, 43383.
The influence growing, 43248.
London and North Western; Great Western, and Midland instanced, 43248.
Danger of this English influence becoming dominant, 43252.
Consequent prejudice to Irish industries and serious hindrance to trade, 43255.
Acquisition of the Irish railways by the public possibly would result in improvement, 43258.
The objections to a policy of subsidies to railways, 43260.
Danger of stagnation in the growth of traffic, 43261.
The policy of amalgamation, 43263.
Amalgamation regarded as an essential preliminary step towards State Ownership, 43264.
No views on the subject expressed by the society, 43266.
Lessons afforded by foreign countries regarding State railways (43269); France; Denmark; Sweden; New Zealand; Australia; etc., 43272.
Objection to control by an Imperial Board, 43279.
Question as to the most suitable body to control Irish railway policy, 43283.
Any Irish agency to be effective for Irish purposes must be responsible to Irish opinion, 43287.
Suggestion that the body should be selected by proportional representation, 43287.
Complaint as to the inland rates and the want of more extensive through bookings, 43293.
Irish inland rates versus Continental, 43295.
Composition of the most suitable body to control the Irish railways, 43297.
Estimated cost of State purchase, 43301.
Margin between net profits and interest on purchase money, 43304.
Economies from unification of management, 43306.
Case of the Great Southern and Western and the Waterford and Limerick Railways, 43307.

Mr. R. A. ANDERSON—*continued.*

Exceptional circumstances affecting their amalgamation, 43307.
Canvassing and other expenses to be saved by a general amalgamation, 43309.
The attitude of the existing companies towards the public requirements, 43314.
Irish butter trade carried on without grading, 43332.
Grading of eggs, 43335.
Importance of the Irish egg and butter trade, 43338.
Points made against the railway companies:—
Liability of contracting carriers, 43348.
Produce parcels post, 43350.
"Owner's Risk" rates not low enough, 43352.
Careless handling of traffic, 43353.
Low rates for limestone required, 43355.
Free carriage of limestone in New Zealand for agricultural purposes, 43358.
Non-use of refrigerating wagons, 43359.
Compulsory connections between contiguous trunk lines suggested, 43360.
Complaint as to excessive rates on milk, 43365.
Irish opinion of the existing railway companies, 43366.
The London and North Western Company approached on the subject of a butter grading depot in Dublin, 43370.
Winter dairying, 43378.
The conditions more favourable in Ireland than in Denmark, 43379.
The development of the butter trade depends largely on education of the people, 43380.
The New Ross to Waterford Extension—L. & N. W. Rly. Co.'s contribution to cost of construction, 43386.
Rates on Cream, 43390.
The complaint as to rough handling of eggs, 43394.
Question of insufficient through bookings to English railways, 43396.

Mr. PATRICK WHELAN.

The Great Northern Rly. Co. and the question of rebates, 43406.
Competition with the Ulster Canal, 43406.
Necessity for a railway connection between Carrickmacross and Kingscourt, 43408.
Unsuitable passenger train connections at Clones Junction, 43409.
Complaints as to the service to Monaghan, 43409.
Industries of the County Monaghan, 43413.
Mineral resources, 43413.
Milling industry, 43416.
Complaint as to excessive rate for corn, Belfast to Inniskeen, 43417.
Comparison with other rates on the Great Northern system, 43417.
Great Northern Rly. Co.'s rates on agricultural produce prohibitive, 43421.
Comparison with Belgian agricultural produce rates, 43424.
Creameries in County Monaghan, 43434.
Export butter trade restricted by excessive rates, 43435.
Complaint as to excessive rate for eggs, Smithborough to Belfast, 43436.
Loading and unloading and cartage services charged for but not performed in many cases, 43442.
Difficulty of obtaining payment of refunds from the Company, 43443.
Unsatisfactory cartage arrangements, 43445.
The Glasgow carters employed by the Great Northern Co. objected to, 43445.
Complaint as to insufficient lavatory accommodation on Great Northern trains, 43451.
Unsuitable wagons supplied for pork traffic, 43455.
Ineffective representations to the railway authorities on the subject, 43462.
The fitting of vacuum brakes as well as spring buffers to cattle wagons suggested, 43466.
The Commission asked to embody suggestion as to improvements of this description in their report, 43470.

Mr. PATRICK WHELAN—*continued.*

A revision of the part wagon rates for live stock urged, 43474.
Continental versus Irish live stock rates, 43474.
Extension of the through inland rate system in Ireland advocated, 43477.
Local rates to be based on Irish railway proportion of cross-Channel rates, 43485, 43535.
Adoption of the Hungarian passenger fare zone system recommended, 43490; Mr. Acworth's opinion in 1892, 43492.
Advantages of the zone system of passenger fares and its adoption by the North British Company, 43498.
Comparison of Continental with Irish 3rd class fares, 43499.
Irish railways exempt from the passenger tax, 43504.
The County Council unanimous in approving witness's evidence, 43506.
Nationalisation of the railways under an Irish authority recommended, 43508, 43545.
Adoption of the Prussian system of control recommended, 43509.
The purchase of the entire railways would benefit Monaghan County and Ireland generally, 43511.
The development of small industries retarded by the existing railway system, 43512.
The influence of English companies on Irish lines, 43513, 43543.
Local industries injured by cheap import rates, 43515.
Complaint as to insufficiency of staff at Great Northern Railway stations, 43520.
The Great Northern Company's amalgamations have not resulted in due economy, 43522.
The present system compares unfavourably with the past, 43523.
Instances of unsatisfactory stores, etc., arrangements quoted, 43524.
Suggestion as to probable savings that could be effected by more economical working, 43525.
Detrimental effect of the present Irish railway policy on the country's prosperity, 43527.
The existing system of rates prejudices agriculture and retards manufactures, 43528.
The development of manufactures and industries preferable to tourist traffic, 43530.
Workmen's fares—Continental system, 43536.
Cheap fares for workmen, 43536.
Only possible when control by an Irish authority is established, 43537.
Disadvantage of the despatch of trains by competing routes at the same hours, 43541.
Examples—Great Northern; Northern Counties, and M.G.W. trains, 43541.
Advantages of public control of the railways, 43550.
The employment of expert assistance, 43552.
Overtaxation of Ireland—The Financial Relations Commission, 43555.
Claim for free grant of purchase money or State credit to be placed at the disposal of the Irish controlling body, 43556.
Excess of present railway profits over interest on purchase money, 43559.
To be increased by economies from unification of management, 43560.
Suggested method of purchase, 43562.
Provisions of the Act of 1844, 43562.
Powers of the Treasury as to purchase, 43563.
Procedure laid down by the Act as to fixing purchase money, etc., 43567.
Ample statutory powers available for State purchase, 43568.
Necessity for reduced rates and better transit facilities for lime, 43572.
Application to the Great Northern Company, 43572.
Reduced rates offered, but on terms as to quantities that were not acceptable, 43572.
Sheds and covered wagons required for the traffic, but refused by the Company, 43575.
Suggestion as to an improved wagon for the conveyance of lime, 43575.
Complaint as to unsatisfactory facilities for Sunday travelling, 43580.
Serious inconvenience caused to the Gaelic Association of Ulster, 43581.

Mr. WALTER HENRY MACNAMARA, B.L.

Act regulating the constitution of the Railway and Canal Commission, 43584.
Evidence given before the Vice-Regal Commission as to the excessive expense and delay of the Court, 43586, 43596.
The procedure explained, 43587.
The charge of dilatoriness refuted, 43587.
Cases quoted:—Goddard *versus* L. & S. W. Rly., 43587.
Sittings arranged to suit convenience of complainants, 43587.
Ex-officio Commissioners in England and Ireland, 43588.
Terms of appointment, 43589.
The judge, who is ex-officio member, must give the Commission first attention, 43593.
Cases quoted to show expeditious disposal—Postmaster-General *v.* Waterford Urban District Council, etc., 43596.
Explanation of the delay in disposal of the case Port and Docks Board *v.* Great Southern and Western Railway, 43597, 43605, 43639, 43685.
Application for hearing held back by the Board, 43597.
Prompt announcement of the Court's decision in the W. & L. and G. S. & W. Rlys. amalgamation cases, 43598.
The complaint as to excessive costliness of the proceedings, 43600.
Explanation of the costs in the Londonderry Port and Harbour Commissioners' case, 43600.
The order as to costs, 43601.
The large expense incurred would be much less under the present constitution of the Court, 43603.
The Dublin Port and Docks Board case—The excessive costs relates, not to one, but to three cases, 43605, 43682.
The Gt. S. & W. Rly. Co's application to increase rates (1902), 43606.
The excessive cost to the Department of Agriculture, who intervened, 43606.
The Newry Town Commissioners' application against the Great Northern Railway Co., 43606.
The cost of the proceedings, 43606.
Statement made by witness before the Departmental Committee (Lord Jersey's) on Railway Rates in 1905 regarding the cost of proceedings generally, 43610.
Mr. Justice Wills's opinion on the question of expenses, 43610.
The complaint as to the employment of expensive counsel, 43610.
Complainants can approach the Court direct on payment of £1, 43610.
Numerous cases settled before trial at that small expense, 43611, 43629.
The costs of a trial regulated by the litigants, 43615.
Litigants may conduct their own case in person before the Court, 43615.
Instances where this has been done (43616):—
Palmer *v.* L. &. S. W. Rly. Co., 43618.
Wyman *v.* Midland Co., 43619.
Usual place for sittings of the Court, 43623.
Suitability of the Capital, 43623.
Sittings also held in Belfast and Londonderry, 43623.
Number of Irish sittings, 43628.
Several cases in Ireland settled by the railway companies before trial within the last few years, 43629, 43636.
Dublin Port and Docks Board case—Two years between the application and the judgment, 43642.
But delay due to necessary formalities which were not carried out by the parties, 43644.
Eighteen months occupied in various stages of the proceedings, 43646.
Importance of the case, which affected almost all the through rates in the South, 43647.
The costs in the Londonderry, the Dublin Port and Docks Board, and the Gt. S. & W. Rly. cases, 43652.
The question of engaging a strong bar in certain cases, 43659.
Not regarded as important by the Court, 43659.
The large number of counsel engaged in the Great Southern and Western Railway case, 43663.

Mr. WALTER HENRY MACNAMARA, B.L.—*continued.*

Deterring effect of heavy costs on the action of private traders, 43664.
The suggested inconvenience to traders, if proceedings taken by them unassisted by eminent Counsel, 43668.
Success depends largely on the nature of the case, 43669.
The complexities induced by Counsel, 43671.
But no escape for any Company infringing the provisions of the Railway and Canal Traffic Act, 43672.
The Court influenced by the justice of the claim rather than Counsel's advocacy, 43676.
The financial resources of litigants, 43680.
Mr. Field's letter to the Vice-Regal Commission *re* costs, 43685.
Costs incurred by the Department of Agriculture in opposing the Great Southern and Western Company's application to increase rates, 43692.
The number of traders, etc., who were parties to the action, 43692.
The Great Southern and Western Company's application one under the Amalgamation Act of 1900, 43699.
Jurisdiction of the Court with regard to Irish railway rates, 43702.
Obligation on the railway companies to justify any increase in rates, 43710.
Rates within the maxima not open to revision by the Court on the grounds that they are too high for the trade and industry of the country, 43711.
Legislation necessary for any extended jurisdiction, 43712.
Ireland's objection to the Court, 43713.
The suitability of the Court for dealing with small cases, 43715.
The complication of railway law, 43721.
The necessity for Counsel in all important cases, 43725.
The question of excluding Counsel from the proceedings, 43726.
The Court hear litigants in person or by Counsel or Solicitors, 43726A.
The law regulating costs in traders' cases, 43729.
The suggested substitution of the County Court in Ireland for the Railway and Canal Commission Court, 43730.

Mr. JAMES F. O'DONNELL, J.P.

Principal industry of the Burtonport district, 43739.
Cost of construction of the Letterkenny to Burtonport Railway by the Government, 43740.
Complaint as to unsatisfactory working of the line, 43741.
Constant breakdowns of trains detrimental to the tourist traffic, 43742.
The railway would serve the district much better if properly worked by the Railway Company, 43744.
Complaint as to excesive rates for fish, 43750, 43833.
Reduced rates would benefit the district, 43750.
The distribution of the Burtonport "catch," 43751.
The development of the fishing industry retarded by high railway rates, 43753.
State ownership of the railways under the control of an Irish authority advocated, 43757.
Industries undeveloped under existing management of Burtonport Railway, 43759.
Live stock rates unsatisfactory, 43764.
Complaint as to unequal treatment of fish curers and reapers in the matter of fares, 43766.
Inadequacy of the Burtonport slip for the requirements of the fishing boats, 43774.
The slip constructed by Board of Works as well as the railway, 43781.
The sea wall carried away since construction of line, 43784.
Accident on the railway at Owencarrow, 43788.
Number of boats and people engaged in the fishing industry at Burtonport, 43790.
The trade greatly hampered by the unsatisfactory landing facilities, 43794.
Failure to provide a suitable approach road to the railway station by the Board of Works, 43799.

Mr. JAMES F. O'DONNELL, J.P.—*continued.*

Its construction abandoned owing to the intractibility of the owner of the land, 43803.
The inadequate accommodation a source of loss to the fishermen, 43806.
Tourist traffic driven away by the inefficient working of the line, 43806.
Breakdowns on the line frequent, 43811.
The substitution of public ownership of the railways for the existing system suggested, 43818.
The Company working the Burtonport Railway have failed to do their duty, 43820.
The Government grant for the construction of the line, 43824.
Suggested reduction in the fresh fish rates and a better service for the traffic, 43827.
How the senders at Burtonport are affected by excessive rates, 43838.
All the trains "mixed," 43842.
The issue of cheap tickets for fish curers advocated, 43844.
The extension of reaper's tickets to women urged, 43849.
Comparison of rates for turnips Londonderry to Burtonport with Newtown-Cunningham and Letterkenny rates, 43861.
The bulk of the "catch" cured, and exported by steamer at low rates, 43871.
Reduced rates required to encourage the fresh fish trade, 43875.
Prospects of increased fish traffic with reduced rates and increased facilities, 43881.
Advantages of public control of Irish railways, 43882.
The excessive rates for small consignments of fish, 43883.
Prevent fishermen from supplying small consumers, 43885.
Reduced rates would increase the consumption in Ireland, 43889.

Mr. J. J. ROSSITER.

Complaints relative to train connections at Wexford, 43894.
Discontinuance of trains between the North and South stations, 43897.
The inconvenience to passengers, 43899.
The former local and through service compared with the present arrangements, 43901.
Importance of Rosslare as a seaside resort, 43908.
Complaint as to unsatisfactory station accommodation, 43917.
No shelter provided for passengers waiting for trains, 43918.
Complaint on the subject made at half-yearly meetings of the Company without result, 43924.
A new station required at Rosslare, 43927, 43970, 44009.
Complaint as to excessive coal rate from Wexford to Rosslare, 43930.
The break of connection between the North and South stations Wexford, 43933.
Complaint of increased haulage charges for coal —Wexford Quay to Station, 43939.
Representations made to a Director of the Great Southern and Western Railway, 43952.
The discontinuance of passenger trains between Wexford North and South stations, 43954.
The effect on through passengers *via* Fishguard and *via* Kingstown, 43693.
Dangerous system of working passenger traffic at Rosslare, 43972.
Possibility of accident if no improvement made, 43981.
The large number of passengers to Rosslare in the season, 43984.
Sanitary accommodation deficient, 43987.
Difficulty with regard to water supply at Rosslare, 43990.
Water brought twenty miles by train, 43993.
The volume of passenger traffic at Rosslare Strand station, 43999.
Passenger fares between Wexford and Rosslare, 44002.
The extent of the improvements required at Rosslare station, 44014.
The population of Wexford, 44017.

Vice-Regal Commission on Irish Railways, including Light Railways.

MINUTES OF EVIDENCE.

SIXTY-THIRD PUBLIC SITTING.—FRIDAY, JANUARY 10TH, 1908.

In the Shelbourne Hotel, Dublin.

Commissioners present:—Sir CHARLES SCOTTER, BART, Chairman; Colonel W. HUTCHESON POË, C.B.; Mr. THOMAS SEXTON; Mr. W. M. ACWORTH; and Mr. JOHN AUDLEY FREDERICK ASPINALL;

Mr. GEORGE E. SHANAHAN (Secretary).

Mr. PHILIP MACNULTY, Transit Inspector, Department of Agriculture, re-examined by the CHAIRMAN.

Jan. 10, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

38724. Mr. MacNulty, I think you want to make some slight correction in the evidence which you gave on the last occasion, in London?—Yes. At Question 33470 I gave a reply as to the weight of a package which is permitted to be conveyed by express train in Belgium. The weight is 150 kg. Subsequently, at Question 34479, Mr. Acworth put to me the question :—"Do you suggest that in Belgium I cannot send five tons by express rate."?—I confused his question, which related to consignment, with the weight of the package, and answered :—"Not by express train. 150 kg. is the maximum accepted for transit by express train." I wish to have this confusion between package and consignment put right. There is really no limit to the consignment that can be sent by express train in Belgium.

38725. A package must not be larger than 150 kg.? It must not be larger than 150 kg.

38726. When we separated on the last occasion you were answering some questions I put with reference to the calculation of freight charges?—Yes. We had got to the end of the German regulations.

38727. Will you tell us what you have got to say upon that?—Holland is the next country with which I deal. Do you wish me to take the different points in my statement of evidence as they come in the statement?

38728. Yes. You are now dealing with the calculation of freight charges in Holland?—Yes. Take first, express goods. All consignments of goods not specially excepted, and under 300 kg. in weight, unless it is expressly requested that they be carried as Fast or Slow Goods, and consignments over 300 kg., when so desired by sender, are forwarded by ordinary passenger trains. The rates for these goods include delivery (where organised) to consignee, within the boundaries of the district or parish in which the railway station is situated, or within a radius of three km. from the station to remote places. Collection of goods is not included in the rates except in a few specific places for consignments of 10 kg. and under The following are the rates:—Consignments of 10 kg. and under for any distance—up to 1 kg., 15 cents; from 1 to 3 kg., 20 cents; from 3 to 5 kg., 25 cents; from 5 to 10 kg., 30 cents. Consignments over 10 kg.:—First, 10 kg., 30 cents, as above; every additional 10 kg., as under——

38729. You may skip all the intermediate rates?—I will take the first, central, and last. 1 to 10 km., 4 cents; 51 to 100 kg., 9 cents; 201 to 250 kg. 22 cents; above 250 kg., 27 cents. Quick or Fast Goods. Quick goods consigned as parcel goods or wagon-load goods are charged double the freight of slow parcels or wagon-load goods. The minimum charge for Quick Parcel Goods is as for 50 kg., additional weights being reckoned per unit of 10 kg. The minimum charge is 30 cents, including cost of loading and unloading.

38730. *Mr. Sexton.*—How much would that be?—A cent is one-fifth of a penny.

38731. Would that be 6*d.*?—Yes, a little over 6*d.* Slow Goods—All consignments of less than 5,000 kg. are charged at ordinary parcel goods class rate, unless freight for 5,000 kg. according to the proper wagon-load class is cheaper, in which case the latter mode of charging is applied, with due observance of the conditions applicable thereto. Goods which are unsuitable, when in an unpacked condition, for loading with other goods, and goods which, on account of their dimensions, cannot be loaded through the door of an ordinary ten-ton closed goods wagon, are excluded from parcel goods class.

Dutch railways. Wagon load goods.

38732. *Chairman.*—Well now, I see that you have a note with reference to agricultural produce. You had better read it?—Certain specified goods, such as potatoes, grain, offal, flour, beans, draff, peas, agricultural harrows, barley, millet, grains, grass seed, oats, oatmeal, hemp, hemp-seed, chaff, cotton-seed meal, clover-seed, turnips, turnip-seed, feeding cakes of various kinds, agricultural implements, flax-seed, etc., are charged under an exceptional parcel goods class rate, if offered for transport in quantities of less than 5,000 kg., the minimum weight charged being 50 kg., and additional weights counted by units of 10 kg. The minimum charge is 0·20 fl., including cost of loading and unloading.

38733. Never mind. That is a very small thing. Just give us any observations you wish to make with reference to the wagon-load goods, and full wagon-loads?—The rates for wagon-load class A are applied to the carriage of all goods consigned with one way-bill in quantities of at least 5,000 kg., or paying for that weight, and not belonging to classes B or C, or *Exceptional* Tariff No. 2, according to the Goods Classification, or for which, in accordance with the following condition, no other mode of rating comes into account:—Goods which are unsuitable, when in an unpacked condition, for loading with other goods, and those which, on account of their dimensions cannot be loaded through the door of an ordinary ten-ton closed goods wagon are excluded from wagon-load class A.

38734. In other words, that is what they call a full wagon-load rate?—Full wagon load rate, in quantities of 5,000 kg., with certain exceptions. The rates of the wagon-load class B are applied to goods which, according to the classification belonging to that class, if they are consigned with one way-bill in quantities of at least 5,000 kg., or paying for that weight. There are certain conditions, then, with regard to the supply of wagons for this class of traffic.

Goods of exceptional dimensions.

38735. I think that is sufficient about that. Is there any special arrangement with regard to bulky goods?—Certain defined bulky goods, when carried either by quick or by slow transit are charged at double actual weight.

38735a. I think we need not refer to the empty packages.

38736. *Mr. Sexton.*—Unless it is more to the interest of the consignor to charge in another way?—Yes. That is for the minimum wagon-load. That is a rule of general application throughout the Continent, so that I think I need not refer to it every time.

38737. The option is allowed to the consignor?—Yes. He gets the advantage of paying for the higher tonnage if the charges come to less.

38738. *Chairman.*—Is there any remark you wish to make with reference to the empty packages?—I do not think there is anything calling for comment.

Jan. 10, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

Dutch railways—*con.*

Minimum charge for exclusive use of a wagon.

38739. There is one point which I think you mentioned, where the consignor asks for the exclusive use of wagons?—For goods consigned in lots of less than 5,000 kg., for which the sender asks for the use of a separate wagon, irrespective of whether the wagon is sealed by him or not, freight is charged for 5,000 kg., according to the wagon-load class to which the goods belong.

38740. That is a general regulation, is not it?—Yes, for Holland.

38741. And other countries?—If the sender requires the exclusive use of the wagon he must pay for the full capacity of it.

38742. Like we do in this country, and in England, they make a charge for disinfecting wagons?—This is with regard to wagons which are used for manure and malodorous goods. I am not aware that there is a similar regulation in the United Kingdom.

Wagon disinfecting charge.

38743. I was thinking of cattle wagons?—This is goods. If the sender uses a wagon for certain exceptional traffic, and it has to be disinfected, he has to pay the company a fee.

38744. *Mr. Sexton.*—Of 1*s.*?—The regulation is fixed by the sanitary authorities, and the railway company cannot oblige senders to pay for disinfection in absence of such regulation.

38745. The charge is 1*s.* per wagon?—1*s.* per wagon.

Special rates for interior traffic:—

38746. *Chairman.*—In addition to the ordinary rates, did you find special rates in operation in Holland?—There are special rates for interior traffic, import traffic, and export traffic.

38747. Take the interior traffic—that is, of Holland itself?—On the Holland Railway and on the Dutch State and Central Railways, or on one or other of these systems, various goods, from March to the end of November in each year, in 10-ton lots, 5-ton lots, and less than 5-ton lots, are carried at special rates.

38748. Is that mainly agricultural produce?—Mainly agricultural commodities, and from March to the end of November.

38749. There are special lower rates in operation for that period?—Yes, for 10-ton lots, 5-ton lots, and less than 5-ton lots. All the year round they have a special rate for peat litter in 10-ton lots, grain and grain offal, feeding cake and potatoes, 10-ton lots, natural and artificial manures, 10-ton and 5-ton lots; beet root, clay, basic slag, hay, straw, etc., in 10-ton lots.

38750. Generally speaking, there are special rates for large quantities of the traffic mentioned, and, in addition, there are lower rates for particular months of the year, for agricultural produce?—And applying to quantities under 5 tons.

Coal traffic;

38751. Now, with reference to coal and coke—did you find that they have special low rates for train loads?—Coal and coke, 45-ton and 5-ton lots, and coal and coke in 200 and 300 train loads, are carried under yearly agreements.

38752. That is, coal from Westphalia?—Yes, it must be, of course.

38753. There is no coal produced in Holland?—No.

38754. I am aware of these arrangements, and I happen to know the man who makes them. That is quite correct. Are there any special arrangements with reference to the import traffic?—

Import traffic;

Import traffic of various kinds, mainly agricultural products, from March to end of November in each year, is carried in 10-ton quantities, 5 tons, and less than 5 tons.

38755. That is practically, then, different rates, 10, 5, and under 5?—Yes.

38756. And during these months a lower rate is in operation?—Yes. There are also rates for 10-ton and 5-ton lots of various goods, chiefly raw materials, and for some manufactured goods—10-ton and 5-ton lots, grain 10-ton lots, and earthenware 10 and 5-ton lots——

38757. The import traffic, I suppose, is traffic imported from England?—Not necessarily—over-sea.

38758. Quite so. That is what I say?—It might come from America.

and export traffic.

38759. It might come from France or America. All right. Now for export traffic?—There are rates for earthenware, 10-ton and 5-ton lots; jute, 10-ton lots; cotton seed oil, 10-ton lots; lard and fat, 10-ton lots; condensed milk, 10-ton lots; drapery, 5-ton and less than 5-ton lots; agricultural implements, 5-ton lots; paper, 5-ton lots; tobacco, 5-ton lots; flax, 5-ton lots; wool, 5-ton lots, and various goods, mainly agricultural commodities, exported from March till the end of November, are carried at special rates for 10-ton 5-ton, and less than 5-ton lots. Similarly, raw material and manufactured goods of various kinds in 10 and 5-ton lots.

38760. Of course, that is a general statement with reference to the system, but it would be of immense advantage if you could make any comparison between some of these rates and some of the Irish rates?—I have made use of some of them in the comparison that I prepared, and have in course of preparation.

38761. And you will be able to give us some comparisons?—Yes.

38762. Thank you. That will do. We need not refer to the emburserments or fees.

38763. *Mr. Sexton.*—Unit rates in other countries have been put into your earlier evidence?—Yes, in tabular form.

38764. *Chairman.*—Yes. Give us the unit rate on the Dutch railways?—On the former occasion I handed a copy to the official reporter. I will furnish a copy of the Dutch rates also.

38765. What is the next country you would like to deal with?—Denmark—the conditions as to freight charges for express goods——

38766. I know it is a difficult question for you to answer, but is it possible to point out the differences in Denmark without going into all the details? Do you think you could manage that? It seems to me that the conditions are somewhat similar to what they are in Holland?—I shall endeavour to do it, Sir Charles, but I should like to safeguard myself in this way—that if it is found afterwards that there is anything which anybody may consider of importance omitted from my answer it will not be put down to having been done deliberately. The charge for sending express goods in Denmark is that for quick goods, plus 50 per cent. But certain perishable goods are conveyed by express train and charged only as quick or fast goods, which is an intermediate service between express and slow. Quick or fast goods—that is, the intermediate service—are charged at a special rate for that class, which is based upon a scale given in my statement. May I read that scale?

38767. Yes?—Charge per 100 kg.:—Constant or station terminal, is 50 ore; conveyance for first 60 km., 2 ore per km.; for the next 60 km., 1·2 ore per km.; for the next 60 km., ·6 ore per km.; for each succeeding km. ·3 ore.

38768. What is the minimum charge?—50 ore.

38769. What is an ore?—50 ore would be not quite 7*d.*; about 6½*d.*

38770. Is there any basis of a rate for perishable goods?—So far as traffic conditions do not prevent it, certain defined perishable goods, such as fish and vegetables, butter, eggs, and beer, are conveyed by this intermediate service—quick or fast goods—at slow goods rates. Under certain conditions, they are conveyed at the fastest speed allowed by the time-table, but not by express train, for an added charge of 50 per cent. to the ordinary slow goods rate.

38771. That is, generally speaking, the same as in Holland—50 per cent. above the ordinary?—Above slow goods. That is for conveying traffic at express speed although not by express train. I do not know that the 50 per cent. applies to the same speed of transit

38772. *Mr. Sexton.*—In Holland they have a special scale?

38773. *Chairman.*—Yes; they have a separate scale?—And in Denmark there is a separate scale for express goods.

38774. Are there State railways in Denmark?—Yes, but not all. There are quite a number of privately-owned railways.

38775. *Mr. Sexton.*—Do they, in Denmark, distinguish the class of service at which a consignment is to be conveyed by the colour of the way-bill?—Yes.

38776. In all cases?—And in all countries. They have a different coloured way-bill for the mode of transit by which traffic is to be carried.

38777. So that simply by the colour of the way-bill the consignor directs the railway to the class of service?—As a rule, they are printed by the railways, and supplied to the public at a charge given in my statement of evidence.

38778. *Chairman.*—It is a very small charge?—Yes.

38779. In other words, they sell the consignment notes?—Yes.

38780. And in Ireland they give them away?—Give them away. That consignment note is used to serve the purpose of an invoice on the Continent.

38781. That forms the way-bill?—Yes.

38782. *Mr. Sexton.*—And also the receipt?—Also the receipt. The consignee's receipt is taken on it. Need I give the basis of the scale for Denmark?

38783. *Chairman.*—For what?—Slow goods.

38784. Yes, you may give the scale?—It takes the place of the tabular form which appears for other countries. Scale for quick or fast goods, per 100 kg.: Constant or station terminals, 15 ore; conveyance for first 60 km., 1 ore per km.; conveyance for the next 60 km., 0·6 ore per km.; conveyance for the next 60 km., 0·3 ore per km.; conveyance for each succeeding km., 0·15 ore.

38785. *Chairman.*—You may as well mention the minimum weight?—The minimum weight charged is 30 kg., and the lowest freight is 50 ore.

38786. That is to say, anything under 30 kg. is charged as 30 kg.?—Yes.

38787. You say something about stamps?—Those are stamped parcels; but in dealing with the maximum rate I gave evidence about that. The working rates are the same as the maximum. At paragraph 178 there is a reference to conveyance by fast train. The freight is calculated without regard to the nature of the goods at double the weight of ordinary wagon-loads and according to the slow wagon-load rate.

38788. In other words, whatever is put into the wagons, they charge for a full wagon?—Yes; and double the rate for conveyance by fast train. The minimum freight is 10 kroner for each wagon.

38789. *Mr. Sexton.*—11*s.*?—Yes.

38790. *Chairman.*—Then come to the basis for slow goods and slow parcel goods?—For slow parcel goods in consignments under 400 kg. in weight, or when that weight is not paid for, must be handed in with a white way-bill, and they are charged as rate No. 2, which is based on the following scale.

38791. Per what?—Per 100 kg. Constant or station terminals, 15 ore; conveyance for the first 60 km., 1 ore per km.; conveyance for the next 60 km., ·6 ore per km.; conveyance for the next 60 km., ·3 ore per km.; conveyance for each succeeding km., ·15 ore. For consignment over 400 km. they are charged at the rate No. 3, which is based on the following scale:—Constant or station terminal, 15 ore; conveyance for first 60 km., ·66 ore per km.; conveyance for next 60 km., ·4 ore per km.; conveyance for next 60 km., ·2 ore per km.; conveyance for each succeeding km., ·15 ore. When slow goods are handed in as wagon-load goods the freight is calculated separately for each wagon, according to the goods loaded in it, with a minimum of 7,500 kg. for a large wagon and 5,000 for a small wagon. The goods are charged according to the classification at rates No. 4, 5 or 6. A reduction of 10 per cent. is given in freight when at least 10,000 Kg. are sent in one wagon or freight is paid for that weight, the calculation being made by decreasing the original weight of the goods by 10 per cent. and then working out to a multiple of 100 kg. There are some regulations with regard to placing the wagons at consignee's disposal. They are not very important.

38792. Do not mention that. I should like if you would leave Denmark and go to Germany?—Yes. I will come back on it.

38793. We know that some inquiries have been made with reference to the working in Germany by another Department. In Holland and Belgium and Denmark and most of those countries practically the arrangements are all the same. There are little variations, but they have all the same complete load and incomplete load and small rate?—Yes, but with regard to this chapter of calculations of freight charges, it would be necessary to get in the basis of calculation for each country.

38794. I do not think it is necessary for each country. I would rather take Germany as typical?—Do you propose to go back to Germany, because at my November examination I gave evidence with regard to Germany.

38795. Did we finish it?—Yes; completed it.

38796. *Mr. Sexton.*—Is there anything concerning Germany—the calculation of freight charges in Germany—that you think it material to add to your former evidence?—I believe we went right through it at the November sitting.

38797. *Chairman.*—Of course in the subsequent statement you will give us rates in Germany to inland places compared with inland places in Ireland?—Yes. We finished with Germany altogether. The unit rates went on the minutes.

38798. What is the next country to Denmark which you have got on your notes?—Austria and Hungary.

38799. Coming back for a moment to Germany, Mr. MacNulty, I do not think we dealt with the packing and labelling and all that?—Yes; we have that here. I read the minutes all through last night.

38800. *Mr. Acworth.*—May I ask, did you say anything about the liability of railway administration—owner's risk and that sort of thing?—That comes in a special chapter at the end of the statement.

38801. You are coming to it?—Yes; for each country.

38802. After you have gone through rates you are then going back on other points?—Yes, coming to liability. It is dealt with separately.

38803. *Chairman.*—I have got to Austria?—The first point——

38804. *Mr. Acworth.*—They are under the German system?—They have adopted it, but added to it very much. They have a lot of supplementary regulations and rates. Anything that I see of difference between Austro-Hungary and Germany I will draw attention to it. The first point is with regard to Hungary, a transport duty, fixed by law, is added to the freight. This duty amounts in the case of quick and fast goods to 7 per cent., and on slow goods to 5 per cent. of the freight, including loading and unloading charges. The duty is included in the calculated freight—the goods rate.

Austrian and Hungarian railways:—

Transport duty.

38805. *Chairman.*—This will all be adduced when you give us the figures?—I thought it right to mention it here, because it might not be mentioned in my comparison.

38806. That is quite exceptional to Hungary?—Yes. There is a point about the minimum length of railway. That is if the total length is less than 8 km., a freight for 8 km. is charged.

38807. *Chairman.*—That is following my minimum rate of six miles in this country?—Yes.

38808. Well, now, express rates?—Rates for express goods. When fast goods are forwarded by request of the sender and by consent of the railway by express train, the ordinary quick goods rate, with the addition of 50 per cent., is charged.

Scale of goods train charges.

38809. That is the same arrangement. It seems to be general on the Continent?—Quick or fast goods are divided into five heads in Austria. I will just mention them:—ordinary quick goods (which include all goods not mentioned hereafter), reduced quick goods (which include perishables), specially reduced quick goods (relating to used packages or empty packages).

"Quick or fast goods."

38810. That applies to goods that are properly packed?—This specially reduced goods class excludes sacks and milk cans. Ordinary quick goods, when consigned in lots up to 50 kg. and 10 packages per way-bill. New and old sacks of all kind——

38811. I do not think that is important at all so far as we are concerned?—Live poultry——

38812. Let us see what you have got to say about live poultry?—When sent as fast goods in coops or crates they are charged on the gross weight of the consignment at the rates for reduced fast goods. If such consignments are sent in baskets or sacks the weights for reduced consignments, plus 50 per cent., is charged.

Live poultry packing and transit charges.

38813. They would not send live poultry in sacks?—Yes; they do it by putting a ventilating tube in the tying of the sack.

38814. They do? I have seen calves in sacks, but I never saw poultry in sacks. According to the package they vary the rate. If properly packed and easy to handle the rate is lower?—Normal.

38815. And 50 per cent. added if it is abnormal?—Yes. There is a special provision for live poultry not enclosed, but handed in loosely for conveyance as fast goods and conveyed in railway poultry vans, which are small receptacles to be loaded in wagons, if such can be provided by the railway, freight is charged at the reduced fast goods rate for the sum of the weight of the poultry and the tare of the van, which is taken as 250 kg. and when conveyed loose in fowl wagons or ordinary wagons the freight is charged according to the fast goods tariff. For breeding poultry enclosed in coops, crates and baskets they are charged at the reduced fast goods rate on the gross

Jan. 10, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

Austrian and Hungarian railways—*con.*

weight of the consignment. They must be accompanied by a certificate as defined later in the regulation relating to transit by slow goods train. Then there is a subscription rate for fast goods which is practically the same as dealt with in Belgium—I think I gave evidence on it, where arrangements can be made with the company to take so many wagons for a period.

38816. All these other conditions I think you may pass. In fact, I think you have said all you need say on that?—The slow goods are the next. In Austria and Hungary slow goods are divided for purposes of rating with nine classes. Class 1, which is the normal class; Class 2, wagon-load classes A, B and C; special tariffs, 1, 2 and 3; and bulky goods class. Need I go through all these definitions and limitations as to packing, etc.?

Slow goods.

38817. No. They have nine classes?—As regards mixed consignments and bulky goods, the regulations are practically the same as in other countries.

38818. About bulky goods?—For live poultry by slow train——

Rate for breeding poultry by slow goods.

38819. You mentioned that?—That was by fast train. This is practically the same, except that a different rate applies to the poultry. There is a special rate given for breeding poultry by slow train which, I think, ought to be put on the notes. For breeding poultry, sent as slow goods, and enclosed in coops, crates, and baskets, a special reduced rate is charged of ·52 Heller per km.

38820. What weight?—Per 100 kg. In this rate the handling fee is included, but the Transport Duty for Hungarian Railways must be added. This reduced rate must be expressly prescribed by the sender in the way-bill, and the consignment must be sent with a certificate from some Agricultural Society or other body. There is also a regulation with regard to persons accompanying live birds. If they travel in the wagon with the traffic, or in another wagon in the train, they enjoy the following concessions as to payment of fare for the journey. If three or more wagons are sent in one way-bill, then one attendant is carried free for every three wagons. When an attendant travels with a number of wagons less than three, or a multiple of three, then the attendant with one or two wagons, or additional attendants for fractional parts of multiples of three must pay a fare of 2·3 Heller per person per km., including Austrian railway ticket duty and Hungarian transport duty. The fare is calculated on the distance the birds are conveyed, amounts up to 5 Heller being omitted, and those of 5 Heller and upwards being counted as 10 Heller. If, however, the fare on the basis of this unit rate comes higher than the regular fare for third-class in a passenger train, the latter is charged.

Charge for attendants with live poultry in transit.

Limitations of liability for compensation.

38821. That is quite enough of that?—There is a limitation with regard to the compensation payable by the railways in the case of loss, depreciation, or injury of breeding poultry. It is limited to a maximum of 100 kronen for 100 kg.

38822. The limitation applies to all goods traffic?—It is a special limitation in consideration of the reduced rate for breeding poultry.

38823. All the railways on the Continent limit the liability for anything?—They may, by the special tariff.

38824. They do. They limit their liability?—Well, not with regard to ordinary goods. I will come to it in order.

38825. Take it in order?—Goods for exhibition are the next. The conditions are practically the same as in Ireland.

38826. These accessory fees are so small that you need not mention them.

38827. *Mr. Sexton.*—"Depreciation"—that bears on the question of liability?—It does. A premium is charged for declaration of interest in delivery. This is really insurance for the profit which the sender expects to make on his goods, and which profit he can recover in addition to the actual value, if they are lost or damaged.

Computation of compensation payable by the railways.

38828. *Chairman.*—It is an insurance?—An insurance of profit, not of the whole cost of the goods.

38829. That is special to Austria and Hungary?—No. It comes in other Continental countries. The sender may insure the profit that he expects to realise on the goods.

38830. *Mr. Sexton.*—If he loses by delay he may recover up to the full amount of the loss?—The premium has an effect on the question of compensation which the railway company has to give in the case of delayed transit.

38831. It bears on the actual value of goods and on the expected profit?—Yes.

38832. *Chairman.*—I see there is an important charge made for disinfecting wagons?—Yes, for wagons used for the conveyance of animal or raw products, or offensive matter, a fee of 4 Heller per 100 kg. is charged, with a minimum of 40 Heller per consignment, or maximum of 3 kr. per wagon. For stable manure if the wagon must be disinfected in accordance with special regulations the charge is 3 kr. per four-wheeled wagon, and 5 kr. per wagon with more than four wheels.

38833. There is no such charge in Ireland?—No.

38834. *Mr. Sexton.*—They do not disinfect goods wagons in Ireland?—No. They must clean them. They are not obliged by law to do it, but I presume they do it for their own protection.

38835. We know they have to disinfect cattle wagons.

38836. *Chairman.*—They have to clean goods wagons. Would you like to say anything about export traffic?—The export tariffs are only applied when goods are sent direct outside of the Austria-Hungarian Customs area, except in such cases as they are allowed by way of rebate in respect of goods conveyed to frontier stations, stored there for a time on the railway premises, and then exported. In this case the application for rebate must be accompanied by the original way-bill to the frontier station, and the duplicate of the re-forwarding way-bill or a ship's bill of lading proving actual export.

38837. We understand from that that from Austria and Hungary there are low export rates?—Which are applied directly if the goods are sent out of the country.

38838. And if sent to a frontier station they may claim it by rebate?—Yes, on production of proof.

38839. I see a charge for transferring to and from the owner's carts?—That is for handling services. I do not think there is anything corresponding to it here. The railway company will load and unload the owner's carts. They will take the goods off the cart into the store, and load the cart. Austria-Hungary is the only country in which I found such a regulation.

38840. That is sufficient. You may state what it is if you have the figures?—Objects exceeding 750 kg. in weight, or 7 metres in length, up to and including 1,000 kg. each object, 6 Heller per 100 kg. of the whole consignment. It varies very much. Take general goods. For ordinary goods it is 2 Heller per 100 kg., that is 20 Heller per ton.

38841. *Mr. Sexton.*—2*d.*?—Yes; 2*d.* for ordinary goods—general merchandise.

38842. *Chairman.*—You will hand in the unit rates of Austrian State railways the same as for the others?—Yes, and the Hungarian.

38843. Now we pass to another subject?—Yes. Take labelling of goods. I made a separate subject of packing and labelling.

38844. Well, we will take two countries—France and Germany for that. Can we do that?—Yes. I have them here.

38845. You are are now dealing with the subject of packing and labelling goods by goods train in France?—Yes.

38846. Give us the general regulation?—The railways are not bound to accept unpacked goods, which, in ordinary commerce, are packed, nor are they obliged to accept defectively packed goods, or such as show evident traces of deterioration. Goods liable to get mixed with others, or which may be injurious in contact with others, are not accepted in a loose state except in complete wagon loads of 4,000 kg., or paying for that weight. Goods not clearly addressed or marked may not be accepted. Chalk markings are not admissible. Commodities such as cereals, flour, grain, must be sent packed. Chestnuts, acorns, and potatoes, and some other goods may be sent in bulk in full wagon-loads. This requirement applies only to the Nord system. I have taken it chiefly for comparison, as it is an unguaranteed line and serves an agricultural and industrial district.

38847. This particular requirement is only on the Nord system?—Yes, with regard to the slow transit of cereals and so on. There are regulations with regard to trees, and shrubs, and growing plants, which have to

be made up in such a way that they may be laid flat and on the top of each other. Special regulations also apply with regard to oysters and fresh fish, which must be sent in barrels and casks of a design approved by the company.

38848. It seems that the railway companies have got stringent regulations relating to the packing and labelling of goods in France?—Yes, the object being safe transit and convenience of loading.

38849. And convenience of handling. That is in France, but Belgium is practically the same. What about Germany?—The first general regulation is that necessary packing for protection of goods against loss devolves on the sender, and if the railway company —

38850. Stop a minute. Make that rather more explicit. There is something else besides that?—Necessary packing for protection of goods against loss, depreciation, and damage, devolves on the sender.

38851. That is an important regulation?—If the railway company accept unpacked or defectively packed goods it is entitled to require the sender to admit absence or deficiency of packing in the way-bill, and to notify the same to the station of destination in a special declaration on a prescribed form. A general declaration may be made once and for all.

38852. That is to say, a consignee may undertake to take all the risk for his goods for any time?—Yes. In such cases a note of the general declaration must be made in each way-bill.

Mr. Sexton.—As to unpacking and defective packing.

38853. *Chairman.*—Yes. Only for that?—Without such declaration the railway will not accept consignments of hides simply roped up, or sugar in loose loaves. When filled barrels, such as dirty oil or syrup barrels, are so covered with dirt that their condition cannot be ascertained when handed in, they are accepted for transit only when the consignee acknowledges their condition in the way-bill. There are a number of regulations for particular commodities—eleven, I think. Need I take them through seriatim?

38854. No. Mention them generally?—Cigars must be so packed that they cannot be tampered with in transit.

38855. Sealed?—Yes. Barrels containing liquids must not show leakage or depressed knot holes. Certain empties must be dry outside, and properly closed, to prevent bad smell.

38856. What about fish?—Packages containing fresh fish packed in ice must, as a protection to other goods, have straw, shavings, or turf moss on the inside, bottom, and sides. Filled sacks must be bound with ropes, and so fastened as to leave sufficient neck to take hold of. Full potato sacks must have the address on a tablet of wood or other lasting substance.

38857. It comes to this, that everything must be properly packed before the railway companies will receive it?—Yes. They will not accept responsibility unless it is properly marked, but there is a regulation stating that they will mark the goods and charge for them if they find the goods imperfectly marked. The railway company is empowered to demand that goods in separate packages shall be marked by the sender, with the name of the station to which consigned, unless their nature does not admit of marking. If the sender omits to mark the name of the station, this will be done by the goods department of the sending station, when the nature of the goods permits, without any special difficulty, and a marking fee of 5 pf. per parcel, fixed in the accessory tariff, will be levied.

38858. *Mr. Sexton.*—About a halfpenny—a little more than a halfpenny?—Yes.

38859.—*Chairman.*—I think we may take these two countries as quite sufficient. Now, there are regulations on the Continent with reference to the ordering of wagons. Take France again, if you do not mind?—The consignors are bound to intimate at the departure station the number of wagons which they require for the consignment of their goods, the loading of which they must, or are able to, effect. They must indicate, at the same time, the nature and approximate weight of the goods, as well as the railway system to which they are destined, specifying whether the consignment is to be forwarded under the conditions of general or special tariffs. Consignors may make, in one and the same letter, requests for wagons for different days. A record of these requests is kept by the company in a special register. The company must, on the day following an application for wagons, provided that the letter has been sent so as to arrive before the station is closed, inform the consignor of the day and hour when the wagons will be placed at his disposal, if the application be for one occasion only, and when the first supply of wagons will be available if they are applied for for different days. In the latter case like information is given for each subsequent supply of wagons, by an advice, which must be sent so as to reach the consignor at latest in the evening before the date indicated by the company for the corresponding delivery of wagons.

French railways:—Timber traffic regulations

38860. Those regulations are in consequence of the system of full wagon-load rates?—Full wagon-load rates.

38861. Are there any special regulations with regard to timber?—The consignor must indicate the maximum length of the objects comprising the consignment.

38862. I see they are practically the same in every country.

38863. *Mr. Acworth.*—May we have Belgium, Mr. Chairman?

Belgian railways:—Regulations as to the ordering of wagons.

38864. *Chairman.*—What about Belgian State Railways? What is the procedure there?—With regard to applications, it is practically the same as in France. The applications are registered.

38865. *Mr. Acworth.*—The time?—The application must be made at least forty-eight hours' in advance when the exclusive use of a wagon is required, and the period is doubled when application is made for five wagons.

38866. *Chairman.*—That is, two days' notice of a cattle wagon being wanted?—It scarcely applies to cattle.

38867. *Mr. Acworth.*—Four days if five are wanted? This applies to goods only. It may or may not be the same for cattle.

38868. *Chairman.*—This is in respect of orders for goods wagons?

Liability of railway companies as to the provision of wagons.

38869. *Mr. Sexton.*—For merchandise?—We are dealing with merchandise traffic only. In Belgium there is also a limitation. If the railway refuses to supply wagons, they must compensate for damage caused thereby, but no compensation is payable in case of accident, superior force, or an outside cause, not imputable to the railway. Abnormal traffic is considered a case of superior force.

38870. *Mr. Sexton.*—Compensation for damage is general in all these countries?—Yes.

38871. In all the countries?—I will go into it fully under the heading of liability. It is all in that chapter.

Colonel Hutcheson Poë.—Practically that clause relieves them from all liability?

Chairman.—Those last words. They can always plead abnormal traffic.

38872. *Mr. Sexton.*—They must prove it. It is evidently a reason which can only be used on exceptional occasions?—I think it never arises.

38873. Never arises?—Did you say Germany?

German railways:—Regulations as to the ordering of wagons.

38874. *Chairman.*—Take Germany?—With regard to ordering the wagons by consignors and keeping the record at the station, it is practically the same. Security must be given, though, by the consignor when required by the railway, to cover one day's loss of time in loading; and when the railway fails to supply promised wagons punctually it is bound to pay to the parties ordering the wagons compensation equal to the demurrage for the time over which the delay extends. Wagons are held to be promised when a written statement to that effect has been received.

38875. *Chairman.*—In other words, if the railway company does not supply the wagons the consignor can claim demurrage or compensation equal to the demurrage charged by the railway company?—Yes.

Rules regulating the acceptance of goods for transit on French railways.

38876. I do not think we need labour that question any more. With regard to acceptance and despatch of traffic by railway?—Will you select a country. In France articles subject to deterioration or of no value are only admitted for transit when carriage is paid in advance. As to the hours for the acceptance of traffic, there is a great variation in some of the countries—some 6 a.m. to 6 p.m., some 6 a.m. to 7 p.m., and some 6 a.m. to 8 p.m. There is a provision in France that on Sundays and holidays the stations are shut at 9 a.m. on Sunday for the acceptance and delivery of slow goods, even for those sent in full wagon loads, the handling of which is incumbent on the trader; nevertheless the acceptance and delivery of poultry, game, fish, oysters, and shell-

Jan. 10, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

fish, dead meat, and other perishables may be effected up to 10 o'clock on Sunday morning.

38877. *Chairman.*—Oh, there is nothing in that. Have you anything to say about Germany?—First, that the railways are only bound to accept goods for transport when the forwarding of them can be effected at once.

Rules regulating the acceptance of goods for transit on German and Dutch railways.

38878. They would accept to store?—Yes; there is a limitation—I believe. In Holland there is a storage provision. The railways are not bound to accept goods for transit when the available rolling stock of the company is not sufficient to forward the goods within the regulation time limit. They are, however, obliged to accept them for temporary storage pending transit, in so far as available space permits, but during said storage the goods are in the care and at the risk of the sender, who must declare himself as satisfied with this arrangement.

38879. Is there anything turning upon the weighing? There are small charges made in every country?—Yes, but they are only made for wagon loads, when weighed specially at the request of the consignor or consignee. They are not made as a matter of course, but only when specially requested, and the same for counting—if the consignor or consignee requests the railway company to check the number of packages, they make a charge.

French railways:—Regulations as to loading, demurrage, etc;

38880. There is nothing in that. Now, loading and unloading and removal of the traffic. I think that is rather important. Will you take France and Germany again as typical places?—The first point is the time limit for loading. The loading of wagons must be completed in the course of the day on which they are placed at the disposal of consignor, provided that the advice note respecting the vehicles has been addressed to the person concerned, so as to reach him on the previous evening before six o'clock, and that the wagons have been placed at his disposal from the usual hour of opening the station. When one or other of these conditions has not been fulfilled the period assigned to the consignor for loading is increased by twenty-four hours. Demurrage charges are levied for delayed loading as follows:—Per day of delay, 10 francs per wagon for each of the three first periods of twenty-four hours, and 12 francs per wagon for each additional period of twenty-four hours; but if the number of wagons placed at the disposal of the consignor exceeds the maximum figure in the application formulated by him for one of the five preceding days, the loading period cannot commence to run each day for any number of wagons greater than that maximum, and the demurrage fee is charged only on the difference between the maximum and any lesser number of wagons actually loaded. The surplus is carried over to the next day in calculating loading time and demurrage, subject to being carried again forward if the maximum is exceeded on the next day.

38881. Have you made any calculation in the figures which you have promised us in reference to the rates—have you allowed anything for that?—Not for demurrage. I have treated traffic normally. These are penalties and I have not dealt with penalties.

38882. *Mr. Sexton.*—Of course in Ireland also penalties are distinct from rates?—Of course.

38883. *Chairman.*—Is there a time limit for unloading wagons?—It is practically the same period as allowed for loading—that is, it must be in the same day on which wagons are placed at the disposal of the consignee, otherwise demurrage is charged.

38884. And you have given us the demurrage charges?—Yes. There is a point, that the company may unload the goods, charging 30c. per ton.

and as to labourage and storage charges.

38885. They can charge for labourage and for storage as well?—Yes.

38886. This relates to wagons, but if they leave the goods, then the consignee is liable for demurrage?—Yes. In the one case he pays the demurrage charge, and in the other he pays for unloading and storage.

Rights of senders as regards the entire use of wagons.

38887. How does that apply to storage?—Any consignment of small goods not completed within twenty-four hours may be refused and the goods sent back to the domicile or to a public warehouse at the expense of consignor. A sender who, under the terms of the tariff, effects loading, is entitled to make use of the entire capacity of the wagons used on the condition that he does not exceed the maximum weight which the wagon can carry and the dimensions of the loading gauges.

38888. Of course if he pays for 5 tons he can put 5 tons into it, and if he pays for 10 tons he can put 10 tons and no more?—Yes, but if he pays for 5 tons and leaves half the wagon vacant, the company perhaps could not use it. In some countries they can where the railways reserve to themselves the right to make use of any unused portion of a wagon except the sender pays for the freight for the full capacity.

38889. That must be confined to some one country?—I will refer to it later.

38890. *Mr. Sexton.*—It is not in France?—No.

Chairman.—Nor in Denmark, nor Germany, nor Holland, nor Belgium.

38891. *Mr. Sexton.*—Then it must be in Austria-Hungary?—I can give it in half a moment. You will find in the index a reference to the railways having the right to use an unused portion of a wagon.

38892. *Chairman.*—There are small fees charged by the railway companies for handling goods. I need not go into that—when they do the work?—When they unload and load. The fees charged include also the station terminals. If you look at the segregation of the charges you will find there are 35c. for station charges on departure and 35c. on arrival.

38893. We will have that separately. Go back to par. 292?—For the manipulation of goods of all kinds by the railway the following fees are charged:—1·50 fr. per ton for goods carried according to tonnage, and 1 fr. per ton for goods carried per consignment of 4,000 kg. and upwards, or per full wagon.

38894. That seems rather heavy—10*d.* per ton for bulked goods. However, they make that charge?—It includes station and service terminals. It is 1*s.* 3*d.* per ton for small goods.

38895. *Mr. Sexton.*—It includes station terminals, service terminals, loading and unloading?—The loading and unloading I call service terminals. There are two charges. I will give it in detail as it is here. The charges are made up as follows:—For goods carried according to tonnage, less than 4,000 kg. consignments. The charge for loading at departure is 40c. per ton per 1,000 kg.; unloading on arrival, 40c.; station charge on departure, 35c., and station charge on arrival, 35c. For goods carried per consignment of 4,000 kg. and over, or per full wagon-load, the charges are:—Loading at departure, 30c. per ton; unloading at arrival, 30c.; station charge at departure, 20c.; and station charge on arrival, 20c. These fees are charged irrespective of the method of loading or unloading employed, whether crane, weighing machine, gangway, or hand.

38896. Is there any allowance made when the owners of the goods do the service?—For goods carried per consignment of 4,000 kg. and over, or per full wagon-load, and when the labour of loading and unloading is performed by the consignor or consignee in accordance with the tariff applied, the fee of 30c. per ton for each operation of loading or unloading is deducted and the station charges only of 20c. per ton on departure and on arrival are payable. The railways do not charge the fee if they do not do the work.

38897. *Mr. Sexton.*—Is that general on the Continent?—That is general.

38898. There is no charge unless they do the work?—That is so.

38899. *Chairman.*—The loading and unloading is done by the sender and consignee?—Yes. I came across only one instance—I forget which country it was—where for goods sent by quick transit it was provided that if the goods were loaded by the railway company at the point of departure and the consignee unloaded them, he should get no allowance for doing the work.

38900. Have you any remarks with reference to charges made on private siding goods?—20c. per tonne is charged to the first departure station on the main line, and 20c. per tonne to the station of destination, or *vice versa*, when goods are sent from or to private sidings.

38901. Instead of the 30c. when they are sent from the station?—It is 20c. for wagon-loads.

38902. You are quite right?—This may apply to small consignments or to wagon-loads.

38903. They would not send small consignments to a siding, would they?—Certain provision is made for it in the rates. Small consignments not exceeding 40 kg. are in all cases exempt from loading, unloading, and station charges.

38904. The rate includes them?—Yes; they are in a special tariff.

38905. I suppose the railway company have power to charge for the use of cranes and so on if they use them?—Yes.

38906. Are there any storage and wharfage charges?—Suppose goods on arrival at a station are put down on the wharf or in the siding, would the railway company have power to make a charge?—For storing in the open?

38907. Yes?—When goods addressed to a station are not removed from whatever cause, within the prescribed time, a fixed storage fee is charged per indivisible fraction of 100 kg., as follows:—5c. for each of the first three periods of twenty-four hours; 10c. for the fourth period of twenty-four hours; 15c. for the fifth; and 20c. for each additional period of twenty-four hours. In all cases the minimum charge is 10c.

38908. A minimum charge of 10*d.* per ton?—Yes.

38909. That is for storage only?—Yes.

38910. *Mr. Acworth.*—How is it possible if you charge 5c. for one day? You say there is a minimum charge of 10c. Do you mean that they must charge for two days?

38911. *Chairman.*—It is 5c. per day?—That is the minimum charge for any sized consignment. It is as for a two-ton consignment practically. These fees are also charged for storage of goods addressed to domicile when consignee is absent, unknown, or refuses to accept delivery, but subject to notice of the fact being immediately given to the sender. In such a case the cartage of the goods back to the station is also charged. Storage may also be charged, after the lapse of twenty-four hours after handing in, on goods which the railway, on request of a sender, agree to store on their platforms or in their warehouses at the despatching station beyond that time. Railways are not, however, bound to accept any goods but those ready to be forwarded. There is an obligation on the railway to advise the sender immediately of any delay in the removal of goods from the station of destination.

38912. Because all the rates are from station to station, practically?—They are not collected and delivered, therefore they must advise the consignee?—They have cartage arrangements at a very considerable number of stations, but in case of delayed delivery they must advise the sender of the goods. With regard to collection and delivery, I will give you full information upon it.

38913. That is dealing with France, is it not?—Yes.

38914. Now, we will go on to Germany, if you do not mind. I think that there we shall find practically the same arrangements?—Yes. Small goods are loaded and unloaded by the railway, the charge being included in the rate. All other goods have to be loaded and unloaded by the sender or consignee.

38915. Practically the same as in France?—Yes. Certain consignments in less than wagon-loads must also be loaded by the sender—large packages of over 750 kg. each, or of exceptional dimensions. Need I mention the loading and unloading fees here?

38916. Yes, for goods?—For general goods: Loading or unloading fees per 100 kg., 4 pf.; cranage fees per 100 kg. additional to loading or unloading fee, 3 pf.; maximum cranage charges for one waybill consignment, 50 pf.; maximum cranage charges for one wagon, 2 marks. With regard to certain traffic carried loose and unloaded by the side of the line the charge is 6 pf. per 100 kg.; that is, 50 per cent. additional.

38917. That is when the work is done by the company?—Yes.

38918. I see that they charge for the crane in the same manner as in France?—Yes.

38919. And there is a time limit for loading by the sender?—Yes.

38920. Just the same as in the other cases?—Yes.

38921. Do they make the same storage, wharfage, and demurrage charges?—It is 10 pf. per 100 kg. for storage every twenty-four hours. It is practically the same, except that it is for every twenty-four hours; in the other case the charge is increased after a certain number of days.

38922. After three days?—Yes, after three days.

38923. But I see that in Germany, in regard to heavy traffic, the loading must be done by the senders?—Yes—loose (or bulk) loading.

38924. Do the Germans advise the same as the French?—Yes, they advise the arrival of the goods, and they charge practically the posting fee.

38925. They all charge the posting fee?—Yes.

38926. If anything is posted on the Continent by a railway company it is charged to somebody?—Yes. In some cases, if they advise people near at hand, there is no charge.

38927. But whenever there is a fee paid for postage they charge it?—Yes.

German railways:—

Advice notes.

38928. There is a time-limit for the removal of goods; that is practically the same, is it not?—Yes.

38929. And they have power to make a storage charge if the goods are not removed?—Yes.

38930. It is in Germany where the railway company may use the unused portion of a railway wagon?—Yes. The railway may make use of the unused parts of wagons loaded by the senders.

Regulations as to supply and conveyance of loading implements and protective appliances.

38931. Then with regard to consignor's loading implements and warm and cold protective materials?—I may give you a general reply upon that. Generally throughout the Continent, senders of goods may use certain appliances for the protection of their traffic during transit, and also warm and cold protective materials. These are carried free by the railway companies, and returned free, without the railway companies assuming any risk for their conveyance, by slow transit.

38932. As a matter of fact, by slow transit the sender has to find his own sheets for covering the wagons?—The railway companies will supply them, and make a charge for them.

38933. I mean the sender has to pay for them?—Yes, unless the tariff specially provides that the goods shall go by covered wagon.

38934. The covering and uncovering of goods is your next subject?—Yes.

38935. Just take Germany in regard to the covering and uncovering of goods?—The loan of covers to a sender, at his request, is only made by the railway in so far as covers are available, and provided no damage to them from the nature of the goods loaded is to be feared in the judgment of the railway officials on the station. The spreading of the covers lent to a sender lies within the option of the latter.

38936-7. We will take it shortly. It means this, that all these railway sheets of any kind or description, that are used for covering wagons, have to be paid for by somebody?—Yes.

38938. And the sender has to provide the covers or pay the railway company for providing them?—Yes.

38939. If the sender provides them, the railway company carry them back free to the sender after the journey is completed?—Yes, by slow train only. If they take them by fast train they charge a certain sum for that.

38940. Practically, that is the arrangement throughout the Continent?—Yes.

Wagon cover hire.

38941. You might mention the fee charged?—The fee for hire of wagon covers amounts for every 100 km. of the whole transport stretch begun, and for every wagon, to (*a*) when two covers at most are used, 1 mark, 50 pf.; (*b*) for every additional cover, 50 pf., with a minimum charge of 2 marks, 50 pf.

38942. That is 2*s.* 6*d.*?—Yes.

38943. *Mr. Acworth.*—A minimum charge of 2*s.* 6*d.* for sixty-six miles.—Yes.

38944. *Chairman.*—You know that all these are provided free in England and Ireland?—Yes; I understand that.

38945. When the railway company supply these covers, and the sender uses them for a longer period than he ought to do, have they power to make a demurrage charge in addition?—Yes; they impose a charge of 50 pf. per day for each cover.

38946. So that they charge for the use and also for demurrage, just the same as for a wagon?—Yes. With regard to that, perhaps I might mention that this demurrage charge for covers is not taken into account for the days for which demurrage is levied for the wagons on which the covers were to be or have been used. It is sunk in the general wagon demurrage rate.

38947. *Mr. Sexton.*—They will not make a demurrage charge on both the wagons and the covers?—That is so.

Chairman.—With regard to private goods wagons; have you private goods wagons in Ireland?

Jan. 10, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

French railways:—

Refrigerator vans.

Mr. Tatlow.—There are practically none in Ireland.

38948. *Chairman.*—Then we will pass on to refrigerator vans?—Provisions may be carried over the Paris, Est, Etat, Midi, Nord—all the large railways in France—in refrigerator wagons, supplied by consignors or consignees, or in flat trucks hired out by a railway company, and equipped with ice chests by the hirers. The transport of provisions in private or hired refrigerator wagons is subject to the general and particular conditions of the tariffs applied, in so far as the latter are not contrary to the following general regulations. There are regulations as to the registration of these wagons, which are largely privately owned, or supplied by the contractors. They must be registered by one of the six large French railway companies.

38349. That is the same here. All private wagons have to be inspected by the railway companies here?—Yes.

38950. Now go on to the charge. This is a provision I understand, for senders supplying their own refrigerator wagons?—Yes.

Regulations as to registration and supply.

38951. I do not know that there is anything of the kind in this country, so that we need not refer to it at all; the railway companies supply them?—With regard to these refrigerator wagons, I think it might be well to go through each country.

38952. Why? It does not compare with anything in this country?—The conditions vary. In France certainly they have to be hired; in some countries the railway companies supply the refrigerator wagons.

38953. So they do here, and they make a charge on the Continent. Wherever you find them on the Continent they make a charge if they belong to the railway company, but they make no charge here?—No, there is no special charge. There was, I think, a minimum consignment specified. Whether that minimum consignment still applies, I do not know. I am speaking now of the Great Southern and Western Railway. However, the railway companies will be able to give the Commission full information on that point.

38954. *Mr. Acworth.*—The rest of the paragraph seems to imply that the railway companies do not keep refrigerator vans, but in paragraph 422 you speak of refrigerator vans for fish hired from one of the railway companies. I do not know whether you can tell us anything on that. The paragraphs says that fish may be carried in refrigerator or ice wagons supplied by consignors or consignees, or hired from one of the railway companies. It seems to imply that the railway companies keep some?—That is taken from the Nord Railway regulations. There is a provision for hiring ordinary flat wagons from the railway companies, and the consignor fitting them up with ice chests at his own expense. That is probably what is referred to there.

38955. You think that it is the same thing that is referred to in paragraph 412?—Yes—trucks hired from the railway company and fitted up with ice chests.

38956. *Chairman.*—That is what they do on the Parisian lines—they have these flat trucks and ice chests?—Yes; they have to be fitted by the consignor.

Time limits for conveyance of goods traffic.

38957. Now we come to the time limits for conveyance. Take France?—Traffic is to be forwarded during the day following that on which it is consigned. The duration of the journey in the case of slow transit is calculated at the rate of twenty-four hours per indivisable fraction of 125 km. Surplus distances up to and including 25 km. are not reckoned. There are certain exceptions in France for specified lines of railways, where the rate is 200 km. for every twenty-four hours for goods charged in certain classes.

38958. To my mind that does not cover what the heading points out—"Time limits for conveyance"?—For the duration of the journey, the statutory time is at the rate of twenty-four hours for every 125 km. carried. But I can give you a table at the end which will put it very shortly.

38959. We will have a table?—You will find it in paragraph 448.

Regulation times of transit for slow goods.

38960. That will explain the whole thing?—It gives the normal times of transit for slow goods. From 1 to 150 km., inclusive, the total time will be three days.

38961. I do not think that that is right, from what I know of these things. Do you mean to say that for 150 km. the transaction must be completed in two days?—Three days.

38962. You have two days in the table?—That is exclusive of the days of consignment and delivery.

38963. Would not that make it four days?—It is an exact copy of the published time table, taken word for word. The note is, "The foregoing tables present directly the calculation of times for consignments by slow transit on one and the same system."

38964. Very well; we will take it for what it is worth?—151 to 275 km., four days; 276 to 400 km., 5 days; 401 to 525 km., 6 days.

38965. Now give it for 1,000 km.?—901 to 1,025 km., 10 days.

38966. That is quite sufficient; that will cover any distance in Ireland?—Yes.

Mr. Acworth.—Might we get on the notes the bottom paragraph on page 56 in reference to cases where there are more than one system involved, because that modifies it very considerably—the paragraph relating to traffic passing from one railway system to another?

38967. *Chairman.*—Certainly?—The next part, in parentheses, deals with that point, if you will allow me to read it.

38968. Take paragraph 445—prolongation of time limits for goods passing from one railway to another?—For traffic passing from one railway system to another through a station common to both, the forwarding time will be counted only from the station of origin, and once only, but a period of one day is allowed for transmission from one railway system to another, the time of transit for each company remaining fixed as under the regulations given above. The time of transmission between railway systems terminating in the same locality in two separate stations connected by railway lines is two days, but, with this exception, the conditions named in the preceding sentence apply in such cases. In the note to the table it is specified that by adding one day for each junction to be passed through you get the total number of days.

38969. *Mr. Acworth.*—I do not follow?—The part in parentheses is the explanation of this paragraph 445 for the purposes of the table.

38970. May I quote your paragraph? "The time of transit for each company remaining fixed" is what you say in paragraph 445?—Yes.

38971. As I understand you now you say that the time of transit is the same; I do not think that that is so?—No. Count separately for each distinct railway the time shown for "conveyance," add to the total thus obtained one day for forwarding at the original departure station. It is perfectly right.

38972. That is right, but I did not understand you to say that?—That is the statutory limit.

38973. It would work out in this way: it would be Monday to Monday. Delivery to the company on Monday; allowed for forwarding and conveyance, Tuesday and Wednesday; allowed for junction with the other company, Thursday; for forwarding by the second company, Friday and Saturday; delivery to the consignee, the Monday of the following week. That is for any distance under 100 miles?—Yes, under 150 km.

38974. *Chairman.*—Does not that put it very clearly?—Yes.

38975. And correctly?—Yes. That is correct in accordance with this table.

38976. *Mr. Sexton.*—These are the limits which must never be exceeded?—Yes; that is the maximum.

38977. *Chairman.*—I know they have a very wide limit of time allowed for transit. Of course the instances that you gave me just now in answer to my question are for normal times?—Yes.

38978. In certain sections of the country and on certain railways there are alterations of those times?—Yes.

38979. And those you mentioned in answer to Mr. Acworth, the time allowed where there is a connection with another company?—Yes.

38980. That deals with slow traffic?—Yes.

38981. Do any of the special tariffs contain provisions varying the normal time limits?—Many of them do.

38982. What are they?—The time limits would be given together with the special tariff. I have not any note of them here. In each special tariff is shown the prolongation of the time limits to compensate.

38983. The lower the rate the longer the time they are allowed?—Yes; that is the way the railway company protects itself.

38984. That is what they do generally abroad?—You may take that as the general rule.

38985. Where there is a special low rate made they are allowed extra time for working it?—Yes.

38986. Now, a few words with regard to fast transit?—Traffic consigned by fast transit is sent off by the first passenger train comprising carriages of all classes and corresponding with the destination of the traffic, provided that it has been presented for registration at least three hours before the departure of the train in question, in default of which it will be held over until the next departure. This regulation is not, however, obligatory in the case of express and mail trains, on which the companies allow, in exceptional cases, second and third class carriages, and which have been expressly designated either in the rate books submitted for Ministerial approval of alterations in the service or in the notices acquainting the public of the train service. The railway companies may, at their own request, be authorised to admit small parcels to their express or mail trains proper, provided that the same treatment is accorded to all consignors under the same conditions. For fast train traffic passing from one railway system to another, through a station common to both, the time allowed for transmission is three hours reckoned from the arrival of the train bringing them to the junction, and re-forwarding the traffic from that point is effected by the first passenger train comprising carriages of all classes leaving after the expiration of that term. The time allowed for transmission between railway systems ending in the same locality in two distinct stations communicating by rails will be six hours, not including the time during which the stations are closed. Special regulations apply to transmission over the Circle Railway between railway termini in Paris. Longer terms than the foregoing may be granted by the Minister of Public Works in the case of various stations on each railway system, on the application of the General Traffic Inspectors and with the consent of the companies, provided such term does not exceed eight hours. Consignments of fast train traffic are placed at disposal of consignees at station of destination two hours after arrival of the train by which conveyed.

38987. Those are the arrangements for the consignment of small parcels by passenger train?—For traffic by fast train generally.

38988. It is parcels by passenger train?—Yes, fast transit.

38989. I think we may take that as being pretty generally the system over the Continent, without going into any other country. Now, the collection and delivery of goods by railway?—All the large railways in France have arrangements for cartage of goods at their principal stations. If goods are to be carted on arrival an entry to that effect must be made on the way-bill by the sender, otherwise they will be consigned to station only. I made an analysis of the carting arrangements on the Nord line specially, and found that out of a total of 737 stations they have cartage organised for delivery of slow goods at 238, serving 502 cities, towns, villages or districts, excluding Paris.

38990. Take the number of stations; there are 238 stations at which cartage arrangements are in existence?—Yes. That is for delivery of goods. For collection, there are arrangements at 78 only.

38991. That is curious?—Yes; they deliver at many stations, but do not collect.

38992. Out of 737 stations on that line, 78 only have collecting facilities?—79, including Paris.

38993. Say 80; it does not matter?—Yes. 238 have cartage arrangements for delivery organised. The rates vary very much. I was going to say that almost every place seems to have a rate of its own, but I will not go so far as that. But they vary according to local conditions.

38994. Can you give us the minimum and the maximum?—Shall I give the prevailing? I have the prevailing charges.

38995. How do you calculate the prevailing charge?—I took a number of distances and indexed the charges for each. In arriving at the prevailing charge I took the one that applied to the greatest number of places within each distance. I have my lowest charge and my highest indexed.

Prevailing cartage charges.

38996. *Mr. Sexton.*—The figures you are about to give us are not averages, but actually prevailing charges?—Not averages, but actually prevailing charges. For 1 km. it varies from 2 fr. to 3 fr. per 1,000 kg.

38997. *Chairman.*—Per ton practically?—Yes. Shall I mention the minimum charge per consignment?

38998. Yes?—For 1 km. the prevailing charge is from 2 fr. to 3 fr. per 1,000 kg., with a minimum charge per consignment of from 20c. to a maximum of 75c. according to local conditions. For 2 km. the prevailing charge is from 3 fr. to 4 fr. per ton, the minimum charge per consignment varying from 25c. to 60c.

38999. They seem very high, do they not?—Yes; cartage charges in France are high.

39000. You might give another instance—the largest?—For 9 km.

39001. Will that be Paris?—I have special cartage rates for Paris. For 9 km. the cartage charge varies from 10 fr. to 14 fr. per ton.

39002. That will apply rarely in this country?—Rarely.

39003. The prevailing charge is about 1*s.* 8*d.* to 2*s.* 6*d.* per ton?—Yes, within the ordinary radius of cartage as compared with Ireland.

39004. If it is more than that it gets up to about 3*s.*?—Yes. Take 4 km., 4*s.* 6*d.* or 5*s.*

39005. So far as cartage charges are concerned they seem to be rather excessive in France?—They are rather higher than here.

39006. You said you had something special with regard to Paris?—Yes.

Cartage arrangements in Paris.

39007. That does not compare with anything in Ireland?—No. Paris is divided into two zones, consisting broadly of the districts on the right and left respectively of the Seine, and they have different charges for the two zones

39008. Of course, cartage charges in London are very heavy?—Yes.

39009. I do not think that that would apply to Dublin?—There is a distinction made generally with regard to cartage which comes in here. Do you intend to go through each country in regard to cartage?

39010. No; take France and Germany?—In Paris when consignments are addressed direct to the domicile the cartage charge is lower than when they are directed to the station and orders are subsequently given for delivery.

39011. Yes, because there is double handling; that is the reason?—I understand; but I draw attention to the fact that they have separate schedules of charge.

39012. They would be sure to have, because there is more work to be done.

39013. *Mr. Acworth.*—Apparently in Paris the railway companies have branch offices at which you can deposit goods?—Yes.

39014. But they do not regard those branch offices as stations of the railway, and they make a charge of 5 fr. for ordinary goods and 3 fr. 50 c. for export goods for taking them to the actual station?—Yes.

39015. It is rather interesting, because one has heard so much of the arrangements in England of receiving offices at the station rates?—Yes.

39016. I suppose you have the same thing in the big towns—Belfast and Dublin?—I do not know about that.

Mr. Tatlow.—For parcels traffic, yes.

Mr. Acworth.—You do not receive goods?

Mr. Tatlow.—No, not at branch offices, only at the stations.

Mr. Acworth.—Of course in England they do.

German railways—

39017. *Chairman.*—Is there anything special in Germany?—No, except with regard to the rates for cartage. The rates for cartage vary in different countries.

Cartage rates in Berlin.

39018. Have you made the same calculation with regard to Germany—or perhaps you have not been in a position to do it?—I have got general information. The cartage tariff given me was for Berlin. For slow goods, up to 50 kg., 30 pf. This is for conveyance from the station to the house or to the place of business of consignee. From 51 to 100 kg., 40 pf.; for each remaining 50 kg. or part thereof, 15 pf.

Jan. 10, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

German railways—*con.*

Cartage charges at stations other than Berlin.

That is for slow goods. For fast goods, bulky goods, and fragile goods, up to 50 kg., 60 pf.; from 51 to 100 kg., 80 pf.; for each remaining 50 kg. or part thereof, 30 pf.

39019. For what distance is that?—That is within Berlin.

39020. You have not anything for the country?—At all the large stations cartage is organised, and the charges for collection or delivery are generally, for slow goods, up to 50 kg., 25 pf.; for each remaining 50 kg. or part thereof, 15 pf.; for fast, bulky, and fragile goods, up to 50 kg., 50 pf.; and for each remaining 50 kg. or part thereof, 30 pf. That was the general answer given me as applying to Germany.

39021. Just below the Berlin rate?—Yes.

39022. The next subject is the liability of railways?—Yes.

French railways:—

Extent of the liability for delays to goods.

39023. We will take France first again there?—The first point is compensation for delay in transit. Delay to traffic beyond the fixed conveyance time limits does not entitle a consignee to compensation when he suffers no loss, but when such delay has been prejudicial he is entitled to integral damages—that is, such damage as he suffers.

39024. *Mr. Acworth.*—Full damage, I think, it means?—I give the translation. He is entitled to damages. The Commercial Code defines that a railway company owes no reparation for loss beyond what can be judged intrinsically.

39025. *Chairman.*—We understand that this is what you call a literal translation?—On the question of liability I did not care to paraphrase it at all. In some exceptional cases the French railways have fixed a maximum compensation for which they may be held liable in the event of delay in transit. Tariffs made for produce brought into Paris markets by special trains contain a clause under which delays of less than twelve hours in transit render the railways liable for indemnities which, in the case of the Nord line, for example, are limited to one-third of the freight for a delay of from 3½ to 4½ hours, two-thirds of the freight for a delay of from 4½ to 5½ hours, and the full amount of the freight for a delay exceeding 5½ hours; and the sender can claim for full compensation if a delay of transit exceeds 12 hours.

39026. You say that these are quite exceptional cases?—These are exceptional cases. The first paragraph relates to the liability generally.

39027. It is the general liability more than exceptional cases that we want, because even there, in regard to this produce for Paris, there are no doubt exceptional rates charged?—Yes.

Powers as to owner's risk Contracts: Effect of "Rabier's Law."

39028. The next point is more germane to our inquiry—what is the extent of the liability of railways in the internal transit of the country?—Since March, 1905, under a law known as Rabier's Law, any variation by any convention of the responsibility imposed by Article 103 of the Commercial Code on carriers in general, and railways in particular, as to loss or damage of goods carried, is prohibited. Railways are forbidden under that law to stipulate in advance in any freight bill or other document that they will not be responsible for loss or damage of any goods entrusted to them for conveyance.

39029. That is since 1905?—Yes, since 1905.

39030. I was not aware of that; I remember the regulations before that period?—The point was contested very strongly by the railway companies for many years; it was debated every session, I think, for seven or eight years, and it eventually passed in 1905. It practically wipes out the owner's risk clause.

39031. Will you just make clear what is the extent of the liability of railway companies now?—The prohibition contained in "Rabier's Law" is formal, and under it railways are forbidden to stipulate in advance in any freight bill or other document that they will not be responsible for loss or damage of any goods entrusted to them for conveyance. Neither may they do it generally by their published rates, nor by private agreement with any particular consignor. The law applies to all interior transit and extends to conveyance by cart as well as transit on inland waterways, but excludes sea transit. Any agreement modifying responsibility between carrier and owner of traffic or contained in the conditions of a duly confirmed rate in existence at the passing of the Act of 14th March, 1905, was thereby annulled. The law, however, admits of a carrier entering into a contract limiting the amount of liability for indemnity in case of loss or damage.

39032. But they cannot free themselves from all liability?—They cannot free themselves from all liability.

39033. Have you anything to show us what the limitation is?—Under the law of 1905, a railway, in order to establish irresponsibility, must prove by precise facts that loss or damage of goods really resulted from inherent properties in the goods, from superior force, or from fault of the consignor. The onus of proof is thrown on the railway company.

39034. This is rather an important subject. Will you give us the arrangement in operation in Belgium?—Under Article 3 of the Transport Law of 1891, a carrier is responsible for the arrival within regulation time limits of goods to be carried, except in the case of accident or overwhelming circumstances, and under Article 34 it is provided that the fact that traffic has exceeded normal proportions will be considered a case of overwhelming circumstances. Under General Regulation No. 26 of the Belgian State Railway it is provided that, in case of delay in transit, the indemnity payable by the railway is limited to one-fifteenth of the cost of transit per day of delay with a minimum of 50c., and provided that the amount of the indemnity does not exceed the amount of the cost of transit, and that the owner of the goods shall not be obliged to furnish proof of loss. When the delay affects only a portion of the consignment the indemnity is reduced *pro rata* to the portion delayed. If delivery does not take place within the fortnight following the expiration of the time allowed for conveyance the sender or consignee is entitled to the indemnity provided in case of loss of the goods.

39035. *Mr. Sexton.*—Total loss, I suppose?—Yes.

39036. *Chairman.*—If not delivered in fourteen days?—Yes.

39037. Is there any other Article in those regulations that you would like to bring under our notice?—The question of onus of proof is practically the same as in France, I think. A carrier is answerable for damage or loss of goods if he does not prove that the loss or damage arose from some extraneous cause that cannot be imputed to him. The onus of proof is on the railway again.

29038. What have you to say with reference to the liability of a contracting railway in case of through booking?—Under the Transport Law of Belgium a carrier guarantees the action of an intermediate carrier to whom he hands goods to be conveyed, but one of the Articles provides that the tariffs or regulations cannot modify for the benefit of the railway authorities the conditions and extent of the responsibility laid upon them except in the case of international transports, respecting which the Belgian Railway Authorities are free to stipulate that they shall not be held liable for events occurring outside their country, except within the limits in which foreign railway authorities are similarly bound.

39039. That is the case with all railway companies: they are not responsible for anything that occurs outside their system?—In this case they are within their own country.

39040. Within their own country: but all the railways belong to the State there, do they not?—No; there are some privately owned railways also.

Mr. Sexton.—Two important ones.

39041. *Chairman.*—But there is some State control?—It is laid down that the contracting railway shall guarantee the action of an intermediate carrier within the country.

39042. Have you anything to say with regard to the limit of compensation?—Under the Transport Law the railways have the power to offer the public special tariffs at reduced rates, fixing a maximum indemnity payable by the railway in the case of loss or damage. That is practically the same as in the case of France. The application of such special conditions must be accepted expressly or tacitly by the consignor. The Transport Law also provides that, notwithstanding any stipulations limiting the liability of the railways, the amount of compensation is regulated by the Common Law where the cause of the damage was a fraud or fault of the railway or its agents. Under regulation applying to a certain special tariff, which relates to products, etc., destined

for exhibitions, there is a reduced rate of liability, limited to one-half the indemnity which might be due in accordance with the terms of general regulations.

39043. That is, traffic carried at a reduced rate?—Yes.

39044. Then, with regard to Germany: is there any difference between the German and the Belgian arrangements?—There is. First, with regard to delay in transit. The railways are responsible for loss incurred through non-observance of conveyance time limits, in accordance with the following scale:—Delay up to one day, inclusive, 1-10th of freight; two days, 2-10ths; three days, 3-10ths; four days, 4-10ths; for a greater period, one-half of the freight; and, when detriment is proved, the amount of loss up to the total sum of the freight may be claimed.

39045. Their liability appears to be limited to the amount of the freight paid?—Yes.

39046. Is there anything else on that point?—Without proof of detriment, one-half of the freight. Then there is a variation of that, in regard to "interest in delivery," or insurance of profit.

39047. *Colonel Hutcheson Poë.*—There is no reference to the damage to the goods conveyed?—That comes in independently.

39048. *Chairman.*—We are dealing with the time limits?—Simply with the time limits. If "interest in delivery" has been declared, there is an increased indemnity payable, without proof of detriment, for delay in transit, as follows:—For delay up to one day, inclusive, 2-10ths of the freight; two days, 4-10ths; three days, 6-10ths; four days, 8-10ths; for a greater period, the entire freight; and, when detriment is proved, the amount of the total loss can be claimed.

39049. But what if no detriment can be proved, or if the railway prove that no detriment has been suffered?—In both of these cases the amount of the indemnity may not exceed the amount of the interest declared. If the railway proves that no detriment has been suffered owing to the delay, then no compensation is paid. The railway is liable (except as provided under heading relative to "Non-liability" in my statement) for injury whether by loss, diminution, or damage of goods occurring during the time between their acceptance and transit, and until delivery, unless the injury be caused by a fault or instructions of the owner not to be imputed to the railway, or by superior force, or defects in packing not visible, or by the nature of the goods themselves—particularly by internal decay, diminution, or ordinary leakage. If a place not situated on the railway is named on the way-bill as place of destination, then the liability of the railway as carriers extends only to the last railway station. In the case of such consignments to remote places, where, however, the railway has made arrangements for their further transit, the railway's liability extends over the entire transport. The value of goods—shall I take that?

39050. I think you had better take that?—It is the current market value at the place from which the goods were sent. The question in the next paragraph is as to a certain limitation of the amount where traffic is carried under special tariffs. In the event of damage to goods the depreciation to value arrived at is to be compensated; if, however, the goods have been carried under a special tariff, limiting the amount of the railway's liability, the amount of compensation to be paid must be correspondingly reduced.

39051. Now read the next paragraph?—Release from liability may not be claimed by the railway on the basis of non-liability regulations if the damage was incurred through the fault of the railway.

39052. And the next? If detriment is caused by deliberate or gross carelessness on the part of the railway, then compensation for the total detriment may be claimed in all cases.

39053. They do not appear to differ much from us?—No.

39054. *Mr. Sexton.*—It is only wilful misconduct here?—Yes.

39055. *Chairman.*—Now, with regard to owner's risk—the non-liability of railway companies. What is the arrangement in France with reference to owner's risk?—In France no liability attaches to railways for loss or damage of goods in interior transit arising from inherent defect in the goods, *i.e.*, when the damage arises from a defect or fault in or of the goods, or from a cause belonging to their very nature without their being any blame on the carrier, or when deterioration is due to a germ contained in the goods, to fermentation, to spontaneous combustion, to damp, rust of steel or iron castings, to leakage of liquids through defective stopping or to bad quality of casks (porous wood, insufficient hooping, etc.). They are not liable for unavoidable accidents, *e.g.*, inundation, snowdrifts, damage arising from intense or unseasonable frost, accidental burnings, and robbery with violence. This latter does not include ordinary theft, which is considered as a want of surveillance by the railway company.

Non-liability of French railway companies for damage, &c., to goods under certain conditions.

39056. And the railway companies are liable?—They are liable for that.

39057. Of course, they are not liable when the consignor is at fault?—No.

39058. Or when the loading or unloading is done by the sender or consignee, if it is proved that the damage is through bad loading?—No; nor when a special method of transport is requested, and the damage arises from the conditions of transport.

39059. *Mr. Sexton.*—In short, the liability follows the blame?—Yes.

39060. *Chairman.*—It is practically the same in Belgium. Now take Germany: there, again, damage due to defective packing is exempt?—And conveyance in open wagon when the damage arises from that mode of conveyance.

Similar regulations on German railways.

39061. That is exempt?—Yes, and when goods are covered by the consignor, and the damage arises from defective covering.

39062. That is, sheeting?—Yes.

39063. The same with loading or unloading by owner?—Yes; insufficiency of packing, and inherent defects in goods.

39064. Waste in weight of certain defined goods?—Yes. In the case of goods which, by reason of their nature, regularly suffer loss of weight during transit, the liability of the railway for loss of weight is excluded up to the following limits, viz., 2 per cent. in the case of fluid and moist goods and of certain dry goods, such as roots, cut tobacco, soaps, fresh fruit, wool, skins and hides, hops, etc.; and 1 per cent. in the case of dry goods not specially designated. The exclusion of liability does not come into effect if the loss is not caused by the nature of the goods, or if the standard adopted does not correspond to the nature of the goods or the other circumstances of the case. In the event of the total loss of the goods, no deduction is made for loss of weight.

Limitation of liability for loss of weight of goods liable to waste.

39065. The next point is rather exceptional and important—goods damaged in transit on the Continent. Take Germany?—When cast-iron goods or cast-iron parts of other goods which, under sender's declaration in the way-bill, are sent unpacked or insufficiently packed and are damaged during transit, the damaged portions will, at the request of the sender or consignee, be returned to sending station carriage free, provided interest in delivery is not entered. The request for free carriage is to be entered on the way-bill. Here is another exceptional point, with regard to goods accompanied by the sender or his agent. It occurs also in Belgium. When goods are under regulations, tariff, or agreement with sender, accompanied by an attendant, and damage arises from risks which the presence of the attendant is to obviate, the railway is not responsible.

Non-liability for goods damaged in transit through imperfect packing by senders or while in charge of owners.

39066. I think that covers Germany?—Yes. In Holland it is the same; it is practically a copy of the German regulations.

39067. In Denmark it is practically the same?—The railway bears no responsibility for mistakes which are caused by want of marking of goods or by confusion with older marks thereon.

39068. There is exemption from liability in case the goods are mis-sent or are wrongly directed?—Yes.

Goods mis-sent or wrongly directed.

39069. Now, with regard to claims in respect of goods lost, damaged, or overcharged?—In France, since 1888, the law grants three days (holidays excluded) for the ascertainment of any damage in transit and the notification of complaints. It also extends from six months to one year the limitation of delay in a suit for loss or damage of goods, and provides a special limitation of five years for all other suits arising out of a contract of conveyance, this particularly applying to a rectification of charges—a statute of limitations. This five years' limitation runs from the day on which a consignment was booked, and, in case of loss, from the date on which it should have been delivered. With reference to the

Limits of time for notification of complaints and lodgment of claims.

Jan. 10, 1908

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture

Verification of railway accounts.

verification of accounts, ordinary commercial agencies undertake for merchants the verification of railway freight accounts and the pointing out of errors and losses discovered.

39070. That is, check the accounts?—Yes. A State representative at each station receives complaints, and sends them forward.

39071. That is what a stationmaster does here?—He sends them forward to the Minister of Public Works.

A State representative at each important station.

39072. Because the Minister of Public Works is the authority?—I am speaking now of private railways as well. Where the State give a guarantee they have at each important station a representative, who receives complaints, and sends them forward to the Minister of Public Works to investigate.

39073. *Mr. Sexton.*—He also has the duty of reporting irregularities, apart from complaints?—That would be any contravention of the concession or regulations.

39074. And to draw up a summons of infringement or contravention?—Yes.

39075. *Chairman.*—In Belgium it is about the same, is it not?—Yes.

39076. There may be something special in Germany. Of course, your first paragraph goes without saying—that the party entitled to bring a claim must be the party interested?—Yes.

Time limit for lodgment of claims in Germany.

39077. What is the time limit in Germany?—One year. It begins, in the case of damage or diminution, with the close of the day in which delivery took place.

39078. That is very restrictive, is it not?—Yes. In the case of total loss or delayed delivery it begins with the expiration of the delivery time limit. The German limitation is stayed by the receipt of a claim in writing by the railway.

39079. *Mr. Sexton.*—Is the Railway Administration mentioned in par. 604 a public authority?—This is Germany, and the railway administration is the administration of the State system in each State.

Procedure of the German railway administration with respect to deficiency or damage to goods.

39080. Is there an initial duty cast upon them, in case of loss, deficiency, or damage, to make a thorough inquiry?—In all cases of loss, deficiency, or damage, they must at once institute a thorough inquiry (that is, on observing it themselves), record the result of the same in writing, and communicate it to the parties concerned, at their request. In particular, if a deficiency or damage of goods is discovered or suspected by the railway or asserted by the party concerned, then the railway must without delay determine in writing the condition of the goods, the extent of the damage, and, as far as possible, the cause and the time of the deficiency or damage. A statement, in writing, must also be drawn up in the event of loss. In determining cases of deficiency or damage the evidence of disinterested witnesses, and, in so far as the circumstances demand it, of experts, and also of the rightful owner should be taken. The expenses entailed by the services of experts in the determination of cases of deficiency and damage are not borne by the railway when the deficiency or damage of the goods having been asserted by the owner, such assertion is not upheld by the inquiry, or when only a deficiency or damage already reported by the railway is established. All parties concerned have the right without prejudice to the procedure described above to have the determination of deficiency or damage of goods carried out by experts nominated by the courts or other competent authority. The railway is also to be summoned to such inquiry, even when the experts are not nominated by the courts.

General regulations in this connection for all the German railways.

39081. *Mr. Acworth.*—What is that statement from? I take it that it is from the railway regulations?—The railway regulations.

39082. It is their own regulation of their own work?—Yes.

39083. It is not a law of the State imposed upon the railway from outside; it is their own private regulation?—It is a law of the State; it is a State railway.

39084. But it is not in the form of a law; it is in the form of a *verkehrsordnung*?—Yes.

39085. There may be a similar regulation on the North-Western for the guidance of their officials?—Yes.

Mr. Sexton.—But the force behind it must be a law.

39086. *Mr. Acworth.*—But this is a regulation laid down by the railways?—It is a general regulation for Germany, for the State railways.

39087. *Mr. Sexton.*—An Imperial law?—It was given me as a general regulation.

39088. *Mr. Acworth.*—If it is a *verkehrsordnung* it is a law which all the separate State railways have accepted for themselves, but they have each done it for themselves, just as the North-Western or the Midland might enter upon an agreement with the same object?—It applies generally.

Mr. Acworth.—It only applies to those who have chosen to accept it, and they all have; but it is not a law.

Mr. Sexton.—Let us be clear that the authority brought into motion here is not the railway authority, but the State authority.

39089. *Chairman.*—This would correspond with the book which the railway companies issue, called "General Instructions"?—They are general regulations for the whole of Germany.

39090. *Mr. Sexton.*—Made by the Government and Legislature?—I do not know about their being Governmental.

39091. *Chairman.*—It is issued by the head of the Railway Department?—By the Minister.

39092. Then with regard to live stock traffic; you have made inquiries in reference to that?—Yes. I have the basis of the rates and conditions here.

39093. We will take France and Germany again. First of all, what are the rates to be charged for the transit of animals?—In France, by quick transit, the rates to be charged are as follows:—Horses and large horned cattle, per head, 16c. per km.; calves and pigs, 6c. per head per km.; sheep lambs, and goats, 3c. per head per km. Persons accompanying the animals travel in the company's carriages, and pay according to the places which they occupy.

39094. That is the same here?—Yes. In other countries they are carried free in many cases.

39095. They used to be carried free in this country?—Then there is a regulation as to the conveyance of animals in crates; they are rated according to weight.

39096. According to the general tariff?—They are charged according to the general tariff for goods by quick transit, but the rate is charged on double the weight of the animals and the crates containing them. Then as to limitation of value, animals the declared value of which exceeds 5,000fr. are rated one-half more than the rate fixed by the general tariff for animals of the same species.

39097. That is something peculiar to France?—Yes. Liability of railway in case of accident:—In the event of accident to animals in the course of transit the liability of the companies is limited to 5,000 fr. per head if the consignment note does not mention a larger sum.

39098. If it is a larger sum I suppose there is an insurance?—Yes.

39099. There is a small registration fee, is there not?—Yes, the same as for goods—10c. per consignment.

39100. Do they charge for loading and unloading?—Yes. For horses and large horned cattle, 1 fr. per head; for calves and pigs, 40c. per head; for sheep, lambs, and goats, 20c. per head.

39101. Is there any arrangement with regard to conveyance and delivery?—In regard to conveyance by quick transit, animals are sent off by the first passenger train comprising carriages of all classes, and corresponding with their destination. This is practically the same as for goods by quick transit.

39102. On mixed trains?—Yes, provided they have been presented for registration at least three hours before the time of departure of that train, in default of which they will be kept back till the next departure. They must be on the station three hours before. Nevertheless, this rule is not obligatory in the case of express and mail trains. This, again, is the same provision as is applied to goods.

39103. Then there is a time limit for transit, in transferring from one company to another?—Yes. It is the same as for goods practically—six hours.

39104. Practically the time for carriage is the same?—Yes. The period in which consignments are placed at the disposal of the consignee is two hours after the arrival of the train. That is for quick transit, mixed train.

39105. There are the usual fees for disinfecting the trucks?—Yes; they vary slightly in the different countries, but not very much.

39106. *Colonel Hutcheson Poë.*—With regard to quick transit, does the fee of 16c. apply to any distance? Is there any decreasing scale according to distance? By State railway there is a decreasing scale according to distance, I think?—By quick transit, that is of general application.

39107. It applies to any distance?—Yes. But for slow transit each system has its own rates.

39108. But for quick transit it is a uniform rate for any distance?—That is so.

39109. *Chairman.*—Of course, the bulk of the animals would be carried by slow trains?—Yes, except horses, in stall wagons or horse boxes.

39110. What are the maximum rates charged on the railways in France for slow transit?—I will give the working rates later on. These are the statutory maximum rates:—For horses and large horned cattle, 10c. per head per km.; calves and pigs, 4c. per head per km.; sheep, lambs, and goats, 2c. per head per km. Each of the large railway systems has its own special tariff for local application.

39111. For the local rates?—Yes. I have here the working rates for the State railways. For horses and large cattle, from 1 to 60 km., 10c. per km.

39112. Are they lower than the others? They are the same, are they not?—For the first distance they will probably be the same; but you will find that they vary as you go on.

39113. Will you go on with them then?—Calves and pigs, 4c. per head per km. up to 60 km.; sheep, lambs, and goats, 2c. From 61 to 100 km., per head per km., horses, oxen, and other large cattle, 8·75c.; calves and pigs, 3·5c.; sheep, lambs, and goats, 1·75c.

39114. Do you know if these are the rates in operation?—These are the rates in operation.

39115. They are the working rates?—Yes.

39116. The others were the maximum rates?—Yes. These figures have been got out by an analysis of their actual rates, because they do not publish the basis on which they calculate their rates. All the other large systems do.

39117. They give actual rates?—Yes. I made an analysis of the rates, and this is the result of it.

39118. Will you give the last line of the table?—For over 300 km., per head per km., horses, oxen, and other large cattle, 8c.; calves and pigs, 3·2c.; sheep, lambs, and goats, 1·6c.

39119. The other regulations are the same?—Yes, as regards value, and liability, and the rate for small animals in crates.

39120. There are certain small fees charged; you might particularise them?—For loading and unloading the fees are the same as for fast transit; you have them segregated on page 77.

39121. There are the same junction charges, I suppose?—There are special junction or transmission fees for animals. Horses and large horned cattle, 40c. per head; calves and pigs, 20c.; sheep, lambs, and goats, 10c.

39122. *Mr. Sexton.*—Even where an exchange of rolling stock is impossible, there is no higher fee charged?—Nothing is added to these fees. When the transmission is effected between two lines between which the exchange of rolling stock is impossible, the fees for loading and unloading which I have just given are charged without any additional transmission fee being added. They charge a loading and unloading fee in substitution for it.

39123. *Chairman.*—Do they make any lairage charges?—Yes. Animals which have not been fetched in arrival are placed in pound, at the expense, risk, and peril of the owner. Pound expenses are paid on a statement of expenditure being furnished—the actual cost.

39124. There are the usual regulations as to time limits and small fees?—Yes.

39125. *Mr. Acworth.*—The second paragraph of 635 is, I think, rather interesting?—Animals of all kinds sent by slow transit will be sent during the day following that on which they were consigned. The duration of the journey in the case of slow transit consignments will be calculated at the rate of 24 hours per indivisible fraction of 125 km. Surplus distances up to and including 25 km. will not be reckoned. Then there is an exception for certain specified sections, as in the case of goods traffic.

39126. *Chairman.*—What disinfecting fees are charged?—40c. for horses or mules; 30c. for oxen, bulls, or cows; 15c. for calves and pigs; 5c. for sheep, lambs, and goats. For consignments from one sender the fee may not exceed 2 fr. per wagon with one floor, and 3 fr. per wagon with two floors. This fee is charged when, by request of the consignor, a wagon is specially reserved for the animals, whatever be their number. Whatever the number of companies taking part in the transit the fee is charged once only, unless there be any transfer of load. Such transfer cannot be imposed upon the consignor except at frontier stations and junctions of two lines between which exchange of rolling stock is impossible.

French railways:—

Wagon disinfecting fees.

39127. Are there any arrangements with regard to horses for shows?—There are special arrangements by which they pay full rate on the outward journey and are brought back free within fifteen days of the close of the exhibition or show on payment only of the registration fee—10c. I think it is—and receipt stamp.

Horse rates to and from shows.

39128. With regard to attendants?—The only point is that they pay full fare on outward journey and are carried back free.

Attendants' fares.

39129. *Mr. Acworth.*—Does the last paragraph of 641—(With regard to the transit of animals, consignors must notify departure stations of the consignments to be sent off a least forty-eight hours beforehand, in writing)—apply only to shows?—Yes.

39130. All these regulations apply only to shows?—Yes; you will find them specially headed in italics.

39131. *Chairman.*—I do not think we need go into the special regulations for the conveyance of live animals by slow transit?—They are the ordinary working rates on the Nord line. I have already given the State railway rates, but generally I have used the Nord as the railway for comparison.

39132. You have the Ouest as well?—I have brought it in; it is a much longer line, and it serves Brittany and Normandy.

39133. If you like you can put in these rates?—The Nord line, I think, ought to come in, because it is the line which I believe is more comparable with ours than the others.

39134. Will you let us have the figures then?—Quick transit for horses?

39135. Give the figures for both quick and slow; take quick transit first?—For quick transit there are two rates, viz., "A" rate per head for horses, colts, fillies, ponies, and mules in consignments of three head at least; and "B" rate per sq. metre of floor area for all kinds of animals in full wagon-loads. The bases of these rates are as follows:—

Rates for horses by "Quick" transit (Nord Railway).

39136. I thought you said they were the rates actually in operation?—They are; but this is the basis on which they are calculated. There is a long table of calculated rates.

39137. This is the actual basis, not the powers?—This is the actual basis of calculation. Up to 100 km., per km., "A," 13c.; "B," 5c.; from 101 to 200 km., per km. added, "A," 10c.; "B," 3·3c.; over 200 km., per km. added, "A," 5c.; "B," 1·5c. Animals are to be loaded and unloaded by the owner at his risk.

Basis and conditions of rates.

39138. The conditions are the same, and I think it would be convenient if you gave us the rates for slow transit to follow those for quick transit?—Yes. For the Nord line there are three rates: "A," "B," and "C." Rate "A" applies to lambs, ewes, fat sheep, goats, and pigs not exceeding 50 kg. each (that limitation of weight applies to pigs only), in consignments of less than twenty head. Rate "B" applies to all the above-named animals in consignments per complete wagon reckoned at a minimum of four head per square metre of floor area. Rate "C" applies to horses, mules, colts, and asses, bulls, bullocks, cows, calves, and large pigs in consignments per complete wagon, without limit of number per square metre of floor area. The rates for these three scales are, up to 50 km., "A," 1c. per head; "B," 0·5c. per head; and "C," 3½c. per km. per square metre of floor area. From 51 to 100 km., "A," 0·8c. per head; "B," 0·4c. per head; and "C," 3½c. per km. added per square metre of floor area. In all these cases for the additional mileage the charge is an added one; it is a cumulative rate. From 101 to 150 km., "A," 0·4c. per head; "B," 0·2c. per head; "C," 2⅔c. per km. added per square metre of floor area.

"Slow" transit rates and conditions.

Jan. 10, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture

French railways—*con.*

Exceptional rates on the Ouest Railway.

Actual live stock rates on State line.

39139. Now take the last line?—From 251 to 300 km., "A," ·2c. per head; "B," ·1c per head; "C," 1⅔c. per km. added, per square metre of floor area.

39140. Those are the rates for quick transit and for slow transit over the Nord line, and you have taken that line as an example?—Yes. On the Ouest line you will find a number of special rates which do not apply on the Nord line nor on the State line—animals going to pasture. There is a special rate for bullocks, cows, and heifers going for pasturing and fattening.

39141. Is there much difference?—I cannot tell without comparing.

39142. It is exceptional for the Ouest?—Yes.

39143. I do not think we need take that exceptional rate; we are dealing with the country. The Nord is a very good example of the live stock rates in the country?—Yes.

39144. I do not think we need refer to all these special regulations. Now you come to the State line in France. There, you say, there is no maximum shown; the figures are the actual rates in operation?—Yes.

39145. You can give us those rates and they will follow the others?—Animals of all kinds in complete wagon-loads. From an analysis of the rates shown in the tariff book it would appear that up to 40 km. the charge is 12 fr. per wagon; 100 km., 28c. per km. per single-floored wagon for the whole distance; 200 km., 26c. per km. per single-floored wagon for the whole distance; 300 km., 400 km., 500 km., and upwards, 24c. per km. per single-floored wagon for the whole distance. The foregoing charges are increased by 50 per cent. when wagons with two floors are used, and by 100 per cent. when wagons with three floors are used. Then there is a limitation as to value; the rates do not apply to animals exceeding 5,000 fr. per head in value.

39146. That seems to be a general limitation?—Yes.

39147. There is also a regulation that all animals must be loaded and unloaded by the owner?—Yes, and at his risk—the same as on the Nord line and on the Ouest.

39148. That is a very comprehensive statement with regard to live stock. Belgium is about the same as France, is it not?

39149. *Mr. Acworth.*—Before we leave France. I have seen this statement very often: "Animals must be loaded and unloaded by and at the risk of the owner." Does it go right through?—For France.

39150. It seems to me to apply everywhere; perhaps you can check that?—I could not do it without referring as I go through.

39151. I have seen it a dozen times, and I wondered if it applied everywhere?—I cannot say right off.

39152. *Chairman.*—Now, let us look at Germany. Rates are the principal thing?—Shall I take the general basis of charge?

39153. In reference to the point just raised by Mr. Acworth, I see that in paragraph 679 you say, "the sender must himself undertake to load the animals into the wagons, and also to see that they are safely secured and to provide the necessary means for securing them. The receiver must unload."

Mr. Acworth.—It is the same in Belgium, I see.

39154. *Chairman.*—We are now dealing with Germany?—I have taken there the Prussian State railway rates only.

39155. That is quite sufficient. Will you give us those?—(*Witness reads*).

Prussian State railways live stock rates and conditions.

Tariff for Live Animals on Prussian State Railways.

The loading rates, which comprise distance rates and consignment fees, are calculated as follows:—

(*a*) Distance rate per sq. m. and km.

Class of Load.								
L 1.		L 2.			L 3.			
Horses and ponies, but not foals.		*Other large animals*, such as cattle, mules, asses, foals (horses up to one year), and the like; also *small animals*, pigs, calves, sheep, goats, &c., in *single-floored wagons*.			*Small animals in double-floored wagons.*			
East (the distances marked red on the map and eastern connections).	*West* (the distances marked black on the map and western connections).	For distances of		Added to the rate for	For distances of		Added to the rate for	
Pf.	Pf.	Km.	Pf.	Km.	Km.	Pf.	Km.	
2.5	3	1-100	2	100 (200 pf.)	1-100	2.67	100 (267 pf.)	
		101-200	1.75	200 (375 pf.)	101-200	2.33	200 (500 pf.	
For traffic between East and West, see note on pp. 41, 42 of the Tariff.		201-300	1.5	300 (525 pf.)	201-300	2	300 (700 pf.)	
		301 and upwards.	1		301 and upwards.	1.33 per 100 km.		

(*b*) Consignment fees for all classes: per square metre, . . . 40 Pf.

The head rates, which consist of distance rates andconsignment fees, are calculated as follows:—

Classes														
S 1.				S 2.			S 3.			S 4.				
Horses, ponies, but not foals.				Other large animals (cattle, mules, asses, foals, &c.).			Calves (up to six months), pigs, sheep, and goats.			Sucking pigs, lambs, kids, and other small animals (not more than 35 kg. each).				
Distance rate per km.		Consignment fees.		Distance rate per km.		Consignment fees.	Distance rate per km.		Consignment fees.	Distance rate per km.			Consignment fees.	
For one animal.	For each additional head.	For the first 4 head, each.	For each additional head.	For one animal.	For every additional head.	For every animal.	For the first 10 head, each.	For every additional head.	For every head.	For one animal.	For each additional head up to 10.	For every 5 additional head.	Up to 10 head each.	For every additional 5 head.
In Pfenninge.														
20	5	100	80	10	3	60	2	1	20	2	0.5	1.5	10	60

The minimum freight for each class is:—

Class S 1, ...	3 M.
Class S 2, ...	2 M.
Class S 3 and S 4, ...	30 Pf.

(1.) Horses, etc., in specially constructed wagons are subject to the following special rates:—

Distance Rate per Km.		Consignment Fee.
For One Head.	For each additional Head loaded in a Wagon.	Per Head.
30 Pf.	10 Pf.	1 M.

(2.) The minimum freight is 3 M. per consignment.

39156. For temporary accommodation provided by the railway company they make a charge the same as in France?—Yes; stallage accommodation. It is free of charge at certain points, provided the cattle do not remain longer than twelve hours on the premises. If they remain longer than that time, then stallage per head and per twelve hours begun is charged for the additional period as follows: For horses and other large animals, 10 Pf.; for small animals (pigs, sheep, calves, goats, lambs, etc.), 2 Pf. Minimum fee for the total number of animals housed at once, 1 mark.

39157. That finishes this portion of your evidence. Would you like us to go on with these other tables or prefer to wait until the others are ready?—I think it better if we took them all together. On this day week I shall be ready.

39158. I rather think it is just possible that there may be some alteration made in the sittings. I am afraid from what I have ascertained that we shall not be able to sit on Friday at all?—Will Thursday be the latest day?

39159. I don't know. I think it will be the latest day?—I will make an effort to have everything ready then. If I might dispense with minute calculations, which do not materially affect the results, it would reduce the labour by half.

39160. *Chairman.*—Items so small as to have practically no bearing on it may be struck out. Instead of going into all those little charges make a general estimate to cover it. Make some allowance for it. There is a penny for this and a halfpenny for that, which is always charged, as for instance, when posting a consignment note. If you go into all these charges it will just double the labour.

39161. *Mr. Acworth.*—Of course I don't want to give Mr. MacNulty any trouble. Can we take this general point that all these charges have to be increased by a penny or three halfpence for so and so?

Chairman.—That is what he says he will do without going into all the details.

39162. *Mr. Acworth.*—I should be exceedingly sorry to make him work them out?—(*Witness*)—All the comparisons made up to the present include these charges carried to two decimals of a penny.

39163. *Mr. Sexton.*—Could you give us the total amount of accessory charges that could be made applicable to any one consignment of merchandise, or of animals, respectively?—Yes; showing how they are made up.

39164. *Chairman.*—You will find it is so small that it won't make any difference?—I will be able to have them made up.

The Commission adjourned till Monday, January 13th, at 11.30 a.m.

SIXTY-FOURTH PUBLIC SITTING.—MONDAY, JANUARY 13TH, 1908.

In the Shelbourne Hotel, Dublin.

Commissioners present:—Sir CHARLES SCOTTER, BART., Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Mr. THOMAS SEXTON; Mr. W. M. ACWORTH; and Mr. JOHN AUDLEY FREDERICK ASPINALL;

Mr. GEORGE E. SHANAHAN, Secretary.

Jan. 13, 1908.

Mr. W. L. MICKS examined by the CHAIRMAN.

Mr W. L. Micks, Member of the Local Government Board (Ireland).

39165. Mr. Micks, I believe you are a member of the Local Government Board of Ireland?—Yes.

39166. Now, have you considered the question that we have to deal with—have you given attention to the subject?—Yes, sir.

Weak financial position of many of the Irish railways.

39167. Do you think that the existing state of things is adapted to the requirements of the country?—I am inclined to think that the financial position of many of the railway companies is not good enough to enable them to spend money on the development of traffic and to spend that money in the hope of future returns. I think their income and dividends are so narrow that they could hardly be expected to run risks.

Further railway extension in Ireland required.

39168. Do you consider that there are districts in Ireland that require further railway development?—Further extension of railways, certainly.

Improbability of private enterprise providing new railways.

39169. Do you consider that under existing circumstances there is any probability of private enterprise providing the capital for these railways?—I do not think there is the least chance of that. There has been no sign of that for many years, except the Waterford and Rosslare line.

39170. And you also consider that it would not be fair to the existing railway companies to expect them to find the capital and incur a loss?—I do not think it would be possible to expect them; they could not do it.

39171. The development of the railways would be of immense advantage to the country generally?—Undoubtedly.

39172. And more especially to the districts through which the railways run?—Yes; but I do not expect them to lower the rates.

The existing railway management as good as could be expected.

39173. You do not want to say anything about the management of the Irish railways?—I think it is as good as can be expected. I do not know much of it, but I have been travelling over them for thirty or forty years.

39174. You are not here for that purpose?—I have no personal complaint.

39175. You are rather dealing with the general question?—Altogether.

State purchase and unification of the railways recommended and scheme suggested.

39176. Well now, failing the railway company finding the capital, or private enterprise finding the capital for further extension, what do you suggest to be the best way of dealing with it?—I think the companies might be bought out by some operation of State finance.

39177. The whole of the companies in Ireland?—The whole of the companies and all merged into one.

39178. Are you clearly of opinion that it would be for the benefit of Ireland?—I think it would be.

39179. And you have given the subject consideration?—Oh, for many years.

39180. Well now, have you thought over any scheme by which that could be done?—Any financial scheme?

39181. Yes?—There is one which I suggest as a very simple scheme, viz., that the United Kingdom or Great Britain should find the money, buy the railways, and hand them over to an Irish authority to work.

Control by an Irish authority essential.

39182. You are clearly of opinion that the Irish railways, for the benefit of Ireland, should be worked by an Irish authority?—I think so; it would be far better for traffic.

39183. Have you thought over the question as to how that body should be appointed—the local body that you suggest?—I think it might be elected.

39184. Elected?—Mainly elected.

39185. In what way? Have you thought of the question?—Not as a definite suggestion, but I will give you an illustration—for instance, the administrative counties might appoint, say, twelve, the county boroughs might appoint eight, and the towns grouped together, eight more. That would be twenty-eight members; then the Government might nominate one or two, so that it might be kept informed of what was being done, and I think that the chairmen of, say, the five leading railways might be appointed as *ex-officio* members of that body for the first five years, if they were willing to act.

39186. Do you consider that the amalgamation of the railways into one system would effect any tangible saving in the working expenses?—It is bound to effect a very large saving.

39187. Unified management of a unified system could, you think, be worked much cheaper than the various companies?—Far more cheaply, I am sure.

39188. Well now, have you thought over what you would do with the existing companies? For instance, there are a large number of officials connected with Irish railways, have you thought out any scheme by which no injustice would be done to them?—I think it would be inequitable and wrong to injure any man's income or fees without giving him full compensation, either by way of annuity or gratuity, and if by annuity, they might be given power to commute that for a lump sum, so as to clear the matter off as far as possible at once.

39189. Do you think then, assuming your proposition could be realised, the railways becoming the property of the State and worked by an Irish authority, have you thought out any plan by which extensions could be made—should the State find further capital for these extensions?—In saying the railways are to be bought out by the State, I mean that the State money should buy them, and that they should be handed over to become the property of a department here in Ireland, not that they should remain the property of the State.

39190. Do you mean that the State should lend its credit so as to enable the capital to be raised on easiest terms?—I mean it should raise the money and pay it. Having regard to the financial relations between the two countries, I do not think it would be unfair or wild to ask that such a payment should be made for the benefit of Ireland.

39191. Supposing the net result of the working of the railways was a large deficiency, how do you suggest that that deficiency should be met?—The Irish authorities would take railways over, and therefore become responsible for them.

39192. They would be responsible for the interest on the capital?—Oh, no; they would get it as a gift. My idea is that it should be a gift. The Irish authorities should get it as a gift from the British Exchequer.

39193. Have you thought that out?—I have.

39194. Why do you suggest that?—Because I think it really a very good opportunity of getting an *amende* in respect of what is due in a financial way. Ireland has lost enormously—two or three hundred

millions, I think, and the question of forty millions for the railways would not be an unreasonable thing to ask for.

Examined by Mr. SEXTON.

39195. Do you consider, Mr. Micks, that for the proper completion of the transit system—the Irish transit system in relation to development—a great many links and branches are still required?—A great many; there are a great many parts of the country where extensions are required. I could give instances.

39196. That indicates the need not only for a large but for a methodical expenditure?—It does.

39197. And apart from other considerations, it indicates that there ought to be some strong central body to secure an even system of working?—An even system of working and some more favourable system of rates.

39198. Well, you, no doubt, are well aware of the recent course of grants in relation to Irish railways, how they have become rarer and smaller, and are now cut down to the Irish Development Fund, which is itself exhausted?—Yes.

39199. Do you then see any prospect of the construction of the necessary links and branches within any reasonable time except by the organisaton of an Irish body having control of the railways as a whole and being in a position to devote the resources of the whole system to the needs of any part of it?—I think that would be desirable. Of course money could be voted, but that would only affect a part of the question; that would not affect the freights.

39200. If you make your plan dependent upon large continual grants you expose it to a hazard?—You do, and to promotion schemes.

39201. Looking to the urgency of the need—the importance of proceeding without delay—is it not prudent to consider in what mode we could effect a self-supporting plan?—I think so.

39202. You infer then that for the purpose of completing the traffic system, and bringing our back districts within reach of the markets, apart from the question of rates, a central authority, working a united system, is required?—I think it would be desirable.

39203. There seems to be no other way of getting the additional lines?—They come so slowly recently that it seems to be the best way at all events.

39204. Diminishing from a stream to a trickle, and from a trickle to an ooze. And the local authorities are not inclined to give guarantees?—I think they gave too many already.

39205. There is a question previous to this, with which you have dealt in your evidence: do you consider that in the interests of Ireland, the rates and fares should be revised?—Oh, certainly, for the purpose of encouraging and facilitating the development of traffic and manufactures.

39206. You are, no doubt, familiar with the scale of passenger fares in other countries?—No, I am not.

39207. I suppose you know that in Belgium and other countries——?—I have read about them, but I have no personal knowledge of the rates anywhere in fact.

39208. You hvae given great attention in the course of your long official career to the conditions of the income and wages of the working populations in Ireland?—Yes.

39209. Do you know that the average number of railway journeys per head of the population in Ireland is only one-fourth of what it is in England?—I have seen that in the evidence.

39210. Do you consider that, having regard to the actual wages or income of the Irish labourer, workman, and small occupier, a rate of a penny a mile is prohibitive to him and his family —Oh, they could not pay it. They have to borrow the money to go to England, as a rule, and pay it back.

39211. If the fares were on the Belgium system, say, instead of the present, there might be more development of railway traffic?—I should not be hopeful of great development until there is a development of the resources of the country behind that.

39212. Assume a development of the resources of the country, would not an increase of railway travelling benefit health, business, education, and other great public interests?—Yes.

39213. And eventually lead to recoupment and further profit?—I am sure there would be profit later on.

39214. Do you know the Return of the Board of Agriculture on imports and exports?—I have seen it. *Jan. 13, 1908.*

39215. Have you observed in the course of the last twenty years the enormous development of imports of food supplies to Great Britain from abroad?—Oh, yes, from Great Britain and from abroad. Mr. W. L. Micks, Member of the Local Government Board (Ireland).

39216. I speak of the whole period?—Yes.

39217. Comparing now with twenty years ago?—Yes.

39218. From Europe and from the most remote countries of the world?—You mean raw material?

39219. I mean food, chiefly food?—I was thinking whether you meant flour or wheat. Irish export trade in food stuffs retarded by high rates.

39220. I would mean both?—Of course there is an enormous importation of wheat, but flour has fallen off a good deal.

39221. We know that the imports to Great Britain of food supplies from the Colonies and foreign countries is enormously in excess—several times as much as the value of the food exports from Ireland?—Yes.

39222. Have you contrasted that great development of imports from abroad with the stagnant and rather dwindling Irish export trade under some of the most important heads?—I really did not contrast it in that way, but I know the very small trade we have got, and I can see and I believe that it is capable of great development and extension, so I think that dealing with the railways by putting them under a national body here, and at the same time developing the resources of the country through a Development Department, would be bound to increase the traffic. Imports to Great Britain from the Colonies and foreign countries.

39223. When you find that countries very remote supply large quantities of food to Great Britain, and that Ireland is in a minor position notwithstanding her situation so close to Great Britain, does that suggest to you that the transit rates—the Irish export transit rates, put Ireland under a disadvantage?—I think it is one of the factors that put Ireland under a disadvantage, but I believe there are other more important factors.

39224. It is not the only factor, but when you find that ingenuity and enterprise are exhausted in providing low rates and great facilities for imports to Great Britain from distant countries, and that Ireland is scarcely able to maintain its former position in the trade, does not that lead to the inference that an adjustment of the export rates to the needs of Ireland would have important results?—Certainly. When you find butter and bacon imported with subsidies from a foreign Government competing with us, the rates, whether they are higher or not, are higher than people in Denmark have to pay, and one wishes some revision of the system. Necessity for the adjustment of export rates to enable Ireland to compete properly.

39225. One would suppose that Ireland, from her position in relation to Great Britain, would be able to dispose of all she could produce there?—One would suppose that.

39226. It is not the case?—It is not the case—bacon, butter, eggs.

39227. The agricultural products of Ireland might be greatly extended?—Oh, yes, they should be capable of being put on a much better basis.

39228. Now, have you observed, from the Return of the Department, that in 1905 we imported into Ireland food and food supplies to the value of nine million pounds sterling, and other goods to the value of eighteen million, all of which are produced, or might be produced, in Ireland?—I observed that the imports were very large indeed, and that some of them we ought to produce. Excessive import of food supplies producible in Ireland.

39229. If the total import of fifty-five millions sterling is half made up of articles which are or might be produced in Ireland, is not that a very serious state of things?—Very serious, and one that could be remedied.

39230. Disastrous?—Disastrous.

39231. And, then, if you find side by side with that a system of low import rates from Great Britain into Ireland, giving the utmost facilities to the importer, and a system of high inland rates putting obstacles in the way of the local producer, you have a relation of cause and effect established?—A still further disadvantage, of course. Assuming that to be heavy enough to operate, as I believe it is. Adverse operation of low import rates on Irish industries.

39232. If we had a system of inland rates on a parity with the system of through rates from England, might we not hope that a great portion of the food now imported, and of all easily producible articles now imported, would in future be Irish products?—I have not considered that.

Jan. 13, 1908.

Mr. W. L. Micks Member of the Local Government Board (Ireland).

39233. If the conditions of transit which now obstruct the Irish manufacturer were removed and fair conditions substituted the direct effect would be to stimulate Irish production? It would tend that way, but there are other matters more important.

39234. So far as it goes?—So far as it goes.

39235. And *pro tanto* to reduce emigration?—Yes.

39236. And to increase the revenue?—Yes.

Inability of the existing companies to appreciably reduce rates.

39237. Now, such being the weighty and urgent need, you say that the companies cannot meet it?—I do not think they can afford it, owing to their circumstances.

39238. You say they cannot do it, considering all the circumstances?—Considering that a great number of the companies are not in what you would call a prosperous condition, they could hardly afford, I should say, to run risks in hope of developing traffic.

Reluctance of commercial companies to surrender profits by experimental reductions in rates, etc.

39239. Well, that brings us to the consideration of the commercial system of transit; will any commercial company, established for profit, voluntarily consent, unless its profits are very large, to surrender part of its profits in the hope of some indefinite future return?—Not unless they believe that the future return is pretty certain.

39240. Unless the prospect of recoupment is near and certain?—Fairly near and certain.

39241. That is not the case in this matter?—No, it would be rather remote.

39242. I daresay you agree that the ruling circumstances in this case are, on the one hand, the amount of the capital, and on the other the amount of the net profits?—The net profit being narrow.

39243. The relation between these two is the determining factor?—Yes, there are other factors—that the population is diminishing, and that traffic would naturally diminish with diminishing population, and also you have the fact that industrial occupation is not increasing materially.

39244. Taking then the amount of the capital, the amount of the net profit, the diminution of the population, and the general prospect, do you say that it is impracticable for the companies to lower rates?—I do not think it is reasonable to expect Irish companies to try to develop traffic.

Vast inflation of Irish railway capital due to Parliamentary costs in obtaining Bills.

39245. May I ask whether you consider that the amount of capital has been vastly inflated by reason of the fact that all the legislation has had to be done in London?—I certainly think that. Under the question of saving I have noted that, and I am prepared to mention something about it later on.

39246. Just one other question, first, the inevitable effect you will agree of having to resort to London for every Bill was to lift the level of Irish expenditure, Parliamentary costs, and general expenses, to the British scale?—To an unnecessary scale.

39247. Towards the British scale—take Parliamentary fees?—I do not know what is necessary over there, but here it should be quite unnecessary.

39248. Exactly. When you go to London for a Bill, your Parliamentary fees and costs are on the British scale?—They are large.

39248A. They are the same.

Chairman.—Just the same.

39249. *Mr. Sexton.*—If you go to London you have to pay the Parliamentary agents and all the other gentlemen the same fees as an English railway?—Yes.

39250. Is not that an explanation of the mass of capital—the inflated capital of the Irish lines; supposing the Irish Legislature had continued in existence and had passed all the Irish Railway Bills, would the capital of the lines be forty millions now?—I do not know.

39251. What the excess so caused might be?—I do not know what they would come to per cent.

Average Parliamentary costs for British railways.

39252. We know, Mr. Micks, that British Parliamentary costs have ranged from £4,000 to £14,000 per mile, and that one solicitor's bill for promoting a railway was £240,000.

39252A. *Lord Pirrie.*—£240,000!

Future legislation for Irish railways should be arranged in Ireland not at Westminster.

39253. *Mr. Sexton.*—Yes, for promoting one line, then may I take it that you attribute a substantial part of the Irish capital to the expense of legislation in London?—I was not thinking of the expenses in London from that point of view, I was rather thinking of the future, that any future development of the Irish system and any future arrangements that ought to be made, ought to be done not at Westminster but in Ireland.

39254. The aim of my question is to submit that the extent to which London legislation has inflated the capital of the Irish railways gives us a special claim on the Legislature for the settlement of this question?—I can see the force of it, but it is not of that I was thinking.

39255. Do you think it reasonable?—I do think it reasonable.

39256. As to the net profit, there have been a series of Acts passed for the interest of Great Britain and without regard to the interests of Ireland, which have had the effect of reducing tillage and increasing pasture, which gives little employment and reduces the population of the country?—And reducing manufactures. Yes.

39257. There again the Legislature, for the convenience of Great Britain, has dictated a course of action detrimental to Ireland?—They have; for the interest of the majority in Great Britain legislation was passed which was injurious to the majority in Ireland.

39258. Those who passed the Acts did not concern themselves about the effect on Ireland so long as they were useful to Great Britain. Now, do these facts suggest to you that apart from overtaxation Ireland, by reason of the inflated capital and by reason of the legislation which has brought Ireland to the present miserable pass, has an irresistible claim to the settlement of this railway question so as to help the country?—I think she has a claim which ought to be irresistible.

39259. "Ought to be"—if it were dealt with as it ought to be?—Yes.

39260. Well, now, if the companies cannot reduce the rates, how is the reduction to be obtained? You say only by public purchase and united working?—That is what I think.

39261. And you have said that the Imperial legislature might very well make Ireland a gift of the Irish railways?—Yes.

39262. The nominal capital and the market value of the capital being about forty millions?—I was assuming that figure, which I saw mentioned.

39263. Yes, curiously enough, the nominal and market value are very much the same, taking it all round?—Yes.

39264. Has the finding of the Financial Relations Commission on the overtaxation of Ireland ever been seriously disputed?—I never read or heard anything seriously advanced against it.

39265. We sometimes hear jests on the subject, without any argument, but so far as the question of overtaxation is concerned has any Committee ever been appointed, or has any competent man ever raised the question, that the finding was unsound?—I never heard anything except the question of whether Ireland had got some set off, but I have never seen how that could be.

39266. Then it appears that in the century since the Union, the richest country in the world has extorted from the poorest country two hundred to three hundred millions sterling of unjustifiable taxation?—I believe that the figure is $2\frac{3}{4}$ to $3\frac{1}{2}$ millions a year.

39267. These are the facts upon which you ground your statement?—I think that there is nothing unreasonable in the Irish case.

39268. If the legislature, by way of an indemnity, were to make a gift of the Irish railways to this country?—That is my view.

39269. At any rate, whether they make a gift or not, you think it essential that the railways, if united and worked for the public, should be owned by Ireland?—I think they ought to be.

39270. If they were not owned by Ireland what security would Ireland have, having regard to past experience, that the surplus realised, which ought to be used for the reduction of rates, would not be appropriated to some other purpose?—I think it would be hopeless to get them managed from the other side. As a matter of administration I think it would be hopeless.

39271. Could any administration but an Irish one apply itself with a single mind to the question at issue?—It could not. It would not have the knowledge nor the time.

39272. Would not a non-Irish administration be liable to the same kind of influences which have brought Irish railway management to the present

pass?—I think that State Department management would be a mistake.

39273. It should be Irish management?—I think it should be.

39274. And elective—substantially elective?—Mainly elective.

39275. With an advisory element of a nominated class?—Only for the first few years, five or ten, I would put the Chairmen of the five or six chief Irish railways on if they would go.

39276. As in the case of the Local Government Act?—Yes, as the members of the Grand Jury were nominated to the County Councils. And then the Government, in regard to the great many questions of Government importance that arise—moving troops and matters of that sort—I think the Government should be fully informed of everything that is going on, and should have one or two members always there.

39277. But the virtual and substantial power of the body should be elective?—Yes. The illustration I gave to your chairman was that the body should consist of twenty-eight members, with one or two Government members, and also, for the first few years, five or six chairmen of the present railway companies.

39278. If the gift is not made, would you say then that, at least, the Treasury might place the Imperial credit at our disposal to float a loan, and that Ireland would be willing to repay the loan, if that were necessary, in order to obtain the administration of the railways?—I do not like to go back from what I said on that point. I really think it should be a gift.

39279. But suppose we find, Mr. Micks—you see you have admitted the urgency of the need that exists, both from the point of view of our great export trade, and from the point of view of the development of Irish manufactures at home—you have admitted that we cannot go on as we are—supposing we find that our friend, the predominant factor, is not in a giving humour?—I think it is not a matter of beneficence, but of common honesty.

39280. He would consider it a matter of gift. I want, as far as possible, to secure that if one thing is found to be not available, there should be another left—at any rate that the question should be settled. I agree absolutely with you that a gift might be made, and should properly be made?—If they would not make a free gift of money, then, I suppose, some financial arrangement might be made. Personally I should consider it very unfair.

39281. Yes, but if that unfairness should be insisted upon, we should, at least, have the use of the Imperial credit for the purpose of floating the loan?—I suppose that would be the next best thing.

39282. Supposing even that were not available, and we were told that we were not to have the Imperial credit, should you prefer that Ireland herself should be allowed to raise the money on the credit of the railways and the rates, rather than the present system of railway management should continue?—I have not considered that, and there are so many tremendous burdens on, and coming on the country, that I really would hesitate to say anything about forty millions more until I looked into it a little more. You have, at present, the National debt of sixty millions in Ireland—I suppose our share would be that.

39283. Under what head—Land Purchase?—No. National Debt.

39284. I am not aware that they apportion the National Debt?—Take it according to the percentage between the three countries—divide the liabilities and it would come, I thought, to something about sixty millions.

39285. British finance in Ireland is very simple. They raise all they can, they maintain a costly Government for Imperial, not for Irish purposes, and then they keep the balance. That is the system in this country?—Assuming that we are paying on sixty millions of National Debt, it might be said we are responsible for sixty millions.

39286. They raise a revenue of about three millions in Ireland, as admitted, over what it ought to be, and after having paid for an expensive Government, maintained for Imperial purposes and not for Irish, they keep the balance. What more can they do?—They apply that according to the different charges—Home Office, Foreign Office, and expenditure like that.

39287. When they keep it all what more need be said?—I think one and a half millions is down in some returns for interest on National Debt paid out of Irish taxation.

39288. Do you consider, having regard to the past and present, that Ireland has a good claim to have the whole balance of her revenue used for the development of her industries, that for a period, at any rate, the revenue actually raised in Ireland ought to be applied to the development of Irish industries?—That was the very fair and reasonable recommendation Mr. Childers made in the draft report for the Financial Relations Commission.

Ireland's surplus revenue sufficient to finance a railway purchase scheme, and develop the country's resources.

39289. If Great Britain would allow, for a period, the revenue raised in Ireland to be applied to undo the evils of the past, and to bring Ireland up to the ordinary level of a modern country, that would go far to solve all difficulties?—That would enable you to get a loan.

39290. It would; if they allowed us our own revenue we need not trouble about any loan. Then, the evils being what they are—restriction of our export trade, suppression of our manufactures, and a disastrous drain of emigration—would you say that the railway question ought to be settled now, that if we cannot have a gift, let us have Imperial credit, and if we cannot have Imperial credit let us borrow for ourselves—at any rate let us have the question settled?—I think the most important thing is to settle the railway question in conjunction with the development of the country. I am afraid there would not be very much use in getting the railways if you had not power to develop the country to make traffic.

39291. If the revenue of the country were placed at the disposal of the country for a term of years it would be possible to deal with the whole question?—It would.

Compensation of the existing officials in the event of State purchase.

39292. As to compensation of officials, have you any knowledge of what has been the practice of the railway companies—the Irish railway companies—in relation to officials and employees discharged by no fault of their own, say, in the case of amalgamation?—No, I have not.

39293. You say that having regard to the great savings that would be made, compensation should be given. The measure of it would depend on the amount of the saving?—No. Equitable grounds and fair play require that employees should be fully compensated for the loss of income.

39294. Equitable grounds are sometimes considered in a more or a less liberal way. It would, in some measure, depend on the amount of margin?—I should not think so. I would give them their compensation at the time of the change. It would depend on the income they received.

39295. But upon some scale?—Upon their actual receipts.

39296. *Lord Pirrie.*—What they are having?—What they are having.

39297. *Mr. Sexton.*—Upon a certain scale of years?—If a man was entitled to a salary I would give him an annuity and allow him to commute it. If a man were getting fees I would take the average of fees for a number of years and give a lump sum.

Method of acquiring the necessary funds.

39298. Yes, but the greater or less amount of the compensation would, no doubt, be influenced, I submit, by the price at which the shareholders were willing to sell the lines, and by the co-operation of the Treasury?—From my point of view it ought not to be influenced by anything except the fact that their rights should not be injured.

39299. I hardly understand. If the country were obliged to give a very high price for the lines, and if the Treasury refused co-operation, the means of affording compensation would be different from what they would be if the shareholders sold at fair or moderate prices and the Treasury gave the utmost help?—Even on a most liberal scale compensation would be a bagatelle.

39300. Of course it would be possible to raise money for the purpose of compensation and to add this to the general loan?—Yes.

39301. So that it would be a comparatively small addition to the annual charge for interest?—Yes.

39302. Or if we received an adequate gift, the compensation might be paid out of it?—Certainly.

39303. Just one other point. I understand you to say that a railway system being established——?—About the saving. I do not know whether you were going to ask about that.

Jan. 13, 1908.

Mr. W. L. Micks, Member of the Local Government Board (Ireland).

39304. One reason why you say it is inevitable to have a public system is that there is no other way to make a sufficient saving?—It seems to me, if you do amalgamate you will have very large savings.

39305. Very well, let us examine that. Apart from the gift altogether (if we had the gift there would be great saving, but apart from the gift altogether), if the loan were implemented by Imperial credit it would be obvious that, the lines being sold at a fair price, there would be a considerable annual surplus out of the present net profits?—Yes.

The savings resulting from State purchase sufficient to provide funds for reducing the rates and fares.

39306. That is unquestionable?—Yes, even on the present scale of rates.

39307. That would be a fund for the reduction of rates and fares, experimentally, if you like?—Experimentally.

39308. And within the limits of the fund?—Yes.

39309. Without risk of any loss?—Yes.

39310. Well then, when you have a united system, worked by one administration, instead of six large ones and a number of smaller, there would be additional and large savings over the whole field of administration?—Yes.

39311. It is sometimes suggested here that only the directors' fees could be the subject of economy. Surely they are an insignificant part of the matter?—I see they were estimated at £18,000, but that would be a very small part of the whole.

Reduction in cost of administration.

39312. If every director continued to receive his fees for the remainder of his natural life, it would make very little difference one way or another?—No.

Economy in working, on the general services.

39313. Do you agree with me that the real substantial savings would not be upon such small incidentals as directors' fees, but upon the general service, the main heads of administration—locomotives, carriages, wagons, permanent way, and so on?—Yes. Something could be gained upon salaries and fees. You would have one rolling stock common to the whole country, instead of the sets of rolling stock which the various companies have; it might be smaller and more available generally—interchangeable. Then rolling stock would be made in the country at a lower cost than is paid for the locomotives and wagons that are imported. Another small item is that you would have no expense for paying canvassers for traffic; there would also be a reduction in the ordinary legal expenses. I suppose that a large proportion of the receipts of the solicitors of the various companies are incurred in connection with differences of opinion between the various companies.

39314. There would be not only no canvassers, but no hauling of traffic by devious routes, no unnecessary trains, no duplication of services?—Quite true; I had not thought of that. Then I think that one of the heaviest heads would be one that you have already alluded to, viz., the enormous expenses of Parliamentary procedure.

39315. There would be no Parliamentary costs?—No.

Abolition of Parliamentary and legal costs.

39316. No Parliamentary contests and no litigation?—There would be no litigation, because there would be only one company and no one to compete with them in respect of the various ways of sending traffic.

39317. There would be no litigation between companies?—There would be only one body.

39318. Experience seems to show that where railways are conducted in the public interest, and where the administration therefore has no motive, no inducement, to act unfairly, or to resist any reasonable claim, litigation or even dispute is reduced to a minimum?—It would disappear.

39319. And if there be any need for an authority to settle disputes, we should find plenty of models in the countries which now have State railways?—Yes.

Cheaper and more convenient facilities assured to the public.

39320. Would you proceed with your enumeration of savings?—I think that is all. Great saving would result to the public from having through rates published. It would be very convenient to have published rates; everyone would know how much the through rates would be; they would not have to negotiate and make inquiries.

39321. The difference appears to be that on the Continent everyone knows out of a book not only what he will have to pay for any consignment to any place, but also what any incidental charges may be; whereas in Ireland you must go to a certain railway station, ask for a certain rate-book, and then you get one figure; you are unable to say of what elements that rate may be composed, or what service terminals may be included in it. The plan on the Continent is to give the maximum of information, whereas in Ireland it is to give the minimum of information. Which do you prefer? Which is the better for the public?—I do not blame the companies very much; I think they are doing perhaps as well as they can; but I would rather have low rates with a new system.

39322. I think that the Irish companies are the victims of London legislation upon railways and upon general subjects, and that they have been subject to the dominating influence of English lines. The Irish railway companies may perhaps be called martyrs to circumstances?—That is the way in which I have regarded them in my suggestions.

Examined by Mr. Aspinall.

39323. You mention in your proof something about railway extensions that are desirable?—Yes.

39324. Where do you consider that they are desirable?—A short line that would be most useful would be one to Castlecomer in County Kilkenny. There is anthracite coal there which would, I understand, be very valuable in connection with suction gas.

39325. Anywhere else?—Arigna.

39326. We have already heard a great deal about that?—Westward from Arigna. But I think that the Castlecomer line is perhaps the more important. A very short line of five or six miles would join Castlecomer to the line between Ballyragget and Kilkenny.

39327. Have you any other place in your mind?—Yes. A small line which I think desirable would be from Magilligan, to assist the fish trade, in connection with the Northern Counties Railway. Then on the west coast of Donegal the light railways avoided the seaports very much. I think it would be a great advantage to have a line touching Ramelton, running round by the sea coast where most of the population is—Ramelton, Milford, Downings Bay, and joining the other line at Creeslough.

39328. Have you come to the conclusion that new lines are wanted in connection with your public work?—No.

39329. Or is it your private opinion?—It is not in connection with my official work at all. Another line would be from Bundoran to Sligo; that would complete the connections for Sligo.

39330. You mention in connection with these lines another matter which I should be glad to have explained. You speak of the avoidance of deep-water harbours by railways. What do you want to convey by that?—I want to convey that in Donegal, for instance, the railway was made across country; it was made from Letterkenny across country instead of round the sea coast, where the population is and where the harbours are.

39331. Have you any other instances of that?—Donegal is the main one; the Galway and Clifden line is another instance.

Examined by Mr. Acworth.

39332. I will not attempt to discuss the right of Ireland to a forty million grant from England, but I daresay you are aware that the English people do not agree?—I did not know that they considered that.

39333. I do not want to argue it, but as far as I understand you would not expect an English Minister to introduce a grant of—I think you said that £200,000,000 was the amount really due, did you not?—I did not put any amount forward, except as a reason for considering a fair claim.

39334. You would not expect an English Minister to be ready to acknowledge the right of Ireland to receive a sum of that kind gratis?—He might be rather unwilling to do so.

39335. And you would not suspect their *bona fides* in not seeing the matter from your point of view any more than we should suspect yours?—It is from the English point of view I am talking. I am not talking from the Irish point of view. I am speaking from the point of view of the English experts who gave that opinion.

39336. You mean that you are quoting the Financial Relations Commission?—Yes.

39337. I see; but I do not understand how you get the amount. Was not the sum they mentioned £3,000,000?—£2,750,000—up to that time, of course; it has been heavier since.

39338. It would be a long while getting to £200,000,000?—There have been 107 years.

39339. Did it begin at $2\frac{3}{4}$ millions?—That I take to be the average.

39340. I see now how you get it. Supposing England wiped out the capital of the railways, clearly, whatever method of management were adopted, the railways would be able to afford to charge lower rates, having no capital to pay?—They could.

39341. Broadly speaking, they could cut down all their rates by one-half?—They could do a great deal.

39342. Roughly speaking, the railways spend one-half their gross receipts on working expenses, and the other half on interest on capital?—Yes.

39343. So that, supposing you had the railways presented to you, the capital wiped out, you could reduce the rates by 50 per cent. at once?—I do not suppose it would be worked that way, but it could be done.

39344. I mean, there would be the money to do it?—Yes.

39345. That, of course, would be independent of the method in which the railways were worked, would it not?—I should not suggest such a reduction of rates.

39346. No; but the funds available either for new improvements or for the reduction of charges for existing services would be the same whatever form of management the railways were under—even if the present companies were continued?—Quite so.

39347. So that it is not on that account that you advocate what I think you called "national management"? It was not on that account.

39348. You advocate it as being good in itself?—Yes, in connection with the development of the country.

39349. I want to understand a little more about this board of twenty-eight people. What is the Board going to do?—It is to act like a Board of Directors.

39350. Would you suggest, for example, that a Board of Directors fixes rates?—It would have power to act for the area within its charge in the same way as the Great Northern Railway does for the area within its charge, subject to the law.

39351. As a matter of fact, do you suggest that the Board of the Great Northern Railway alters or fixes rates—that it changes a 5*s.* rate to a 4*s.* 3*d.* rate, and does that sort of thing?—They are tied by certain restrictions, of course.

39352. Do you think it ever comes to them at all? Do you not think it is done by the general manager, or the general manager's subordinate, or the general manager's subordinate's subordinate?—I should hope that that would be the way under the new system, that you would have your highly qualified managers, and that things would be left very largely in their hands, as they are by directors at present.

39353. Your view, as I understand it, is that practically you would have the same kind of management as at present, except that it would be all one organisation; the elective body would have the same sort of powers as a Board of Directors has now?—Yes. Their object would be the good of the country, whereas the object of the other people is the acquisition of a good dividend.

39354-5. What is your experience on this point. You have had a good deal of experience at the Local Government Board, I suppose. Does a public authority generally make 20*s.* go farther than a private business man. Take all the Boards of Guardians, and people of that kind that you know about up and down the country?—Some Boards of Guardians do, but I do not say the majority do.

39356. Taking them up and down the country, would you say that you would expect them to make a sovereign go as far as a private business man would?—I should not like to offer an opinion upon that.

39357. You are not confident?—The rates in some unions are very low, too low; in others they are too high.

39358. I was not discussing what the rates were; I was discussing the question of getting value for money?—But it turns on the question of poor rates in the case I was considering.

39359. Surely not. What I am considering is not how much money you spend, but the spending of it economically. What I asked you was whether you thought the ordinary local authority spends its money as economically, and gets as good value in butter, bacon, or whatever it buys, as the private trader?—I think most of them do.

39360. You think they do?—I think so.

39361. That is your own personal experience?—It is.

Examined by Lord PIRRIE.

39362. May I take it that the evidence you are giving is on behalf of the Local Government Board?—Oh, no.

Witness's evidence not given on behalf of Local Government Board.

39363. It is your individual view on this important subject?—Absolutely.

39364. From the eviednce you have given I take it you consider, as a result of your experience of Ireland, that if the British Government did what you believe to be justice to Ireland in returning some of the money they have received from us, the first duty of an Irish body should be to take over the entire management of the Irish railways, and that without the development of the Irish railways and the reduction of freights it is impossible to increase the population, or to raise up manufactures; am I right in that assumption?—Not altogether; I should put development first, and railways second.

Claim for industrial development on the public funds, a prior one to Irish railways.

39365. What do you mean by development. What would be the object of building a big factory in one of these congested districts where there was no railway to convey the material to build the factory?—You could not do it.

39366. Would you not be doing the very thing about which Mr. Sexton has asked you. Would you not be increasing the cost of that mill or factory to such an extent as to make it impossible to work it; would you not be putting the cart before the horse?—You could not put up a factory where communication was not at the door; you would look for water carriage first and rail last.

But grants for both purposes urgent.

39367. What is in your mind with regard to developing; do you expect another grant?—Certainly.

39368. In addition to the grant for the railways. The first grant for which you would ask the British Government would be for development?—Yes. I have already made a report—at the time of the inquiry into the Department of Agriculture and Technical Instruction—and there the suggestion I made was that development should be undertaken. There was a concrete case in Kilkenny at the time. The people raised a capital of £18,000 for the purpose of establishing a woollen mill. They had not a single person in Kilkenny trained to work at the looms or other machinery, and I suggested that for the first three or five years the Development Department should be placed in funds to give practical instruction to the green hands until they became profit-earning; that would be for a period estimated at from three to five years. I do not know whether you follow me?

39369. I do. But how much would the Development Grant be per annum, probably?—I suggested a million per annum.

A grant of one million per annum for 20 years for agricultural and industrial development suggested.

39370. That is merely a grant of three or five millions according to whether it is for three or five years?—Oh, no—for, say, twenty years, to be spent on agricultural and industrial development, like Kilkenny, where you would say, "You have spent so much on machinery, so much on power and buildings; we find that will be at a loss of, say, £2,000 the first year, £1,500 the second, and £1,000 the third, in working this factory, owing to having only untrained hands to work with." What I suggest is that that loss should be borne by the Development Department—that they should examine the books and be aware of everything that went on there, and bear the loss resulting from working with untrained hands.

39371. That would be a bounty to that particular manufacture?—It might be called a bounty to that particular manufacture. But I should not call it a bounty. I should say that it was an equivalent of the technical instruction that is given in England. There is a large grant for technical instruction in England—and there is also a grant in Ireland—and it is spent here on giving technical instruction to people, most of whom never become work-people.

39372. I am sure that the question of development is a very important one for Ireland. But is it possible for that development to take place if our railways keep the rates as they are at present?—I think that certainly the railways ought to be put into Irish hands in one system.

Development of industries and railway reform to go hand in hand.

39373. And at once. And would you not advocate that if the railways are put into Irish hands at once, whether by gift or by any other manner, development should go on at the same time?—I am afraid the railways will not get traffic unless the Development Department does its work.

39374. Development must go on at the same time, or you do not see how additional traffic can come to the railways?—That is my opinion.

Jan. 13, 1908.

Mr. W. L. Micks, Member of the Local Government Board (Ireland).

39375. *Chairman.*—Instead of putting development first and railways afterwards, you would put them both together?—Yes.

39376. *Lord Pirrie.*—These are two important elements which should go together. I thought that that was what you meant, and I wanted to get it clear on the minutes?—In addition to that suggestion about education, if it were not possible to raise the capital locally I suggest that the Government should, in the same way that the Congested Districts Board have done, find the capital and float the business afterwards—not keeping it on as a Government institution, but passing it on to private capitalists.

Duties of the elective railway board of control.

39377. I do not think you made yourself quite clear in regard to this elective board of twenty-eight, with the addition of a few representatives of the Government and four or five chairmen of railways. Am I not right in thinking that your idea was that these men, being representatives from all over Ireland, would be able to point out the necessities of their particular districts in regard to extensions and so on, and to bring to bear their commercial knowledge and their knowldge of the localities, leaving the manager to work out the details and investigate the question?—I think the manager should have the practical power. But I do not think that this board of directors would have the power to arrange about extensions of railways and matters of that kind. That, I think, should be done by a committee.

Suggested committee of Irish Peers and members of Parliament to deal with railway extension, &c.

39378. A committee of the same body?—No. What I meant was that the natural body to do that would be the Irish Parliament if it were in existence, but it is not. Therefore, as a substitute, I would recommend that a committee should take its place, that that committee should consist of the Irish Members of Parliament and twenty-eight Peers sitting together, that they should sit during the Parliamentary recess and settle questions of extensions, rates, and matters of that sort.

39379. Instead of multiplying the various boards, would not this elected body—which would consist of representatives, we may assume, from all over Ireland—twelve from the counties, eight from the county boroughs, and eight from the towns—with other additions be sufficiently representative to be responsible for utilising the money to the best advantage, because none of the earnings of the railways, I take it from you, are to go to the Treasury at all; they are to go to the development of the country?—Yes.

39380. Would you not simplify the matter considerably by leaving it exactly as you put it to the Chairman?—I did not think of them as the supreme controlling body.

39381. You did not?—No. I have it on my notes here about a committee.

39382. So that you have thought it over very seriously, and you consider that there should be another body?—To take the place of the Westminster Parliament. You could hardly get a managing body of directors to decide also questions of extensions. I think it would be well to have some body over them.

39383. I only wanted to get your view on the subject?—I suggest the Parliamentary representatives in the House of Commons and twenty-eight Irish Peers elected by the Peers having connections with Ireland.

39384. How would those Peers be elected?—They would be elected by the general body of Irish Peers themselves.

39385. As I take it, every official of the railways, on the day the railways were handed over by the British Government to the Irish, would get so much money, either in a lump sum or so much a year?—If his services were not retained.

39386. And the amount of the annuity he would get would depend upon the age limit of 65 or whatever it was?—Yes.

39387. It could be settled very easily, I suppose, according to his salary?—Quite easily. It would be the same question that arose in connection with the disestablishment of the Church in 1869.

39388. Do you propose to deal in the same way with directors who have been elected for one, two, or three years?—I did not think that out, but I think they should get something.

39389. They would get something?—Whatever was fair, according to what their term of office would be, and solicitors and engineers should be treated in the same way.

Mr. F. W. D. Mitchell examined by the Chairman.

Mr F. W. D. Mitchell, Secretary, Congested Districts Board

39390. Mr. Mitchell, I think you are Secretary of the Congested Districts Board in Ireland?—Yes.

Constitution of the Congested Districts Board.

39391. Would you tell us in a few words what is the constitution of that Board?—At the request of the Secretary to this Commission I have handed in a paper which explains the constitution of the Board. The Board was established in 1891 by the Purchase of Land Act of that year. The members are all nominated by the Government. There are now three *ex-officio* members, viz., the Chief Secretary, the Under-Secretary,, and the Vice-President of the Department of Agriculture and Technical Instruction. The five other permanent members are, at present, Mr. W. P. Geoghegan, Mr. Charles Kennedy, the Most Rev. Dr. O'Donnell, Bishop of Raphoe, the Right Hon. Sir Horace Plunkett, the Right Hon. the Earl of Shaftesbury. There are also three temporary members, viz., the Right Hon. Arthur James Balfour, the Rev. W. Spottswood Green, and the Rev. Denis O'Hara.

39392. That is the present constitution?—Yes.

Powers of the Board.

39393. What are the powers of the Board?—The general powers of the Board were laid down by the Act of 1891.

39394. Just tell us in a few words what their powers are?—In the 39th section of the Act of 1891 the powers were generally to assist and foster industries of all kinds, including agriculture, and to endeavour to improve the position of the poorer portion of the population in these special districts.

39395. Were the funds to be applied for temporary relief, for instance?—No.

Relief of temporary distress not undertaken.

39396. They were not?—It was not specially prohibited, but the Board have understood that the purposes for which their grant was given did not include the relief of temporary distress. It is partly because that is already the province of another public department—the Local Government Board.

39397. Does the Board adhere at the present time to that decision?—Yes.

39398. How much funds have the Board at their disposal?—Originally the grant given to the Board was £41,250 per annum, the interest on £1,500,000, which was part of the Church surplus. They also received from the Votes some assistance towards the cost of administration. At present they have, in addition to the £41,250 from the Irish Church Fund, £45,000 from the Votes of Parliament.

39399. Is that all the income you have?—Yes, that is all the regular income. The Board also had transferred to them, in 1892, about £89,000 belonging to the Fishery Fund. Part of that money was at the time actually issued in loans to fishermen, but there was £50,000 of unemployed capital which the Board, with the consent of the Treasury, applied to the improvement of piers and harbours which would assist the fisheries.

39400. Just for the sake of information, in regard to the loans to fishermen, did you make many bad debts?—Out of £36,000 or more—£38,000, I think, it was—that was on loan when the funds were transferred to the Board, the Board have had to write off about £4,000 in bad debts.

39401. Not more?—That is of the loans that were issued at that time—that is, in 1892. But that is partly owing to the decay of the fisheries on the east coast of Ireland. The Board of Works had lent the money in non-congested as well as in congested districts. The Board had power to lend money only in the congested districts. But since then they have had to write off, I think, about £4,000 out of about £90,000 that they have issued themselves—that is, by turning this money over several times, three times, I think, it is.

39402. *Mr. Sexton.*—I think Mr. Green explained to us in London that that loss was due to very special causes?—Yes.

39403. *Chairman.*—The alteration of the fishing grounds, for instance?—I think Mr. Green said that the work was to a great extent experimental in many places. And, again, the fishing has not prospered

in some parts of the coast; it is of course very fluctuating.

39404. Have you given us the total resources of your Board?—Yes. The fixed income is £86,250. Then they have, you may say, £36,000 lent under these fishery funds to fishermen.

39405. So much for the powers and resources of the Board. Have you devoted any portion of your funds to subsidising steamer services?—Yes. The Board have from the beginning given subsidies to steamers to assist fisheries and other industries on the coast.

39406. I am rather dealing with the steamer services?—Yes; I am referring to the steamer services. In all, up to the present time, they have given about £18,300 or £18,400 to assist steamer services.

39407. When did they begin that process?—In the beginning—in 1892.

39408. Where was the first steamer service?—The steamer to Aran was the first.

39409. From where?—From Galway to the Aran Islands.

39410. What was the arrangement with reference to that service?—The Board pays £700 a year.

39411. As a subsidy?—As a subsidy.

39412. To an independent company?—To a local company.

39413. You gave them a subsidy to run a steamer?—Yes.

39414. Is that in operation at present?—That has continued from 1892 up to the present time.

39415. Are the Board satisfied that the subsidy they have given has tended to develop industries that would not otherwise have been developed?—It has been of immense benefit—in fact, it is essential to the well-being of the islands.

39416. Have you given them any further assistance besides the subsidy?—The Board have encouraged the fishing, not only by loans, but by giving instruction and by building piers.

39417. I mean have they given any further assistance to this steamboat company?—In the first instance they gave them a loan to assist them in purchasing or obtaining a vessel.

39418. A proper vessel for the service?—Yes. They have since repaid the loan. It was a loan of £2,300.

39419. That would rather indicate that the service is profitable?—I am afraid it is not very prosperous.

39420. At any rate, your loan has been repaid?—Yes. The traffic is not heavy enough to support a very good service.

39421. Is that the only service you have subsidised as far as steamers are concerned?—No; there was another in 1896.

39422. Where was that?—Between Westport and Clifden on the south, and Belmullet on the north. The Board paid £300 a year.

39423. How long did that run?—That was discontinued in February, 1898.

39424. Because it did not pay?—Yes. Complaints were made of the irregularity of the service. For a short period in 1897 the Board commenced a subsidy of £250 a year for a service between Sligo and Broadhaven; that was only for a very short time.

39425. Is that continuing now?—No; it continued for only nine months. The Sligo Steam Navigation Company said that they were losing on the working of that service, and they were unwilling to continue it.

39426 They discontinued it, and of course your subsidy ceased?—Yes. Again there was not sufficient traffic to support a good service.

39427. Have you done anything on the coast of Donegal?—Yes. In July, 1898, a service was commenced on the coast of Donegal with a subsidy of £600 a year. The terminal ports were Londonderry and Donegal, with occasional calls when weather and tide permitted at Ballyness, Burtonport, Mount Charles, and Dunfanaghy. Numerous complaints were received from local traders as to the unsatisfactory manner in which the service was being carried on. On reconsidering the question of continuing the subsidy the Board decided in April, 1901, to offer a subsidy of only £300 for three years for a slightly different service, but the offer was declined, and the service ceased. Another case was in November, 1901. A subsidy of £500 a year was paid to the Clyde Shipping Company to assist them in continuing a weekly service on the south-western coast between Cork, Schull, Bantry, Castletownberehaven, and Dingle. The arrangement with the Clyde Shipping Company for a subsidy of £500 a year expired on 31st October, 1904. In September, 1904, the company offered to continue the service for another year if the Board would increase the subsidy to £750 a year to meet the loss which they said they incurred in carrying it on. The company were informed that the Board could not increase the subsidy, and the steamer was withdrawn. In coming to the decision that they would not increase their subsidy the Board were influenced not only by want of funds for a larger subsidy, but by the fact that there had been considerable local opposition to their giving any assistance—that is, opposition from other companies trading on the same part of the coast.

The Board's subsidies to steamers:—Cork and Dingle, calling at Schull, Bantry, and Castletownberehaven.

39428. There was objection to the subsidy being given to the Clyde Shipping Company?—Yes.

39429. Has the Board made any arrangements with any railway company?—Yes. From time to time the Board have had correspondence with the railway companies in connection with rates for fish traffic or for the carriage of agricultural produce.

Reasons for withdrawal of subsidy.

39430. Have you made any arrangements with the Great Southern and Western Company?—At the time this subsidy to the Clyde Shipping Company was withdrawn the Board concluded an arrangement with the Great Southern and Western Company and the Cork and Bandon and South Coast Railway, by which the then existing rates for goods carried to Kenmare, Bantry, and Tralee would not be increased, and a special schedule of reduced rates has been fixed for goods *via* Kenmare, the Board giving an undertaking that they would not subsidise any line of steamers plying on the south-western coast, except it be a purely local service not extending to Cork or Limerick. This arrangement was made on the withdrawal of the subsidy to provide for the wants of several districts which might otherwise have suffered.

Board's arrangements with railway companies.

Agreement with regard to goods rates to Kenmare, Bantry, and Tralee.

39431. When the steamer was withdrawn you took steps to prevent the railway rates being increased to the people living in the district?—Exactly.

39432. And that arrangement you made directly with the Great Southern and the Cork and Bandon Railways?—Yes.

39433. With regard to the mackerel fishery at Blacksod Point, have you taken any steps there?—The Board in 1900 endeavoured to establish a mackerel fishery, as they had successfully done at other places, off Achill Island, with Blacksod as the depot, and they chartered a small steamer to run from Blacksod to Tonragee, a siding on the Midland Railway between Achill Sound and Mallaranny. They paid £135, and in six years this amounted to £2,375, but the fishing was not a success, and it was abandoned. Most of the fishermen said they would prefer to land their fish at Cleggan.

Blacksod mackerel fishery steamer chartered.

Withdrawn owing to non-success of fishery.

39434. Instead of Blacksod?—Yes. Consequently Blacksod station was abandoned. In the winter of 1903-4 the Board paid a small subsidy to the Bantry Bay Steamboat Company for running extra trips to convey herrings to market, but the quantity of fresh fish carried did not justify the continuance of the extra service beyond a few weeks. Again, in 1906, the Board agreed to pay the Bantry Bay Steamboat Company a subsidy of £200 a year for a service between Bantry, Glengariff, Adrigole, and Castletown. That is now being continued. The Congested Districts Board and the Department of Agriculture have constructed a new pier at Adrigole, and the Board are now building a pier at Glengariff, at which places regular calls will be made.

Subsidies to the Bantry Bay Steamboat Company.

Construction of piers at Adrigole and Glengariff.

39435. That is for the landing of the fish, I suppose?—For general trade purposes.

39436. What is the total expenditure of the Board in connection with these steamer services? Have you got the figures?—Up to this year it would be about £18,360.

Board's total expenditure on steamers.

39437. That is in local steamboat services?—The cost of assisting steamboat services.

39438. Now, with regard to railways. What have you done in connection with railways?—The Board have never been in a position to give any considerable financial assistance to railways for the extension of their systems, having no funds which they could draw upon or which they could hypothecate for such extensive undertakings. They have, however, in many cases shown their willingness to assist on a moderate scale by offering an annual amount to meet the probable loss on working a new branch line. But in no case has the scheme been carried out, and the Board have therefore never given any financial assistance for the extension of railways.

Inability of the Board to assist railway extension.

Jan. 13, 1908.

Mr. F. W. D. Mitchell, Secretary, Congested Districts Board (Ireland).

39439. In fact, your funds would not allow you to?—No; they were too limited, and the Board had no command of capital.

39440. I do not think it is necessary to read your Board's minutes; you have frankly told us that you could not assist these light railways in the congested districts, because of want of funds?—Yes. From time to time the Board have made arrangements with railway companies to grant more favourable rates for the carriage of fish, and when they first introduced the culture of early vegeteables in Cork and Kerry they made arrangements for the carriage of the early potatoes to the English markets at rather better rates.

Assistance afforded traders to obtain reduced rates and improved transit facilities.

39441. In that way you have benefited the senders?—Yes. But I ought to explain that under the Act of 1899 the agricultural work has passed from the Board to the Agricultural Department.

39442. When was that?—Soon after 1899, when the Department of Agriculture was established.

39443. I see you have detailed in your proof a great many applications which you have made to the railway companies, but I may take it from you generally that wherever you have been asked by any bodies in the congested districts you have done your best as a Department, and have secured the best terms you could with the railway companies—that is putting it broadly?—Yes. The Board would not have felt themselves entitled to apply to the railway companies to get the rates reduced generally, because that would have been tantamount to asking them to give a subsidy to the congested districts which the Government ought to give.

Subsidies not given to railway companies: several schemes proposed and abandoned.

39444. In no case, I understand, have you given a subsidy to a railway company?—No. The Board offered one in one or two cases, but the scheme fell through, and it was not availed of.

39445. That is with regard to rates. Now, with regard to transit generally. Have you taken up the question with the railway companies—as to the quick transit of fish, for instance?—Yes. Special trains were arranged for with the Midland Railway to assist the mackerel fishing in the West—trains from Clifden and Galway.

39446. Have you found the railway companies ready to assist?—They have always been ready to assist the Board whenever they have been approached.

39447. That applies not only to the fish traffic, but I think you have carried on negotiations with reference to early produce?—Yes, agricultural produce.

39448. Early potatoes, for instance?—Yes.

39449. Which it is important to get early to the market, in order to secure a better price?—Yes. That work is now all in the hands of the Department of Agriculture.

Examined by Mr. Acworth.

Success of the subsidised steamer service to Aran Islands, which is being continued.

39450. Do I gather that on the whole the Aran subsidy is the most successful?—It was more obviously essential there than anywhere else, because these islands, on which there are about 3,000 people, had no means of communicating with the mainland, except by very small hookers or sailing boats.

39451. And it is being continued?—Yes; it has not ceased.

39452. It is undoubtedly useful—you say essential?—It is essential.

39453. You do not see any prospect, I suppose, of the place ever growing out of the need for the subsidy?—No.

Value of the Aran fishing.

39454. It will never be able to pay its own way?—No, it could never. Agriculturally, the island is almost a rock; there is very little agriculture possible. The fishing is now worth, I suppose, from £5,000 to £8,000 a year, and that is the chief means of subsistence the islanders have.

39455. Does that have to keep 3,000 people?—Of course, when I say that the island is almost a rock there is some feeding there, and what there is is very good—between the cracks in the rocks. Anyone who has been to Aran will understand that. As it is limestone, what little grass does grow is very good.

The continuance of the subsidy a necessity although the service is unremunerative.

39456. Anyway, it is not a commercial thing, and never can be?—No; the steamer service can never pay its own way.

39457. It might be arguable that it would be better for these people to abandon Aran altogether, but if they are to go on there you have got to run this at a loss in perpetuity?—The poor law valuation of the islands, founded on the value of the land, is, I believe, about £1,600 a year.

39458. For the whole island?—Yes, the three islands.

39459. It seems to be about ten shillings per head of the population?—It is about that.

39460. Now, tell me another thing. You mentioned once or twice in your proof local opposition?—That was in connection with competing local undertakings, where it was thought that others were unfairly favoured. If a subsidy were given to one company, another company working on the same part of the coast or on a neighbouring part, or possibly a railway company, might consider that it suffered by the favoured company receiving a subsidy.

39461. I suppose the Cork and Bandon, for example, had to put down its rates so as not to lose all its traffic?—I am not aware that any reduction was made.

39462. I thought you bound them not to increase their rates?—After it was arranged between the Clyde Shipping Company and the Board that their steamer was to be withdrawn, the Board made an arrangement with the railway company to prevent the rates being increased.

39463. Does not that mean to prevent their being put back to what they were before the steamer commenced running?—I do not think it had any reference to what they were before the Clyde Shipping Company's steamer ran. I do not think it had any connection with that.

39464. Anyway, the steamer tended to take away traffic from the Cork and Bandon line?—Yes, certainly. In fact, while it ran there was competition between the railway and the steamer, but when the steamer was withdrawn the railway company had almost a monopoly, and of course there was a danger of their raising the rates owing to there being no competition.

39465. I think there is another case of local opposition mentioned in your proof, is there not?—The local opposition was all of the same kind.

39466. Was there not another case?—There was one Belmullet way, I think?—It appeared there that Messrs. Laird and Company, the shipowners who received the subsidy, stated that the people of Belmullet discountenanced the service and complained of its irregularity because of their desire to obtain a railway service instead. They are still in want of a railway.

39467. Does that seem to you a serious difficulty in connection with these subsidies?—No; it is not very serious. To assist communications and the transit of goods is, of course, essential in any poor district—in fact in every district, and I think the system of subsidies is a very good one.

39468. I was not doubting that. But we have had here on several occasions evidence of local opposition to new improvements—opposition for the protection of people who had such business as there was already? That has never been of any serious importance. I do not think the opposition was ever serious, but, of course, if two companies were running over exactly the same route, to give a subsidy to one and not to the other would have been very unfair, and it has never been done.

39469. I should presume that. But you do not think, in extending your policy of subsidies and assistance, that the question of treading on the toes of existing vested interests is very serious?—No.

Examined by Mr. Aspinall.

39470. With regard to these steamship services that you have run, have they all been run in connection with existing lines, steamers of which have been asked to call at some of these ports, or are some of them new arrangements from point to point?—The Aran line is entirely new. It is subsidised, practically maintained, by the Board for the special purpose. But the Clyde Shipping Company of course run their steamers in connection with their other main routes. The Laird Company run theirs in connection with their general service, and Mr. Herdman was maintaining the service in Donegal, which the Board assisted for a short time.

39471. The remark one would make about the subsidies is that some of them are extremely small?—Where traffic was not quite sufficient to maintain the service the Board granted as much as they thought they could fairly spare to carry it on and to enable the company, I do not say to pay well, but barely to subsist; because in many cases in these outlying dis-

tricts the traffic on the branch does not pay for its own mileage, but it pays as a feeder for the main line belonging to the same company.

39472. Did you ever feel that if you were able to increase the subsidies you would get the services continued?—No doubt.

Examined by Mr. SEXTON.

39473. Can you state the total area of the counties and districts scheduled as in need of public aid by reason of congestion?—Those that are scheduled have an area of about 3,600,000 acres.

39474. About one-fifth or one-sixth of the area of the whole country?—Yes. But a great part of that —I believe over 1,000,000 acres—is classed as water, waste and bog.

39475. Is there a larger proportion of water waste and bog in the congested areas than in the country as a whole?—Yes.

39476. Somewhat?—There would be considerably more, because the congested districts are a bare fringe round the west coast.

39477. If we ignore the water waste and bog, both in the congested districts and in the country at large, I suppose it might be said that these areas comprise perhaps about one-sixth of the area of the whole country?—Yes.

39478. What is the population of these areas?—At the last census it was 505,000.

39479. Corresponding roughly to about one-seventh or one-eighth of the population of the whole country. To exercise your powers and fulfil your duties over that area, apart from land purchase finance, you have an income of £86,000 a year?—Yes.

39480. You have a very wide and varied assortment of powers?—Yes; it is money that is wanted.

39481. You need money. Power is always gratifying, but power without money is not of much use where expenditure is an essential matter?—Certainly. The commission given to the Board was a very wide one, and has only shown how extensive it was.

39482. Your income was originally only one-half what it is now?—Yes.

39483. Derived from Irish sources?—Yes.

39484. Interest on capital funds which were part of the liquidation of the late Established Church?—Yes, exactly.

39485. You received no increase of that income for eight years?—About eight years.

39486. And then another interval of four or five years passed before you received an additional increment?—Yes.

39487. Was the last grant from the Irish Development Fund?—It was from votes of Parliament.

39488. The Development Fund is a Parliamentary vote no doubt; it is a sum dedicated to Ireland for certain purposes as an equivalent for other sums given to England and Scotland, and this money comes out of it?—Yes.

39489. It is Irish money in that sense?—Yes, in that sense.

39490. The first grant of £25,000 a year was made an occasion by the Treasury for getting rid of the Vote for the administrative charges?—Yes. The Board did not get the whole £25,000 as an increase of income; it amounted, after the cancellation of the smaller votes which the Board had hitherto had, to an increase of not much more than £16,000 or £17,000 a year.

39491. They cut away the vote for about £6,000 a year for your administrative charges and put upon you other charges amounting to £2,000 or £3,000 a year?—Yes; they withdrew the assistance the Board had hitherto had from other votes.

39492. As is unfortunately too often the case when anything is given to Ireland, the Treasury made a point of getting something back?—I am afraid they generally consult economy.

39493. Was it agreed or was it enacted that your administrative charges should be borne by Parliamentary Votes?—It was enacted by the original Act.

39494. The Land Purchase Act of 1891?—Yes. According to Section 40, "The salaries or remuneration of the officers employed by the Board and the administrative expenses of the Board shall be fixed by the Treasury and paid out of money provided by Parliament."

39495. And the Treasury fixed it so that you did not get anything at all?—I think there was a misunderstanding at the time between the Treasury and Mr. Gerald Balfour. It was known that some other votes were to be withdrawn. He stated in Parliament that he intended to give the Board an increase of income of nearly £20,000 when he gave this grant of £25,000, but after the Treasury had made the deductions it turned out to be much less.

39496. The Treasury defeated the intention of the Minister?—Yes, partially.

Treasury manipulation of the finances of the Board

39497. It often happens. The result is that although you were to have your administrative charges borne on Parliamentary Votes, the Treasury took advantage of the giving of a Parliamentary grant to neutralise that arrangement?—The £25,000 was intended to cover and replace part of these charges, I think. The position was this. The direct assistance the Board had at that time from the votes was about £6,000 or £7,000 a year. Mr. Gerald Balfour intended that to be taken off the £25,000, but the Treasury, in addition to taking off the £6,000, obliged the Board to pay for their own office maintenance, which was formerly defrayed by the Board of Works, their postage and telegrams which were formerly borne by the Post Office, and their printing and stationery which had been provided by the Stationery Office.

39498. And the cost of keeping up the offices was £2,800 a year?—Yes; with the other services named; they swept all those away.

Only two subsidised steamer services remain.

39499. If you had had that almost £3,000 a year additional you might have maintained all these steamer services?—It would have been a great advantage, of course.

39500. Only two of those services now remain?—Two remain.

39501. All of them, but one or two were found publicly useful?—I have given the reason for which they were withdrawn in each case.

The other services discontinued through inadequacy of the Board's funds.

39502. I infer from the circumstance that the Board in each case offered an increased subvention that they desired to continue the service?—If the Board had had the means of increasing the subsidies they would have continued them no doubt.

39503. So that this cleverness of the Treasury has had the effect of abolishing the steamboat services?—Indirectly that might be said to have been one of the results.

The utility of the Board hampered by tardy and inapt legislation.

39504. I suggest that the legislation affecting your Department has been not only tardy but rather inapt. For instance, they gave you powers to enlarge holdings in 1891, but they did not give you power to acquire land until 1893, and they did not give you any funds until 1896?—The process of enlarging the powers of the Board has been very slow.

39505. Very slow and inapt?—All legislation is slow I am afraid.

39506. I should demur to that. Your Board have been sixteen years in existence, and it has taken the greater part of that time to discover the most obvious defects of the original Act?—The amendments of legislation have been in connection with the land business. That, of course, was not in the first instance put on the footing that it is now on. It was not intended that the Board should do the work it is now doing. In the first instance, it was supposed that the Board would enlarge holdings on the properties of private landowners.

Enlargement of holdings on private properties attempted and abandoned.

39507. How could they without buying the holdings?—Arrangements were made, as the Act shows, for carrying that out, but it was found impossible to work it, and nothing was ever done.

39508. Obviously. How could you suppose that private landlords would let you go on their estates, take up individual holdings and cut them about, unless you bought the land?—That ought to have been apparent from the beginning. If you had power to acquire, what use was it without the money?—The fact is that all this land business has developed since.

39509. It seems to me, though I hesitate to suggest it to you as an official, that if we had some power of initiating matters of this kind nearer home we should get them dealt with more intelligently in the first instance, and more rapidly by way of amendment?—It is quite possible that it might be done more rapidly, as Parliament has more business than it can manage.

Improved railway communication an urgent need of the country

39510. Your Department candidly admit through you that they regard the matter of communication as one of the most urgent needs of this country?—They do.

Jan. 13, 1908.

Mr. F. W. D. Mitchell, Secretary, Congested Districts Board (Ireland).

39511. But they have not been able to give any assistance whatever to railway construction or extension?—No. That requires very large capital, and the Board have not been able to do anything in that direction.

39512. When we say that they have no money for that use, what we mean is that the Board have considered and decided that there are other uses more imperative?—Yes. Anything that they could do towards the extension of railways would be so infinitesimal that it would be hardly worth granting.

The Board's resources inadequate to assist railway extension.

39513. In the Belmullet case you offered £500 a year for ten years?—That was too small a grant.

39514. In the Arigna case your offer was of no avail?—That is so.

The Belmullet, Arigna, and Blacksod cases—Board's action.

39515. In the Blacksod case, you had nothing to offer but sympathy?—No. This was a very large scheme, and anything the Board could have offered would have been of no use at all.

39516. So that it was quite abortive?—Yes.

Increased funds required.

39517. Your attempts to extend railway construction came to nothing?—I might say that more than two years ago the Board made an application to the Government for an increase of income. A Royal Commission was appointed in July, 1906, and it has not yet reported.

39518. Your whole income of £80,000 is a very small part of the 2¾ millions which, according to a Commission composed chiefly of Englishmen, is extracted annually from this country by excessive taxation. If you had a slice of that you would be able to do something?—I have no doubt that England owes Ireland a large sum, but I am not able to assess the amount.

39519. But when that figure is put forward by a Commission, the majority of whose members were Englishmen of the financial standing of the late Lord Farrer, Lord Welby, Mr. Bertram Currie, and Sir Robert Hamilton, we Irishmen may take it as a good working hypothesis?—Certainly.

39520. May I call your attention to this provision in the Land Purchase Act of 1891:—"The Land Commission may, with the consent of the Treasury, place at the disposal of and pay and apply as may be directed by the Congested Districts Board for the purposes of this Act any part of the principal of the Church Surplus Grant which may not in the opinion of the Treasury and the Lord Lieutenant of Ireland be required for the purposes of the guarantee fund." The guarantee fund makes no demand whatever upon it, practically?—The Board's Church Surplus Grant has been removed from the Guarantee Fund now.

39521. That is quite clear?—That is quite clear.

Church Surplus Grant—Board's application to withdraw money for land purposes refused by Treasury.

39522. Have the Board ever asked the Lord Lieutenant or the Treasury to allow them to apply any part of that principal of 1½ million sterling?—They have, on two occasions.

39523. What was the reply?—It was refused.

39524. When was that?—One instance was, I think, some six or seven years ago; I do not remember the exact date. Another instance is a transaction that is not concluded at the present moment. The Board asked the Treasury for a loan of £25,000, or that they might borrow that sum from that fund.

39525. Reduce the fund by that sum?—Yes. That would be equivalent to the Board's borrowing at 2¾ per cent., that being the income the capital realises.

39526. The Board would have been willing to submit to such reduction of their income as would be represented by the withdrawal of that sum, for the sake of meeting these urgent needs?—Yes.

39527. What sum did you ask six or seven years ago?—I think it was £10,000; but I can get the correct figure.*

39528. An approximation will be quite sufficient. It was about £10,000?—Yes. I could let you know the exact figure to-day or to-morrow.

39529. Although that was an Irish fund, and although your Irish Board declared that a sum of £10,000 paid out of that fund would be of use in this country for the exercise of their powers, it was refused. By whom was it refused—by the Treasury?—Yes.

39530. Not by the Lord Lieutenant?—No. I ought to explain that the Board had power under the Act of 1891 to borrow from the Board of Works, but no regular arrangement was made with the Board of Works until 1899, in Mr. Gerald Balfour's time. Since then the Board have been borrowing for the improvement of estates, and they have borrowed about £130,000.

39531. Is there any sense in keeping that sum of one and a half millions intact for an indefinite time in a country so much in need of present expenditure?—I do not know the reason.

39532. The reason is the usual official aversion to allowing anything to be done in Ireland that Irishmen desire?—It costs the Board more to borrow from the Board of Works than from the Church Surplus Fund, as they pay 3½ per cent. to the Board of Works.

39533. *Chairman.*—And 2¾ per cent. to the other?—Yes.

39534. *Mr. Sexton.*—I will pass from that. Now, as to railway rates. You have intervened, you say, with some effect in two or three cases?—Yes.

39535. You asked the Great Southern and Western Company to make some reduction of rates to West Cork, and you succeeded. But you had in that case, however, a leverage. You had been running a line of steamers, and you agreed with them that you would not touch either Cork or Limerick with any line of steamboats?—Yes.

39536. So that you had a consideration to give?—Yes.

39537. It was by virtue of that consideration you obtained the remission?—Yes.

39538. And the Midland Great Western have given you rates for the carriage of fish—fresh mackerel—and large consignments of fish. But on looking at the exports, I see that the export of mackerel is very small, about £1,000 a year; indeed, the whole export of fish is not large; so that that concession seems to have been scarcely operative in any practical sense?—The export is small, not because there is a small amount of fish caught round the Irish coast, but because it is carried straight to the English market instead of going through Ireland.

39539. The export by rail is small?—Very small.

39540. It would seem that this concession has not been really of much importance?—It is not very important, but, of course, it was important to the fishermen concerned.

39541. Have you been able to learn anything about those extraordinary charges for fish boxes from Killybegs to Clifden, and for fish from Maam Cross to Glasgow?—Within the last day or two I have had a letter on that subject which shows that the company have, I think, satisfactorily met that complaint. A letter dated the 10th of this month was received from the Midland Railway Company, as follows:—"We have your letter of 25th October enclosing copy of letter from Messrs. Bookless Brothers, wholesale fish merchants, Glasgow, of 17th October. I have looked into the matter, and the consignment was correctly charged at the rate of 5*s.* 10*d.* per cwt. then in operation between these places. I have, however, since taken the matter up with the interested companies and arranged a special rate of 3*s.* 9*d.* per cwt. at owner's risk for fish in Division III. between Maam Cross and Glasgow, and the same was put into operation on 14th November, 1907. I have also arranged to have the charges on Messrs. Bookless' consignment in question reduced to the new rate. I may add that we are now applying this rate for the traffic from Galway, Clifden, and Ballynahinch to Glasgow, as well as from Maam Cross."

39542. Then as to the rate on fish boxes from Killybegs to Clifden; they charged 34*s.*?—I have heard no more.

39543. The only other thing I wish to ask about is this. In the case of a project to establish a factory for the manufacture of shirts at Ballyshannon,

Loss incurred by Board in consequence.

* An application was made to the Treasury in 1903, for permission to draw from the Church Surplus Grant £31,943 to pay for four estates, which the Board had agreed to purchase before the Irish Land Act of 1903 came into operation. The Board rested their claim on the 35th Section, S S. (3) of the Act of 1891, which has not been repealed, and is believed to be still in force, but the Lords Commissioners of the Treasury stated in their letter of the 26th November, 1903, that "the Judicial Commissioner of the Land Commission is of opinion that the Board's suggestion is not in accordance with the Land Purchase Acts." The Board had explained that their object was to avoid the heavy loss which they must incur by the issue of Guaranteed Land Stock standing at a discount in the market. The loss actually incurred in these four estates was £4,508.
(Explanation subsequently furnished by witness.)

the railway company at your instance agreed to reduce the rate from £1 4*s.* 7*d.* for shirts to Derry to 17*s.* 6*d.*?—Yes; they agreed to a large reduction.

39544. But the projectors of the shirt factory still thought even the reduced rate prohibitive?—It is a struggling business, and if it is carried on at a considerable distance it would be under great disadvantages.

39545. But what complainants here contend is that just because Ireland is a struggling country with many struggling businesses in it, therefore the rates ought to be made accordant?—The difficulty is a natural one to a great extent. The insular position of the country is a great disadvantage, and the sparse population of the country makes it impossible for the railways to carry goods at the same rate as could be done in a thickly populated country.

39546. No one questions the difficulties of the railways, but I am inviting you to regard the matter from the point of view of the need of the country and what the country requires in order to develop trade?—Reduced rates would be an enormous advantage.

39547. The company agreed to reduce the rate from 24s. 7d. to 17*s.* 6*d.*, but the projectors of the factory still thought the rate prohibitive, and did not establish the factory?—Yes. That would mean that distance was the real objection, and that it was insuperable.

39548. Not insuperable, because they would have accepted a rate of 15*s.*?—As the company had made so large a reduction, I suppose it would have been rather unfair to ask them to make a further reduction. That is a case in which it would have been better for Government, if they wished to foster the industry, to have given a subsidy.

The normal railway rates too high for Irish industrial development.

39549. That shirt manufacture is one of the few important but struggling industries that need special attention; we have heard a great deal about its difficulties. Does it not occur to you that the circumstance that the projectors of the factory were really in earnest but would not take a reduction from 24*s.* 7*d.* to 17*s.* 6*d.* sheds a very instructive light as to their view of the excessive character of the rates in force?—It shows that under the circumstances of the case what you may call the ordinary normal rates that would pay the railway company could not be paid by the industry.

Suggested subsidy to railway companies to reduce rates.

39550. That is putting it tersely and very well, I think. If the rates which the railway company have to impose in order to earn a fair dividend are such as industries cannot bear, is there any exit from that *impasse* except by a united system under public control?—One way to assist the industries would be to subsidise the railway companies to reduce rates; that is one way of doing it.

39551. At the period which we have reached, do you think that any subsidy of that magnitude, taken as it necessarily should be taken out of the revenues of Ireland, should be handed over to the railway companies? Would not the Irish people insist on administering the money and on seeing for themselves that the money was properly used and applied?—I cannot answer that question.

Mr. P. F. Mullally examined by the Chairman.

39552. Where do you live, Mr. Mullally?—At Mullinahone, County Tipperary.

39553. How far are you from a railway station?—Eight miles from Fethard railway station, 13 miles from Kilkenny, 10 from Carrick-on-Suir, and 14 from Clonmel.

39554. What is the nearest railway station?—Fethard would be the nearest railway station, but that is a station that is very little used; Carrick Station is nearer Waterford port. It is out of the way for us. That is a line we are paying a rate of 5*d.* in the £ for for the last thirty years without it being any benefit to us. Our great grievance is that we are paying for that line, and we are paying now for the Cashel line, and we are deriving no benefit from them.

39555. What is the particular traffic in the district where you live? What do you send out of the district?—Pigs, butter, eggs, corn, stone, coal, lime, and provisions. There are about 25 cars constantly employed carrying goods to and from Carrick and Kilkenny. That is for the town of Mullinahone and the villages adjacent.

39556. Everything that is sent into the district has to be carted from the nearest railway station?—Yes.

39557. What station do you cart to, as a matter of fact?—Carrick-on-Suir, ten miles.

39558. Of course, the district consumes produce of some sort. What is the particular produce brought into the district?—There is meal, flour, timber, and provisions coming in to the shopkeepers in the local towns and villages.

39559. Do you import coal?—Yes.

39560. And timber?—Yes.

39561. Have you made any calculation as to what the total tonnage is in and out of that district?—Yes. The approximate amount of goods coming to the district is about 10,000 tons of timber, coal, manures, and other things, and the output is about 7,000 tons of corn, butter, pigs, eggs, and limestone. There are collieries. turf bogs, and limestone quarries, and there are a number of industries not developed in the district that could be developed.

39562. Are they at work at all?—Yes. There are four mines working, with about twenty men employed in each mine.

39563. But with a railway there there would be considerably more employment?—Certainly. You cannot get the coal from the mines. You have to cart it through the country.

39564. The cartage kills the traffic?—Yes, it does.

39565. Is limestone produced in quantity in the district?—Yes. There are very fine limestone quarries in the district.

39566. There again the cartage is too costly and injures the business?—Yes. Stones from these quarries have gone all over the South of Ireland.

Mineral resources of the district awaiting development.

39567. Are the collieries actually working?—Yes, on a very small scale. There are four mines working and about twenty men employed in each mine.

39568. Could the output be considerably increased?—Yes, if we had transit facilities.

39569. Is the coal there?—The coal is there.

39570. Do you know anything about the collieries?—Yes.

39571. What sort of seams are they? What thickness?—I could not say.

39572. At any rate it is workable coal?—Yes, workable coal.

39573. And good coal?—And good coal.

Long road cartage a serious handicap to the industries.

39574. Then this limestone that you refer to is another instance in which the cartage kills the traffic, but if there were a railway the limestone could be produced and utilised in public buildings in different places?—Yes. Stones from these places have gone to Dungarvan and Lismore. They had to be carted to Carrick, and brought to Waterford by rail, and then taken out of the train and brought across the bridge there and put on the train on the Dungarvan line and sent on to Dungarvan and Lismore.

39575. That proves it is good stone?—It is good stone. It is considered the best stone in the South of Ireland.

Proposed construction of a railway from Kilkenny to Carrick-on-Suir, *via* Callan and Mullinahone.

39576. Where do you suggest that this additional railway should be made?—From Kilkenny to Carrick-on-Suir.

39577. What is the distance between these two places?—From twenty-two to twenty-five miles. It would depend on the line of country it would take.

39578. Are there any physical difficulties in the way of making it?—Not very much.

The district prepared to give a guarantee for the line, although already paying in respect of two railways.

39579. *Mr. Sexton.*—It would go through Callan and Mullinahone?—Yes. We had a meeting in Callan, and the whole country seemed to be unanimous on the need of a line, and would be prepared to give a reasonable guarantee should the line run.

39580. *Chairman.*—What do you call a reasonable guarantee—2 per cent.?—I would not quite commit myself to anything on that, because we are paying on two lines, which we consider a great grievance.

39581. One is very small though?—One is very small. The other will go out in two years. The thirty years will expire in 1910.

Jan. 13, 1908.

Mr. P. F. Mullally, Mullinahone, County Tipperary.

39582. At any rate, those have nothing to do with this particular district?—Yes; the Mullinahone district is paying for the two lines.

39583. Have you formed any opinion as to what is called the nationalisation of the railways?—No.

39584. Have you formed any opinion as to State purchase or unification of the railways —No; I have not gone into that at all.

State purchase or nationalisation not considered.

39585. Do you know anything about the rates that are charged generally on the railways personally?—I have heard in the district the shopkeepers——

39586. You don't know of your own knowledge?—Not of my own knowledge.

39587. Have you considered the question of a motor service into this district?—Yes.

Desirability of establishing a road motor service pending railway construction.

39588. What is your view about that?—We consider that it would be very beneficial, pending the creation of a railway line there, and especially if it would carry the mails. We have a great grievance with regard to the mails, too.

39589. What about the roads? Are they adapted for a motor service?—I was chairman of the Tipperary County Council. During my chairmanship there was a resolution passed that should a motor service be obtained the roads should be steam-rolled; and I am glad to say that nearly all the main roads of Tipperary have been steam-rolled.

Suitability of roads for motor traffic.

39590. You have got steam-rolled roads down there?—Yes. They are nearly all steam-rolled. It was one of the first counties to take up steam-rolling.

Refusal of the G.S & W. Railway Company to receive a local deputation *re* railway extension from Kilkenny.

39591. Have you made any representation, as a Council, to any authority with reference to the railway that you suggest?—No; but we had a meeting with regard to the railway, and a deputation was appointed to wait on the Great Southern and Western Railway Company. The secretary of the meeting wrote to the company to know would they receive the deputation, and their reply was that, pending your report, they would not receive any deputation.

Examined by Mr. Sexton.

The agitation for a railway of long standing.

39592. I believe that efforts have been made in the district almost since the establishment of railways to get some better communication?—Yes.

39593. So far, they have had no success?—No success.

No difficulty as to roads for motor transit in this case.

39594. About the roads, for a moment. We have heard over and over again that the real obstacle in the way of developing a motor service is that the Councils will not put the roads into a fit condition. Do you think that that is a well-founded statement?—Not with regard to the Tipperary roads, which are in splendid order; and, as I have said, we were the first to go in for steam-rolling.

39595. That is an illusory objection?—I think so.

39596. You have a good opportunity of ascertaining public opinion upon the subject generally of the Irish railway rates and their effect on the industries of the country?—Yes.

Railway rates generally condemned as too high.

39597. What is the opinion of the community, so far as you know it, of the effect of Irish railway rates on the industries of the country?—That they injure the trade of the country very much.

39598. And keep down the export trade?—Keep down the export trade.

39599. And let in the foreigner?—Yes.

39600. And suppress Irish manufactures. Will anything mend that woful state of affairs so long as the railway system is divided up between a number of bodies of private proprietors?—I don't think so.

The question of guarantee.

39601. When you say that the ratepayers would be likely to give a reasonable guarantee in the case of this particular line, have you considered the probable cost of the line?—No. I have not gone into that, because there was a divided opinion as to whether the line should go on to Clonmel or Carrick. There may be an engineering difficulty with regard to some hills.

39602. Now that you see a chance of getting rid of the existing rate of 5*d.* within a year or two, you are thinking of giving a guarantee for the other line?—A guarantee of 5*d.*—I don't think so.

39603. But a guarantee for the proposed line in consideration of getting rid of the existing guarantee?—I think so. The guarantee will expire in 1910.

39604. The difficulty is this—getting the district to guarantee any excess of working expenses over receipts. It is not only interest on the capital that the ratepayers are asked to guarantee, but also the working expenses of the line should they be more than the receipts. Railways will now not even take a present of a line unless they are guaranteed against loss by the ratepayers of the district. Would the ratepayers be willing to bear not only the burden of part of the interest on the capital, but also to be responsible for any excess of the working expenses over the receipts?—I cannot answer that. They are prepared to give a reasonable guarantee when the other guarantee will expire, two years hence.

39605. Looking at the difficulties of the system of the existing companies requiring guarantees against loss and the difficulty of asking the ratepayers to enter into an indefinite guarantee of this kind, does not it occur to you that the most likely method of getting these necessary lines, especially where the public interest is so manifestly in favour of them, would be to have the Irish railways as a whole handled by an Irish authority, with power to use its resources for the good of any part of the country that might require development?—I would be very glad to see it.

Examined by Mr. Acworth.

39606. You say you have got twenty-five carts running through your place?—Yes.

39607. Some of them to Kilkenny and some of them to Carrick?—Yes. Most of them to Carrick.

39608. What you want is to put a motor on in place of them?—A railway; but pending a railway, we would be very glad to get a motor. We consider we are very badly treated. Our country is a very fine district without railway communication, and it has several small industries which could be fully developed if we had railway communication.

39609. I was wanting to deal with the motor service first. What sort of a motor service were you thinking of—for passengers only or for goods?—For both.

39610. Will there be no difficulty with the people who make their living by carting at present?—In what way?

39611. We have heard of one or two places where a motor was put on, and the carters did not like it, and induced people not to send their traffic by motor, and the motor was starved out?—I don't see how that would interfere in our district.

39612. You don't think there would be any difficulty of the kind?—I don't think so.

39613. It would not have occurred to me as likely, but I am told it has occurred. You don't think there would be any difficulty of that kind?—I don't think so; because a great number of these carts belong to local shopkeepers.

39614. If they could get it done more cheaply they don't want to run their own cart?—Certainly not.

39615. It is not done by people who are living by carting?—No. Some of them are living by carting, but a great number of these shopkeepers have three and four carts on the road.

39616. Of course, if they can save money they would like to do it?—Yes.

39617. *Mr. Sexton.*—It is not peculiar to Ireland that people who are making their living by a certain industry object to improvements that may take away their means of living. That is a very usual thing; but is it a usual thing for such opposition to succeed against the public interest?—No, it is not.

Mr. Andrew Hamilton examined by the Chairman.

Mr. Andrew Hamilton, Representative of the Omagh Board of Guardians

39618. What are you, Mr. Hamilton?—I represent the Rural District Council of Omagh.

39619. We have had some evidence already from Omagh?—You have had some. But I represent not so much the Rural District as the particular District of Mountjoy, and the want of railway facilities, as to which I am going to give evidence.

The necessity for railway facilities in Tyrone.

39620. Are you connected with the Board of Guardians?—Yes.

39621. And you have been deputed by them to appear before us?—Yes.

39622. Has not there been a committee formed in your district to consider railway questions?—Yes.

39623. Were you the chairman or secretary of that committee?—I was the secretary.

39624. What was the object of your meetings?—To try to get the Mountjoy Station re-opened. After the line was made, about 1856 or 1857, there was a station at Mountjoy. That station was worked for a few years, and afterwards closed; or, rather, in the first instance, it was removed from the place in which it had been originally put and put down nearer Newtownstewart, about a mile further down, which was very inconvenient for the district that it was meant to serve. The place in which it was put in the second instance was very inconvenient to the public, as you will see from the map. I have the Ordnance Sheet here, and can point it out to you. The place in which it was originally put was there (*indicates*). It was removed from there, after working for some years, down to here (*indicates*), where you see the bridge crossing the road. It was most inconvenient, and served nobody, except perhaps half-a-dozen people.

39625. *Mr. Sexton.*—That second one was discontinued also?—Yes, it was discontinued also.

39626. *Chairman.*—What is the distance between the two stations that are open?—Ten miles—the longest in Ireland.

39627. So there are ten miles without station accommodation?—Without a station of any kind.

39628. This particular station, Mountjoy, would be midway, I suppose?—Rather nearer Omagh; about four miles from Omagh and six miles from Newtownstewart. The reason the four-mile limit has been chosen by us is that the cross-roads is the most convenient place on the whole portion of the line.

39629. You have brought this under the notice of the Great Northern Railway Company?—We have been writing them for the last ten years about it.

39630. What is the upshot of it all?—The upshot of it is that the directors have refused to reopen the station.

39631. Have they alleged any reason?—They have alleged that when it was open before, about thirty years ago, it did not pay. Our answer to that is that it hardly worked long enough to see whether it would pay or not; and the circumstances of the country are quite different now from what they were then, and there are industries existing in the country now which did not exist then. There is a creamery at the edge of the plot of ground that the company have still in their hands for the station-master's house.

39632. Was the station pulled down?—It was before I came to that district, but I don't think there was any permanent station or built station there. I think it was more a temporary wooden affair.

39633. What are the industries in the district that would be served if the station were opened?—The Mountjoy Co-operative Agricultural and Dairy Society.

39634. That has been established since the station was abolished?—It is about nine or ten years since it was established.

39635. That is an industry that has been developed since the station was taken away?—That is so, but it was put there, I should say, in the anticipation that the station would be restored.

39636. Is it at work now?—Yes. But it is very considerably handicapped, because they have to cart their goods.

39637. They have five miles to cart?—Yes, almost. The coal has to be brought from Omagh. Butter and cream have to be taken by carts.

39638. Have any creameries been established in the district since?—There are two creameries that would use this station; one on the other side of the river, and the other district (North Cappagh) on the other, so that the two districts, although near, are thus separated, and there is a bridge at the one end of North Cappagh district leading to Mountjoy. North Cappagh is about four miles from Mountjoy Station, but Mountjoy would be the nearest station to it, and very considerably nearer than Omagh Station, to which they have to go.

39639. Those creameries have been established since the station was removed?—Yes, the creameries have all been established in recent years. I should say that the creamery at Mountjoy would not have been put there but that it was anticipated that the station would be restored. I mean it would have been put further down towards Newtownstewart.

39640. The milk is brought in from the district to the creameries, and the produce, whatever it may be, butter, and so on, has to be carted into Omagh?—That is the process. The butter or cream is carted into Omagh at present, but what the people of the district want is to put it into the train and send it off to Belfast, Derry, or other markets, instead of having to go to Omagh.

39641. You wish that the station should be restored to somewhere about its original site, and that would accommodate those new industries that have been established since the station was removed?—Yes, and also accommodate the people who wish to travel.

39642. All your coal has to be carted from Omagh or Newtownstewart?—Yes. I should say we were never told how much the income was or anything of that kind, to show how much we might have guaranteed. We did offer at one time to guarantee the railway company that if they restored the station we would make up the loss it would be to them, but it never came so near as for them to tell us what the income was and what the expenditure would be.

39643. Did you make that offer to the railway company?—There was an offer made. But it never came to figures.*

Jan. 13, 1908.

Mr. Andrew Hamilton, Representative of the Omagh Board of Guardians.

Suggested restoration of Mountjoy Station to its original site.

Road cartage of goods inconvenient and expensive.

Offer to G.N. Company to offer to guarantee the loss in maintaining a station at Mountjoy.

Examined by Lord PIRRIE.

39644. I presume you have had several public meetings on the subject of this station?—We have had public meetings held all round the country, three meetings held in Mountoy and two in Omagh, and also resolutions passed at the Board of Guardians and at the Town Commissioners, and I have here a copy of a resolution passed by North Cappagh Creamery Society and by the Omagh Angling Club, urging the re-opening.*

Resolutions of public meetings and local Boards advocating re-opening of the station.

39645. Therefore, we may assume that the people of the district all want it, and feel that they will have a good traffic if the station is re-established?—Yes. The district consider it a great grievance that the station was put there in the place marked on the maps lodged on the construction of the line, and was afterwards taken away. We think we were very unfairly treated by the company in doing so.

Examined by Sir HERBERT JEKYLL.

39646. You did not make any application to the Railway and Canal Commissioners, I suppose, on the ground of want of facilities?—We did make application to the Board of Trade. I have the letters here (*produced*).

Correspondence with the Board of Trade *re* Mountjoy Station.

"MOUNTJOY, OMAGH,
"*8th July*, 1896."

"R. 3035.

"*Re* Mountjoy Railway Station.

"SIR—

"I beg to refer you to your acknowledgment, dated 11th March last, of our memorial and papers, which you were good enough to state would receive attention. Not having heard further upon the subject, I beg again to draw your attention to it.

"I am requested by the committee who have been appointed to look after this matter, to ask most respectfully for a public inquiry of some sort into the subject. We are so satisfied that if the matter were fully inquired into, the Board of Trade would put pressure upon the company, that we are prepared to defray any reasonable costs which may be incurred in such inquiry.

"We have exhausted every means within our power, even to the extent of offering a guarantee to the company to indemnify them against loss by the re-opening of the station, as shown on their own plans, but all without avail, and we trust that, as your Board seems our only hope, you will interfere on our behalf. Our grievance is not sentimental. We only ask the company to do what they publicly contracted to do, and if the statements contained in our memorial sent you are denied by the company, we are prepared to send a deputation to wait upon your Board to verify those statements upon oath, if necessary.

"I would beg again to remind you of some of the points set out in that memorial, viz.:—That the station now asked for is set out on the company's original plans; that it was worked for some time after the opening of the line; that it was subsequently shifted to an unworkable and useless place, and finally closed altogether, against the will of the inhabitants;

* See appendix No. 10.

Jan. 13, 1908.

Mr. Andrew Hamilton, Representative of the Omagh Board of Guardians.

Correspondence with the Board of Trade *re* Mountjoy Station—*con.*

that there is no station within a distance of ten miles (the longest in Ireland). This is admittedly a very populous rural district.

"I have also recently been informed, and have no doubt, that the local director of the company has stated to one of our committee that he has urged the company all in his power to re-open the station.

"There is not a public body in the locality who have not passed unanimous resolutions in its favour, viz.: public meetings of the inhabitants, public meetings of the inhabitants of Omagh, the Omagh Town Commissioners, and the Omagh Board of Guardians.

"We are most reluctant to write anything harsh of the company (which is now paying a dividend of 6¾ per cent., besides a surplus carried forward), but in justice to ourselves I would beg to draw your attention to this evidence given before the recent Parliamentary Committee relative to the proposed railway between Strabane and Derry. Whereof it appears, and from local knowledge we have no doubt it is the case, the new line has been rendered necessary, at least in a great measure, through the refusal of the Great Northern Railway Company to grant legitimate concessions. The only grounds given by this company for refusing our request is that of expense; and yet thousands of pounds are being spent to oppose new lines, rendered necessary through their own action in refusing to make concessions not dissimilar to ours.

"I regret having to trouble you at such length, but the circumstances demand that the facts should be brought before the Board of Trade, and, if need be, before the public.

"We confidently hope that your Board will give the matter more than a mere formal acknowledgment.

"I am, Sir,

"Your obedient Servant,
"(Signed), A. Hamilton."

"The Assistant Secretary, Railway Department, Board of Trade, 7, Whitehall Gardens, London, S.W."

39647. What was the result of that correspondence?—I will just read the reply. It states:—"I am directed by the Board of Trade to advert to your letter of the 8th inst. with further reference to the re-opening of the station at Mountjoy on the Great Northern Railway of Ireland, and in reply to state that the Board are of opinion that no useful purpose would be served by their re-opening the correspondence with the railway company on the subject. The Department has not been entrusted by Parliament with powers to deal with such a matter compulsorily and they are not therefore in a position to bring pressure to bear on the Great Northern of Ireland Railway Company. The Board are always happy to assist memorialists and others interested in a locality by making representations on their behalf to the railway company serving the district, but when, as in this case, such representations have proved ineffectual, the Department is unable to pursue the matter further.—I am your obedient servant, Francis J. S. Hopwood." That is dated the 20th of July, 1896, and questions were put in the House of Commons before this.

Examined by Mr. Acworth.

Powers of the Department as to the re-opening of railway stations.

39648-9. It was decided by the Court of Appeal in the Darlaston case that they cannot compel the re-opening of a station. The law was supposed to be otherwise till that decision?—We did everything we possibly could do short of instituting proceedings before the Railway Commissioners, which, I understand, is a very expensive matter, and we did not adopt that.

Prospects of traffic consequent on re-opening Mountjoy Station.

39650. Have you any idea what the value of the traffic of the Mountjoy creamery would be; what would they pay the railway company for carriage in a year?—It is a small quantity at present, so far as the creamery itself is concerned, but we hope by getting railway facilities that it would be very much increased. It would be very much increased if we had these facilities. Last year, which was not so good as some previous years, the turnover was £3,445 and a quantity of milk.

39651. The milk would not come in by train?—No.

39652. There would not be very much for the butter which the creamery would send out?—The expense of cartage of the butter and cartage of the milk amounts to over £40 for Mountjoy creamery alone.

39653. It would not pay the wages of a stationmaster, would it?—Of course not; but there is another concern, Messrs. Doherty and Borland, that keep some five or six horses every day carting goods to and from Omagh. Messrs. Scott, the millers, I believe, are bringing in often 8 tons a day. They keep two horses constantly on the road, and there are meal, flour, and things of that kind carted from Omagh which could very conveniently come to Mountjoy. The old station is just at the side of it, and then there is North Cappagh creamery similarly handicapped, or even worse—being further from Omagh their cartage is more. The Church of Ireland, Roman Catholic Church, and also the Presbyterian Church are all in the immediate neighbourhood, and many hundreds of excursionists would go from Mountjoy Station every summer, and those who do so now have to drive or walk.

39654. What is the population of Mountjoy itself?—It is a rural district entirely.

39655. Is there not a village of Mountjoy around the station?—No. The population that would be served by this station would, according to the census returns which I have looked up, be about 5,000.

39656. That is the population of the parish?—No; of the district about two or three miles around. It is a very thickly populated district.

39657. Do you think would the people be satisfied if they got a goods siding without any passenger trains?—They would be glad to get some concession from the railway company, but that would not be a restoration of the rights taken from them, nor would it serve them properly, as for example, if you take the case of the school children. I have myself counted between thirty and forty children who would go to Omagh in the morning to school; some now go on bicycles, some in traps, and others any way they could get in. That station would give them a cheaper and much more comfortable way of getting in and out.

Examined by Mr. Aspinall.

39658. Which is the more important to you, the passenger traffic or the goods traffic? Which would you sooner have if you had your choice at Mountjoy, a passenger platform or a goods siding?—There ought to be both, because there would be a very considerable traffic for passengers and also a large quantity of goods, and the creameries concerned cannot exist unless there are some railway facilities, because they will be outbid by other societies better served.

39659. Because you know that for certain kinds of trains run with rail motor cars the Board of Trade will allow of the erection of platforms at which trains can stop without signals or stationmaster or a staff of any kind provided that they are properly lighted. They call them halts; you don't know that?—I do not; but I do know it is a serious loss to us not to have railway facilities. Here are 10 miles from Omagh to Newtownstewart and there are some twenty trains passing every day, and the people think it very hard that the railway company do not offer them some trains. We don't ask for all the trains. We don't ask for express trains. We merely ask for the slow trains, which it would not be very inconvenient to the railway company to give us, and the goods train to take away the goods. One goods train each way would do.

Examined by Mr. Sexton

39660. The good schools are in Omagh?—Yes.

39661. How far do the children go to school on bicycles and in traps?—From 3 to 5 miles. About 3½ Irish miles, most of them.

39662. The distances vary from 7 to 10 miles a day?—Yes. I meet them myself. I go myself from the district, Mountjoy. I would go always by train, in the winter especially, if I could get going by train.

39663. Would the station be more likely to pay now than it did before it was discontinued?—I don't think there is any question but that it would.

39664. I understand that the railway company refuse to give the station because it would not pay?—That is the reason given to us. I am told by a man, whom I thoroughly believe, that the reason the station was discontinued in the first instance was that

Mr. Andrew Hamilton, Representative of the Omagh Board of Guardians.

the stationmaster had a row with some local person and threatened—I don't vouch for the truth of it; I merely repeat what I was told, and believe—that he would have the station removed, and he so poisoned the minds of the then directors that it helped them, at all events, to make up their minds to discontinue it.

39665. I understand that the district suffers continuous loss and damage owing to the want of the station?—There is no question of that.

39666. Creamery butter and other things are damaged by carting?—Messrs. Doherty and Borland, who have the shop in the district, keep some five or six horses on the road. Of course those horses must be paid for by some persons. We say they are being paid for out of the produce of the farmers of the district.

39667. But such produce as creamery butter is damaged and deteriorated by being carted in summer instead of being taken by rail?—They are, because in hot weather it is almost impossible to cart it without damage.

39668. Then you are confined to markets near you and are shut out from markets at a distance?—Undoubtedly that is so. We would have probably made an agreement to send the cream to Belfast or some place where a better price could be got than by sending it to Omagh if we had facilities for doing so.

39669. About railway grievances, it is often said that all you have to do is to buy a postage stamp and write to the Board of Trade. You bought the postage stamp and wrote to the Board of Trade and the Board of Trade replied that they had no power: was not that it?—Yes.

39670. And from the way their first representations were received by the company they were not inclined to renew them?—Yes.

39671. I suppose you know that the path to the Railway Commission has to be paved with gold for counsels' fees?—Really, I don't know the amount, but we don't care for the expense.

39672. At any rate you had not the gold to give?—No. We were thinking of taking proceedings in a court of law.

39673. You had better begin by collecting £1,000?—We never did it. But we have gone to some expense to have the matter properly considered. The railway company have still the plot of ground in their own hands.

39674. Do you notice that when a railway company is asked for any concession, whether it be a station or a low rate or an excursion or any other thing, they always think it sufficient to reply that it would not pay—the particular thing would not pay of itself?—Certainly the Great Northern do so, at any rate.

Policy of the Great Northern Railway Co. criticised.

39675. If a great company has a monopoly of transit over a wide district, is it a fair or reasonable thing to deny each particular concession simply because it would not pay?—I am quite sure in the case of small railway stations it is not fair, for it is very questionable if a small station does not pay in itself whether it does not pay indirectly. I think, for example, you will have to take into account the receipts at Omagh in order to say whether Mountjoy would pay or not, I mean the receipts at Omagh dealing with the district of Mountjoy, because Mountjoy should get credit for some portion of the receipts there, and I venture to say that half the stations on the Great Northern system do not of themselves pay. There are several smaller stations than Mountjoy—Trillick, for example, which, I understand, Mr. Archdall prevented the company from closing. They threatened to close it, I believe, and actually did close it, and Mr. Archdall, I think, had some agreement with them at the time the way was made and insisted on their keeping the station open. Mountjoy is a much more important station that that is.

Particularly as regards Mountjoy Station.

39676. In other countries where the railways are public property the question in the case of a concession being asked is not whether it would pay, but whether the public interest requires it: is that the proper test?—Yes.

The convenience of the public the proper object of railway administration, not the question of remuneration.

39677. You would like to see such a question as this determined by such a test, namely, not whether this particular small concession would repay its own cost itself, but whether the public interest really requires such concessoin to be made?—I think so. Of course within reasonable limits.

39678. Within reasonable limits?—Yes.

Mr. Patrick Murphy examined by the Chairman.

Mr. Patrick Murphy, Wholesale Provision Dealer, Dublin.

39679. Mr. Murphy, I think you are a wholesale provision dealer in Dublin?—Yes.

39680. Of course you send and receive a great deal of traffic by railways?—Yes.

39681. I suppose you have formed a favourable opinion as to the way in which they are worked?—No; quite the contrary.

39682. Tell us what you have to complain of?—What brought me to the Commission at all was an advance of rates by the Great Northern Railway from 10 to 15 shillings a ton, or 50 per cent., on the 1st of October.

39683. This last year?—Yes.

39684. Tell us the facts, will you?—There was a coasting steamer running from Derry to Dublin for some time. They were running in opposition to the Northern Railway Company. They were bringing us coarse meat from Derry to Dublin at 8*s.* 4*d.* a ton, and the Great Northern Railway Company was bringing it for 10 shillings a ton. The coasting steamer ceased to run on the 1st of October, and the Northern Railway immediately advanced the rate from 10 to 15 shillings a ton, or 50 per cent. I wrote the Northern Railway Company *re* the advance and have got their reply. I wrote the goods manager of the Great Northern Railway Company on October 19th. "Dear Sir,—There is a great hardship imposed on me owing to the advance in your rate from 10 shillings to 15 shillings per ton. It represents a loss of at least £1 10*s.* a week to me on the amount of goods I am getting through your line, and this week it amounted exactly to £2, as I got 8 tons through your company. I unfortunately cannot get an extra price to cover the extra freight, and unless you can see your way to bring them to the old rate I fear I will have to give up selling coarse meats altogether. I will feel obliged if you will go into this matter and let me have a reply at an early date.—Yours faithfully, P. Murphy." On the 23rd of October I received the following reply:—"Dear Sir,—Your letter of the 19th inst., to our Dublin office has been sent to me"—this is from Belfast—"you do not give the name of the traffic you refer to, but I presume it is coarse meat from Derry, and if so, our rate for it is, as you say, only 15 shillings per ton, station to station, owner's risk, which is certainly a very reasonable rate for traffic of this kind for a distance of 163 miles, and I think you should be satisfied with such a rate. You could not reasonably expect the company to carry the traffic at an unprofitable rate.—Yours truly, B. Gamble."

Complaint as to excessive rate for meat, Derry to Dublin.

39685. Did you ever go to the railway station to see the 10-shilling rate in the books of the company?—I did not go to see it, but I have the docket showing the 10-shilling rate and the 15-shilling rate, and they also had an 11*s.* 8*d.* rate.

Correspondence with the Great Northern Co.

39686. Have you got the quotation for the 10-shilling rate?—Yes.

39687. I would like to have a look at it; is there any stipulation, any condition with regard to that rate?—There is not (*docket produced*).

39688. This is one of the accounts?—Yes. The rate is shown at 10 shillings a ton.

39689. *Mr. Acworth.*—How long has it been in force?—The 10-shilling rate had been in force from August, 1906. Before that there was an 11*s.* 8*d.* rate.

39690. Before that?—Yes; so that you have three rates in two years.

Variations in the rate consequent on steamer competition.

39691. Before August, 1906, you had an 11*s.* 8*d.* rate?—Yes.

39692. From August, 1906, to October, 1907, you had a 10-shilling rate?—Yes.

39693. How long did the 11*s.* 8*d.* rate last? Did it go back?—I am only in business for close on three years and I had the 11*s.* 8*d.* rate from the time I started.

39694. *Mr. Sexton.*—Were there any steamers running when you went into business?—I think there were. They were running about a year and nine months in all.

Jan. 13, 1908.

Mr. Patrick Murphy, Wholesale Provision Dealer, Dublin.

Complaint as to excessive rate for meat, Derry to Dublin—*con.*

Reduced rates offered by Great Northern Co.

39695. *Chairman.*—You never went yourself or sent anyone to look at the rate-book?—No, I did not. Since then I have communicated with the firm that I get those meats from—Messrs. Mark Rolleston and M'Loughlin, of Derry. I wrote to them asking them to reduce the price of the goods as I could not get an increased price to cover the increased rate, and then they communicated with the railway company, and as a result they have offered me since a 12*s.* 6*d.* rate, and Mr. Walker called from Derry. He wrote me on the 5th of December—"Dear Sir,—Will you, please, if convenient, see me here at 5 o'clock on Wednesday relative to rate for coarse meats from Derry to Dublin." I was unable to see him on the day mentioned, but I wrote to say that I would see him on the day following. I saw him on the 8th of December, and he offered me a 12*s.* 6*d.* rate, and a refund of what I had paid over and above that.

39696. What did you say the distance was?—163 miles.

39697. What is the traffic?—Coarse meat, which means pigs' head and tongues.

39698. What is called in England offal?—It would not come under the heading of offal.

39699. What are they packed in?—In barrels of 2 cwt., on which we pay freight for 3 cwt., that is, 2 cwt. of meat, and then they put 1 cwt. on the barrel and the pickle. That gentleman came from Derry, and saw me. I think he is the traffic manager or superintendent in Derry. He offered me a rate of 12*s.* 6*d.* I did not say that I would accept it. Since then they have offered it to Mark Rolleston and M'Loughlin at 11*s.* 6*d.*

39700. *Lord Pirrie.*—But they wanted 12*s.* 6*d.* from you?—Yes. They offered me a 12*s.* 6*d.* rate.

39701. Did they offer any other firm the same goods at 11*s.* 6*d.*?—I would not accept the 12*s.* 6*d.*, and they offered the 11*s.* 6*d.*

But traffic sent by steamer, Derry to Heysham and thence to Dublin, at a cheaper rate.

39702. *Chairman.*—Has any other route been suggested to you for the traffic?—Yes.

39703. What is the route?—The stuff is sent across to Heysham, in Lancashire, by the steamer, and from Heysham over here to Dublin.

39704. There are two sea passages?—Yes, for 10*s.* 6*d.* a ton.

39705. Are you sure of this?—Quite sure.

39706. Have you got your figures?—I have paid it.

39707. You don't mean to say you have got the traffic carried that way?—Yes.

39708. From Derry to England and back again to Dublin?—Yes.

39709. Do you get it for 10*s.* 6*d.*?—Yes. I have given none of my traffic to the Northern Railway Company since the 1st of December. I have got all my coarse meat *via* Heysham since then.

39710. That is extraordinary. Have you anything to add to what you have told us about this particular traffic?—I don't think so.

Complaint as to unpunctuality of G.S. & W.R. Company's passenger trains.

39711. Have you anything to say with reference to the train service?—Yes.

39712. What have you got to say about that?—The trains on the Great Southern line, on which I travel frequently, are never run up to time, particularly the late trains at night. On one occasion I came from Naas to get the 1.35 train at Sallins. That train was an hour late. I inquired to know the cause of the delay, and I was informed that there was a race meeting at Tramore, and that there was a special coming from there, and they had to wait for the special.

39713. That was exceptional. There are delays everywhere where there is special traffic?—An hour is exceptional.

39714. Unless you have something more substantial than that I must pass on?—Should the ordinary business people who are supporting the railways constantly and regularly have to suffer this inconvenience?

39715. You have given a very strong case in reference to the rates, but a very weak case in reference to delay?—I am only giving evidence of what has come under my own notice.

Comparison of rates for butter, Copenhagen to Dublin and Galway to Liverpool.

39716. Have you anything to say with reference to local rates in Ireland?—Yes. I consider them too high.

39717. Why do you consider them too high? Have you got any special case to give us illustrating what you mean?—I get Danish butter from Denmark——

39718. I am speaking of local rates?—But I wish to mention this to illustrate the other rates I get Danish butter from Denmark to Dublin——

39719. Does it become Irish butter then?—No. I sell it as Danish. There is very little Irish butter made in the winter time, and I get it from Denmark at 35*s.* a ton.

39720. How does it come?—It comes *via* Hull, across *via* the Lancashire and Yorkshire Railway to Liverpool, and thence across to Dublin, and it is delivered at the stores from Copenhagen at 35*s.* a ton.

39721. From the port, wherever it is?—That is Copenhagen. That is where we buy it. If a man in Galway wishes to send his produce to England it would cost him a great deal more.

39722. Take the same article, butter?—The rate from Galway to Liverpool is 41*s.* 8*d.* a ton. The distance from Liverpool to Hull is about the same distance as from Dublin to Galway, exactly the same distance.

39723. *Mr. Sexton.*—The rail journey in both cases is the same?—Yes. Then it is brought 680 miles of a sea journey for nothing. The rate in one case is 41*s.* 8*d.*, and does not include delivery in Liverpool. The rate in the other case is 35*s.*, and includes delivery in Dublin.

39724. That is the Danish rate?—Yes. I will give you those rates (*dockets produced*).

39725. No wonder that the Danish butter should have an advantage in the English market when it can be brought to Ireland on terms unfavourable to the Irish producer?—Of course it is pointed out to us every day what an advantage it is to us to have such a great market as England close beside us, but it would be better for us if the English market were 700 miles away.

39726. *Chairman.*—It the Danish rate an owners' risk rate?—They insure it for a few pence. It is owners' risk.

39727. Is the rate from Galway owner's risk also?—Yes. The conditions are the same.

39728. I think that is a good illustration?—Of course the rate to Manchester is much more. I take that one instance on account of the rail journeys being exactly the same.

39729. You can give us the rate there if you like?—To Manchester from Galway it is 43*s.* 4*d.*

39730. Have you given us that simply as a rate, or is butter actually carried from Galway?—Yes, it is.

39731. It covers an actual transaction?—Yes.

39732. As regards some anomalies in the rates on the Great Southern and Western Company, what have you to say about that?—Take, for instance, the rate from Limerick to Dublin for butter, which is 16*s.* 4*d.* a ton, from station to station. The station to station rate from Goold's Cross to Dublin is 17*s.* 6*d.*; yet the distance from Limerick to Dublin is 129 miles, and the distance from Goold's Cross is 95 miles.

39733. Both are station to station rates?—Yes.

39734. They are under the same conditions and with the same quantities?—Yes, about 3 cwt.

39735. That is an example of what you call the anomalies of the local rates?—Yes. That is only one. I could give you several.

39736. Would you give us another one?—Thirty miles west of Limerick is Devon Road, where I get a good deal of butter from, at 25*s.* 8*d.* The distance is thirty-eight miles beyond Limerick or 167 from Dublin. The rate from Cork to Dublin, which is 166 miles from Dublin, is 17*s.* 6*d.*

39737. That is the sea competition?—Yes.

39738. You are a business man?—I understand that, but there is no competition in the County Cork, where the line is altogether their own.

39739. Give us one more case?—Newmarket, in the County Cork, is 164½ miles from Dublin. They quote both 16*s.* 8*d.* in four-ton lots and 20*s.* 10*d.* for a lesser quantity. That is the same distance as Devon Road, and in the one case they quote 16*s.* 8*d.* where it is all their own line, and in the other it is 25*s.* 8*d.*

39740. *Lord Pirrie.*—For the same mileage?—There is a difference of about three miles.

39741. *Mr. Acworth.*—The 25*s.* 8*d.* is not for a four-ton lot?—No. Neither is the 20*s.* 10*d.*

39742. It should be a comparison between 20*s.* 10*d.* and 25*s.* 8*d.*?—Yes. That is right. The rate from Goold's Cross is 17*s.* 6*d.*, and the rate from Limerick, thirty miles further away, is 16*s.* 4*d.*

Chairman.—I think that is quite sufficient for our purposes.

Mr. Patrick Murphy, Wholesale Provision Dealer, Dublin.

Examined by Mr. SEXTON.

39743. I wish to question you a little further about the rate from Derry. When did you go into business in Dublin?—Next March three years exactly.

39744. Did you then have this traffic brought from Derry by the Great Northern Railway?—The first traffic I got over the Great Northern was this time two years exactly.

39745. What did you pay then?—11*s.* 8*d.*

39746. Did that figure appear in the rate column of the docket?—Yes.

39747. That went on until the steamer ceased to run?—The steamer was then on, and they further reduced it to 10*s.*

39748. Voluntarily?—Yes. I did not ask them.

39749. The steamer rate was 8*s.* 4*d.*?—Yes.

39750. Probably they found that 11*s.* 8*d.* was not competing efficiently, and they reduced the rate to 10*s.*?—Yes.

39751. Did you send any of your traffic by steamer?—Yes.

39752. Was that before or after the 10*s.*?—Before and after. I gave the most of my traffic to the steamer.

39753. That may have led to the reduction?—I don't know that my traffic did, but other people may have been giving away traffic which induced the railway company to reduce their rate.

39754. If they were charging you 11*s.* 8*d.* and the steamer was charging 8*s.* 4*d.* they would think it well to reduce the freight to 10*s.*, which might compete effectively, having regard to the greater speed and convenience of the train service?—Yes.

39755. Then the steamer ceased?—Yes.

39756. Then the next thing you noticed was the rate of 15*s.*?—The rate was charged for a few weeks before I noticed it.

39757. Did the three rates all appear in the rate column of the invoice?—Yes. I have it here (*dockets produced*).

39758. The company were bound to have the rate-book correspond with the invoice, from which it appears they must have reduced the entry in the rate-book from 11*s.* 8*d.* to 10*s.* and then have increased it again to 15*s.*?—Certainly.

39759. Either they were levying rates not entered in the rate-book which were illegal, or they reduced the rate in the rate-book and raised it again in the rate-book, which renders them liable to the supervision of the Railway and Canal Commission?—Either one or the other. I have a number of dockets with the different rates on them.

39760. Does the increase of from ten to fifteen shillings add £100 a year to your business?—I should say that it is between £80 and £100.

39761. You could not afford to pay it?—I could not afford to pay it.

39762. So instead of having it carried by rail you have had to take to the water?—Yes.

39763. That is on this traffic only?—Yes.

39764. It is sent first across from Derry to Heysham, and then it is brought back to Dublin from Heysham?—Yes.

39765. So that it has to be handled six times. It has to be carted in Derry?—Yes.

39766. It is carted to the ship and loaded there. It is unloaded in Heysham and loaded on the other ship, and it is unloaded in Dublin and carted to you?—Yes.

39767. So there are two voyages and six handlings, and you have the goods carried more cheaply than they would be by the Great Northern Company with only two handlings?—Yes.

39768. Then it appears, that having imposed 15*s.* they then came to you and offered you a rate of 12*s.* 6*d.*, with a refund of all paid over that amount?—Yes. That was after I had written to Mark Rolleston and M'Loughlin, which was on the 23rd of November. Then they offered a rate of 11*s.* 6*d.* to the senders.

39769. So we have six rates on the same goods in the course of a few months, varying between 10*s.* to 15*s.*?—Yes.

39770. Do I understand you to say you told the senders, Messrs. Mark Rolleston and M'Loughlin that you intended to give evidence before this Commission?—Yes.

39771. Who, did you say, called to you on behalf of the railway company?—Mr. Walker. I don't know whether he is superintendent or traffic manager in Derry.

39772. Did he come to your place of business?—He came to my place of business in Dublin.

39773. Did you tell him you proposed to give evidence here?—No, but he asked me if I was to give evidence.

39774. What did he say about it?—He said I intended to give evidence, and he asked me not to give evidence and he would do anything reasonable, and to communicate with himself.

39775. What did you say?—I would not like to put it exactly that way. He asked me if I proposed going to the Commission, and I said I proposed going, and he said—"Don't go to the Commission and I will do anything reasonable to meet you."

39776. What did you say to that?—I said I would not pledge myself to anything, that I intended going to the Commission, and had made up my mind.

Great Northern Company's offer to arrange a reduced rate if the matter were not brought before the Commission.

Examined by Mr. ACWORTH.

39777. You mentioned that you have not seen the rate-books?—No.

39778. You assume that the Great Northern Company had complied with the law and put the 10*s.* rate in the rate-book?—Yes.

39779. When they proposed to put it up to 15*s.* they were bound to give public notice of it in an advertisement?—So I am informed.

39780. There is no doubt about the legal obligation to give notice by advertisement. You did not happen to see any advertisement of the kind?—Not on any occasion that they altered the rates. I never saw it.

The obligation on railway companies to advertise increases in rates.

39781. They are not bound to give notice when they are going to reduce, but I assume you don't mind how soon that comes?—No.

39782. When they proposed to advance they were bound to give notice by advertisement. Of course you cannot say that that was not complied with?—No. I cannot say that.

39783. But you did not see the advertisement?—No.

39784. Well, I think that remains for the railway company to explain. You cannot tell what is the distance from Derry *via* Heysham?—I cannot tell you the distance.

39785. About 280 miles I understand. About the Danish butter; what sort of consignments do you get that in?—Packed in cwt. casks.

Similarity in size and manner of packing of Danish and Irish butter consignments.

39786. What do you get at a time?—It varies, of course. Three casks come as a tonnage lot, the same as applies to this country. I get, as a rule, between ten and twenty of these. The docket that is there I think it is for a ten-cask lot.

39787. You commonly get in something between a ton and a half ton?—Yes.

39788. Can you tell me what is the rule with the Irish butter. Is that generally sold in lots of the same size, or larger or smaller?—In the same sized casks.

39789. I am not speaking of the size of the casks, but of the quantity sent from one consignor to one consignee?—I am quoting it for tonnage lots, which are exactly the same in each case—three cwt.

39790. I quite understand that in each case the rate is for something not less than 3 cwt.; but as a matter of practice you tell me that you get Danish butter in lots of from a half-ton to a ton. In what lots do you get the Irish butter generally?—About the same quantity.

39791. Is that usual. Do you think that as a rule Irish butter is sold in the same kind of quantities as Danish butter?—It is only the creameries here that sell in the large quantities. They quote creameries here for four-ton lots. No creamery has ever four tons of creamery butter. It would be all bad before they would have made four tons.

39792. Do they send Danish butter in four-ton lots?—There might be a few large people in England like Lonsdales, who might deal in four-ton lots, but nobody in Dublin.

39793. As far as you know, there is nothing in the difference of the average consignment to explain the Danish rate being lower than the Irish rate?—Absolutely nothing. There is another industry started down in Cork. It has not come under my notice, but I know the facts of it. It is a cheese industry. There is a man here in Dublin, Dolans, who acts as agent for them. He has been getting a considerable quantity of this cheese, and I am glad to say has been

No difference in the average consignments of both descriptions of butter to explain the lower Danish rate.

Jan. 13, 1908.

Mr. Patrick Murphy, Wholesale Provision Dealer, Dublin.

doing very well. They charged him, from Cork to Dublin, 25*s.* per ton. The rate for butter is 17*s.* 6*d.* per ton. All over the Kingdom the rate is less for cheese than for butter. They were written to on the subject, and the reply was it was a new article, and they had not gone into it. Immediately an industry is started in this country the railway company tries to wipe it out instead of encouraging it.

Complaint as to excessive rate for cheese. Cork and Dublin.

39794. *Mr. Sexton.*—Does that rate cripple it?—Of course it does.

39795. *Chairman.*—Did they bring the rate down?—They did bring it down after they were written to.

Ineffective representations to the railway company.

39796. Your point is that they should encourage these industries in the beginning?—Yes; but even the present rate is not sufficient. It is 17*s.* 6*d.*, the same as butter.

39797. What is the condition?—The condition is it must be in baskets, and those baskets have to be returned, and by the time the baskets are returned the rate would be exactly the same.

Allegation that new industries are crippled by similar treatment.

39798. You cannot expect cheese to be carried loose at companies' risk?—This man engaged a whole wagon, and filled a wagon with cheese, and they would not bring it less than 25*s.* 11*d.*

39799. They do now?—Yes, in the baskets.

39800. *Mr. Acworth.*—Suppose the cheese were packed into a wagon and were crushed underneath as it would do if packed loosely the company would be liable?—No. It was packed by this man. It was his own risk. He took this wagon, and it was packed by his own men in Cork with the railway company's men.

39801. But you say they would not let him send it loose at owner's risk?—No. They, would, at that freight 25*s.* 11*d.*; he took a whole wagon to bring it up, and they charged him that rate. On other railways of the Kingdom the rate for cheese is always less than that for butter.

39802. *Chairman.*—The cheese has to be packed?—Even taking it packed the rate is still too high.

39803. Then there is another question. Cheese is a very risky thing to carry?—But he took a wagon and filled it with the same as the men do with cattle or any other thing.

Examined by Lord PIRRIE.

Danish butter season.

39804. Do you bring in the Danish butter all the year round or do you only bring it in the winter when there is no Irish butter?—Only in the winter now.

39805. Is the butter you bring in to be sold in Ireland? You don't ship any of that to England?—No. It is simply for the Irish trade. They get it themselves direct in England.

39806. This is only for the Irish trade?—Yes.

39807. In summer do you buy the butter from the ordinary Irish creameries wherever you can get the supply?—Yes.

Effect of steamship competition on railway rates.

39808. You get it from where the railway companies charge low freights?—Yes, provided the quality of the butter is good. Most of the butter comes from Limerick.

39809. If you get it from creameries is there any difference in the quality?—Yes. There is a great difference between two creameries.

Reduced rates obtained from Great Northern Company in consequence.

39810. You have been two and a half years in business, and your experience is that you would have been very seriously injured were it not for the steamships coming to your rescue?—Yes. The only place they come to my rescue is on the Great Northern Railway. They have no competition with the railway company at Goold's Cross, and they are charging more than from Limerick. The nearer we are to the creamery in some instance the more we have to pay.

39811. You have not so much to complain of regarding the railways in the South of Ireland as in the North?—Yes. It is the Great Southern Railway that charges the Limerick and the Goold's Cross rates.

39812. You were talking of Derry a few minutes ago?—That was when I was referring to the coarse meat.

39813. You don't get any coarse meat from the South?—Yes.

39814. *Sir Herbert Jekyll.*—You have referred to the anomaly of charging lower rates for greater distances?—Yes. We never get a rate on the Great Southern and Western Railway. The rate column is blank. A man comes in with a package of stuff, and if you don't pay what is in the docket he will take the package back.

39815. *Chairman.*—Do you not get it with your account?—I suppose I would get it if I asked for it. Here is a docket (*produced*) with no rate on it at all.

Mr. Smyth (*G.S. and W.R.*)—It is not correct to say you don't know the rate. It may happen in one delivery note, but it is not correct to say that the Great Southern Company don't put the rate on the docket.

Lord Pirrie.—He says when they bring the package and he does not pay the 10*d.* that is marked on this docket they take away the package again.

39816. *Mr. Smyth* (*G.S. and W.R.*)—That is 10*d.* which is charged at the smalls rate and therefore the rate cannot go on the docket. (*Witness*).—I assert that there is no rate given on Great Southern dockets.

39817. *Lord Pirrie.*—Have you got one with you?—Unfortunately I have not, but I will send you one.

39818. The Great Southern, as a rule, you say, do not put in any rate?—They never put in a rate.

39819. And if a carter comes to the door, and you don't pay the money demanded, he takes back the stuff?—Yes.

39820. *Chairman.*—Are all your consignments from that company carried under the smalls rates?—No, they are not. That came to my hand.

39821. Suppose you got four cwt.?—Or a ton weight.

39822. Anything above three cwt—you say that in no case is the rate put on the dockets?—Yes.

39823. *Lord Pirrie.*—During these two years you have been in business, with all these rates changing, were you not aware, until this Commission was sitting, that the railway company could not increase their rates without an advertisement?—No, I was not. As a matter of fact, up to recently, what I did was what most business people do, pay what they are asked when the docket comes. We cannot afford a staff of clerks to check these things. I have to do my work myself. I cannot stay inside in the office when a package like that comes.

39824. Do you believe that no advertisement was put in the paper by the Great Northern Company when they increased the rates?—I believe there was not. The steamer went off on the 1st of October, and on that day they advanced the rates.

39825. Have you not made a claim on them for what was overpaid since then?—No. How could I go to fight the Great Northern Railway Company.

The Commission adjourned till the following morning at 11 *o'clock.*

SIXTY-FIFTH PUBLIC SITTING.—TUESDAY, JANUARY 14TH, 1908.

In the Shelbourne Hotel, Dublin.

Commissioners present:—Sir CHARLES SCOTTER, BART., Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Colonel WILLIAM HUTCHESON POË, C.B.; Mr. THOMAS SEXTON; and Mr. W. M. ACWORTH;

Mr. GEORGE E. SHANAHAN, Secretary.

Mr. GODFREY J. GREENE, J.P., examined by the CHAIRMAN.

Jan. 14, 1908.

Mr. Godfrey J. Greene, J.P., Representative of Callan Rural District Council.

39826. Mr. Greene, I think you appear on behalf of the Callan Rural District Council?—Yes, I am a member of it, and I am here principally to represent the want of railway accommodation in that district. There is 1,500 square miles there, on the borders of the County Tipperary and County Kilkenny, that has no railway accommodation whatsoever, and served by carts only, at an expense of 6*d.* to 8*d.* per ton per mile.

39827. In what part of the district do you live?—I live at the town of Callan.

39828. How far is that from a railway station?—Callan is sixteen miles to Carrick-on-Suir and thirteen miles to Ballyhale and eleven miles to Kilkenny.

39829. The shortest distance is eleven miles?—Eleven miles to Kilkenny, but Kilkenny is not the principal railway station, because Carrick-on-Suir is practically a seaport station, because goods can be conveyed by the Suir Navigation to Carrick-on-Suir.

39830. Is the district purely agricultural?—Oh, no; it is just quite close to the Slieve Ardagh coalfields. They are practically dormant for want of railway accommodation.

39831. Have they ever been worked?—They are worked at present in a half-hearted manner. They are only doing a local output. They are so far from a railway station. Then there is the slate quarries that are mid-way between Carrick-on-Suir and Callan, where only recently there were employed 140 hands, but they had to shut up one of the quarries recently, which employed about sixty hands, for want of accommodation. Their slate is well known to be really the best, because it has taken several first prizes, and the managing director told me the output was only half of what it should have been for want of accommodation.

39832. There is a demand for the traffic, but it is not commercially successful in consequence of the cost of cartage?—Anything that goes in the more northerly direction has to be carted to Kilkenny, which is 23 English miles, and they cannot compete with the English slate for that reason.

39833. How many square miles do you estimate in that particular district is without railway accommodation?—About 1,500 square miles, I have been informed.

39834. Have you any idea of the population in that district—a rough estimate?—Callan union takes 14,000, but then there comes into it a portion of Carrick-on-Suir and portions of Urlingford, so I would roughly say about 22,000.

39835. Is it a rich agricultural district?—Oh, yes; it is most fertile; there are about 17,000 acres of barley grown in the district. I made that out from the police report, and this has to be carted; there is very little demand from the local brewers, but it has to be carted to Carrick-on-Suir, Ballyhaile, and Kilkenny.

39836. There are no malt kilns in the neighbourhood?—There are two breweries, but they purchase very little.

39837. Now, take manure, for instance—how do you get the manure?—Do you mean artificial manure.

39838. Any manure. Give some idea of what it costs to get it into the neighbourhood?—A ton of manure can be conveyed from Dublin to Carrick-on-Suir for 6*s.*, and from that to Callan the cartage is 9*s.* or 10*s.*; it varies according to the season.

39839. So that the railway carriage for a large number of miles is only about 6*s.*, and the cartage is about 10*s.*?—Yes.

39840. That is practically, it is prohibitive to import stuff into the district?—Quite so.

39841. You suggest something about some coalfields?—These are situated up beyond Ballingarry and Urlingford. They are about eight to ten miles from Callan. If the railway came, as suggested there, from Kilkenny to Carrick-on-Suir *via* Callan, it would tap them.

39842. Has any application been made by the county authorities for railway accommodation?—Not that I am aware of, but I may say in this district that they feel their grievances very keenly; they have been holding public meetings from time to time for the last twenty years.

39843. Suggesting light railway accommodation?—Anything that would relieve the great grievances. I have acted as hon. secretary of these meetings, and have been on a committee that they appointed to work up the affair, and we have written the Great Southern Railway, and they said—that was quite recently—that until the report of this Commission now sitting that they could not augment their system.

39844. I suppose you do not suggest that a railway *per se* would pay in itself without assistance from some quarter?—I believe it would. What I suggest personally is an extension on from Castlecomer through Kilkenny, Callan, into Carrick-on-Suir, and you would have a railway for sending the Castlecomer coal to the South. There is no way at present, and if you connect it with some of the stations, say Athy, you are as far away from the South as ever.

39845. You are of opinion that the light railway if constructed in that district would tend to develop all these industries?—Certainly.

39846. And the slate and the quarry is a known quantity?—Yes.

39847. And proved by working on a small scale?—Considering that they have been working with 140 hands it is not exactly a very small scale. We have considered very seriously a motor service, and, in fact, we got an exhibition of a Renard train.

39848. You have had that?—Yes; we had it in the town, but they consider that it would be some improvement, but it would not remedy the grievance by any means. The traffic to Callan is too large for a Renard train to grapple.

39849. The only remedy in your judgment would be a light railway?—Quite so.

39850. And that in itself, you think, would be fairly profitable in consequence of these industries?—I consider it should pay a fair dividend.

39851. Have the district considered the question of giving any guarantee?—They would give a reasonable guarantee.

39852. If it were limited?—Yes, limited.

39853. Not an unlimited one?—It would be very hard to expect that in view of the present depression of agriculture.

39854. You think the district would give a limited one?—I am quite sure of it.

39855. Have you formed any opinion as to what that limit should be—2*d.* or 3*d.* in the pound?—They would give that.

Owing to absence of railway accommodation, the cost of cartage practically prohibits import of goods.

Situation of Slieve Ardagh coalfields.

Ineffective agitation to obtain railway accommodation in Callan district.

Suggested route of new railway from Castlecomer to Carrick-on-Suir.

The traffic sufficient for a light railway.

The district willing to give a limited guarantee.

Jan. 14, 1908.

Mr. Godfrey J. Greene, J.P., Representative of Callan Rural Ditsrict Council.

39856. They would not like to go into a guarantee of percentage which would land them into a shilling in the pound?—That would be disastrous, you know.

Callan an extensive barley-growing district.

39857. Did you tell me that about 17,000 acres of barley were under cultivation?—Yes; it is a lot of barley.

39858. And most of that barley has to be carted—how many miles?—It all has to be carted to Carrick-on-Suir, sixteen miles, Ballyhale, fifteen miles, or Kilkenny, eleven miles.

39859. Are there many carriers' carts in the district now—I mean regularly working?—Yes; there are twenty-four carriers in Callan and twenty-six in Ballinamore. The reason that Callan is smaller is that there are many private carters.

39860. These are public carriers?—Yes.

39861. Men who live by carrying?—Yes, live by carrying.

Decline in cattle fairs.

39862. Have you any fairs—cattle fairs?—Oh, yes; monthly fairs. They are going down seriously; the buyers will not come in now.

39863. In consequence of the difficulty of getting to the town?—In fact there are no purchasers there, only what we may call local graziers.

39864. Is there any difference of opinion as to the route the railway should take, or are they pretty unanimous?—They are unanimous.

39865. There are places where one part of a county wants it in one direction and another part wants it in another?—Yes.

Local unanimity as to the route of proposed railway.

39866. You are all agreed on the route?—Yes.

39867. And that route, you think, would be, first of all in the interests of the railway itself, and secondly that it would more effectually serve the district?—Quite so.

39868. What sort of roads have you in the district?—Excellent roads

39869. You are in Tipperary?—No, Callan, which is just on the borders. Tipperary roads are steam-rolled, and Callan Rural District roads are steam-rolled also.

39870. So that the roads for motor service are fairly good?—Excellent. In fact, we had to adopt the steam-rolling system on account of the heavy traffic.

A road motor service as a substitute not desirable.

39871. You think that a motor service would not effectually develop the trade?—The traffic is too great for it.

39872. Do you think there would be a fair passenger traffic?—Oh, yes; quite so.

Examined by Mr. Sexton.

Disastrous effect of emigration on Kilkenny County.

39873. Has the County Kilkenny suffered as much from emigration in the last fifty years as Irish counties in general have?—Kilkenny has suffered very severely. My memory is hazy, but I think it has gone in the last fifty years considerably under half—three-fifths, I think.

39874. The general case is that since the railways were constructed, the populations of Irish counties have been reduced coincidently by about one-half?—I am not aware that there is any connection.

39875. I said coincidently—"at the same time." The railways were constructed in a certain time, and in the same time the population has dropped by half?—I do not attribute it to railway development.

39876. I am not asking that. In the same period the population has diminished by about half?—Quite so.

Decrease in population of Ireland in last fifty years.

39877. And the population of the whole country has decreased from close upon 9,000,000 in 1846 to just a little over 4,000,000 now?—Yes.

39878. Well, emigration has proceeded so far that I think even those who thought it a good thing forty or fifty years ago agree that it should be stopped?—It is quite agreed.

39879. The question of finding employment for the people at home has become extremely urgent, even from the Imperial point of view?—Yes.

39880. Even from the point of view of Imperial revenue?—Yes, that is so.

39881. Now, regarding the question from that point of view, bearing that in mind, what would be the probable cost of the railway which you require from Castlecomer to Kilkenny *via* Callan and Mullinahone to Carrick-on-Suir?—I have not gone into the question.

Length of proposed railway.

39882. How many miles would it be—the whole railway?—I will just make it up—about thirty-nine, something under forty miles.

39883. Perhaps the cost would be about £200,000?—I am not very strong in engineering—I do not know.

39884. You are of opinion that the railway might pay?—Yes; I am quite sure. Kilkenny, from the point of view of its mineral wealth, should certainly make the railway pay.

39885. You have been asked whether any applications have been made with reference to this railway. Do you not know that ever since the Union, 107 years ago, continual efforts have been made in that part of the country to get, first, a canal, afterwards a tram line, and since then a railway? They have never ceased, and all their efforts have been abortive?—All abortive. In fact, for the last twenty years in the district I represent there have been public meetings after public meetings appealing to know how can they get some means of transit.

39886. I suppose the failure may be explained in this way, that you have to get a company to construct the line or get the Imperial Treasury to make a grant?—Yes; the latter way is our only hope; and, failing that, there is not money enough to run it through private enterprise.

39887. Is that hope growing, or is it becoming fainter?—It is growing.

39888. The hope that the Treasury will make a grant?—Yes.

39889. Do you really say so: have you not observed that in recent years the grants for railways are becoming fewer and smaller?—Yes. But we have opinion that perhaps a reaction may set in.

39890. A Treasury reaction in favour of liberality?—Quite so.

39891. You may hope—have you any grounds for it?—No grounds, but that we always like to look at the bright side of things.

39892. You see no grants have been made for some years now except from the Development Fund, and that fund has been all swallowed up by land purchase?—Yes, unfortunately.

39893. Do you think, if you had any authority in this country to which you might apply, an authority regarding the transit system as a whole, and not trying to lay a levy on every district for every little line, you would have a better chance of getting the line you need?—It is not hopeful I would be then but certain.

39894. You and I are practically of one mind on the subject?—Quite of one mind.

39895. You are not tied down to agriculture in this district?—Oh no. Perhaps it is one of the very few districts in the country that have other wealth; but, unfortunately, it is undeveloped, or, I might say, dormant.

39896. You have large and valuable mineral resources?—Yes. They are very little developed.

39897. No trade or navigation laws passed in London could take away your mineral resources?—No.

39898. Is the coal supply in that region practically inexhaustible?—On the Slieveardagh field, so far as it has been ascertained, it is inexhaustible.

39899. Take them altogether—Slieveardagh and Castlecomer—is there what might be called an inexhaustible supply?—An inexhaustible supply, as has been ascertained.

39900. Do you know that we pay every year for coal imported into Ireland £2,000,000 to £3,000,000?—Yes; and even anthracite—this is only anthracite—it has been imported into this country, which should not have been done.

39901. We pay £2,000,000 to £3,000,000 a year for coal brought into the country, and you have an inexhaustible supply in that district, and our population is reduced by half for want of employment. Is that not disgraceful to the Government?—Quite so.

39902. Do you know of anything more disgraceful in any civilized country in any part of the world?—We would rather not speak of it.

39903. Do you think a rational man sees any real ground of hope, except from some domestic system of Government, which will foster home industries?—It is the only real remedy.

39904. You have slates, marble, and limestone in your district. Do you know that we pay every year for slates brought into this country more than £100,000, and as much for marble and limestone and other stones which we have in abundance?—I do not know the figures, but there are splendid black marble quarries in Callan not working at all—not a stone taken out.

39905. That import simply means that people are paid wages in another country for producing the goods, while Irishmen, who could produce the goods at home, are obliged to go to America?—Yes. There were sixty hands discharged from the slate quarries there, and one of the best quarries has been closed up; and I was speaking to the managing director, and he attributed it altogether to want of railway accommodation—that they could not compete with those who have railway accommodation. Cartage is too high.

39906. I suppose you agree with what Mr. Disraeli said—that if a Government fails to attend to the material interests of its people, that Government is condemned?—I quite agree.

39907. You are hit in three ways: first, you have to pay not only the railway rate upon goods brought in, but you have to bear, as I understand, the cartage rate of 6*s.* to 10*s.* a ton for bringing the goods from the railway to the point of distribution?—The cartage expenses are the most serious. If we had a railway, even if we had some grounds of complaint about the charges, such as we know are made, we would not complain.

39908. When that charge of 6*s.* to 10*s.* per ton, in addition to the railway charges, is placed on the goods, which your shopkeepers in Callan have to sell, what chance have they of transacting a lucrative trade?—It destroys it.

39909. It is destructive to the trade?—It is destructive to the town. All the traders agree. The shopkeepers are the keenest to get the railway.

39910. Naturally. They stand at a disadvantage in the selling market to the extent of this 10*s.* a ton. Then, for any goods you have to send out, you have to bear this charge of 6*s.* to 10*s.*, in addition to the cost of production?—Yes.

39911. And to that extent you stand at a disadvantage in any market where you have to sell?—Yes, and the farmer has to walk the cattle a considerable distance, and leave them not as fresh or marketable as the cattle that could be sent by rail or even walked only a short distance.

39912. And then the buyers—the commercial travellers of the cattle industry—prefer to go to markets where they have railway accommodation, and your fairs are left derelict?—Yes. Cattle are badly depreciated in value when they are walked in thirteen to sixteen miles; and then, when they are sent to Dublin, the cattle are simply wrecks.

39913. Now, you grow barley and oats in great quantities? Oats is only grown for home consumption. It is barley they principally rely on.

39914. Oats for home consumption, not for sale?—Very little is sold.

39915. Barley you would sell if you could?—Barley is the more lucrative crop.

39916. Do you know we import £500,000 worth of barley into the country every year? What does that mean: that Irish and English railways, in conjunction, carry the barley in here at a low scale of rates, and that districts in Ireland which have no railways, or which even have railways, have to pay so high a rate, that the imported barley finds a market here in preference to the home-grown grain?—Yes.

39917. All that seems to spell disaster and ruin. Is there any way out of it, Mr. Greene, except what has been taken in so many countries where the railways have been united and worked, not for profit, but for the benefit of the country?—I suggest State purchase, and have all the railways worked as one system under the control of the public. The cost of management by that, it can be easily seen, would be lesser.

39918. Certainly?—And at present, unfortunately, the railways are not, as far as I can see, co-operating, and that costs more expense and more inconvenience.

39919. Railways co-operate to keep up rates, but they struggle with each other for the meagre traffic that there is to be obtained?—Yes; and then they do not time the trains to make connections.

39920. Yes. The habit of contention for traffic sometimes generates the wish to baffle each other?—I would suggest that the Government should give grants, even on the same lines as loans for the purchase of the land, for the purchase of the railways, and I am quite sure that the interest could be paid by them.

39921. In the same manner as they lend for various purposes—on the condition that they receive back enough to pay the interest and instalments to extinguish the debt?—Yes.

39922. Do you think that it would be indispensable, in order that we should have control of the surplus profits, that the railways should be worked by Irishmen?—If they are worked otherwise, I would prefer to leave them as they are. If they are worked by a body that do not understand the country they are better as they are.

State purchase and unification of the Irish railways under public control advocated.

The control to be centred in an Irish body.

39923. The Irish railways have hitherto been worked very much under external influence, and you hold that even though purchased, if they were not worked under the influence of an ownership which would accord with Irish interests it might be just as well to let things go as they are going now?—Yes, if it is worked by any external body (if I might call it so), it will eventually come under the influence of great English railways, and they will become simply only feeders to the English railways.

39924. The English railways might be as influential with the Imperial Department as they are now with the Irish railways?—I am afraid quite as much.

Examined by Mr. Acworth.

39925. Just a word about barley, Mr. Greene. I suppose the great bulk of barley is used for brewing?—Oh, yes, except what is damaged or unfit for brewing, and it is used for feeding.

39926. It is grown for brewing; if it is not good enough it is used for food for cattle?—It is grown for brewing.

39927. Where are the big breweries?—Waterford, and then there are some up along the County Cork, and maltsters in Milford, Bagnalstown, Carlow, Loughlin.

The home centres of consumption of Irish barley.

39928. Where are the breweries?—I do not know who these maltsters supply. They simply malt, and sell the malt.

39929. The big breweries that we know are in Dublin, Belfast, Cork, and Waterford?—Yes.

39930. They are all on the sea coast?—Yes.

Location of the Irish breweries.

39931. If they get barley from England they will get it by sea?—They will.

39932. And the Irish railway won't carry it at all. It will come straight by sea into the town?—Yes.

39933. If, on the other hand, the barley comes from anywhere in Ireland, the Irish railways will get a finger in it?—Quite so.

39934. So that it looks as if it was the interest of the Irish railways to encourage Irish barley instead of English barley?—I do not know whether they look on it in that light.

39935. Does not that seem the natural light?—Yes.

39936. It seems so to me. Tell me another thing. You said supposing you had a railway authority in charge of railways, you are quite certain you would get the railway at once?—Yes.

39937. I am not suggesting that you do not want your railway very badly. I think you do—you know, of course, but I daresay not as well as we do, that there are a great many other people in Ireland that want railways very badly, too?—I quite believe it.

39938. Supposing that there are a dozen or twenty different districts wanting railways just as much as you do, do you think an Irish authority would be able to provide them all at once?—A genuine effort would be made to grapple with the difficulty even if all could not be done at once

The prospect of an Irish authority dealing effectively with railway extension.

39939. I am not doubting for a moment, but everybody could not come first?—No; of course not.

39940. Are you sure there would be money enough to do them all?—That is a financial question that is a little above me.

39940A. I am afraid finance is rather at the bottom of this question. You see the difficulty, do not you, that with the best intention in the world the money may come short?

39941. *Mr. Sexton.*—If we were allowed to use our own revenues there would be enough of money.

39941A. *Mr. Acworth.*—That is Mr. Sexton's answer. I would prefer the witness's?—I quite agree with Mr. Sexton.

39942. Just one other point. You suggest that the railway should go from Castlecomer to Kilkenny, and so down?—I would be more immediately interested to alleviate our own grievances by having it from Kilkenny to Carrick-on-Suir, but I believe, honestly, that a railway from Castlecomer to Carrick-on-Suir *via* Kilkenny would pay a dividend.

Suggested route for proposed railway from Castlecomer.

39943. I quite follow; but you know that we have had evidence here from Castlecomer, and what they want, mainly, is to get northward to Stradbally, and

Jan. 14, 1908.

Mr. Godfrey J. Greene, J.P., Representative of Callan Rural District Council.

north to Kildare, and so on to Dublin?—They are only looking at what concerns themselves.

39944. Quite so, just as you are?—Oh, no. I would not have introduced Castlecomer if I looked at what only concerned ourselves, because we could get the coal from Slieveardagh.

39945. Where is Slieveardagh?—It is northward of Callan.

39946. Is it north, south, east, or west of Kilkenny?—It is west.

Suggested route for proposed railway from Castlecomer—*con.*

39947. Of the two coalfields you would rather be connected up, I understand, with the Castlecomer one?—No, if we only considered it to alleviate ourselves. You have no outlet on the other side. What I want is not to have it a *cul-de-sac*, but to connect it with the G.S. and W. Railway, and then with the Suir Navigation at Carrick-on-Suir.

Connecting the G.S. & W. Railway and the Suir Navigation.

39948. And then with the Great Southern and Western Railway at Kilkenny?—Yes.

39949. I see that, but when you get to Castlecomer, unless it went on from Castlecomer through Stradbally northward, you would not get it beyond Castlecomer?—No.

39950. As far as you are concerned, you are not most interested in getting beyond?—We would get the connection through Kilkenny.

39951. The point I wanted to call your attention to was that the Castlecomer people talk more of getting northward than southwards?—Would not you think they would have as good a market for the coal in Cork and Limerick

39952. I won't express an opinion. It really works out that what we are asked to support is a railway, not merely your piece to Castlecomer but northward from Castlecomer to Portarlington.

39952A. *Chairman.*—That is the contention.

39953. *Mr. Acworth.*—We are really asked, in two halves, to make a through road?—Really what I am most interested in is from Kilkenny to Carrick-on-Suir. That would tap Slieveardagh, tap the slate and marble quarries.

39953A. You think there would be considerable outlet for Castlecomer southward, if you get it?—Yes.

Quality of Castlecomer and Slieveardagh coals.

39954. Do you know which is the best coal, Slieveardagh or Castlecomer?—Castlecomer is somewhat the better. It is worth 3*s.* a ton more.

39954A. Are they both anthracite?—Yes.

39955. And both are rather small, as you get it out?—Broken small. Oh, no. You get it in lumps up to two cwt.

Examined by Colonel HUTCHESON POË.

Comparison of output and prices of the two qualities.

39956. Just a word about this coal. Have you any idea of what the output is of that Slieveardagh colliery?—I have no idea.

39957. Does it compare, at all, with the quantity put out from Castlecomer?—I do not think it is half, though the coalfields are quite as extensive. It is now lying dormant.

39958. How many hands do they employ at present?—I have no idea. There are several pits open now. All are private enterprise. It is not worked as one concern.

39959. Small proprietors?—A man will open a pit and work it in a kind of a way, and then, eventually, become bankrupt or something else and give it up.

39960. Do you know what price they get at the pit's mouth for the larger-sized coal?—For the larger coal—it is raised recently—I have not got any since, but they were getting 10*d.* per cwt.

39961. At the pit's mouth?—Yes.

39962. At the present time, though it is subject to an increase, the Castlecomer coal is only averaging 10*d.* at the pit's mouth. Does your coal command as good a price?—It will compete with Castlecomer in Kilkenny, where they meet, but it is not as good a coal.

Situation of the slate quarries.

39963. To go from the coal. I gather, in reply to Mr. Acworth, that Slieveardagh is only about twelve miles from Templemore on the one hand, and from Ballyragget on the other. I do not think it could be much more than that?—I do not know.

39964. It is half-way from Ballyragget to Templemore?—I think the distance is over double that.

Distances to nearest railway stations.

39965. Ten to twelve miles from Thurles on the one hand, and Kilkenny on the other. But to come to Mullinahone—is not that the slate quarry?—No, Windgap. They are six or seven miles from Carrick-on-Suir, between Carrick-on-Suir and Callan.

39966. Did not I understand you to say that you had to cart twenty-two miles?—Yes.

39967. Where did you cart that to?—Kilkenny. The slates that go to the North.

39968. Could not you bring them to Ballyhale, which would be much closer?—Ballyhale is not.

39969. Ballyhale is farther from the slate quarry than Kilkenny?—Yes, they bring them to Kilkenny. Probably one of the reasons is that the road is more level.

39970. What distance are you from Fethard?—Mullinahone is only seven miles from Fethard?—Probably six miles or seven, and eight from Windgap to Mullinahone.

39971. It is seven miles by the railway guide from Fethard. Would not it be more convenient and more accessible?—There must be some reason to have it carted to Kilkenny.

39972. Have you any idea what the output of slates is?—No; I have made inquiry from the managing director, but he would not tell me, but he told me it could certainly be doubled if they had railway accommodation.

39973. Are they as good a class of slate as they put out at Nenagh, for instance?—Oh, superior.

39974. I never heard of that particular slate. Of course the Nenagh slate is a well-known slate in the South, and large quantities are brought into the country and used, but I never heard—though I live fairly near to the neighbourhood—I never heard of that slate industry. Has it been used in any place outside of your own district?—It comes here to Dublin.

39975. They have been advocating a line from Stradbally to Portarlington, and that the output of the Castlecomer fields is 80,000 tons a year?—I am not aware.

39976. At any rate, you know that the cost of a light railway would be at least £4,000 to £5,000 a mile. You are aware of that?—I have heard that.

39977. And that to earn anything like interest you would have to have a revenue of £140 or £150 per mile. Do you think for a moment, putting it fairly, that the traffic in slates and coals and barley and other products in your district would represent anything like a revenue amounting to £150 a mile per year?—Perhaps it might not the first year or two, but I have not the smallest doubt that as it became developed it would reach that.

39978. Have you any complaint to make as to the actual rates for barley once you get it on the railway?—Nothing. It looks very small as compared with the cost of cartage.

39979. At any rate, you have no complaint to make. The rates charged where they get it are reasonable, and, of course, as Mr. Acworth pointed out, it is to their interest to encourage barley growing rather than let it be brought in from the Continent and other places?—Yes.

39980. You alluded to the roads being in good condition?—Very good condition.

39981. Do not you think, in the first instance, that sooner than go to the large expense involved in the railway something might be done in the way of experimenting by the introduction of motor services or trucks?—We have considered the Renard car. We had it in the town, and it gave an exhibition, and we did not consider it would be able to grapple with the traffic. In fact, if we thought it a success the people of the district were willing to subscribe and purchase one if they thought it would pay.

39982. The Renard car, I believe, they estimate will carry twenty tons two journeys each of nine to ten miles. Do you mean to say that except for a very short period of the year you have anything like the traffic amounting to that tonnage in barley, for instance, sent by carts?—I am quite sure there is more.

39983. For a couple of months in the year?—There are twenty-four carriers' horses engaged in Callan constantly, besides a lot of the larger merchants keep their own horses. Any man who has sufficient traffic to keep a horse, he will keep his own in preference to paying carriers' fees. And then at Mullinahone there are twenty-six carriers, so that it is impossible that a Renard train would be able to grapple with it.

39984. On your own figures, fifty horses represent a traffic of less than 50 tons which the Renard train would amply provide for?—Yes; but I think there

are, perhaps, thirty or forty more private horses carting.

39985. I wondered whether, in the first instance, you thought that by way of experiment something might not be done in the way of a motor service or Renard train to see whether the traffic would pay the heavy expenditure involved in the construction of a railway. It is not easy to get money?—The question has not been dealt with. There was a committee formed of the most influential people of the district, and they were all Justices of the Peace for County Kilkenny and County Tipperary, and that was their opinion after considering the matter for several weeks—that a Renard train could not grapple with it.

39986. I have no doubt you would like the most efficient service, which would be the railway, but failing such a service do not you think it would be wise to get something done towards the establishment of a motor service, which, though it might not be all you want, might answer the purpose, and justify the Treasury or the Irish authority that we have heard about in subsequently finding the money for a railway?—It would be no use attempting it. There were two Renard trains proposed, and each of them is £3,000, and it is not easy to get £6,000, though, if necessary, it could be got.

39987. Putting it at £4,000, that is the capital cost of the train, whereas it costs £4,000 per mile for the railway, which would represent £30,000 or £40,000, a sum that would buy nine or ten Renard trains—for the sake of argument?—Yes, but the railways are very much more lasting than a Renard train.

Jan. 14, 1908.

Mr. Godfrey J. Green, J.P., Representative of Callan Rural District Council.

The cost of a Renard train and a railway compared.

Mr. John Butler, J.P., examined by the Chairman.

39988. Mr. Butler, you are a Justice of the Peace?—Yes.

39988A. And you also appear on behalf of the Callan Rural District Council?—Yes.

39989. And you have heard the evidence that has just been given by Mr. Greene?—Yes.

39990. Do you agree with his evidence?—On the whole.

39991. Is there any part with which you disagree?—I do not know that there is.

39992. Then you agree with his evidence?—I do.

39993. You heard the questions that were put to the last witness by Mr. Sexton, with reference to the unification of the railways, and the purchase of the railways by the State and to be worked exclusively by an Irish authority?—Yes.

39994. Do you agree with the evidence given on that point?—Quite.

39995. And have you considered the question?—Yes, considered the question. It is the only remedy. I do not agree with one particular thing that Mr. Green has stated—that the fares or freights charged are satisfactory. I think they are prohibitive for agricultural purposes.

39996. I do not think Mr. Green made much point of that. You think that there is room for a reduction of rates generally on the Irish railways?—Certainly.

39997. Are you personally engaged in any particular industry?—I farm.

39997A. You grow barley?—No, I do not. I did grow barley.

39998. You agree with the evidence that has been given that the enormous cost of cartage kills the industry?—Oh, yes.

39999. And that the slate and stone, and marble and coal cannot be properly developed without better means of transit?—They are all dormant for want of carriage accommodation. Even agriculture and growing of corn is penalised by the railway freights.

40000. By the cartage?—Yes, the cartage.

40001. Do you think that with the agricultural products in and out, that is to say, the manure in and the grain out, and the articles which I have mentioned—the stone and the slate and the coal—do you think that if the railway were made in that district it would produce £3 per mile per week on the railway?—I am not able to go into the figures, but, looking at the country as a whole, and looking at the undeveloped state of agriculture, the limestone products of the district, the coal and the slate, and creameries are very prevalent—I suppose forty creameries in an area of 1,500 square miles—all these now are very much hampered for want of accommodation.

40002. Well, now, the creameries—take the creameries. Of course, they produce butter?—Yes.

40003. And cream—principally butter?—Butter.

40004. How do they get it out? It has to be carted?—It has to be carted to the railway, to the injury of the butter.

40005. You think that particular industry might be improved and increased?—Yes; but particularly the growing of corn. Corn is prohibited from being grown owing to the difficulty of moving it to the market.

Examined by Mr. Acworth.

40006. I gather you consider that the existing rates are exceedingly high?—They are high.

Mr. John Butler, J.P., Representative of Callan Rural District Council.

40007. And you would expect, I suppose, that if an Irish national authority took charge of the railways they would reduce those rates considerably?—I think the increased accommodation would reduce the rates.

40008. I do not follow?—I think that if you develop the districts it will decrease the rates.

Reduction in rates expected to result from popular control after State purchase of Irish railways.

40009. The railways are charging, we will say, for carrying certain goods a certain distance, 10*s.*, or whatever the rate may be; you say that those rates are too high?—Yes.

40010. And you think that they ought to charge less than 10*s.*?—I do not know what they ought to do, but I know that the presence of so many boards and the interests of so many different companies make a demand on the earnings of the railways, which, if the railways were State property, and in the hands of the local authorities, would not exist.

40011. I understand that. But what you said was that the rates were too high, was it not?—Yes.

40012. And I ask you, if an Irish authority took charge of the railways, would you expect them to put the rates down to a proper level?—I think that if you took away all that expense they would certainly come down naturally.

40013. You would expect them to come down?—Yes, from the development of the district and the doing away with unnecessary expense.

40014. You would expect the rates to be reduced because they would have new money to do it with; that is what it comes to?—The increased traffic would enable them to do so, necessarily.

40015. They would have more revenue, and they would be able to afford to reduce the rates in consequence?—Yes.

40016. If they used their new money to reduce the rates for the existing traffic they could not use it over again for new railways, could they?—I think the money for new railways should come *in globo*. I think the Government should advance money for new railways, and I believe there is ample security for it in the railways themselves.

Suggested advance by the Government of the capital necessary for railway extensions in Ireland.

40017. You mean the British Government?—The British Government, yes.

40018. I will not go into the question at any length, as I daresay Mr. Sexton will wish to. But who is to find the money to purchase the existing railways?—I think the Government should find the money.

40019. The British Government should advance the money?—Yes.

40020. And they ought also to advance a certain amount of additional money for extensions and improvements?—They would naturally grow.

40021. You said that they would want new capital, and that the British Government ought to find it?—New capital to purchase the existing system, and in the working of the system the extensions will follow.

40022. I thought you agreed with me that the profits were to be applied to the reducing of rates on the existing lines. You told me that the British Government ought to find the money for extensions?—I did not quite say that the profits ought to go to the reduction of rates. I say that with the economy

A portion of the savings from unified working to be applied to the reduction of rates.

Jan. 14, 1908.

Mr. John Butler, J.P., Representative of Callan Rural District Council.

of working the railways as one system, and having money borrowed at a cheap rate for the purchase, they would become cheaper in the management.

40023. *Chairman.*—Do you not mean this—that the economies which could be effected in the working of one system could be applied to the reduction of rates?—Yes, a portion of them could be so applied.

The provision of capital for new railway works by the Government on Irish security.

40024. And that if new railways had to be made, that would be capital expenditure for which capital ought to be provided?—Yes.

40025. That is what you mean?—Yes.

40026. *Mr. Acworth.*—And that money should be provided or lent by the British Government on the Irish promise to pay; that is what I understood?—Yes.

Examined by Mr. Sexton.

The sale of Irish barley in the home markets restricted by insufficient transit conditions and excessive rates.

40027. First, a word about barley. Do you happen to know how many brewers and distillers there are in Ireland?—No, I do not.

40028. There are still a good many?—A good many, yes.

40029. Some on the east coast, and a good many inland?—We have six or eight surrounding the area which I describe as being unsupplied with railway accommodation—Clonmel, Carrick-on-Suir, Waterford, and so on.

40030. And throughout the country?—Yes.

40031. Therefore a presentation of the case which suggests that the breweries and distilleries are on the east coast and can get barley by sea carriage only from Great Britain is scarcely accurate. They can get it so when they are on the east coast?—Not from Ireland.

40032. To say that the existing breweries and distilleries have only to pay sea carriage from England for barley is not quite accurate; inland breweries will have to pay railway carriage?—Yes.

40033. And then, of course, barley does not grow at the English ports; it has to be brought to the ports from the agricultural districts of England?—Yes.

40034. Therefore, even the Irish breweries and distilleries situate on the east coast, which use English barley have to pay for it, not only the sea carriage across the Channel, but also the land carriage from the point of production?—From where it is grown, naturally.

40035. Is it not then a hard case that the Irish grower of barley, whether by reason of want of railway accommodation, or by reason of high railway rates in Ireland in comparison with the import rates, should find himself shut out from the market afforded by the Irish breweries and distilleries?—Unquestionably the Irish farmers have to suffer through the want of railway accommodation.

Suggested application of the economies expected under a nationalised scheme to rate reductions, etc.

40036. And it is not to be accounted for by any assumed comparison between sea carriage and land carriage, because the English barley has to be carried by land as well as the Irish barley; is not that so?—Yes, that is so; it cannot be grown at the ports.

40037. You were asked if an Irish authority would reduce the rates, and where they would find the money to do it. In the first place, if the public credit were applied to the purchase of the railways, would not the rate of interest all round on the future capital be much less than it is upon the present capital?—Certainly.

40038. And the difference would be a surplus available for the reduction of rates?—Yes.

40039. The difference would be an increase in the present net profits and would be available for the reduction of rates. In the second place, if the Irish railways were managed as one integral business instead of being managed as twenty independent businesses, I think any business man will say that the effect would be a very substantial saving?—Undoubtedly.

40040. And that would be a second surplus available for the reduction of rates?—Yes.

40041. And this policy of the reduction of rates being entered upon and effectuated, you would look for a development of traffic as the result?—Yes.

40042. And a further consequent surplus to be used for the reduction of rates?—Naturally.

40043. You were asked by Mr. Acworth whether even an Irish authority could use the same money for reducing the rates and for constructing railways. I think we would agree, to put it in axiomatic form, that no money can be used for two different purposes at the same time. You would agree to that?—Yes.

40044. We do not claim such potency for even an Irish authority. Now let us try for a moment to clear up this question. Do you know that the most competent financial experts in England found, unanimously, some years ago, that this country is overtaxed to the extent of close upon three millions every year?—Yes.

40045. Do you know that after paying the whole cost of government in this country there is every year a surplus of about two millions, which is taken out of the country and used for other than Irish purposes while the over-taxation continues?—I am not quite conversant with the particular facts.

40046. You may take it from me that the balance of the revenue raised in Ireland, after the whole cost of administering Ireland is discharged, amounts to about two millions a year, and that goes to the Imperial credit. Do you think it would be an extravagant or unjust claim on the part of Ireland, after having been brought so low by depopulation and by British legislation, that for a period, at least, the balance of her own revenues, after discharging the cost of government, might be used to raise her again to the level of an ordinary country?—It is due to us. I think that restitution is a very well acknowledged claim against the British Government for the overtaxation found by her own nominees.

40047. If there were an international court, such as the Alabama Arbitration, to determine disputes between these two countries, have you any doubt as to what that court would find?—What strikes me about the matter is that the British Government appointed a committee to get information and to make inquiries, and although it is found by their own nominees that we are wronged to the tune of three millions a year they leave the matter as it is and still continue to rob the country.

40048. It is worse. The burden of taxation has greatly increased since that Commission reported, and therefore the proportion of Ireland is even more than 2¾ millions per annum more than it ought to be?—The disease is found, but there is no remedy; they have the power, but they will not use it.

40049. The overtaxation being admitted, or not contested, what do you say of the financial policy that withdraws two millions a year of our revenue from us for purposes not Irish?—Of course it is unjust.

40050. Supposing we had a thousand miles of railway made additional to what we have now, it would probably meet in a very full and adequate way the needs of this country?—Yes, probably.

40051. At £6,000 per mile, 1,000 miles could be built for £6,000,000, and the annual charge for £6,000,000, say at 3½ per cent., would be about £200,000; that is about one-fifteenth part of the overtaxation of the country. If anything like a substantial grant were made as an off-set against overtaxation, would not a small fraction of it provide for the annual charge for all the branches required? I mean, if we had even £200,000 a year—not £2,000,000—available to pay the interest on the capital required, could we not provide all the branch railways Ireland requires?—Oh, yes.

40052. Then where would be the necessity for using the same money twice, or what is the sense of suggesting that an Irish authority, if justice were done, would not be able to make the necessary branches; do you see any?—No.

Examined by Sir Herbert Jekyll.

40053. You spoke of there being 1,500 square miles in your county without railway accommodation. Will you tell me where that area is; I have a difficulty in finding it on the map. What are the boundaries of the area? It is an area of 50 miles by 30, and there does not appear on the map anything like that area unprovided with railway accommodation?—It is from railway station to railway station within the area; that is my computation.

40054. Can you give us any indication of how the area is bounded? (*Mr. Greene indicated the area on the map*). It might be 1,500 square miles if it were a rectangular area, but it is more like a triangle. It is certainly less than 1,500 square miles?—(*Mr. Greene*)—I only spoke in round figures.

Mr. P. A. MEEHAN, M.P., examined by the CHAIRMAN.

Jan. 14, 1908.

Mr. P. A. Meehan, M.P., Representative of Queen's Co. County Council.

40055. Mr. Meehan, you are a member of Parliament, for what division?—For the Leix division of Queen's County.

40056. And are you connected with the County Council of Queen's County?—I am a member of the Council, and its Chairman.

40057. What is the area of Queen's County?—The area is 33 by 37 miles.

40058. What is about the acreage?—424,723 acres.

40059. Will you particularise—how much of that is tillage, pasturage, etc.?—There are 126,631 acres of tillage, 223,120 acres of pasturage, 11,000 acres under plantation, 63,662 acres of waste, and 357 acres are under water.

40060. What was the population in 1851?—111,623.

40061. What was it in 1901?—57,417, a decrease of 54,206.

Industries of Queen's County:—

40061A. What are the chief industries of the county?—Agriculture, mixed farming, and grazing ranches.

40062. When you talk about agriculture, what are the products generally?—Barley, oats, wheat—which is grown only in very small quantities at present; it was formerly very extensively grown in Queen's County—butter, eggs, poultry, potatoes, cattle, horses, sheep, and pigs.

40063. Are there any manufacturing industries in the county?—The only manufacturing industries at present are extensive flour-mills at Maryborough and Portarlington, and large malting works at Maryborough, Rathdowney, and Stradbally.

40064. Those are the malt works that we have heard of this morning; that is where the barley is sent for making malt?—Yes.

40065. And the malt is sold to the brewers?—The malt manufactured at Rathdowney is used in the local brewery—that made at Stradbally and Maryborough is sent to Dublin and used by the brewers and distillers there. The malt is sold in Maryborough and sent by rail to Dublin.

40066. To the brewers?—Yes, and distillers.

40067. Are there any brewers in the county?—There is a brewery at Rathdowney.

40068. Are there any factories of any kind?—There is a small tweed and flannel factory at Ballinakill, and a brick factory at Durrow.

40069. Are there any flour or oatmeal mills in the neighbourhood?—There are oatmeal mills at Abbeyleix, Ballycarnon, Maryborough, Knockagrove, near Mountmellick, and Timahoe.

40070. Are there any other industries?—The only other industry at present is a carpet factory recently established at Abbeyleix, giving employment to about thirty hands.

40071-80. Yes, we saw those carpets at the Irish Exhibition, and very good they are?—Yes, they are very excellent indeed, and command a high price.

40081. Are there any minerals in the county?—There are extensive limestone quarries extending many miles round the town of Stradbally, and the limestone is pronounced by experts to be equal in quality to any rock of a similar character in Ireland. One of the quarries is being worked at present, and about 100 men are employed there, but the industry is very much hampered by the want of transit, the nearest railway being about seven miles and the nearest canal five miles distant.

40082. So that the rock produced has to be carted that distance?—Yes, to rail or canal.

40083. And the cost of cartage practically kills the traffic?—Want of transit has practically killed the industry there, except in one quarry which is being worked at present by a Dublin contractor.

40084. You refer in your proof to extensive grit rock quarries at Clonaslee. What is a grit rock quarry?—That is a local name.

40085. What is grit rock?—I think it is something in the nature of granite, but of a much finer quality and much more easily worked for ornamental buildings. I may say that these quarries were extensively worked formerly when the population was larger and wages were lower, but there is only one small vein in the quarry being worked at present.

40086. What is the nearest railway station to the quarry?—Perhaps I should mention that at present Messrs. Troy are doing some very fine work there at present, especially for the Roman Catholic Church at Naas.

40087. Ornamental work?—Yes.

40088. From that quarry?—Yes. The nearest railway station is about eight miles distant; that is, at Mountmellick. The nearest canal is ten miles distant.

40089. So that even with that drawback they are doing this particular work at this particular cathedral in consequence of the superior quality of this particular rock, I suppose?—Yes. They are practically working only one small vein there at present, but the work is as good as any similar class of work in Ireland. I have not any practical knowledge on the point, but I have heard experts say that the stone and the workmanship of the carving is equal to anything, not only in Ireland, but in many other countries.

Building stone and lime.

40090. Does the county produce any lime?—Lime is extensively manufactured for building and agricultural purposes at Ballyroan, four miles distant from any railway, and the lime is carted by farmers from fifteen to twenty miles for the purpose of manuring their land. Lime is also manufactured at Dunamane, four miles from either railway or canal. Farmers also draw this lime very long distances for the purpose of putting it on their land. Lime is also made at Mountmellick, and there is also a salt factory there. Mountmellick is served by both canal and railway.

Decay of former woollen manufactures.

40091. I suppose that these that you have mentioned are the principal manufactures in the county? They are the principal manufactures, as far as I know.

40092. Have you any knowledge as to whether any manufactures or industries have been discontinued in the county?—Yes. Queen's County was noted years ago for being one of the foremost manufacturing counties in Ireland. Woollen manufactures principally flourished in Queen's County. There were extensive factories at Mountmellick, Maryborough, Mountrath, Abbeyleix, and Cullenagh. Ballinakill was noted for the extent of the industry and the quality of the manufacture. I may mention, too, that at Mountmellick there were close on a thousand people employed in the woollen industry; at Maryborough between 500 and 700; at Mountrath about an equal number; at Abbeyleix, where a factory was continued to a recent period, there were very extensive mills; at Cullenagh also there were extensive woollen mills, employing about 300 people. A historical incident in connection with that was that the Irish Parliament voted £40,000 for the establishment of the woollen industry at Cullenagh. A mere remnant of the industry exists at the present time at Ballynakill, but it is only a ghost of what it was in former times.

Vote of £40,000 by the Irish Parliament for the woollen industry at Cullenagh.

Cause of the decay of that industry.

40093. Speaking generally, how many years is it since the decay of that industry?—I think it is about sixty years since the mills were closed at Cullenagh. The closing was brought about by the eviction of 120 families; the people were driven from their homes, and the place had to be abandoned.

40094. Because there was nobody to work it—the people were driven away, you say?—120 families were evicted from Cullenagh, and having no homes, they had to clear out of the country. Between sixty or seventy years ago there were the mere remnants of the industry at Mountmellick, Mountrath, and Maryborough, but the industry was decaying from the time the Acts were passed by the British Parliament prohibiting the manufacture of Irish woollens.

Hostile legislation of the British Parliament against Irish industries in the eighteenth and nineteenth centuries.

40095. Prohibiting the manufacture?—Yes. I can not just now fix the date that the war against Irish manufactures was commenced by the British Parliament. Irish manufactured goods were exported to England and the Continent, and were of such superior quality that they beat the English goods out of the markets. Act after Act was passed to hamper and to restrict and crush out the Irish factories. Acts were passed prohibiting the export of Irish goods to the colonies, except to England, and even this was hampered by the condition that Irish exporters were prohibited from landing goods in England except at one port—Barnstaple. Again, at a later date, English manufacturers petitioned the King, William III., to stop Irish woollen manufactures, as, even with the restrictions that were imposed, Irish manufacturers were beating the English even out of their own markets. The King promised to put down the Irish woollen industries by every means in his power. Later still, English farmers complained that the Irish wool exported raw into England was interfering with them, and the export of Irish wool was prohibited. A few general instances besides those quoted:—In the year

Jan. 14, 1908.

Mr. P. A. Meehan, M.P., Representative of Queen's Co. County Council.

1800 the Act of Union was passed. Wicklow County was at the head of the woollen trade, one thousand factories were in full work. In 1841 not a single loom was at work. In Kilkenny fifty-six factories gave employment to 5,000 hands. In 1822 there were but twelve factories; now I believe there is but one, and that only recently established. In Dublin there were 2,500 broad silk looms; in 1840 there were but twelve. At the present day, I believe, there are none. Thirteen carpet factories, 329 hosiery frames; I believe at the present day there are none, except at Balbriggan. Balbriggan had 2,000 calico frames; in 1840 they had fallen to 226. I cannot say if any exist there at present. Roscrea gave employment to 1,000 hands. In the year preceding the Union Ireland supplied all her own flannel and woollen goods and exported several millions' worth. Forty years after the Union Ireland paid £1,400,000 for flannel and woollen goods required by her people. In the history of the world there is no such record as the well-planned and deliberate destruction and the pauperising of a country by a Government.

Decline of Irish textile industries since the Act of Union.

40096. You mentioned that £40,000 was granted to some woollen factory?—At Cullenagh; that was by the Irish Parliament.

40097. I suppose they all ceased when that Act was passed?—The result of the Act of Union was that they were crushed out; the export duties and restrictions were so heavy that they were killed.

Closing of flour mills

40098. Are there any flour mills in the county?—There were large flour mills at Mountmellick, Mountrath, Abbeyleix, Castletown, Stradbally, and Coolrain. All these flour mills are now closed. Two flour mills have recently been closed at Maryborough, but I am glad to say that one large mill that is working there is doing excellent work, increasing its output, and is in a very flourishing condition. I think the reason of that is that it is quite adjacent to the railway, and I think the proprietors have some special freight over their line from Dublin.

40099. Special rates. That shows, at any rate, the advantage of a railway to the industry?—Yes.

40100. You do not know anything about the details; you speak only generally?—That is so.

Extinction of pottery industries.

40101. Is there anything done in earthenware or sanitary tubes in the county?—There were extensive drain and sewer pipe works—pipes and tiles for draining land were extensively manufactured at Luggacurran. That industry has been extinct now for some time.

Caused by evictions and decrease in population.

40102. Is it because the clay is exhausted?—No, it is not because the material is exhausted; but because of the evictions that took place there. Driving the people out of the country, and so reducing the population that the works had to be discontinued.

40103. Are there any potteries in any other direction?—There were potteries at Ballyfin. The articles manufactured were generally for dairy use, and for flower pots, which were sent generally all over Ireland. That industry is extinct.

Flag quarries lying undeveloped.

40104. For the same reason?—I would not say that it is for exactly the same reason there. Of course, diminution of population is, to some extent, accountable for it; but I am glad to say the reduction of population there was not brought about so much by eviction as it was in other parts of the county. Then there are extensive grit flag quarries at Ballyfin. These flags are of a uniform thickness, with a surface almost of the smoothness of a planed board. They were extensively used in Queen's County, and in the adjacent counties, for many years; and the falling off of the population is, to some extent, accountable for the fact that that work has been for some years discontinued. I have seen flags from these quarries which have been laid for over 100 years, and I have had them laid myself thirty-five years ago, and although there has been constant traffic over them, they are as good to-day as they were the day they were set, showing their durability and their suitability for flagging.

Disastrous effects of expensive transit and emigration on the industries.

40105. Is the stone still there?—The stone is there in almost inexhaustible quantities—in the range of hills rising up to the Slievebloom Mountains.

40106. How far are these quarries from a railway station?—This particular quarry would be about eight miles from Maryborough and about an equal distance from Mountmellick—about eight miles from either railway or canal.

40107. It is the cost of cartage that operates against the development of that industry?—The cost of cartage and the reduction of the population.

40108. There, I suppose, it is emigration from the country that has affected the reduction of population?—Emigration, of course; but if you ask me the cause of the emigration I should say that the land tenure was the cause of it.

40109. You told us at the beginning of your evidence that there is only half the population now that there used to be. Are there any other industries that have ceased to exist in the county?—There was a sugar factory and a bit-and-stirrup factory at Mountmellick. Bits and stirrups were made from the iron that was mined at Dysart, carried to this district, smelted, and made into bits and stirrups. It is a historical truth that the bits and stirrups made at Mountmellick were famous all over the Continent as being the very best of their class.

40110. And the iron was found in the county?—Yes.

40111. Where is that deposit of iron-ore found?—At Dysart

40112. Are there tanneries also?—There were large tanneries at Maryborough and Mountmellick, but they have been closed now for many years.

40113. Tanneries must exist somewhere in the county—there must be hides and so on?—The hides, as far as I know, are all exported.

40114. Raw?—Raw.

40115. Not tanned?—Not tanned.

40116. Leather is imported?—There is no tannery in Queen's County or in the adjacent counties at present that I know of.

40117. The probability is that leather is imported into Ireland?—According to the returns procured by the Department of Agriculture, nearly all the leather used in Ireland is imported.

40118. I think you told us that the iron ore was found at Dysart?—Yes.

40119. That is about three miles from Maryborough?—Yes.

40120. How long is it since these iron mines were worked?—Sixty years, but prior to that they were worked very extensively. Sixty years ago there was a small mine being worked there, but the then landlord of the place prohibited the working, and it was discontinued. The Department of Agriculture has recently sent down an expert, who has visited the place, made an inspection of it, and taken samples of the ore for the purpose of having it tested. But as this place is four miles from either canal or railway, even if the ore proves to be good, and there is a prospect that the working of the mine would be remunerative, I think it can hardly be made to pay except there is a railway or a canal brought within a reasonable distance of it.

40121. You cannot work iron ore unless there is means of transit. We have heard several witnesses from adjacent counties, and they have spoken about the anthracite coal beds. With regard to the beds in your county, in the baronies of Slievemaggy, Stradbally, Cullenagh, and Ballyadams, do you know if the coal is being worked?—Not in my county. I presume that former witnesses have referred to the anthracite coal in County Kilkenny, at Castlecomer.

40122. I beg your pardon. You are right?—The mine is just on the border of the county. The anthracite coal beds in the Queen's County are in the baronies of Stradbally, Slievemaggy, Cullenagh, and Ballyadams. They do not extend over the whole baronies, but a portion of each barony comes in.

40123. Are these collieries at work in your county?—There is no Queen's County colliery at work at present. Shafts have been sunk, and mines were worked, but all in Queen's County are now closed; mainly through want of proper means of transit.

40124. I suppose they have proved the coal there?—Yes. There was one particular mine in Queen's County worked up to two or three years ago, I think; but it was discontinued on account of the difficulty of transit.

40125. And the cost?—And the cost.

40126. Is any effort being made by the county authorities to get railway or canal accommodation provided, so as to develop the mineral resources of the county?—Several attempts have been made. In 1800 a canal was mapped, levels taken, and specifications prepared, from Monasterevan to Castlecomer. This canal was mapped to run *via* Portarlington, Maryborough, Ballyroan, Abbeyleix, Ballinakill, and Ballyragget, with a branch to Mountmellick, and a suggested route from Maryborough to Roscrea *via* Mountrath.

40127. But it was never made?—It was never made.

40128. Was it the cost that prevented its being made?—I really cannot say.

40129. At any rate, it has never been made?—It never was made. I may point out that it would be invaluable, in my opinion, to the people of the district through which the canal would run, because it would touch at the lime works at Ballyroan, and a great portion of the land in Queen's County is of such a nature that it requires lime, which is very valuable as manure. This canal would run quite close to the lime works at Ballyroan, and make a cheap means of transit for this lime both into Queen's County and into County Kilkenny, and all through the country, where lime is absolutely necessary as a manure, and bringing coal to the lime-kilns.

40130. Is it within your knowledge what the estimate was for making that canal?—The estimate was £80,000. That was in 1800. I suppose it would be double the amount now.

40131. The specifications showed that it was a feasible scheme?—Oh, yes. The engineers' report set out that it was the most favourable route and the most easily constructed.

40132. It was quite feasible at an outlay of about £80,000; but, at any rate, it was never made?—That is so. I brought the report of the engineers and a map with me; I would be very happy to supply them to-morrow if the Commission would like to see them. I will supply you with the map and the report dealing with the scheme.*

40133. Thank you. Has any tramway been projected since that period?—In 1883-84 a tramway was proposed from Clough, Castlecomer, to Athy. A company was formed for the purpose of carrying it out, and the necessary capital was promised on condition of a baronial guarantee being given. Public meetings of the ratepayers were held in favour of the project. The Grand Jury, however, refused to give the guarantee, and, in my opinion, they did right in so refusing. The company was not an Irish company, and I think it would have been managed mainly with a view to earning dividends for the shareholders rather than to promote the public interest. A recent case which came within my knowledge shows the danger of giving these guarantees. In the making of an extension line from Sallins to Tullow a baronial guarantee was given, and the people who gave the guarantee were under the impression that the whole of the profit from the traffic of the line from Tullow and the intermediate stations to Dublin would be available for meeting the expenses of the line. But when the matter came to be worked it was found that the only profit allowed by the directors was the profit from Tullow to Sallins. Consequently it fell short of meeting the expenses, and up to the present day the ratepayers there are paying a rate of 6*d.* in the pound for that guarantee. That shows the danger of giving these guarantees, unless you have a body of men who are working the line really in the interests of the public.

40134. Or unless the rate is limited to so much in the pound?—Or unless the amount of the rate is limited.

40135. If the ratepayers knew that whatever the liability was it would never exceed 2*d.* or 3*d.* in the pound, that would be another thing, I suppose?—Well, yes.

40136. Instead of its being an unknown quantity?—Yes. I think that wherever a guarantee is given the amount in the pound should be limited.

40137. The maximum amount should be limited?—Yes; and there should be some prospect of relief from the taxation.

40138. Have the guarantors in this instance paid more or less than 6d. in the pound?—If the profits of the traffic from Tullow and the intermediate stations to Sallins over the main line into Dublin were taken, in all probability they would meet the whole of the expenses of the line, and leave a margin.

40139. And save the ratepayers?—It would relieve the ratepayers from that 6*d.* in the pound.

40140. Surely there are baronial auditors to audit the accounts and to see that it is properly done?—But the guarantee has been given, and the auditor cannot interfere with it. The auditors would have nothing to say to a matter like that.

40141. I suppose the only railway running through your county is the Great Southern and Western?—The Great Southern and Western Railway runs through the county north-east to south-west, with a branch from Maryborough to Kilkenny and Waterford, and a branch to Mountmellick, which was originally intended to be continued to Mullingar.

40142. Have you any canal communication in the county?—The Grand Canal serves Portarlington, Vicarstown, and Mountmellick.

40143. Are there some extensive maltings at Rathdowney?—The important town of Rathdowney, with its extensive brewery and maltings, is five miles from the nearest railway station, Durrow two miles, Borris-in-Ossory is but half a mile; but the railway company, notwithstanding constant appeals from the town and the people of the district, have refused to open a station there. The people have to drive to Ballybrophy to catch a train, and to cart their goods from Ballybrophy to Borris-in-Ossory.

40144. How far is that?—Probably between five and six miles.

40145. You say that at Rathdowney there are extensive maltings. That is for the barley grown in the district, I suppose?—Yes.

40146. *Lord Pirrie.*—Do you mean to say that they do not import any?—I do not think the brewery in Rathdowney imports any.

40147. *Chairman.*—What have you to say about the proposed line of railway from Castelcomer to Portarlington?—In reference to the very important question of the coal-mining industry, and the proposed line of railway from Castlecomer to Portarlington, Dr. Higgins and Colonel Cosby, who were appointed by the County Council to give evidence, have gone into exhaustive details in their evidence dealing with this important subject. On that ground I do not propose to go into any matters of detail.

40148. Do you agree with their statements?—I agree with and support the statements of both witnesses from personal knowledge of the district, but I disagree with the evidence of Colonel Cosby as to the remedies he suggested, viz., a tax on food imports, and that though rates on canals and railways are high they could not be reduced in fairness to the shareholders. I am opposed to the taxing of food imports, and I believe that the true remedy is the abolition of the present system of railway and canal management. It is this system that is accountable to a large extent for the backward state of trade and agricultural depression. The numerous boards of directors and officials drawing huge salaries, eat up what should go to the benefit of the workers and the country. The working staff have been reduced—this is the solid complaint of the people who have to do business with the railway—the working staff has been reduced, and the other portions of the staff have been increased. Railway influences have got control of some of the canals, with the result that the little competition that existed has been destroyed. As to the remedy, I approve of and support the plan suggested by Mr. John Sweetman and Mr. William Field, and adopted unanimously by the General Council of the County Councils of Ireland, on 18th October, 1906, as the best plan for providing a remedy for the evils which exist, and promoting the welfare of the country.†

40149. Has this plan that we are now dealing with been brought before the County Council of Queen's County?—I do not remember that the plan of Mr. John Sweetman and Mr. William Field has been brought formally before the notice of the Council.

40150. I am assuming that you are referring to their opinion that the railways should be purchased by the State, and worked by an Irish authority?—Yes.

40151. Has that question been brought before the notice of your Council?—It has not formally been brought up as a subject and discussed at any of our meetings, but I know from the interchange of opinion with the members that they are unanimously in favour of it.

40152. You know that from your own knowledge?—Yes.

40153. *Mr. Sexton.*—Was your Council represented at the meeting of the General Council of County Councils when the resolution to which you refer was adopted?—I do not think that I was present.

40154. But the Council was represented?—Yes.

40155. That brought your Council into accord with the resolution?—Certainly.

40156. *Lord Pirrie.*—Your representatives voted for it at the meeting of the General Council?—Yes.

40157. *Chairman.*—The General Council were unanimous, were they not?—It was a unanimous decision of the annual meeting of the General Council,

* See Appendix No. 11.

† See Appendix No. 37 (Second Report).

Jan. 14, 1908.

Mr. P. A. Meehan, M P., Representative of Queen's Co. County Council.

and while it never came formally before our Council for consideration at any of our meetings, I am aware, from personal knowledge and interchange of opinion, that the members of the Queen's County County Council are unanimously in favour of the proposal.

40158. I take it from you as Chairman of the Council that you are quite certain that if a resolution had been proposed by you or anybody else in your Council in the direction indicated by Mr. Field's evidence, it would have met with the approval of the Council?—Certainly.

Proposed railway extensions: from Mountmellick to Mullingar; and from Ballybrophy to Rathdowney.

40159. Leaving the general subject for a moment, let us go back to your own county. What suggestions have you to make with reference to the extension of railways in the interests of your own county?—In my opinion the interests of the people of Queen's County would be well served by an extension of the railway from Mountmellick to Mullingar. That would bring them in touch with the Midland Railway, and open up the country both to the North and the West of Ireland. A station for goods and passengers should be built at Borris-in-Ossory.

Proposed new canals: from Kilnacosh to Castlecomer; from Vicarstown to Stradbally.

40160. That is what you referred to just now, is it not?—Yes; the railway runs to within half a mile of the town, I think. Then there should be an extension of the railway from Ballybrophy to Rathdowney, a distance of five miles; the making of a canal from Kilnacosh townland at Clonterry to Castlecomer *via* Maryborough and Ballynakill (that is the old plan for a canal mapped in 1800); the extension of the present canal from Vicarstown to Stradbally, with a connection to Athy; a canal to Mountrath on the route suggested by the canal scheme of 1800, or, as an alternative, I would suggest the widening of the present road from Kilbrichen to Mountrath.

40161. Do you mean the main road?—The main road from Kilbrichen to Mountrath, about three miles, and the making of a light railway which could be used for both passengers and goods traffic, and a light railway or canal to Clonaslee *via* Rosenallis.

40162. That is a light railway running alongside the road?—Yes. I strongly support the suggested construction of a railway line from the collieries at Clough, Castlecomer, through the coal district in Queen's County to Portarlington, *via* Stradbally, running through or close to Ballinakill, where some of the principal cattle fairs of the midlands are held twelve times each year.

Suggested light railway to the colleries.

40163. The cattle industry is a most important one in your county?—It is very important in the district. It is an extensive grazing district, and although personally I am not in love with the grazing industry, in so far as it tends to shut the people out from the soil, still it is an important industry, and the necessary facilities should be provided where possible.

The passenger train service for town and district of Maryborough satisfactory.

40164. Have you any complaint with reference to the existing transit facilities? Take passenger traffic, for instance. Do you think the service is sufficient for the district?—With reference to the passenger traffic, as far as Maryborough is concerned, the town and district of Maryborough are well served; they have frequent trains and fast trains. But the general complaint is that the rates are too high; they are much higher than in other countries.

Complaint that passenger fares in Ireland are too high.

40165. You mean the fares?—The passenger fares are much higher than in other countries.

40166. Not higher than they are in England, are they?—I think they are.

Comparison of some English and Irish fares.

40167. We have had complaints from various witnesses as to the difference between the second and third class fares?—I will give an instance of the difference between fares in England and in Ireland. From Maryborough to Dublin, a distance of fifty miles, the difference between second class and third class fares is 4*s.* 9*d.* Now, the difference between second and third class fares from Holyhead to London, a distance of about 260 miles, is only 3*s.* 9*d.* From London to Liverpool, a distance of 192 miles, the difference between second and third class fares is 3*s.* From Holyhead to Manchester, a distance of 140 miles, the difference is 1*s.*; while for the fifty miles between Maryborough and Dublin we have a difference of 4*s.* 9*d.* I have not made an exact comparison of figures with reference to the difference between third class fares in England and third class fares in Ireland; I cannot give you any figures of my own knowledge, but I have been told by commercial gentlemen who have travelled in the two countries that the railway fares in England in all classes are considerably lower than they are in Ireland.

40168. I will not ask you any more questions on the point, but you give these as illustrations of what you say?—Yes.

40169. Have you any complaints to make with reference to facilities or the working of trains? I am dealing with passenger trains only at present?—Frequently delays arise. I am quite prepared to admit that there must be delays on even the best managed railway; delays will occur that cannot be prevented. What I complain of are preventible delays. A short time ago I travelled by a train due to leave Abbeyleix, on the Waterford branch line, for Maryborough at 1.45. This is a single line of railway. A goods train left the station at 1.53, just as the passenger train came in. The passenger train was kept at the station for seventeen minutes, and arrived at Maryborough at 2.30, the scheduled time being 2.5. That is an instance of the delay of which I complain. It was a delay which kept business men at the station for that length of time, and it was one that could have been prevented.

40170. What you say is that the goods train ought to have been shunted so as to allow the passenger train to keep its time?—Certainly.

40171. You very fairly say that on a single line you cannot always keep time; that is impossible; absolute punctuality under such circumstances is an impossibility?—I recognise that.

40172. But you give this particular case as an instance where, if the goods train had been shunted, as it ought to have been there is no doubt, the passenger train could have kept its time?—Yes.

40173. Is there any other particular case you wish to mention? I do not want to go into much detail?—At the present time there is no train coming from the South of Ireland to Maryborough before 11.10 in the morning, except a train from Waterford which gets into Maryborough at 9.15. But south of Maryborough, from Tipperary to Cork, there is no train coming in; consequently people from the southern end of our county cannot get into Dublin in the morning before 12.30. I know a gentleman who had to drive from Borris-in-Ossory—that is Ballybrophy station—to Maryborough, a distance of 13 Irish miles, to get a train to Portarlington in order to keep an important engagement. I can see no reason why an early train could not be run from the south to Maryborough, say, from Limerick or Thurles, to give the people in the southern part of our county an opportunity of getting to Dublin at a more reasonable time.

40174. Has any public authority taken this matter up with the railway company officially?—To my knowledge for thirty years the local authorities have been complaining and sending up memorials to the railway company, and we have never got any of the reforms we have asked for.

40175. Hardly ever got, I suppose?—I do not remember that we have got any.

40176. Of course, you are acquainted with the amalgamation of the Great Southern Railway with the Waterford and Central Ireland Railway?—Yes.

40177. Did you not get some concessions then?—There were some improvements at Maryborough station in the way of new stores and increased accommodation for the reception and delivery of goods. In connection with the goods traffic, perhaps I may mention that complaints are made and have been made for years of excessive rates, delays, and insufficient working staff. These complaints have been general in the Maryborough district for many years. The Town Commissioners as representing the people of the district have protested and appealed, both by letters and deputations to the directors, but all those appeals have failed to provide the remedy the people sought for. In January, 1896, a memorial signed by every trader in Maryborough was addressed to the directors of the Grand Canal asking them to make an extension to Maryborough and promising the entire carrying trade from Dublin. A baronial guarantee would have been given, but the directors of the canal refused to entertain the suggestion. The amalgamation of the Waterford and Central Ireland Railway and the Great Southern Railway was in the air at the time, and it was well known that some of the principal directors of the Grand Canal held shares, a large number of the Waterford and Central Ireland Railway shares, and I suppose it was to their personal interest to have the amalgamation carried out. Since the amalgamation the conditions have im-

proved; increased space for cattle and goods delivery has been provided, and new stores have been built, but the working staff is insufficient, and this is a cause of considerable loss to traders.

40178. Where is that?—At Maryborough. Prior to the amalgamation there were two working staffs. When speaking of the working staff I mean the porters. Since the amalgamation the working staff have to do the work of the Great Southern Railway and also the work of the Waterford and Central Ireland line, which was formerly done by the working staff of the last-named line. In reply to inquiries which I have made I am informed that there were four working porters on the Waterford and Central Ireland line prior to amalgamation, and since amalgamation the seven porters of the Great Southern and Western Railway have had that extra duty put upon them without any increase of the working staff.

40179. You mean that formerly there were seven men on one staff and four on the other, and that now the work is done by the seven?—Yes.

40180. Does that cause any inconvenience to the public? Do the public get properly served?—It is a very serious inconvenience.

40181. You mean in moving luggage, and so on?—I will give one instance that came under my own notice. At one period of the year the trains are pretty full, and a good deal of luggage has to be handled. I know that passengers have to handle a good deal of their luggage themselves, although I must say in justice to the railway officials there that generally they are most courteous and ready and willing to give all the help they possibly can. But it is impossible sometimes for the men to cope with the amount of work necessary to serve and despatch a particular train. Then, too, the new carriages make it more difficult for passengers to alight from or get into the train.

40182. *Lord Pirrie.*—You mean the corridor carriages?—Yes. In this particular instance there was a party of four, with their luggage, joining the train. An employee of the party was putting their luggage into the carriage, and a railway official in uniform was standing by looking on. Before the man, who was putting in the luggage, had time to get out the train was signalled off, and the man had to jump out at the risk of falling. This ornamental official walked over and demanded his name. I told him it was his duty to have provided sufficient staff to see people's luggage properly placed in the train, and not to compel men to run such risk. That is one instance showing that the staff is, as I say, insufficient, and that it is wrong to the travelling public.

40183. *Chairman.*—That man was a servant of one of the passengers?—A servant of a passenger going by the train.

40184. With reference to goods accommodation, is that satisfactory?—I have mentioned that the facilities for the handling of goods have been improved, but even at the present time they are not satisfactory at all. The traffic at Maryborough is very considerable, and there is not, as there should be at every such station, a lifting crane. Heavy packages of 5 or 6 cwt. have to be moved by hand.

40185. There is no crane at the goods station?—There is no crane.

40186. *Lord Pirrie.*—In the goods yard?—In the goods store.

40187. *Chairman.*—But there is in the general yard, is there not?—There was not up to a couple of months ago. There may have been one put there since, but up to then there certainly was not. Packages of 5 or 6 cwt. have to be moved by hand, and men and horses are constantly delayed for hours. I know of instances of men being kept two or three hours waiting for the delivery of goods that were there; the wagons would be shunted and other delays caused. Traders using floats frequently have them broken. I speak now from my own knowledge as a trader sending goods to that station. My floats often come back broken, and when I investigate the matter I find that it is through the dropping of these heavy packages from the floor of the store—which is four feet over the ground level—into the body of the float. The provision of a crane would save all that trouble and loss.

40188. *Lord Pirrie.*—Is this the station that you use yourself for your own business?—It is. I know an instance of a trader who had his float broken by the dropping in of one of these packages of about 6 cwt. Prior to that he had frequently appealed to the directors to provide a crane. The railway officials themselves admitted that it was necessary, but still it was not provided. When the float was broken, the trader processed the railway company for the amount that it cost him to get the float repaired, but, of course, he did not succeed in getting the money.

40189. *Chairman.*—When you say that the trader "processed" the railway company, do you mean that he went to law?—Yes. That is the usual term in our country.

40190. And the decision was given against him?—Yes.

Defective station equipment at Maryborough.

40191. *Lord Pirrie.*—Was that before a jury?—No; before a judge. If it had been before a jury I think it would have been a different story. The goods store at Maryborough at present is a considerable distance from the station. If a trader requires information in reference to rates—and it is frequently necessary for a trader to make inquiries from the stationmaster about certain matters, about goods coming in or going out, and so on—he can get no information at the station unless the stationmaster sends or goes himself to the goods store, which is over a quarter of a mile from the station.

40192. *Chairman.*—By the goods store I suppose you mean the place where the goods are warehoused?—Yes.

40193. Do you mean to say that it is a quarter of a mile from the station?—It is a quarter of a mile from the passenger station.

40194. Up the line?—Yes.

40195. And if you go to the station to make inquiries there is no means of communication except by foot; somebody must go to the store to get the information?—Yes. There is no means of getting the information unless the stationmaster walks himself or sends some employee to the goods store. You can get no information without that delay. A line of telephone from the station to the goods stores, which could be put up for a couple of pounds—they have the poles there—would remove all that annoyance and delay.

Telephonic communication between the station and goods store suggested.

40196. Is the goods clerk at the store?—Yes. The goods clerk, and, I think, two porters work the store.

40197. And they are at the store?—Yes.

40198. Has that suggestion been made to the railway company?—I am not aware that it has been made.

40199. What have you to say about cross-Channel goods?—May I mention one instance with reference to passenger traffic?

40200. Certainly?—I mentioned the connection of trains from the South to Maryborough, and the inconvenient branch lines from there to Dublin. As illustrating the unsatisfactory way in which the business is managed and the delays and inconvenience which it would be quite easy to prevent if the business were managed, as, in my opinion, it ought to be, I may say that recently I travelled from Maryborough to Naas *via* Sallins. I got my ticket for Naas by the 9.20 train, arriving at Sallins at 10.30. When I got to Sallins I found that there was no train available for the Tullow connection until 3.30 in the evening, so that there was a wait at the station from 10.30 in the morning until 3.30 in the evening. I say that it is not at all an unreasonable thing to expect that the train going on the branch line to Tullow should be timed to meet the other train coming in from the main line. That is illustrative of numerous other instances that could be given of an exactly similar kind.

Complaint as to inconvenience to passengers on the Great Southern and Western Railway owing to faulty train connections at junctions.

40201. That is a junction connection, I suppose?—Yes.

40202. Now we will go to cross-Channel goods. There must be a considerable traffic at Maryborough in cross-Channel goods. Have you any complaint to make in reference to that?—In my opinion, formed upon experience, cross-Channel goods are handled better and more carefully and delivered in better time than goods sent locally.

Local goods traffic not carried as carefully and expeditiously as cross-Channel traffic.

40203. When you talk about them being delivered in better time do you mean that they are delivered into the town or delivered at the railway station?—Delivered at the railway station.

40204. You do your own cartage?—Yes, largely.

40205. They do not cart?—They do not cart at Maryborough; they do at other stations.

40206. You think that they show a preference for or give a preference to cross-Channel goods?—I really would not go so far as to say that they give a preference to cross-Channel goods.

But preferential treatment not suggested.

Jan. 14, 1908.

Mr. P. A. Meehan, M.P., Representative of Queen's Co. County Council.

40207. I mean a preference in facilities?—What I do say is that, according to my own knowledge of getting cross-Channel goods, the goods I get, say from London, are more carefully handled and delivered in better time than goods sent locally, or than goods from Dublin or Cork.

40208. That is a curious statement to make; but you make it upon your own experience?—I make it upon my own experience.

40209. You cannot account for it?—I cannot.

40210. Do you mean to say that local goods are treated quite differently from cross-Channel goods?—I do not know; I do not like to give any explanation of it. I merely state what is within my own knowledge—that drapery goods that I get from London are delivered to me with the evidence of having been more carefully handled and in good time. It is not so with Irish manufactured goods. I will submit two instances. In last September a consignment of goods was ordered from Dublin to Abbeyleix. They were goods made in Dublin, and they were tossed about the line for eleven days before they were delivered to me at Abbeyleix.

Instances of serious delays in transit to Irish manufactured goods.

40211. Of course you complained about that?—My manager complained about it.

40212. What was the explanation?—There was no satisfactory explanation. As far as I remember it was that the goods were sent to some station down the line.

40213. In mistake?—In mistake.

40214. That might occur on the best regulated railway?—I quite admit that it might occur, but it is a strange coincidence that I never knew of a similar case of delay in connection with cross-Channel goods.

Allegation that business is impeded by insufficient wagon supply on the Gt. S. & W. and M. G. W. Railways.

40215. Now, give us the other instance?—The other instance is that of a consignment of Irish manufactured hats from Cork to Abbeyleix. It took five days for those hats to reach Abbeyleix, and you can get goods from London in three days. It is quite possible that there may be some explanation, but the gentleman to whom the hats were sent did not get any.

40216. Have you any other facts within your own knowledge that you wish to mention?—Yes. A large building contractor in Queen's County had to wait eight days before he could get wagons in which to remove his building plant. During those eight days he had to keep his foreman in charge of that building plant, and of course he had to pay him. Then a timber merchant—I should mention that this instance does not apply to the Great Southern but to another railway—wanted delivery of 200 tons of timber in March, 1907. From want of wagons he did not get delivery until 20th May. The same gentleman informed me that he has had to refuse several contracts for Irish timber solely on the ground that he could not get the railway company to guarantee delivery within the time specified in the contracts.

40217. That is home-grown timber?—Yes.

40218. Round timber, I suppose—trees?—Yes.

40219. *Mr. Acworth.*—Where was that instance?—That instance was on the Midland Great Western Railway.

Injury to home industries occasioned by the system of Continental through booking over Irish transit routes.

40220. *Chairman.*—Do you think that the development of home manufactures is handicapped or impeded in any way by the system of through booking?—In my opinion it is.

40221. Will you just explain what you mean by that? Take, as an example, bacon from Liverpool to Maryborough; What do you say about that?—In my opinion the development of home manufacture is handicapped and impeded by the system of through booking which foreign railways and canals have over Irish transit routes. I may instance the carriage on bacon from Liverpool to Maryborough. For under 10 cwt. the carriage is 18*s.* per ton; for over 10 cwt. it is 15*s.* per ton. But the carriage on bacon from Limerick to Maryborough, for small weights, which are the general consignments locally, run as high as 26*s.* 8*d.* per ton, and for large consignments, 15*s.* 3*d.* per ton. Pigs' heads, which are packed very loosely and do not require very careful handling, run as high as 23*s.* 4*d.* per ton, the rate from Liverpool being about one-half that amount. My point is that the carriage on bacon from Limerick to Maryborough, even for large consignments, is higher than it is from Liverpool to Maryborough, while for small consignments it is very considerably higher.

Comparison of bacon rates, Limerick and Liverpool to Maryborough.

Continuance of horse transit, as being cheaper and more expeditious than the railways to certain places.

40222. It is more than double?—Almost the entire products of the mills at Maryborough and of the brewery at Rathdowney are distributed by horse transit, even to towns where there is direct railway communication, showing, in my opinion, that the manufacturers find that carriage in this slow way is more satisfactory and cheaper than carriage by rail. Three large wholesale firms doing business in Queen's County employ the same means of transit to distribute their goods, although Mountmellick, which is the principal town for this class of business, has both railway and canal communication with other towns. The transit of goods from the main line to branch lines is unsatisfactory and subject to most inexcusable delays and exorbitant charges, sometimes in cases of urgency mainly arising out of delays of the carrying company. A trader may require a certain class of goods; he may know, by experience, that it will take a certain time to bring them to his station, and it may be necessary that he should get them by the swiftest possible means. I may instance the sending of a small consignment on a Friday from Maryborough to a branch line station forty miles distant. The sender was told that the goods would not be delivered before mid-day on the following Monday. It was necessary that the parcel should be sent, and it was sent by passenger train at a cost of 8*s.* 3*d.* for six stone weight over forty miles of railway. I consider that such a thing as that kills enterprise.

40223. *Mr. Sexton.*—That is £11 per ton?—Yes. Then I instance a consignment of twenty-four packages of tea from Dublin. One package of a particular description was required urgently.

40224. *Chairman.*—And that was sent by passenger train?—The merchant in Dublin was directed to send one package of about 70 pounds weight by passenger train. The rate charged was ¾*d.* per pound. The dealer asked for a refund on the ground that the charge was unreasonable, and pointed out that as large consignments of goods were coming to him daily by the same service it was not an unreasonable thing to ask that he should get this particular package at a reasonable rate. The result of the correspondence was a refusal to reduce the charge.

Lord Pirrie.—Was it the regular rate?

40225. *Chairman.*—That was the regular passenger rate, I suppose?—It may be, but my point is, when an extensive trader requires an article such as this he should not be held to such a rate. The trader applied for a refund, and the reply of the railway people was, "I am in receipt of your letter *re* charges on half-chest of tea. The regulations of the company will not permit of my making any refund under the circumstances." There was not a word of explanation more than that.

40226. I do not think there is much in that, Mr. Meehan. The package had to be sent for a certain reason by passenger train, and the passenger rate was charged. Your contention is that to a good customer they ought to charge the package at the ordinary goods rate?—My contention, whether right or wrong, is that for any customer it is the duty of any carrying company, in case of urgency such as that might be, to send the goods at a moderate rate. To make a charge of ¾*d.* per pound on a package of seventy pounds of tea I think was exorbitant, and, under the circumstances, inexcusable. I give that as an instance of what traders have to submit to. The best regulated commercial concern in the world cannot guard against requiring a certain article in a hurry and requiring it to be sent by the swiftest possible means, and I think the carrying company ought to recognise that and try to meet the trader. I may say that the railway charges in that instance swept away the total profit of the trader on the transaction.

40227. You are aware of the amalgamation of the Great Southern and the Waterford and Central Ireland Railways. Have goods rates been reduced since that amalgamation?—No.

40227A. They have not been reduced?—Prior to the amalgamation the railway rates at Maryborough were lower than they are at present. I would submit the following figures in proof of that statement. I will give the rates from Dublin to Maryborough. I may mention that from Dublin to Maryborough is on the direct main line. I will give the rates on the direct main line and the rates on the Waterford and Central Ireland Railway. Goods had to be carried by canal to Mountmellick and carted from the canal store about two miles across country to the railway station, loaded there, and brought by rail to Maryborough. For grain, from Dublin to Maryborough, on the main line, the Great Southern and Western ordinary rate was 7*s.* 7*d.*; special rate, 5*s.* 9*d.*; Waterford and Central Ireland Railway ordinary rate, 6*s.* 7*d.*; special

Mr. P. A. Meehan, M.P., Representative of Queen's Co. County Council.

rate, 5*s.* 11*d.* For flour, Great Southern and Western Railway, 7*s.* 7*d.*; Waterford and Central Ireland Railway, 6*s.* 7*d.* Sugar, Great Southern and Western Railway, 11*s.*; Waterford and Central Ireland Railway, 9*s.* 11*d.* Tea, Great Southern and Western Railway, 16*s.* 8*d.*; Waterford and Central Ireland Railway, 15*s.* Machinery, Great Southern and Western Railway, 20*s.* 6*d.*; Waterford and Central Ireland Railway, 12*s.* 1*d.* Bacon, Great Southern and Western Railway, 11*s.* 11*d.*; Waterford and Central Ireland Railway, 10*s.* 9*d.* Potatoes, Great Southern and Western Railway ordinary rate, 7*s.* 7*d.*; special rate, 5*s.* 4*d*; Waterford and Central Ireland Railway, ordinary rate, 6*s.* 10*d.*; special rate, 5*s.*

40228. Take groceries generally?—Groceries, Great Southern and Western Railway, 16*s.* 8*d.*; Waterford and Central Ireland Railway, 15*s.* Since the amalgamation these rates have been discontinued and the other rates charged.

40229. *Mr. Acworth.*—Which rates have been charged?—The rates charged at present are those that I have submitted as the Great Southern and Western Railway rates.

40230. The Great Southern and Western Railway have continued to charge their old rates?—Certainly.

40231. The rates which had formerly existed, and the Waterford and Central Ireland Railway rates were discontinued?—Yes.

40232. *Chairman.*—So that anybody with the traffic has to pay this additional rate?—Certainly. I say that prior to the amalgamation the traders of the district and the people generally had the advantage of this competitive rate, and the rate by the Waterford and Central Ireland Railway was lower that that on the direct main line of railway.

40233. And you have given instances showing that?—I have submitted these as instances.

40234. *Lord Pirrie.*—Do you mean that whereas for machinery the rate was formerly 12*s.* 1*d.* you now have to pay 20*s.* 6*d.*?—Yes.

40235. *Colonel Hutcheson Poë.*—At that time the traffic came by canal or river to Mountmellick?—Yes; by canal.

40236. And that involved much slower transit?—Yes; that is so.

40237. And the traffic that formerly went by canal or river to Mountmellick now comes by railway entirely?—Yes.

40238. *Mr. Acworth.*—It came from Dublin to Mountmellick by canal?—Yes.

40239. Is it a branch of the Grand Canal?—There is a branch of the Grand Canal from Dublin to Mountmellick.

40240. The main branch of the canal seems to come through Monasterevan?—It does, but there is a branch to Mountmellick.

40241. *Chairman.*—Prior to amalgamation you could get machinery from Dublin to Maryborough by the canal and the Waterford and Central Ireland Railway at 12*s.* 1*d.* per ton?—Yes.

40242. And now you have to pay 20*s.* 6*d.* by the Great Southern and Western Railway, or a special rate of 17*s.* 6*d.*?—Yes.

40243. And the other figures are treated in the same way?—Yes.

40244. *Mr. Sexton.*—The Great Southern and Western Railway rates before the amalgamation were the same as they are now?—Yes.

40245. But before the amalgamation you had another and cheaper independent route, which you no longer have?—That is so. I have another instance in connection with the advantage to the trading public and the people generally of even the limited competition of the canal service. I may mention that the canal comes to the town of Carlow, which is 56 miles from Dublin. The distance from Dublin to Maryborough, which is on the main line, is 50 miles. The carriage of goods from Dublin to Carlow is less than the carriage to Maryborough, although the distance is six miles longer. To Carlow the carriage on flour and meal is 5*s.* 9*d.*; to Maryborough it is 7*s.* 7*d.* Oil, to Carlow, 10*s.* 6*d.*; to Maryborough, 11*s.* 11*d.* Sugar, to Carlow, 10*s.* 6*d.*; to Maryborough, 11*s.* Manure, to Carlow, 6*s.* 9*d.*; to Maryborough, 6*s.* 7*d.* There is a difference of twopence in favour of Maryborough in that instance.

40246. *Chairman.*—Now, take machinery?—Machinery, to Carlow, 12*s.* 8*d.*; to Maryborough, 20*s.* 6*d.*, or a special rate of 17*s.* 6*d.*

40247. Take eggs?—Eggs, to Carlow, 17*s.* 6*d.*; to Maryborough, 16*s.* 8*d.*

40248. There it is more to Carlow than to Maryborough?—Yes. There are two or three instances in which the carriage is more to Carlow, but in every other instance it is less than to Maryborough, although there is an additional six miles to Carlow.

40249. *Lord Pirrie.*—Is there any disadvantage at all so far as the canal is concerned?—For the egg traffic rapid transit is necessary.

Comparison of present rates, showing effect of canal competition:—Dublin to Carlow and Maryborough.

40250. *Chairman.*—Take butter?—Butter, to Carlow, 11*s.* 8*d.*; from Maryborough to Kingsbridge, 11*s.* 11*d.*; to North Wall, 13*s.* 5*d.* In further proof of that particular point I instance the carriage on goods from Dublin to Kildare, which is 30¼ miles from Kingsbridge, as compared with the rates from Dublin to Monasterevan, 36¼ miles. The rate on flour and meal to Kildare is 5*s.* 6*d.*; to Monasterevan, where there is canal competition, it is 4*s.* 6*d.*, a difference of 1*s.* per ton. Oil, to Kildare, 8*s.* 7*d.*; to Monasterevan, 7*s.* 6*d.* Sugar, to Kildare 7*s.* 10*d.*; to Monasterevan, 7*s.* 6*d.* Bacon, to Kildare, 8*s.* 7*d.*; to Monasterevan, 9*s.* 8*d.*

Dublin to Kildare and Monasterevan.

40251. There it is more?—Yes, there are a few instances where it is more.

Advantage of canal competition in cheapening rates.

40252. Take manure?—Manure, to Kildare, 5*s.*; to Monasterevan, 4*s.* 6*d.* I mention these to prove that where there is even the limited competition of the canal, traders and the public generally have the advantage of cheaper rates and a more satisfactory service.

40253. Now, one word on the foreign freights on bacon. Is this information with regard to Canadian bacon within your own knowledge?—I do not trade in that particular commodity, but in looking into the matter I sought for information where it was to be had.

Rates for agricultural produce (foreign) to London:

40254. Canadian bacon sent from the port of embarkation in Canada to London direct by steamer; have you the rate for that? Of course, that is all the way by sea. The rate from the Canadian port to London, all the way by sea, according to your figure, is 24*s.* 3*d.* per ton?—That is correct. I have the information from one of the principal importers in London. I went to him specially to get the figures.

from Esbjerg, Copenhagen (Denmark), Caen (France); compared with rates from Limerick, Cork, Waterford, Dublin, etc.

40255. Now, take it from the port of Esbjerg in Denmark to London?—20*s.* 3*d.* per ton, which includes delivery in London within a radius of two miles from the goods station.

40256. Now, eggs from Copenhagen?—30*s.* per ton.

40257. To London?—Yes.

40258. Eggs from Esbjerg?—36*s.* per ton, including all charges; that is owner's risk rate. 41*s.* per ton ordinary rate. Butter from Denmark is 27*s.* 9*d.* per ton.

40259. That is from the port in Denmark?—Yes. It is generally from the port of Esbjerg. From Caen, in France, it is 20*s.* per ton.

40260. *Mr. Acworth.*—Do you know if that is by sea right into London, or whether it is *via* Newhaven?—I do not know.

40261. *Chairman.*—It must be *via* Newhaven if that is a recent rate, because there are no direct steamers now. To compare with these, just give us two or three of your local rates?—Home freights on bacon, Limerick to London, 34*s.* 2*d.* per ton, with a rebate of 4*s.* if goods are carted to the rail by the shippers.

40262. 4*s.* is allowed for cartage?—There is a rebate by the carrying company of 4*s.* per ton if the goods are carted to the rail by the shippers.

40263. That must be cartage in Limerick?—That would be cartage from the place where it was to be collected to the station at Limerick. From Dublin to London the freight is 34*s.* 2*d.*, with a rebate of 1*s.* 6*d.* per ton. Waterford to London, 28*s.* 4*d.* Cork to London, 33*s.* 4*d.* *via* Holyhead, and 30*s.* *via* Rosslare.

40264. Now, take eggs and butter?—Home freights on butter and eggs. From Limerick to London, butter, 40*s.*; eggs, 55*s.* owner's risk, 63*s.* 4*d.* company's risk. Emly to London, butter, 40*s.*; eggs, 55*s.* owner's risk; 63*s.* 4*d.* company's risk. Waterford to London, butter, 28*s.* 4*d.*; eggs, 42*s.* 6*d.* I have given these towns because they are the principal butter-producing places in Ireland, and I instance the figures for comparison between the rates on foreign produce coming into the home market and the rates charged in Ireland.

Jan. 14, 1908.

Mr. P. A. Meehan M P., Representative of Queen's Co. County Council.

40265. I think you wanted to bring under our notice your views with reference to the transit of cattle?—Yes.

40266. The cattle trade is an important factor in this country?—Yes.

40267. Of course you are acquainted with the dealers: you are brought into connection with them frequently as a member of Parliament no doubt?—Yes.

Importance of the cattle traffic.

40268. You have heard of their complaints?—Yes.

40269. What do they complain of principally?—Farmers and dealers complain that the rates are too high. They are as high as when the cattle trade was at its best. They complain that the cattle are injured in transit and deteriorated in value on account of the length of time they are kept in the trucks and of the shunting that takes place at different places.

Complaints as to slow transit and high rates.

40270. I suppose that wont be a general complaint: that is only a complaint of some cases?—It is a complaint that is made generally, not only by farmers who send their fat cattle to market, but also by persons engaged in the cattle trade.

Cattle train service, Maryborough and Dublin.

40271. Would you give us an instance of what you mean by delay?—I have consulted some of the principal cattle dealers in Queen's County in connection with this subject, and also some of the farmers who are engaged in the cattle-rearing business. They complain that cattle booked at Maryborough at 6 o'clock in the evening are not delivered in Dublin before 12.30 or 1 o'clock next day. They are kept in the trucks all that time shunting in and out at the different stations before they are taken on to the delivery banks at Cabra.

Extension of through booking facilities required.

40272. Is that an ordinary transit of a night and half a day going from Maryborough to Dublin?—So I am informed. Dealers also complain of delay of cattle going to local fairs at which it is intended to sell them. I know that to be the fact, and I know that some of the dealers have taken legal action against the railway company for damages arising out of the loss of fairs. In some cases they have succeeded in getting damages. In a good many they have failed. They also complain that cattle from Kilkenny fair, which is a very important fair, when sent by Maryborough, have to be re-booked at Maryborough.

40273. Instead of being through booked?—Yes, to Dublin or whatever market they are booked for.

Delay in the despatch of cattle from Kilkenny fairs.

40274. In other words, what is said is that the cattle industry, being a very important one in this country, every facility should be given for through booking so as to avoid delay?—Certainly. There is delay in sending cattle and sheep from Kilkenny *via* Maryborough. That would mean partly to the Midlands, Portarlington, and on to Athlone, or by the main line to Cork to the South of Ireland. They complain that stock sent *via* Maryborough are kept waiting until all the stock for Waterford are loaded and despatched, and dealers in the direction of the Maryborough district find a reluctance on behalf of sellers to sell to them on account of these delays. They state that they have sometimes been kept from 7 o'clock in the morning to 12 or 1 o'clock in the afternoon before they can get their cattle loaded. Both buyers and sellers are inconvenienced.

40275. And the cattle are injured and deteriorated?—I would not say injured, but it means a substantial loss to the dealers. They have to pay men, and keep them to mind the cattle until they are loaded.

Poultry industry injured by excessive transit cost and delays.

40276. We have had considerable evidence as to the importance of the poultry traffic in this country. I suppose that there is an enormous amount of poultry reared in this country?—Breeding and rearing poultry is an extensive and important industry in Queen's County. Dealers complain of the excessive carriage and of delays in transit, frequently causing enormous loss.

Complaint as to excessive rate for dead poultry, Maryborough to Leicester

40277. They have no complaint about the rates?—The high rates and the loss arising out of delays have to be taken into account by dealers in fixing a price in the markets of the county. The consequence is that the prices are not remunerative to the people who breed and rear the fowl. An instance recently came under my notice. A trader largely engaged in the poultry trade in Leicester wrote to a gentleman in Maryborough engaged in the trade, asking to be sent a sample of poultry. The sample consignment was sent of a dozen birds, and they cost 8*d*. per bird from Maryborough to Leicester.

40278. *Mr. Acworth.*—Chickens?—Geese.

40279. *Chairman.*—Dead or alive?—Dead. The Queen's County trader in sending his sample quoted his price. The Leicester dealer when he received the birds, and found the amount of carriage that would be on them, refused to place his orders with the Queen's County dealer, and wrote and told him he could buy foreign birds much cheaper, and the lower price was brought about by the small amount of carriage that was on the foreign birds. Dealers complain of poultry sent to London, say on Saturday, not being delivered in London until the following Wednesday. Numerous instances have been quoted to me by dealers in Queen's County of their consignments having been thus delayed, and the inspectors in the London markets have frequently condemned the fowl as being unfit to be put on the market, and that arose through the delay that occurred on the railway. They also inform me that such delays are frequent. One extensive dealer in Queen's County informed me, and I know that the information is perfectly correct, that his business was ruined in consequence of losses arising out of these delays; and that the dealers also complain of large and extensive pillage and the difficulty of getting any compensation.

40280. I suppose they are carried at owner's risk?—They are carried at owner's risk, and they say that the reason they send them at owner's risk rate is that the carriage by company's risk rate would be almost prohibitive.

40281. There is a great difference between the two. Now, one general question. You said in the earlier part of your evidence that you had read the evidence given before this Commission by Mr. Field?—Yes.

40282. And that you agreed absolutely with his views as to the nationalisation of the railways in this country?—Yes.

40283. That covers everything, I think. I don't think I need ask you any further questions?—There was just one point in connection with the transit of Irish goods, say to the London market, and the transit of Danish butter. Butter is an article produced very extensively in Ireland, and I find that the rate on Danish butter from Copenhagen to Dublin is 35*s*. per ton. If you take the rates to the London market from these ports of Ireland you will find it is almost double that.

40284. How does it come from Copenhagen to Dublin?—This is the rate from Copenhagen *via* Leith to Dublin, 35*s*. per ton.

40285. It comes across Scotland and then from Glasgow here?—Yes. Take the rate from any butter district in Ireland. Take the County Limerick. The rate on butter per ton from Limerick to London is 40*s*.; from Lismore, in the County Waterford, 55*s*.; from Fermoy, *via* Dublin, 40*s*.; Fermoy, *via* the city of Cork Steampacket Company, 36*s*. 8*d*.; Mallow, *via* Dublin, 58*s*. 4*d*.

40286. Are the conditions the same with regard to quantities? Are the Danish rates applicable to large or small consignments?—They are per ton in each case; and I point out the enormous difference between 35*s*., 58*s*. 4*d*., 39*s*. 2*d*., 36*s*. 8*d*., for this butter produced in Ireland to bring it to market.

Examined by Mr. Sexton.

40287. You represent your county in Parliament and also in the County Council as its chairman?—Yes.

40288. You speak what in your judgment is the unanimous opinion of your County Council?—Yes.

40289. That County Council is in accord with the decision of the General Council?—Yes.

40290. Are you convinced that the various recommendations which you have submitted here to-day represent the preponderating opinion of this country?—I believe so.

40291. That is practically the universal opinion?—It is almost the unanimous opinion of the country. It is not confined to any political party in my country in my opinion; certainly not in my county.

40292. A word about guarantees. You mentioned the Sallins and Tullow line, now a branch of the Great Southern Railway, and you stated that the ratepayers were given to understand that the branch line should be credited with the profit of the main line between Sallins and Dublin upon traffic created by the branch line?—That was the condition on which the guarantee was given or at least on which they consented to give the guarantee.

40293. That was the consideration or understanding on which the guaranteeing ratepayers entered into the guarantee?—Yes.

40294. The result has been, you tell us, that the branch line is credited only with the actual receipts upon traffic over its own mileage?—Yes; that is so.

40295. You consider it unfair and inequitable that although the branch line has brought, apart from its own mileage, lucrative traffic to the main line, the levy upon the guaranteeing ratepayers should be measured only by the actual receipts of the branch line itself?—I consider that it is most unjust.

40296. Do you say that in such a case, where an existing company undertakes to work a guaranteed line, at least some proportion of the profit brought to the main line by reason of the new branch, as well as the strict receipts of the branch itself, should be credited as against the liability of the guaranteeing area?—Certainly. I would say that the entire of the profit of the branch line from Tullow to Sallins should be credited to the working of the line, and a proportion of the traffic arising directly from the branch line and going to the main line should be credited to the branch line.

40297. That this principle should be applied in future cases of this kind?—Yes.

40298. Looking to the number of these additional lines required, and the great necessary expenditure, do you consider it is requisite to have an Irish authority, a central authority, which would consider this transit question as a whole, and deal with proposals of this kind in the order of their public merit and urgency?—Certainly. I believe there is no possible satisfactory solution for this present difficulty except the vesting of the railways and canals in an Irish authority.

40299. Even if there were no gift and no grant from what is called the Imperial Exchequer to Ireland have you any doubt that the economies arising from the application of public credit to the purchase of these lines and from single working would provide money enough, not only to make a full experiment in the reduction of rates and fares, but also to provide from year to year the interest necessary for the capital sum required for these additional lines?—In my opinion there would be sufficient money for the purpose. At the same time I would not for one moment recede from the position of insisting upon restitution being made to Ireland for the millions of overtaxation that have been taken out of the country.

40300. Certainly not: I quite understand that. But in an inquiry of this kind we consider all the contingencies with a view to showing that the reform of the railways can be effected, whether there is a gift or a grant or not, by the other alternative—I mean that if a gift or a grant is refused we have to consider whether there is any other mode of bringing the matter to an issue?—I believe that that is another mode as you have put it to me that will bring it to a satisfactory solution, as it will bring sufficient money for the development of the resources of the country and would mean increased traffic.

40301. In the Queen's County, together with the ordinary resources of crops and the raising of cattle, you have still some industries remaining?—We have a few.

40302. A few flour mills and maltings, a brewery, a couple of little textile factories, and a few stone quarries?—Yes.

40303. And more valuable and greater industries have disappeared?—Yes.

40304. Coal mining, the woollen industry, potteries and tanneries, have all disappeared?—Yes.

40305. I ask you to contrast the fate of the linen and the woollen industries in Ireland. The British Parliament by legislation extinguished the Irish woollen industry?—That is so.

40306. The Irish Parliament in the brief period of its power fostered that industry, and raised it to a thriving condition?—Undoubtedly.

40307. The British Parliament, from the date of the Union, frowned upon and neglected that industry?—Undoubtedly.

40308. It has now practically ceased to exist, or exists in a very limited form?—It has ceased in Queen's County at all events, with the one exception of the little industry at Ballinakill.

40309. It has no considerable organised existence in this country?—It has not.

40310. On the other hand, the British Parliament, for reasons of its own, fostered the linen trade?—It did.

40311. After the date of the Union it turned its back on the woollen trade, and gave bounties to the linen trade until it was in an independent condition?—It did.

40312. And the linen trade flourishes to-day?—Yes.

40313. Do you find an instructive contrast between the industry struck down by Parliament and the industry favoured by it—a proof of what Parliaments can do? Do you happen to know what we are importing wool and woollen goods to the extent of £1,500,000 per annum into Ireland?—I was aware of that fact.

40314. Under fair conditions all that money might have been applied to finding employment for Irish workers?—Every shilling of it.

40315. You have lost all your tanneries?—Yes.

40316. How many of them had you in the county?—I think there was one in every important town. There were two very important ones in Mountmellick and Maryborough, and I believe others in different parts of the country of a more limited size.

40317. My friend the Chairman seemed surprised that you have now no tanneries, but is it not the fact that we import into Ireland every year half a million sterling worth of leather?—That is so.

40318. And boots and shoes worn by the Irish people to the value of £2,000,000 a year are imported from across the Channel?—That is so.

40319. Could there be a more striking instance of the want of organised industries in the country?—I don't think in any country in the wide world a similar instance could be quoted of the deliberate destruction of the manufacturing industry of the country by the Government.

40320. The thing has been so scientifically handled, indirectly but very effectually, that actually the hosiery and wearing apparel of this country to the value of £5,000,000 a year are now brought across the Channel?—That is a fact. In fact everything in daily use, what the people wear, their boots and hats and clothes, knives, forks, delph, everything comes from across the Channel.

40321. Can any country whatever live and thrive under such conditions?—It is not possible for any country, in my opinion, to be prosperous where such a condition of things exists.

40322. Selling its more valuable food and sending out the money thus gained for inferior food and for the commonest articles of wearing apparel and household use?—That is so.

40323. The case of the Queen's County as recited briefly to-day at the outset of your evidence is the common case of Irish counties—tillage halved since '48?—Yes, and decreasing at the present day.

40324. Pasture now half the total area, and the population reduced 50 per cent. in 50 years?—Yes.

40325. Do you know that the population of Great Britain has doubled in the same time?—Yes, and it would have doubled in Ireland if the people of Ireland had the management and control of their own affairs and the destiny of their own country.

40326. If the Irish Parliament had not been bribed and bludgeoned out of existence I suppose the population might now bear something more like the same proportion to Great Britain that it did at the time of the Union—one to two?—In my opinion it would.

40327. Such a contrast in what is called the United Kingdom after 100 years of the Union, population halved in one country and doubled in the other, arrests attention and challenges inquiry, even in the matter referred to this Commission, does it not?—In my opinion it does.

40328. The depopulation of this country is closely connected with the critical position of the railways?—In my opinion it is.

40329. In proportion to the decline of the population there is a restriction in the sources from which the passenger traffic is drawn?—Certainly.

40330. In proportion as the people diminish the demand for goods declines?—Undoubtedly.

40331. Let us see what caused the depopulation of Ireland; did it spring in the first instance out of the great famine?—Yes.

40332. The great emigration sprang from the famine?—Yes.

40333. Then, too, came the repeal of the Corn Laws, in the interests of the British consumer directly, and indirectly of the British manufacturer. What was the effect of the repeal of the Corn Laws on Ireland? Did it substitute pasture for tillage?—

Disastrous effect of British fiscal policy on Irish industries since the Union.

Annual value of woollen goods, leather, and boots and shoes imported.

Also of hosiery and wearing apparel.

Depopulation of the country and its effect on the railways.

Contrast of the populations of Great Britain and Ireland after a century of union.

Causes of the depopulation of Ireland.

Jan. 14, 1908.

Mr. P. A. Meehan, M.P. Representative of Queen's Co. County Council.

The effect was that it was for the time being destructive of tillage, and every great landlord in Ireland swept his tenants off his estates and consolidated his land into great grazing tracts, and the people, who remained in Ireland, were driven to the cutaway bog and the bit of mountain side to try to make land out of the mountain heather, and the good land was all locked up into bullock runs and sheep walks, and so it remains to this day.

Effect of the repeal of the Corn Laws on Irish tillage.

40334. That economic measure, called for by the convenience of the British manufacturer and workingman, led immediately to the substitution of grazing cattle for the labour of men and tillage, and very soon to the immense consolidation of holdings and the dispersion of the people?—That is so. It gave cheap food to the English artisan, but it starved and hunted from their native land the people of Ireland.

40335. Then came the railways?—Yes.

Effect of high export rates on Irish agricultural produce in conjunction with Continental rates to Great Britain.

40336. And they have instituted and continued to the present time a system of high export rates from Ireland which, taken in conjunction with the facilities and rates allowed to the importer of food products to Great Britain from Asia, Africa, Australasia, Europe, and every division of the globe, have left Ireland in the background even in the markets of Britain, her nearest neighbour?—Yes.

40337. The effect of those high export rates as contrasted with the low rates for transit has been to limit the agricultural and pastoral output of Ireland?—Undoubtedly.

40338. The railways as commercial undertakings had a certain line to pursue, but whatever may be the justification or explanation of the policy of the railways, the low import rates from abroad and the high export rates from Ireland continue to complete the effect of the famine and of the repeal of the Corn Laws?—In my opinion they do.

Difficulty in reviving past industries.

40339. Those evils might have been mitigated if there had been any industrial resources in our towns? Why are there no industrial resources in our towns? Why are our towns mere distributing points without industrial energy?—If you take the towns in the Queen's County, after the destruction of the woollen industry the artisans emigrated. There was nothing for the population to turn to but agricultural pursuits. They were limited in their sources of employment by the creation of grazing ranches. Agricultural labourers living in the neighbourhood of the town had merely a few months employment during the year. Manufacturing industry has been so long out of the country that the people now have lost all technical knowledge in connection with it. Hence arises the difficulty of establishing manufacturing industries in the towns.

40340. In any ordinary well-organised country the overplus of the agricultural population, the natural overplus from one generation to another, of the agricultural population finds occupation in the industries of the towns?—Certainly.

40341. The imports into Ireland, which are £55,000,000, include £27,000,000 of food products and other goods that could be produced in Ireland. That explains the absence of organised industry in the Irish towns?—Undoubtedly.

The analogy of former trade and navigation laws and existing railway rates as affecting Irish industries.

40342. A great deal is said about trade and navigation laws passed against Ireland in former times. The main object of such trade and navigation laws enacted against Ireland was to prevent Ireland from exporting her goods to England, the Colonies, or foreign countries. Is not the same effect produced in a measure, at the present day by the very great facilities, the very low rates, given for food imports from foreign countries into Great Britain?—The same object is attained no doubt.

40343. Then the effect of the high inland rates in Ireland, the rates which the Irish manufacturer has to pay for the movement of his products, as contrasted with the low rates allowed to the importer, seems to be worse than that the trade and navigation laws, because these were introduced to prevent us only from exporting our goods, while this system, carried to such perfection by the railways, prevents us even from selling our goods at home. Does not that seem to go further in an indirect way than the trade and navigation laws did directly?—Undoubtedly.

A complete change in the railway and canal systems and improvement in the modes of transit necessary.

40344. What is the prospect?—If the agricultural output continues to diminish, and if no industries are started in the towns, the country must continue to decline, and emigration must persist?—Yes.

40345. What, then, is the cure?—Is it a reversal of the policy? Would you say that the same principle must be taken and the same means must be applied to place the Irish exporter upon an equal footing with the foreign importer into Great Britain, and to place the Irish manufacturer upon an even footing, so far as transit is concerned, with the producer of imported goods in whatever country he may be?—If there is any hope for the revival of industries in Ireland, or ever bringing about the prosperity of the country, there must be a complete change in the railway and canal systems of the country, and the modes of transit must be improved in the direction in which you suggest.

40346. If the export rates from Ireland were placed upon a parity with the import rates from foreign countries into England for proportionate service, have you any doubt that the Irish agricultural output, which is capable of very great expansion, would very much develop?—Enormously develop, in my opinion.

40347. If the inland rates were placed on an equal footing with the low import rates into Ireland, have you any doubt that there would be a, perhaps, slow but a certain and increasing, development of industries in the Irish towns?—Undoubtedly.

40348. You support as the only effective solution that recommended by the General Council?—I approve of it in its entirety. In my opinion it is the only possible satisfactory solution of the difficulties of the case.

40349. However the finance may be arranged—and the finance might be arranged in any one of two or three different ways—either by a gift in restitution, which would settle the question at once, or by the use of Imperial credit, which would implement the loan and capital, or even by allowing Ireland to borrow for herself if nothing else were done—in any of these ways it is possible to deal with the finance of the reform. Apart from the question as to which of these should be actually carried into effect, I understand you to say that the essential principles—the principles that cannot be dispensed with—are that the lines shall become the property of Ireland, and that they shall be worked by an Irish elective authority?—That is my opinion.

Examined by Mr. Acworth.

40350. If a man manufactures a pair of boots, say, in Maryborough, and sells them in England, the Irish railway gets the carriage of the boots to Dublin?—Yes, if they are sent by rail.

40351. Say they are sent by rail. Leave out the canal. If an Englishman makes boots in Leicester, and sends them to Maryborough to be sold, the Irish railway get the carriage from Dublin to Maryborough?—I presume they do.

40352. On the other hand, if the workman is employed in Leicester he employs the English railways to bring him food, clothing, and everything else he wants?—Yes.

40353. If he lives in Maryborough he employs the Irish railways to bring him food and everything else he wants?—Yes.

40354. It would look therefore as if it was the interest of the Irish railways to encourage the manufacture of boots in Maryborough rather than in Leicester?—It would strike you immediately that that is the interest of the railway company, but that is the very thing they don't do.

40355. I want you to tell me why you think they fly in the face of their own obvious interest?—I cannot explain why they do, but I think the fact is established that the carriage on foreign goods through Ireland is cheaper and the handling is more favourable by the railway company than is the case with what is made at home. I have given you to-day in my evidence two instances to prove that fact.

40356. Then, may I take it your position is this—that you cannot understand why they do it; you agree with me in thinking that it is against their interests to do it, but you think the facts prove that they do it?—They do it. I think one of the reasons why they do it is this. Irish railways—some of them at all events—are controlled very much by English opinion, or the opinion of English railway companies. I don't know to what extent they may be bound to them, but I believe that the policy of the management of Irish railway companies is controlled to a great extent by the management of Eng-

lish railway companies, and they are not managed in the interests of this country.

40357. That is a good reason of course, as far as it goes?—In proof of that I may mention that frequently we see occurring in this country the scandal of an Englishman or Scotchman being appointed manager of an Irish railway company. Some of the principal officials that man the Irish railways are Englishmen or Scotchmen. I don't object to Englishmen or Scotchmen at all; but I say that if the railways of this country were managed in the interests of the country they could find Irish quite capable and competent to do the business of the Irish railways, and not bring over strangers.

40358. Would you object to Irishmen being taken over to good positions in England?—I would if I were an Englishman and if my own countrymen were there, and capable of doing the same kind of work. What I object to in connection with that is this, that while the subordinate positions, porters and clerks, at a salary of £50 or £60 a year, are given to Irishmen, the important appointments with from £500 to £1,000 a year are given to Englishmen and Scotchmen. Consequently there may be English and Scotch influences dictating the policy of Irish railways and not the advantage of this country.

40359. You told Mr. Sexton that the repeal of the Corn Laws led immediately to the substitution of grazing for tillage. I am afraid I don't know Irish economic history as well as I ought to, but you will agree with me that it certainly did not have that effect in England for at least twenty or twenty-five years?—I am afraid I cannot give information on that point. I know that the effect of the Corn Laws was the destruction of tillage in Ireland at the time.

40359A. It is rather strange to me, because it clearly did not have that effect in England at the time. It has had that effect in later years of course; but it did not have that effect in England for a generation. The price of corn did not drop.

40360. *Mr. Sexton.*—In Ireland the great clearances came immediately after the Corn Laws repeal.

40360A. *Mr. Acworth.*—With regard to the Tullow and Sallins line, as I understand, what happened was this. The people who were negotiating made a bargain, as they believed that they were to get a rebate on all traffic to Dublin, which would have been a very equitable bargain, as it seems to me. When it came to the written document being drawn up they did not get that, but something smaller?—That is so.

40361. They never apparently took steps to protect themselves, making sure that the written document was to the same effect as the original, perhaps verbal, bargain?—It may be open to the suspicion that the business arrangements might have been done loosely.

40362. You and I both know the extraordinary care that is taken when bills are going through the Houses of Parliament. It could not have slipped in without a great deal of notice?—I don't think that that particular point was dealt with in the bill at all. The bill was simply to get authority to make the railway over that particular district. It could not have gone into the question of guarantee at all.

40363. Before the Act of 1883 you could not have levied a rate on a locality except by an Act of Parliament?—Yes; under the Grand Jury Laws the local authority could give the grant. It was in the hands of the local authority under the Grand Jury Act.

Mr. Croker Barrington, Solicitor.—It was I obtained this guarantee for the Great Southern Company. It was got by an Act of Parliament, in which the guarantee was embodied, and I had to explain it to each Board of Guardians in the neighbourhood and the Committee of the Grand Jury, and none of these bodies ever made any suggestion, nor did I make any suggestion, that there would be anything in the way of a rebate for traffic coming to the main line. That was not mentioned at all.

Witness.—I cannot dispute this gentleman's personal knowledge of the transaction, but the people of the district have told me that the guarantee was given on the understanding by the general body of the people that they were to be credited with a certain proportion of the rate over the whole line.

Mr. Croker Barrington, Solicitor.—That suggestion at all was never mentioned between the parties who struck the bargain which was carried through Parliament. Crediting receipts of the main line is unusual in Ireland. I never heard of it being done.

Chairman.—It is very common in England.

Lord Pirrie.—What do you mean by saying it is not usual?

Mr. Croker Barrington, Solicitor.—It is not usual to credit receipts coming to the main line to the benefit of the guaranteeing area.

Lord Pirrie.—I have never known any that was not.

Mr. Acworth.—The first instance I ever knew coming before Parliament was in the West Highlands Railway in 1889.

Tullow and Sallins line. Working agreement with G.S. & W. Company.

Chairman.—What Mr. Meehan says is that people were under the impression, and he says whether they were under the impression or not, he thinks that in justice this little line should be credited with a portion of the benefit that the main line gets out of the traffic.

Mr. Croker Barrington, Solicitor.—If they had made such a bargain we might have asked 4½ instead of 4 per cent., or £60,000 instead of £50,000.

40364. *Chairman.*—In England, where these little lines are made, in several cases within my own knowledge the little line is credited with from 5 to 10 per cent. on the through traffic that originates or terminates on the little line. That is what you mean?—(*Witness*).—Yes.

Lord Pirrie.—I know that the same thing took place about several lines.

Conditions under which the baronial guarantee was given.

40365. *Mr. Acworth.*—There is no question but that it is quite common within the last fifteen years. When you speak of Irish manufactures being prohibited, you don't mean that they were prohibited while in Ireland, but that there was a prohibition against these manufactures being imported into England?—All the tendency of the laws that were passed was the destruction of the Irish manufactures.

The effect of British fiscal policy on Irish industries.

40366. I won't in the least deny that. I wish to get the facts. There was no prohibition of manufactures for Irish consumption?—The Acts of Parliament may not have used these very words, but they were prevented from exporting the manufactures to the Colonies or to any foreign country except through England.

40367. That, of course, was before the Act of Union?—Yes.

40368. There were precisely similar restrictions on Scotland exporting to the English Colonies before the Scotch Act of Union?—I cannot speak for Scotland.

40369. Take that from me. Since the union of Scotland and Ireland respectively there have been no such restrictions?—There is an old saying in this country it is too late to lock the stable door when the horse is stolen. Our industries were destroyed, and when the road was open to revive them our artisans were gone and our capital was robbed.

40370. Don't take me as arguing that everything which was done was right. I am only trying to get the facts accurately on the notes, if I can. There were regulations of the Irish Parliament prohibiting English manufactures being imported into Ireland, I believe?—No.

Irish industrial progress under Grattan's Parliament.

40371. Between 1780 and 1800?—The only time the Irish Parliament had liberty was under Grattan's Parliament, and there was no country in the world made such strides in manufacturing and agricultural industry as Ireland did during that short time.

40372. I am not denying that for an instant, but they did exercise their liberty, rightly, I suppose, of restricting English imports into Ireland?—I cannot answer that question.

40373. Now let me come to a different question. I would not in the least deny that what has happened in reference to fiscal policy has had some effect. But take the question of tanneries, for example—I daresay you are aware that tanneries have largely died out in English country districts. The big town tanneries, with their large supplies of leather close at hand, swallow up the little ones?—I am not aware of that fact, but it may be so.

40374. I daresay you know that in the 18th century there was a very considerable iron industry within thirty or forty miles of London, which was afterwards killed by the great industries of the North.

Chairman.—The ore was exhausted.

40375. *Mr. Acworth.*—No, it was not exhausted; but they could not smelt it at a profit against the competition of the big industries?—That is right.

40376. If a place cannot be worked at a profit it is a mistake to work it?—Yes.

40377. The question is whether your iron ore may not be like the iron ore in Surrey—that it cannot be worked at a profit?—It was worked at a profit.

Jan. 14, 1908.

Mr P. A. Meehan, M.P., Representative of Queen's Co. County Council.

40378. So was the Surrey iron ore 100 years ago, when carriage was more important. Take another instance—the worsted industry in Norfolk. It is dead there?—It simply changed to another part of the country.

Decline of certain English manufactures.

40379. Because other parts of the country have advantages?—It might have been more profitable to work them where they are at present, but our complaint is that our industries were taken away out of the country altogether.

40380. Does not that tend to show that it need not be legislation entirely that is responsible for the change?—Yes, but it is proved legislation killed Irish industry.

40381. There being no legislation against Surrey iron ore or Norfolk woollens, they have gone under?—Legislation would not affect the transfer of an industry from one part of the country to another; but what we complain of, and are in a position to prove, is that legislation has killed our industries.

Cause of the stoppage of the Dysart iron ore industry.

40382. What I suggest is that while it may possibly have helped there may be other causes more important?—I know what killed the iron ore industry at Dysart was the prohibition by the landowner of working the ore further.

Complaint as to Maryborough Station accommodation.

40383. You referred at some length to the insufficiency of plant and staff at Maryborough Station and the shortage of rolling stock—I suppose you would not have mentioned these if Maryborough had been exceptional?—I would not.

40384. You mentioned it as a general complaint?—I think that possibly you misunderstand me. I said that the facilities at Maryborough both for passengers and goods are good; much better in comparison than other places. The rolling stock at that particular point may be sufficient. The two instances I mentioned were not at Maryborough. One was at Abbeyleix and the other was on the Midland Great Western line.

Insufficiency of staff.

40385. But you did mention, *apropos* of Maryborough, that the staff, plant, and accommodation were not sufficient?—The working staff at Maryborough is insufficient.

40386. You would not have mentioned that if it were a solitary instance, but you think it typical of the starvation of the line?—In any portions of the length of railway that I have any knowledge of these features always strike me.

Savings to be effected by amalgamation of the Irish lines under popular control.

40387. I was sure you would not have mentioned it if it were a solitary instance, but you mentioned it because it was typical. If that is so, if the State takes over the railways, they will have to add considerably to the staff, plant, and so on?—If the Irish people take over the railways there will be, I presume, an amalgamation of the numerous boards that control the railways at the present time. That would bring about a very substantial saving.

40388. I would not deny that?—And the reduction of what they have to pay an ornamental staff and the appointment of a sufficient working staff would bring about a much better and more satisfactory condition of things, and make the handling of goods and the transfer of passengers much more convenient for the public, and in every way satisfactory.

40389. Having got rid of, we will say, 200 directors, and converted them into perhaps 400 porters, you would have used your money up?—I could not say we would use all the money up. If we remove five or six directors or five or six managers or chairmen, with £1,000 a year each, we could employ a great many porters.

40390. But having used up the directors' salaries to increase the staff, you cannot use the same money over again, can you?—You cannot apply money to two purposes at the one time.

40391. I won't ask you to put a figure on it—that would not be reasonable. But you have given the impression that a considerable amount extra is wanted for plant and staff and so on. Whatever that costs it is going to be a first charge against the economies of amalgamation?—Whatever staff is necessary for the proper and satisfactory working of the line should be provided.

Improvements in stuff and equipment to follow from amalgamation.

40392. That has got to come first, before there is any money available for other purposes?—Yes; I presume so.

Complaint as to train service to the Tullow line from the South.

40393. You mentioned the connection at Naas. How far is Naas from Sallins?—I think two miles.

40394. It would not be a very great hardship to spend 1s. 6*d.* on a car?—No; but where men buy a ticket from Maryborough to Naas they should not, when they get out at Sallins, have to take a car to drive them the remainder of the distance.

40395. Let us suppose it is a railway worked by the State, and, not wanting to waste money, does not want to run a train up the line for the sake of the connection at Sallins if there is only one passenger every two days?—It would be very absurd to run a train for one passenger. When I mentioned the one instance I don't wish to contend that there is only one passenger concerned. My point is this. There are two trains leave Dublin for Tullow in the morning. I say that one of these trains should be so timed as to connect with the first train coming from the south of Ireland and take on any passengers that were going on the branch line, but at present those trains pass through Sallins on to Tullow and have gone before the southern train comes, and there is no connection with the south of Ireland until 3 o'clock in the afternoon, and I say it is a disgrace to any railway company to have such an arrangement.

40396. I daresay the explanation may be that the traffic is so small that it is not worth while delaying the Dublin passengers, who constitute 90 per cent., even ten minutes?—I say that there are very important fairs in towns like Baltinglass, and, I think, in Tullow, and I think it would be to the interest of the railway company themselves as well as to the interest of the public to have arrangements made by which passengers from the south of Ireland, cattle traders and others, could reach these fairs at a reasonable hour in the morning. There is nothing to prevent it if you only time the train to arrive at Sallins to make the connection.

40397. I don't argue you are wrong, because you know the circumstances so much better than I do, and I am only speaking from the point of view that naturally occurred to me that the traffic up the line to the Tullow branch is infinitely smaller probably than the traffic from Dublin to the Tullow branch?—Yes, but in my opinion if the railway company had to work that line without any guarantee they would be glad to make a connection with all the branch lines.

40398. I follow that. They have got their money safe?—Yes. They have got the 6*d.* from the ratepayers and don't care how they manage the line.

40399. You say goods from London are better handled than goods from Dublin?—That is my experience.

40400. One cannot imagine that the railway company have any interest in doing that?—I cannot.

40401. So one cannot suppose that they have given instructions?—I would imagine their interest would be the other way.

40402. One cannot imagine that there are any regular instructions. Can you say what interest the railway company staff have in handling it worse?—I cannot see any interest. I am only stating what is the fact and the Commission can draw their own inference. I say from my knowledge that goods from London are more carefully handled and delivered in better time than goods from stations in Ireland.

40403. When you say they are more carefully handled do you mean to say they are more carefully handled at your own station?—No. They arrive in better condition. I judge by the condition in which they arrive at the warehouse.

40404. That might be due to the fact that the English trader packs more carefully?—It might be.

40405. It might be due to the fact that the English railway company collecting in London collect carefully and the Irish trader in Dublin delivers to the railway company and delivers carelessly?—I don't know that. I am only stating what is a fact within my own knowledge, that one class of goods is handled better than another.

40406. We are both agreed that we don't see why the railway company should do it?—I don't see why they should not handle Irish goods better.

40407. You have also fairly admitted that you don't know that it is the railway company have done it?—No. Perhaps I may say at this point that I am not by any mean unfriendly to the Great Southern Company. I admire them for many improvements they have recently made. I think they are deserving in some respects even of every encouragement and appreciation for the changes they have brought about, but they are far and away behind what they should do for the public.

40408. I am not concerned to say they are not. I want to ask you as to a different point, which is a

very difficult one. You remember the case of the chest of tea?—Yes.

40409. You practically said this, that the trader in question was a good customer, and that they ought to have let him off the high rate and taken the tea by passenger train for goods rates?—I would not say by goods rates, but at a lower rate than three farthings per pound.

40410. At a lower rate than the regular passenger scale?—Yes.

40411. I see that from your point of view, but it would be illegal for the railway company to do it?—I don't think so. I think it is in the power of the railway company to make certain charges and to alter and vary them as much as they desire, and in the case of a trader who is paying them several hundreds of pounds a year freight, I think it is quite a proper thing that in a case of urgency where a trader requires a small clean parcel, such as that would be, to be sent by passenger train there ought to be a reasonable rate and that the three farthings a pound was a most unreasonable rate.

40412. I am not in the least saying it may not be a hard case, but there is an old saying that hard cases make bad laws. We have had any quantity of evidence from traders saying that railway companies give favoured clients special advantages, and they bring them before this Commission to have it stopped, while you are asking to have it done—I don't mean to say for yourself?—I am not saying that this concession should be restricted to one, two, or a dozen people.

Chairman.—All you say is you consider that three farthings a pound for this chest of tea was too high.

Mr. Acworth.—Of course if you meant to say that the parcels scale altogether was too high I could understand that, but I understood you to say that a special concession ought to be made, because it was an accident that it was sent by a passenger train.

Chairman.—You said that the three farthings a pound swallowed up the entire profit.

40413. *Mr. Acworth.*—At page 15 of your proof there was a thing that interested me a good deal. You say the through home freight of eggs from Limerick to London was 55 shillings owner's risk, and 63*s.* 4*d.* company's risk; that is, roughly, about 10 or 12 per cent. extra for companies' risk?—Yes.

40414. On the previous page you give eggs, Esbjerg to London, 36 shillings, owner's risk, and 41 shillings, companies' risk. That is just about the same proportion in the Danish trade as in the Irish trade—rather more in the Danish trade, about 12 per cent. extra—but it is roughly the same. It is 5 shillings extra on 36 shillings, and 8*s.* 4*d.* extra on 55 shillings?—The home freight on butter and eggs from Limerick to London is, butter, 40 shillings——

40415. You have not given the two rates there, and that is why I take eggs?—Eggs are 55 shillings from Limerick to London at owner's risk, and 63*s.* 4*d.* company's risk. From Esbjerg to London it is 36 shillings, including all charges at owner's risk, and 41 shillings at ordinary risk.

40416. That is including all charges, too?—I suppose so.

40417. The difference in each case is owner's risk?—Yes.

40418. In each case there is an increase or deduction of something like 10 or 12 per cent. in the rate. They are alike in the two countries. Does it seem to you a reasonable difference to make for the company being absolved from risk?—The point I desire to establish is this, that the freight on foreign butter and eggs to the London market was so much cheaper than what it is from Ireland to the London market.

40419. Those figures are there. They speak for themselves. We have had those from other people, but you are the first person who has given us an opportunity of comparing the owner's risk with the company's risk rate in the two countries, and I want to ask you whether in your view the difference made is a reasonable one?—I have not considered the question from that point of view.

40420. As to the rate for geese, it seems to me so enormous I think there must be some explanation. Do you know have any of these people ever asked the Board of Agriculture to interfere?—I am not aware they have.

40421. Because 8*d.* for a goose that is worth about five shillings seems enormous?—I have supplied the Commission with the information which I have taken the trouble to inquire into to verify the truth of the statement.

40422. But you don't know whether your informant has taken any steps?—He has not, as far as I know.

40423. Then you gave a rate comparing the rate for Danish butter with the rate for Irish butter from Mallow to London *via* Dublin. Do you know what the Rosslare rate is?—I have not got it.

Danish butter rates to London compared with those from Mallow to London.

40424. It is presumably lower. It seems to me it was not quite right to compare the longest route with the direct sea route, with the cheapest route for the Danish.

Mr. Smyth (*G. S. & W. R.*)—We have not got the rates here.

40425. *Mr. Acworth.*—There is just one question I want to ask. I hope you won't think I want to trench on politics, because I don't. You spoke of the County Council of the Queen's County being unanimous. I don't want in the least to minimise the importance of that, but I would wish if you could tell me are they all of one party politically?—How would you define the party?

The politics of the Queen's County County Council.

40426. I would leave it absolutely to you. I will be satisfied with your answer?—Would you say Nationalists and Unionists?

40427. That is what I had in my mind. That is how parties do tend to divide in Ireland?—At present the members of the County Council are entirely Nationalist. At the first election——

40428. I don't want to carry it further, but I don't wish to stop you from answering?—There is a certain inference might be drawn from that. One reason for that is that at the first election some Unionist gentlemen did contest certain divisions, and I am glad to say that one Unionist gentleman was unanimously elected on his merits, irrespective of politics. Others were defeated. Since then no Unionist has come forward. If they had they would be judged on their merits, and if the public thought well, be elected. But I may mention that while the Queen's County Council are entirely Nationalist, yet in selecting their officers they have selected them upon just principles. One of the principals, the accountant, is a Protestant and Unionist, and he was unanimously selected by this entirely Nationalist body; and 13 out of 30 officers employed by the Council are Protestants, and where any position is in the gift of the Council the question of politics is rarely if ever considered except in this light, that heretofore every appointment from that of a door-keeper to the highest position in the county was given to Unionists and non-Catholics, and we consider we are perfectly justified in readjusting this great injustice in electing a just proportion of the Catholic people to positions of honour and emolument from which they were so long shut out. In doing that we are always anxious to guard against inflicting on any of our non-Catholic fellow-countrymen the same injustice that we suffered under for so long.

Appointments made by the Council irrespective of religion or politics.

Religion of the existing officers.

40429. *Lord Pirrie.*—Was that the Grand Jury that you referred to?—Yes; the Grand Jury, the different poor law unions, the asylum and the county infirmary. To my knowledge every position in these was filled by non-Catholic officials, from the gatekeeper to the highest official in them; and I say that now under this entirely Catholic and Nationalist body we have 13 of our principal officials non-Catholics and Unionists.

The position of affairs under the Grand Jury.

40430. *Mr. Acworth.*—I am very glad that I am responsible for bringing out that information. May I say I am quite sure that the Chairman of the Queen's County County Council will always be quite fair?—Thank you very much.

Examined by Colonel Hutcheson Poë.

40431. You spoke of the want of connection between Mountmellick and Mullingar. I think it was always contemplated that the line would be extended to Mullingar?—That was the original intention.

The desirability of a direct railway from Mountmellick to Mullingar.

40432. At present anyone going to the North of Ireland from Waterford, Kilkenny, or any of the southern stations would have to go round either by Athlone or Dublin?—Yes.

40433. Through Athlone they would have to go a long roundabout journey making connections to get to the North, while if this connection were made with Mullingar they could go on by Cavan and Clones, and so on to the North of Ireland?—Yes.

40434. Then apparently that would be one of the

Jan. 14, 1908.

Mr. P. A. Meehan, M.P., Representative of Queen's Co. County Council.

most beneficial extensions of the existing system that could be made?—I think it would be an enormous benefit to the Queen's County and the adjoining country, as it would open up the whole of the district to the Midlands and the North.

Inconvenience arising from defective connection between different companies' trains at junctions.

40435. You allude to the want of connections and the inconvenience which you and passengers generally receive at the Sallins and Naas junction. You are in a large business, and in addition to travelling on your official duties, you travel a good deal over Ireland. Would you go so far as to say that if you find a want of connection on one system, between trains which, so to speak, are in the hands of one company, the Great Southern and Western for example, and that consequent inconvenience and disadvantage is entailed upon the travelling public—would you say that such want of connection, with its attendant disadvantages, is far more likely to be met with in the case of a number of different competing lines. For instance, is not the want of connection felt much more between the Great Southern and the Great Northern and between the Great Northern and the Midland Great Western where they meet?—My knowledge of the other railways is not very much. I mainly travel over the Great Southern. Sometimes I have gone on the Midland line; but I have generally found delays more or less.

Advantages of unity in the management of the lines.

40436. You are aware probably from reading the papers that a great deal of complaint has been made—we have had evidence to that effect—of the want of connection to enable passengers from the north to get to the south?—That complaint is correct. At the same time I may say the best managed railway cannot avoid these delays, but it is a great cause of complaint where these delays are constant.

40437. At any rate the want of connection which the public suffer from at present could be minimised, if not altogether removed, if there were unity of management?—Undoubtedly.

40438. Probably it would disappear to a great extent if not altogether?—Undoubtedly.

40439. You allude, I think, to the excessive second class fares. There is a great difference between second and third class fares in Ireland as compared with England and Scotland?—Yes.

40440. You are aware that second class fares in England are very little over third class fares—from ten to fifteen per cent?—Yes.

40441. In Ireland they go up to 50, 60, and 70 per cent.?—Yes.

A reduction in second class fares advocated.

40442. Would it be in your opinion beneficial to the railways and of great advantage to the travelling public if the second class fares were greatly reduced and brought down to something approaching the third class fares?—It would certainly be an advantage to the travelling public, and I believe it would be an advantage to the railways.

40443. It would not involve any loss to the railways?—It would not in my opinion.

40444. Is it your experience that there are numbers of people in Ireland of the middle classes who are now obliged to travel third class who would travel second class for the sake of the added comfort and convenience, if the charge were only slightly in excess of the third class?—Yes. They would be very glad to pay any reasonable increase.

The baneful effect of past British legislation on Irish industries.

40445. You have given very interesting examples of the various industries that existed in Ireland, many of them in a very flourishing condition in the previous centuries. While I don't wish to go back on the past history of this country, is it not the fact also that the oppressive legislation, which began so far back as the reign of Charles II., was carried on almost to the end of the 18th century, and that though repeated efforts were made only twenty years before the Union, between 1770 and 1780, to get many of these enactments repealed, yet that owing to the opposition of the English traders and manufacturers, these efforts were, with very few exceptions, unsuccessful?—That is so.

40446. Would you go so far as to say that the effect of that legislation was really to subsidise indirectly English manufactures and industries?—Undoubtedly. That was the object of the measures dealing with the Irish woollen industry and Irish industries generally.

Ireland's claim to Government aid to develop industries.

40447. It not only hurt industries in this country, but it put into a very much more prosperous condition those that were in their infancy in England?—Yes. The consequence is that the English Government owes us restitution for that destruction of our manufactures, and this is the time to make it.

40448. The effect of that legislation was seriously to handicap any industries which were started during the last twenty years or are being started now?—Undoubtedly, because the English manufacturers have been long established; their business is made, and they are able to compete successfully against the poor struggling men who were trying to get their initial knowledge of the business.

40449. I suppose you will go so far as to say that no country can live by land alone, and that unless industries of some kind or manufactures can be recreated or started in Ireland there is very little prospect of any great development of prosperity. Would you go so far as to say that for any real development of the country, where past legislation has inflicted such grievous injury, it would be a fair argument to urge, that now when we are trying to restart industries of one kind or another, every facility should be given us, in the matter of whatever financial assistance might be required to initiate such a policy, whether that assistance took the form of State credit, a free grant, or other aid to an Irish authority?—Undoubtedly.

40450. You gave us figures to show that the rates for butter from Denmark to England are from 50 to 70 per cent. lower than the rates for butter from Ireland?—Yes.

40451. I suppose a great deal of that is owing to Danish butter being sent in very much larger quantities. Possibly something may be done on the part of the Irish producers to co-operate so as to send their consignments in larger quantities?—I could not say it was in consequence of sending larger quantities, because if you take the rates from Cork, which is one of the largest butter-producing centres in Ireland, you will see that the rates are very much higher than from Denmark. From Mallow, in the County Cork, the rate for butter, *via* Dublin, is 58*s.* 4*d.*, and *via* the City of Cork Steampacket Company it is 53*s.* 4*d.*, and I say that if the Irish railways and the transit generally were under proper control the people in Cork should be able to send their butter to the London market as cheaply as the people in Denmark.

40452. You are aware from the returns of the Department that something like £11,000,000 of butter and eggs are sent into the United Kingdom from Denmark in the year?—That is so.

40453. And that the value of the butter and eggs sent from this country is between £5,000,000 and £6,000,000?—Yes. We should have something like £11,000,000 worth.

40454. You will agree that there is very little prospect of our doing so, even though we improve in the matter of winter dairying, which has a great deal to say to it, but that, apart from that, unless we can nearly assimilate our carrying rates to those in operation between Denmark and England there is very little chance of capturing that large amount of traffic?—I think with proper transit arrangements we would be able to capture the greater part of it. I am aware of the fact that up to a recent period Irish butter and bacon commanded the highest prices in the London market, and supplied the principal part of the butter and bacon to the London market.

40455. Probably I think a great deal of the inferior position which they now occupy is owing to the non-supply of butter during the winter months, and people who have to go to Denmark for their winter supply get to like the Danish butter, and when spring comes they do not care to go back to Irish butter. You spoke of the effects of amalgamation on the Great Southern and Waterford and Central systems as producing higher rates than were available formerly by the canal and the Waterford and Central. You spoke of the rates which were in existence from Dublin *via* canal to Mountmellick and thence by rail to Maryborough, and said that they were considerably lower than the rates now in force on the Great Southern Railway. Surely the former route is still open to you. I don't see how that is affected by amalgamation. The canal is independent, and the only difference is you have got the Mountmellick connection to Maryborough in the hands of a different company, but that is only a short distance?—I think you will find that the views of the railway company are taken very much into account in regulating the traffic of the Grand Canal at Mountmellick; and then the branch railway from Mountmellick to Maryborough is under the control of the Great Southern Railway Company since the amalgamation. Prior to that it was under the control of the Waterford and Central Ireland Railway Company. They had that competitive route.

Now that competitive route is discontinued. I went to the goods store at Maryborough to inquire if this route was still open, and I was told that it was not.

40456. I think we had evidence from a former witness that at present you could get certain articles at Maryborough *via* the canal and *via* Mountmellick at a considerably lower rate than you could get them by direct railway between Dublin and Maryborough. Is that the case still?—At present I am not aware that any goods come by that route, and I was told it was closed. And if it is not to the interest of the railway company to send goods by a certain route they can make it disagreeable for a trader if they like, and discourage him from sending by that route.

40457. At any rate, where you have water competition alongside a railway you will admit it must materially affect the railway company's charges?—At a place like Maryborough, on the direct line to Cork and fifty miles from Dublin, the rates should be as cheap as they possibly could be, even by the water route. It is on the direct line. There is no shunting and no going on to side lines, and there is no expense, but the mere hauling of the goods from Kingsbridge. In my opinion the railway company could afford to carry goods that way as cheaply as they could carry it by Mountmellick.

40458. I suppose the railway company would say they cannot; but, at any rate, you know that where there is water competition it governs the railway rate?—There is competition to Monasterevan and Carlow, and, in consequence, the freights are lower than to places where the railway haulage is shorter.

40459. It would be no good to say to the railway company at, say, Kildare or Maryborough, "You must keep your rate up, and not be influenced by the canal." You would put up the price on the people at Monasterevan and Carlow, but you would not benefit yourself? There should be, in my opinion, a readjustment of all the rates, and because people in a particular town are restricted to the use of one railway they should not be penalised by a higher rate than people who had competitive routes. Why should the people of Maryborough, fifty miles from Dublin, be penalised by a higher rate than the people of Carlow, fifty-six miles from Dublin, who have a cheaper rate?

40460. But you know that if the railway did not agree to lower rates in these places they would not get any traffic. Everything would go by water to Carlow?—That proves my case—that the rate is too high.

40461. You will agree that the amount of traffic to be carried one way or another in Ireland is hardly enough to keep both canals and railways alive. In these days traders want consignments delivered quickly. They don't take a large bulk. There are not a great many things for which there will be traffic by canal?—There are numerous things which could be carried by canal, and many industries which could be created and fostered, and it would be a substantial advantage to the country if there was an extension of the canal, say, to Ballyroan, the lime-manufacturing district. There would be plenty of haulage on it, not alone of lime, but of coal and other commodities, such as manure for the farmers. It would be a substantial advantage, and create industries through the country.

40462. I don't want to go into the canal question, because the Canal Commission is inquiring into it, but I should have thought you would hardly contend that there was enough traffic to justify further extension of both railways and canals. It may be necessary or desirable to extend either one system or the other but it is hardly necessary to extend both systems. When you speak of cattle sent from Kilkenny having to be re-booked at Maryborough, is that from Kilkenny to Dublin?—Yes; Kilkenny to Dublin, Limerick, Mountrath, Thurles, or any of the southern towns.

40463. There is no through booking?—That is the statement made to me by the principal cattle dealers of the district. If a man from Thurles, Portarlington, or Mountrath wishes to send his cattle *via* Maryborough, should he want to get a train connection he has to re-book them at Maryborough.

Colonel Hutcheson Poë.—I suppose the railway company will have some answer to that.

Mr. Smyth (G. S. & W. R.)—It is not correct.

40464. *Colonel Hutcheson Poë.*—I thought it was curious?—I give the information on the authority of one of the principal cattle dealers in the district.

40465. With regard to this railway from Castlecomer to Portarlington you speak of a line passing through Castlecomer *via* Ballinakill to Stradbally; I should like to see the railway going to Ballinakill, but if it went to Ballinakill it would not go to Stradbally. Would you think the Castlecomer, Ballinakill, and Abbeyleix route would be as useful as the Castlecomer, Stradbally, and Portarlington route. It comes to this, whether the cattle industry, which is very important round Ballinakill, is more valuable than the limestone industry at Stradbally?—In my opinion the making of the railway from Castlecomer *via* Stradbally and Portarlington would be best in the interests of the general public.

Jan 14, 1908

Mr. P. A. Meehan, M.P., Representative of Queen's Co. County Council.

The proposed railway extension from Castlecomer to Portarlington, *via* Stradbally, recommended.

Examined by Lord PIRRIE.

40466. I listened with great interest to your evidence given to our Chairman and other members of the Commission. There are one or two points that I wish to clear up in my own mind. What do you mean by the 63,000 acres of waste land in Queen's County? You say that the population of the county has been reduced one half in fifty years, and that land has gone out of cultivation. Is the reduced population your explanation of that waste land?—The acreage under tillage has decreased considerably. A large proportion of the 222,120 acres now under pasture was formerly under tillage. Some portion of the 63,000 acres of waste was also under tillage, but I am not prepared to give you the number of acres.

Acreage of waste land in Queen's County.

40467. My question was what do you mean by the word "waste." Has it become waste by the want of labour or of railway and canal facilities. Is it too costly for the people to take their goods to market?—Some portion of the 63,000 acres was formerly under tillage, but has gone back to its original state.

Large decrease in tillage.

40468. What is the amount in your mind?—And the other portion represents all the bog.

40469. I rather took your view to be that the waste would cease to be waste provided railway or canal facilities, of some sort or another were increased?—No. I don't think I made that statement.

Chairman.—Barren land you mean.

40470. *Lord Pirrie.*—You say it has not been always barren?—Portion of it has not.

40471. Why is that portion which is not cultivated to-day lying barren, in your opinion?—In my opinion the chief cause is the depopulation of the country. The removing of 54,000 people out of the country accounts for a great deal of the land having gone back.

40472. A great deal of that waste land is lying waste through the decline of the population?—Yes.

Land lying waste through decline in population.

40473. When you speak of a large amount of land being under water do you mean lakes or land that has not been drained?—That includes lakes and rivers.

40474. It is not because of want of drainage in that particular county?—The want of drainage in the county does not affect this 357 acres.

40475. It is merely river and lake?—Yes.

40476. You merely want to make up the balance of the total area of the county?—Yes, but as you have mentioned the question of drainage perhaps I may state that out of that 223,000 acres under pasturage there are 40,000 acres subject to flooding from the River Barrow.

40477. Then you don't include the land I thought you meant to refer to?—I do not.

40478. Over and above the land included as under water there are 40,000 acres constantly flooded owing to want of drainage?—Yes.

Lands flooded owing to want of drainage.

40479. It seems to be a very serious question in the interests of the county, that reduction of the population by one half in fifty years. Were any people evicted except those who did not pay their rents, or were they evicted because landlords wanted to get them off their property and get the land into their own hands?—I cannot speak from personal experience of the cause of the evictions in these days, but it is historically true that the people were evicted at the mere caprice of the owner, and the occupiers of land that was under cultivation and was growing good wheat were all evicted by the owners and the small farms were consolidated into grazing tracts.

Cause of evictions of small farmers.

40480. Then, if they had had the railway facilities you speak of fifty years ago that would not have kept the population in those circumstances?—I don't know whether the existence of the railways would

Jan. 14, 1908.

Mr. P. A. Meehan, M.P., Representative of Queen's Co. County Council.

have been a reason for the landlords not pursuing the inhuman policy of destroying the population.

40481. You speak about a great deal of limestone in your district, and in your evidence to the Chairman you laid a good deal of weight on the statement that if you had proper facilities it could be made a considerable industry in the county. Where would that limestone have gone to. Have you considered that almost all the counties of Ireland have got limestone, the ordinary use of which would be for building purposes in the county or for putting on the land?—Yes.

Prospect of successfully working the limestone industry.

40482. And each farmer, as a rule, sends to the kiln and takes what limes he wants to manure his land. Where could you send to. You could not compete with the limestone that has to go to Glasgow from those County Antrim hills, where there is no railway journey at all, and it practically falls off the cliffs, and is put on the steamer, for Glasgow?—In nearly all the Midland Counties of Ireland there is limestone, but limestone that it would be almost impossible to successfully quarry. In Queen's County the limestone is on the surface, in the baronies of Stradbally and Ballyadams, and at the Rock of Dunamaise. If there were transit facilities that rock could be utilised for building purposes all over Ireland where limestone is required. It could be used in Dublin where so much foreign stone is imported. The heavy transit of the limestone from Stradbally prevents it from being worked up to the present.

The proposed connecting of Ballyroan with Monasterevan by canal.

40483. But the imported stone, whether it comes from the North of Ireland or elsewhere, comes direct by sea. There is no railway freight on it. Do you think you could possibly compete where you have to pay railway rates and loading and discharging, as against the steamer rate?—We could get a canal connection to Ballyroan, I think, for a very trifling expense, and I think it would be a decided advantage not only to the locality, but to all the country around. Farmers at present have to get their lime from 15 to 20 miles distant. In consequence it is only used very sparingly. It is valuable as a manure. If there was any means of the people getting it by canal or rail in the district it would be used far more extensively than it is at present.

The £40,000 for canals voted by the Irish Parliament not received owing to the Union.

40484. You spoke of the £40,000 voted by the Irish Parliament. Am I right in assuming that that money was voted, but was never given to you; that it never got to Queen's County?—That is another of the grievances we have against the Saxon.

40485. You never got it?—We never got it.

40486. It was voted?—It was voted, but the interlopers came in and prevented us from getting our rights.

40487. *Mr. Acworth.*—What was the date of the vote?—Just before the Union.

The excessive number of railway directors and chief officials.

40488. *Lord Pirrie.*—You spoke, I think, rather by mistake, of the numerous boards of directors and the ornamental officials. Do you not mean the numerous boards of ornamental directors and officials? You did not mean to apply the description "ornamental" to the officials?—I did not use the word in any offensive sense.

40489. It is not offensive. You meant to apply it to the directors?—Not entirely to the directors, but to a staff that would be considered altogether unnecessary.

40490. I really thought that you meant to convey that we had from 200 to 250 directors and that you thought it could be managed by eight or nine men quite as well as by these ornamental gentlemen?—That is what I did mean.

40491. Then the word ornamental is applicable to the directors in that sense?—Yes.

Complaint as to passenger train delay at Abbeyleix.

40492. You very properly spoke of the passenger train that was kept waiting to let the goods train pass at Abbeyleix. If that goods train had to pass along a single line and if it contained goods for export belonging to many farmers, don't you think it was proper management to send forward the goods so that these farmers might have them delivered in time and keep back a train containing one or two gentlemen who were probably going on a shooting expedition or to pay an afternoon visit? That did not affect the commercial side of Ireland. Would you not rather sacrifice twenty minutes to benefit the Irish farmer?—I would willingly sacrifice twenty minutes if an object such as you describe were to be attained by it; but the people travelling by that train were not going to shoot or dine with their friends. They were business men whose time was of great value to them, and if the trains came in in time and went out in time there would have been no necessity for that delay.

40493. You speak very strongly all through your evidence about the advantage or importance, in which I agree, of having additional canal or railway facilities, but you speak here; where you have a railway close to your own district, of the goods of some mill in Maryborough being distributed by cart to the extent of ten or fifteen miles, though the railway runs alongside. If you have those facilities and don't make use of them, I think a little explanation is wanted?—The only explanation I can give is that the manufacturers find it cheaper to send by this slow method of horse haulage than to pay the rates charged by the railway companies.

40494. Or that the want of facilities at the various goods yards and the loading and discharging of those particular goods are so bad that it is better for them to cart the goods?—That is the inference I draw from it.

Chairman.—That only applies to short distances.

40495. *Lord Pirrie.*—It goes up to ten or fifteen miles. Do you grow flax at all in your county?—Not in Queen's County.

40496. Does the flax trade get a little assistance from some public authority to assist them?—There was an attempt, some years ago, to revive the growing of flax in Queen's County. It was tried for a couple of years, but it was discontinued.

40497. Therefore there is no grant from the Government or any department towards assisting the flax industry in your county?—There is not.

40498. Has your County Council ever tried to get a grant?—Our County Council did not, because the farmers consider that the land is hardly suitable for growing flax.

40499. Did not you grow flax in considerable quantities in the South of Ireland many years ago?—Not in Queen's County, and I think that the flax you allude to was grown only over a very limited area.

40500. I take it that your broad view is this: the railway company in their own interests should facilitate not only the travelling public, but the customers who are sending goods, otherwise the dividends will be gradually reduced as the population is reduced, and that is why you think in their own interests they should try to meet these various complaints you have brought forward?—Undoubtedly.

40501. I take it from your evidence you believe that one of the very first and most important things that can be done for the welfare of the Irish people and for increasing industries, which is the only way to increase the population, is to make railways the property of the Irish people themselves, and managed by an Irish body?—That is, in my opinion, the only possible satisfactory solution.

40502. *Chairman.*—May I say I think we are all agreed we are much obliged to you for the very clear and admirable evidence you have given?—Thank you very much.

Mr. Peter Gannon, Representative of Ballinamore Rural District Council.

Mr. PETER GANNON examined by the CHAIRMAN.

40503. Mr. Gannon, you appear on behalf of the Ballinamore Rural District Council?—Yes.

40504. You are baronial auditor of the Cavan and Leitrim Railway?—Yes.

The guarantee for the Cavan and Leitrim Railway given under a misapprehension.

40505. Is it within your knowledge how these baronies gave the guarantees?—Yes. The scheme was pretty largely circulated, but I have been asked to convey the impression that several of the parties who signed the primary document their names were forged to it and they themselves never signed it, but, of course, I don't attach much importance to that fact, because we have since been an agreeing party. Nevertheless it is a fact.

40506. I suppose the guarantors, according to you, were under the impression that they would have a permanent majority on the Board?—Certainly.

40507. Have they?—They have not.

40508. Were they under the impression that the rate they would be called on to pay would not exceed

a certain amount in the pound?—That was stipulated in a document which I understand was put in by Father Gray or Mr. Lawder.*

40509. Do you remember what the maximum amount you were likely to be called on for was?—It was stipulated that it would not exceed 4*d.* in the pound.

40510. In practice what has it been?—I believe it has reached 1*s.* 1*d.*

40511. What is it now?—It stands at a shilling in the pound at present.

40512. You being the guarantors are of opinion that you should have a majority in the management?—Certainly. That was in the contract in the beginning, but it was not embodied in the Order in Council. That is where we are at sea at present.

40513. The Order in Council provides that the majority should be the shareholders?—It does not make that provision. The shareholders shall have two for Cavan and four for Leitrim on the Board; but at the time the Local Government (Ireland) Act was coming into force the shareholder directors when they saw they would be losing their power increased the shareholder directors from six to eight. At all events they stand at eight at present, so that they hold the control in their own hands, while their 5 per cent. is assured.

40514. Are you the auditor of the accounts?—Yes.

40515. Have you anything to say with reference to the working of the Cavan and Leitrim Railway?—Yes. We complain that they have usurped the management of the ratepayers, and manage the railway in such a way that various extravagances and abuses of the ordinary railway system exist.

40516. As auditor could you tell us what you mean by that extravagant management? What particular item do you refer to?—I will take one item to commence with. I have known various cases where undue preference is a prevailing feature. I have known where rebates have been given to particular customers. I have known a case where a customer had three head of cattle going to the cattle fair, and was charged at the standard rate; while another more fortunate, if not more favoured, customer had five head of cattle carried for the same distance for 7*s.* 6*d.*—this works out at head rate over 3*s.* 1*d.* in the former and 1*s.* 6*d.* in the latter case.

40517. That is in the station accounts?—Yes.

40518. *Mr. Croker Barrington, Solicitor.*—Could you give us the name in the case of the undue preference about the cattle?—I believe I will be able to get you that. That was by no means an isolated case. I knew of various cases of the kind to happen.†

40519. *Chairman.*—As auditor of the railway, do you get facilities from the line to go to any particular depot if you wish?—No; I get no facilities whatever.

40520. You don't get a pass to go over the line?—I get one single journey pass every year to make one audit in the year. As baronial auditor I am bound to make one audit. That would seem to fulfil the duty of auditor according to the railway way of looking at it. I get one free pass for one journey to do that, but no more. According to Section 18 of the Order in Council you will see we are entitled to a certain amount of supervision. According to the companies' interpretation of that, the only supervision we should exercise is to come up here to Dublin once in twelve months, and examine the accounts when they are veneered and varnished and fitted for the eye.

40521. The head office is in Dublin?—Yes.

40522. Do you only examine the general books kept at the general office?—Anything offered to me is all I could see. Here is the Order I refer to (*produces Order in Council*), but there are transactions not accounted for.

Mr. Croker Barrington, Solicitor.—All the books and station accounts are brought to Dublin. This gentleman gets a free pass to Dublin. The general manager is here.

Mr. R. R. Stewart (Secretary, Cavan and Leitrim Railway Company)—I am Secretary and Accountant to the company. Nothing is refused to the baronial auditor in connection with the auditing of the accounts. Everything asked for is placed before Mr. Gannon and his co-auditor for Cavan, and certified by him as correct.

40523. *Chairman.*—Are the station accounts sent to Dublin.

Mr. Stewart.—All the original way-bills are in Dublin, and were shown to Mr. Gannon.

Witness.—That is not quite correct. Before going to make the audit of the accounts I was informed that on the preceding 15th of August—this will illustrate how there are no accounts in Dublin of some traffic; and as a matter of fact there has been work done in connection with this Siamese twin company, the Arigna Mining Company and Cavan and Leitrim Railway, though they were not born together—I was informed that a special train was employed on the 15th of August for the collection of hay for the Mining Company. A number of men were loading it, and the work was superintended by the Traffic Manager, who is here. I made very particular inquiry, because if the ratepayers took an action the company would stand to win in any case. They cannot lose. The ratepayers would lose if the company lost. I made full inquiry in the audit in the office, and found there was no trace of that special train. Not alone that; they can run trains any time they wish. Mr. Stewart says that we got all the accounts we asked for. We did not get that account. This is simply the way they work the accounts down there. They don't damn themselves by sending in returns of transactions such as those.

40524. The special train you refer to was for the Arigna Company, and your contention is that the Cavan and Leitrim Company got nothing for it?—Yes.

Mr. Stewart.—The train referred to was for carrying hay for ordinary traffic. It was booked, and the original way-bills in connection with that were shown to Mr. Gannon at the time of the audit, and he made no objection. I have the way-bills here.

40524A. *Chairman.*—It is a twice told tale, and it is so easily explained.

Mr. Stewart.—The strong allegation in connection with the baronial auditor is that the company refused the baronial auditor permission to make his audit. That is entirely inaccurate.

Witness.—I made no such statement myself.

40525. *Chairman.*—Here is the way-bill?—(*Witness*)—My contention is this. These are booked by the ordinary train, as you can see, and there is a special train to go along and collect the hay and bring it in, and the staff are employed doing this, and there is no account of it in the Dublin office.

Mr. Stewart.—The work of the men in connection with loading or unloading outside the ordinary traffic is charged in the wages sheet, and has been done in this case. We can produce evidence of this when we come before you in proper time.

Mr. Gannon.—Of course, I merely give this as one simple incident brought under our notice which illustrates the manner in which this company is carried on. They refuse us access to their books, and refuse to allow us to supervise the working of the line.

Mr. Stewart.—I object to the witness using the word refused. They were not refused access to books.

Witness.—On the line. We are refused where it is most necessary.

Mr. Stewart.—There are no books kept on the line that can be of any service to the auditor. All the original documents on the line are sent up to the office monthly, and are produced to the auditor each time he makes his audit.

40525A. *Lord Pirrie.*—The witness should be allowed to give his evidence, and the railway company can give evidence afterwards. I really must protest against the interruption of the witness.

Mr. Stewart.—I am responsible for this, and I thought I might clear it up.

40526. *Chairman.*—I think we shall have to take you at the end. I can quite see there is the entry, there is the rate. If the wages incurred were charged in the ordinary way as wages, there is the wages bill he could have seen?—(*Witness.*)—Certainly. That is a new departure. The outside public never heard of such a thing. It is the first time that anybody has heard of it. I want to show you it is impossible for us to have the supervision we are entitled to under these Orders in Council.

40527. The Order in Council provides that you are not to have a majority on the board?—I am at present on the question of supervision, which we are denied on the line, and I have Mr. Stewart's document here to prove that contention. Here is a letter which I have written to the Traffic Manager, and his reply. The answer is:—"I beg to acknowledge receipt of your letter, which I have forwarded to the Secretary and Accountant, whom I shall be glad if you will kindly communicate with on the subject." I wrote the Secretary. Here is his reply:—Mr. M'Adoo has forwarded your letter of the 3rd inst. in

Jan. 14, 1908.

Mr. Peter Gannon, Representative of Ballinamore Rural District Council.

Allegation that the Cavan and Leitrim Company perform services for the Arigna Mining Company gratis.

A special train for hay traffic instanced.

Complaint that access to the books at the railway stations was refused.

Therefore the supervision authorised by the Order in Council is not possible

Correspondence with the railway company as to the right to inspect the station accounts.

* See Appendix No. 7, Third Report.
† See Appendix No. 12.

Jan. 14, 1908.

Mr. Peter Gannon, Representative of Ballinamore Rural District Council.

Cavan and Leitrim Railway—*con.*

which you state you called at some of the company's stations for the purpose of inspecting the accounts to enable you to make your audit, and you were not allowed to see them without permission from the Manager, and requesting such permission. In reply I beg to inform you that all the accounts and documents necessary to enable you to fulfil your duties as baronial auditor for the year ending November, 1906, are in this office, and will be laid before you when you come here on the 10th inst. as arranged. All stations returns are sent up here monthly and retained here, so that a visit to the stations would not only be a waste of time, but would not assist you in carrying out your audit." That is dated the 6th of April, 1907.

The documents submitted to the baronial auditors alleged to be incomplete.

40528. That seems reasonable if the fact is as stated that you have got everything?—I deny I have got everything. I have asked for the return of this special train. I can prove that this special train was collecting hay. Mr. Stewart admitted that they have a special wages sheet for it. It is very hard to draw the line between where this company ends and the mining company begins, and they deny us the supervision of the line. That is my contention.

40529. *Mr. Acworth.*—The law is dead against the railway company. Look at section 44?—Here is a letter from the Board of Works in connection with the matter of auditing.

Mr. Croker Barrington, Solicitor.—Our position is that we give everything that is usual. At Kingsbridge our accounts are in that way.

Mr. Acworth.—The Act of Parliament says they are entitled to one thing, and you say, "We will give them another."

Sections 42 and 44 of the Order in Council of 1884 dealing with the keeping and auditing of the accounts of the railway.

40529A. *Chairman.*—Let us have the clause read. It is sufficient at first to read clause 42.

Mr. Croker Barrington, Solicitor.—"Keeping accounts.—The promoters are to keep full, true, and distinct books of account, with a description of the capital of each of the said undertakings and the receipts of each from every source, and the expenditure, and shall keep and preserve all receipts and other documents necessary for vouching same, and shall at all times produce the said books, receipts, and documents for the inspection of such person or persons as the respective presentment sessions and Grand Juries may appoint to examine the same, and also to such persons as the Treasury or the Board of Trade may appoint for a like purpose, also the arbitrators appointed under section 6 of the Tramways Ireland Act, 1883." The 44th is next. "Audit of accounts.—The respective accounts of the respective undertakings shall be audited once in each year, but the auditors should be appointed as hereinbefore provided, and the promoters shall produce for inspection and examination of such auditors in so far as they shall require same the books of account and all receipts and documents necessary for vouching the same, and supply the auditors with all such further information as may be reasonably required for the purpose of auditing the said accounts."

40530. *Mr. Acworth.*—You are to produce in so far as he likes any information he may reasonably require for the purpose of auditing the said accounts. I don't suppose that Mr. Croker Barrington will suggest that the railway is to be the judge of reasonableness.

Mr. Croker Barrington, Solicitor.—What I say is this—the audit is once in each year.

The company's objection to the examination of books and accounts at the stations.

40530A. *Mr. Acworth.*—You shall produce documents and vouchers, whatever he asks for, in so far as he asks for them.

Mr. Croker Barrington, Solicitor.—It does not mean a roving commission over the whole railway into stations. We are bound to keep the books by one section, and bound to produce anything necessary to vouch them by another, at any time he likes. In connection with that we cannot say he can only come up at two o'clock in the day, or anything like that.

Lord Pirrie.—It does not say he must come to Dublin.

Mr. Croker Barrington, Solicitor.—Dublin is the chief office he must come to.

40531. *Lord Pirrie.*—It does not say that he is not entitled to go to all the stations on the line if he wishes to.

Mr. Croker Barrington, Solicitor.—You cannot keep the books in more than one place. What he really wants is a roving commission?—(*Witness*)—I want some kind of supervision. If coming up to Dublin once a year and looking at the books veneered and made up is supervision then I waive my claim. Look at Section 18.

40531A. *Mr. Acworth.*—Section 18 is this: the said baronies of the said County Leitrim shall be represented in the direction of supervision of the affairs and finance of the promoters by any auditor or auditors who may from time to time be appointed by the respective presentment sessions to inspect the books and accounts of the promoters and so on. If you are going to read it disjunctively, then the business of the auditor is to direct and the business of the directors is to supervise, and it is the auditor who is the director.

Mr. Croker Barrington, Solicitor.—That is what is asked for.

40532. *Chairman.*—The Board of Works, Dublin, in reference to an application, say, on the 27th of September, 1907—I am only reading an extract in reference to the statement of Mr. Gannon—"The Board are advised that no such limitations are imposed on you by Clause 43 of the Order in Council of 1884, and the accounts of the various stations on the line appear to be in the nature of further information reasonably required for the purpose of auditing the accounts within the meaning of Clause 44."

40532A. *Mr. Croker Barrington, Solicitor.*—That, of course, we absolutely admit?—(*Witness*)—I may further say we made no application to the Board of Works, but the Treasury were sent their yearly auditor's report, and they sent it back to the Board of Works here. It was by virtue of that, and taking exception to some paragraph, that they wrote me that letter.

40532B. *Chairman.*—I don't know that we can give any decision upon this.

40533. *Colonel Hutcheson Poë.*—Might I ask the Secretary what is the practice of the Board of Works in Ireland.

Mr. Shanahan.—The practice of the Board of Works as regards the auditing of the accounts of light railways is to make the audit in the head office. The Board of Works' representative never, as far as I am aware, thought it necessary to visit any station or to take any accounts outside the accounts presented to him in the books and relevant documents, in the head office of the company; but, of course, my Department in adopting that course and that practice never admitted for a moment that it was not within their rights to make any visit to a station or take up anything oustide the head office if they wished.

40532. *Mr. Croker Barrington, Solicitor.*—It would come up in the King's Bench if any dispute arose to compel the company to produce the books?—(*Witness*)—That would be to tax the ratepayers over again, for the company would lose nothing.

40533A. *Chairman.*—What I would suggest is, if there is nothing to conceal, why should not this auditor be allowed to go to any station he likes?

Mr. Croker Barrington, Solicitor.—What this gentleman tells me is that the station books are all brought to the head office, and they are there, with the vouchers, and the one set of books that show the accounts.

40534. *Chairman.*—Then what I suggest is that if this gentleman goes to the stations and finds that all the documents are in Dublin he will be satisfied; but he is debarred from going to the stations to make any inquiries.

Mr. Croker Barrington, Solicitor.—I hear he goes to the stations, and is not satisfied?—(*Witness*)—It is for that right I am contending.

40534A. *Chairman.*—When he goes to the station he is told that all the papers are in Dublin.

Mr. Shanahan.—There are station books kept in the station. Every railwayman knows that.

Mr. Stewart.—Only copies.

Mr. Shanahan.—Then the Cavan and Leitrim Railway must be different from all other companies if there are not books at the stations.

Witness.—All the railway books are not in Dublin. I asked to see a list of the stock in hands—the stock of goods, supplies, stores—and I was told it was in Ballinamore. There are a lot of abuses existing, no matter what the railway company say. I say if there were no abuses why are they afraid of me. Another case in point: I was shown a list of old stores sold. I know the customer myself who purchased the old stores. There was not one word of that on the list I got.

40535. *Colonel Hutcheson Poë.*—Did you make any remark on your certificate to the Grand Jury to that effect?—I don't believe I referred to that particular point.

40535A. Surely it was your duty?—I referred to many other points as well as that. Another reason: I did not know until afterwards that the particular party

Mr. Peter Gannon, Representative of Ballinamore Rural District Council.

Cavan and Leitrim Railway—*cont.*

had bought the stores. I made more inquiry in the meantime.

Examined by Mr. Acworth.

40536. Forgery is a nasty word. Do you think "to convey the impression" that there was forgery twenty years ago?—Yes.

40536A. Do you think that that is fair?—I know it is true.

40537. Are you prepared to prove it?—I am not going to prove it. But, at the same time, I believe that the thing is unimportant at present.

40538. It is not unimportant. When you say that there was forgery, it seems to me that you should either withdraw it or prove it?—I withdraw it, but I think there are living men will prove it.

40539. You don't know it yourself?—I don't know.

40540. Then it is not right to say it here. Undue preference has been a prevailing feature, you say in your proof, and you say you think you can give one instance of where five head of cattle were carried as cheaply as three head?—I don't think I am positive they were carried cheaper.

40541. You are prepared to give the name, the station, and the date?—Yes.

40542. Can you give any more?—That was only a case in point. I can give data in other cases. I know another case in which there was a rebate of four or five shillings. I can give the name of the party.

40543. And the station and date, so that the railway company can deal with it?—I cannot give the exact date.

40544. Can you give it approximately?—Yes; April, 1896.

40545. You have undertaken to send these to the Secretary?—Yes.*

40546. Have you any more?—These are the only cases in which I can give date, but there were many more.

40547. That is for twenty years. Does that justify you in saying it is a prevailing feature?—It has been.

40548. You know of two cases that may yet break down?—I knew of many more, but I did not take the data of them. Now, about free passes. Many people travel on free passes. I was shown a list of free passes in Dublin here by the secretary, Mr. Stewart. There are many people travelling whose names are not included in that list. The list I was shown included the principal railway servants, who were, of course, entitled to passes, and certain press representatives, but many passes in use were not recorded on the list.

40549. You know there are passes for the whole year over the whole system and single journey passes for a particular journey?—Yes.

40550. You are not speaking of single journey passes?—No; passes for certain periods and passes for years.

40551. You are satisfied that those are being given and not reported to you?—Yes. That is more than mere belief.

40552. It seems to me you are entitled to go to the stations to find out?—Yes.

Mr. Croker Barrington, Solicitor.—They would not be at the station.

40553. *Mr. Acworth.*—I was thinking for the moment of the North-Western and the Great Western system, where you get a voucher. These would be recorded in the secretary's office?—That is not quite correct either. There are any amount of passes issued by the Traffic Manager.

40553A. *Mr. Acworth.*—I presume they are issued by the different heads of departments.

Mr. Stewart.—A list of passes issued from one Board meeting to another, every fortnight, is submitted to the Board by the heads of departments.

40554. *Mr. Acworth.*—If Mr. Gannon suspects you of not giving the full information to the directors he is entitled to verify it.

Witness.—I have no suspicion that Mr. Stewart did not act fairly and squarely in every way he could.

Mr. Stewart.—We have nothing to conceal. Mr. Gannon can go into the affairs of the company from its very inception. He satisfied himself with the year's audit.

40554A. *Mr. Acworth.*—Do you accept that?—(*Witness*)—Certainly not. I satisfied myself as far as the books in Dublin were concerned.

40555. You are satisfied you did not find anything wrong with the books in Dublin?—No, with the exception of the fact of the retention of the office in Dublin.

40556. Do you claim you are entitled to go to the stations and work back for ten years?—No. I don't claim that. That was the order of the joint committee.

40557. *Mr. Acworth.*—Does the railway company accept that during the current year he is entitled to see any current document at the stations?

Mr. Stewart.—If he went to-day to the stations he would see nothing that we cannot produce for him in Dublin. Mr. Gannon cannot make his audit until the books of the company are closed half-yearly.

40558. *Mr. Acworth.*—I am not suggesting that Mr. Gannon is correct, or even that that is what he thinks. You don't send all the documents to Dublin. Suppose he thinks you keep back invoices, and he says nothing shown him in Dublin will satisfy him, the question is, is he not entitled under this Act to make surprise visits to the stations and see what he can see?—(*Witness*)—I don't even want to make surprise visits. As a case in point, we are told that in the locomotive department one of those directors had his car mended in the workshop. How are we to know that in Dublin?

Alleged use of the locomotive works for the private purposes of a director.

40558A. *Mr. Acworth.*—I think that is a case of administering interrogatories.

Mr. Stewart.—I think the company should be supplied with the specific charges against them.

40559. *Lord Pirrie.*—You have brought on the whole discussion by interrupting so frequently. If you had allowed the witness to give his evidence as the chairman asked him it would have been over now.

40559A. *Mr. Acworth.*—Are you prepared to give a date when the car was in the shops?—No. I have not got the information.

40559A. You know where you got it from?—Yes, but I am not going to verify it. I cannot give information on those points except I saw it.

40560. *Mr. Acworth.*—If you produce the man who says he saw the car.

40560A. *Chairman.*—It seems to me you are clearly entitled to what you ask?—(*Witness*).—The Board of Works have written to that effect at all events.

40561. I think so. Where you have a suspicion, even though probably there is no foundation for it, you ought to be able to go and verify it. With regard to these passes, do you say that passes are given that ought not to be given?—Yes. They are given largely to Pressmen, who only get single fare for return journey on big lines.

Allegations that passes are issued to representatives of the local Press to silence criticism.

40562. That is all right legitimately?—It is not done on other lines in the same way. It is given for the purpose of bribing some of the local papers into silence. You had Mr. Lawder before you. He wrote a letter to some of the papers, and it was inserted *verbatim* in one, but the other paper wrote to say "We have received a letter from Mr. Lawder; it is libellous, and we cannot insert it." Some of them think that anything a man writes about the railway is libellous. The provincial Press, I say, should get the same facilities here as on other lines, but a poor railway like this should not give more. It is liable to abuse.

40563. The manager lives in Leitrim or Cavan?—He lives at Ballinamore.

40564. Of course he would have pass-books?—Yes.

40565. And you could see who got the passes?—Yes.

A full list of the passes issued not obtainable by the auditors.

40566. You have not seen that return in Dublin?—No. The only passes we have seen in Dublin are a few that are issued.

40567. Those were all legitimate?—Yes, except these Press passes, and I don't draw a great deal of attention to them either.

Examined by Colonel Hutcheson Poe.

40568. You say the guarantors were induced to agree to the guarantee on the strength of a representation that they would never be taxed beyond 4*d.* in the pound?—Yes.

The representations made to the ratepayers when the guarantee was sought.

40569. That point has been made by other witnesses. The guarantee is on £195,000 at 5 per cent., of which the Treasury contribute 2 per cent.?—Yes.

40570. If you work that out it means an annual levy of £3,900 from the Treasury and £5,850 from the ratepayers?—Yes.

40571. If you go a little further, and look at the valuation of the areas charged, £32,000 in the case of Cavan and £64,000 in the case of Leitrim, you see that at 4*d.* in the pound Cavan would pay £500 a year and Leitrim £1,066. In other words, this rate would amount to less than £1,600, as against a total annual sum of £5,800, which you guaranteed?—Yes.

40572. Surely at the time they gave that guarantee they knew they were guaranteeing three per cent. on £195,000?—Yes, possibly.

40573. Therefore it is perfectly plain they could

* See Appendix No. 11.

Jan. 14, 1908.

Mr. Peter Gannon, Representative of Ballinamore Rural District Council.

Cavan and Leitrim Railway—*con.*

never be induced to believe that 4*d.* in the pound would meet the guarantee?—It was put roughly to them. They did not go into the figures in these days.

40574. It does not cover one-third of the guarantee. That shows that these representations could not have been seriously considered?—Yes, but they did not go into statistics in this way, but said that the rate would not exceed 3*d.* or 4*d.* in the pound, and it was promised to be self-paying.

40575. But you can see for yourself it is absurd?—That is plain.

40576. The Cavan and Leitrim line is one of those that work at a profit, and the baronial guarantee is reduced by about £1,000 a year?—Yes.

40577. You have not had occasion to ask for liberty to inspect the station books since the receipt of that letter from the Board of Works?—Yes. I applied since. Only a few days ago we had another resolution passed by the County Council.

Resolution of the Leitrim County Council regarding the claim of the auditor to inspect the station books.

40578. *Chairman.*—Here is a letter dated 15th November, 1907, from the Leitrim County Council—"I am directed by the County Council of Leitrim to forward you resolution passed unanimously at the meeting held on the 13th of November." Copy of resolution—"Proposed by Patrick Masterson and seconded by Patrick Gaffney, and resolved—That we think it absolutely necessary in pursuance of the instructions he has received from the Joint Committee of the Cavan and Leitrim Railway, that the baronial auditor, Mr. Gannon, should have full and complete access to all the books and documents at the several railway stations on the line, as well as in the central office in Dublin, for the due performance of his duties as baronial auditor. Copies of this to be sent to the auditor, to the Secretary of the Cavan and Leitrim Railway, and to the Board of Works."

Action of the railway company on the resolution.

40579. *Colonel Hutcheson Poë.*—Have you since the receipt of that letter from the Board of Works saying that you were entitled to have access to——?—(*Witness*)—My letter to Mr. Stewart dated the 23rd of December was—"Dear Sir,—I have received copy of the resolution passed at the meeting of the Leitrim County Council held on the 13th of November. As I am aware that a copy of same has been forwarded to you I shall be glad to know what order your board have made thereon, and if they have given the facilities sought for." The result was that Mr. Stewart merely replied that he had received the letter and that it would get consideration. That is all.

Mr. Stewart.—The matter was considered by my board and this is the reply they wrote to the Leitrim County Council. "I am directed by the board to send you below copy of the resolution passed unanimously in reply to the resolution passed by your Council on the 13th November." Copy resolution—"Proposed by Mr. Macrory, and seconded by Mr. Clements:—Resolved, that the Council be informed that the audit of the accounts is for the last year, and all the original papers connected with that year are sent by the said stations to the office in Dublin, and these have been produced to the auditor, and no original accounts of that year are at the stations but only the accounts connected with the current month, and these will come before the auditor next year in due course."

Free access to the station books still denied the auditor.

40579A. *Colonel Hutcheson Poë.*—In other words, the railway company don't admit the contention of the Board of Works' auditor.

40580. *Mr. Acworth.*—The Board of Works certainly support the contention that we have all agreed on.

40580A. *Chairman.*—If there is nothing behind it why should he not be allowed to inspect the books at the station.

40581. *Colonel Hutcheson Poë.*—I take it in view of that expression of opinion of the Board of Works and of the resolution of the County Councils and also of the construction of the actual Order in Council, which, as Mr. Acworth points out, provides for the railway company producing all books when and as required, that the auditor will be entitled, if he thinks fit, to go to every station on the line in future.

Mr. Croker Barrington, Solicitor.—Mr. Stewart went with this letter to the Board of Works and they said the construction put on it was not that Mr. Gannon had the right to go to the stations, but that the station books and so on should be given to him without any impediment; and he says himself he went to the Board of Works.

40581A. *Chairman.*—If there is nothing to conceal at the station why on earth should not Mr. Gannon go?

Mr. Croker Barrington, Solicitor.—I don't represent the Cavan and Leitrim line. There may be many things with which I am not acquainted, and it may be suggested that Mr. Gannon is travelling outside the scope of his duties as auditor.

40582. *Mr. Acworth.*—The auditor in England can go where he likes.

40582A. *Chairman.*—I think these poor ratepayers who pay so much per annum, if they have a doubt, are entitled to have that doubt cleared up?—(*Witness*)—Not only that, but we hold the universal belief in the country that it is the management of the railway that is responsible for everything.

40583. *Colonel Hutcheson Poë.*—I should have thought that the interest of the railway company itself would have dictated that if there was any suspicion the sooner it was cleared up the better?—(*Witness*)—The connection between the railway company and the Arigna company is such that you cannot expect men to tax themselves. There may be many things in which the railway company do not want us to interfere with their accounts. It is not so much the accounts we want to see as the omission of accounts.

40583A. How many years have you been baronial auditor?—Twelve months.

40584. Are you aware whether any former baronial auditor, or the Cavan auditor at any time when giving his certificates to the County Councils or to the Board of Works, made any representation to the effect that he was not satisfied with the way in which the accounts were presented, or that there were certain items which did not appear to be satisfactory?—I don't wish to go very far into that, but it is only necessary to show how far the people have been fooled. In Leitrim I find that the last auditor—he is since dead—the only checking he did was simply to sign his name. It was written overhead that the accounts were signed and found correct. Even the abstract was not written by the auditor himself—nothing but his own signature. That was all he did for his money.

40584A. Was that the Leitrim auditor?—Leitrim and Cavan. There was only one auditor before.

40585. Can you say why the Leitrim County Council rejected that grant of £24,000?—It was simply owing to the sordidness of the mining company on the one hand and the mismanagement of the railway on the other.

40586. It is one of the few light railways worked at a profit. All the others are worked at a loss and entail a much heavier guarantee?—We are merely a connecting link between two railways. We are placed in a good position, in a fairly populous district, with a good cattle trade. The railway would pay only for mismanagement.

40587. It seems to me that the reason the Leitrim County Council rejected the offer of the money was because of the Arigna Company, and that sooner than see their own line benefited by the traffic which would have gone over it, they cut off their nose to spite their face?—That is not right.

40588. It must have benefited your line?—I could not say that. Twelve or fifteen years ago there were several mine owners in the district and coal was then 50 per cent. cheaper than now. The increase in the price of Arigna coal has been in proportion to the monopoly of the company. If you give them a further monopoly by making the railway up to the pit's mouth, what would you get? As far as we see the price of the coal would go up still further.

Colonel Hutcheson Poë.—I presume you could have made your own conditions with the Arigna Company as to what they should have done in return for the grant.

Mr. Acworth.—If this gentleman comes to Dublin to inspect the accounts it probably means an absence of three days from home, and if he came monthly do you appreciate you are asking him to give thirty-six days to the auditing of the accounts?

Mr. Croker Barrington, Solicitor.—He could not do the work anywhere but in Dublin.

Mr. Acworth.—He clearly won't be paid on the basis of having the thing made as inconvenient and expensive as possible. Do you think anyone would contemplate anything so ridiculous as having to follow the books up to Dublin? I never heard anything so ridiculous.

Witness.—If I ask for a pass to come to Dublin it is refused. They give me one pass in the year as representative of the whole taxable area in Leitrim.

The Commission adjourned till the following morning at 11 *o'clock.*

SIXTY-SIXTH PUBLIC SITTING.—WEDNESDAY, JANUARY 15TH, 1908.

In the Shelbourne Hotel, Dublin.

Commissioners present:—Right Hon. LORD PIRRIE, P.C. (in the chair); Sir HERBERT JEKYLL, K.C.M.G.; Colonel WILLIAM HUTCHESON POË, C.B.; Mr. THOMAS SEXTON; and Mr. W. M. ACWORTH;

Mr. GEORGE E. SHANAHAN, Secretary.

Mr. J. P. RAFFERTY examined by LORD PIRRIE (*in the Chair*).

Jan. 15, 1908.

Mr. J. P. Rafferty, ex-Flax and Seed Merchant, Monaghan.

40589. Mr. Rafferty, are you a merchant in Monaghan?—I was, sir.

40590. Then you have retired from business?—Yes, sir.

40591. What was your business?—General business. I was an agent—commission business.

40592. Commission business, but principally in flax and seed?—Flax and seed.

40593. Had you also to do with other things?—Everything in connection with farmers.

40594. Everything in connection with farmers. Well, now, what have you got to complain of?—From a trader's point of view, I believe the word is "complaint," as far as the railways are concerned, and especially as far as agriculture is concerned.

40595. You mean the rates or want of accommodation?—No, not want of accommodation, or infrequently of that, but the want of any come and go on behalf of the railway company. If there is opposition they will meeet you, but if there is none it is the point of the bayonet.

40596. Have you any specific point that you can put before us?—All these I have made out here. Just to show how rates are managed in the North of Ireland, where the railway company comes into connection and competition with the canal, from Monaghan to Belfast is fifty-two miles, and the rate for grass seed is 6*s.* a ton.

40597. Is that a special rate or a rate that is in the rate-book?—It is a special rate, I believe. But if a farmer came to these people and asked them to take his lot of grass seed they would not take it at that rate.

40598. Do you know what the railway rate in the rate-book is from Monaghan to Belfast?—I do not, sir.

40599. That is the special rate which you know was in existence?—And is in existence to-day, as I have proof here before me in some receipts from the railway company.

40600. You have the receipts. Well, now, have you any other question like Monaghan to Lurgan?—From Monaghan to Armagh—it is only sixteen miles as against fifty-two in the other journey, and the rate is 7*s.* 11*d.*

40601. Is that, again, a special rate or the ordinary rate?—The ordinary rate. Monaghan to Lurgan is thirty-two miles against fifty-two, and the rate is 12*s.* 10*d.* In regard to that I want to say something. I called at Lurgan station one day, and asked the controller of traffic there what the rate on grass seed was. He said 12*s.* 10*d.* I was fishing at the time. I told him——

40602. You were fishing for information?—Yes. I said I wanted to send a ten-ton lot. He said, "Just wait till I see Mr. Gamble; I will call him up on the telephone," and then the concession was made of 7*s.* 6*d.* "Now," said I, "I want to give this information to the Railway Commission. Perhaps you would want to make it lower."

40603. That was from Monaghan to Lurgan or from Lurgan to Monaghan?—Monaghan to Lurgan. He said, "If I had known that I would not have given any information. I thought you meant to do business." I said, "Six shillings is the rate from Monaghan to Belfast, and it should be less from Lurgan, which is only 32 miles of the journey." He said, "That is none of our business."

40604. Yes, but you are a clear business man; could not you look up the rate-book for yourself in the Lurgan station?—There is no necessity for the rate-book as far as an ordinary customer is concerned. Every customer, surely you know, having such a long experience in Monaghan, that every customer has a right to see the rate-book, and see for himself the actual rate that everybody must be charged, and if they do give a low rate it must be actually written in the book?—I say there is no possible access to such a book, and that there is preferential treatment.

Comparison of rates for grass seeds Monaghan to Belfast and Lurgan.

40605. Have you ever asked for that book—have you ever gone personally or sent your clerk or manager, and asked for the book, and been refused it?—I cannot say, but I have asked the ordinary rate, and been told what it was. I know if I wanted to send stuff from Monaghan to any place ten miles down the line, they look up the rate-book, and tell me what it is.

40606. You are sure of this rate of 12*s.* 10*d.*, and that they were prepared to give a special rate of 7*s.* 6*d.*?—Yes.

Effect of canal competition.

40607. I take it, from your evidence, that where they have the opposition of the canal the rates are lower?—The rates are lower.

Equal mileage rates between all stations advocated.

40608. And then do I understand what you complain of is that you consider if the canal is there your rates should be equal all over in proportion to the mileage?—That is my contention, that if the railway company find it possible to pay a 6½ per cent. dividend, especially the Great Northern Railway, in a competitive way, that in like fashion they should make that an equitable rate to every station.

40609. That is your contention?—That is my contention. Before I leave that I want to bring under your notice the rate on this article from Belfast to Monaghan.

Complaint as to disparity in grass seed rates, Belfast to Monaghan and Monaghan to Belfast.

40610. Belfast to Monaghan?—Belfast to Monaghan they make it 14*s.* 2*d.*

40611. You mean on grass seed?—Grass seed from Belfast to Monaghan is 14*s.* 2*d.*

40612. And it is only 6*s.* from Monaghan to Belfast?—Yes, sir.

40613. That is helping the export trade, is not it?—I do not know. I believe it is a burden on the farmer who has to keep up all business in the North of Ireland.

40614. Are you right in thinking that Belfast to Monaghan is charged 14*s.* 2*d.*, and the same article from Monaghan to Belfast is 6*s.*?—Yes.

40615. And you consider the rate should be the same both ways?—I think it should be the same, and every rate should be fixed. If 6*s.* is a fair rate from Monaghan to Belfast a proportionate fair rate should be established from every other station.

Mr. Croker Barrington, Solicitor.—Would you ask, Lord Pirrie, is there, as a matter of fact, any grass seed from Belfast to Monaghan?

Lord Pirrie.—I have got a bill in my hand.

Mr. Croker Barrington, Solicitor.—Is there any grass seed traffic there?

40616. *Lord Pirrie.*—Here is the bill?—I have got the answer to that.

The flax-growing industry.

40617. Have you anything to say about flax?—In connection with the flax traffic there has been an endeavour by the Agricultural Department to start the industry of flax-growing in the County Mayo. Two or three years ago—and every year—I have gone there

Jan. 15, 1908.

Mr. J. P. Rafferty, ex-Flax and Seed Merchant, Monaghan.

myself until last year, and we have endeavoured to get a rate from Ballina to Monaghan or from Ballina to any place, except the two places I have mentioned

40618. Ballina is a central place where you are growing or trying to grow flax?—There is an annual market there under the control or direction of the Agricultural Board. I found out that the rate on flax from Ballina to Monaghan was 39*s.* 2*d.*, and I found out that in the same market there was a representative from Hilden.

Excessive rate for flax, Ballina to Monaghan with the rate Ballina to Sion Mills.

40619. Is that Mr. Barbour's?—Mr. Barbour's, and another representative from Sion Mills, Messrs. Herdman, and their rates were 25*s.* I want to make a change in the evidence. I have given 23*s.* 4*d.* as the rate to Sion Mills.

40620. And the distance there is fifty miles more?—Fifty miles further.

40621. *Colonel Hutcheson Poë.*—What is the distance from Ballina to Monaghan?—I should say about 180 miles.

40621A. Is that right, Mr. Barrington, 180 miles?

Mr. Croker Barrington, Solicitor.—We will get it.

40622. *Lord Pirrie.*—His evidence is that it is fifty miles further than to Monaghan, and the rate is 23*s.* 4*d.* against the rate of 39*s.* 2*d.* to Monaghan?—Yes.

40623. Therefore Monaghan is handicapped to the extent of 16*s.*?—Yes. The whole thing comes to this, that if we wanted to start an industry to-morrow in Monaghan in connection with the flax business we must make the business before we get the concession, and that is the contention of the railway company throughout.

40624. That rate that you have got of 23*s.* 4*d.* from Ballina to Sion Mills is from the Midland Great Western. Does it come over the Great Northern?—It is about an equal division over the Great Northern and the Midland.

40625. I think that is very clear?—Before I leave I would like to bring under your notice another rate——

40626. Just one minute before you go to that. You consider that 23*s.* 4*d.* to Sion Mills is a fair rate?—Fair rate.

40627. And reasonable?—And a reasonable rate.

Necessity for a reduction in the rate from Ballina to Monaghan.

40628. And you would be satisfied with the same rate to Monaghan?—Quite so.

40629. Do you consider it would increase the industries of Monaghan if you had it—that it would help to develop them?—It would give an encouragement to start the industry, because there is no industry at present.

40630. At present you have no mills?—None.

40631. If you got a rate you think you might get them?—Yes.

40632. What is the other question?—From Irvinestown, which is in County Fermanagh, to Glasgow is 22*s.* 6*d.*, from Irvinestown to Monaghan is 14*s.*, and from Monaghan to Belfast is 12*s.* 3*d.*, and from Belfast I have not inquired. But if you tot those up they come to about twice as much as 22*s.* 6*d.*

40633. And the information you got was direct from the railway company? (*No answer, but the witness handed in a card.*)

40634. These are in lots of what? Three-ton lots and upwards?—Yes.

Further instances of excessive rates for flax.

40635. What we have been speaking of, to Hilden?—I do not think it has any reference to Hilden.

40636. To Sion Mills is three tons?—Yes.

40637. It is three tons to Hilden?—In that same market, which is the annual market that the representatives of Barbour's and Sion Mills attended, their consignments would be only about a quarter of what my personal consignment was in the same way.

40638. You mean they have larger quantity?—A quarter of the amount that I had to consign.

Traffic conveyed from Ballina to Cork *via* Glasgow more cheaply than by direct rail.

40639. In other words, you had the largest amount?—They have only a requirement for a certain article. I represent, as commission agent, several spinners. I wanted to send that day flax to Cork, and I found that the only possible way to send flax to Cork from Ballina was to send it to Glasgow, and re-book to Cork, which took something like about fourteen days.

Alleged preferential treatment of certain traders by the Gt. N. Ry. Co.

40640. Is your contention that the railway companies give facilities to certain traders and not others?—That is my contention, and my suggestion is that if it is possible for the Great Northern Railway to pay 6½ per cent. dividend, giving these special rates to special customers, that it is possible to give that rate equitable from all stations over the line.

40641. You do not object to the 6½ or even 7 per cent. provided they give low freights?—I do not believe that they have any right to pay 6½ per cent., because they have been given the power to ply for the traffic, and it should be for the development of the country, and not for the aggrandisement of finances.

40642. You have given us a great deal of information about grass seed and flax of which you know. Have you anything to say about turnips?—I have here a personal connection about turnips. I think it is about two years ago that I asked the Great Northern Railway to make a special rate for turnips from Monaghan to Ballyshannon in wagon lots, and at the same time said to them that a large business could be done. There was an abundant crop of turnips in that year in the County of Monaghan, and turnips were selling at a rate of 3½*d.* to 4*d.* per cwt.

40643. 3½*d.* per cwt.—that seems very low?—Yes.

40644. Is that exceptionally low?—It was low this year, because there was a very abundant crop, and there was nothing for them but to pitch them behind the ditch, and make manure of the stuff, unless there was some way to use them. I said to the agent of the Great Northern at Monaghan that I could do a large business if a proper rate were made. They said the rate was 8*s.* 6*d.*, and after many letters it resulted in a rate being made of 7*s.* 6*d.* That was a colossal concession. However, that really meant a large amount; I have made it out—28 per cent. over the cost of the article.

40645. I thought you exceeded the cost; I did not think turnips could be put on a wagon at 7*s.*?—I am absolutely positive of this, sir, that turnips in that very year were buried behind the ditches by farmers in the County Monaghan. I saw this myself.

40646. That is very distressing, and you blame the want of facilities?—The railway company. That say you must show a traffic before they will make a rate.

40647. Have you anything in writing from them to that effect, or is it merely verbal statement?—That is absolutely from the goods manager, Mr. Gamble.

40648. That you must make a trade before they will give a rate?—I do not know that they said that exactly. I would not go so far that they said that on paper, but the statement is made—"No traffic heretofore in this commodity to cause them to make a further reduction in this rate."

40649. You did not make them an offer—if they carried fifty tons so much, 200 tons so much, and 600 tons so much?—I said in the first consignment there would be a ten-ton lot, and I believed it could be developed into perhaps as many hundred tons.

40650. You did?—Yes.

40651. Have you anything to say about cheese?—Excuse me, before I leave the question of turnips. This year there is a very abundant crop of hay, and, I believe——

40652. Hay and turnips. You said you wanted to keep to turnips?—It is just in connection with that, because it is a cheap commodity. Hay at present is selling about 25*s.* to 30*s.* a ton in County Monaghan, and is unsaleable at that in quantity. There is an export trade possible in that commodity.

40653. I should think there is?—And the railway company sticks out for its price. They won't do any business.

40654. At such an exorbitant rate that you cannot send it to Belfast?—That it stopped the trade in it.

40655. What is the rate? Have you a rate from Monaghan to Belfast?—I have no idea of what the rate would be. I know that they could assist the traffic very largely, and the clearance of a super-abundant crop.

40656. We will go to the question of cheese?—Cheese is absolutely an unknown quantity in Monaghan. It is only what I heard from one of the traders.

40657. Then we will leave it if you have only heard of it?—I have the figures. 2 cwt. 3 qrs. 12 lbs. of cheese from Cork to Monaghan was charged at 7*s.*, which comes to 50*s.* a ton. The freight from New York to Monaghan would be 26*s.* 6*d.*

40658. From New York to Monaghan, railway and steamer and all, in the same quantities?—In quantity.

40659. If you brought large quantities from Cork would they not give a reduced rate?—Exactly what I said. You want to make a trade before they will make a rate.

40660. You think they should have a rate for any quantity?—A published rate is my contention.

40661. You have admitted that you did not go to look at the rate-book. They may have a special rate?—I know that a farmer went and booked a lot of grass seed from Monaghan to Belfast, a small lot, and it was charged at 12*s.*

40662. Well, now, we have got through a certain amount of goods. Have you anything to say about the passenger train service?—The train service connection at Monaghan——

40663. Take Cavan, for example?—Monaghan and Cavan: in the abstract of evidence the whole answer is in the statement that a passenger from Enniskillen to Mullingar, or, for that matter, from Monaghan to Mullingar, cannot return in the same day.

40664. He has to spend the night in Mullingar?—From the way the one company has its train departing five or ten minutes before the other train is due to arrive.

40665. Have you any note of the actual time?—From Cavan to Belfast a train arrives at 10.20, and I know the next departing train from Cavan is 1.45, and the next arrivnig train is 3.20, and the next departing train is 5.0. I may say I know positively there is a train between those times.

40666. So that they could go by it?—Yes.

40667. Well, now, have you anything to say about the summer train?—There is a train going on to the Ballyshannon and Donegal line. There is a train arrives from Belfast and Ballyshannon at 2 o'clock, and there is no connection with that train at all until about 5.40 in the evening.

40668. You have to wait from 2 o'clock till 5 o'clock?—Yes; admiring the scenery, sir.

40669. Broadly speaking, you consider the train service is not made to suit the people?—That is my contention.

40670. And that each line should be compelled to try and make their arrivals suit the departure of the other train?—That is my contention. In that connection there is a side line——

40671. Can you make it clearer?—I will. There is a side line in Monaghan in connection with Carrickmacross, twenty-two miles distant from the county town of Monaghan. A train leaves Monaghan at 9.50 in the morning, and arrives forty minutes later in Carrickmacross than it does in Dublin. It takes longer to get to Carrickmacross than it does to Dublin. That is 1 cwt. of coal saved to the Great Northern Railway Company, hence the 6½ per cent.

40672. This 6½ per cent. seems to be on your mind?—It gets on my nerves.

40673. If they gave the accommodation I would not object if they doubled that. Do you want to put anything in evidence in regard to parcels—take Monaghan to Dublin?—20 lbs., Monaghan to Dublin, costs 4*d.* Monaghan to Cavan, which is twenty-six miles, costs 6d.

40674. Therefore, it is 2*d.* more for, how much more distance?—120 miles less.

40675. You think that is the way to interfere with the welfare of the farmers?—I do, sir.

40676. And the railway companies would be assisting themselves by giving reduced rates, in accordance with the mileage. You do not object to the rate to Dublin?—I do not.

40677. You consider it fair?—Yes.

40678. You consider they should be all in proportion?—Yes.

40679. That is what I want?—From Donegal to Bundoran, 14 lbs. costs 1*s.* 3*d.*, and from Leeds to Bundoran, 17 lbs. costs 1*s.* 1*d.* You can bring in a foreign article to compete with the Donegal—a Scotch shoddy tweed to compete with the Donegal tweed.

40680. Have you ever brought this before the directors of the railway company?—You might as well try to——

40681. That is not an answer to my question, Mr. Rafferty. Have you ever gone to the trouble to go to one of the directors?—You get the stereotyped answer: "We received your letter of such a date, and the matter will have the attention of our directors."

40682. Then I take it you have put it before them?—Not just that particular case.

40683. But do not you think a case like that looks on the face of it that if you had put it before them the directors might have considered it with advantage to themselves? Do not you think a railway company can be very materially assisted by the traders putting before them such extreme cases as a rate of 17 lbs. from Leeds to Bundoran 1*s.* 1*d.*, whereas, in the other case, 14 lbs. from Donegal to Bundoran is 1*s.* 3*d.*?—They might; but they seem—that side of their brain seems to be——

Complaint as to inefficient postal service with Bundoran and Ballyshannon.

40684. What about the postal service? Have you a good postal service in Monaghan?—Not in Monaghan, but in the counties of Tyrone, Fermanagh, and Donegal, for thirty miles immediately beside the railway line, and touching seven villages and many rural post offices, a double-horse vehicle carries the post—a very anomalistic procedure in the 20th century—but the Great Northern Railway Company holds out for its prohibitive price in the eyes of the Postmaster-General, and the result is that the users of the postal service are seriously inconvenienced through waste of time, the morning mail deliveries not being made in the towns of Ballyshannon and Bundoran until ten and eleven o'clock; and frequently storms have caused this, the usual delivery, to be postponed till an advanced hour in the afternoon. It is impossible to send a postal reply by the first post on the day of receipt of a letter, or catch the outgoing train from Bundoran.

Suggested amplification of Postmaster-General's powers as to use of trains for mails purposes.

40685. Do you consider that the postal authorities should have a right to send letters by every train at a very moderate rate when the railway companies have got a monopoly of the district?—My contention is that the postal service, being for the benefit of the people, the Government that has given these companies power to ply for traffic should have absolute right to use the railway, and compel the railway company to use their service to convenience the people of the district.

40685A. I think that you might leave it there.

Mr. Croker Barrington, Solicitor.—They have that power. The Postmaster-General has that power.

40686. *Lord Pirrie.*—He evidently does not know. I agree with you. He considers that they should do it; and now the question arises, why does the Post Office not make use of it.

Mr. Croker Barrington, Solicitor.—He does; I was only mentioning that he had the power.

40686A. *Lord Pirrie.*—I do not think, Mr. Barrington, that the farmers know the powers that the railways have, as they do not seem to know their own powers.

Mr. Croker Barrington, Solicitor.—And they do not know the power the Postmaster-General has. They do not know about rate books and things.

40687. *Lord Pirrie.*—They do not seem to know. Your view is that the Department of Agriculture and Technical Instruction have done and are doing——?—Have not done, in my opinion.

40688. You do not think they have done anything to improve the existing state of affairs?—I have seen no trace of their work.

Ineffective intervention of the Department of Agriculture to assist traders.

40689. Broadly speaking, in Monaghan?—Neither Monaghan nor any other place I have touched—I do not believe the Department of Agriculture have, what I may say, forced the hand of the railway company in any way.

40690. Used their influence in making the rates suit the traders—is that what you would mean to convey?—I do not believe any action of theirs has been vigorous enough to bring about any result.

40691. And you have got a great deal of experience of traffic?—I have.

40692. From your evidence, you evidently do not consider the railway companies, as at present run in Ireland, are run for the benefit of the trader. What would you suggest? Have you any suggestion in your mind as regards how the traders could be assisted?—I believe the railway companies should at once become State-owned, and that instead of the country being bled by excessive rates, that the State——

Nationalisation of the railways advocated.

40693. You mean the Irish people should own the railways?—The Irish people themselves should own the railways. A question might be raised that there is not sufficient money to buy the railways.

40694. You mean sufficient with British credit?—That the present state of——

Suggested scheme.

40695. The Money Market?—The Money Market and the Consol value are all difficulties in connection with railway purchase. My idea is that, first of all, to stop the competitive dividend-paying powers of the railways, limit them to pay equal to the results on Consols. Having arrived at that, I believe that two

Jan. 15, 1908

Mr. J. P. Rafferty, ex-Flax and Seed Merchant, Monaghan.

and a half millions sterling, which a previous Commission has found to be in excess collected over expenditure—that that for twelve years' period would buy out the total railway system of Ireland at thirty-six millions sterling—buy it out piecemeal.

40696. Your idea is that two and a half millions is taken from us, and should be given back, and the railways handed over to Ireland free of cost?—If they do not want to make restitution for the amount of money that they have taken—that their own appointed Commission have found they have taken—they should at once, I believe, put this fund that is so derived to purchase out the railways piecemeal if they cannot do it in bulk.

Financial arrangements for State purchase.

40697. You would like to see it done at once, and as quickly as possible, for the benefit of Ireland, and you consider that it is the most beneficial thing that could be done in the interests and the welfare of the Irish people?—I would like to leave it there.

Examined by Sir HERBERT JEKYLL.

Effect of canal competition on railway rates.

40698. Mr. Rafferty, you gave an instance of a rate between Monaghan and Belfast of grass seed, 6*s.* in one direction and something considerably more in the other—do you know of any other cases of that kind where the rate is different in the two directions?—On the same basis, where the railway company and canal company are concerned.

40699. My point is that between two points, A and B, there appears to be, in one instance, a rate different in the one direction from the other, for the same two stations?—Yes.

40700. Do you know of many instances of that kind?—In every place in touch along the Great Northern Railway Company, where the railway company is in direct opposition to the canal, and the canal in direct opposition to the railway company, the same thing occurs.

40701. How does the canal competition affect it? What influence has it, as it appears to be the same in both directions?—No. The canal freight must be a boat load.

40702. Oh?—The smaller quantities would be treated alike with the canal company. In that connection a thing occurs to me which I think I should bring before this Commission. On the 25th March, in the year 1907, a consignment from Newry to merchants in Monaghan, 13 cwt., was charged 11*s.* 3*d.*, as against 5*s.* 6*d.* from Monaghan to Newry.

Disparity in the rates for agricultural seeds, Newry to Monaghan and Monaghan to Newry.

40703. *Mr. Croker Barrington, Solicitor.*—What goods?—Seeds. But the railway company tried to square the difficulty—which would seem to be a difficulty—the railway company say that the rate was 6 cwt., instead of 13 cwt., in order to qualify the rate.

40704. *Sir Herbert Jekyll.*—Did you verify the rate in the rate book?—No, sir. There are the particulars. (*Handing in a railway account.*)

40705. You did not examine the rate books at Newry or Monaghan to see if the rates were in it?—I think it could be found out—we might ask some of the railway representatives here to produce the rate, and supply it from Newry to Monaghan. They will find that right.

Examined by Colonel HUTCHESON POË.

40706. I suppose you are aware that the answer of the railway companies as to the lower charges for grass seed, to begin with, to Newry and Belfast, is owing to the fact that if it did not go by rail it would go by sea, and that the water competition, of course, influences the railway rate. They are obliged, in order to prevent all the flax seed and grass seed going into Belfast and Newry by sea—they are obliged to give a special rate in order to get some of the traffic?—I beg your pardon, I have not followed you.

Effect of water competition on railway rates.

40707. You compared the rate for grass seed from Monaghan to Belfast with the rate from Monaghan to Lurgan, and similarly, the rate from Monaghan to Newry with that from Monaghan to Lurgan. Now Newry and Belfast are on the sea—Belfast is on the sea, and Newry in immediate connection by a river, is not it? And if the railway company did not charge a low rate the grass seed would probably get into Newry and Belfast by sea, and the railway would get none of the traffic?—Yes. That is in connection with the traffic from Monaghan or from inland districts, but to Lurgan——

40708. Of course, it does not affect Lurgan. It has no water competition, and, therefore, the railway has got a monopoly; but where there is any rival—sea or canal competition—the railway is obliged, in its own interest, to charge a lower rate?—Yes; and if it is possible, wipe out the canal as a competitor.

40709. I do not think it bears in Lurgan. I have taken the trouble to go into the maximum rates for terminals and for conveyance of grass seed from Monaghan to Lurgan, a distance of thirty-two miles. I understand you to say that the rate was 12*s.* 10*d.*?—I have never done any business with it.

40710. Have any of your colleagues done it?—I know that one of the merchants is compelled to store his grass seed that he buys in small quantities on the premises of the canal company, there to wait for sufficient to make a boat load.

40711. Of your own knowledge, you are not aware that such a rate as 12*s.* 10*d.* has ever been put into operation?—Oh, yes.

40712. On the railway, for grass seed—because if it has it is above the maximum?—It is the amount that has been quoted by the agent at Lurgan.

40713. If you take the trouble to work it out, grass seed comes under Class 2, and the maximum terminals are 4*s.* 8*d.*, and the maximum conveyance rate for thirty-three miles is 6*s.* 9½*d.*, which works out at a maximum, supposing the railway charges the full amounts for terminals and conveyance, of 11*s.* 5½*d.*; against that you tell me that some traders have been charged 12*s.* 10*d.*, and if that is the case it is 1*s.* 6*d.* in excess of the maximum?—That is the amount that was quoted to me personally by the chief agent at Lurgan.

40714. We have it. That is your evidence, and, of course, the railway companies will answer it. I only wish to point out that it is in excess?—I think all rates should be published.

40715. I took the trouble to go into the flax figures. I do not not know whether it was carried in Class I or in Class 2?—I do not know the classification.

40716. Under Class 1, the minimum is 6 cwt., and Class 2 it is smaller; but, assuming it is Class 2, from Ballina to Monaghan, a distance of 179 miles, the maximum rate, including terminals, works out at 33*s.* 5*d.*, and you tell me that the rate in operation is 39*s.* 2*d.*?—That is how I found the rate, from the Great Northern themselves and the other railway company (*handing in memorandum*).

40717. "I am in receipt of yours of 23rd inst., and in reply, beg to inform you that the rate for flax from Ballina" (that would be probably Class 1) "to Cavan is 27*s.* 10*d.*"?—That railway company did not take it any further.

40718. What is the 11*s.* 4*d.*?—Cavan to Monaghan.

40719. That would be 39*s.* 2*d.*?—Yes.

40720. The maximum is 30*s.* under Class 1, and 33*s.* 5*d.* under Class 2, so that if 39*s.* 2*d.* is charged it is in excess, 6*s.* in the one case and 9*s.* in the other?—That is where the inequity of the whole proceeding is. There should be a public rate.

40721. The railway companies will have something to say, but according to that they have exceeded their powers to a considerable extent. I come to the question of turnips. You say that a large business could be done if the railway company would be prepared to meet you?—That is so.

40722. Would you consider 7*s.* 6*d.* a very heavy rate?—What is the value of a ton of turnips?—The value of a ton of turnips would be 5*s.* 10*d.* in that year. At present it would be 11*s.* in Co. Monaghan and Co. Tyrone.

40723. What is the distance, have you any idea, from Monaghan to Ballyshannon—sixty miles, I suppose?—Sixty-three miles.

40724. I took it at sixty miles and the maximum rate would be 11*s.*, so that in that case the railway companies were making a concession of about 4*s.* That would be the charge for sixty miles, 11*s.*, but, at any rate you think that the disposition they showed when the price was so very low, practically doubling the cost, which was prohibitive, showed a lack of enterprise, and was very much against the interests of the Great Northern Railway Company itself?—Quite so.

40725. I suppose your contention would be that if the railways were taken over, unified, or put under some central authority, that you would hope, at any rate, that that want of enterprise would be diminished?—I should hope so.

40726. I notice you speak of being put under State control. Do I understand you to mean administered by a Department of the Imperial Government or have

you any other means in your mind?—The immediate Government has not occurred to me outside the Imperial Government, because it is not present, but I should very much like to have the Government under Irish control.

40727. We have had a good deal of evidence, some in favour of State purchase and State administration, and more in favour of Irish authority. That is the point I wish to ask you. I wished to get it from you, in your own words, whether your idea was in favour of State control, which is, of course, under the Imperial Parliament, or assuming the railways were put under some central organisation that they should be administered by an Irish authority?—Certainly, an Irish authority.

40728. You think it would be preferable to State control?—Preferably, from an Irishman's point of view.

40729. Of course, though you may object to the Great Northern Railway Company paying such a dividend as they now do, I presume that in such a case as you contemplate—that is, the unification of railways—you would not entertain the idea of the shareholders in these companies being inequitably treated—shareholders who have put their money into them as commercial undertakings, which, under existing circumstances, must do their best for the shareholders, and I suppose if they should be amalgamated, or any alteration made, no injustice should be done to any class of shareholder. I do not take it that you would approve of it?—In a fashion, no. In a way, I suppose, that all shares are a gamble. To-day, when we are sitting here, and the Great Northern Railway is paying 6½ per cent., there might be ten accidents that might wipe out the whole company.

40730. Quite so. On the other hand, where a railway, such as the Great Northern Railway, has been paying a dividend of 6 per cent. or 6½ per cent. for ten or fifteen years, it would be manifestly very unfair that in the event of that railway changing hands, that the shareholders in it should be mulcted?—I believe it is the district that has been mulcted—in the minds of many that has been the case.

40731. I only hoped I would get you to agree that in any arrangement no injustice should be done to any class of shareholders?—So would the landlords have said that no injustice should be done to them, but the law stepped in and the rates were reduced.

40732. Railway shareholders are not confined to landlords?—It is the same principle.

40733. The large majority of the shareholders are very small people, who would suffer very heavy loss if the railways were taken over on the basis of 3½ per cent.?—Yes, let them put their money into Consols, and make it easy for the country to get the money, and the thing is all right. Before I go further might I mention between Monaghan and Dublin.

40734. *Lord Pirrie.*—Yes?—There is no train arriving in Dublin from Monaghan, a country town only something like eighty-nine miles distant from Dublin, before 1 p.m. There is a train from Clones at 7.10, and there is a train from Armagh at 7.40. We are the unhappy medium. Now, a luggage train passes Monaghan, going to Clones, at the hour of 7.30, and at one time this train was run in connection with the Dublin departing train from Clones at about 7.10. This train, I might say, more often missed than caught the supposed connection. I, myself, have been left behind. No mid-day train except a train leaving at 3 o'clock to Dublin, which arrives here about 6.20, or after that, and it necessitates to travel by limited mail, second-class and excess of 2*s.* 6*d.* on the journey from Dublin.

40735. To Monaghan?—From Monaghan to Dublin. What I would like to suggest—Why not run the train leaving Clones at 7.40 so as to connect with the 8.3 departing train at Portadown.

40736. I do not think the amount of detail is much use. You have already given your opinion that you do not think the railway companies facilitated the traveller. The question is one of the things that will come up later on when the railway companies give evidence?—Could we not bring about an earlier solution of the question by putting this before the Commission?

40737. They hear what you are saying, and they, probably might do it. It is just one of the facilities.

40738. *Mr. Sexton.*—He has stated a grievance, and I think he was about to suggest a remedy?—Yes.

40739. *Lord Pirrie.*—Finish it?—An earlier train leaving Clones to connect with the 8.3 from Portadown would remedy it as far as possible. If not go the other way and connect with the early train that leaves Monaghan at 7.30, going West. You have another train going East. There are three trains that stop at Armagh, and do not come on to Monaghan. It is inequitable treatment.

40740. *Mr. Sexton.*—Have you said what you wish to say?—Yes.

Examined by Mr. Sexton.

The right of the public to examine railway rate-books.

40741. Witnesses here are often asked whether they have examined the rate-books. Do traders in Ireland really know they have any right to examine the rate books?—I never knew it till to-day, and I thought I was rather a keen business man.

40742. By law the consignor has the right to demand the rate-book at the station of departure. Have the railway companies taken any steps to make the public aware that they have any right to examine the rate-books?—No, sir. None that I know of; but excuse me——

40743. If public measures had been taken to this end you would know of them?—Yes.

Futility of seeking redress from the railway companies.

40744. It is often asked whether a grievance stated in evidence has been put before the directors. But if traders have, again and again, asked concessions unavailingly from managers, it is to be presumed that the directors were not left in ignorance of what had been asked?—The only presumption, sir.

40745. Then, even when the directors have been directly approached, your evidence is that the result is merely a form of acknowledgment, followed by no substantial act?—Quite so.

Alleged failure of the railway companies to foster industries.

40746. Another argument advanced is that when a grievance has been alleged it is asked—"Is it really to the interest of the railways to refuse a concession in this case." Your evidence is that they do not always act in their own interests?—Quite so.

40747. In fact, I understand you to say that they lay it down as a principle that you must first make the business in order to get the concession?—It is exactly what I want to get at.

40748. Is not that principle directly contrary to the actual line of advance throughout the world—must you not get the concession in order to develop the business?—That is exactly what stops development of business in many cases. The railway companies are the first power against its advance.

Their action opposed to their own interests.

40749. Therefore, when doubt is thrown on the existence of a grievance on the ground that it is not the interest of the railway companies to permit that grievance to continue, we find that they actually lay down the principle that traders must make the business first in order to get the concession, whilst in the case of Ireland we know—it is obvious—that business, and especially new industries, cannot be developed unless the concession is first made?—Sympathetic concession should be made, in order to encourage.

40750. It seems from their own principle that the railway companies do not act in their own interests?—They do not. I am positive of that.

40751. Now, is Ireland suited to the production of flax?—Very much so, sir.

Suitability of the climate of Ireland for flax growing.

40752. The country is very well suited to grow flax?—There is no doubt about it, that the flax that is grown in Ireland is the best quality that the world produces, when carefully treated.

40753. Both the soil and the climate are particularly suitable?—Quite so.

40754. What then is the reason that so much flax is imported?—There is not enough grown in Ireland—it is not the tithe.

Effect of railway rates on the industry.

40755. Why not? Do the railway rates prevent the growth of it?—Well, I would not go so far as that.

40756. Do they tend to restrict the growth of it?—It is a high-priced commodity, and I do not say the railway companies do.

Extent of the flax imports.

40757. It is very valuable, and so much the more desirous the farmers should be to produce it. What is the reason, then, that the imports of flax to Ireland, and of yarn—of flax from Belgium and Russia, and of yarn from Belgium, represent about two-thirds of the whole Irish export of linen?—The North of Ireland has been made the exchange of the linen trade, and the yarn trade, and you might as well ask how has Manchester been made the centre of the woollen trade, wool is not grown about Manchester.

Jan. 15, 1908.

Mr. J. P. Rafferty. ex-Flax and Seed Merchant, Monaghan.

40758. But if Ireland, as you say, can produce better flax than any other country, and its total export of linen is about 60,000 tons a year, why cannot Ireland produce a larger proportion of the raw material? Why is it brought from Belgium and from Russia—a crop worth, I think, an average of £50 a ton?—As high as £80 a ton.

Average price of flax.

40759. As high as £80?—I do not think if all Ireland was under flax, or proportionately, it would be quite sufficient to supply the market wants of the yarn producers in the North of Ireland.

Capacity of Ireland for the growth of larger quantities of flax.

40760. I should think Ireland would be quite capable of producing the whole of the flax imported?—No, sir. It is a very intricate question. I do not think anyone that is not really in the "know" of the business can understand the difficulties. There are various grades and qualities, and they cannot all be produced in one country.

40761. I know; but your account is that Ireland can produce as good flax as any country?—Yes, and as bad.

40762. What is the influence upon the production of flax in Ireland of such rates as that from Ballina to Monaghan?—Oh, it is a stopper.

40763. Oh, a stopper. Are there other rates like that one?—All over the system.

40764. Surely, then, if these rates are stoppers, as you put it—prohibitive rates——?—It comes indirectly off the grower and producer.

The development of the flax-growing industry prevented by high railway rates.

40765. Does not that restrict the production of flax in the country?—I believe it does.

40766. This Commission is asked to report what has retarded the expansion of traffic on the Irish railways, and what prevents the full development of agricultural resources. Would you say "Such rates as that from Ballina to Monaghan for flax"?—It is entirely inequitable. It comes to something like 3*d.* a stone, £2 a ton; and 3*d.* a stone is very considerable.

40767. You see the Irish grower has to compete with very low and favourable rates from Belgium and Russia?—Yes; 14*s.* from Courtrai to Belfast.

40768. Surely the farmers of Ulster have a very strong interest in extending, as far as they can, the cultivation of flax?—Very much so.

40769. And the railway companies push against them?—They do.

40770. We are told by two or three witnesses that Ulster wants no change. If the farmers of Ulster understood the effect of the rates on flax do you think they would want a change?—They would. Very few in Ulster but want a change, especially in railway rates.

Complaint as to excessive rates for flax, Ballina to Cork.

40771. This rate on flax from Ballina to Cork—do I understand the flax is sent to Glasgow, and then back to Cork?—I sent it from Ballina to Glasgow and from Glasgow to Cork at 13*s.* 4*d.* a ton under a charge that would be made by the railway company dealing directly with the traffic.

Traffic sent by sea, *via* Glasgow, in consequence

40772. Could anything be worse than that? In order to send flax from one part of Ireland to another (I suppose to have it manufactured), you have actually to send it to another country, and bring it back again? Could anything we worse?—I do not think so.

Disparity in the rates for grass seed from Monaghan.

40773. These rates on grass seed show an extraordinary disparity, which is not accounted for by the suggestion or inquiry of my friend, Colonel Poë. You have pointed out that the rate from Monaghan to Belfast is only 1·4*d.* per ton per mile, and to Newry 1·2*d.*, while to Armagh it is 6*d.* per ton per mile, and to Lurgan 5*d.* Is the seed sent to Belfast and Newry for export or is it sent for home distribution?—It is sent for manufacture, if I might so speak. It is cleaned in Belfast or Newry. Those are the cleaning centres of rye grass, more or less.

40774. And it may be distributed in Ireland?—Comes back again, very frequently.

40775. Of course Monaghan, being an inland town, very much inland, there can be no question of sea competition?—No.

40776. Because wherever you want to send the grass seed to from Monaghan you cannot introduce the sea in any competitive sense?—No.

40777. Well, then, surely the necessary effect of this extraordinary scale is to distinguish Monaghan and Lurgan as distributing centres, and to substitute Belfast and Newry for them?—Quite so.

The through rate for pork, Cavan to Glasgow, in excess of the locals.

40778. What is the meaning of the circumstance that the through rate on pork from Cavan to Glasgow is higher, some 5*s.*, than the sum of the local rates?—I do not know, sir. Perversity.

40779. It seems to be very prejudicial to Clones as a place for the sale of pork?—No; prejudicial, rather, to Cavan.

40780. To Cavan as a place for distribution?—As a place for sale.

40781. As a place for sale and export, and to Clones as a place for purchase?—Yes.

40782. Because, if to send pork from Cavan to Glasgow costs 40*s.* a ton, and the two local rates—to Clones, and thence to Glasgow—come to 5*s.* less, the effect is to hinder the Cavan exporter from getting supplies at Clones?—It is a perishable article.

40783. The through rate is more than the two local rates. What is the effect of that?—It handicaps the producer of pork in Cavan, and the dealers in Cavan are compelled to have an agent in Clones to re-book their stuff to Glasgow on the same line.

40784. Can you thrown any light on that arrangement—the reason of it?—The Great Northern Railway——

40785. Does it go on the same train?—In the same wagon, not unloaded or changed.

40786. If you pay the through rate it costs 40*s.*, but if you re-book in transit it is 5*s.* a ton cheaper?—5*s.* a ton cheaper. Pure business.

40787. As is sometimes said, the railway company will have something to say about it?—They will. It will take a little saying.

40788. In the case of turnips, you promised a large business?—Unfortunately, I very much regret that I did not keep the papers. I did not think they would come into use, and I destroyed the letters. I would have liked to produce them before the Commission.

40789. However, from Ballyshannon to Monaghan, a short distance, the rate was more than the value of the article?—28 per cent. over the value at that time.

40790. What has retarded the expansion of traffic on the Irish lines? What is the reason that the agricultural resources of Ireland are not fully developed? These are the questions put to the Commission?—Because the railway companies won't move. They will do nothing.

40791. I suppose there are really turnips at Ballyshannon as well as at Monaghan, and if a man can get turnips at Ballyshannon for the ordinary cost of production it is very evident he won't give more than double the price to get them from Monaghan?—At the time turnips were selling at Ballyshannon for 1*s.* per cwt., and 3½*d.* in the town of Monaghan.

40792. At any rate, the railway traffic did not expand by the turnips. That natural resource was not developed?—They were made manure.

40793. Cheese would be very important to Ireland if she could develop this industry, but I understand cheese can be brought from New York across the Atlantic and by rail from Dublin or Belfast to Monaghan for 21*s.*?—I am wrong, 26*s.* 6*d.*

40794. It hardly affects the argument—the difference hardly affects the argument?—I have different information this morning.

40795. Whilst, if you want to send Irish cheese from Cork, where there is an attempt to develop a cheese industry, to Monaghan it costs 50*s.* a ton?—I have inspected the railway charge sheet—2 cwt. 3qrs. 12 lbs. was charged 7*s.*

40796. Sometimes we hear about a ton containing 2,240 lbs., and that a difference in freight amounts to nothing on a pound of cheese, but is that the way to look at it? Is not it rather this—that a merchant in Monaghan who wants to purchase cheese will pay 25*s.* to 30*s.* a ton less for freight if he gets it from America than from Cork?—Yes.

40797. Would not that be his decision? He would buy the American cheese, and the Irish trade will be extinguished?—Smothered. Excuse me, there is another anomaly. Confectionery between Belfast and Enniskillen is 18*s.* a ton. That is over the Great Northern Railway. There is a railway company from Enniskillen to the town of Sligo—the Leitrim Railway—and the rate from Belfast to Sligo, for forty miles more, is 15*s.*, that is 3*s.* less than it is to Enniskillen.

40798. *Lord Pirrie.*—And yet it comes through Enniskillen?—Yes.

40799. *Mr. Sexton.*—We know that very active and skilful efforts are made to concentrate traffic in Belfast, and make Belfast the centre of import, export, and distribution, to the prejudice of other ports. The parcels arrangement shows, apparently, that local conveyance of parcels is penalised?—Yes. It is quite evident with the connection of Bundoran and Donegal.

Mr. J. P Rafferty, ex-Flax and Seed Merchant, Monaghan.

40800. The system works to the prejudice of Donegal and Bundoran?—I know in County Donegal the producing industry is not developed.

40801. And the home-tweed industry is hindered?—Yes.

40802. I note from your supplementary memorandum that you want to say something about the treatment of live stock at Belfast?—Cattle from Monaghan or from any Northern station, cross-Channel by Belfast, are sent to veterinary stations, put into the veterinary pens on arrival, inspected, walked a mile—a full statute mile—across the city, and for this there is a charge of 3*d.* a head—a driver's charge. Now cattle have been killed, I know one has been killed, several cattle have been injured in crossing the station, and cattle that arrive late at night, being brought across the city, frequently become unmanageable in dark streets and sideways, and have lost or missed sailings. Now this could be all obviated, I believe, if the railway companies—the County Down and the Great Northern Railway—changed the veterinary pens that they have erected from Victoria Station to the Central Station. Either of these railway companies will take scrap iron across the city, scrap iron at about 30*s.* for a wagon load, as against something like £5 for cattle.

40803. Would that end the grievance?—I believe that it would—in a manner.

40804. Mitigate it?—Yes.

40805. Now, as to the financial solution of purchase. Of course, Mr. Rafferty, if restitution were made, we know that the amount which the Royal Commission unanimously found to be drained from Ireland by over-taxation would be about double as much as is required to pay the whole annual charge on the value of Irish lines?—I did not know that.

40806. I mean, take £40,000,000 at 3½ per cent., that is only £1,400,000, while the Commission found that Ireland was over-taxed to the extent of two and three-quarter millions?—That is what I said: that it is impossible to find the finance at the moment; that every year, at least up to the extent of three millions in excess of the expenditure, that it should be placed aside for the purchase of railways.

40807. Let us take forty millions as the figure for the purpose of founding a calculation. Forty millions at 3½ per cent., which would include interest and sinking fund, would be £1,400,000 a year. That would leave another million and a half of the produce of over-taxation for other Irish public uses. It would not be necessary to apply the whole of the money to railway purposes; one-half would be sufficient, and the other half might be left for other public uses in Ireland. Do you understand that?—I understand it now, but I had not thought of it.

Suggestion as to financing a State purchase scheme for the Irish railways.

40808. It is quite obvious that this would be so. And it would even make provision for a sinking fund, whereby at the end of a term of years the railways would become the property of Ireland absolutely without any capital burden?—Yes.

40809. If there were no restitution and no free grant, but if the credit of the Government were applied to the case—we know that the money market is now depressed, but the money market moves in cycles; it will not be always depressed; in the course of a year or two it may be again in a tolerably buoyant condition—I put it to you that the use of the Government credit would enable the Irish railways to be purchased, and leave a large surplus out of the present net profits. Even if Ireland borrowed on the security of the railways and of the rates she could borrow at about 3½ per cent., and that would leave a margin. So that it is clearly practicable, in any event, to purchase the railways, and leave a margin out of the present net profits available for the reduction of rates?—Looking at it in that way, I believe it is quite possible.

40810. It is as clear as day?—It is merely a transfer of accounts, as far as I see.

Nationalisation of the railways under the control of an Irish representative body advocated.

40811. Do you think, in order that the reform should be effective, that the lines should become the property of Ireland—that is, the country immediately concerned in the reform?—I believe that a body of Irishmen competent to deal with such affairs should have the control of the Irish railways.

40812. As to the ownership of the lines, it would be material that from year to year any surplus obtained from the working should be available for reduction of rates. In order to ensure that the surplus would not be taken away and applied to any other purpose, would it be a desirable thing in your opinion that the ownership of the lines should be vested in Ireland?—Surely.

40813. And then, in order to secure that public interests should prevail, the body under which they were worked should be a representative body?—They should be a body in sympathy with Irish development and the development of Irish industries; I do not care where you get them.

40814. But periodically responsible, by election or choice, to public opinion?—Yes.

Mr. James Murland, J.P., examined by Lord Pirrie (*in the Chair*).

Mr. James Murland, J.P. (Messrs. Jas. Murland & Co.), Annsborough, Co. Down.

40815. Mr. Murland, you are a member of the firm of James Murland and Company?—Yes.

40816. Flax spinners, of Annsborough, County Down?—Yes.

40817. You send a good deal of goods by railways?—Yes.

40818. Principally by the Belfast and County Down Railway?—Yes, principally.

40819. Am I right in saying that your firm has been in existence for a very considerable number of years?—Yes, for a long time—since about 1828; and prior to that we were in hand-loom business.

40820. Your father and grandfather preceded you in the business?—Yes, and my great-grandfather.

40821. Am I right in assuming that all your transactions with the railway company have been extremely pleasant and amicable?—Yes.

40822. And that any little differences were settled immediately you called upon them?—Yes.

40823. You are quite satisfied with the rates. How far is Dundrum station from Castlewellan?—Four miles.

40824. And when the company made the new connection with Castlewellan they increased the 6*s.* 6*d.* rate by 6*d.*?—Yes.

40825. Is that a satisfactory rate to you?—Yes.

40826. A cheaper rate as compared with your traction engine and cart?—Yes.

40827. So that those railway companies in the North have tried to meet the necessities of traders?—I think so.

40828. It is very gratifying to me that you have spoken so well of a railway company with which I used to have such a close connection. You have heard the evidence of the previous witness, have you not?—Yes.

40829. And you have probably read some of the evidence given before the Commission since its proceedings started?—Yes; I have read most of it.

Suggestion to amalgamate the County Down and Great Northern (Ireland) Railways disapproved.

40830. Do you agree with the suggestions that have been made, that it might be desirable that amalgamation should take place in the interests of the public?—No, I do not.

40831. You are opposed to amalgamation?—Yes.

40832. You do not agree with Mr. Cooke, who represented the Chamber of Commerce, that the County Down Railway might with advantage be handed over to the Great Northern Railway Company?—Most decidedly not.

40833. You refer in your proof of evidence to appeals to the Board of Trade or other bodies. You have never made any appeal yourself in connection with rates?—No, I have not.

40834. In fact, you have not had occasion to do so?—No.

Appeals to the Board of Trade.

40835. The railway company have met you so well. If you would not approve of the County Down Railway being attached to the Great Northern, would you approve of any amalgamation at all? Have you studied other parts of Ireland?—I do not know anything at all about the South of Ireland as far as railways are concerned.

Flax traffic from the interior.

40836. In your business do you not send any goods at all except between Castlewellan and Belfast? Do you send any goods inland at all, or do you get your flax inland?—Yes; we get flax from inland.

40837. From all sorts of places?—Yes.

Jan. 15, 1908

Mr. James Murland, J.P. (Messrs. Jas. Murland & Co.), Annsborough, Co. Down.

40838. From Ballina?—No; we have never got any from Ballina.

40839. Where do you get your flax from outside County Down and Antrim?—A good deal depends on the season, as far as Irish flax is concerned. Of course, we are drawing a lot of flax from Belgium.

40840. I am speaking of Ireland for the moment. Do you use much Irish flax?—Yes, a great deal.

40841. Where do you buy it?—We buy most of it in County Down.

Sources of flax supply to Annsborough Spinning Mills.

40842. Then it comes over the one railway?—Yes. There is a good deal of it, because there is a fairly large flax-growing district round us, and a lot is carted from Rathfriland market, and we have latterly begun to bring it by rail from Newry.

40843. On the Great Northern Railway?—Yes.

40844. Do you get facilities on the Great Northern Railway equal to those that you get on the other lines?—We asked for a special rate for flax from Newry to Castlewellan, and they gave us a special rate of 7*s.* I do not know the distance; it is a long way round by rail. The distance by road is about twenty miles, but by rail it is much farther. The rate is 7*s.* a ton.

40845. Do you think that that is a fair rate?—I consider it fair. I could not cart it for the freight.

The railway rates regarded as satisfactory.

40846. So that you get it by rail now?—Yes, we get it by rail now. We send linen and that sort of thing by the Great Northern Railway to other places on their line, and we get linen for bleaching from other places on that line, and in each of these cases we have asked for a special rate below that in the rate-book.

40847. And have you got it generally?—We have always got it.

40848. Is the rate that you get marked in the rate-book, so that other people dealing with the railway company may see and obtain it for themselves?—I could not tell you that. In our case, Castlewellan is simply more or less a large village, and we are the only firm in the neighbourhood that does anything like that.

A general reduction in rates impossible under the existing conditions.

40849. Therefore they could give you those rates without really affecting anybody else?—Yes.

40850. Although your rates are very moderate and you are satisfied with them, would you have any objection, if you were a trader, to those rates being reduced by 50 per cent.?—Not at all.

40851. You would like to see them reduced?—Yes.

40852. I suppose you would admit that you do not see any way in which the rates could be reduced under the present system of management, and still give the shareholders a dividend?—I do not see how they could be reduced, and pay the shareholders a dividend.

40853. You heard the evidence of the previous witness, and also some of the evidence given yesterday. Supposing the railways were handed over free to the Irish people themselves, do you not consider that the rates could then be reduced by fifty per cent., seeing that they would have no interest to pay on borrowed money, on debentures, or to shareholders, who sometimes expect 6 or 7 per cent.?—I think that that opens up a very large question.

The substitution of a system of public ownership not objected to if it benefited trade.

40854. You would not object as a trader?—Not at all.

40855. I am only speaking of that. As a trader you would like to get that advantage?—Certainly.

40856. If rates were reduced by fifty per cent., would facilities of that sort increase any of the industries connected with your particular business?—No; I do not think so.

40857. But it would probably help farmers to increase theirs?—It probably would.

40858. And you think it would be beneficial to traders generally?—Yes.

Examined by Mr. Sexton.

The linen industry centred in Belfast.

40859. I believe both the import and export of flax, linen yarns, and linen goods, are concentrated at Belfast?—You mean that that is the usual port for bringing them into the country?

40860. Yes?—As a rule it is.

40861. In fact, there is scarcely any import or export of either the raw material or of the finished goods elsewhere than at Belfast?—That is accounted for by the fact that Belfast is the centre of the industry.

40862. Certainly; I am only noting the fact?—Yes, that is so.

40863. In fact, you may say that there is no import or export, except a certain import to Dublin which so nearly corresponds to the export from Dublin as to suggest the idea that there is an import and a re-export; have you examined that?—No, I have not.

40864. Do you import much of the raw material?—Yes, a considerable quantity.

40865. *Via* Belfast?—Yes.

40866. Not *via* Dundrum?—No, not *via* Dundrum, because we could not take the quantity that would pay by steamer at one time. It would be inconvenient to bring it *via* Dundrum. In times gone by I have heard that we brought flax into Dundrum.

40867. Do you bring coal in *via* Dundrum?—Yes, and always have.

40868. Do you mostly export finished goods?—We export yarns, and also linen.

40869. I suppose that what you do not export you send for sale to Belfast?—We sell it.

40870. You sell it yourselves?—Yes.

40871. Do you consign it to Belfast?—No; we do not.

40872. You either export or sell it?—In Belfast or the North of Ireland generally; we sell it at various centres of weaving.

40873. So much of the raw material as you do not import you are able, very conveniently, to buy, because you operate in a flax-growing district?—Yes.

40874. You seem to be in the fortunate position of being rather independent of the railways. Your trade is only affected by a short transit of 40 miles to and from Belfast?—That is really all, as far as I am concerned.

40875. You are in a position of special independence. But how different is your position from that of a trader in the South or West of Ireland, who, in order to find his market, has to take his goods across the whole of Ireland into the interior of England; you are in a far better position?—Yes; I suppose I am.

40876. You may congratulate yourself. As to the incidence of the railway freight upon your business. What is the average value of linen per ton?—It is very difficult to answer that question, because linen varies. You may buy an article that is composed of linen at 5*d.* a yard, and you can also buy an article that is all linen up to 3*s.* a yard. It would entirely depend; there is a tremendously wide margin in the value of linen and the value of flax. It is very difficult to say what the average value would be. In fact, we never talk of linen by the ton.

40877. The returns of the Department of Agriculture show that the average value of linen goods imported into Ireland is about £150 per ton, and that the average value of linen goods exported from Ireland is about the same amount. Would you take £150 per ton as a fair average figure for the value of linen?—Yes, as far as I know.

40878. You have a special rate of 7*s.* per ton?—Yes.

40879. You observe that that freight is only a halfpenny for every pound sterling of the value of the linen?—Yes.

40880. That is totally negligible; it is not at all a material factor in your profit; it cannot be?—Of course the 7*s.* rate is an all round rate for linen and flax. If you take it on flax it immediately becomes a thing to be considered.

40881. Take it on flax also. The same return of the Department of Agriculture shows the average value of flax to be £50 a ton?—Yes.

40882. So that if you take the average between £50 and, say, £120—£80 or £90—between the value of the raw material and that of the finished article, it is still true that the rate is less than a penny for every pound sterling of value?—If we could save a pound a ton on all the flax we brought in in the year it would be a very nice profit.

40883. How much of your freight is on coal, and how much on textiles?—We pay about £1,000 per annum in freight, exclusive of coal.

40884. Then even supposing you carried all the raw material from Belfast, the double freight to and fro would be 14*s.* a ton. That indicates a very considerable trade; it would indicate a trade of about 1,400 tons?—We would have that.

40885. The profit on 1,400 tons renders an item of £1,000 a minor item in your yearly balance sheet?—I do not consider it as such at all.

40886. Minor in amount. You have 1,400 tons of a commodity which when finished is worth much over £100 a ton. That indicates an output in relation to

which a freight of £1,000 is indeed a trifle. But suppose you were in the position of the gentleman who preceded you in that chair and who had wanted to send turnips—a more democratic form of traffic—from Monaghan to Ballyshannon, and was asked to pay 28 per cent. above the cost price of the turnips, do you not see what a very different consideration the incidence of freight would become?—Oh, yes; I follow you there.

40887. We have had many witnesses who have testified that the cost of transit was 15, 20, 25, or 40 per cent. of the value of the goods. You will agree that traders in that position, competing with favoured producers on the Continent, have a different case in relation to the railways from that which you have put before us; they are driven more hardly, and they find it harder to make a living?—I think, of course, that the turnips are an extreme case.

40888. Turnips may be an extreme case, but it is by no means a rare case to have it stated here that the cost of freight, even for inconsiderable distances, is a large part of the value. I think you must recognise that you are in an exceptionally fortunate and happy position in relation to the difference between the value of your goods and the amount of the freight. Would you not say so?—I suppose I am, compared with some traders.

40889. I think that, compared with Irish traders generally, you are in an Arcadian position in Castlewellan. You have no complaint against the railway, or the company try to satisfy any complaint you may make; you have no need of the Board of Trade, or of the Railway Commission, or of the Department of Agriculture; you would not care if they did not exist; is that not so?—Well, in relation to our own business we never have had any occasion to go to the Board of Trade. But I say in the proof of my evidence that we might have a quarrel with the railway company sometimes, and that then I should be very pleased if there were some tribunal before which a trader could go at a cheap rate if he had actually come to loggerheads with the railway company.

40890. After so many years or generations of unbroken friendship, surely such a probability is very remote?—I think it is very remote.

40891. I think they are as friendly to you as though you were the Chairman of the line?—Oh, no.

40892. What more could they do for you; you had a special rate of 6*s.* 6*d.* from Belfast to Castlewellan, and when they ran the line on five miles farther they only added 6*d.* for the additional five miles?—That is exactly what I say.

40893. They are extremely friendly?—Yes.

40894. And they are not satisfied with making you a line up to your factory, but they give you a siding to your works?—I daresay they thought it would pay them.

40895. And you have also a daily express service. What is the distance by the Great Northern Railway from your station to Belfast?—Exactly the same, I think.

40896. But you side with the line which gives you a siding very naturally?—It was not a question of that. I think the siding was joint property; I do not know. But I sided with the line that we had always been doing with; we had no reason to change, and we remained where we were. We like our customers to do the same with us.

40897. It would be unaccountable for you to do anything unfriendly towards the County Down Railway. I think you have read the evidence which has been given before this Commission?—I have read most of it that has appeared in the Press.

40898. Then you know of the chorus of complaints that has been heard. Do you think the idyllic contentment of Castlewellan or of your firm ought to affect the claims of the traders of Ireland generally for an improvement of their condition in their relations with other railway companies?—I suppose that in this, as in everything else, each person does what he thinks is the best thing for himself from a business point of view.

40899. What is best for himself. You state very frankly in your proof that both in respect to service and also in respect to rates, the County Down line allows you an advantage over competitors of your own trade, even in districts not remote from you?—That is true.

40900. Then competitors of your own who are not so well off as you are may well desire an improvement in the system?—Yes, but it is for them to do it for themselves.

40901. Quite so?—The same as we look after ourselves and they look after themselves.

40902. You say—"We are as well off as we can be"?—I do not say that.

40903. Then "as we need be"?—I do not say that either. I said to Lord Pirrie that if the rates came down 50 per cent. I should be very pleased indeed; it would be so much in my pocket. I am not in business for my health, but for what I can make

40904. But you are so well off that you have no need for machinery for the redress of grievances; you do not need any Department of Agriculture or Railway Commission or Board of Trade?—Not at the moment.

A general reduction in rates, if possible, wanted.

40905. But you would say that people who are not so well off have every right—you admit it frankly—to do what they can to improve their position?—Yes.

Suggested disadvantages of centralised control

40906. You appear to think that if the railways of Ireland were in one system governed by a public body there would be no competent agents at important points for the transaction of business. You go to Belfast twice a week, and you find a courteous and able gentleman there, but you appear to think that if there were a central system under one management that central system would be so silly as not to have competent agents at far less important places than Belfast. Surely that is an unfair assumption?—I do not assume that.

40907. Well, you write very clearly, and what you conveyed by your proof was that you can now go to Belfast, and see the manager twice a week, and you imply that if there were a public system you would not be able to do anything like that. But there would be a very competent gentleman, perhaps the very same gentleman, in charge of the system at Belfast?—I think that in business life, railways included, the nearer the responsible head is to the part affected, as it were, the better treatment you get. It is only my idea, but I think that if there were a central body in Dublin you would write to Dublin about a grievance or convey it to the responsible agent at the point, wherever it might be, and that when it got into the mazes of a central system it would probably eventually be dealt with by a gentleman who might be a very able man indeed, but who would not know the local conditions.

Possibility of local interests suffering under centralised management.

40908. He would be too far away?—He would not know the local requirements as well as the man who was nearer the spot. That is the point I make.

40909. I submit to you that if there were a public system rates would be published, the conditions would all be known, the system would be immensely simplified, and that if the system had competent, fully accredited agents at important points there would be no occasion whatever, in any incident of traffic, to refer to what you call the central head?—I am afraid that that would be approaching the arcadian position that you spoke of as existing at Castlewellan already.

40910. We know that on the Continent, in Germany, for instance, there are twenty-nine sub-administrations, yet very rarely indeed is it necessary to refer anything to the Central Body?—I have been in Belgium a good deal; I have lived there in connection with my business for periods of six or eight weeks at a time, but I do not think I was greatly impressed by the administration of the Belgian State railways.

The Belgian State railway administration not an ideal one.

40911. I wish we had here the same rates or the same fares or anything like the same industrial development; they have progressed wonderfully there?—That is quite true; but my idea is that it is the people themselves.

40912. Is there such a great difference between people? The impulses and desires of human nature are everywhere the same, and if people have the same facilities they will tend to produce the same result?—I think the Belgians are the hardest working people I ever saw.

40913. Assume, however, that a central system had competent and fully instructed agents at various points who would be capable of deciding any difficulties which might arise in connection with the traffic your objection would disappear. I ask you to assume the presence of such agents?—Yes.

The procedure to be followed on a central system.

40914. The last thing I want to ask you is this. you suggest that if the railways were controlled by a central body in Dublin prompt and businesslike

Jan. 15, 1908.

Mr. James Murland, J.P. (Messrs. Jas. Murland & Co.), Annsborough, Co. Down.

methods would disappear. Would they disappear because the Council represented the country, or because they sat in Dublin?—I did not mean that at all.

40915. What did you mean?—It is simply following up what I said before. It would be on account of its being a central body, and away from the seat of trouble, simply that. I did not mean to cast any reflection on Dublin, or anything like that at all.

40916. Does it not occur to you that a central authority dealing with the Irish railways as a whole, administering the whole revenue, would be able to organise a more powerful body of experts than any single line can now afford, and that the perfection of management could be better obtained in such a case than it can be under a system of dispersed and separate lines?—Of course, that bears looking at in two ways, too. On the one side there might be economies effected, but do you not think that on the other side there might be leakages?—That is my idea.

40917. All human institutions are infirm, and we can only judge by probability and experience. What is the name of the gentleman who manages the County Down line?—Mr. Moore.

40918. Suppose the central system commanded the services of Colonel Plews, Mr. Dent, Mr. Tatlow, and Mr. Moore, do you not think that those four gentlemen, putting their heads together and keeping their subordinates in order, would be as well able to manage the lines of Ireland as a whole as any one of them is now able to manage a single line?—I think you just come back to the same thing again.

40919. I put that to you. The railways of Ireland are not more extensive than the railways of any single Australian State; they are about the same mileage, and those are managed by one or three Commissioners?—Yes.

The system of separate lines preferred to unified management of the railways.

40920. I ask whether these four gentlemen together would not be better able to manage the railways of Ireland as a whole to the satisfaction of everybody concerned than any one of them is able to manage a single line?—You want my opinion?

40921. Yes?—I would rather have them separate.

40921A. *Mr. Sexton.*—And I would rather have them together. But you have given your evidence quite fairly; thank you.

Examined by Colonel HUTCHESON POË.

Management of County Down Railway satisfactory.

40922. I gather that your experience of the County Down Railway has been a very satisfactory one?—Yes.

40923. Would you go so far as to say that if the other railways of this country were equally satisfactory there would be no cause for such complaints as we have had from many witnesses?—I think so. But there are in the country a great many people whom it takes very little to make complain.

40924. I agree with you. But at the same time you have probably read or followed the evidence which has been given before this Commission during the last year and a half, and you will have seen that there has been a great chorus of complaints, some probably badly founded, and others probably well founded?—Yes.

40925. And that the bulk of the evidence has tended to show that—there have been some exceptions—in the opinion of most of the witnesses many reforms could be initiated which would be not only in the interests of the railway companies themselves but to the material benefit of the people of this country?—Yes.

Excessive freight for flax, Ballina to Monaghan compared with the low rate, Belfast to Dundrum.

40926. To go no further back than the rate to which you referred, for flax. You said that the County Down Railway gave you a rate of 6*s.* 6*d.* per ton between Belfast and Dundrum, a distance of thirty-four miles, which works out, including all costs—we need not go into the terminals and conveyance details—at 2*d.* per mile, and you say you are quite satisfied with the rate. You heard the gentleman who preceded you in the chair state he was charged from Ballina to Monaghan, a distance of 180 miles, a rate of 39*s.*, which works out at nearly $2\frac{3}{4}d.$ You pay 2*d.* a mile for a short distance, and he pays $2\frac{3}{4}d.$ a mile for five times the distance, although, as you are aware, it is a recognised principle of railway management that the longer the distance the lower the charge per mile?—Yes.

40927. Do you not think there is ground for complaint when he is paying $\frac{3}{4}d.$ per mile more over a distance of 180 miles than you are paying over a short distance of thirty-four miles? Do you not think it is a justifiable ground of complaint?—Yes, it is in a way. But I think I could explain it to myself. There is no quantity. All the flax in Ballina would not keep you going for long.

40928. Probably that has something to do with it. But at the same time it must handicap the small trader. You are in the fortunate position of dealing with large quantities?—All flax is in large quantities.

40929. But I thought you said that this other gentleman was dealing only in handfuls, so to speak?—I mean that in Ballina there is only one market in the year, and after the annual market is done with there is no more. But the other rate is one that is going on every week; flax is coming every week, every day. Under those circumstances, do you not think it is reasonable that the rate there should be lower than where it is simply once in the year?

40930. No doubt it has something to do with it. That was only one instance; the witness gave others. I merely took it as being for a long distance. But assuming that there is something of that kind operating generally through all the railways of Ireland—I do not say rates which are in excess of the powers of the companies, though in that particular instance it does seem to be in excess—would not the main tendency of these rates be seriously to handicap the struggling agricultural producer, trader, or manufacturer, as the case might be?—Do you mean generally, or as regards flax in particular?

40931. I am speaking of the general question?—To my mind the railway rates have practically very little to do with the cultivation of flax.

40932. I am not talking of flax now; I am talking generally. You are satisfied, and you are quite right to be satisfied. I am only asking whether if it can be shown—and I think we have had a great deal of evidence on the point—that the rates on the bulk of the Irish railways do seriously handicap Irish manufacturers or agriculturists, do you not think that some steps ought to be taken to try and bring about a reform?—Yes.

40933. I am sure that you in your particular corner of Ulster are happily situated and have no fault to find; but if it could be shown that by unification of management, increased facilities, lower rates, and greater economies can be brought about, you would not stand out and say that because you were well circumstanced you would oppose any such change in the system as would bring about those reforms?—Oh no, if it could be shown.

40934. I am quite sure that, as an Irishman and an Ulsterman, you would be the first to fall in with such a view. I think I am right in saying that?—Yes.

40935. You referred to State control, and you instanced Belgium. I dare say you are aware that it was generally assumed that the Belgium railways resulted in very large profits to the State; but quite recently the Minister for Railways has been obliged to admit that the manner in which the accounts have been framed in past years has been fallacious, and that so far from the railways having resulted, after paying all charges, in a very large profit of eight or nine millions to the State, the profit has dwindled down to something under a million?—Yes.

40936. I think it is the general experience of Continental countries that State control and State management mean increased expenditure?—Yes.

40937. I take it that that is one reason why you would not be in favour of State control?—Yes.

40938. But if you could get private control, such as Mr. Sexton alluded to, in connection with the Commissioners in the Commonwealth of Australia, where the railway administration of the different Federal States is in the hands of two or three Commissioners, and where the commercial element is still maintained, that would be preferable in your opinion?—I make a good deal of the question of competition. If the competition were taken away it would make a great deal of difference.

40939. Does not the competition in this country in many cases come to this—that where railways are forced to compete one with another they are obliged in their own interest and self-defence to enter into some agreement which practically does away with the competition?—Yes; but even though they may enter into an agreement as regards freights, the competition makes for better working. Although two lines may have entered into an agreement they are both anxious to secure the traffic, and they both have agents, and are both desirous of doing all they possibly can for traders to induce them to use their line.

40940. That is natural, of course. On the other hand, does not the competition between 26 or 27 lines, as there are in this country, result in their competing one against another by curtailing facilities in the way of connections?—I do not think it does, so far as Ulster is concerned. I do not know anything about railways in other parts of Ireland.

40941. You speak from your own point of view, and that is fair enough. I take it from your previous answer that, provided it could be shown that any change in the system would benefit Ireland generally, and not prejudicially affect you, you would not be opposed to it?—Yes.

40942. *Mr. Croker Barrington, Solicitor.*—Might I ask about how much you pay in wages at Castlewellan?—About £17,000 a year.

40943. How many hands do you employ?—About 600.

Mr. Sexton—The railway freight is only about 1-17th of the wages.

Mr. Croker Barrington, Solicitor.—The wages are a great deal.

40944. *Lord Pirrie*—Do you mean that you get a profit out of carrying goods for the workers, and that, therefore, you can afford to give a little to the manufacturer?

Mr. Croker Barrington, Solicitor.—I only meant that it was very satisfactory to have such prosperity as that figure indicates.

Jan. 15, 1908.

Mr. James Murland, J.P. (Messrs. Jas. Murland & Co.), Annsborough, Co. Down.

Employment given by the Annsborough flax-spinning industry

Rev. P. J. Dowling, C.M., examined by Lord Pirrie (*in the Chair*).

Rev. P. J. Dowling, C.M., Cork, Lecturer for the Department of Agriculture

40945. Father Dowling, you are a lecturer of the Department of Agriculture and Technical Instruction?—That is where I gained a good deal of my experience as to the transit problem in Ireland. I was engaged by the Department to lecture in the country. As a lecturer I travelled all over Ireland—north, south, east, and west—and in the course of my lecturing I met nearly all the people that were engaged in the industrial movement.

40946. Were you in the room this morning?—Yes, since the opening of the proceedings.

40947. Then you heard a previous witness state that the Department of Agriculture and Technical Instruction had never done much in his neighbourhood?—With regard to railways, yes.

40948. I suppose your lecturing was more or less in connection with outside subjects altogether, and not transport?—Naturally transport came in. My business was to show what the development of industries would mean to the country, and what were the best means of developing industries, and naturally, in addition to technical instruction, transport would come in.

40949. That being so, have you lectured at Monaghan?—I do not think I did. I was at Newry, Cavan, and Dungannon.

40950. Had the Department of Agriculture any reason for keeping clear of Monaghan?—I think not. I was sent to particular centres; that is all.

40951. Perhaps they were so advanced themselves that they did not require to be taught?—Perhaps so. I had peculiar advantages in my position, because great interest had been aroused in the industrial movement, and I think I met everyone concerned in it—clerics and laymen of all classes and politics; they simply met on a common platform.

40952. Did all these important men whom you met give you the impression that the railways all over the country were as well managed and as satisfactorily for the traders as the last witness has found them?—Looking back on my experience, I do not think that in any single instance I met any body of men who were satisfied with the working of the railways of Ireland.

40953. Then you have met one to-day?—I said any body of men. It was invariably found that the great obstacle to the development of the country was the transit system. You would always find two or three who would say that they differed from the others, but in every part of the country that I was in there was a general feeling that the present system was a block to the development of the country.

40954. It was a hindrance to progress, as you put it in your proof?—Yes. I would like to say that in my opinion undue blame is attached to the railway companies. The reason I say so is that people do not consider the enormous handicap that is on the railway system of Ireland. Our population is diminishing; our industries are decreasing; and tillage is going out. So that all the factors that would tend to the encouragement of the railway companies are disappearing one by one. Anyone who studies the question and looks at the reports will know that while in England the receipts per mile have gone up from 58*d.* to 63*d.* in, say, ten years, and the passengers have gone up almost twice—in Ireland passengers have gone up only about 5 per cent., and the receipts per mile have remained almost the same during that period. Anyone reading the statistics will say that the wonder is that the railway companies are able to do so well. Therefore, if I speak about it, it is only because I feel that if the country goes on as it is going there is no possibility of improving the state of affairs, and that the only remedy is for the State is step in, and save them from this impossible condition. That is the course of thought that led me to study the matter so seriously.

State purchase of the Irish railways the only remedy

40955. That is why it is you want to put before us certain drawbacks in connection with transport?—Quite so. Not, as I say, that I find fault with the railway companies; because I believe that, considering the circumstances of Ireland—the diminishing population, the decreasing industries, the land going out of tillage, and everything of that sort—the railway companies are really making a very good job out of a very bad case.

The existing railway system, rather than its administration, at fault.

40956. What special things do you want to facilitate—butter, eggs, poultry, and so on?—From what I learnt all through the country, I think the principal difficulties rest with those who wish to establish industries, and therefore must make small beginnings. Gentlemen with magnificent businesses and great natural facilities, like the gentleman who has just given evidence, the transit system does not concern them at all; but it concerns the man in a country town who is looking round trying to develop his own business, or who with two or three others is anxious to develop a new business or industry. They are the men who feel the pinch, and therefore I have noted a few instances.

Importance of the transit question to struggling industries.

40957. Will you give us a few of those instances?—I believe that these instances mean more than the actual facts. Let us take, for instance, a case in Foxford. That is one of the most interesting economical spots in the country, because the difference between the condition of the place when the movement started and its condition to-day is simply marvellous. If you had been there you would realise what an object lesson it is. When the movement began there were a thousand houses in the place, in each one of which the man, his wife, children, cattle, donkey, and everything else lived under the same roof.

The agricultural development of the Foxford district.

40958. You are speaking of the entire district?—Yes. There were one thousand homes in which human beings and cattle all lived in the same house, without even a division between them.

40959. How many years ago are you speaking of?—Twelve or fifteen years ago. At present the same condition prevails in about 400 houses.

40960. *Mr. Sexton*—They are one-roomed houses?—You can scarcely call them houses.

40961. One-roomed cabins?—One-roomed cabins, and the only difference between human beings and cattle in the matter of accommodation is that there is generally an elevation in the floor where the human beings live, and the cattle live on the lower portion of the floor. That gives an idea of the condition of things that existed in the whole of these houses. With the aid of an intelligent sympathy these poor people were induced to improve their houses and to grow fruit and vegetables for the market, but the very moment they got as far as that the transit system blocked them.

Vegetables and fruit grown, but excluded from profitable markets by high rates.

40962. *Lord Pirrie.*—Do you mean to say that they raised the rates?—No; the existing rates blocked all further progress. Sisters of Charity, women, did the whole thing, with the aid of the Congested Districts Board. They got first-class seed, and the vegetables were so good that they took first prize in the Dublin market. Vegetables grown by these miserable cottiers on miserable plots of land about the size of this room, with rocks bumping up here and there, took first prize in Dublin, and the people were told that if they could send those vegetables to Dublin they would get a first-class market for them. As soon as they tried it they found that for 17 or 18 cwt. of those vegetables to Dublin they would be charged £2 17*s.* for carriage.

Complaint as to excessive rate for vegetables, Foxford to Dublin.

Jan. 15, 1908.

Rev. P. J. Dowling, C.M., Cork, Lecturer for the Department of Agriculture

40963. On what line?—On the Midland Great Western Railway. That simply blocked them.

*40964. You have not a freight note, I suppose?—No, but I got the information from one of the keenest business persons in Ireland. I took the note on the spot. There was no chance of doing anything further there. Then they planted fruit trees, and some of these poor cottiers, after planting and tending the trees, had to sell their fruit in the neighbouring town for a mere trifle, because the transit of the fruit was as difficult as the transit of the vegetables, and they could not get them to a good market.

Foxford fruit and vegetable industry killed by high railway freights.

40965. Did you bring that subject under the notice of the Board?—It has been brought before the Board.

40966. This particular case?—Several times.

40967. Did they not make any headway with the railway company? You mean that it was brought under the notice of the Department of Agriculture and Technical Instruction?—I could not say that, but I presume that it was. It certainly was brought under the notice of the Congested Districts Board, but they got no forrarder.

Effect on other industries.

40968. Did the County Council take any part in putting the matter before the railway company?—I cannot answer that. That is a typical case. You know yourself what a disastrous effect a thing like that has on a locality. You go to the people, and say—"You had better start such and such an industry," and they at once say—"Oh, start an industry! Look at what happened when we tried to start the vegetable industry or the fruit industry." To show the possibilities of the district, I may say that there is a man in Swinford who sends his carts round collecting eggs from these cottiers, giving them either cash or goods in exchange, and it is calculated that this man spends £30,000 a year in the district for eggs alone.

40969. He buys £30,000 worth of eggs?—Yes.

40970. That is very satisfactory?—Yes. These poor people, who, before the advent of this movement were living in absolute poverty, are now living comfortably.

Possibilities of improvement in the district.

40971. Do you mean that with proper railway rates that district would improve immensely, and that the population would increase instead of diminish?—Certainly; there is no doubt about it.

Cork fishing industries handicapped by unsatisfactory transit facilities.

40972. Have you anything else to say as regards another district in reference to the fish traffic?—Yes, at Cork. The fish question in Cork is a very important one. There was a time when the fishery districts round Cork were the best in the country, and untold wealth was to be got from the sea there. One of the principal difficulties with regard to fish is the transit. The fish sold in Cork is nearly all sent from Kinsale and other places to Grimsby by boat, and some sent back to Cork again.

40973. *Mr. Sexton.*—Is that possible?—That is the fact.

40974. Why is that? How do you explain it?—It is the simplest thing in the world.

40975. *Lord Pirrie.*—They send it by steamer to Grimsby, and Grimsby sends it back by steamer and rail to Cork?—By steamer and rail by the Rosslare route.

40976. Do you mean to say that the fish that all these American liners take on board at Queenstown is not actually Cork fish?—Not at all.

40977. It comes from England?—It is a rare thing to get a piece of really fresh fish in Cork. The fishermen will tell you that it is from Kinsale, but they know that it has been handled in transport, and that it is not fresh fish. I may quote an instance of another industry, which I take as typical; there are others through the country. Dunmanway is another fairly poor district in West Cork. Here, again, an enterprising lady wished to develop the district. She had already developed the district a great deal, and amongst other things she thought that a flower farm would succeed. I need not tell you that we cannot have all our people making lace or doing wood-carving; we must try to develop other lines. Hence this lady thought that to keep the girls at home a flower farm would be a very good thing, and she tried to start one. I wrote to her a few days ago to verify what she had told me, and she stated in her letter that they had to give it up for the simple reason that the railway rates from Dunmanway to Cork killed the industry.

Dunmanway flower farm given up owing to high railway rates.

40978. Can you tell us what the rate was?—I will quote her words. She said—"There was no market here, and the railway charges to Cork or Dublin gave no margin for profit; they can get them fresh from Covent Garden and the Continent, and sell them in Cork at the same price as we are obliged to ask."

40979. They could get flowers from Covent Garden market to Cork as cheaply as they could get them from Dunmanway?—Yes. Here is the lady's own statement—"They can sell flowers in Cork from Covent Garden market in London as cheaply as these people can send them from Dunmanway."

Mr. Croker Barrington, Solicitor.—The price of flowers; the witness does not mean the rate only. I have a friend who tried the same thing.

Witness.—She actually says "or the Continent."

40980. *Lord Pirrie.*—We have already had evidence that it is frequently cheaper to bring goods from the Continent?—Of course you cannot compare carriage by rail with sea carriage simply.

40981. *Mr. Sexton.*—If the Cork people get flowers by preference from Covent Garden or the Continent they must be able to sell them more cheaply than if they get them from Dunmanway. How far is it?—Thirty or forty miles.

40982. *Lord Pirrie.*—I do not know that it is necessary to give the rates that you have in your proof; we have had them first-hand?—No. I do not know whether you would care to take that point about reciprocity. That is a point which is a good deal insisted upon. With regard to export trade that is very important. I and many other people believe that we will never do anything in Ireland unless we can create an export trade. We shall be like the islanders who tried to live by taking in one another's washing. Therefore, reciprocity is a very important thing, and, to use a 'bull," I think we ought to have more reciprocity towards us than from us.

40983. We will leave the question of reciprocity. A more important matter is this instance from Paris?—I can give the railway freights of that. From Paris the cost was only 3*s.* 3*d.* for 2 qrs. 6 lbs., but if I want to send anything the reverse way I am told that I must make up at least 1 cwt., and pay a deposit of 5*s.* before they will look at it at all.

40984. You could not send it out of the country for less than 5*s.*, and you must make up a cwt., whereas goods come in for how much?—2 qrs. 6 lbs. for 3*s.* 3*d.*

40985. You think that it should be reversed if anything?—Yes.

40986. That for sending goods out of the country the rate should be cheaper?—Certainly. We can never get an export trade unless we have that. A very important point is that wherever the railways did help the industries the result seems to show that that was the one thing necessary to make them flourish. For instance, take the early potatoes in Clonakilty. That was a great novelty for Irishmen. In fact, when they saw the first men preparing the potatoes they looked upon them as lunatics But the result is that now a considerable business in early potatoes has been developed in Clonakilty and the neighbourhood.

40987. That is into Cork, is it?—No; you would not sell early potatoes in Cork. They are sent on to the Liverpool and Glasgow markets.

40988. But they go through Cork?—Yes.

40989. Did they put on through rates to Manchester and Liverpool?—The railway company have given the greatest facilities for the early potato trade.

40990. They have?—They have, and the result is that they have developed the trade. The principal man engaged in it says that but for the railway companies they could not have done it.

40991. That is satisfactory?—Yes. I want to point out that wherever the railway companies do give their help to an industry the one obstacle is removed. If they had not given facilities so that the potatoes could be landed in the market at a rapid rate the industry could not have succeeded. A matter of twenty-four hours would spoil the trade.

40992. Where the railway companies in their own interest have given facilities the industry has increased?—Yes.

40993. *Mr. Sexton.*—Is that export *via* Rosslare?—Yes.

40994. The Bandon and Great Southern have concurred?—Yes. According to one witness who appeared this morning the railway companies say—"Create the business, and we will give the facilities." If the railway companies have gone on that

* See Appendix No. 13.

principle with regard to early potatoes the industry could never have been carried on.

Mr. Croker Barrington, Solicitor.—It was rather implied in connection with that Paris case that it in some way reflected on the Irish railways. It is the City of Cork Steampacket Company; it is not the railway companies at all.

Lord Pirrie.—I do not think the witness made the point against the railway companies.

Mr. Croker Barrington, Solicitor.—But in the mind of the public "transport" means the railways; but in this case it is the City of Cork Steampacket Company.

40995. *Mr. Sexton.*—I thought he meant the railways?—No; I meant the transport. The next point that struck me as a suitable one to put before you was how the Barony of Forth was developed. The Barony of Forth is in County Wexford; it is a little strip of land, ten miles by five, and emigration and poverty are practically unknown there. There was formerly no such thing as fruit-farming there, and the people had the average prejudice against anything new. But the Department came in and said that if they would plant fruit farms, pluck the fruit, and pack it according to the directions of their experts, they (the Department) would pay half the railway rates. What is the result? They have now twenty-one fruit farms there where there was none some years ago, and the people who are working the farms declare that the fruit is far more profitable to them than any other crop. There again the one obstacle was removed—the difficulty of railway transit.

40996. *Lord Pirrie.*—Are the Department still paying a proportion of the railway rate?—I think they are for a certain number of years until they have established the fruit industry.

40997. In other words, the great thing is to get the railway rates reduced?—Precisely. If the railway companies would do similarly elsewhere similar results would follow.

40998. The railway company are here getting the advantage of a subsidy from the State?—Of course it comes to that. In the same way the poultry trade was not important, and now it is developed to such a degree that they have a poultry fattening station at Tagoat, County Wexford. Sometimes as many as 1,000 turkeys go by one shipment. That is due to the railway facilities; since the new railway was opened up they have got special rates.

40999. That is *via* Rosslare?—Yes. The result is that an enormous poultry trade has been developed where a few years ago there was none existing.

41000. Your view is that until railway facilities are given largely and cheaply all over Ireland prosperity cannot come to the country?—Yes. Until that is done you can never develop new industries, at any rate.

41001. Whether it is by amalgamation or by the purchase of the railways. You would not object to the railways being handed over free to an Irish body?—I was the first person in Ireland to propose that the railways should be handed over to a public body.

41002. You want them handed over free of cost?—That is a question for men skilled in finance.

41003. But even supposing you had to pay for them, you would rather the country bought them and handed them over?—My personal opinion is that the very wisest act the English Government could do to-day, if they were really far-seeing, would be to present the railways to an Irish governing body, because if the present competition between foreign goods and home goods goes on, I believe that in ten years time the tenants of Ireland will not be able to pay half the rent they are paying at present, and you will have the land agitation all over again.

41004. Even the £40,000,000 they might have to pay to the shareholders might actually be saved in the end, you think?—Yes; it would save a world of trouble in the end.

41005. Would it not save money?—Yes, because otherwise they will lose on land purchase.

Mr. Tatlow.—May I say a word with reference to the rate for vegetables from Foxford. I think the witness said he was informed that the rate was something like £2 17*s.* a ton. It cannot be a figure like that.* The rates for vegetables in any quantities over three cwt. from Foxford to Dublin are from 12*s.* to 15*s.* per ton, and the rates for potatoes in wagon-loads is 7*s.* 6*d.* So that if it was anything like what has been stated there must have been a grievous mistake.

Witness.—I have it from the person who started the industry, a very keen business person. I took it down on the spot.

Mr. Tatlow.—There must have been some mistake?—(*Witness*).—Perhaps she meant different kinds of produce; perhaps she put in a package of potatoes, a package of cabbages, and a package of something else.

Mr. Tatlow.—It would not affect it, unless they put in groceries, or something very extraordinary.

41006. *Mr. Sexton.*—Was it one consignment?—Yes.

41007. It might have been a very small consignment?—That is the fact as I have it.

Mr. Tatlow.—There must have been some grievous mistake. Even if it were a very small consignment it could not be such a rate. I do not remember ever being asked for special terms or for any low rates for a vegetable industry at Foxford. If an application had been made we should have done something for it, as we always do. But there is some terrible mistake about the matter if it is said that the rate was £2 17*s.* per ton.

41008. *Lord Pirrie.*—Apparently there is a great traffic if the people know that they can send it for the rates you speak of.

Mr. Tatlow.—There is no difficulty in their knowing. A man has only to go to the stationmaster to ascertain the rates.

Witness.—I will wire to-day and get an answer. I should not like to give evidence that might be called in question. I went to the fountain head, and I have the note in my note-book.* But I will get the particulars. I understand thoroughly that you cannot send twenty little parcels for the same rate as you can a ton, but I say that special facilities might be given there.

Examined by Mr. Sexton.

41009. I think your knowledge and experience of this question are a good deal more than insular?—Yes. I was nine years in Australia, three years in Paris; I have travelled on practically all the great railway systems on the Continent; I have been through Germany three or four times, Denmark, Switzerland, Holland, Belgium, and Austria, so that I am fairly well acquainted with the railway systems of the Continent.

41010. You have had a very wide experience. Through the course of that experience have you given special attention to the question?—Yes. I have. The first time I saw the working of the State-owned railways was in Australia, and it was such an object lesson that my mind got saturated with the idea that it was the only solution of the transit question.

41011. You were nine years in Australia?—Yes. I had a great deal to do with the railways there, because I was Vice-President of one of the principal colleges there, and we had to deal with goods traffic both in the colonies and from home. Both as a clergyman and as a lecturer I travelled over the whole of the railway systems, so that I was in intimate contact with their working.

41012. And you observed the systems from the point of view of one who was constantly considering how they would suit the case of Ireland?—Quite so.

41013. I understand you to say that your own opinion and the general opinion as you have met with it in this country is that not only are rates and fares too high for the circumstances of Ireland, but that the general method of managing the Irish railways is a hindrance to progress?—I should say so, though not blaming the railway companies; I believe there is almost an impossibility of their doing any better in the present condition of the country.

41014. For the moment I am entirely ignoring the amount of railway capital and the financial circumstances from their point of view; I am considering the matter as we are directed to consider it, from the point of view of the public interest?—Yes. If you take the personal traffic, to begin with —

41015. I will come to that in a moment. Our object is to discover, admitting all that may be said as to the stringency of the financial situation from the point of view of the railways, whether some way may not be found for getting rid of this situation in the public interest?—Quite so.

The alleged excessive rate for vegetables Foxford to Dublin.

Range of witness's experience of railway working.

Suitability of the State ownership system to Ireland.

Existing Irish railway management a hindrance to progress.

* See Appendix No. 13.

Jan. 15, 1908.

Rev. P. J. Dowling, C.M., Cork, Lecturer for the Department of Agriculture.

41016. You give some rates on leather in your proof?—They were given me by a Limerick leather merchant.

41017. You know that the leather industry, both in tanning and in the manufacture of boots and shoes, was formerly a very valuable industry in Ireland, in numerous districts?—It has almost disappeared. We had as many as ten tanneries in Cork alone at one time.

41018. You give a number of rates from Liverpool to Irish sea ports; those are necessarily sea rates?—I suppose that they are all sea rates, as far as I can tell from the names of the places.

Effect of low import rates on the Irish leather trade.

41019. And you give a number of rates from Limerick to various ports and other places in Ireland?—Yes.

41020. Are there tanneries in Limerick?—Oh, yes, there are two fine tanneries. Some of the best leather in Ireland is made in Limerick.

41021. These rates from Limerick are rates upon Irish leather?—Quite so. A manufacturer can send English leather from Liverpool to any of these important Irish towns at rates varying from 5*s.* to 20*s.*?—Yes.

41022. But the Limerick manufacturer in endeavouring to reach those same Irish towns has to pay rates varying from a minimum of 22*s.* to a maximum of 45*s.*?—Quite so.

41023. Are these rates prohibitory?—I should think so. Seeing that competition is so keen now that a matter of an undercut of 6*d.* or 3*d.* in a figure will get a man's business, I think the rates will be practically prohibitory.

41024. They go far to account for the imports of half a million a year of foreign leather into Ireland and the depressed condition of the Irish leather industry?—I should say so.

Continental methods of creating new industries by affording free railway transit.

41025. I understand you to hold that it is a wrong principle to maintain that the traffic ought to come before the facilities and concessions are granted?—I think that it is directly contrary to any hope of success. I will give an instance to give an idea of how differently they act on the Continent. In Belgium, for example, when they wanted to create a fruit trade with London, they gave free traffic on the State railways to Antwerp, and as soon as the trade was created they asked the ordinary rates.

Easy transit conditions a necessity to the development of industries in Ireland.

41026. We heard to-day that when a man asked for a special rate for turnips the reply was that there was no traffic in turnips, and so they would not allow him to create the traffic; they refused the special rate which would have created the traffic. Would not the true principle be to afford the facilities and give the concession, so as to develop the traffic?—Yes. I gave the instances of a part of Wexford and Clonakilty to show that if you had that principle all through Ireland it would create industries.

41027. You gave two instances of industries—potatoes in West Cork, assisted by a special rate, and fruit in the barony of Forth in Wexford, assisted by new facilities?—Yes, and a special rate in the case of fruit.

41028. But the instances which you described as being typical of what happens in Ireland were those in which the industries disappeared?—Quite so.

The excessive rate for vegetables, Foxford and Dublin.

41029. By reason of want of help. In the Foxford case the vegetables were grown, and got the first prize in Dublin?—Yes.

41030. And an effort was made to put them on the Dublin market?—Quite so.

41031. The circumstances as to the rate are contested?—I have sent a wire, and I may get a reply befor the Commission rises.*

Effect of high railway rates on the Moy fruit trade.

41032. Whatever the circumstances of the rate may have been, is the fact that the industry has ceased, one from which any inference may be drawn?—Yes. The rate was prohibitive. There may be some dispute as to the details, but it was prohibitive; they could not undertake to open up a market in Dublin.

41033. What about the fruit trade at Moy, in Tyrone?—I got a letter from one of the leading apple producing men here, a man who took the Dudley Cup three years running and the Aberdeen Cup last year, and he said that the apple trade was very severely handicapped by the rates. I do not believe that you can compare railway rates with sea rates, but apples can be landed in Liverpool from New York for 2*s.* 8*d.* a barrel weighing 100 odd pounds, and from Boston at 2*s.* 3*d.* a barrel. This man says that his business is very much handicapped by the rates from Moy to Dublin or any other place to which he sends the fruit. Strawberries, as well as I remember, in Moy were promising to be a very good crop, but in some places they were severely injured, if not put out of the market, by the heavy rates. I wrote for specific information upon that point, but I have not received a reply yet.

41034. In any comparison between railway rates and sea rates the railway companies have the argument of the greater costliness of their method of transit?—Yes, I understand that.

41035. But if it is found that the sea rates from America or any other country do effectually compete with the Irish producer in Ireland, is not that a reason why the railways should give the most favourable rates possible, from the point of view of Irish interests?—That is my contention, and that is where State-owned railways would come in. If they saw that an industry was being killed by unduly favourable sea rates they could reduce their railway rates to such a degree as to compete with the sea rates.

41036. The mere circumstance that the competing rate is a sea rate does not alter the nature of the case in regard to the Irish producer; he wants all the relief he can get, and it is to the interest of the country that he should get it?—Yes.

41037. Dunmanway is about thirty miles west of the city of Cork?—Yes.

41038. An effort was made by competent people to put flowers and, I think, fruit on the market at Cork?—What I dealt with was flowers.

41039. It proved an unsuccessful effort?—Yes.

41040. The railway rate for the thirty miles was prohibitive?—That is the statement of the lady who tried to do it.

41041. The Cork florists get flowers from London and the Continent?—Yes.

41042. Is that direct from the Continent or *via* London?—In some cases direct from the Continent, and in other cases through Covent Garden.

41043. So that it was cheaper to get these flowers by land and sea from France or from London than to take them thirty miles on an Irish railway?—In other words the French flower grower can sell his flowers in Cork whereas the Dunmanway flower grower cannot.

41044. So that the Dunmanway industry was killed?—Yes, they had to give it up.

41045. Then as to fish at Kinsale. What is the distance from Kinsale to Cork?—About fifty miles, I think.

41046. Do the fishermen bring into Kinsale the fish they take?—Yes.

41047. There is no Alpine range between Kinsale and Cork; what is the nature of the obstacle to transit?—They have boats laden with ice in the harbour at Kinsale; as soon as the fish are caught they are put on board these refrigerating boats which, when loaded with fish, go off straightaway to Grimsby. On the other hand, you have not the ice provided by the railway companies to preserve the fish in transit to Cork, and that is very necessary in the hot weather. Further, the railway station at Kinsale is nearly half a mile from the harbour; you would have to cart the fish from the boats to the railway station; then, having got it to the railway station, when it reached the terminus at Cork, you would have to cart it again to the fish market. All this handling does harm to the fish, causes additional expense, and delays the article.

41048. If there were a half-mile tramway in Kinsale how would that affect the matter?—That would make a great difference.

41049. And a good deal of the fish would be sold in Ireland?—I dare say. If, for example, there was a fish train waiting at the head of the harbour at Kinsale the same as the ice-boat is waiting in the harbour to have the fish thrown into straightaway and take it to Cork, that would mean a vast difference in time, in expense of handling, and everything else. If the railways were unified and there was enterprising management at the head of the unified system, they would not hesitate about doing that. That is what they have in countries where there is a unified system of railways.

41050. What happens here is that fish taken outside Kinsale and brought into Kinsale harbour are sent to the great English fish centre at Grimsby, re-shipped back to Cork, and sold there?—Yes.

41051. At a great increase of cost?—Yes, and a great decrease of quality. The men can tell that the fish are not fresh, that they have been caught some time, and that they have been handled a good deal.

* See Appendix No. 13.

41052. These instances which you call typical tell their own tale?—I call them typical, because it is a question of starting new industries. The fishing industry in Kinsale is practically killed now, I dare say largely for that reason.

41053. You have observed the amount of the imports of Great Britain from abroad of the special products of Ireland?—Yes.

41054. I think the Department of Agriculture returns them as being about £120,000,000 a year?—Yes.

41055. Several times the value of the similar exports from Ireland. Do you consider that the agricultural and pastoral output of Ireland is capable of indefinite expansion by a good system of rates and railway facilities?—A good deal of that must be theoretical, but we have practical proof that wherever the transit facilities were given there was an immediate development of the produce.

41056. We know that the Irish farmers could produce a great deal more?—Yes.

41057. We know that there is a great market in England now mostly occupied by foreigners?—Yes. The whole question is how to bridge over the space between the farmer in Ireland and the markets in England. The only way of doing that is by a splendid system of transport and rates.

41058. The true test of the success of a private railway, I suppose you would agree, is the surplus left after payment of the working expenses?—I think so.

41059. What is the true test of the success of a public system of railways?—I cannot see why the same test should not be applied.

41060. Private railways are worked for profit; therefore profit is the test of their success?—Yes.

41061. But if a public system of railways is so worked as to develop population, industry, trade, to make the community prosperous, and to make the revenue buoyant, what does it matter whether there is a railway profit shown or not?—I admit that. I know that some people say that if the railways were unified they would become very expensive; but the answer to that is to look over the returns of railways in other countries where they are unified, and see the big profits that are shown there. There is no question about that.

41062. Suppose a public system of railways was so worked as to bring the community to a state of prosperity and to make the revenue of the country buoyant and easily raised, then, even though the railways did not pay the interest on their capital, could there be a better use of public revenue than to pay that interest? I mean, supposing the public railways are successful for public purposes, is the test of actual profit in their special accounts a true test at all?—Of course it is not. The New South Wales Year-Book puts the same point when it says: "The railways have not been built as a purely commercial speculation. While a reasonable return has been looked for, there has been no desire for profit beyond the interest on the cost of the line; and as profits have followed increased settlement and traffic, the charges have been brought down to the simple interest standard. As an instance of this it may be stated that during the seventeen years the Commissioners have been in office, since they have had power to administer the railways on a business basis, while keeping in view national considerations, the reductions in rates on goods equal at least half a million per annum."*

41063. Instead of working the railways upon no other discernible principle than that of private profit, they work them in Australia on the principle that the fares and rates are to be brought as low as they can be while the charges of the railway are paid?—That is so exactly.

41064. That is what you call the true principle?—That is the true principle. I have a socialistic idea about railways. I believe the time will come when, like the roads, the railways will be free. I believe the private owning of the railways is a relic of mediæval times, when railways were not as necessary as they are to-day, and the time will come when the railways will be practically free for the benefit of the country.

41065. The railways in commercial transit have taken the place formerly held by the highways?—Quite so.

41066. And it is inconsistent with the welfare of a modern community that the railways should be privately owned?—Just the same as the turnpikes have been done away with.

41067. So that whether or not there is a large surplus, say, in Belgium, after the working expenses of the railways have been met and the interest and sinking fund charges defrayed, the obvious results of the public railway system in that country are such as to make the matter of profit on the railway accounts one of comparatively slight importance; they have a profit, but whether it is large or small is not the vital question?—That is so.

Results of Belgian public railway system such as to render profits of slight importance.

41068. You spoke of restitution. Do you think that if the Imperial Government and Parliament were to agree that the amount found to be drawn from Ireland by over-taxation were to be given to Ireland year by year for railway and other public purposes, it would in the end prove to be a good investment for Great Britain?—I believe that not only would it be a good investment, but that a far-seeing politician would see that it was a necessity. If things go on as they are going the land question will be renewed in all its fierceness in about ten years' time, because the people will be unable to pay their rents.

Ireland's claim on the Imperial funds in respect of over-taxation.

41069. It would not only promote good feeling between the two countries, and give an assurance that the land purchase engagements would be discharged, but it would probably in a limited period increase the public revenue by even more than the amount returned to Ireland?—I think so.

Beneficial effect on land purchase engagements.

41070. That is the solution of the whole question. Do you say, taking the model of Australia, that the railways should be owned by the community in which they are—that the Irish railways should be owned by the country in which they exist?—Yes. I believe that, first of all, because unfortunately our experience in Ireland shows that the Government Boards do not work for the country, and that where such a vital question as the transit of the country is at stake it would be suicidal to experiment any further; consequently, I should not put the railways under a Government Board.

Nationalisation of the railways under the control of an Irish authority advocated.

41071. You would have them owned by this country—Ireland—however the finance was transacted?—Yes. I would have them worked by Irishmen for Ireland.

41072. By Irishmen responsible to Irish opinion?—Yes.

41073. *Mr. Smyth* (*G.S. and W.R.*)—With reference to the rate for cut flowers from Dunmanway. No doubt, the witness has given you the information he received, but it is not the fact at all. The rate for 24 pounds weight from Dunmanway would be 6*d.*; from London it would be 2*s.* On the other hand, there is a very low rate on the Irish railways for cut flowers. We will take 1 cwt. for 9*d.* a distance of 30 miles.

41074. *Witness.*—What would be the rate for a parcel of 7 lbs.?

41075. *Mr. Smyth* (*G.S. and W.R.*)—For 7 lbs. for 30 miles, 6*d.* is the minimum charge, and it covers up to 24 lbs. From London the rate would be four times that amount.

41076. *Mr. Acworth.*—And from Paris?

41077. *Mr. Smyth* (*G.S. and W.R.*)—Considerably more, I should think.

Examined by Sir H. Jekyll.

41078. What about postal facilities, would they suit?—There is not such an elaborate postal delivery from Dunmanway as would suit.

Postal facilities not an adequate substitute for railway transit of flowers.

41079. I suppose the Post Office would take small packages of flowers to any part of England, would they not?—I daresay it means that the flowers would have to be posted overnight, and they would suffer by the keeping. I expect flowers would be sent by the morning train; that is probably the difficulty. They must be quite fresh. In any case there is the fact that this lady tried the experiment and had to give it up on account of the rates.

Examined by Mr. Acworth.

41080. I should have thought there was a gap in the argument. The lady tried the experiment, and had to give it up; but where is the evidence that it was on account of the railway rates?—I read the letter.

41081. Supposing I started a shop; I am quite certain I should make an utter mess of it, because I should be a very bad hand at it. But I should not say it was my own fault. I should say it was the railway, or the customers, or something else; I should never take the blame on myself. Is not that human nature?—I do not think that this person is of that stamp. She is a very keen business woman, and

The effect of excessive railway rates on the cut flower industry.

* The Year Book of New South Wales, 1907, page 65.

Jan. 15, 1908.

Rev. P J. Dowling, C M., Cork, Lecturer for the Department of Agriculture.

has succeeded in other things. I think that if she says expressly that it was the railway rates that killed the flower industry I would take her explanation.

41082. She said that the railway rates were higher from Dunmanway to Cork than from London to Cork, did she not?—I will quote her exact words. She told me this when she had to give up the industry:—"The railway charges to Cork or Dublin gave no margin for profit. Florists could get them fresh from the Continent at almost half the price we were obliged to ask."

The effect of excessive railway rates on the cut flower industry—*con.*

41083. Take that statement that they could get the flowers from the Continent at almost half the price. You are told that from London to Cork the rate is four times as much as from Dunmanway to Cork?—Yes.

41084. The rates from Paris are very high, and we may safely assume that the rate would be at least eight times as much as from Dunmanway to Cork?—I do not assume that the flowers come from Paris.

41085. She says the Continent?—Yes. I dare say it would be from some of the coastal places. I lived in Paris for three years, and I do not think that anyone would consider to get flowers from Paris an advantage, because they in Paris must get them from the country

41086. Anyway, it would clearly be more from the Continent than from London; we may assume that, may we not?—I would go so far as to say that this lady may mean from the Continent *via* London, because I have bought flowers and fruit in Cork and have been able to tell at once that they were packed in France. I can tell it by the packings and the wrappings of the fruit, and the people said that they got them from the Continent through Covent Garden. They may have been sent in bulk from the Continent to Covent Garden, and distributed through Covent Garden.

41087. Let us keep to the fact that from London alone it would cost not only twice but four times as much as from Dunmanway, and if they came from the Continent they would cost still more. If the lady says that she was driven out because the Continental rates were low, do you not think she has made a mistake?—I do not think so, from the character of the lady.

41088. I admire your chivalry?—One of the things she told me was in reference to chrysanthemums. These are not flowers that fetch a high price. A florist will charge a shilling a dozen for chrysanthemums in their season. It might be that she could only send a small bulk of chrysanthemums to Cork, while Covent Garden could send a large supply through. Therefore her statement would hold good.

41089. It would not be the fault of the railway if she did not compete in an economical manner?—That is the difficulty. She wants to start an industry, and she could only do it on a small scale.

41090. Let us keep away from detail. You have had a great deal to do, I am sure, with the organisation of these industries, have you not?—Yes, I have been in very close contact with the movement for the last three or four years.

41091. You have also seen the way in which flowers come from the South of France, and so on?—Yes.

Irish versus Continental packing.

41092. Leaving out the question of railway rates, which do you think have the best chance, the people who pack like those on the Continent or those who pack like the Irish folk?—If you take the ordinary Irish packing there would be no chance whatever for it; but some of the Irish packers are now able to pack as well as any Continental packer.

41093. I am glad to believe that. But is it not fair to say that the Irish people are suffering under a good many disadvantages? The difference in railway rates may be something, but at any rate it is not everything?—It is not everything. If the railway rates were dealt with it would not be a solution of every difficulty, but we are now tackling that one obstacle.

Extent to which transit cost affects industrial development.

41094. Yes. Take, for example, the question of butter. Thousands of tons of butter go from Ireland. We are told that the rate from Limerick is too high—it is 40*s.* to London—and that it ought to be, say, 30*s.* That is 10*s.* on £100 worth of butter—½ per cent. Do you think that that will turn the scale of profit or loss to the industry?—I believe that competition is so keen now that even a smaller amount than that would turn the scale.

41095. Do you really think so?—I was speaking to one of the leading bacon merchants in Dublin the other day, and he told me that business is so keen now that a difference of a trifle in the cwt—he went so far as to say ¼*d.*, I think, but I will not say the exact figure—would turn contracts away from him. He is dealing with large contracts. Consequently, I believe that this ½ per cent. would make a very vast difference. I was speaking yesterday to one of the leading woollen manufacturers in Ireland, and he said that 6*d.* in the yard on his cloth would mean commanding the export trade.

41096. 6*d.* in the yard; I can quite believe that?—So that I think that sometimes a small thing makes a vast difference.

41097. Anyway, I gather that you would not put it as high as I would. That ½ per cent. would not stop the output of butter; it might cut somebody's profit, but it would not prevent the person from producing it?—If the peasant has no market he will not produce it, and he will not have a market unless the conditions are favourable for getting to a market.

41098. Tell me this: which do you think handicaps the Irish people most in competition with Danish butter, the fact that the rate is said to be 10*s.* higher than it ought to be, or the fact that the Irishman stops manufacturing all through the winter and has to get hold of his market anew every spring?—That is a big factor, I admit.

41099. Do you not admit that it is a much bigger factor than the railway rates?—I would not go so far as that, but I agree that it is a very big factor.

41100. Are we not making a mistake in thinking that if you hand over the railways to some glorified body you are all going to live happily ever afterwards?—It means that Irishmen are under a double disadvantage. Take the people in a land like Denmark: they have butter making winter and summer, and in addition they have favourable railway rates. Irishmen have butter making in the summer only, and unfavourable railway rates the whole of the time. So that Irishmen are doubly handicapped.

41101. I see how you would put it. Kinsale fish is mackerel, is it not?—Principally.

41102. Do you know of your own knowledge that it goes round to Grimsby?—Certainly. I have been down there very frequently and have met plenty of it. It just happens that my servant is a Kinsale man who was a prosperous fisherman but had to give it up on account of the competition; therefore I am in intimate communication with him about the subject.

41103. That it goes off to England I agree, but do you really say that it goes to Grimsby?—Yes, Grimsby is one of the centres that it goes to.

41104. It is a great centre for East coast trawled fish, and you say that at the same time this mackerel goes there. But, of course, I cannot pretend to contradict you. Then it comes back and is sold in Ireland. Do you know the moral I should draw from that? The moral is that the railway rates cannot be so high as to stop traffic?—The railway rates from England into Ireland *concedo*, and the other way *nego*.

41105. I think there is a considerable mistake on this point, and I would ask the railway companies to make a note of the matter. Your suggestion is that the rate from Grimsby to Cork is so low that the fish can afford to come back into Ireland, but that the rate the other way would be dearer?—That perhaps would not be a fair way of putting it.

41106. Put it your own way?—There are a lot of facilities besides the mere question of rates. Although the rate might be low, there would be no fish train running at the time the fish were caught. That is a very important point in connection with fish.

41107. You do not suggest that there are special trains for fish running from Grimsby to Ireland?—No; but there are boats waiting in Kinsale harbour.

41108. I am talking of fish coming back from Grimsby. You cannot get any special facilities for its coming back?—Grimsby is such a great fish distributing centre and the supply is so constant that they are always ready to send off.

41109. The railway rate does not stop its going all the way to Cork?—It is not purely a question of rate—railway facilities come in also.

41110. Nothing stops its going. The accommodation given by the railways is such that the fish can get all the way to Cork?—The worst enemy of the Irish railways would not say that they will not get you where you want to go. There are Australian

railways on which you take a ticket but are not sure whether you will get to your destination. The greatest enemy of the Irish railways will admit that you will eventually get to your destination.

41111. I gather that you are in love with the Australian railways?—I am very much so.

41112. I wonder what you will think of this, Mr. Davis, who was general manager of the West Australian railways for many years, gave evidence before us in London six months ago, and this is what he told us. It is in reply to some questions I put to him:—"You said something which rather surprised me. You said, I think, that goods rates in Australia generally were decidedly higher than in Ireland?—Except those in New Zealand. Q. Now as to passengers. What do you make out to be the effect of your comparison of passenger fares; what impression has that left on your mind?—Passenger fares in Australia are higher than in this country. Q. When you say that are you speaking of the ordinary fares?—Yes, the ordinary fares. Q. Then, in addition, I suppose there are not so many concessions; would you say that? If I correctly understand your position it is this: that comparing Australia with Ireland, goods fares are higher in Australia, passenger normal fares are higher, and there are fewer concessions and special fares; is that right?—That is right?" To begin with, you might as well compare the railways of Western Australia——

41113. He was speaking of Australia generally?—He was manager of the Western Australian railways. That is just the same as if you were manager in Russia. Western Australia is the most undeveloped part of the country.

41114. But he was not speaking of Western Australia; he was speaking of Australia as a whole?—Here are the New South Wales railways, fares, and everything.* Let us take a place where I spent a good deal of time, that is Bathurst, 150 miles from Sydney. The express fares between Bathurst and Sydney, return, first class—there are only two classes—is 43*s.* The fare from Cork to Dublin, express, second class, is 40*s.*

41115. What is the distance?—166 miles.

41116. For 16 miles less the Australian fare is 3*s.* dearer?—I know; but you are omitting a very important point. Anyone who has lived in Australia knows that when you are calculating prices in Australia and are comparing them with home prices you count them as one-half. If you pay £2 in Australia you calculate it as equivalent to £1 at home.

41117. That is very funny?—There is no fun at all. I lived for several years in Australia, and I know what I am saying. If I wanted to buy anything in Australia, and I was told it was 7*s.* 6*d.*, I would not say that that was an enormous price, because I should reckon is was equivalent to about 3*s.* 9*d.* at home.

41118. How long is it since you were in Australia?—About eight or nine years.

41119. I will tell you why I thought that was rather striking. Mr. Davis, who had not been back as long as that, made a statement on that point. I thought it was fair to expect that prices would be higher in Australia, because money was more plentiful, and I put it to him: "A shilling will not go as far in Perth as in Dublin?—Well, 1*s.* 3*d.* in Perth would go as far as 1*s.* in Dublin, I should think; there is about 25 per cent. difference?" That is not the general standard.

41120. I asked that question, and I confess the answer surprised me?—I had to touch several phases of life there. I was bursar, therefore I had to buy provisions; I was prefect of studies, and had to buy books. I had to deal with transit in a thousand ways, and the invariable rule was to reckon Australian prices at one-half. If I asked how much is that, and they said £2, I would not say that it was very dear; I would say that it was equivalent to £1 at home. Even the pensions of the college follow that rule. If you say that a college pension in Australia is £80 no Australian will say that it is a terrible cost; he knows that it is equivalent to £40 at home. That is the invariable rule.

41121. I do not think we need cavil over details?—Details are sometimes very important. That fare from Bathurst to Sydney would work out £1 here.

41122. Do not let us discuss that, as another man might take other details. I only wanted to call your attention to the fact that there was strong evidence from an expert that there was no great catch in the Australian railways?—May I give a few illustrations? I was very little in Western Australia; I only paid a flying visit there, but I know the country from people who were there and from their descriptions. For instance, Mr. Davis said there were very few facilities. The fact of the matter is that there are always standing facilities on the Australian railways in Victoria and in New South Wales. For instance, if you want to organise an excursion, you go to your book and see that holiday excursions will be issued at certain fares, and you are told the number of people necessary to make up a party. You simply go to the office and say, "I have so many people, and I want to get an excursion fare," and you get it. Or let us take persons engaged in education. We could get in our college pupils who lived in any part of Australia; we had them from North Australia and from South Australia, and the return fares was half single fare.

Australian railway rates and facilities reasonable and moderate.

41123. There is no doubt that the Australian railways give special facilities for education?—That seems to contradict what Mr. Davis says.

41124. He did call attention to that point; there is no doubt about that?—Or suppose a farmer wanted to visit an agricultural station, he would get a free pass to the agricultural station and back again. In fact, the railways are teeming with facilities. The Victorian railways are run on almost more liberal lines than the New South Wales railways, because the Victorian State is almost over-railroaded, if I may use the expression, and it is simply a matter of making use of the railroads.

41125. So much so that they had to pull some up because they did not pay interest?—Yes. They are even more free with their facilities there. As a matter of fact, when I first came in contact with the Australian railways it struck me that it was the ideal principle of working the railways for the benefit of the country.

41126. I am not suggesting that you should alter your opinion to suit me; I was only putting it to you that there is another point of view, which is expressed by a person who has some right to have an opinion on the matter. There is one other thing which rather struck me. You said that you had a belief in what you described as making the railways free like the roads?—I think it will come to that.

41127. Do you mean that person will be able to walk into a train and go down to Cork for nothing?—Quite so; the same as the road—kept for the benefit of the people.

Free use of the railways to the public the ultimate result.

41128. Can you tell me any road where there is a free omnibus that I can get into?—Of course not. That would be an ideal thing too. But the railroads to-day are so important as a matter of intercourse that they are practically taking the place of roads.

41129. All I want to point out to you is that to supply a road, what you call a turn-pike, free, gratis, and for nothing, for anybody to travel along would not be such a very serious matter; but to supply the means of carrying you along that road also free would be a very serious matter?—The question is whether it would not be repaid by the development of the country.

41130. Do you think that it would be quite fair that you and I, who have a certain amount of leisure, should run down to Bray every fine afternoon at the expense of all the other people who have to stay in Dublin and earn the money to pay for it?—It might not come in that way at the expense of the people; there is many a way in which it might come. As Mr. Sexton says, there are three millions of over-taxation; if we could use that money in Ireland we could give the people practically free travelling..

The cost to be provided for by recoupment of the over-taxation of Ireland.

41131. Take it that you have those three millions: do you think it would be a profitable way of spending it to allow idle people to travel wherever they liked for nothing?—My theory is that the railroad should be as common as the ordinary road. You would not prevent the idle person from walking along the road; you would not prevent the idle man either from going into the train.

41132. Is not your analogy a little mixed?—How is that?

41133. I do not suggest that you should allow the idle man to walk along the railway; he might be killed. But that is your analogy?—Then I would say "use" the railway. Just the same as you would not prevent an idle man from using the road.

41134. But you would not supply an omnibus gratis?—We will not go into the omnibuses yet.

* Official Guide Book, New South Wales Railways, October 1906.

Jan. 15, 1908.

Rev. P. J. Dowling, C.M., Cork, Lecturer for the Department of Agriculture.

Examined by Colonel HUTCHESON POË.

41135. With reference to this question of fish traffic do I understand you to say that from Kinsale fish in bulk goes to Grimsby and comes back again in bulk to Cork?—I cannot answer the question as to how it comes back, but I know that it goes in bulk from Kinsale.

Necessity for improved railway facilities between Kinsale and Cork for fish traffic.

41136. It is only a small residue, as much as is required for local needs, that comes back to Cork, I suppose?—That is all. Such supplies as Cork wants comes back to Cork.

41137. Is that not also the case with Yarmouth, Lowestoft, and all those fishing places on the east coast of England? The' fish there comes in in great quantities, and it is all sent away to London and elsewhere. It is with the greatest difficulty you can get any fish in those places; it is only the residue that is left. It is the same way with Kinsale, owing largely to the difficulties caused by the want of physical connection between the railways in Cork, and the fish having to be carted across Cork to get to Dublin, and the better market that Grimsby supplies. The fish naturally goes where it can command the best price. A small proportion comes back. I am sure you do not want to convey to the Commission the impression that fish in large quantities goes to Grimsby and then comes back in large quantities for distribution in Cork?—What I feel is this. If you had the same facilities given to the fishermen of Kinsale as are given to them by the people who take the fish away to the English ports, Cork would become a great distributing centre for fish. There is a great deal of fish wanted in the country, and Cork would become the distributing centre for it.

The question of fish exported from Kinsale being imported from Grimsby for consumption in Cork.

41138. Does not the want of that physical connection between the railways in Cork rather handicap the fish trade? Fish or any other traffic that comes up from Kinsale or the West has to be carted across Cork, and that is a serious handicap, is it not?—Yes, and we are trying to remove that now.

41139. We have had a good deal of evidence on this question of fisheries from Mr. Green. He stated that the system by which the fishing was carried on by these steam trawlers, and the large consignments made thereby, was very different from what it had been a few years ago. But I did not gather from him that he thought it was to the disadvantage of the fishermen or of the people of the country?—It is very much to their disadvantage. First of all, the prices are controlled by these people. Say the fishermen at Kinsale take so much fish. If they had the alternatives of sending it to Cork market or selling it to these Grimsby people they could hold out for their price. But at present they are blocked. The Grimsby man says that he will give so much a hundred for the fish, and the fishermen may either take it or let the fish rot. There is no other alternative. If they had an efficient service from Kinsale to Cork there would be an alternative, and they could hold out for their price. At present they are held in a ring. The owners of the Grimsby trawlers gather together, and say—"There is good fishing to-day; we will give so much a hundred." They name their price, and they stick to it.

41140. I think I am right in saying that there is no railway connection with the harbour, and if you want to develop the fish traffic that is a part of the problem also?—Yes.

Extent of foreign competition with Irish specialities in English markets.

41141. You make a strong point, and I think very rightly so, of the large sums of money paid to foreign countries for what you call Irish specialities—dairy produce, butter, eggs, and bacon?—I calculate that something like £40,000,000 per annum is going out of England for foreign produce which Ireland could supply.

41142. I was looking at the returns of the Department of Agriculture, from which it appears that the butter, eggs, and bacon imported into Great Britain from the Continent, not to speak of the Australian and Canadian imports, amounts to twenty-two millions a year?—That would be a very low calculation.

Necessity for low export rates for agricultural produce.

41143. Those are the figures in the returns of the Department of Agriculture for those three commodities only—butter, eggs, and bacon—not taking into account the Australian and Canadian imports. Against that, in those three commodities, we export something like eight millions. Although Mr. Acworth seemed to think that half per cent. would make very little difference to the butter manufacturers of this country, I think, with all due deference to him, that when we have evidence that Copenhagen butter is brought in in large quantities at something like 24*s.* or 25*s.*, as against 40*s.*, it makes a considerable difference. At any rate, I understood you to say that you attach great importance to winter dairying, and I certainly think that is a very important factor; but would it not be an additional inducement to farmers to start winter dairying, which they are reluctant to do (I think it is a pity they are), if at the same time they had some promise of considerable concessions held out to them by the carrying companies in the shape of lower rates?—Of course it would.

41144. That would be a great inducement?—Yes.

41145. And it would probably very materially assist in recovering a great deal of this trade which is now in the hands of the producers on the Continent?—Yes.

41146. You refer in your proof to the rates on leather. We have had some evidence about that. I think that at Limerick there are one or two tanneries?—Two, I think.

41147. In spite of that argument about a few pence in the ton not making much difference in the case of leather, because boots are expensive articles, when you come to figures such as you point to in your proof—leather from Liverpool to Dublin, 7*s.*; from Limerick to Dublin 22*s.*—I presume they must very seriously handicap the Limerick manufacturer?—Quite so.

41148. Such rates must seriously handicap him in trying to place his goods in his own market, that is, in his own country?—Yes.

41149. I take it that that is all you wished to draw our attention to?—That is the important fact, yes.

41150. With regard to the general question of unity of management, I presume you are aware that there has recently taken place a great amalgamation between two large English companies?—Yes.

41151. The Great Central and the Great Northern Railways?—Yes.

41152. I read an interesting report of a meeting of the shareholders of the Great Northern Railway the other day; I think the meeting was held in December. One of the terms of the arrangement was that the Great Northern Railway should pay the Great Central Railway in respect of capital expenditure a sum of £100,000 a year. That was in addition to other terms. The Chairman of the Great Northern Company, Lord Allerton, in recommending the terms to the shareholders, some of whom rather objected to this item, said he thought it was a mere flea-bite, and that owing to the great field for economy which would be opened out by the amalgamation of the two companies the money would be paid without the smallest difficulty. He stated that the improved working of both passenger and goods trains and the avoidance of unnecessary duplication of services would bring about very large economies. If such economies as that—£100,000 a year in one instance only—can be brought about by the amalgamation of two large companies, is it not reasonable to suppose that where you have twenty-six or twenty-seven companies, as we have in Ireland, the unification of management would result in similar economies here?—I have no doubt about it.

41153. I think it is a strong argument?—I think there would be a great saving here by amalgamation.

41154. Not so much in directors' fees and so on, which do not amount to much, but in the improved running of trains, both passenger and goods, and by the avoidance of unnecessary services and the competing of one with another; one service would do what perhaps two or three do now. All these things entail cost?—There is one other point referred to in my proof. I think that anyone who has lived under an amalgamated railway system would dismiss the idea of dividing the railways into two systems.

41155. *Mr. Sexton.*—You mean State railways?—Unified railways. To my mind one of the special features of the system is that a poor railway would be helped by the richer railways. Take Australia. A line was built at the expense of the Government, and it was run for ten or fifteen years at a loss, the loss being made up by another railway that was making enormous profits. If you divide the railways of Ireland into two systems, the Northern and the Southern, the Northern may be very successful and keep all their money to develop their own system, while the Southern system may be poor and stunted. On the other hand, if you have one system for the whole country, if the Southern railways want a little

help for a few years it could be supplied by the railways in another part of the country.

41156. Or conversely?—Yes.

41157. *Colonel Hutcheson Poë.*—The reserves of the whole system would be available for supplying whatever deficiencies there might be on any one part of the system?—Yes. That is a very important point to urge, so that there should not be two systems in the country. Such a scheme would spoil the whole thing in addition to doubling the administrative management. I always thought that that was one of the great features of a unified system, that a helping hand could be given wherever it was wanted.

41158. *Sir H. Jekyll.*—Such a system is peculiarly applicable to a new country which requires developing?—Quite so. In this country the railways follow population, because no company will build a railway unless they see some prospect of a return upon their capital; whereas in Australia if the Government came to the conclusion that they would drive a line fifty miles into a part of the country in order to develop it they would immediately build the line and run it for perhaps ten or fifteen years at a loss.

41159. *Mr. Sexton.*—That would account for apparently high rates and fares for a time?—I do not admit that there are high rates and fares.

41160. I mean until the population came there?—There might be high rates on that particular line.

41160A. *Sir H. Jekyll.*—They proceed on the principle of providing facilities before the traffic?—Yes.

41161. In order to create traffic?—Yes.

41162. *Colonel Hutcheson Poë.*—You alluded to the high fares in this country as compared with the Continent. According to the return of Mr. M'Nulty, the third class passenger fare on the ordinary slow train in Holland works out at ¾*d.* a mile, and in Belgium, Germany, Denmark, and Austria at ½*d.* With your knowledge of Ireland, and your wide experience of the country, are you of opinion that a penny a mile—which is the third class Parliamentary fare in this country—while it may not operate injuriously in England where there are large manufacturing populations, is a heavy rate to charge third class passengers in Ireland?—Quite so.

41163. Do you think that probably a reduction to ¾*d.* per mile would lead to a great increase of third class traffic in Ireland?—Yes.

41164. An Irishman is inclined to travel if he can?—Yes. I think that that is one point on which some of the witnesses do not appear to have touched to any great extent—I mean the personal traffic as apart from the goods traffic. Many a merchant in a country town would run up to Dublin himself and buy his goods personally and make better bargains for the carrying on of his business, but the fare deters him. If he were in Belgium, where, for a payment of a few shillings, he could travel all over the country for a week, he would go to the different centres and buy his goods. You see what an enormous advantage that would be to him. That is a point which has not been insisted upon sufficiently. The personal traffic is a very important factor.

41165. While you state very fairly that you do not blame the railway companies for their administration of the lines as they exist, and that they do their best under difficult circumstances and with difficult material, still I take it you would expect that if there were anything like unity of management many reforms in regard both to passenger fares and goods rates could be introduced which it is impossible for the railway companies under existing circumstances to attempt?—There would be such savings that they would be able to lower goods rates and give further facilities for passenger traffic which at present the railway companies cannot do. With regard to the managing body, my idea was to have a council elected by the country, say, two members from each province; that would constitute the railway board. They would have under them, say, three railway experts, as they have in Australia, who would be responsible for the technical details of the management of the lines. That would be my ideal, because it would secure that the lines were worked for the country.

41166. *Mr. Sexton.*—The elective body would have an expert board?—Yes.

Jan. 15, 1908.

Rev. P. J. Dowling, C.M., Cork, Lecturer for the Department of Agriculture.

The advantage of cheap travelling facilities to traders.

Suggestion as to the constitution and administration of the controlling body of the nationalised railways.

Captain H. M'Ternan, D.L., examined by Sir Herbert Jekyll (*in the Chair*).

41167. Captain M'Ternan, you are a Deputy Lieutenant and a Justice of the Peace?—Yes.

41168. You have had considerable experience as a resident magistrate?—Yes.

41169. You reside in the country, and know its wants?—Yes.

41170. What is your view as to the future of the railways?—I think they should be made the property of the State and given to an Irish authority to manage.

41171. You advocate the purchase of the railways by the State and handing them over to an Irish authority?—Yes.

41172. An elected authority?—Certainly.

41173. What have you to say about the rates for goods?—I have not very much experience, but I have some experience. I don't think some of the railways make the effort that they should to oblige customers in carrying small parcels, for instance, bread from Dublin. I communicated with Dublin as to getting bread for my family, and Messrs. Kennedy wrote to say that the charge on a 2 lb. loaf would come to three farthings, so I could not get it. Last year I sent off boxes of fowl to friends in England. One box, 36 lbs. weight, cost 3*s.* 6*d.* to Chelmsford; another, 30 lbs. weight, cost 2*s.* 6*d.* to London. Mention has been made of the carriage of potatoes from Foxford. I know that I paid two shillings for the carriage of a cwt. of potatoes from Boyle to Dublin. That would come very nearly to the rate that the preceding witness gave.

41174. Have you anything to say as to the rates to Castlerea?—I should not be surprised if that was improved, but the people living in Castlerea had to get cattle from Dublin, a 5 ton wagon of cattle, more cheaply by having it sent on to Ballyhaunis, 15 miles further on, and then brought back to Castlerea.

41175. The cattle were brought 15 miles past Castlerea, and then brought back again?—Yes.

41176. Can you account for that in any way?—No, except that there was competition at Ballina. The cattle were the same. They were brought on to Ballyhaunis, and then brought back again to Castlerea.

41177. Are you satisfied with the condition of the carriages?—Except the third class. I think the third class are very bad. There are no cushions on the seat, they are dirty, and there is no cloth on the floor.

41178. That is on the Midland Great Western Railway?—Yes.

41179. Your observations are confined to that line?—Yes.

41180. Have you seen any recent improvements lately?—I have not been on it very lately until the day before yesterday. Another thing is I should like to see railways built to improve the country. Parts of it are very badly off, in my opinion, for railways. From the Arigna district down to Sligo is in want of a railway

41181. That has been mentioned by other witnesses?—Mr. Long, when Chief Secretary, offered £24,000 to make 3½ miles of railway up the Arigna valley. The river Arigna is between the mountains of Leitrim and Sligo.

41182. Was not that refused?—The County Council would not take it because they were afraid they would be taxed, although there was no interest to be charged, and there did not seem to be any risk, yet they would not run any risk. The new line of railway starting from Arigna station now is not going up the Arigna, which runs up between the mountains of Leitrim and Sligo. Both are very high, and are full of coal and iron ore. I think that is a great mistake. They intend to apply for help from the State to make a railway round by Ballyfarnan and Collooney. I hope they won't get it unless they make the line up the Arigna valley to develop the resources of the country. They have not put it into their Bill. I have been protesting against their leaving it out.

Captain H. M'Ternan, D.L., Boyle, Co. Roscommon.

M. G. W. Ry. Co.'s 3rd class carriages condemned.

Necessity for further railway extension in Ireland

Proposed extension from Arigna to Sligo.

The Government grant for an extension in the Arigna Valley.

Refused by Leitrim Co. Council. Omission from the Sligo project of a link to the Arigna mines.

Jan. 15, 1908.

Captain H. M'Ternan, D.L., Boyle, Co. Roscommon.

Examined by Mr. SEXTON.

41183. You live in the County Leitrim?—In the County Sligo, but I am mixed up with the County Leitrim a great deal. I have 7,000 acres of land in that county.

41184. You know that the Leitrim ratepayers have to bear a guarantee which has run as high as two shillings in the pound?—Yes, but that was given without any limit.

41185. It is not now so high, but it is still very oppressive?—Yes.

Reason for the refusal by the Leitrim County Council of a grant for railway extension at Arigna.

41186. Perhaps you will confirm me that the reason why the ratepayers refused to carry out the arrangement as to the £24,000 was that they apprehended there might be an increase of the guarantee levy by reason of a further deficiency in receipts to pay the working expenses?—That is the allegation, but the £24,000 was to be given free of interest, and I could not see how it was a risk to take money which they were getting free of interest.

Guarantee offered by the Gt. Northern Railway Company.

41187. The branch line was to be constructed with capital, for which no interest was to be charged, but the ratepayers apprehended that the line would show a deficit in working expenses?—The Great Northern line offered £500 a year to guarantee that line in the Arigna Valley, so that it would not be a loss to the ratepayers.

41188. For a certain time?—I am not sure that there was any limit of time.

41189. There was this apprehension apparently on the part of the ratepayers?—So the County Council said.

41190. They thought so?—They said so, and thought so, I am sure.

Necessity for a railway up the Arigna Valley to the coal mines.

41191. There is a great need of additional lines in Ireland?—Yes, there is, but I think it would be a great mistake for the interests of the public at large, and for the development of Leitrim and Sligo, too, to leave out this line up the Arigna Valley, because it runs up to the mountains, and the people could run the coal down to the railway at Arigna, because I don't think the railway could be made in any other way, because it is a hilly place, full of iron and coal. They are working two or three pits there now.

41192. If we are to judge from the evidence here, there is a strong movement of opinion in various parts of the country in favour of the construction of up to perhaps about 1,000 miles of various links and branches?—I am sure there is. Leitrim wants a branch badly.

Question of obtaining money for further necessary railway extensions.

41193. What is the best way of getting the transit system developed to that extent?—To get the money.

41194. How?—Either by a company; this new railway is going to be built by a company with some help which they hope to get from the State.

41195. The branch lines are wanted for those parts of the country which have hitherto been avoided by the companies, for the simple reason that they did not foresee a profit.

41196. That of course leads to a certain strong presumption?—Yes.

41197. Is there any real prospect of the completion of the transit system in Ireland if the matter is left as at present between companies, guaranteeing ratepayers and the British Treasury?—I fear not.

Creation of an authority to control the railways advocated.

41198. What would you say to the creation by Parliament of an authority which would take the railways as a whole and the resources incidental to the railways into their hands?—I would say it would be the best way to settle the matter.

41199. And out of such resources to provide the annual charge requisite for capital to build these branches?—Quite so.

41200. You put it very strongly here that the rates for goods, so far as you know, are quite excessive?—I thought so. I am not very conversant with the rates.

Excessive railway rates a subject of general complaint.

41201. But you move about, and meet all classes of the community, and you discuss these practical questions, and you say that traders in your district have actually given up the selling of certain classes of goods in consequence of the pressure of rates?—There are great complaints about excessive rates. Bread is sent from Belfast to Riverstown, which is close to me, but the railways won't give any facilities for it coming from Dublin to there. The Northern lines do, but the Midland Great Western won't at such a rate that the traders can sell it.

41202. We had a contented flax manufacturer here to-day who pays for railway freight less than a penny for every pound sterling worth of flax; but here where you want bread the freight on 10*s.* 6*d.* worth would be 4*s.* 6*d.*, which would be 40 per cent. of the value of the article?—That would be by passenger train.*

41203. You gave up getting bread from Dublin?—Yes.

41204. Looking to what you say as to traders giving up trade owing to excessive rates, is it not vital that in whatever united system may be devised for Ireland there should be perfect security that every surplus should be available for reduction of rates.

41205. The finance of the question being practically managed between the Imperial Government and Ireland, the lines should be the property of Ireland?—Yes.

41206. And worked by an authority responsible to the Irish people?—Certainly.

Examined by Colonel HUTCHESON POË.

41207. Who are the promoters of the Bill before Parliament as to this proposed line from Arigna up to Collooney?—I cannot tell you. Mr. M'Andrew is the secretary. The others are English people. The County Council of the County Sligo is backing it up.

41208. We have heard a great deal about considerable friction, animosity, and dissatisfaction felt by the people of Leitrim at the fact that the railway and the coal company are, so to speak, in the hands of the same people?—This company will also suffer from the same thing I am afraid.

41209. I was going to ask you whether there is really as much in that grievance as people coming before us say?—I can only judge by the evidence given here. I live in Sligo.

41210. You don't know from the circumstances of the case or your own knowledge sufficiently well?—I do not, but I think something of that kind is likely to arise. With regard to the new railway, the engineer to the new railway, who is the only person seen in connection with it in the country, told me himself he had taken options of nearly all the coal and iron around the railway which they propose to make. They have left that line of railway up the Arigna Valley out of the Bill. I take it they intend to make, perhaps, with private means. If they do they will have the whole key to the Arigna coal and iron ore. A supporter of the present proposed line, and an M.P., told me the proposed company have got options of coal and mineral lands that would supply them for 200 years. This makes it very clear that they would not allow any person opening mines to run their coal over their Arigna Valley line if made by their private means, in case the pits were competing with the company's pits.

41211. From the existing railway they will make a private line to their mines?—Yes.

41212. What is the objection to that?—They would penalise and handicap private owners. I am interested as the owner of 2,000 acres of land near Arigna. If they made a private line themselves they could handicap other people working the mines, particularly when they promised me they would make it, and that it would be part of the Bill.

41213. The line leaves the Arigna coal mines out of the question?—Yes. The three miles for which Mr. Long gave the grant was to go up the mountains. The engineer told me that they would make this 3½ miles themselves, but they have not put it into the Bill.

41214. Suppose this line takes the route to Collooney, and there was a condition in the Bill that the coal company was to make the extension to the mines themselves?—I don't wish them to have control of the mine as a private property.

41215. You think there should be a provision in the Bill compelling the company to make the line?—Certainly.

41216. You refer to third-class carriages as filthy, with no cushions and no cloths on the floor?—They are very cold and comfortless.

41217. Does that opinion apply only to the Midland?—To the Midland Great Western principally.

41218. You are aware that of the 29,000,000 people who form the travelling public in Ireland, 24,000,000 are third-class passengers?—Yes.

41219. It is the third-class passenger pays the dividend?—Yes.

41220. That being so, you think he is entitled to a little more consideration than he gets?—Yes

* See Appendix No. 14.

41221. Further than that, would not you say that while the large majority of the people in the country are obliged to travel third-class, if the railways saw their way to make an appreciable reduction in second-class fares a great many people who now go third-class would be glad to go second-class?—Quite so. I have heard the third-class carriages compared to a plank bed. I have never been on one yet. I hear that they are very uncomfortable.

Mr. J. W. MANNING examined by Sir HERBERT JEKYLL (in the Chair).

41222. You live at Rosapenna, in the County Donegal?—Yes.

41223. You represent the hotel and tourist trade, do you not?—Yes.

41224. You are in frequent communication with fishermen, farmers, and the travelling public?—Yes.

41225. So you represent very fairly those classes in your district?—Yes.

41226. What is the district to which you particularly refer?—The railway with which I am particularly concerned is the Londonderry and Letterkenny and the Letterkenny and Burtonport Extension Railway.

41227. What have you to say about the passenger service locally on those lines?—We have had reason to complain of the various serious breakdowns on the line.

41228. Has there been no improvement then recently?—Yes.

41229. It was very bad I know some years ago. Has the service not improved?—Yes. It has during the past season.

41230. There has been no great cause of complaint comparatively speaking?—Comparatively speaking not.

41231. Now, what is the number and condition of the carriages?—Visitors coming to me complain that there is no heat supplied to the carriages.

41232. Is not the tourist traffic mainly a summer traffic?—No. We get some very early in the season. Our seasons lately have been cold and bad.

41233. Do you mean to say you get many visitors in the cold season in that wild part of Donegal?—Yes. Our fishing begins in February.

41234. Do you include these in the tourists?—Yes. I include these in my season's work.

41235. During the summer months have you anything to complain of as to the number and condition of the carriages?—As to the number—that is all.

41236. There is insufficient rolling stock?—Yes.

41237. What about connections?—The connections also we rather complain about.

41238. The connections at Letterkenny particularly?—With the main line trains leaving Londonderry.

41239. Have you any remark to make about the goods?—We sometimes have to complain about the undue delay in delivery. I may say that those cases are not very recent either.

41240. Things have improved in fact?—Yes, they have.

41241. You have not been very successful in your appeals to the Board of Trade, I understand?—No. That is really a very serious matter.

41242. Are you referring to the appeal you possess under the Order in Council?—Yes.

41243. By the guaranteeing ratepayers?—Yes. They have appealed unsuccessfully.

41244. I remember the appeal took place about one and a-half years ago and it was withdrawn?—There is one appeal I am informed by Sir John Olphert was forwarded by him to the English Board of Trade at the request of the Irish Board of Works, and Sir John was afterwards informed that no steps would be taken. He was first informed that an inquiry would be held, and then informed that an inquiry would not be held.

41245-46. Quite so, the reason being that the request for the inquiry which was made by the ratepayers at the instance of the Board of Works was withdrawn by the ratepayers also at the instance of the Board of Works?—I was not aware of that.

Examined by Mr. SEXTON.

41247. In your avocation you have special opportunity of learning the views of merchants, farmers, and others on the general question of railways?—Yes.

41248. What is their opinion about the level of passenger fares and of rates on goods?—I have no complaints and no particulars to go into. Speaking for myself, I have no complaints to make of rates.

Desirability of a general reduction in fares and rates.

41249. Are you acquainted with the opinions of the fishermen and others connected with the fishing and other industries in your district?—I cannot say I have ever heard them complain about rates, only about delays.

41250. Would you consider it important or valuable to the country if passengers could move about the country more cheaply, and if goods could be exported to England to compete with the Continent more cheaply than at present?—That would be of very great value, particularly as the tourist business is the one thing which is growing fast in the country.

Industrial development would be assisted by lower rates.

41251. Should you think it important if industries, struggling industries in Ireland, such as shirt factories and fishing, could have their produce exported or even moved about in Ireland more cheaply, so that sales would be promoted?—Certainly I would.

41252. Would you be in favour of such a form of the railway system as they have in many other countries—namely, a united system of lines more cheaply worked, so that there would be means available to reduce fares and rates to the level of those of other countries?—Yes. Would that be amalgamation?

Unification of the railways under Irish control advocated.

41253. By unification?—Yes. I think in that way it would be to the public good in the way of reduced rates.

41254. Do you think the most likely way of securing it to the public good would be that the railway authority should be responsible to the public?—The State.

41255. To the Irish public?—Yes.

Examined by Colonel HUTCHESON POË.

41256. You say in your proof that you wish to present some petitions signed by general merchants, farmers, and other persons. Did you bring them with you?—Yes.*

41257. From what particular towns?—Falcarragh, Dunfanaghy, Creeslough, and Dungloe.

41258. All on the Burtonport extension?—Yes.

Petitions from traders complaining of unsatisfactory working of the Burtonport extension line.

41259. In your opinion is the unsatisfactory condition of things which exists apparently along the whole of that system leading to Burtonport more or less attributable to the way in which the lines are worked by the Londonderry and Lough Swilly Company; is that your opinion or not? We have had a great deal of evidence, and there have been many complaints as regards the line, stores, rolling stock, breakdowns, and different other allegations of that kind. What I would like to know is to what do you attribute these complaints?—Personally I believe from observation it must be due to defects in the rolling stock and engines.

Which is due to defective rolling stock and engines.

41260. Are you satisfied with the way in which the Londonderry and Lough Swilly Company run that system; they practically run the whole thing; they are practically responsible?—I could not go so far as to say there was mismanagement on their part, but I have been personally on the trains that have broken down, and I have been told that the cause of being stuck was the engine having broken down. Whether it was mismanagement that the engine should break down I could not say.

Question of Letterkenny Railway.

41261. You are not in a position to express an opinion as to whether in the event of an arrangement being come to to enable the Londonderry and Lough Swilly Company to take over the Letterkenny line it is desirable in the interests of the community generally or otherwise?—No; but I would like to refer to this matter in connection with the new line from Strabane to Letterkenny.

41262. That is to be opened in March or April?—Yes.

The opening of the Strabane to Letterkenny Extension.

41263. What about that?—On behalf of the tourist business, with which I am personally concerned, I

* See Appendix No. 15.

Jan. 15, 1908.

Mr. J. W. Manning, Rosapenna, Co. Donegal.

Effect on the traffic of the Burtonport line.

am afraid that when that line is opened it will be of no value to us, owing to the want of connection with the Letterkenny and Burtonport line.

41264. It is rather premature to say whether it will be or not. The line is not open, and it is impossible to say what connections they will make, but we have evidence to show that with the exception of the unfortunate ratepayers who are responsible for the Letterkenny branch, the opening of the line will be a very great advantage to the residents of this district. People between Letterkenny and Londonderry who have to pay a guarantee will suffer, because traffic will be diverted, but it will give a connection from Letterkenny down to Strabane, Belfast, Dublin, and other places which they at present don't possess?—Yes, if the connections are run.

41265. It is a little premature to say that they won't be run?—They belong to different companies, who are in opposition.

41266. *Colonel Hutcheson Poë.*—I think we can deal with those grievances when they arise.

Mr. John O'Dea examined by Sir Herbert Jekyll (*in the Chair*).

Mr. John O'Dea, Trader, Clarecastle, Co. Clare.

Clarecastle industries.

41267. You are in business, I think, at Clarecastle in the County Clare?—Yes.

41268. In the hardware business?—Yes.

41269. What is the principal trade which is carried on in your district?—Our district is a very good one for corn-raising, and timber and coal are dealt with, Clarecastle being a port.

41270. I suppose that the timber and farm produce are exported?—Yes.

41271. How do they go?—By boat from Clarecastle.

41272. Do they also go by rail?—Yes; from Clarecastle station. There is also hay-pressing, which I forgot to mention.

41273. Can you give me instances of the rate, say, to Cardiff?—Yes; the rate on pressed hay in wagon loads containing 3 tons would be about £1.

41274. How does it compare with the rate by steamer?—The rate by steamer would be 12*s.* 6*d.*

Comparison of rates for hay, &c., by steamer and by rail, Clarecastle to Cardiff.

41275. So there is a difference of 7*s.* 6*d.*?—Yes. You very often may chance to get a steamer for ten shillings a ton, to take it to Cardiff, which would be half the carriage.

41276. But that is a chance?—Yes. The usual thing is 12*s.* 6*d.*

41277. Does the same thing apply to the other articles you have mentioned, like timber and so on?—Yes.

41278. What are the rates on hardware from Wolverhampton to Clarecastle?—They class hardware under several headings, but it usually comes to me in casks, and now they have one fixed rate to Clarecastle, which is 56*s.* 8*d.* per ton.

41279. *Mr. Sexton.*—From where?—From Wolverhampton to Clarecastle.

41280. *Sir Herbert Jekyll.*—That is for small articles packed in casks?—Yes, 3 or 4 cwt. casks.

41281. The articles in the casks would be small?—Yes.

Complaint of excessive rate for hardware from Wolverhampton.

41282. *Mr. Sexton.*—Would you have to get a ton to get that rate?—No; a 2, 3, or 4 cwt. Usually it is 56*s.* 8*d.*

41283. *Sir Herbert Jekyll.*—How does that rate compare with the rate from America, from Chicago?—Four years ago I started business in Clarecastle as a seed merchant. I find that the railway people have been charging me a rate of 73*s.* 4*d.*, in a great many cases a good deal higher; for one item alone, 2 cwt. 2 quarters, something like 12*s.* 5*d.* That is something like 100 shillings per ton.

41284. How long ago?—12 months ago, one particular item.

Overcharges refunded by G.S. & W. Company.

41285. You have just told us that the rate was 56*s.* 8*d.*?—Yes; the rate at present which I have got from them is 56*s.* 8*d.* I also got a refund of all the previous excesses that had been carried over the line at 73*s.* 4*d.*, 80 shillings and 100 shillings, as the case might be. I hold the different dockets, if you wish to see them.

41286. Was the 56*s.* 8*d.* rate the result of negotiations between you and the railway company?—Yes; very long negotiations extending over 12 months. (*Dockets produced.*)

41287. Can you explain why these parcels are at different rates—one at 73*s.* 4*d.*, and one of 14 lbs. at a rate of 108*s.* 4*d.*?—No.

Mr. Smyth (*G.S. and W.R.*)—There may be different commodities.

41288-9. *Mr. Sexton.*—Were not they both hardware?—They were all hardware, but they embraced a number of different things. There was another one for 7 lbs. that cost 2*s.* 9*d.* to bring from Wolverhampton.

41290. That is a bale of whips?—Yes.

Mr. Smyth (*G.S. and W.R.*)—They are very easily broken and a very brittle article, and, of course, they are charged at the smalls rate for one-quarter weight.

41291. *Sir Herbert Jekyll.*—I think you made some comparison of rates from Chicago as compared with the rates from Wolverhampton?—Yes. The rate from Chicago to New York, 1,000 miles, would be on the smallest consignment 48*s.* 2*d.* per ton, and on large consignments 32*s.* 4*d.* per ton.

41292. That is between Chicago and New York?—Yes, 1,000 miles.

41293. You would not say there was any analogy between the conditions in America having regard to the distances, and so on, with the conditions prevailing in Ireland?—I would not. The rate from New York to Liverpool would be 12*s.* 6*d.* per ton plus 5 per cent. for every forty cubic feet.

41294. Which of the districts are specially affected by these high railway rates?—The districts between Ennis and Kilrush.

41295. Between the Shannon on the one side and the sea on the other?—Exactly.

41296. Has any attempt been made to establish a motor service?—Some time ago an attempt was made but it fell through. It was not a motor service that they wished to establish but a traction engine service.

41297. For the carriage of goods, not of passengers?—Yes.

41298. A motor service would be more useful for passengers?—Possibly.

41299. It is hardly applicable to heavy goods?—It would, because at present a motor service is not more severe on the roads than a common cart. Some of the new motors, with their engines, are only two tons weight—the Renard road train, for instance. Then a great many people down in County Clare are thinking of approaching the County Council with the object of having three or four routes served by the motor service.

41300. It has been talked about, but nothing has been done?—Yes.

41301. Not even as an experiment?—No. Not as yet.

41302. How about the train service to Clarecastle: is it adequate?—It is a great deal better than it was. Goods were often delayed a day and a night at Ennis. Somehow they did not run it through, but they do now.

41303. So there is not the same cause of complaint now that there was a comparatively short time ago?—No. In fact, I can see no cause for complaint since I brought this under their notice.

41304. Is there any steamboat service from Clarecastle to Limerick?—Yes. We had a weekly service there, but the Limerick steamship people were unsatisfactory. They did not exactly suit the requirements of the people to whom they were delivering the goods, and it fell through.

41305. It has been discontinued?—Yes; but had there been a good cross-Channel service established either with the Clyde Shipping Company or the Limerick Steamship people, delivering quantities as far as Clarecastle, by establishing that with those three or four services with termini at Clarecastle or Ennis—but Clarecastle would be more central, being the port, to have the distributing station—it would materially advance the County Clare.

41306. Is there any prospect of that service being resumed from Limerick to Clarecastle?—There will be, but not until such time as those three motor services are running through the county not served by railways at present. For instance, I have got a map of the county, and I have those three principal routes mapped out in red. In one portion you have the best corn-producing district in Ireland. That is the district from

Ennis to Limerick, by the Fergus. (*Map produced.*) Steamers of 500 tons can get in to Clarecastle. Here we have a valuable coal mine fourteen miles beyond Clarecastle; if we could only touch on these places.

41307. There is no suggestion that this country should be developed by means new railways?—No. I would suggest no more new railways until we have at least a ten-fold turnover in our industries in Clare.

41308. There would not be sufficient traffic to warrant them?—I fear they would not pay.

41309. You think something in the nature of a motor service would be better?—Certainly I say a motor service would pay because it is got up at a fractional part of what a light railway would cost.

41310. Have you had any suspicion of undue preference being given to some traders against others?—Yes, as far as having a difficulty first in getting a rate for six-ton lots of petroleum from Limerick, for instance.

41311. By rail?—By rail from the tanks there, and delivered in six-ton lots, I was at first charged 7*s.* 3*d.* a ton. I wrote refusing it, and a few days afterwards I got the reduced rate of four shillings a ton.

41312. Have you any reason to suppose that some traders were charged 7*s.* 3*d.* per ton while others were charged 4*s.*?—That very case which I have given gave me to believe that some of those people, very extensive merchants, would get a preference beyond a small trader.

41313. Does it depend at all upon the quantity taken?—Yes. A six-ton lot is the most you can take, and a 4*s.* rate is the minimum rate.

41314. What is the published rate?—Since that it has been published at 4*s.*

41315. Everyone is charged only 4*s.*?—For a six-ton lot.

41316. To come to the general question, what is your idea about the management of Irish railways as a whole?—I would have them managed by an Irish body, and I would have that body elected by the people, a representative body.

41317. Such representative body to control the work of the railways?—Yes.

41318. With experts working under them?—Yes; at least from four to six railway experts.

41319. What do you think would be the special advantages of carrying out such a plan?—I think it would tend to a great extent to increase the products of the country.

41320. You think it would benefit the country generally?—Yes.

Examined by Colonel HUTCHESON POË.

41321. With reference to this question of preferential treatment, you are aware that it is perfectly legal for a railway company to give a trader or anyone a specially reduced rate for consignments in bulk so long as they give everybody who sends consignments under the same conditions the same rates?—Certainly.

41322. I gathered from your answer to the Chairman that in this particular instance the rate for this particular commodity was 7*s.* 3*d.* per ton?—Yes.

41323. And for six-ton loads they gave it at 4*s.*?—The reason I knew about the 4*s.* rate was that I acted as manager for an Ennis firm in Ennis, and we had been paying the 4*s.* rate. Clarecastle is two miles nearer Limerick than Ennis. Consequently I did not see why we should be charged 7*s.* 3*d.*, as against 4*s.*

41324. They charged you 7*s.* 3*d.* on a six-ton lot?—The first time I refused it. Then they gave the 4*s.* rate.

41325. They gave you the same rate as the others?—Certainly.

41326. Then I don't think you have any right to complain that they charged you 7*s.* 3*d.* It might have been an oversight. They gave you the 4*s.* rate?—Yes.

41327. Is that the only instance you can give of preferential treatment?—That is the only instance. It may have been an oversight.

41328. The railway company, when it was brought to their notice, at once gave in. If you have any other instance the Commission would be glad to hear it?—I would not go so far as to say that I have any other instance.

41329. *Mr. Smyth (G.S. and W.R.)*—4*s.* is the rate in the rate book. There never was any other rate. I would like to know the date?—The date is 20th December, 1904. *Jan.* 15, 1908.

41330. *Colonel Hutcheson Poë*—Is that the invoice of this particular consignment at 7*s.* 3*d.*?—Yes. (*Produces docket*). Mr. John O'Dea, Trader, Clarecastle, Co. Clare.

41331. *Mr. Smyth (G.S. and W.R.)*—This is 4*s.* The railway docket shows 6 tons 6 cwt. at 4*s.*, £1 5*s.* 3*d.*

41332. *Colonel Hutcheson Poë.*—The Commissioners, I think, are satisfied that there is nothing in that particular case?—The 7*s.* 3*d.* a ton was in the railway books. By the time I took the oil the delivery docket was made out at 4*s.* Rate for petroleum, Limerick and Clarecastle.

41333. Did you see the railway books?—Yes.

41334. Did you see it entered in the rate book?—There was £2 5*s.*, or something like that, in the first instance. I wrote back saying I would refuse to take the oil on that. I got back a reply saying they would reduce it to the 4*s.* a ton rate. Charge of undue preference.

41335. *Mr. Sexton.*—Were the rates shown differently on the two dockets—was the 7*s.* 3*d.* rate shown on the first docket and the four-shilling rate on the second?—I have not kept the 7*s.* 3*d.* docket at all. In fact, I am not quite certain if ever made out.

41336. *Mr. Smyth (G.S. and W.R.)*—You do not suggest a second docket. There was no other docket made out?—There was not, I think.

41337. *Colonel Hutcheson Poë.*—I think it was evidently an error?—It may have been an error on the railway company's part. That is the only particular item I can give you. Of course I don't say the railway people are to blame, for one item particularly, as I only gave one particular instance.

41338. With regard to steamship communication between Limerick and Clarecastle, manifestly it would be to the advantage of the people in Clarecastle to have a competitive route with the railway?—Yes. Prospects of traffic to justify a steamship service between Clarecastle and Limerick.

41339. Do you think it possible that there would be traffic to pay both the railway and the steamship company. If you have a railway running alongside the steamship route to serve a small amount of traffic you would starve one or the other, though naturally the trader would get the benefit of each trying to get traffic by cutting the rates as low as possible. Would there be enough to keep both alive?—I think so.

41340. A good deal of the evidence here tends to show that competition to a certain point, is beneficial, but if you bring the railways into it, where there is no necessity for competition, the advantages derived from competition are of the most remote kind?—Exactly so. In some districts. Benefit of competition.

41341. It would not be a desirable factor to introduce into the situation to have two or three companies struggling, one against the other?—It is desirable for the traders.

41342. But if it meant that the railway would be largely derelict—you would not wish that?—I would not wish that.

41343. If there were goods enough to justify the steamship service, and enough goods requiring more rapid transit for the railway, it would be different; but from the evidence I question whether there would be enough traffic, agricultural or otherwise, to justify two competing lines running a parallel course. You have spoken of a motor service as being desirable for portion of the county between Ennis and Kilrush?—Yes. Suggested motor service in the Kilrush district.

41344. You are aware that up to quite recently there was a coach service between Ennistymon and Ballyvaughan subsidised by the Board of Works for a considerable number of years, and that the receipts were so ridiculously small that they were obliged to discontinue it?—Yes; but that was only for the season, for three or four months, for the tourist traffic. Failure of a former subsidised coach service between Ennistymon and Ballyvaughan.

41345. It went on for several years, and the expense was so heavy that they had to discontinue it?—What I would suggest about the motor service running to three different parts of the country is that the products which it would carry would be sufficient for a good steamship service and also to feed the railway service. Prospects of traffic for proposed road motor services.

41346. You think there are sufficient agricultural resources in that district?—I am quite sure there are. It is lying quite derelict, a lot of it, for 14 or 16 miles.

Jan. 15, 1908.

Mr. John O'Dea, Trader, Clarecastle, Co. Clare.

Hay traffic from Clarecastle.

41347. Is there much crops raised in the district?—Yes.

41348. A great deal more than supplies the requirements of the district?—Yes.

41349. You spoke of hay going to Cardiff. I presume all the hay sent there would go direct by sea?—Some of it went by train also, from Clare to Waterford and from Waterford to Cardiff.

Disparity between American and Irish rates.

41350. You say that the rate by rail is 7*s.* 6*d.* dearer than the direct sea rate. That does not seem unreasonable?—No; but I am showing both rates.

41351. *Colonel Hutcheson Poë*—With regard to America the comparison is worth very little, because there they run not only wagon loads, but train loads. One great instance of low rates is tinned fish, which the railway companies will take from San Francisco to New York and right across the Atlantic to Liverpool at something like 5 cents a cwt., simply because they can do it in such enormous quantities.

Examined by Mr. Sexton.

41352. I gather that the rate on small consignments from Chicago to New York is 46*s.* That appears to be a rate of a half-penny a ton a mile?—Yes.

41353. It is 32*s.* 4*d.* on the larger consignments, which is about one-third of a penny per ton per mile?—Yes.

41354. There is an extraordinary difference between these rates and the railway rates on this side?—Yes, a great difference.

41355. You think, from your experience, that the Irish lines should be governed by a central elected body?—Yes.

41356. In order that this elected body should really be in a position to control the lines the railways would have to be made public property?—Yes, I should think so.

41357. Is not it very important that the lines should be so managed to make as large savings as possible, so that the rates would be reduced?—It would be.

41358. From that point of view it would be better to have one system only than to have a number?—Yes; I think one system is the best.

The Commission adjourned till the following morning at 11 *o'clock.*

SIXTY-SEVENTH PUBLIC SITTING—THURSDAY, JANUARY 16TH, 1908.

In the Shelbourne Hotel, Dublin.

Commissioners present:—Sir HERBERT JEKYLL, K.C.M.G., (in the Chair); Colonel WILLIAM HUTCHESON POË, C.B.; and Mr. THOMAS SEXTON;

Mr. GEORGE E. SHANAHAN (Secretary).

Mr. GEORGE DE BELLE BALL examined by Sir HERBERT JEKYLL (in the Chair).

Jan 16, 1908.

Mr. George de Belle Ball, Drogheda Development Association, Ltd.

Tables of G.N.R (Ireland) Co.'s rates and charges.

41359. Mr. de Belle Ball, you have given evidence already before this Commission?—Yes.

41360. And I understand you wish to put in a supplementary statement?—That is so. I wish to submit the following Statements as to rates and charges on goods conveyed by the Great Northern Railway (Ireland) Company, to Drogheda, Skerries, Balbriggan, Laytown, etc., and I do so as representative of the Drogheda Development Association:—

41361. Is there any explanation that you wish to give in this statement without going into very great detail?—Well, simply that these dockets—I have brought a great number of railway vouchers here from different places, and so far as Drogheda is concerned, one of the features is that there is no rate quoted.

41362. No rate quoted?—No rate quoted, which prevents a merchant from being able to know, at a glance, whether he is being charged properly or not, and where the scale rate is applicable.

41363. On the docket?—On the docket; where the scale rate applies, and that is a very serious difficulty. These dockets have not been given to me with any grounds of complaint attached—they have been simply collected at random to see whether it is systematic or not.

41364. May I take it that the statement contains extracts from dockets transcribed?—Precisely, and I propose to hand in the originals. So far as Drogheda is concerned, out of forty-three dockets taken at random, there are only two that show the rate.

41365. They are simply the weight of the consignment and the charge, but no rate?—No rate.

41366. *Colonel Hutcheson Poë.*—You give the dates with regard to one station, Swanlinbar, but with regard to the others, are they of recent date? I see in one only you give the date?—Oh, yes; they are chiefly 1905.

41367. Is it within the last year or so?—Oh, yes. The Drogheda ones I have given the dates of. I am dealing with the Drogheda ones first. In most of these cases, we take it that according to the maximum terminals which could be charged and the maximum carriage, that the rates to Drogheda were beyond that maximum.

41368. *Sir Herbert Jekyll.*—Will you point out one or two cases in point?—I take No. 33 as a useful one—from No. 33 onwards, to Drogheda. No. 33 shows a quotation to Drogheda from Limerick of 23*s.* 4*d.* for bacon. That one is simply handed in to show the rate. It was the only one, at the time, in which the rate is quoted. The subsequent ones all show overcharges. No. 34 shows an overcharge of 8*d.*, according to the scale rate of 23*s.* 4*d.*

41369. You arrived at that by reckoning the haulage rate and terminals?—No, sir. Take that as a rate quoted by the railway company of 23*s.* 4*d.*

41370. Yes; 23*s.* 4*d.*?—No. 33 shows that rate. None of the others do.

41371. *Colonel Hutcheson Poë.*—Is that the maximum?—No. That is below the maximum. It is the scale rate. I am showing the disadvantage of not having the rate quoted. No. 34 then is an overcharge of 8*d.* No. 35, then is an overcharge of 9*d.* No. 36, then is an overcharge of 8*d.*; No. 37, an overcharge of 7*d.*

41372. I think that will be enough. No doubt the railway companies will have a note of these.

41373. *Mr. Croker Barrington, Solicitor.*—We will have them all checked and given in the evidence. Of course we cannot do that now.

41374. *Sir Herbert Jekyll.*—That is quite sufficient as to overcharges. Is there any allegation of exceeding the maximum?—We will take the Belfast rates. Take docket No. 20, Belfast to Drogheda, one ton twelve cwt.

41375. One ton fourteen cwt. I have got here?—That was what was in the railway docket, but the correct weight was one ton twelve cwt., and the charge is £1 12*s.* 4*d.*

41376. Yes?—The maximum rate for sugar in Class I. would be 18*s.* That would represent an overcharge of 3*s.* 6*d.*

41377. And you maintain that it is over the maximum?—Over the maximum.

41378. Any other case. Take No. 21?—We will take No. 23. It is a larger amount.

41379. No. 23—very good?—In No. 23 there is an overcharge of 1*s.* 4*d.* in £1 4*s.* 9*d.* There is a rate in this docket, 24*s.* 4*d.*, but I do not think it is really meant to represent a rate. It is something simply marked on it, because the rate is really 19*s.*, and there was a letter from the consignee, of complaint about the charge, and subsequent correspondence between Messrs. Musgrave of Belfast and the Great Northern Railway, and they stated that their ordinary charge is 19*s.*, whereas we make the maximum to be 18*s.*

41380. Now, all these instances down to No. 32 are over the maximum?—All of them over the maximum.

41381. Very well. The railway companies will take a note of that. Is there any other class of complaint?—I have dockets to Swanlinbar.

41382. Yes?—The first docket, No. 1, illustrates a case where, instead of the goods coming at a through rate from Belfast to Florencecourt, they go as far as Enniskillen and are re-booked, and the result is that there is a higher charge of 10*d.*

41383. Is there no through rate?—Yes. It is in Class 3, and the maximum through rate would be 26*s.*

41384. What is the amount of the extra charge?—10*d.* Nos. 2 and 3, and so on, all represent small charges over the maximum. The reason I brought so many of these was to show that it was not an exceptional case at all; it was too constant.

42385. *Mr. Croker Barrington, Solicitor.*—Will these be printed? I suppose they will. If we could get a copy——

41386. *Sir Herbert Jekyll.*—Yes; you will get a copy.

41387. *Mr. Shanahan (Secretary).*—I will give you a copy, and the tables will be on the minutes in any case.

41388. *Sir Herbert Jekyll.*—We will put them in as a statement by the witness.

41389. *Mr. Smyth (Great Southern and Western Railway).*—Of course, to make a statement to the effect that because the sum of two local rates exceeds a through rate, it is an excess of the maximum, is not correct, because there are two terminals additional.

41390. *Sir Herbert Jekyll.*—It requires some explanation. Why the double rate should be made instead of being booked through.

41391. *Mr. Smyth (Great Southern and Western Railway).*—Quite so, if the through rates are in operation.—(*Witness*)—I have given No. 2, exactly the same class of goods, the same consignee and the same class shows a through booking.

41392. *Sir Herbert Jekyll.*—If there are no through rates in operation I think it requires an explanation why there are not through rates?—Take No. 9. There is a peculiar overcharge again.

41393. Swanlinbar?—Florencecourt Station. Four bags of onions quoted here, 4 cwt., and the rate quoted 10*s.*, and the amount charged is 2*s.* 6*d.* That is, they really charge at the rate of 12*s.* 6*d.*, an overcharge of 6*d.* In the same docket there are six bags of onions, 6 cwt., and they are charged at the rate of 10*s.* 7*d.*, though they were within a few days of each other.

41394. That may simply be a question of miscalculation?—Yes, but the point is that these were so frequent; these twopences and threepences and sixpences are almost systematic. The dockets have been all gathered at random, and all been paid without question by the senders, and given to me subsequently to investigate. Not to delay, there is a question that is very interesting about bacon—through rates from Liverpool as compared with local rates. No. 12 docket of Swanlinbar, there are two parcels of bacon, the same classification, in one consignment, and they are charged separately. To apply the scale rate to one of these, there is a gain of 7*d.*

41395. I see one is in bales and the other in boxes?—Yes; one in the bale and the other in the box; but the rate is exactly the same, and they are charged separately instead of being taken together. That is, the through rate from Liverpool is 20*s.* Docket No. 8 would show that on bacon from Belfast to Florencecourt the rate is 22*s.* 9*d.*, and therefore they are charging 2*s.* 9*d.* a ton more for the local from Belfast to Florencecourt than from Liverpool to Florencecourt.

41396. *Colonel Hutcheson Poë.*—Of course bacon can be carried in class 2 or in class 3. Are you sure they both went by the same class?—Oh, yes. It is in this classification book, "bacon in bales and boxes," class 2.

41397. Bacon can go in class 3 under certain circumstances?—Not in cases of bales and boxes, when uncooked or fresh or green. It clearly gives it in class 2. On docket No. 15 I have to draw attention to the charge for timber. That timber is from Derry to Florencecourt.

Instances of overcharges on goods booked locally where through rates exist:—

Belfast and Florencecourt;

Derry and Florencecourt.

Overcharge on bacon from Liverpool.

Improper application of the scale for "smalls."

Overcharges on bacon. Belfast to Florencecourt, and

Timber, Derry to Florencecourt.

Jan. 16, 1908.

Mr. George de Belle Ball, Drogheda Development Association, Ltd.

41398. *Sir H. Jekyll*—Yes?—The consignee is Mr. Howe, Swanlinbar. Mr. Howe has a letter from the Great Northern Railway Company quoting timber in 5-ton lots from Derry to Enniskillen at 6*s.* 6*d.*, yet to bring it 5¼ miles further an extra charge of 3*s.* a ton is made.

Instances of overcharges on goods. Belfast and Florencecourt.

41399. 9*s.* 6*d.*?—9*s.* 6*d.* for the goods 5¼ miles further, which the consignee thinks is a very excessive charge for the distance. Docket No. 18 is a rather interesting one, too. It conveys a case of glass and a bag of onions at the owner's risk rate of 22*s.* 1*d.* The rate for glass ought to be 21*s.* 3*d.*, because the total maximum rate is 24*s.* 7*d.*, and at the special rate—it is one of the cases in which there is a special arrangement at owner's risk, and the proportionate reduction would be 21*s.* 3*d.* However, they add in the bag of onions, 1 cwt., and that has also been charged at the rate of 22*s.* 1*d.*, whereas the standard or current charge for onions is 10*s.*

Rate for soda, Dundalk to Florencecourt, compared with rates from Derry and Belfast.

41400-1. *Sir H. Jekyll.*—I see?—Another case, No. 19, is rather interesting. A keg of soda from Dundalk to Florencecourt, a distance of 66½ miles, is charged 27*s.* 6*d.* a ton. Now, the rate from Derry, 65 miles, is 10*s.* 4*d.*, and the rate from Belfast, 92 miles, is 13*s.*, so that Dundalk is penalised by more than double the rate from the other points. No. 22 is a consignment of 3 cwt. in Class C and 1 quarter in Class 3. The entire has been charged at the rate of 20*s.* 11*d.*, at the scale rate of 20*s.* 11*d.*, which brings an extra profit of 1*s.* on the consignment. If they were taken separately, 3 cwt. at 10*s.* 4*d.*, the scale rate would be 2*s.* The point is, that, putting the two together, there was only one-thirteenth of the entire consignment was at the higher class.

Overcharge on oats, Drogheda to Laytown.

Mr. Smyth (*G. S. and W.R.*)—Were they in the same package?—(*Witness*)—They were directed together. Most of these complaints are more or less similar, with the exception of Laytown. I am sure the Great Northern Railway will give an explanation. Take Laytown—there was a special charge of 3*s.* 6*d.* for a barrel of oats, 14 stone, from Drogheda to Laytown. It is the very last in the list. The distance is only five miles, and I suppose the explanation will be that it was sent by passenger train.

41402-3. *Mr. Sexton.*—What number is it?—The very last one.

41404. *Sir H. Jekyll*—Two bags of oats?—Weighing 14 stone—1 cwt. 3 qrs.—and the charge is 3*s.* 6*d.* The explanation of it will be this, that it was sent by passenger train. It was not ordered to go by passenger train, but it was to be delivered that day. Now, nothing can be delivered by goods train from Drogheda in Laytown in the same day, because the goods will leave at 3 p.m., and they are conveyed up to Balbriggan, past Laytown, and they are left at Balbriggan all night till the down goods next morning leaves them at Laytown, which handicaps Drogheda very much.

41405. Are these instances you have given selected out of a large number?—Yes.

Complaint as to excessive percentage of errors in charges on dockets issued at Drogheda Station.

41406. Can you give any idea of the proportion of instances to the total number of dockets; is it one in 1,000 or one in fifty?—I would say that practically 75 per cent. of the dockets have some error.

41407. Some error of this kind?—They have been given to me without any knowledge on the part of the giver that there was anything wrong. They have all been paid and done with. I was given them to inquire into, especially when I found in Drogheda that there were no rates quoted in them. I could get any quantity subsequently if it were desired here to show that it is quite usual.

Examined by Mr. Sexton.

Railway dockets taken at random, and 75 per cent. found to be erroneous.

41408. These dockets were all issued by the Great Northern Railway Company?—Yes. They are practically all from the Great Northern Railway station.

41409. Have you looked into the dockets of any other company?—No; I have not.

41410. These were collected from five or six stations?—Yes.

41411. What is the number of stations on the Great Northern Railway system? You hardly know?—I have no idea.

41412. A great many. You have tabulated here about seventy-nine dockets. From what total number I think the Chairman asked you, did you select these dockets for the purpose of your evidence?—I really did not count them, but I am safe in saying that practically 75 per cent. of the dockets I got at random contained some errors which I have brought forward.

41413. With what view were the dockets collected?—For the purpose of seeing whether the statements that had been made in Drogheda by traders in general were correct, that the charges were variable, and that they had in many cases no way of ascertaining whether they were correct or not.

41414. The dockets were not brought before you by consignees representing that they contained errors or overcharges?—Not at all, with the exception of that one for oats. That was the only one given to me with a specific complaint.

41415. You simply had inquiries made of these traders, "Have you any dockets?" and they gave these dockets without any thought of error or overcharge?—Quite so.

41416. These may be taken then, in your judgment, as samples of the ordinary dockets issued by the company?—We take it so.

41417. You think they are not exceptional cases?—No, unfortunately, it must be almost systematic. The peculiar feature seems to be that Drogheda seems to be the only place where it is customary to quote no rate, and that applies both before and during and subsequent to the coasting steamer competition—a regular system.

41418. It has been stated that the Great Southern and Western Railway Company make a practice of not quoting the rate, but in this case the rate is quoted to other stations?—I found that the rate is quoted to practically all other stations.

41419. Do you suggest the inference that there is a system or habit on the Great Northern Railway of quoting a rate in excess of the maximum, and also, when the correct rate is quoted, or a rate under the maximum, of charging more than the rate warranted, and also where two or three parcels are in the same consignment, of adding their weights together for the purpose of affecting the whole consignment into the high rate applicable to only a small part of it?—Yes, these are complaints that we make in general against them.

41420. *Colonel Hutcheson Poë.*—Looking over these tables that you have furnished, it occurs to me that whether the rate is quoted or not, it does not seem to affect your grievance very much, because even for the instances, Skerries, Balbriggan, and Gormanstown, where they did quote the rate, they seem to make a small overcharge?—That is so.

41421. The only difference is that, in the one case, if the traders had known as well as you do they could have checked it, and in the other they could not?—That is so. I might mention that there are some few traders in Drogheda—Mr. Harbinson, for instance—some few men who insist on having the rate quoted. No document is ever furnished to them without it, but the small men, who are not up to these ways, unfortunately, we believe, they are taken advantage of.

41422. At any rate, the effect of all these different documents seems to show that even where they do quote the rate—I do not say intentionally—there is some slight overcharge?—We found they were so frequent that if not intentional you can hardly say they were accidental.

41423. At any rate there is an overcharge, and when the rate is not quoted it is impossible for the trader to ascertain what it is, and even when it is quoted it is difficult without a great deal of calculation and knowledge?—Quite so.

41424. *Mr. Sexton.*—Would you say that very few traders are capable of checking the charge against them, even when the rate is given, especially small traders?—As a rule that is so. I think very few of them have gone to the trouble of working out and ascertaining what the maximum rates ought to be. Here are some dockets from one of the keenest business men we have in Drogheda, Mr. Harbinson, and though he insists on having the rate quoted yet there are overcharges.

41425. So that if the railway company quote a rate over the maximum, or make a miscalculation to the prejudice of the trader, he is not able to check it. The railway company really can do what they like?—There is an absence of a ready way of getting at what the rate ought to be, unless they went into an intricate calculation, which many business men have

Mr. George de Belle Ball, Drogheda Development Association, Ltd.

not time to do. There is no ready way of getting at the rate.

41426. Would it be of great practical importance, in the interests of traders, that the finance of transit should be simplified, as in Denmark, and generally on the Continent, so that one could always understand what he had to pay?—Undoubtedly.

Mr. Brian E. F. Sheehy, c.e., examined by Sir H. Jekyll (*in the Chair*).

Mr. Brian E. F. Sheehy, c.e., Limerick.

41427. You are a civil engineer, I understand?—Yes.

41428. And you reside in Limerick?—Yes.

41429. Are you an Associate Member of the Institute of Civil Engineers in Ireland?—Yes.

41430. And a Member of the Royal Sanitary Institution?—Yes.

41431. And a Member of the Royal Institute of Public Health?—Yes.

41432. And Associate Member of the British Association of Waterworks Engineers?—Yes.

41433. You have been engaged, have you not, in different parts of Ireland, and in railway and other works?—Yes.

41434. And your present practice is in the South of Ireland?—The South and West of Ireland.

41435. Do you travel much in this country?—My total travelling is about 12,000 miles a year for the last five or six years. It was smaller last year on account of an exhibition I was connected with in Limerick.

41436. The principal railway in this part is the Great Southern and Western Railway?—Yes.

41437. What do you consider to be the effect of the present local rates on the development of industry?—No one can understand them. I paid 7*d.* for 27¼ miles, and I paid 16*s.* 2*d.* for the same mileage.

41438. That is carriage of goods?—Yes; and I got a refund of 8*s.* 1*d.* out of the 16*s.* 2*d.*, leaving 9*s.* 7*d.*

41439. What was the article?—It was one of these folding or telescopic ladders.

41440. Sent from where?—From London to Limerick, carriage paid. I booked it on to Newcastle West for 7*d.* I sent for it to Newcastle West to bring to Limerick, and paid 16*s.* 2*d.*, and I kicked up such a fuss that after three months I got a refund of 8*s.* 1*d.*, leaving 9*s.* 7*d.* On that very day I paid for sending it back to Newcastle 1*s.* 2*d.*, and I have got receipts, except for the 7*d.*, which I took to the booking office, and did not get back. It is the same size—it did not grow, because it was cut. Those are the two dockets which I got, for 1*s.* 2*d.* and 16*s.* 2*d.*, and there is the original cost. The first docket, for 7*d.*, I handed into the office in Limerick. The rate is there—8*s.* 1*d.*

41441. *Mr. Sexton.*—It was charged in the first docket at 3 cwt., and in the second docket at 1 cwt. 2 qr. Are the weights the same?—Oh, yes. They are exactly the same.

41442. Are the charges the same?—The weights should be the same.

41443. *Sir H. Jekyll.*—It was the same article?—The same article.

41444. The weight must be the same?—The weight must be the same.

41445. *Mr. Sexton.*—In the first docket it was charged 3 cwt., as far as I am able to make out?—They charged two trucks in the first, and then took it back on one.

41446. The second docket is in the same year?—The same day as I paid 9*s.* 7*d.* I paid 1*s.* 2*d.*

41447. Obviously the ladder was the same weight?—The same weight and height.

41448. *Sir H. Jekyll.*—Did you represent to the railway company that the same article had been charged less?—I did. I took up the docket, and they kept it, and I asked for it several times to get it back.

41449. What explanation did they give?—That there must be something wrong the first time. I said, "How can there be anything wrong the third time?"

41450. That is all you could get out of them?—That is all I could get out of them, but they got 9*s.* 7*d.* out of me; and it looks something like it—because 7*d.* is half of 1*s.* 2*d.*

Mr. Smyth (*G.S. and W.R.*)—Before you pass that, perhaps you would ask the length of the ladder. It occupied two wagons.

41451. *Sir H. Jekyll.*—What was the length?—36½ feet.

Mr. Smyth (*G.S. and W.R.*)—We are entitled to a minimum of a ton per wagon?—(*Witness*).—I beg your pardon; that is 36½ feet open, and it was folded.

41452. *Sir H. Jekyll.*—Could it have gone open in the one case and folded in the other?—I could not say. It came folded in the 16*s.* 2*d.* case.

41453. *Mr. Smyth* (*G.S. and W.R.*)—What was the length folded?—Twenty feet.

41454. That is it. It is over a wagon length. Two wagons are required for the carriage?—Not necessarily.

41455. *Mr. Sexton.*—You took 7*d.* the first time.

Mr. Smyth (*G.S. and W.R.*)—That was an undercharge.

Witness.—They took 7*d.* because it was cross-Channel goods.

41456. *Mr. Sexton.*—And eventually 1*s.* 2*d.*?—Yes.

Mr. Smyth (*G.S. and W.R.*)—We will deal with it, at all events, Sir Herbert.

41457. *Sir H. Jekyll.*—As to passenger fares?—I consider passenger fares very excessive.

41458. General or particular fares?—My travelling expenses alone come to a big thing in the year.

41459. You travel a great many miles?—I do not get any concession of any description. I should say that there should be an allowance made.

41460. In consideration of the great number of miles that you travel, do you think you should get your fare at a lower rate?—And I consider there is a lot of stuff I have to specify that will come over the line.

41461. Something like a trader's ticket?—The same as a trader's ticket. I once asked for a fifty-mile radius ticket, and the quotation they gave me was £67. That practically works out that I should be travelling 12,000 miles round Limerick.

41462. It was not worth while?—It was too much. It was a special mileage.

41463. *Mr. Smyth* (*G.S. and W.R.*)—When he says fifty-mile radius from Limerick he does not mean fifty miles by rail—it may be 200 miles?—(*Witness*).—I could say. I could easily measure it up.

41464. *Sir H. Jekyll.*—I suppose the railway companies make concessions to traders and others, according to certain rules?—Certainly.

41465. Did your case come within the rules?—I asked before the amalgamation for a ticket—proposing to get a season ticket—and I was told to wait for the amalgamation, and I found it was higher then.

Mr. Smyth (*G.S. and W.R.*)—That is utterly incorrect.

Witness.—I have the authority of one of your staff, and he said it was better to wait over, at the time.

41466. *Sir H. Jekyll.*—What do you think would be the result of reducing the rates and fares?—I think considerably more people would travel.

41467. Do you think it would be for the benefit of the railway companies generally?—It would. Any excursion, or anything else, you get three people to travel for one at present. A reduction is an encouragement to people to travel, because once people get into the habit of travelling it becomes second nature to them, in a way.

41468. What have you to say about the efficiency in regard to speed, accommodation, and punctuality?—Take, for instance, the 6 a.m. train to Tralee. It leaves Limerick at 6 a.m., and it arrives at Newcastle at 7.41, 27¼ miles, and it arrives at Tralee at 10.15, and Cahersiveen, which is 128 miles, at 12.48, and there is no convenience of any sort on all that line.

41469. No refreshment room?—No refreshment room.

41470. And no lavatory carriage?—No lavatory carriage.

41471. Is that peculiar to that line or is it the same on other lines?—The same thing on several different lines.

41472. The service from Limerick to Dublin would be better than that?—Oh, yes.

41473. I suppose there are more people travelling that way, are there not?—There are a good many people travelling on the other line.

41474. Are there many passengers to Cahirciveen?—As far as Tralee; and a fair share along that line, too.

41475. What have you to say about through con-

Complaint as to excessive charge for a telescopic ladder sent by G.S & W. Railway.

Suggested concession in passenger fares to regular travellers.

A general reduction in passenger fares recommended.

Suggestion as to improved speed of trains and general accommodation for passengers on branch lines

Jan. 16, 1908.

Mr. Brian E. F. Sheehy, C.E., Limerick.

nections? We have heard a great many complaints about want of connections?—I have often to go out to Croom. It is on the Cork direct line, beyond Charleville Junction, and I have to go back to Patrick's Well to get a connection on to Tralee and thence to Mallow, to meet the Rosslare train. I have often driven across to Adare, and I have tried to catch the train to Patrick's Well, and I have been told that they got instructions not to wait for the Cork train if it is late.

Complaints: Inconvenient train services and unsuitable connections at junctions;

41476. You say there are instructions on no account to wait for the Cork train?—No. They are due to time not to keep the Rosslare train at Mallow late.

41477. In order to make a connection at Mallow. That is a good reason?—It is a good reason, but it is a queer thing that you lose a day there. It is not encouraging the public to travel. It is all their own system.

41478. It is not a rival line?—No; and the same thing happens at Ennis by the 6.18.

41479. That is also on their own system?—Yes.

41480. You give another instance of the Cork direct train from Limerick?—That one I told you of.

41481. Arriving at Charleville at 6.20?—Yes, 6.20.

41482. Has the passenger service from Dublin been improved since the Rosslare route has been opened?—Quite the contrary. You have a delay now at Ballybrophy on the night mail. Any person leaving England by the London and North-Western Railway routes has a delay of practically three-quarters of an hour at Ballybrophy.

Passenger service from Dublin to Limerick disimproved since opening of Rosslare route;

41483. So that it is really worse than before?—Yes, before you came on to the Junction and got a connection.

41484. What do you attribute all this to?—They are diverting the passenger traffic to catch the Rosslare traffic.

41485. It is all to favour the Rosslare route?—I say it is.

41486. At the expense of the Dublin route?—At the expense of the Dublin route. Anyone must admit that a delay of three-quarters of an hour at Ballybrophy, after a long journey from eight o'clock in the morning from London, is not encouraging to people to travel by that route.

Insufficient carriage accommodation on trains and neglect of the comfort of travellers';

41487. Is there sufficient accommodation?—Oh, no; not in the carriages at all. As a rule, the usual thing is one first-class smoking and non-smoking, and the same second. The second smoking is always crowded with school children in nearly all of the trains, and they are a perfect nuisance sometimes. Even last night coming up I asked at Charleville, Limerick Junction, and Thurles for a foot-warmer, as there were no foot-warmers, as the ones put into the train at 4 o'clock at Queenstown were cold. I thought that foot-warmers would be put in at Ballybrophy, and the train heated all along, but they were not. A man put two into the carriage. There is only one put into each carriage, and they are put in at the starting of the train, and they are cold. They do not last.

And insufficient sanitary accommodation at stations and want of cleanliness where it exists.

41488. What have you to say about sanitary accommodation at railway stations?—That speaks for itself. It is as primitive as it can be. You get out of the train, and go into an open space, no roof, no matter whether it is raining or not. There is no classification between first, second, and third-class passengers.

41489. There is no improvement?—Oh, no. It wants serious consideration.

41490. Have you any suggestion to make?—I should say that it should be inspected, just the same as the cattle pens and truck wagons and everything else by some official or Departmental inspector, and especially on the branch lines. They are particular about the cattle pens and trucks, and they have white-washing and everything else, but there is no compulsion on them to keep these places clean. Also, there is disinfecting the carriages. I go into some carriages on the early trains in the morning, and it is impossible to remain in them.

Periodical disinfecting of railway carriages suggested.

41491. They are so dirty?—Yes.

41492. Is that in any particular place?—Generally. I should say generally, but Monday morning is about the worst morning. I attach a letter cut out of one of the papers showing the dangers of these carriages. I think there is 50,000 people carried in them.*

41493. What is your opinion of the management of the Irish railways. Generally, both as regards passengers and goods?—On the Great Southern and Western Railway the number of servants has been considerably reduced on all the platforms. Take Limerick platform. You have to go up the platform on Saturday evenings to look for men to carry your traps. I should say that the staff has been reduced to between a half and a third.

41494. Have you any figures in support of that, or is it merely what you would guess?—From what I see—from my observation, and from what I can learn.

41495. Well, now, as to the remedy for all these things?—I should say that the lines should be nationalised, and have one elected body with experts responsible to each district, and have a kind of large company.

41496. One large system?—One large system, because, take the smaller railways, such as the light railways—their profits are very little compared with the other. They cannot manufacture their own stuff, so that they have practically to get their stuff across the water, while a large system could manufacture their stuff. Of course the large companies are forbidden to do that at present—to manufacture except for themselves.

41497. You have considered the various economies that might be made by the general amalgamation of the railways?—They could devote a rate to a sinking fund all over the lines.

41498. I see that you refer to the railways being under a Government Department?—I mean an elected department—an official department.

41499. Not a Government Department, in the ordinary sense?—No, but if the lines are bought up by the Treasury——

41500. And handed over to an Irish representative body?—Irish representative body.

41501. That is your view?—Yes.

41502. Do you think that view is generally held?—I do believe it from what I see and hear.

41503. Do you consider that there is any preference given to the cross-Channel and foreign goods as against the home goods?—Those dockets I handed in are proof.

41504. *Mr. Sexton*—The ladder?—Yes.

Sir H. Jekyll—You do not go into the question of live stock at all?—No.

Examined by Colonel HUTCHESON POË.

41505. I understand you to say that, in your opinion, the effect of the amalgamation has been disadvantageous to the part of the country served by the Great Southern and Western Railway in which you reside—the amalgamation of the Waterford and Limerick and the opening of the Rosslare route?—I might say that. The delay at Ballybrophy proves it.

41506. Can you give us the time-table prior to the opening of the Rosslare route, of trains passing from Ballybrophy to Limerick?—That is not the point, because you had not to get out at Ballybrophy formerly. You got on to Limerick Junction.

41507. Coming from Dublin?—You went on to Limerick Junction, and Limerick people had not to wait at Ballybrophy. They went on to the Junction, and got the connection, but now they have to stay at Ballybrophy.

41508. In other words, the facilities which you enjoyed previous to the opening of the Rosslare route are now taken away?—Yes. That delay was always at Ballybrophy, but it did not affect the Limerick people.

41509. You went on?—On to the Junction, and got the connection.

41510. I suppose representations have been made to the railway company in respect of that?—There are always people grumbling about it.

41511. Of course you can grumble without bringing it under the notice of the railway company. Do you know has it been brought by traders and professional men like yourself?—I should say the Chamber of Commerce——

41512. You are not in a position to say?—I believe it has.

41513. With regard to want of connection and loss of time and inconvenience suffered at Newcastle and Charleville and different other junctions, would it require any great alteration of the time-table on the part of the railway companies?—Practically very little.

41514. It would not seriously inconvenience them—a little readjustment and rearrangement would probably make the connection?—On a kind of give and take system. You would not expect, if the train was very late, for it to wait for five or six minutes

* See Appendix No. 16.

it is gone, and they said they had instructions not to wait any time for it.

41515. You alluded particularly to this want of connection on the Great Southern and Western Railway. Is there this same want of connection also between the West Clare and the Midland Great Western?—The Midland Great Western does not serve for passengers. There was formerly a passenger train, but it is now only a goods service. The connection with the West Clare, leaving Ennis at 6.18, brings you into Limerick at 7.20, and if it does not make the connection you do not get in till 10 o'clock.

41516. Then you instance the Dublin and South Eastern. In your experience do you find that when lines have running powers over another company's line, as the Dublin and South Eastern have over the Great Southern and Western Railway, that there is friction?—There is friction.

41517. It results in that. They do not try to meet each other when they have running powers?—There is no running powers in force for passengers; it is all goods.

41518. How do you mean?—It is only for goods. The Midland has no passenger traffic. The West Clare connection is the only point, and it is a different gauge. They meet at Ennis. If that train waited for the West Clare you would get into Limerick in time.

41519. To go to another point. You said, in reply to the Chairman, that you consider that if the passenger fares and rates were reduced it would lead to a considerable development of traffic, and eventually recoup the company for any loss that they might temporarily sustain?—Certainly.

41520. Have you anything to say with regard to the reduction of second-class fares—would that be desirable, in your opinion?—Certainly. I suggest that the school children should have a carriage to themselves.

41521. Is there much use made of the railway by the school children?—Yes.

41522. *Sir H. Jekyll*—They put them in a smoking carriage?—They go into them.

41523. They do not smoke?—Some of them.

41524. *Colonel Hutcheson Poë.*—Of course, in that case of the ladder, I may point out that in certain cases if the ladder is over a certain length they are entitled to charge you at the tonnage rate per wagon, if it uses more than one?—Yes, but how can the ladder get bigger and smaller. A previous witness said if there was a scale of charges laid down, and everyone knew what they were, you could easily check it.

41525. You think if some improvement were brought about in the direction of the rate-books being more easily accessible, such things as you told us of could not occur?—To the best of my recollection that ladder from England was booked as a bundle of sticks.

41526. It is possible?—That is my recollection. It is all in the name.

41527. It is very possible they may have undercharged you; at any rate a reform such as you suggest would be much more satisfactory?—If you describe a thing clearly they will charge you extra, but I have a distinct recollection that it was booked as a bundle of sticks from England, and it is nothing else.

41528. With regard to the general question, have you at all considered the kind of body that you would put in control?—A general elected body, with officials in charge and experts.

41529. The administration would be in the hands of railway people, I presume?—Yes.

41530. And the body that would have supervision over that railway authority, what would they be composed of?—Some elected and some of the old system, the different lines represented.

41531. Some of the present directors or chairmen of existing companies?—Yes.

41532. And failing the whole of the lines being taken over by one central system, would you be in favour of the amalgamation of the smaller of the existing lines into the hands of, perhaps, two or three companies?—I do not know about that.

41533. You have not considered that point?—No.

41534. You have probably read a good deal of the evidence that has been given, showing that while some are in favour of amalgamation of all the lines into one system, others are in favour of two or three systems?—Of course it would be all right if they were competing, but if one got control it would not work so well.

Examined by Mr. SEXTON.

Jan. 16, 1908.

Mr. Brian E. F. Sheehy, C.E., Limerick.

41535. I think you suggest that the general convenience of the public on the Great Southern and Western Railway is made to yield to the special circumstances of the Rosslare route?—That is my belief, and that is what anyone else can see. They are diverting the traffic and arranging the time to suit the Rosslare system. They upset their time-tables in the middle of the month when the Rosslare line started to suit the Rosslare runnings.

The Rosslare route to England unduly favoured by the G.S. & W.R. Co.

41536. The system generally is managed with a view to directing the traffic, goods and passenger, by Rosslare?—Yes.

41537. In the interest of the combination of the Great Southern and the Great Western Railways?—Yes.

41538. If one train is travelling in the direction of Rosslare and another is proceeding in another direction, the former has to go at top speed to keep time; but the passengers in the other may look out for a connection?—Yes.

41539. Is it in the public interest that in the case of so extensive a system, comprising over 1,000 miles of rail, everything should bend to that one consideration?—No, certainly not. Take an instance. People in Limerick wanting to go to England, if they go *via* Dublin, can break their journey there either going or coming and do business on the way; but if they go *via* Rosslare they have to make another journey to do business in Dublin. I might mention that in the mileage I have given I have included only the mileage of my Irish travelling.

Inconvenience caused thereby to passengers from Limerick.

41540. You would not be disposed to favour further partial amalgamation?—No, I would not.

Objection to any further partial railway amalgamation.

41541. Now, about this ladder. There has been another case given in evidence of an article of exceptional length, a magic lantern screen, and, curiously enough, that also when it originally came over from England was brought for a few pence, but on a subsequent journey in Ireland the pence developed into pounds. What is your explanation of the difference?—My belief is that when they sent it as a bundle of sticks it did not matter about the length of the sticks.

41542. A representative of the company suggests that the reason for the charge was that the ladder occupied a second wagon?—But it equally required a second wagon from London.

The complaint as to excessive charges on a ladder by the G.S. & W.R. Company.

Mr. Smyth (G.S. and W.R.)—Perhaps I might explain what exactly is the practice with regard to this charge. For a ladder or any other article which, on account of its unusual length will not fit into one wagon, we have a right to charge a minimum of one ton for each wagon occupied by it. If the second wagon happens to be running on the same train, say with coal, so that it is not required as a runner—that is, if a special wagon has not to be put on as a runner—no additional charge is made.

Sir H. Jekyll.—You give the trader the benefit?

Mr. Smyth (G.S. and W.R.)—Yes. When a trader brings a consignment of that sort we usually say to him—"We shall have to charge you on a minimum of one ton per wagon occupied; but if you are not in a very great hurry we may be able to meet you." If they were goods between Limerick and Dublin in all probability we would be able to meet him, as we should very likely have two wagons running to Dublin on which we could put the ladder, and he would be charged only the actual tonnage calculation. If, on the other hand, the trader was sending to some little place where we would not have such traffic, and it was necessary to use two wagons solely for the purpose of carrying the ladder, we should charge on a minimum of a ton per wagon. That would account also for the difference in the charge for the same article. In one case the wagons may have been running for other goods, in which case we should have charged tonnage only, while in the other two wagons may have been solely occupied by the ladder, and therefore a ton per wagon was charged, which does not seem unreasonable. (*Witness*).—That would not account for the fact that in one case it is charged at 3 cwts. and in the other 1 cwt. 2 qrs.

The practice of the company as regards charges on long articles requiring more than one wagon.

Mr. Sexton.—It seems to have lost half its weight between the first and second bookings.

Mr. Smyth (G.S. and W.R.)—Anyway, we will go into that case particularly.

Witness.—The charge was made on June 4 of that year. I brought it before them on the 5th, and on the

Jan. 16, 1908.

Mr. Brian E. F. Sheehy, C.E., Limerick.

27th August the refund was made, so that they were three months looking into it.

41543. *Mr. Sexton.*—It belongs to an exceptional class in the tariff which gives a special discretion to the company, and this may make it all the more necessary to examine the charges?—It was for a charitable purpose—the funds of a hospital.

Varying charges on one consignment forwarded on different dates.

41544. I confess that I am still at a loss. This ladder was carried from England for 7*d.* on the first occasion; on the Great Southern system it was charged 16*s.* 2*d.* On remonstrance the charge was reduced to 9*s.* 7*d.*, and then, upon the very same day upon which they declined to reduce the charge below 9*s.* 7*d.*, they accept a new consignment of the ladder at 1*s.* 2*d.*?—Yes.

41545. It appears to be impossible to reconcile these contradictions at present; we must await an explanation. I take it that the effect of your evidence is to urge upon the Commission that there is, in regard to the Irish railway system, an urgent need of reform?—Yes.

Reform in the Irish railway system urgently needed.

41546. You complain of slow trains, bad connections, bad accommodation?—The accommodation is not proportionate to their charges.

41547. And less care of the health of the passengers than is now taken of the health of cattle?—Yes. I have here a docket taken from a weekly time-table: "The attention of stationmasters, inspectors, head porters, loaders, and others is again directed to the fact that the above vehicles—that is, horse boxes—are not being cleaned and disinfected. Every care should be taken to see that they are properly attended to, and the portions of the box which come in contact with the animals' heads disinfected." But where passengers' heads come in contact with the carriages is very greasy.

41548. That rule is very proper, as far as it goes, but you think that the same principle ought to be applied with regard to passengers?—Yes.

41549. You say generally that local rates are injurious to trade and to the development of local industries?—Yes.

41550. And likewise that passenger rates are most excessive?—Yes.

Difficulties under the existing system of reducing rates.

41551. You strongly urge that the companies are not in a financial position to make a reduction of rates and charges?—I would say that the reduction in the rates would be very small; there would be nothing that would be of any benefit to the railway company. But if there were an adequate reduction of the rates for travelling there would be three people travelling for every one that travels now with the high charges.

41552. Railway companies, having to maintain their profits from year to year, and, above all things, to avoid a fall in profits in any period, may be unwilling to accept your view of the probability; they may prefer a limited profit in the hand to the larger one in the bush?—Yes.

41553. When you say that local rates are injurious to trade, and that passenger fares are most excessive, it follows that there must be large reductions in order to meet the necessities of the case?—A large reduction on the one hand, but at the same time an encouragement of travelling on the other.

But if reductions were made, larger profits would follow.

41554. And eventually larger profits?—Yes.

41555. But you understand that, owing to the strict lines in which railway finance is bound, and the necessity for the companies to meet their shareholders from year to year, and to declare, if possible, undiminished dividends, they are, from the commercial point of view, unwilling, and would no doubt strongly resist any attempt to oblige them by a reduction of fares to reduce their profits and dividends?—Certainly.

Public ownership the only remedy.

41556. Is there any option except to try by public ownership and management whether this reduction of fares can be given?—There should be a general purchase of the system.

41557. To benefit the public without injuring anybody?—Without injuring anybody. Anything over the sinking fund and an allowance for bringing the small lines up to the level of the whole system would be divided.

41558. What the evidence contemplates is agreement and good-will between all concerned?—Yes.

41559. An arrangement with the shareholders which they would willingly accept?—Yes.

41560. Either to take the value of their stocks or to convert them into stock of the public system?—Yes.

41561. That having been done, even if there were no restitution and no gift, would you say that the saving by purchase, coupled with the saving by the united working of one system all over the country, would give the means of making such reductions in rates and fares as would enable us to test in a very few years whether these lower fares for passengers, and the cheaper and easier transit of goods, would not produce such a development as to lead eventually to larger profits?—Certainly. Then you could get the system of buying books of tickets for £5 or £10 to travel over any part of the system, and you would get an allowance according to the number of tickets you used in the year.

41562. A great many of the complaints in Ireland appear to arise, first, from the different degrees of ability and diligence brought to bear on the different systems?—Yes.

41563. And, secondly, from the contention which naturally arises between people who want to take traffic from each other, and leads to desire to baffle and obstruct each other?—Yes.

41564. All that would disappear under united management, would it not?—Certainly.

41565. It would be vital to secure that any surplus earned should be secured for the benefit of Ireland?—Yes.

41566. Would it not be essential that any surplus obtained by economies in working should be available for the reduction of Irish rates and fares?—Certainly.

41567. In order to secure that would you say that the ownership of the lines ought to be vested in Ireland?—Certainly.

41568. To secure the proper reductions, that the rates most requiring to be reduced should be those actually reduced, do you think that the governing authority ought to be one responsible to the Irish public?—Yes.

41569. And to provide that no incompetent persons—I mean amateurs or, as some say, politicians, or others—should take upon themselves too much, do you think that the efficient working of the lines in detail should be provided for by a board, committee, or staff, call it what you please, of the most competent railway men that can be secured?—Yes. There are a lot of small lines that have practically no working capital at present or rolling stock. A rich line, working round a city, for instance, and making 10 or 11 per cent. for a distance, would be equalising those poorer lines.

41570. The resources and appliances of the system as a whole would be equally available for the needs of the country at large?—Yes.

41571. Instead of each little system being confined within its own circumscribed area?—Yes. Further, these small lines do not manufacture for themselves; they have no local works for carriage building; and they have to get their stuff from England or Scotland. All that, I think, would be manufactured in this country under a central system.

41572. That is perfectly true. I think you will agree that the more one reflects on the subject the more plain it is that all the concurrent circumstances attendant upon such a system tend to the benefit of the country?—Certainly.

Mr. Walter B. Ronan, Solicitor, Representative of Councils and local bodies in Cork County and City.

Mr. Walter B. Ronan examined by Sir H. Jekyll (*in the Chair*).

41573. Mr. Ronan, you are a solicitor practising in Cork?—Yes.

41574. Have you been requested to give evidence before this Commission by the Cork County Council, the Cork Corporation, the Cork Harbour Commissioners, the Cork Incorporated Chamber of Commerce and Shipping, the Youghal Urban Council, the Queenstown Urban Council, the Cork Rural District Council, and the Cork Board of Guardians?—Yes.

41575. All these bodies have concurred in asking you to give evidence?—Representatives from these bodies.

41576. Not the bodies as a whole?—The bodies appointed representatives to attend a meeting.

41577. We may regard you as a delegate of all these bodies in regard to this particular matter?—I think so.

41578. I understand that you have been a good deal connected with Railway Bills relating to the City of Cork?—I have been mixed up in all the recent Railway Bills, Amalgamation Bills, the Fishguard and Rosslare Railway Bills, and so on.

41579. Did you draw the Bills?—The Fishguard Bills of 1898 and 1899 I was opposing on behalf of the Cork Harbour Commission to get protection; the same with regard to the Amalgamation Bill. Then there was the Bill of 1905 for joining the railways in Cork; I opposed that on behalf of the Cork Harbour Commissioners, and it was thrown out. I promoted a Bill in 1906 on behalf of a local syndicate or company for making the connection in another way, and that Bill was passed.

41580. Has that Bill now been taken over by the Great Western Railway of England?—Yes; the Great Western Railway of England and the Cork and Bandon Railway have practically taken over that Bill.

41581. Was a special company incorporated to deal with that connection?—Yes. The Bill as passed incorporated a company called the Cork City Railways Company, which is now really composed of the Great Western Railway Company and the Cork and Bandon Railway Company.

41582. The Government are making a grant, are they not?—Yes, they are giving a grant of £25,000 towards the connection.

41583. How is the bulk of the capital found?—I think the bulk of the balance of the capital will be found by the Great Western Railway Company.

41584. Have you any idea what will be the amount of the balance?—I should think that the entire scheme will cost about £100,000.

41585. So that the Great Western Railway Company will have to find about £75,000?—No; the Cork and Bandon Railway Company are finding a portion, and there may be some local contributions. Probably £50,000 or £60,000 will be nearer the mark. I could not give the exact figure.

41586. I understand that you wish to give some evidence about the proposed line between Youghal and Cappagh?—Yes.

41587. That line is for the purpose of shortening the route between Queenstown and London *via* Rosslare and Fishguard?—Yes, principally in the interest of Queenstown and the American mails. (*Witness indicated on the map the route of the proposed line.*)

41588. Are there any great engineering difficulties?—I understand that there are not.

41589. There must be a considerable bridge across the Blackwater?—I am told that it will come somewhere up in the narrow part of it; but that is an engineering matter about which I do not know very much.

41590. What is the length of that line?—About 17 miles.

41591. What is the estimated cost?—I understand that the cost will be about £200,000.

41592. It would make a considerable saving in distance, would it not?—It would save about thirty miles as compared with the present route *via* Rosslare.

41593. Running by Mallow?—Yes. This is the present route. (*Witness traced present route on map.*)

41594. By how much would it shorten the existing route between Queenstown and Rosslare?—By about thirty-one miles.

41595. That would represent an hour by train, I suppose?—About an hour.

41596. Is the existing route between Queenstown and Dublin full, or even congested?—I believe it is pretty full. It is the main line between Cork and Dublin, and there is a good deal of congestion on it; I mean it is full traffic.

41597. So that the line you suggest would afford considerable relief?—I think so.

41598. Is there any proposal to construct a loop at Queenstown Junction?—I think that if the scheme were carried out that would be a part of it, so as to prevent shunting at Queenstown Junction, in order that trains from Queenstown might go right on.

41599. And avoid Queenstown Junction altogether?—Yes, and avoiding Cork altogether, so as to get the American mails right through if they went by that route.

41600. The mails at the present time still go by Dublin, do they not?—Well, I believe there is a mail by Fishguard at night now.

41601. The American mail?—No, the ordinary mail. It is a very great convenience, because previously unless the Cork people posted their letters about three o'clock they could not get them into London until the day after the next day. Now they can post up to six o'clock in the evening, and the letters, going by Rosslare, are delivered in London the next morning between 12 and 1 o'clock, which is a very great convenience.

41602. That is the ordinary mail?—Yes.

41603. But the American mail is an important affair, is it not?—Very important.

41604. Is the American mail increasing in bulk?—Very much, and our object in having this line made here is to give increased facilities to the Queenstown route, so that the mails can be got to London as quickly as possible.

41605. Would it also open up any country which is at present deprived of railway communication?—It would open all this country across here (*indicating on map*).

41606. Is it agricultural country mainly?—I think so, but another witness will be able to tell you more about that.

41607. There are no towns of any importance?—No, there are no towns on the line itself; it will be merely a connecting line.

41608. It is not necessary to go into the question of the superiority of Queenstown as the American mail station; it has been decided for the present, at any rate, by the Post Office?—Yes. I understand that the Post Office have decided in favour of Queenstown against any other route.

41609. So that for the present it is unnecessary to dwell upon the advantages of the route?—That is so.

41610. Can you explain at all the circumstances connected with the inauguration of the Fishguard and Rosslare route service?—Yes. In the year 1898 a Bill was passed to make the Fishguard and Rosslare service, and it was made. In that Bill there was a line to be constructed from Waterford to Rosslare, and another line from Fermoy to Cork.

41611. To Dunkettle, was it not?—That is practically Cork.

41612. That is an old story; I can remember that twelve years ago?—Yes, it is a very old story. There was a sum of £93,000 due to the Government on the old Dungarvan line, that is a line running between Dungarvan and Waterford.

41613. £93,000 due by the Government?—No, due to the Government by the line. The Board of Works had advanced the money on mortgage. When the Fishguard and Rosslare Company took up the whole scheme they had to pay back that £93,000 to the Treasury. The Treasury entered into an agreement with the Fishguard and Rosslare Company by which it was provided that on the construction of a line between Waterford and Rosslare and a line between Dunkettle and Fermoy the Treasury would give back to the company the £93,000. This particular line between Waterford and Rosslare has been built, but the Cork to Fermoy line has never been constructed, with the result that the £93,000 has never been paid back to the company. What we think is that if this line between Youghal and Cappagh were built it would be a very efficient substitute for the Cork and Fermoy line. It would really be a better and more useful line, and we think that the £93,000 might very properly be payable for the construction of the line.

41614. It was specially allocated, as I understand, to a line between Cork and Fermoy. It does not follow that the Treasury would agree to transfer it from that to another line?—What we think is that it would be only an equitable thing, where you have a line which does practically the same thing—makes a connection with the through route—which that line was intended to do, that they should give the money for this as they would have done for the other.

41615. It would not be much advantage to Fermoy?—No, but I understand that the rates between Fermoy and Cork are all based on the assumption that there was a direct line between the two places. I am not sure of that, however.

41616. Is there any demand for direct communication between Cork and Fermoy, or are the people there fairly satisfied with the existing route *via* Mallow?—Naturally the Fermoy people would like to have a direct line if they could get one, but I have not

Jan. 16, 1908.

Mr. Walter B. Ronan, Solicitor, Representative of Councils and local bodies in Cork County and City.

Advantages of the proposed railway from Youghal to Cappagh.

The superiority of Queenstown as an American mail station.

Circumstances in connection with the inauguration of the Fishguard and Rosslare route.

The proposed railway from Fermoy to Cork included in Rosslare scheme not carried out.

The agreement between the promoters and the Treasury.

Suggested application of the Government grant intended for the Fermoy and Cork line to the Youghal and Cappagh scheme.

Jan. 16, 1908.

Mr. Walter B. Ronan, Solicitor, Representative of Councils and local bodies in Cork County and City.

read anything about it for the last few years; the demand seems to have died out.

41617. Do you think the Fermoy people would acquiesce in the transfer of that sum of money?—I could not give any undertaking on behalf of the Fermoy people. I am looking at the matter as a connection between Queenstown and London for the American mails. That is really the view that I am taking of it.

The companies interested in the Rosslare and Fishguard route.

41618. The expense of the line as it exists now was borne jointly by the Great Western Railway Company of England and the Great Southern and Western Railway Company of Ireland?—Yes.

Mr. Croker Barrington, Solicitor.—The Irish side is borne by the Great Southern.

Sir H. Jekyll—Was the whole of the expense on the Irish side borne by the Great Southern?

Mr. Croker Barrington, Solicitor.—Yes, except the bridge at Cork; and the whole of the expense on the English side and of the steamers by the Great Western.

Sir H. Jekyll—So that there is practically no Great Western capital?

Mr. Croker Barrington, Solicitor.—There is, for the bridge at Cork.

Sir H. Jekyll.—But only for that.

Mr. Croker Barrington, Solicitor.—Yes; then the Fishguard—that is a separate company.

Sir H. Jekyll—The Great Western seems to have an interest in all these South of Ireland systems.

Constitution of the Fishguard Board of Directors.

Mr. Croker Barrington, Solicitor.—On the Board there are four Great Western directors and three Great Southern, the two companies forming the Fishguard Company. They have a preponderance on the board. That was done when the Bill was passing through Parliament.

The advantage of the route to Cork.

41619. *Sir H. Jekyll*—Is it an advantage, from the point of view of Cork, that a powerful English Railway Company should have an interest in the lines of the South of Ireland?—Speaking on the point of convenience, as we find it actually working, we find it very convenient to have an alternative route to London. We are now able, for the first time, to leave Cork in the morning and get to London the same evening, or we can leave London in the evening and get to Cork the next morning. Those are practically two new services.

The improvement of communication in the South a direct interest to the Great Western Company.

41620. I suppose it is the direct interest of the Great Western to foster and improve railway communication in the South of Ireland?—I think so. I have no authority to speak on behalf of either the Great Western Railway or of the Great Southern and Western Railway; I am speaking on behalf of the meeting which asked me to give evidence.

41621. The harbour at Fishguard still requires improvement, and the Great Western Railway Company are seeking powers to raise additional capital for the purpose, are they not?—I understand that they have a Bill in Parliament this year. But from what I understand, your statement is not quite correct. I do not think they are taking power to raise additional capital, because I believe the original estimate would cover the additional works they propose now to make at Fishguard.

41622. So that they can make the improvements without additional powers?—Without additional capital; I think they require additional powers.

Examined by Mr. Sexton.

Treasury agreement with the Fishguard Co. relative to the Waterford and Dungarvan line, and other matters (Act of 1898).

41623. The origin of this sum of £93,000 was a loan on mortgage by the Treasury for the construction of the Dungarvan line?—Yes.

41624. How long ago was that?—1878.

41625. The £93,000 remained due by the Dungarvan line to the Treasury?—Yes.

41626. And when the amalgamation took place the Great Southern Railway Company paid the £93,000?—The Fishguard Company.

41627. The Fishguard Company repaid the £93,000 to the Treasury?—So I understand.

41628. And the Treasury have held it since?—Yes.

41629. And they hold it still?—I understand that they have it still.

41630. They agreed, however, I understand you to say, that in the event of the construction of what we now call the Rosslare line, and also of a line from Fermoy to Dunkettle, the £93,000 should be paid out again as a gift?—Yes; the agreement is scheduled to the Act.

41631. Will you state its effect?—That is practically the effect, that on the building of these two lines the £93,000 would be paid to the Fishguard Company.

41632. You say that so far as concerns the main route and the main object in view, the line from Youghal to Cappagh would attain the same object as the line from Fermoy to Dunkettle?—I think it would be better; it would be more direct.

41633. And it would attain the same purpose—facilitate the main route?—Precisely.

41634. I see that amongst the bodies that requested you to attend is the Cork County Council?—Yes.

41635. Did they discuss the subject?—They sent their representative to the meeting—in fact, the secretary to the County Council was appointed secretary to the meeting.

41636. Were the Council unanimous?—The meeting that I refer to was unanimous.

41637. I mean, did Fermoy agree?—Fermoy was not represented; Midleton was, but Fermoy was not.

41638. Should you say that if Fermoy had been inclined to dissent they would have made their dissent known?—I could not say as to that. I could not say whether the Fermoy people knew anything about it; probably they did not.

41639. If the line from Dunkettle to Fermoy had been made, local as well as general interests would have been served?—It would have made a shorter communication certainly between Fermoy and Cork. That was the original project. But, as I say, the rates—both passenger and goods—from Fermoy to Cork are based on the assumption that there was a direct line between the two places.

41640. We have had evidence of that repeatedly. At any rate, you are quite clear—indeed, it appears to be obvious—that the line from Youghal to Cappagh would serve the same general public ends that were contemplated in the case of the line from Dunkettle to Fermoy?—Certainly, that is as regards getting through communication from Cork and Queenstown to London and the West and South of England.

41641. Facilitating the transfer of mails and shortening the route between the South of Ireland and the South of England?—Yes. What we in Cork wish to do is this: We look upon this American mail traffic as of enormous importance, and we are anxious to have every line opened so as to preserve the South of Ireland for the American mail traffic, and to give every facility we can, both by the Dublin and by every other route.

41642. Assuming you had this line made, what would be the total saving of time?—As regards the present route by Rosslare?

41643. Yes?—About an hour.

41644. That is, a passenger from Cork would make his journey in an hour less time by reason of this line?—Well, I should hardly say from Cork; I am speaking rather more in regard to Queenstown, because there is an extra saving of time from Queenstown by their not having to go to Cork. I understand that the present time allowed from Queenstown to London by the Kingstown and Holyhead route for the American mail by special train and special through service is 16½ hours.

41645. Allowed by the Post Office?—Yes; and I understand that that could be done with a special train and special non-stop service by this route, if this line were made, in between 12 and 13 hours.

41646. What time do they actually take by the Kingstown and Holyhead route—do they take the full 16½ hours?—They sometimes take more.

41647. They generally take that, I suppose?—I think so.

41648. And you think that the service could be done by this proposed new line in 12 or 13 hours?—So I understand.

41649. There has been a very vigorous effort, comprising various elements of strength, lately made to take away the service from Queenstown?—There are a great many opponents.

41650. But for the moment the Postmaster-General has decided in favour of Queenstown?—So I see by the newspapers, but I have had no official communication to that effect. But I see by the newspapers that the Postmaster-General, after consideration, decided that Queenstown was to go on.

41651. But you are quite uncertain how long that will last?—They say in the newspapers that it is to go on for some years. Queenstown has this enormous advantage, that even at the very lowest state of

the tide we have had the *Mauritania* and the *Lusitania* both entering and going out of harbour. There is no other place where that could be done.

41652. You are open to attack at present, but if you had this line and this period of transfer between Queenstown and London of between 12 and 13 hours, you think that even if you were not impregnable, you would at least be very much stronger?—Yes, because a few hours makes an enormous difference; it may mean the catching of the outward mail. If there were three hours saved it would mean six hours on the double journey, which would be half a day.

41653. You are asking for this £93,000?—We think it ought to be given.

41654. What do you say as to the remainder of the capital?—I have no authority to speak on behalf of any company, but the companies have been taking a great interest in the South of Ireland, and I think they would probably find the remainder of the capital for this line. But I cannot say that absolutely. At any rate it would be an enormous assistance if the £93,000 were made available.

41655. How far would the proposed line penetrate into the County Waterford?—It might come across about there (*indicating on map*), but that is an engineering matter.

41656. The line would serve to some extent the same district as the original Dungarvan line?—Well, the Dungarvan line is there still.

41657. But it would be in the same district as that line?—It would take this country across here (*indicating on map*).

41658. You think that if this £93,000 were made available for the purpose which is urged by certainly a very powerful combination of local authorities, the companies concerned would probably find the remainder of the necessary capital?—I think it is very likely, but I have no authority to speak on behalf of the companies, and therefore I cannot say definitely whether they would. But I think it extremely likely that the money would be forthcoming.

41659. And you are a highly intelligent observer?—That is my own opinion; I cannot give you more than that.

Examined by Colonel Hutcheson Poë.

41660. I think that at the time of the Fishguard Act of 1898 it was part of the understanding that the railway companies should not only construct the line from Cork or Dunkettle to Fermoy, but also bridge over the river at Cork?—Yes.

41661. And that when both these conditions had been complied with the Government would practically give them back the £93,000?—Oh, no. There has always been a great deal of misconception upon that point. The railway connection in Cork had nothing whatever to do with the £93,000.

41662. The railway bridge had not?—Nothing whatever.

41663. I think you are under a misconception?—I have the agreement.

41664. And there is nothing about the bridge in it?—There is an undertaking on behalf of the Fishguard Company to build a bridge across the river at Cork.

41665. And that when that and the Fermoy and Dunkettle line were completed the whole of the £93,000 would be available; is not that so?—That is not so.

41666. It is only conditional on the Fermoy line?—The Fermoy line and the Waterford and Rosslare line.

41667. You are aware that at the time the Board of Works, acting on behalf of the Treasury, sold their interest for £93,000, they also forewent a matter of £54,000 in respect of arrears of interest?—I believe there was a good deal of interest outstanding, but I do not know what the amount was.

41668. They lost £54,000, and also a large sum in respect of the Waterford and Dungarvan line?—Yes.

41669. So that I only put it to you that I am afraid, unless the conditions embodied in the Act were complied with, the Treasury, having lost such a large sum of money in connection with these two lines, would hardly be prepared to make a further grant?—If they are prepared to give £93,000 on the construction of a connecting line from Cork to Fermoy, I do not see why they should not give it on the construction of a line between Youghal and Cappagh.

The Fishguard Co.'s obligations under the Act of 1898.

41670. I was under the impression that a part of that was in connection with the bridge over the river at Cork, towards which the Government have now given £25,000?—There is absolutely nothing about that. I can read the whole agreement.

The promise to construct a bridge over the Lee in Cork to connect all the railways

41671. I am quite satisfied if you have assured yourself that that is the fact?—To make it perfectly clear I had better read the clause. "The Treasury, upon being paid the said sum of £93,000 and interest, and upon being satisfied that half the works . . . between Rosslare and Waterford and Fermoy and Dunkettle respectively have been completed, shall advance and pay to the Fishguard Company the sum of £50,000, and upon the certificate of the inspecting officer of the Board of Trade that the whole of the said works have been completed, shall pay the sum of £43,000." That is £93,000 on the two lines.

41672. You say that the line between Waterford and Rosslare was the first part?—Yes.

41673. That they have done?—Yes, and they have not done the other.

41674. Have they been paid anything in respect of the Waterford and Rosslare line?—No; they are not entitled to get anything until they have done both. They have done half and got nothing.

41675. That would constitute an additional argument in favour of their being given a certain grant if they carry out this line of which you have spoken?—Precisely.

The retention of the American mails at Queenstown.

41676. As Mr. Sexton pointed out, you have, for the time being, overcome the opposition of these other interests and kept the American mails at Queenstown, but no doubt at the end of the period which the Postmaster-General has approved the agitation will be renewed?—Yes, undoubtedly.

The proposal to select Holyhead as a port of call for the American mails.

41677. And if you can show a saving of two or three hours in the transfer of the mails *via* Queenstown, Youghal, and Rosslare as compared with the Holyhead route to London, it will probably frustrate any further attempt on the part of your opponents to deprive you of the very great benefit which you now receive?—Our point of view is that both routes ought to be open. Sometimes it might suit to send the mails *via* Dublin and Holyhead, while at others it might be more convenient to send them the other way.

41678. But it would not be likely to be taken away from you for the benefit of Holyhead under such circumstances as you point out?—I do not think so. I do not think that Holyhead is a suitable place for the American mails at all.

Mr. Thomas Farrell examined by Sir Herbert Jekyll (*in the Chair*).

41679. Mr. Farrell, you reside at Youghal?—Yes.

41680. And you are prepared to give evidence on behalf of the Cork Conference of local bodies in favour of the railway between Youghal and Cappagh?—Yes.

41681. What is your business or profession?—I am a large general merchant, manufacturer, and shipowner.

41682. Have you acted as secretary to this conference of local bodies mentioned by the previous witnesses?—No; I am a delegate only. The Secretary to the Cork County Council, together with the Town Clerk of Youghal, acted as secretaries.

41683. What was this conference of local bodies?—A conference of all these local bodies which met in the Municipal Buildings at Cork, and it appointed Mr. Ronan and myself to attend here and give evidence.

41684. The proposed line between Youghal and Cappagh has been in contemplation for a great number of years, has it not?—Yes; it was originally surveyed by the great engineer, Brunel.

41685. As far back as 1864?—Yes.

41686. Have you anything to say about that line?—It is the shortest possible route between Queenstown and Rosslare.

Jan. 16, 1908.

Mr. Thomas Farrell, Youghal, Representative of Councils and Local Bodies in Cork County and City.

Advantages of the proposed route for railway from Youghal to Cappagh.

41687. *Mr. Sexton*—Shorter than even the Fermoy and Dunkettle line?—Yes, because you would have to come to the junction which is to the west, and from there to Dunkettle.

41688. *Sir H. Jekyll*—What would be the saving in time by the adoption of this route?—I estimate that there would be a saving of 1¼ hours from Queenstown to Rosslare as compared with the present route.

41689. Is the present terminus at Youghal inconveniently situated?—Extremely so.

41690. Where is it with respect to the town? Does it lie out of the town?—It lies on the beach. Between that and the town proper there is about 80 or 100 feet of a hill, and a distance of a mile and a quarter to the centre of the town.

41691. Would this proposed line pass right through the town?—Yes.

Suggested route for the line.

41692. By extending from the existing terminus or by taking a branch?—By taking a branch a mile or two from westward of present terminus either the north end of the town of Youghal, and cross the estuary of the Blackwater.

41693. Would it cross the Blackwater near the town?—About a mile to the north-east.

41694. It would be a very long bridge, would it not?—No, comparatively short. The estuary at the town would be at some places nearly a mile wide, but a mile to the north-east it narrows. The bridge would be about 100 yards long.

Inconvenient position of the existing Youghal station.

41695. Is the existing terminus so far from the stores and factories that a considerable expense for cartage is thrown on the inhabitants of the town?—I estimate the expense of cartage at about £1,500 a year.

41696. And you think that a good deal of that might be saved?—I do.

41697. Enough, in fact, to pay the interest on a portion of the capital for the new line?—Yes.

41698. What other advantages would the new line have?—For the tourist traffic it would open up a very large country which is at present unapproachable. Youghal is a sea bathing place of repute in the south; there is a beautiful strand, and safe.

Industries to be developed by the extension.

41699. Would it develop any new trade?—I think it would increase the brick trade, in the first place. We are very much hampered by the distance from the terminus and the heavy cartage expense.

41700. Is there any fish trade there?—It is practically undeveloped, except the salmon of the Blackwater. There is a little fishing at Ardmore, but it is so far away from the terminus that there is no means of getting the fish along at a reasonable cost. It is brought in by donkey carts, then taken across by an eighteenth century ferry boat, and then carted a mile and a quarter.

The promoters' claim for the Treasury grant promised for a line from Cork to Fermoy.

41701. What have you to say about the Treasury grant of £93,000 that we have heard of?—I agree with the previous witness that if this railway were substituted for the Cork and Fermoy line we would be equitably entitled to that money. It would also be giving some return to the ratepayers of the west and south-west of the County Waterford.

41702. You say that the ratepayers have been and are still paying rates to produce the interest on the Government advance?—The rates are imposed still.

41703. But I thought that the amount had been repaid?—There is still a railway rate paid, although it has been reduced.

41704. Even though the capital sum has been repaid to the Treasury?—Yes. I cannot give the details.

The baronial guarantee for the Dungarvan line

41704A. *Mr. Sexton.*—I think it was a condition of the Amalgamation Act that there should be a payment for a certain number of years in respect of the Dungarvan line.

Mr. Croker Barrington, Solicitor.—Yes; there are seven years to run, I think.

Sir H. Jekyll.—And at the end of that time it will cease?

Mr. Croker Barrington, Solicitor.—Yes.

Mr. Sexton.—It was a Parliamentary bargain.

Mr. Croker Barrington, Solicitor—Out of the £14,000 we returned £7,000.

Mineral wealth of the district.

41705. *Sir H. Jekyll*—Would the line tap any minerals?—It would tap a large amount of iron ore which is known to exist and a very large slate quarry which my firm had inspected by an expert some years ago, and in which, to our certain knowledge, there is a very fine supply of first-class slate.

41706. And you think the line would have some naval and military uses as well?—Yes. For strategic purposes I presume a line right along the coast would be of use in case of necessity between Waterford and Berehaven.

41707. As regards the tourist traffic?—I believe the line would increase that very much. Even as it is there is a very large tourist and excursion traffic to Youghal.

41708. Has the tourist traffic developed very much since the opening of the Rosslare line?—Not to Youghal; they pass it by. We have a little steamer coming from a point up the river at Cappoquin, a station on Rosslare to Cork Railway, to Youghal, but she has to work according to the tide, and in that way she is unable to tap any traffic that may come our way.

41709. You think that the line is one which might become remunerative?—Yes, but not with the local traffic, but would rely on the mails and through traffic.

41710. But with a grant of £35,000 or £40,000, you think it might produce 3 per cent.?—I do.

Examined by Mr. Sexton.

41711. The ratepayers of the guaranteeing area of the Dungarvan line had originally to pay, I think, £14,000 a year. Was it a fixed charge of £14,000 a year?—The rate was about 1s. in the pound, but I think it varied according to the locality.

41712. I should have thought that a guarantee of that kind would have varied according to the circumstances of each year?—I think it was fixed.

41713. When the Great Southern absorbed the Dungarvan line into their general system, the effect of the Amalgamation Act upon that particular matter was to reduce the liability from £14,000 to £7,000 a year, and also to make it terminable?—Yes, so I understand now.

41714. But they are, at any rate, paying this £7,000 a year at present?—Yes.

41715. They did at one time pay £14,000 a year, and have paid a great deal of it?—Yes, for a long time, since 1878 or 1879.

41716. What you say is that this line from Youghal to Cappagh would be beneficial to that very district which is yielding that guarantee?—Yes.

41717. It would facilitate the distribution of imports from Youghal?—Yes.

41718. More cheaply than at present?—Yes. Youghal is simply tied hand and foot; it does not disperse anything except what comes by river.

41719. It would promote access to the best markets for the farmers of West Waterford?—Yes.

41720. And it would develop new industries perhaps, such as the mining of iron ore and the making of bricks?—Yes, and slates.

41721. And you think that in that way the general prosperity of the district would be aided by this line?—I do. I would expend a good deal of money if the line were there, in developing the brick industry of our firm.

Examined by Colonel Hutcheson Poë.

41722. At the time of the original survey—though perhaps the figures would not be very applicable to the present day—was an estimate given of the probable cost?—I did not see that.

41723. I think the previous witness said that it would cost £200,000?—I think that would be a very liberal figure.

41724. That is what I thought. It would be £12,000 a mile?—There are no engineering difficulties except the bridge over the estuary of the Blackwater; it is all practically level.

41725. You think a traffic would be developed which would be sufficient to pay interest of 3 per cent. on £160,000, assuming you got a grant of £40,000?—Yes.

41726. That would be about £5,000 a year over and above working expenses. Do you really think the traffic in the district would be developed to that extent?—I do.

41727. It is a considerable amount?—There would be an equitable charge on the rates for the railway when they come into the town of Youghal; it would be a set off against the £1,500 a year which I estimate as the expense of cartage.

41728. Even assuming you put aside £800 of the £1,500 which you now spend in cartage and so on, that would still leave about £4,000 a year over and

above working expenses to pay 3 per cent. dividend?—With the extra traffic.

41729. That is a large revenue for a small line, and I am putting it to you whether, with your knowledge of the district, you honestly think that the traffic which may be developed would bring in such a return?—I think it would, from my experience of the tourist traffic to Youghal and the excursions on Sundays. They have had as many as 13,000 passengers on one day from Cork and neighbourhood to Youghal.

41730. Is there any great development to be expected in the way of goods and agricultural produce?—Yes.

41731. A considerable amount?—Yes.

41732. So far as the Fermoy people are concerned, have you any reason to believe that they would raise any insuperable objection to this alternative route?—I believe that the bulk of the Fermoy people would not; they don't want the direct line.

41733. If they were told that if they did not get this line they would not get the other, they would probably not persist in any objection they might have; if they could not get the original line they would prefer to have this alternative rather than nothing at all?—I presume they would be generous enough for that.

Mr. Thomas Farrell. Youghal, Representative of Councils and Local Bodies in Cork County and City.

Probable attitude of Fermoy people towards the proposed line.

Mr. Jeremiah Hurley, J.P., examined by Sir Herbert Jekyll (*in the Chair*).

Mr. Jeremiah Hurley, J.P., Leap, County Cork.

41734. You are a Justice of the Peace of County Cork?—Yes.

41735. You live at Cononagh, Leap?—Yes.

41736. You are in business with mills and a creamery; what sort of mills are they?—Originally they were flour mills; I grind maize for the local people.

41737. The special point upon which you wish to give evidence is as regards the necessity for railway communication between Clonakilty railway station and the deep water in Glandore Harbour?—Yes.

41738. Is there a large mackerel fishing at Glandore?—There are 35 boats fishing from there.

41739. How is the fish sent to market from Glandore?—The bulk of the fish is cured for the American market; a portion is sent fresh by cart to Skibbereen, and then by rail to Cork.

41740. How does it get from Glandore to Skibbereen?—By cart.

41741. How far is it?—Nine miles.

41742. It is carted nine miles to Skibbereen?—Yes.

41743. Is that the nearest railway station to Glandore Harbour?—It is.

41744. That must be a considerable impediment to the trade?—It is hard for it to exist under the conditions.

41745. What sort of district is it between Clonakilty and Skibbereen?—It is a rather rich agricultural district from Clonakilty to Rosscarberry. At Rosscarberry you touch the slate district. The country between Rosscarberry and Leap to the head of Glandore Harbour has several quarries in it, only two of which are working at present.

41746. Slate quarries?—Yes.

41747. Is it a good slate?—It is a superior slate. The slate of the Benduff quarry is known all over the country.

41748. Is that an industry which could be largely developed?—Undoubtedly.

41749. And the development is hindered by want of railway communication?—Yes. I know myself when from 20 to 50 tons of slate were delivered from the Benduff quarry to Leap quay daily for shipping purposes, but the Welsh people were able to land their slates in Cork very much more cheaply than the Benduff people in consequence of the distance the Benduff slate had to be carted and the high railway charges.

41750. Is there any amount of slate there. Is the supply practically unlimited?—Yes.

41751. Some years ago the quarries in this district were worked in a considerable way?—They were. I myself have seen 200 men working in the Benduff quarry; that was always the principal one.

41752. And that number had dwindled down to how many?—To about 20. There are about twenty working in another quarry also.

41753. Is the sole reason for the decay of the industry the want of railway communication?—They were shut out from the market by want of transit facilities.

41754. That is the only reason that led to the decay of the industry?—Probably there are others; the fortunes of the quarry ran down with the smash of the old Munster Bank. Mr. Shaw, who was Chairman of the Munster Bank at the time, was half owner of the quarry.

41755. Was that in 1885?—I am not certain; it would be about that time.

41756. The slate has to be carted to Skibbereen railway station?—Yes.

41757. Eleven miles distant?—Yes, eleven miles from Benduff, and about ten from Madarana.

41758. So that the slate, to get into Cork, has to go eleven miles by road and fifty-three by rail?—Yes.

41759. Although the quarries themselves are only about forty-three miles from Cork; is that so?—That is so. That is the Benduff quarry; the other one would be two miles farther.

Proposal to connect Clonakilty with Glandore by railway.

41760. You refer to another industry connected with the clippings of slate. How can they be used?—Mr. Swanton, the former owner of the property, sent some of these clippings over to England to see if they could be converted into a serviceable brick. I saw the bricks myself, and they were undoubtedly most excellent. There are millions of tons of that stuff waiting there to be converted into something useful.

41761. You are of opinion that it is of the greatest importance for the development of the district that a line of railway should be constructed connecting Clonakilty railway station with the deep water in Glandore Harbour?—That is so.

41762. Have any plans and estimates for such a railway been made?—There was, at one time, to Rosscarberry, but no farther. A meeting was held in Unionhall, and it was unanimously decided to suggest that the deep water in Glandore Harbour should be the terminus, for the reason that the fishing boats could come alongside and land their catches of fish into the train, instead of, as at present, the fish having to be handled out of the vessel, put into small yawls, and re-handled in being discharged from the yawls on to the quay. All this handling is detrimental to the proper curing of the fish, and also keeps the fishing boats from the fishing grounds, as they are delayed in the harbour while it is being done, and very often they are not able to reach the fishing grounds when they get free.

Importance of having the terminus at Glandore Harbour.

41763. And there is also the expense of that handling. Are there any physical obstacles to the construction of such a railway?—None.

No physical obstacles to the construction of the line.

41764. Could it be constructed cheaply?—I think at about the average rate. The portion of the country from Clonakilty into Ross would be cheap, but from Ross to the west it would be a little rough.

41765. But there is no mountain range to cross?—Not a bit, nor any river of importance.

41766. Would the harbour at Glandore need improving?—If this scheme were carried out I think the quay could be cheaply built in a position that would enable the fishing boats to come to it at about half tide with their catches.

41767. What quay accommodation is there now?—There is a pier. But it is not suggested to have the railway terminus where the pier is, but about half a mile further up the harbour, towards Leap, midway between Leap, Unionhall, and Glandore. There are three villages, and they agreed amongst themselves that the station should be built at a central point between them, so as to serve all three at the same time.

Proposed position for the station at Glandore.

41768. Is it a safe sheltered harbour?—Decidedly; a beautiful harbour.

41769. Would it also help to develop the fairs of Leap and Rosscarberry?—Undoubtedly. The fair at Leap had dwindled almost to nothing for want of railway communication; buyers have refused to come there. The Ross fair has been kept on, but it is solely by the people of the locality; they asked the pig-buyers of Cork to come there to buy their pigs, and agreed to cart those pigs free of cost to the railway at Clonakilty; so they cart the pigs by their own horses or pay somebody else to do it for them.

A good live stock producing district to be served.

Local fairs dwindling owing to absence of railway communication.

Jan. 16, 1908.

Mr. Jeremiah Hurley, J.P., Leap, County Cork.

41770. It is a large pig district? Yes.

41771. And cattle too?—Yes; but there are a lot of pigs in the district.

Present cost of transit a serious handicap to all local industries.

41772. Have you anything to say about the cost of marketing agricultural produce in the district as compared with other districts in West Cork which have railway facilities?—What I say about pigs will apply to cattle also. I have personal knowledge about butter, and I would like to hand in some figures in connection with the charges on that. A man in Cork City can land butter here in Dublin at less than 1*s.* a cwt., while a man where I live, only 44 miles from Cork, has to cart his butter into Skibbereen, a distance of nine miles, and pay 2*s.* 4*d.* on the net weight of the butter for it to come to Dublin.*

Comparison of the cost of marketing butter in Dublin from Cork and from Leap.

41773. Because it comes by land, whereas the Cork butter goes by sea?—It is all by the Great Southern line.

Mr. Croker Barrington, solicitor—It could not be all the Great Southern.

41774. *Sir H. Jekyll*—It goes by the Cork and Bandon Railway to Cork?—Yes.

41775. And is carted across Cork City to the Great Southern?—Yes.

41776. And taken by the Great Southern to Dublin?—Yes. My object is to show that from want of railway facilities it costs me more than twice as much as it costs the Cork man to place butter in Dublin. These delivery notes that I have with me will prove it.

41777. Do you confine yourself to butter, or do you wish to say anything about other produce?—I think that what applies to butter applies all round.

Danish butter landed in Dublin at a cheaper rate than butter from Leap.

41778. Have you anything to say about Continental and foreign freights?—Well, I cannot go into that matter, though I have a delivery note here which shows that Danish butter, *via* Leith, is landed in Dublin at a little less than it costs me. Danish butter is landed here *via* Leith from Copenhagen at about 1*s.* 9*d.* per cwt.†

41779. Have you any winter dairying in your district, or is it all summer dairying?—It is kept alive in the winter only in a struggling way, although we do better in the west than they do in some of the rich districts of the south.

41780. The climate is favourable?—Yes. The early potato growing industry could be immensely developed from Glandore along the western coast to Baltimore.

Development of early potato growing anticipated if railway communication established.

41781. It is particularly favourable for that?—Yes, decidedly. Hardly anything has been done there. I know of one instance where a man sent a small quantity of potatoes to the Dublin market, and the railway carriage was such that it only left a few pence to be returned to him; it was an infinitely worse market for him than he could have got at Skibbereen.

41782. Probably if it were done on a larger scale it would be more profitable?—Decidedly.

Examined by Colonel Hutcheson Poë.

Distribution of fish landed at Glandore.

41783. With regard to the fishing industry round Glandore. Where does the fish eventually go to, to Cork?—No; London.

41784. Does it go from Cork to London?—On account of the distance from Skibbereen to Cork they are never sure of getting a proper connection at Cork, and it sometimes goes by the Great Southern and the Holyhead route. I think that is principally the route.

41785. We have had evidence that from Kinsale there was a large export of fish by the Cork Steam Packet Company, and that the bulk of it went to Grimsby?—I have no experience of the market of the fish myself, but I know that some of it goes to Liverpool, I think by the Cork steamers.

41786. Is there not a steam trawler fishing service round the south coast?—There are steam trawlers coming there.

41787. Do they not take away the great bulk of the fish?—Their own catches only. The large fishing companies have their steamers to take up the fish; but that only applies to fish put on the market freshly caught; it does not apply at all to cured fish.

Glandore industry principally in cured fish; extent of the trade.

41788. Is it cured fish that you are speaking of in connection with Glandore?—The bulk of the fish coming into Glandore is cured, because of the great inconvenience of having it iced in Cork, and the great expense.

41789. Have you any idea of the quantity that is caught in that particular district?—I could not give the quantity in bulk, but the 35 fishing boats engaged are doing very well there; the fishermen are very well satisfied with their earnings, so that their catches must be considerable.

41790. But the fishing is only for a short time, spring and autumn, is it not?—Spring and autumn, about seven months in the year, I think.

41791. I think we had evidence from Mr. Green to show that the fishing on the south coast had rather decreased, and that there was not the same quantity of fish caught on the south coast now that there was some years ago?—I agree with Mr. Green in that.

41792. That would rather tend to show that there was not the same necessity, or at any rate, that one would have to be satisfied that there was something more than the fishing industry to sustain in connection with the railway? The fishing would be one item only. We depend a great deal on the quarries. We think that if there was a railway running to the quarry gate or within a reasonable distance of it we could land our slate in Cork City at a cheap rate, and thereby capture the Cork trade. We believe that we could drive the Welsh slates out of Cork if we had railway facilities to land our slates in Cork, and that capital, local and otherwise, would at once drop into the quarries.

41793. *Sir H. Jekyll*—That is a point I wish to mention. In other places where there are valuable mineral deposits it is found worth while for the owners of the quarry or mine to make a railway themselves to the nearest harbour?—Unfortunately the companies are not in a position themselves to build a railway; the finance of the Benduff quarry was ruined at the time of the smash.

41794. *Colonel Hutcheson Poë.*—I can hardly understand, if they turn out such good slate and employed a couple of hundred men some years ago, why some company has not been formed on the ashes of the old one to take the working up?—The Swanton family were always interested in the quarry; they were the principal owners of the quarry, with the exception of Mr. Shawe, as far as I can recollect, and they were most anxious to keep it in the family. Mr. Swanton did put it on the market some years ago, but I think they say that he was asking too excessive a price for it.

41795. The slates a few years ago were capable of finding a ready market?—Yes.

41796. Was there a large output in those days?—Very large.

41797. Were they used in Ireland?—In Ireland, and there they were carted to Leap quay for shipment to Scotland—Glasgow.

41798. There was a good market across the Channel?—Yes.

41799. It is very curious that it should have been so and yet no effort has been made to resume the working?—That slate has been on houses for 200 years, and it is still as sound as it was on the day it left the rock; that is a proof that it is good slate.

41800. In the days that you speak of, did it compete on favourable terms with the imported slate in Cork?—Decidedly. It had a large sale in the city of Cork. They had to cart the slate to Dunmanway or Bandon, and then they had a yard in Cork where they did a big trade.

41801. I presume that the slate quarries are not at all worked out?—Oh, no.

47802. There is plenty of material?—Millions of tons. The Glandore mines are open now, and are likely to be developed.

41803. What mines are they?—Manganese and copper.

41804. Is that a resuscitated industry or one freshly started?—The mines have not been worked for years. A new company has taken the matter up six months ago.

41805. With what result?—They are most decidedly pleased with the result.

41806. With regard to bricks, I am afraid you must not count too much on that industry, because unfortunately in nearly every part of Ireland there is good brick-making material. So that unless you had a very large market for your bricks locally I am afraid you could not do much good at it. Has your brick trade a very large local market?—If we had a railway and the plant we could compete with anybody.

* See appendix, No. 17—I., II., and III.

† See appendix, No. 17—IV.

41807. I am afraid you would find that you could not compete with bricks at any distance, because nearly every part of Ireland has its own brick factories?—Of course.

41808. With regard to this railway from Glandore to Clonakilty, has any estimate of the probable cost been made?—No; but the estimate for the portion to Ross was about £5,000 a mile. There was no estimate from there to the west.

41809. *Sir H. Jekyll*—The distance is about eleven miles, is it not?—To Glandore, yes; about thirteen miles.

41810. *Colonel Hutcheson Poë*—It would probably cost about £40,000 or £50,000, and you would not be likely to meet with any guarantee from the baronies; they have had a sufficiently bitter experience of guaranteeing throughout Ireland generally?—The ground over which we should go into Ross is already paying a guarantee on the capital that built the Courtmacsherry line. Into Leap and west of Glandore Harbour a guarantee is being paid by the district in connection with the Schull tramway.

41811. There are heavy guarantees already. At any rate, if there was to be any railway made, it would have to be done with either private capital by a company or by State assistance?—Yes.

Examined by Mr. Sexton.

41812. How far do you say it is from Clonakilty to Glandore Harbour?—Thirteen miles.

41813. This line might be a light railway?—Our experience of the light railway that we have already from Skibbereen to Schull is not satisfactory. To be of any use the railway should be on the Cork and Bandon Railway gauge—the ordinary gauge.

41814. The regular gauge?—Yes.

41815. That would mean a matter of about £50,000?—I think it would.

41816. Do you anticipate that between the fisheries, the quarries, the carriage of imported goods, and the transit of goods for export, that line might prove remunerative after a time?—I really think it would. I think the district is capable of such development that after a little time the line could be made a paying concern.

41817. Suppose you were able to put the case, as you have put it here to-day, before an Irish authority, say an elected body, with funds at its disposal, do you feel a good deal of confidence that they would be willing to make the line, with the certainty of developing the district, and in the hope of a financial return?—I do not know what they would do, but I know from personal knowledge that the district is capable of development.

41818. I mean, if you could put that case before an Irish authority, an elected body, having funds at its disposal, should you feel confident that such a body would consent to make the line?—An Irish authority acting on behalf of Ireland would not leave such a rich little district undeveloped. I mean a district rich in mineral and slate deposits having a beautiful coast line. I think it would certainly give the money.

41819. If your district were in Australia, or even in India, to say nothing of progressive Continental countries, do you think that these fisheries and mines would have been left until now without railway accommodation?—Not at all; they would have been developed long before we were born if there had been an Irish authority.

41820. On the other hand, under this irrational system of unlimited local guarantees, appeals to companies, and appeals to the British Treasury, have you any confidence at all that the very considerable needs of Ireland in these respects will be fairly or promptly met?—Indeed I have not the remotest hope. I have had experience of the expense of attending in London to get these things done; and even then they are badly done. There is not an Act that we got from them in which there is not still some working defect.

41821. I have had some experience of that myself. They seem never to be able to pass a law but year after year there is a necessity for passing amendments to it, the original law having been so bungled?—Unfortunately that is our experience.

41822. Even if there were no question of high fares and rates at all, does it appear to you that merely for the purpose of perfecting the transit system and making the necessary lines we require a central Irish authority with funds to deal with the question in a reasonable and sufficient manner?—Certainly. That district has been there since the Creation, and nobody has done anything for it. Are we to wait until England wakes up long after we are dead? An Irish authority ought to be established at once to deal with these things.

Unsatisfactory nature of the present system of obtaining State aid for railway extensions.

41823. Has your district suffered much from emigration?—Very considerably. In the parish in which I live the population is only about one half what it was in the famine times. I heard the parish priest speaking about it a few years ago. There was a population of nearly 7,000 before the famine of 1847; it is only about 3,000 now.

41824. West Cork has suffered as much as any part of Ireland?—I think so. There are other parts of Ireland that have suffered equally, perhaps, but I think there is scarcely a district that suffered more during the famine times than the district round West Cork.

The necessity for establishing an Irish authority to deal with the transit question.

41825. Would it be true to say that substantially the cause of emigration is want of work, want of means of living in Ireland?—There would be a great deal of truth in the statement. Wages are not sufficient to keep any self-respecting man at home while he has got the world in which to go and look for a fortune.

Decline in population caused by emigration due to want of employment.

41826. The quarries formerly gave work to many men; the Benduff quarry alone employed 200, and now it employs only 20?—Yes.

Welsh slates imported at low rates to the injury of the Leap industry.

41827. Then, as now, there were no railway facilities, and the question is asked why has the number of men employed so greatly fallen off?—Because the importation of Welsh slates is very much greater now than then. The Welsh slates are able to reach Cork much more cheaply than they could then.

41828. In the course of these last thirty years facilities have been increased and freights lowered for the purpose of importing goods into Ireland?—Exactly; it has increased competition from every direction.

41829. Competition is more keen than it was, and if you want to explain why there are 180 men less employed in this quarry you have to say that it is because the railway systems in combination have made it cheaper and easier for Welsh slates to come into Ireland?—Yes.

Extent of the employment formerly afforded by the Benduff slate quarry.

41830. You will not find Welsh quarries hampered by want of communication, of quays, railways, and harbours?—I would like to say that in this quarry, where 200 men were employed, the work was done on a contract system, with a substantial weekly wage, I think of 12*s.* per week per man, and these men would have at the end of the month £2 over their weekly wages or in addition to it at the very least on their monthly contracts. That comes to considerably over £1 a week for the common labouring man at that time, while the skilled workers who split the slate at the rock would get £3 or £4 a month on their contracts over and above weekly wages.

41831. The quarries are practically inexhaustible?—Yes.

41832. And the slate is of first-rate quality?—Yes.

41833. Slates which have been on houses for 200 years are as good to-day as when they were put on?—Yes.

Annual value of imported slates and other stones.

41834. Is there any reason, on the merits, why we should import slates and other stones to the value of a quarter of a million a year?—There is no reason whatsoever, leaving our own slate quarries undeveloped, and sending our men to Wales for work.

41835. You are worse off because you have no railways at all; but we have heard of quarries where there are railways—in West Cork, too—which have been unable to take contracts in Tralee because they could not get through rates on the railways?—I cannot speak of that; that would be in the Clonakilty district, I imagine.

Failure to obtain through rates from the railway companies.

41836. The Cork and Bandon Company was willing to give the rate, but the Great Southern Company was not, and accordingly the contract fell to the ground. So that between the quarries with no railways and the quarries which are not facilitated by the railways the slate industry appears to be in a bad condition. Now, about the fishing. There are thirty-five boats. I suppose there are perhaps 200 families dependent on that industry?—There are eight men in each boat, as well as the shore hands, the people who handle the fish on shore.

Inconvenience and loss at present occasioned to the fishing industry.

41837. You get on better than Kinsale; you do land the fish in Ireland, at any rate?—Yes.

41838. But you say that owing to want of railway and want of quay accommodation there is too much

Jan. 16, 1908.

Mr. Jeremiah Hurley, J.P., Leap, County Cork.

handling of the fish, long cartage, delay, deterioration of the fish, and also detention of the fishermen from the fishing grounds, with consequent reduction of their income?—Yes.

Fish trade obstructed owing to want of pier accommodation.

41839. All that could be avoided by a slight expenditure, you say?—Yes. I say that a quay could be built there with a railway station on top of it, so that the fishing boats could come alongside with their catches of fish at half tide, and deliver their fish in thirty minutes, and clear off to the fishing ground again, instead of having to remain for hours in the harbour, as at present.

41840. In your slate industry you are hit by the low rates from Wales into Ireland, and in your butter industry by the low rates from the Continent into England and Ireland?—Yes.

Butter trade with Dublin handicapped by absence of railway accommodation.

41841. First, let me refer to Dublin. Do I understand you to say that the producer who sends butter from Cork to Dublin can send it for 1*s.* a cwt., whilst you in the same county have to pay 2*s.* 4*d.*?—That is so; I have dockets here to prove it.*

41842. That means that when you sell butter in Dublin you have to get 26*s.* a ton more to have the same profit as the Cork trader?—Yes.

41843. Or else lose your market?—I have to sell under those conditions. I buy milk from the farmers, and manufacture it into the most excellent butter. I defy the Danes or anyone else to make better butter than I make myself. I manufacture that butter, and send it here, and it costs me 1*s.* a cwt. more to market that butter in Dublin than it does the man in Cork, and that 1*s.* comes out of the farmer's pocket.

Average loss per ton.

41844. Practically the want of railway accommodation costs you 26*s.* a ton on your butter?—Exactly.

41845. And you have to submit to that (or lose the Dublin market), and sell the butter on unfavourable terms at some inferior market?—That is so.

41846. It is a heavy burden—a great disability?—Decidedly.

41847. You say that it applies all round, whatever you have to sell, if you have to send it to such a market as Dublin?—My experience is confined to butter alone, but the same conditions must prevail in regard to all other commodities.

41848. Did I understand you to say that Danish butter could be sent from Copenhagen, *via* Leith, to Dublin for 1*s.* 9*d.* a cwt?—Yes.

41849. Now let us consider that. Butter can be sent from that country across the sea from Copenhagen to Leith, by rail from Leith across all Scotland?—I don't know the route.

41850. From Leith to Glasgow, I suppose. It is sent by rail across Scotland, and then by sea to Ireland for 35*s.* a ton. The Dane gets his butter into Dublin for 35*s.* a ton, and you pay 46*s.* a ton; so that as far as the cost of transit affects the competition the Dane can undersell you in the capital of your own country by 11*s.* a ton?—Yes, and I assert that he cannot beat me in quality.†

41851. It would certainly seem that a system which allows that to happen is urgently in need of amendment, at any rate in the interests of Irishmen?—It does; it ought to be ended.

41852. *Sir Herbert Jekyll.*—The only difference is that the Dane sends his butter all the year round and the Irish only in the summer?—Unfortunately yes. But personally I send butter to Dublin every week in the year.

41853. *Mr. Sexton.*—I hope winter dairying will be extended in Ireland, and I expect it will when the people realise the disadvantage they are now under in the British market?—We do a little down our way, but it is not much.

41854. But you will do more?—Yes.

41855. In the meantime the fact that you make butter only during a part of the year does not make the heavy rates easier to bear?—Not a bit.

41856. But harder?—Yes.

Mr. Joseph William Shea, J.P., examined by Sir Herbert Jekyll (*in the Chair*).

Mr. Joseph William Shea, J.P., Representative of Tipperary Farmers' Society.

41857. You are a Justice of the Peace, and you come to give evidence on behalf of the Tipperary Farmers' Association: is that so?—Yes. It is non-political and non-sectarian.

41858. Is the Tipperary Farmers' Society a new society?—Yes. It has started within the last six months.

41859. You are in business yourself?—I represent an English firm in the egg and butter trade, and my business takes me over portion of the County Clare and the County Kerry and the County Tipperary.

41860. You were deputed by the South of Ireland Butter Merchants' Association to represent them before the Board of Agriculture in England?—To make certain representations as regards the standard of water in butter before the late Mr. Hanbury, Minister of Agriculture. I also went over on behalf of the amalgamation of the Great Southern and the Waterford and Limerick railway systems.

41861. And you are familiar with the railway systems of the South of Ireland?—For the last thirty years.

41862. Including the West Clare Railway?—Yes, since it was established.

Necessity for low rates for butter to meet foreign competition.

41863. What is your opinion as to the prospects of Irish farmers in connection with the rates on butter, local and through, which are charged by the Irish railways?—Taking into consideration the keen competition from the Colonies and Continental countries as distant as Russia, it will be very, very hard for farmers to do well. Another thing to be considered is the cost of labour on account of the increased emigration for the last fifteen years, and this will make it very hard for tenant farmers in Ireland to fulfil their obligations to the Government in repaying the instalments of loans to purchase their holdings; and I may tell you I am in daily touch with the tenant farmers in a good portion of the South and West of Ireland.

Need for change in the working of the present Irish railway system.

41864. You think the country is unfavourably situated as compared with foreign countries which have State Railways?—That is so.

41865. In reference to the working of the Irish railways, in your opinion they are worked more for the interests of the shareholders than for those of the country at large?—That is so.

41866. Do you think under the existing system it is difficult to expect any large increase of the dairy industry?—I think so. It cannot be expected owing to foreign competition and the railway companies prohibitive railway rates.

41867. Did you hear the evidence of the last witness?—I did not follow his evidence. I happened to be engaged writing.

41868. Do you agree with him as to the effect of foreign importations? He told us that Danish butter can be imported at a cheaper rate than you can send butter from the South of Ireland to Dublin?—I would not be surprised.

41869. Does your experience bear out that statement?—Yes.

41870. Has the price of butter gone down in recent years?—Very much. I may instance what the loss is. Between the year 1874 and 1877 the average price of butter realised by farmers varied from 160 to 175 shillings per cwt. About the year 1879 Danish butter was coming on the English market in increased quantity, and as a result the average price the farmer realised for his butter in the year 1879 was somewhere about 70 shillings a cwt.

41871. And you attribute that great reduction in price to the importation of Danish butter?—Yes. The climate has also had some influence in recent years. You are not able to make as much butter from the raw material, the milk, as when you had more favourable seasons, as you had in the 'seventies.

41872. Have there not been improvements in the manufacture of butter?—Yes, material improvements.

41873. With the introduction of the creameries, improved machinery, and improved methods?—Yes.

41874. In spite of all that the price has gone down?—Yes. At that time in the 'seventies Continental butter, Canadian and South American butter, and butter from the Argentine Republic were unknown in the English market.

41875. Does the same thing apply to hay?—Yes; in fact the prices in those years ranged from 74 to 77 shillings and £4 a ton, and the average price from the back end of 1907 to this month works out somewhere between 30 and 40 shillings a ton.

* See appendix No. 17—I., II., and III.

† See appendix No. 17—I., II., and IV.

41876. What is the cause of that? No hay is imported from Denmark?—None, but the hay growers had to come down to that, chiefly owing to the fact that last season being a very unfavourable season for farmers. As late as the month of November I have seen hay that could not be removed from the fields to farmers' homesteads to put in ricks and hay-sheds owing to the bad weather.

41877. The fall in the price of hay is not owing to the same cause that has brought down the price of butter?—The same competition from the Continent.

41878. Is there?—Yes. Besides electric trams have taken the place of horse haulage in England.

41879. In the period referred to has there been any reduction of railway rates at all corresponding to the reduction in the price of the articles?—Not that I am aware of. I take it—I am not quite certain—that the classification for butter would have taken place in the seventies. Since then there has been no adjustment of these rates.

41880. Was the classification not adopted in 1891?—There might be an adjustment in 1891. I am not aware of it.

41881. *Sir Herbert Jekyll.*—I mean the statutory classification.

41882. *Mr. Croker Barrington, Solicitor.*—Under the Act of 1888?—No. I don't think that would apply to butter. The same rate applies to butter to-day, 37*s.* 6*d.*, that obtained in the early days.

41883. *Sir Herbert Jekyll.*—It became a statutory rate in 1891 in consequence of the Railway and Canal Traffic Act of 1888. You mention the Railway and Canal Commission as a court of appeal, but you say that no use is made of this procedure?—Not as far as private traders, or I would go so far as to say public bodies are concerned, for the simple reason that the expenses to be met with would be too great. Pending the railways being placed under Irish control, if the Government could see their way to create a simple court of appeal to which traders and others could resort without much expense whenever they feel any grievance with regard to existing rates.

41884. I suppose you are aware that the Department of Agriculture and Technical Instruction are empowered by Act of Parliament to bring applications on behalf of farmers to the Railway and Canal Commission?—I am aware of one case that they have taken up against the Great Southern and Western Railway successfully on behalf of farmers.

41885. *Mr. Croker Barrington, Solicitor.*—There was an effort on our part to remove a number of anomalies. The late Mr. Colhoun was very keen on doing that. The Board of Agriculture intervened, and we were defeated.

41886. *Sir Herbert Jekyll.*—That is a means of getting grievances redressed which you are aware of. If the Board of Agriculture think the case sufficiently good they are empowered to take it to the Railway and Canal Commissioners on behalf of farmers?—Yes. That is not generally known throughout the country.

41887. The value of eggs has largely increased in recent years?—Yes.

41888. Owing to a large extent to the efforts of the Department of Agriculture?—Yes, and ably assisted by the labours of the County Committees of Agriculture.

41889. Is there room for a still larger development of the egg trade?—Decidedly.

41890. It is a growing trade?—Yes, so long as they could get what you might call a reasonable rate, both companies' risk and owner's risk rate. The merchants now send at owner's risk rate for the simple reason that competition is so keen from Continental countries, notably Russia, in recent years that eggs have to be booked at owner's risk rate, and if they are damaged in transit they have got to abide by it.

41891. If there were better rates given for the egg trade they would stimulate the trade largely?—Decidedly.

41892. Still in spite of the existing rates the trade is a growing one?—Yes. Might I give some of the rates for eggs: Limerick to Bolton—Bolton is classified under the Manchester group—a ton lot at owner's risk rate would be 36*s.* 8*d.* The same rate from Tipperary, although it is twenty-two miles nearer Bolton, would be 43*s.* 4*d.*

41893. Why does that difference exist?—I cannot offer an explanation, but it is a great injustice to our district.

41894. Your Association have communicated with the railway company on the point?—No; as you are aware, it is only in existence for a short time—six months; but no doubt those matters will meet with attention.

41895. It will be worth while to approach the railway company and point out the difference and see if you can get a lower rate?—It should be on the same basis as the existing rate from Limerick, which is twenty-two miles further from Bolton than Tipperary.

Comparison of butter rates, Tipperary to Liverpool and Manchester, and Clonmel to Liverpool and Manchester.

41896. Now, as to butter rates?—The rate on butter from Tipperary to Liverpool *via* Waterford is 26*s.* 3*d.*; the rate from Clonmel to Liverpool *via* Waterford is 13*s.* Clonmel is only 21½ miles from Tipperary. I would like to draw your special attention to this rate. The rate from Tipperary to Liverpool is 26*s.* 3*d.*, and the rate from Clonmel is only 13*s.* The rate from Tipperary to Manchester is 37*s.* 6*d.*, and the rate from Clonmel to Manchester *via* Waterford is 36*s.* 8*d.*, as compared with the 13*s.* rate to Liverpool, although as far as my memory serves me there is about forty-five miles from Liverpool to Manchester.

41897. That is another case in which you may with advantage approach the railway companies?—I would like to lay stress on the fact that Manchester is a larger centre for the distribution of Irish agricultural produce than Liverpool.

Complaint as to excessive milk rate, Tipperary to London.

41898. Then milk?—There are some rates, unfortunately, that I have not been successful in getting, though I applied by letter, prepaid wire, and personally this morning at 9.30 at Kingsbridge, but they have not seen their way to let me have it.

41899. The rate for milk from Tipperary to London is fourpence a gallon?—Yes.

41900. Can an article like milk bear such a charge?—Decidedly not. From Knocklong, I understand—I asked for confirmation by letter and prepaid wire—the railway rate to London is 2½*d.*

41901. Is milk actually carried those long distances?—Yes, from Knocklong. The rate from Tipperary was created by representations made to the railway company, but it is so prohibitive that creameries in the district and farmers could not think of availing of it. A very large trade could be created if an attractive rate or a living rate was established as between Limerick Junction *via* Rosslare and Fishguard, in South Wales, to such centres as Swansea, Cardiff, and Newport Monmouth.

Creation of a fresh milk trade with South Wales *via* Fishguard practicable if suitable rates were given.

41902. For milk?—Yes; so much so that it would be necessary, as far as I could see, to put on a special milk train with automatic brakes and spring buffers to carry out that expeditious service to South Wales. Two great objects would be attained. It would give the people there nutritious milk, and at the same time it would be a material benefit to farmers in Ireland, and open a new field for them to dispose of their produce. Milk could be sent by the night train passing Tipperary at 8.20, and it could be on the breakfast tables in South Wales the following morning and at the same time retain its freshness. If there was a rate of somewhere between 1¾*d.* and 2*d.* it eventually would pay the railway company.*

41903. *Mr. Sexton.*—Instead of 4*d.*?—The 4*d.* is to London.

41904. *Sir Herbert Jekyll.*—To make a trade of that sort available it would be necessary to do it on a considerable scale?—That is so.

41905. Has any attempt been made to organise a trade of that sort between the producers on the one hand and the railway companies on the other?—It is with that object that such Associations as the Tipperary Farmers' Association have been established.

41906-7. They have been established such a short time that there has been no time to deal with it?—Yes. This is one of the objects that it would aim at.

Comparison of the rates for bacon, Tralee and Tipperary to Liverpool.

41908. Now as to the rates for Irish bacon in bales?—I have asked the railway company for confirmation of a rate I got for bacon in bales from Tralee *via* Waterford or Cork to Liverpool, 15*s.* 10*d.*, while from Tipperary to Liverpool it would be 25*s.* 6*d.*, although it is ninety miles nearer than Tralee.

41909. Is that accounted for by the fact that there is water carriage from Tralee and there is not from

* See Appendix No. 18.

Jan. 16, 1908.

Mr. Joseph William Shea, J P., Representative of Tipperary Farmers' Society.

Tipperary?—I suppose it would come under that. It is a great injustice to the midland counties. I especially asked for the rate from Roscrea, but I have not been able to get it, for bacon, for the simple reason that a new factory has been started and a reasonable rate would be a great assistance to them in the efforts that are being made. There has been a practical spirit of self-help displayed in the district by the establishment of a bacon factory.

Establishment of a bacon factory at Roscrea.

41910. What have you to say about the loading of cattle?—There is room for improvement, but the Department of Agriculture have taken the matter up in a very practical way as regards inspection of cattle banks and the carriages and the expeditious despatch from fairs to their respective ports.

Improvement in the loading and despatch of cattle since Department of Agriculture was established.

41911. There has been a great improvement?—Yes, since the establishment of the Department of Agriculture.

41912. And the improvement is progressing still?—Yes.

41913. You say something about pooling and working agreements?—Yes. I may tell you there is a working or pooling arrangement between the London and North-Western Railway Company and the Lancashire and Yorkshire Railway Company.

Complaint as to the agreement between the L. & N. W. and L. & Y. Railways with regard to Irish traffic.

41914. How does that affect it?—We were hopeful as long as the Lancashire and Yorkshire and London and North-Western were working independently there might be a possibility of getting a rebate or some similar reduction in the through rates. The only independent companies now in the cross-Channel service are the Manchester Canal Company, the Waterford, Cork, and Belfast Steamship Companies.

41915. You are only referring to a limited area—Lancashire and Yorkshire. The competition between these companies has a very limited area. It does not apply to the routes to London, for instance?—That is so. But Lancashire and Yorkshire are the chief distributing centres for dairy produce from the South of Ireland. Dairy produce is not sent to the same extent to London as to Manchester and Liverpool and towns adjoining.

41916. You mention running powers also: do you mean the running powers of one railway company over the lines of another, confined entirely to Irish railways now?—They might be useful. Owing to competition there might be a reduction in the rates.

Motor car services suggested to collect and convey produce to the railway stations.

41917. Have any motor car services been established?—Not in our county.

41918. Do you think they would be likely to be established with advantage?—Especially the district between Limerick through the village of Newport and on through Upper Church, Ballycahill, and Thurles, and on the other side from Nenagh through Templederry, Borrisoleigh, and Thurles.

41919. What sort of produce would those motor cars carry?—Butter and eggs. There is a number of creameries both proprietory and farmers in the district. The cartage to Thurles, Nenagh, and other stations on the Great Southern system is a big annual expenditure.

41920. So it would take the place of cartage?—Yes.

41921. Would it be profitable?—I would rather not answer that question, but you would be safe in saying it would.

41922. If it would be profitable why is it not done?—First of all the county is pretty well taxed already, and the people cannot attempt such a costly experiment.

41923. Even by combination such an Association as yours could not even as an experiment start a motor car?—They could not attempt it. They are hopeful that the Government may see its way to establish such a service.

Nationalisation of the railways under an Irish board of control advocated.

41924. What is the remedy you look to for these evils that you have mentioned?—I believe that you require that the railway systems of Ireland should be placed under an Irish board of control, and it would materially tend to benefit the interests of the country. Otherwise I don't see any hope in the future for the establishment of any dairy industries or manufacturing industries in the country on account of rates being prohibitive.

41925. And having regard to the competition from abroad?—Yes; which is year by year becoming keener. In passing I may say my experience of the Great Southern is that it is doing as much as it reasonably can in giving traders certain assistance in the way of placing at their disposal—that is, if they get reasonable time—suitable wagons for the transit of dairy produce.

41926. In fact, the railway companies help you as much as they can in what is reasonable, having regard to their duty to their shareholders?—Yes, but the fact still remains that the railway companies got power to take over and acquire land for the benefit of the country, and not as a speculation. At the same time, if the Government saw their way to take over the system and place it under a board of control I would not be in favour of having the interests of the shareholders or the interests of the railway officials sacrificed.

41927. You think they ought all be fairly treated?—Yes, the shareholders getting the market value of their property, and the officials compensated for their services either by a pension or a lump sum in the way of gratuity. I believe that if the railway system of the country were placed under the hands of the board of control good results would ensue, in which the sister country, England, would participate, in having placed at their disposal cheap agricultural produce, especially if the expert management were in the hands of such men as Mr. Neale of the Great Southern and Western, and Mr. Tatlow of the Midland Great Western Railway.

41928. Of course your suggested board would require the assistance of experts?—Certainly. Then any minor appointments in the way of clerks should, from my point of view, be open to competition.

41929. Have you anything to say about the West Clare and the South Clare Railway?—Yes. I know these lines since they were established. They are baronial guaranteed lines. It would be a very great boon not alone to Clare, but to Ireland, if, pending the State taking over the railway systems of the country and handing them over to an Irish board of control, the Great Southern and Western Company saw their way to take over this system, and convert it into a wide-gauge system, and have the rolling stock made like that on the railway between Mitchelstown and Fermoy, which is wide-gauge.

41930. The standard gauge of Ireland?—The standard gauge of Ireland. It would be the means of developing a large tourist traffic, not alone from England and Scotland, but even from America, to places like Kilkee, Lahinch, Lisdoonvarna, and elsewhere in Clare.

41931. Which are favourite tourist resorts? Yes. I believe that the Great Southern Company would be enterprising enough to establish a quick, expeditious service in connection with the cross-Channel service from Dublin to Kilkee.

41932. A good deal might be done in some of the fishing ports by making quays?—Deep water quays at Kilrush and Ballyvaughan would help to develop what is looked on as a mine of wealth, because while the West Coast of Ireland actually teems with fish, native fishermen living on the coast cannot follow their calling there on account of the primitive boats at their disposal, which are known locally as currachs or canoes.

41933. The Congested Districts Board have done a good deal in that direction?—Yes. I would like them to come down a little further, towards Kilrush.

41934. We have had evidence from Mr. Green, who knows all the coast intimately?—They have done a lot of valuable good work.

Examined by Mr. Sexton.

41935. You say you would like a simpler court of appeal to settle disputes instead of the Railway and Canal Commission?—Yes.

41936. Which is not at all simple, and is very costly?—Yes.

41937. But so long as the railways are in private hands, if you bring a railway company into court, whatever the complaint against it, how can you prevent the railway from dictating the scale of expense by engaging leading counsel?—We cannot.

41938. Is there any way really of cheapening litigation, if I may be guilty of a bull, except by bringing the causes of litigation to an end?—I don't see any way. It is very expensive to invoke the Railway and Canal Commission to get a grievance redressed, and no trader or board can attempt it.

41939. The railways defend themselves at any cost?—Yes.

41940. The other litigant must put himself upon as effective a basis?—Yes.

41941. Is there any way out of this costly litigation except by making the railways public property, and administering them under a public authority?—None whatever. They should be under an Irish board of control.

41942. You would put them under an authority which would have no other authority to litigate with?—Yes.

41943. And no object in treating unfairly or harshly any individual or the public?—On the contrary, it would do everything it could to develop the resources of the country.

41944. You spoke of a new classification: that may be difficult, owing to the necessary relations between the railways in the two countries?—That is so, on account of the rates in existence, and the way things are shaping themselves recently, one question which the English public in the near future will take up will be the arrangements between the companies, notably between the Great Central and the Great Northern of England, and between the London and North-Western with the Caledonian and the North British, as I am told.

41945. The object of a new classification, so far as Irish industries are concerned, might be met by well-considered and adequate reductions of certain existing rates?—Decidedly. If it does not come to that in the near future I don't see where the prospects of the farmers marketing the output of their farms to advantage is to be found either through institutions such as creameries, in which they may be financially interested, or by themselves. There is no use in a farmer having possibly got his land owing to recent legislation at a reasonable rate if, owing to railway rates, he is unable to market to advantage the output of his farm.

41946. The advantage which he gains by the difference between his old rent and his new annuity may easily be lost by his not having fair access to markets?—Yes. What he gains in one way he loses in another—possibly double.

41947. You say that the prospects of the Irish farmer year by year are becoming more precarious?—Yes, owing to the keen competition of the Colonies, South America, Canada, and the Continent, where, I understand, in most countries State railways exist, and they protect and develop the dairy industries of the country by putting into operation very attractive rates for dairy produce.

41948. In those Continental countries, which are now competing more and more keenly every day with Ireland, you have State railways running from the place of production to the port?—Yes, and then the Government subsidise steamers, such as the Aberdeen line, to carry the produce at cheap rates to the port of London.

41949. The sea carriage is subsidised?—Yes.

41950. Then the English railways combine to grant most liberal terms to Continental consignments for carriage to British markets?—Yes; and it is to be regretted that they see their way to adopt such a policy.

41951. All these things happening together to favour the foreigner in the British market more than counterbalance any advantage on the side of Ireland?—That is so. We are a poor country; we are overtaxed, but we have very few and far between industries in the South and West of Ireland, and it is only in the North of Ireland that you have a contented and prosperous people, a result due to the industries prevailing there.

41952. If the railways and the Government continue on the present line is not it quite possible that the Government might lose quite as much in the revenue of this country in the produce of taxes as might be required to put the railways upon a reasonable footing?—As things are shaping themselves at present even farmers who purchased their holdings under the recent Land Act find it difficult to meet their obligations. As competition from other countries is becoming so acute year after year it is quite possible they may never be able to discharge their obligations to the Government by paying their half-yearly instalments for loans under the Land Acts.

41953. They have to do it for seventy years?—Yes. Almost every other day I am in touch with farmers in a great portion of the South of Ireland.

41954. You think England, as the principal creditor of Ireland—for an amount which may reach to £150,000,000 for the purchase of land—and as the collector of taxes in this country, has a very real and substantial interest in putting the transit of Irish goods in the most favourable conditions by letting the railways go into the hands of the public in this country?—That is so. Year by year it is becoming more apparent in my mind that that is the only way to solve one of the great evils of the country.

Jan. 16, 1908.

Mr. Joseph William Shea, J.P., Representative of Tipperary Farmers' Society.

41955. An official of the first eminence, a man of the greatest ability, Mr. Micks, of the Local Government Board, has given testimony here that he thinks the Government would do well to make a gift of the railways to Ireland by way of a set-off against the over-taxation?—Judging by the report of the Financial Relations Commission which was appointed by the Government to report on the financial relations between England and Ireland, it appears, as well as my memory serves me, that we are over-taxed to the tune of £3,000,000 annually, and surely it would not be unreasonable to expect them to devote some of that extra taxation to the purchase of Irish railways.

Nationalisation of the railways advocated.

Ireland's claim to restitution of over-taxation (Financial Relations Commission Report).

41956. About half of it would buy up the railways?—At the same time they should not sacrifice the interests of the shareholders or the staff of the railways.

41957. I don't remember one witness since the beginning of this inquiry who has suggested that there should be anything but fair and liberal terms in regard to the shareholders?—I am not surprised to hear that.

41958. As illustrating the precarious condition of affairs at present you have mentioned the fact that butter is worth only half what it fetched thirty years ago, and that hay is worth less than half?—Yes. That is from 1874 to 1877.

Fall in price of butter and hay in thirty years.

41959. On the other hand, the output of eggs, and almost of eggs alone, has increased?—Yes.

Increase in output of eggs.

41960. In consequence partly no doubt of greater care?—Greater care. There is a lot of piracy practised in parts of Great Britain. I happened to be one of a deputation that waited upon the Department and asked them to appoint a Commissioner to protect the dairy industries of Ireland in the English and Scotch markets, and I was pleased to hear Mr. Plunkett say that he was about to make the appointment immediately; and Lord Ikerrin, who was appointed, has been doing practical useful work in protecting the dairy industries of the country; but, taking into consideration the great difficulties that have to be dealt with in perfecting the chain of evidence to deal with those unprincipled traders, the fines inflicted are infinitesimal in comparison with the injustice done to the consumer in England and the crime committed on Ireland as an agricultural country.

Necessity for the protection of the dairy industries of Ireland in British markets.

41961. Let us hope that the conditions will be made more stringent?—I hope so.

Action taken in the matter by the Department of Agriculture.

41962. The effect on the egg traffic shows what can be done under favourable conditions, and suggests a wide inference as to the prospects of developing Ireland in other respects?—It can be greatly developed if anything like a reasonable rate were in existence. A Limerick trader is in a position to get a rate from Limerick to Bolton *via* any route at 36*s.* 8*d.* We in Tipperary have got to pay 43*s.* 4*d.* The same applies to the butter rate. The butter rate from Tipperary to Liverpool *via* Waterford is 26*s.* 3*d.* The rate from Clonmel to Liverpool *via* Waterford is 13*s.* Do you think that is fair towards the farmers and traders of Tipperary?

Injustice to Tipperary in the matter of rates for bacon and butter to Liverpool.

41963. The effect is unmistakable: anyone can see for himself the effect?—Similarly, I understand, the rate from Tralee for bacon to Liverpool—I have asked for this rate, but have not got it—is 15*s.* 10*d.* *via* Liverpool. The rate from Tipperary for bacon is 25*s.* 6*d.*

41964. They try to justify this rate, the Tralee rate, by sea competition or some Parliamentary compact. Whatever may be said in that respect, surely the disadvantage to you is all the same?—Yes.

41965. Even though sea competition may dictate this rate, apart from Parliamentary compacts, may not it be said on your behalf that the difference is greater than it ought to be: that is the real point?—The rate, I understand, is the same on the imported article to Tralee. The same rate, 15*s.* 10*d.*, applies to Tipperary. It would not be unreasonable to expect that the same rate which applies to the imported article should apply to Irish bacon going out.

The disparity between the Tralee through rates and those with other Irish towns

Jan. 16, 1908.

Mr. Joseph William Shea, J P., Representative of Tipperary Farmers' Society.

41966. Should you say that the rates generally abound in anomalies, and that the principles upon which they are founded are obscure and very hard to discern, but that they operate against this country right through?—Very, very extensively. The railways are not doing well, even from the speculative point of view, for the shareholders, and they are a disastrous burden on the ratepayers certainly in the West of Ireland.

The Irish rates generally abound in anomalies.

41967. In any countries where State railways are in existence there is no considerable body of public opinion willing to change the system under which the railways are worked for the benefit of the public and substitute a system of railways worked for private benefit?—There is not.

41968. Is not it obvious that railways worked for the public benefit must be more beneficial to the public than railways which are worked for private profit?—It naturally follows.

Present railway system expensive and unsatisfactory to the public.

41969. You are told that the public have the benefit of competition. Is there any competition in rates?—There was a competition in rates at Tipperary and the district. In connection with the amalgamation of the Great Southern and the Waterford and Limerick systems the Dublin and South-Eastern Railway Company got from Parliament running powers to Tipperary and Limerick Junction. The competition no doubt was brief. Up to the 21st of October last certain rebates were granted which were given not alone to creameries but to bodies of farmers and private traders by the railway companies.

41970. They tried to outdo each other by breaking the law apparently?—That is so.

Unreality of the rates competition between Irish railway companies.

41971. But, putting it plainly and broadly, if there are two railway companies between certain points, do you know any case in which one railway offers to do a given service for a lower price than another?—No.

41972. They agree upon the rates?—It might be done privately in the way of rebate.

41973. Before the law they agree upon the rates?—Yes.

41974. Therefore the existence of competition does not give the public a lower rate?—No.

The Irish companies exercising running powers.

41975. Because they agree upon the rate?—As far as I know, the only companies exercising running powers in Ireland are the Midland Great Western, which runs from Athenry to Limerick, and the Dublin and South-Eastern, which runs from Waterford to Limerick Junction, but they have running powers also to Cork if the new line was made from Fermoy.

41976. *Mr. Croker Barrington, Solicitor.*—That is what they call contingent powers to Cork?—They have running powers to Limerick Junction.

41977. *Mr. Sexton.*—It refers only to allowing a company to run over a line not its own, but it does not affect your point. It does not affect the giving of a lower rate?—No.

41978. We are told that if there is no competition as to rates there is competition as to facilities which give a benefit to the public. It is an argument for private ownership that competition in facilities would not exist if the State had control of the railways. You have observed that there are many pooling and working arrangements beginning to come into operation?—Very much; they are becoming very keen, especially in England.

Gradual disappearance of competition as to facilities anticipated.

41979. The Midland and North Western, the Great Central, and Great Northern, the two big Scotch companies, and the companies running into Liverpool, have all concluded pooling agreements?—I anticipate that the English trading public will hardly put up with that, and they will ask for Parliamentary powers to render it illegal.

41980. I submit that it means this: the railways have come at last to see that the enormous expenses incidental to competition for traffic are heavier than the traffic is worth?—That applies very much to some traffic.

Pooling arrangements between competitive points.

41981. So any two or more competing companies now taking the receipts for any traffic by competing routes, can put the whole of the receipts for that traffic together and divide them in a certain proportion, say, on the basis of what they actually had at the time of the agreement. By that means they retain all the receipts and get rid of all the special expenses incidental to competition?—Yes, and compensate themselves according to the mileage.

Their extension to Ireland equivalent to a deprivation of competition

41982. Is not it plain that this will spread like an epidemic among the railway companies, and that they will all come to such agreements eventually? The public will then have no competition for rates and no competition for facilities?—That is so.

41983. The railways will have no interest in competing with each other, having settled in advance the proportion in which the receipts should be divided?—Not alone that, but at present they are increasing some passenger rates in England, and, I believe, some of the rates for produce.

41984. Do you not think that this process of pooling agreements will extend to Ireland, or that, at any rate, the time is ripe for providing against an extension of that policy?—Decidedly.

41985. Would not such a policy deprive the public in Ireland of the advantage of any competition that there may be in facilities, just as they are already deprived of competition in rates?—That is so.

Examined by Colonel Hutcheson Poë.

41986. Even in a rich country like England, where they have hundreds of tons of traffic to one of ours, and hundreds of passengers to one of ours, the pressure of competition is getting so great that they say that they must, in self-defence and in the interests of their shareholders, come to these agreements; and if the railway companies on this side, where we are complaining of the railway rates as injuriously affecting us, were to follow that example it would mean that the people in this country would be squeezed out of existence altogether?—There is a material falling-off in the population of this country during the last few years. It is observable every day.

41987. You have twenty-seven companies operating in this little bit of an island of ours. Would not all this seem to point to the necessity of doing away with the unnatural competition and over-lapping and working one against the other, which at present prevails, and putting all into the hands of one central authority?—One central Irish authority.

41988. You emphasised at the beginning of your evidence the precarious position in which the tenant purchasers under the Land Act will be placed owing to the stress of competition to which they are subjected and the difficulty of meeting that competition?—Yes.

41989. And you spoke in your proof of the necessity of the Treasury, for a time, subsidising Irish agricultural products?—Pending the Government taking over the Irish railway system and putting them under national control.

41990. Without going into the fiscal question, which is a very thorny subject, open to a great many differences of opinion, would not an indirect subsidy be afforded, perhaps more swiftly, by the State taking over the railways and by lowering the rates, without entering into the question of fiscal reform at all?—Denmark has done that; and it has assisted so much that the Danish Government not alone subsidises the dairy industries of the country, but it subsidises the carrying companies and protects Danish produce in the English market for a certain number of years. Of course that is only of a temporary nature. After wards they withdrew it.

41991. If the State were to take over the railways at a valuation they could afford to make reductions, and be at a loss for a certain period, even if the traffic did not pay them?—Yes, as a temporary arrangement.

41992. In that way they would give an indirect subsidy to Irish agriculturists, which is what they want?—Yes; as a temporary arrangement.

41993. Of course, as you are aware, the State has assumed very great responsibility within the last few years, one which will assume very big dimensions, and the only security that it has for that big financial burden is the capacity of the Irish tenant purchasers to pay their annuities?—Yes.

41994. Therefore, anything which will jeopardise that security imperils the security of the State?—Yes.

41995. You have referred more than once to the action of the Department of Agriculture?—Yes.

41996. I think you are of opinion that they have really benefited the trade of this country in various directions?—They have done good work.

41997. Do you expect a lot more?—They are a new body, and you cannot expect too much at present.

41998. They have done good work in the past?—Yes.

41999. I daresay you are aware that the late Vice-President said that if he had money at his disposal he could think of no better way in which the trade of this country could be benefited than by financial assistance in the way of transit?—Yes.

42000. They had the power, but they had not the means. You think that in no way could the agricultural interests be more benefited than by direct assistance to transit? Anything that would bring that about would, in your opinion, be very desirable?—Yes; but I am afraid of anything in the way of a subsidy, but of a temporary nature. As regards the position of the tenant farmer, the competition is keen, and with the introduction of refrigerating plant and cold storage, dairy produce from the remotest corners of the earth can be poured into such centres as Manchester, Liverpool and London. You have State railways to the seaboard in places like Australia and New Zealand, and you have lines like the Aberdeen and the Orient subsidised for the water carriage to London.

42001. In existing conditions, such aid could not be given by privately-owned companies?—Decidedly not.

42002. Therefore, there must be some change to bring about the benefits which Continental countries give to their producers?—Yes; on the lines I suggest.

42003. *Sir Herbert Jekyll.*—These sittings will end to-morrow. The Commission will sit to-morrow, and will be adjourned until the month of March, in London, when some more evidence will be taken. The railway case will be taken in April; but it is particularly desired that the list of railway witnesses and the proofs of the evidence which the witnesses will give should be sent in not later than the end of March.

Mr. Croker Barrington, Solicitor.—We have sent in the list of the railway witnesses.

Sir Herbert Jekyll.—All the witnesses who will be called?

Mr. Croker Barrington, Solicitor.—Yes, with this reservation—that we were under the impression that this was the last sitting, and as I don't know what class of evidence will be given in March, we will want time to answer it, if we have not a sufficient interval. There may be nothing requiring answer.

Mr. Shanahan.—There won't be very much affecting the companies at the March sittings. Mr. M'Nulty's evidence will be the principal business.

Sir Herbert Jekyll.—Mainly the evidence of Mr. M'Nulty, from the Department of Agriculture.

Mr. Croker Barrington, Solicitor.—Thank you, Sir Herbert.

The Commission adjourned till the following morning at 11 *o'clock.*

Jan. 16, 1908.

Mr. Joseph William Shea, J.P., Representative of Tipperary Farmers' Society.

Announcement as to further sittings of the Commission.

SIXTY-EIGHTH PUBLIC SITTING—FRIDAY, JANUARY 17TH, 1908.

In the Shelbourne Hotel, Dublin.

Commissioners present:—Colonel WILLIAM HUTCHESON POË, C.B., (in the Chair); and Mr. THOMAS SEXTON;

Mr. GEORGE E. SHANAHAN (Secretary).

Jan. 17, 1908.

Colonel Hutcheson Poë (in the Chair).—Before we commence to-day's proceedings I should like to express on behalf of Mr. Sexton, my colleague, and other absent colleagues, our regret and their regret at so few of the Commissioners being able to take the evidence of the gentlemen who are kindly prepared to give evidence before us to-day. As I have no doubt you are aware, most of the members of the Commission are very large business men, and have got important duties to attend to, including Mr. Sexton, and all of them, with one exception, Mr. Acworth, were called away by business engagements. Mr. Acworth had intended to be present to-day; but, unfortunately he has been ordered by his doctor back to England, and he is very sorry that he is unable to be with us to-day. I should like to express on behalf of Sir Charles Scotter, and the members of the Commission generally, our regret that Mr. Ginnell, member for Westmeath, who some months ago had intimated his desire to give evidence before this Commission, and whom we had notified that we should be glad to see at these sittings, has been prevented by circumstances, with which we are all acquainted, from appearing before us to-day.

Mr. Shanahan, Secretary.—Mr. Murphy wants to make an explanation. He gave evidence here during the present sittings.

MR. PATRICK MURPHY re-examined by Colonel HUTCHESON POË (*in the Chair*).

Mr. Patrick Murphy, Wholesale Provision Dealer, Dublin.

42003A. Well, Mr. Murphy?—I gave evidence here on Monday last, 13th inst. Amongst the matters I mentioned was that the Great Southern and Western Railway gave no rate in their dockets. The gentlemen representing the Great Southern and Western Railway said that that statement was not true and correct. I came here to-day to show these dockets, and to prove that the statement was absolutely correct. I have no receipts with the rates on the dockets of my own, and I have here dockets of other traders, not alone from Dublin, but from the country.

Question as to G.S. & W.R. Company's goods dockets.

42004. *Colonel Hutcheson Poë.*—I was not here on Monday. To what station do these allude?—They are from different stations coming to Kingsbridge from every direction—even from Limerick.

42005. And you wish to hand in these dockets as bearing out your contention?—Yes—that there is no rate given on the Great Southern and Western Railway dockets. They took exception to that, and said that they give the rate.

42006. There are certainly no rates on any of these?—These are more dockets from Newbridge, County Kildare (*handing in documents*).

Specimens handed in showing that the rates are not indicated.

42007. *Mr. Sexton.*—These are seven dockets of the Great Southern and Western Railway which were issued to one consignee between August and December, 1907, and none of them has a rate in the rate column?—Not one of them. These are not picked out. That man has been in business for twenty to twenty-five years, and he assures me that he never saw a rate on the Great Southern and Western Railway dockets.

42008. *Colonel Hutcheson Poë.*—There are also a number of dockets of different traders at Newbridge, and the rate is not in any of them—twenty or thirty dockets of different traders, and in no case is the rate quoted?—Not alone that. I have asked other traders if they have got a rate, and in no case did they ever see a rate given by the Great Southern and Western Railway.

A large number of traders consulted, and in no single case was rate given.

42009. *Mr. Sexton.*—Are these all to one firm?—Yes; these are all to one firm (*indicating a lot of receipts handed in*).

42010. These are dockets to one consignee, and none show a rate?—I could not find a receipt with a rate in it.

42011. *Mr. Croker Barrington, Solicitor.*—Have you some from different consignees?—From different consignees.

Mr. Sexton.—There are twenty-one here to one consignee and one to another.

Mr. Croker Barrington, Solicitor.—I believe that is the case—that when one person is in the habit of getting consignments of the same goods the rate is not given.

42012. *Colonel Hutcheson Poë.*—That is the only point. We will have an explanation from the railway?—I was contradicted on the last occasion, and I said that in my own business they never gave the rate, and not alone have I taken my own, but other people's.

42012A. *Mr. Sexton.*—You have been two years in business?—I have been three years.

Mr. Smyth (G.S. and W.R.).—We did not state that we gave the rate in every instance, because the proof was there that we did not, but I said it was the practice; but we will explain it all.

Witness.—On the last occasion you contradicted me, and said it was given on all occasions.

Mr. Smyth (G.S. and W.R.).—No; not in all cases.

42013. *Colonel Hutcheson Poë,*—Probably it is a misunderstanding. At all events, it is for the railway to answer that.

42013A. *Mr. Sexton.*—Have you consulted many consignees?—I have consulted 120 traders, and in no single instance is the rate given. I will go as far as this, and ask this gentleman (*indicating Mr. Smyth*) to show a single docket in Dublin with the rate in it.

42014. Very well. Perhaps they will produce them.

Mr. Smyth (G.S. and W.R.).—Perhaps you will allow me to say this, that the majority of the principal traders have weekly accounts, and these delivery notes are simply used for the purpose of their carters taking the goods at the station, and the weekly accounts show the rate charged; where they are omitted it is in the case of goods coming constantly, day after day and week after week, to them, and they are absolutely in possession of the rates and charges. The only thing we objected to was the insinuation that we omitted to put down the rate, in order that the consignees would not be able to check the charges.

42014A. *Mr. Sexton.*—There was no insinuation—there was a direct statement that the rate was not given; the inference was a matter for judgment. Mr. Murphy pays on delivery. He has no weekly account.

42015. *Colonel Hutcheson Poë.*—Have you any weekly account?—No, I have not; and I asked this

trader if he knew the rate, and he did not, and there was no rate shown.

42016. At any rate, for yourself you have no knowledge of the rate, and you have no weekly account?—I have not, and neither has this man.

42017. I presume there are a great many other traders in the same position?—I should say 80 per cent.

42018. Have not weekly accounts, and have no means of ascertaining what they are paying, or whether the charges are right or wrong?—No.

Mr. Croker Barrington, Solicitor.—The rate-books show the rates.

42019. *Mr. Sexton.*—Do the traders know they have the right to inspect the rate-books?—I can only say that for myself I never knew till the last occasion.

42020. Do the railway companies let the public know that they have the right to inspect the rate-book?—No.

Colonel Hutcheson Poë.—I am sure that the railway companies do not contend that they should not put the rate in the docket.

Mr. Croker Barrington, Solicitor.—I do not know why they do not put it in the rate column. They tell me it is the practice.

Mr. Sexton.—The object of inserting the rate in the docket would be to inform the trader who receives the docket and pays the rate of what is the rate in the book.

Mr. Croker Barrington, Solicitor.—So that the railway company can see that there are no malpractices on the part of their servants.

Mr. Sexton.—So that the trader can see what amount he ought to be charged.

Question as to G.S. & W.R. Company's goods dockets—*con.*

Mr. Croker Barrington, Solicitor.—I never could see that there was any legal obligation on the railways to have the rate column, but——

Mr. Sexton.—I am not concerned with the legal obligation, but the interests of the trade of the country.

Mr. Croker Barrington, Solicitor.—It seems to be done generally by the railway company.

Mr. Sexton.—There is a rate column, and it should be filled.

Mr. Croker Barrington, Solicitor.—That is my own observation, that it should be filled when it is there. However, we will give any information that we can on the subject.

Mr. John Hilliard examined by Colonel Hutcheson Poë (*in the Chair*).

42021. You are a member, I think, of the Killarney Urban Council?—Yes.

42022. And you are deputed by them to give evidence on their behalf?—That is so.

42023. You wish, I think, to say something with regard to tourist traffic to Killarney?—Yes.

42024. And to the facilities, or, in some cases, the want of facilities, given to hotel keepers in Killarney?—That is so.

42025. Killarney, of course, is a great resort for tourists?—Oh, very large.

42026. Has much money been spent, of late years, on hotels?—A very great deal. According to my estimate I think there was £40,000 spent in the last ten years.

42027. By private individuals?—By private individuals.

42028. That has nothing to say to the money spent by the Railway Company?—No.

42029. The Railway Company, I think, are the owners of two or three hotels?—Two hotels in Killarney.

42030. How many other hotels are in the district?—A great many. There would be about a dozen large hotels and up to fifty smaller ones of various sizes.

42031. I think you complain that the same facilities are not given to all these hotels of which you speak as are given to the hotels owned by the railway?—Yes, that is so. I would like to point out, Mr. Chairman, that these two hotels are leased to a tenant, and he works them for his own profit.

42032. They are not run by the railway company?—Not by the railway company.

42033. You would like to say something as to the privileges which are enjoyed by the lessees of these two hotels?—Yes.

42034. Would you tell us what they are?—The cost of a first class return ticket from Dublin to Killarney, including two full days board at the first class hotel, is £2 1*s.*

42035. That is the Friday or Saturday till Monday ticket?—On Friday or Saturday for two days, and it can be extended by the hotel manager.

42036. What is the cost of the ordinary first-class return?—£1 16*s.* 6*d.*

Mr. Smyth (G.S. and W.R.)—£1 1*s.* is the week-end fare to Killarney.

Witness—I was speaking of the present date. I think Mr. Smyth is speaking of the summer months. I am coming to that afterwards.

Mr. Smyth (G.S. and W.R.)—From May till October the fare is £1 1*s.*

42037. *Colonel Hutcheson Poë.*—And from October till May is the charge £1 16*s.* 6*d.*?—Yes.

42038. In the winter months the difference between the ordinary fare and the hotel ticket is only 4*s.* 6*d.*?—Yes, and then the Saturday to Monday ticket at 36*s.* 6*d.* can only be extended on payment of the full ordinary return fare, while the privileged ticket can be extended by the manager of the hotel.

42039. Do these tickets apply to any other hotel except their own?—No, they do not apply to others.

42040. And does the existence of these special tickets with the hotel accommodation prejudice other hotel proprietors in the district?—Very much so, especially at Easter, to 30th April.

42041. In the winter months?—In the winter months it is not much difference, because there is little traffic, but it affects us very much when the fishing season opens.

42042. When does it open?—It opens on 1st February, but practically it is the middle of March.

42043. How long does it go on to—how long does it last?—All through the summer, but these figures I give refer only to 30th April.

42044. During the summer months?—It refers to the summer months.

The issue of combined railway and hotel tickets and their effect on the private houses.

42045. Will you give the fares during the summer months?—Will you let me give this instance? At the present time a passenger to Killarney on Friday would have to pay 54*s.* 3*d.* for a first class return ticket, and on the Saturday, if he goes to the Great Southern and Western Railway Hotel, he can get a first class return ticket for 41*s.*, including hotel accommodation.

42046. *Mr. Sexton*—Does the ordinary fare of 54*s.* 3*d.* apply to the whole year round?—It does, sir, till 30th April. A passenger can get a ticket for the Great Southern and Western Railway Hotel for 41*s.*, including two days' hotel board, and he will pay 53*s.* 3*d.* for a railway ticket alone without hotel accommodation.

Colonel Hutcheson Poë.—Am I right in saying that the return fare is 54*s.* 3*d.* from Friday till Monday, and from Saturday till Monday it is 36*s.* 6*d.*?—That is so.

42047. Now with regard to second class—what are the fares for second-class passengers from Friday till Monday during October till April?

Mr. Smyth (G.S. and W.R.)—I don't think I have it. The only time that affects Killarney is the season from May till October. There is no tourist traffic in the winter.

Ordinary and excursion fares to Killarney.

Witness—The fare is 41*s.* 3*d.*, second return from Dublin, and a second return for two days, with hotel accommodation, is 36*s.*

42048. 36*s.*, with two days' hotel accommodation?—Yes, with two days' hotel accommodation.

42049. And the ordinary fare?—41*s.* 3*d.*

42050. That covers the Easter traffic?—Yes.

42051. Now, will you give us the rates for the eight-day excursion tickets?—An eight-day ticket is issued on Friday or Saturday, first-class, at 29*s.*, without hotel accommodation.

42052. That is during the summer season?—During the summer season.

42053. And the second-class?—23*s.*

42054. And with hotel accommodation what is the charge?—With hotel accommodation it is 41*s.*

42055. And suppose a tourist gets an eight-day ticket and stops at the hotel for two days, to which he is entitled, for 41*s.*, can he get the hotel privilege extended?—Yes, by the manager.

Jan. 17, 1908.

Mr. John Hilliard, Representative of Killarney Urban District Council.

The issue of combined railway and hotel tickets and their effect on the private houses.

42056. And a tourist that goes to any other hotel cannot get the extension, and he has to pay the same railway fare?—He has got to pay the same fare.

42057. What is the ordinary fare for a second-class passenger return, Dublin to Killarney?—41*s.* 3*d.*

42058. All the year round?—All the year round.

42059. Prior to 1906 were you in a better or worse position as regards these fares?—We were worse.

42060. Will you tell us in what way you were affected?—The Saturday till Monday ticket was issued at 1*s.* less than the ticket for the privileged hotels, which included two days' hotel accommodation. It was worse in this way also—that the hotel ticket could be extended indefinitely. At present there is a limit to the extension. I think it can only be extended for three days, but formerly it could be extended indefinitely.

42061. What was the cost of the three-day privileged ticket, including first-class return fare to Dublin?—47*s.* 6*d.* included three days' board.

42062. Does that fare apply all the year round?—It applies during the winter months. The winter months were extended to cover till 31st May.

42063. What was the same fare during the summer months?—They did not issue these tickets in the summer months then, but the ordinary return fare was 54*s.* 3*d.*, or 6*s.* 9*d.* more than the privileged ticket.

42064. Did not they give a privileged ticket in the summer months?—52*s.* 6*d.*, for three days, while ordinary tourist ticket was reduced to 45*s.*

42065. So that during the summer the privileged rate was really higher than during the winter by some 5*s.*?—By 5*s.*

42066. At any rate, in your opinion, what is the effect of these different privileged tickets which are given by the railway company to the hotels which belong to them, but which, as you say, are run by men paying a rent? What is the effect of these privileges?—They prevent the other hotels from doing any business while they are in operation.

42067. I forgot to ask are you a hotel proprietor yourself?—Yes.

42068. What is the name of it?—The Lake Hotel.

42069. And you and other private hotel keepers are prejudiced by the privileges which the railway company gives to their own hotels?—Very much so. We can get no traffic from Irish tourists except when these privileges are withdrawn.

42070. Are these privileges withdrawn occasionally?—When the hotels are full—whenever they can get their ordinary fares and full tariff they withdraw these privileges.

The privilege of combined tickets only withdrawn when the railway hotels are full.

42071. When their own hotels are full they say—"You may have a share"?—That is so.

42072. In your opinion do these rates affect the development of the district?—Very much.

42073. I suppose there has been a great development of Killarney of late years?—It has very much increased. The number of visitors to Killarney has increased very much.

42074. Speaking generally, I suppose the facilities given by the railway company with regard to these cheap tickets have been of great advantage in developing the district?—Of very great advantage.

42075. And I suppose that all you would wish to say is that, as regards the hotel accommodation, these privileges should be extended indefinitely?—I say that the same tickets should be extended to all the hotels; all should be on an equal footing.

Claim that the same concession should be made to the private hotels.

42076. There might be, I suppose, some difficulty. These hotels, as I understand, are not run by the railway company themselves, and we have no evidence as to whether there is any agreement with the lessee by the railway company that these privileges are part of the understanding on which he has taken the hotel. I suppose that is so?—I am sure it is so.

42077. Do you wish to say something about an hotel that was opened by the railway company during the tourist season of 1907?—Yes.

42078. What have you got to say about that?—On Fridays and Saturdays during the summer third class return fares, including two full days' board, were issued at 26*s.*, extendable to three days, free of charge by the manager; while ordinary Saturday till Monday ticket cost 11*s.* These are only issued on Saturday, while the others were issued on Friday and on Saturday, and the ordinary were unextendable, except on payment of five shillings.

42079. You say that a third-class passenger can get a return ticket, including three days' board, for 26*s.* Supposing the same passenger wanted to stay in your hotel, for instance, what would his railway fare be?—14*s.* on Friday.

42080. Friday till Monday?—Yes. 14*s.*, and Saturday till Monday 11*s.*

42081. In other words, the tourist at the hotel would get three days' board for 12*s.*?—That is so.

42082. Now, with regard to seven-day tickets, what was the price of these tickets?—14*s.* for the ordinary.

42083. The ordinary tourist third class ticket?—Yes.

42084. What is the conclusion drawn from these figures?—That the railway company accepts a much lower rate from passengers travelling to the privileged hotels.

42085. Have you any other grievances to complain of on behalf of what I call the independent hotelkeepers?—Yes. Until this year the representatives of the various hotels were rigidly excluded from the railway platform, while the uniformed porters of one privileged hotel were allowed to canvass all the passengers arriving. That gave the hotel a very great advantage, as insufficient ordinary porters were provided at the station, and passengers who had ordered accommodation in one of the other hotels thought they should be met by the servant of the hotel. Complaints by passengers are frequent in this source, and a great deal of traffic has been developed to the privileged hotels.

42086. And up till this year your and other hotelkeepers' representatives were prevented from attending at the railway platform?—That is so.

42087. Has that been remedied?—This year they were permitted on the platform.

42088. I suppose you mean in 1907?—Yes; I mean the past season.

42089. Was that in consequence of representations made to the railway company?—The current opinion is that it is because the Railway Commission is sitting.

42090. Manifestly the effect of one hotel being allowed to have its employees on the platform to draw all the people arriving at the station to that hotel, is manifestly against the interest of the other hotelkeepers?—Very much so. Passengers would be disgusted waiting for attention five or ten minutes sometimes.

42091. And, as a matter of fact, the practice which hitherto prevailed has had the effect of drawing away passengers from the other hotels to the railway hotel?—Yes. Passengers who had engaged rooms from me gave that excuse.

42092. You have handed in a supplementary proof that you wish to give some evidence with regard to baronial guarantees levied in respect of the extension of the line between Farranfore and Killorglin?—Yes.

42093. That short branch, I think, had nothing to do with the Killorglin and Valentia extension?—No; it was long before.

42094. In regard to the Killorglin and Valentia extension there is a baronial guarantee?—Yes.

42095. A Treasury guarantee?—From Killorglin to Valentia.

42096. There was nothing but an ordinary private or baronial guarantee in respect of the Farranfore and Killorglin line?—That is so.

42097. What was the nature of that guarantee?—It was to be fixed by arbitrators appointed by the Board of Trade.

42098. First of all, will you please tell the Commission what was the amount of the guarantee?—I think it was limited to £3,000.

Mr. Croker Barrington, Solicitor.—£3,000 a year for thirty-five years.

42099. *Colonel Hutcheson Poë.*—£3,000 a year. Over what district was the £3,000 levied?—It was levied over the baronies of Corkaguiny, that portion of North Dunkerrin, which is situate in the unions of Cahirciveen and Killarney; the barony of Iveragh, the barony of Magoniky——

42100. I do not think you need go over all these names, because they convey nothing to my mind, and I suppose not much to my friend, Mr. Sexton. Was any parish situated between Faranfore and Killarney and on to Tralee answerable for this rate?—Yes; both baronies are answerable.

42101. So that these baronies, north, south, and west, all have to contribute towards this levy?—That is so.

42102. That was £3,000 a year?—A maximum of £3,000.

42103. What amount did that mean in the £?—It meant 4*d.* in the pound for the barony of Magoniky, in which Killarney is situated, and in the barony of Trughenackmy, in which Tralee is situated, it is 1·13*d.* in the pound.

42104. And in the Cahirciveen district?—Cahirciveen is partly in the barony of North Dunkerron, and the rate is 7·40*d.*

42105. 7½*d.*?—Yes, for North Dunkerron.

42106. So that, roughly, it is 4*d.* with regard to the Faranfore and Killarney district, 1½*d.* for the Faranfore and Tralee district, and 7*d.* for the other district, broadly speaking?—Yes.

42107. What were the terms of the guarantee with regard to the period?—As each district was benefited by the railway company it had to contribute.

42108. Do you mean that the levy was to be reduced?—Or increased?

42109. I do not suppose it could be increased?—The Act of Parliament provided that an inquiry might be held from time to time on the initiative of the Great Southern and Western Railway Company, who should request the Board of Trade to appoint an arbitrator. The Killarney Urban Council wrote to the railway company, asking them to do this, but without result. I have here copies of the letters written to the railway company, and the original letter received from the Board of Trade.*

42110. One moment—in what year was the guarantee given?—I think it was 1881.

42111. Has it been paid ever since?—Ever since.

42112. £3,000?—It varies. Last year it was £2.229 15*s.*

Mr. Croker Barrington, Solicitor.—Perhaps I may tell you that there is a maximum of £3,000 a year, limited to 35 years, which expires in 1920. When this guarantee was obtained the Government appointed the late Mr. Posnett the arbitrator, and he was to decide the incidence of this levy, and he held an arbitration at Killarney. I attended it, and evidence was taken. The arbitrator had the greatest difficulty to know how much each district was benefited, and he worked it out, I think, in twentieths, and this gentleman has described what that is.

42113. *Colonel Hutcheson Poë.*—I understood that Mr. Hilliard's contention was that it was part of the undertaking that, from time to time, this guarantee might be reduced?—That is not so. I think he means this:—That they may have arbitration frequently to alter Mr. Posnett's award. I do not know that there is any reason why it should be altered.

42114. The total amount of £3,000 cannot be altered?—That is only the maximum.

Witness.—I have here the original letter of the Board of Trade:—"Section 26 of the Act provides that it shall be lawful for the Board of Trade, or upon the request of the Company, from time to time, to appoint arbitrators for the purposes indicated. Under the provisions of the Great Southern and Western Railway Company (Killorglin Railway Transfer) Act, 1881, the powers of the Killorglin Railway Company were transferred to the Great Southern and Western Railway Company, and the baronial guarantees were to remain in force. I am to add that the Board of Trade have, from time to time, appointed arbitrators under the Act of 1880, on the request of the Great Southern and Western Railway, but that no such request from the company has now reached this department."

42115. *Mr. Sexton.*—What is the date of that letter?—30th November, 1899. We wrote to the Great Southern and Western Railway on the 6th November, and again on the 27th November.

42116. *Colonel Hutcheson Poë.*—What year?—The same year, 1899. We gave it up as a bad job. It was no concern of the Great Southern and Western Railway who paid the guarantee so long as they got it.

42117. Have you made any representation to the Board of Trade or to the railway company since 1899?—Not since.

42118. You heard what Mr. Barrington said—that apparently the only power the arbitrator had was to try and allocate the amount which should fall on each of these three districts—that the total amount of the guarantee could not be affected except by the actual profits accruing to the railway?—The Urban Council contends that the places benefited most are paying least. Before the railway was made the trade of Killorglin naturally flowed to Killarney——

42119. One moment. Do you happen to have the Act in which the agreement is included?

Mr. Croker Barrington, Solicitor.—I can get it for you.

Mr. Sexton.—It is rather curious that though the Great Southern and Western Railway have no interest in the award, and that it is only between the several baronies, yet the initiative as to the arbitration rests with the company.

The statutory provision for the appointment of an arbitrator to apportion the levy for the Farranfore and Killorglin Extension.

Mr. Croker Barrington, Solicitor.—The real arbitration is to see what are the profits—what are the receipts and expenditure so as to ascertain the amount of the levy. These arbitrators are appointed for life, and from time to time, as one dies, another is appointed. We certainly look on the incidence as finally settled by Mr. Posnett's award.

Colonel Hutcheson Poë.—When were the arbitrator's powers last invoked?

The last apportionment made by a previous arbitrator.

Mr. Croker Barrington, Solicitor.—As far as I know there was only one arbitration, and it was a formal thing. The document was prepared declaring five-tenths on one portion, and three-tenths on another, and two-tenths on another. I do not think any award could be made which would satisfy everybody. There always must be rates where a man on one side of a line pays one rate and the man on the other side pays a different rate.

A revision of that award now required.

Colonel Hutcheson Poë.—I suppose the Urban Council feel that twenty years ago when the arbitrator made the allocation, he satisfied himself that the profit and the expenses were so much, and I suppose that they may have some feeling that now they are different.

Mr. Croker Barrington, Solicitor.—The arbitrator had nothing to say to that. Mr. Posnett had nothing to do except to say it was to be spread over these places. It is most difficult because there is a line and A will pay three-tenths, and B, only a hair's-breadth off will pay more.

42120. *Colonel Hutcheson Poë.*—Who has to satisfy those people? In the case of an ordinary Treasury guarantee there are people to represent them, and who will have an opportunity of satisfying themselves that they are not paying a levy they are not entitled to pay?—It was a public meeting in the Courthouse of Tralee or Killarney, after public advertisement, and they all put their views forward, and he made his award, and that is a public document which they have access to.

The responsibility of the G.S. & W.R. Company for the non-appointment of an arbitrator to readjust the levy.

42121. *Mr. Sexton.*—You appear to take the view that a single arbitration by Mr. Posnett should be taken as final?

Mr. Croker Barrington, Solicitor.—I have never said that. As far as I know it has always been taken as final.

42122. *Mr. Sexton.*—Why does the Board of Trade say in this letter that "The Board of Trade, from time to time, appointed arbitrators"?—I am sure they meant the arbitrators to settle the amount of levy. You know the arbitrators meet twice a year to go into the accounts.

42123. *Mr. Sexton.*—One must assume they refer to the others. They say, "I am to point out that section 26 of the Act provides that it shall be lawful for the Board of Trade, at or upon the request of the company, from time to time to appoint arbitrators for the purposes indicated in the section." That is to say, for settling the incidence of the taxes between the baronies.

Mr. Croker Barrington, Solicitor.—Do they continue and say they have been doing so?

Mr. Sexton.—In another paragraph they say they have "from time to time appointed arbitrators under the Act of 1880, at the request of the Great Southern and Western Railway Company, but that no such request from the company has now reached this Department,"

Mr. Croker Barrington, Solicitor.—I do not think that is accurate.

Complaint that Killarney district is unfairly mulcted under the present arrangement.

Witness.—The Act provides that the arbitrators be appointed by the Board of Trade at the request of the company, and we contend that when the incidence was fixed it was fixed on an estimate and not on actual results, and the actual results have became painfully evident to the ratepayers of these

* See Appendix No. 19.

Jan. 17, 1908.

Mr. John Hilliard, Representative of Killarney Urban District Council.

The Farranfore and Killorglin Extension guarantee—*con.*

places about Killarney, and they complain that the railway company say "It is no affair of ours, and we may be raising a hornet's nest about our ears at Tralee if we oblige Killarney."

42124. *Mr. Croker Barrington, Solicitor.*—Will you ask has he the letter from the railway there?—I have the letters here.

42125. *Colonel Hutcheson Poë.*—Is it your contention, Mr. Hilliard, and that of the Urban Council of Killarney, that if the arbitrator inquired into the matter, at the present time, he would find that you are entitled to some reduction of the particular tax which has been levied on you for the last twenty years or so?—That is so.

Reduction in the amount paid by the Killarney district claimed.

42126. You think the result of fresh arbitration would show that you are entitled to some relief?—Yes.

Undertaking given by the G.S. Co.'s solicitor to inquire.

Mr. Croker Barrington, Solicitor.—* I quite understand the position, and I will look into it. But in regard to the last observation, relief to this gentleman can only be had by putting it on other gentlemen. Of course that is their look-out?—As it happens, if I was relieved in Killarney I would pay in Tralee, but I am here for fair play for the Urban Council.

Colonel Hutcheson Poë.—He is speaking for that particular body.

Mr. Croker Barrington, Solicitor.—Practically all the Great Southern and Western Railway guarantees are terminable, but all the ones under Mr. Gladstone's law are perpetual.

42127. *Colonel Hutcheson Poë.*—At any rate, the particular district that you represent has to pay, in addition to this 7*d.*, or whatever it is in respect of the Killorglin to Farranfore Extension, a considerable levy in respect of the Killorglin and Valentia line?—No, we do not.

42128. Do you not pay something like a shilling in the pound?—We pay nothing for the Killorglin and Valentia line.

Traffic diverted from Killarney to Tralee since the opening of the Killorglin line.

42129. What have you to say about the traffic passing over that line before and since the opening of the Extension?—There is a far better train service from Farranfore to Tralee than from Farranfore to Killarney, and the traffic is diverted on that account.

42130. *Mr. Sexton.*—Although Killarney pays more?—Although Killarney pays more.

42131. *Colonel Hutcheson Poë.*—What have you to say about the connections at Tralee?—Tralee has a connection with every train running on the branch line, Killarney has not.

42132. In that way there is a privilege constituted in favour of Tralee as against Killarney?—That is so.

Complaint as to train connections at Killarney.

Mr. Croker Barrington, Solicitor.—With reference to the point you were on just now, it seems to be exactly as you say. There is no letter from the railway company.

Colonel Hutcheson Poë.—You have not the Act?

Mr. Croker Barrington, Solicitor.—We have sent for the Act; it is at the Clearing House. But I think it is as was said.

Examined by Mr. Sexton.

42133. First, about this guarantee. It appears that the arbitrator cannot act unless at the request of the Great Southern and Western Railway?—That is so.

The responsibility of the G.S. & W.R. Co. for the non-appointment of an arbitrator under the Act.

42134. There was only one arbitration?—I believe so.

42135. About twenty years ago?—About that.

42136. You say that the true proportions between the baronies have altered since then?—That is so. I believe that they were fixed on estimates, in the first place, and that if the actual figures were taken now the proportions would be different.

42137. Your Council have tried again and again to have another arbitration?—They have applied to the railway company twice, and the Board of Trade once.

42138. And the Board of Trade excuse themselves by saying that the railway company will not ask them?—That is so, and that they have no power unless they do.

The company have no interest in the matter.

42139. The railway company have no interest in having a fresh arbitration?—Not the slightest.

42140. The interest lies entirely between the baronies?—Yes.

42141. So that it appears to be a defect in the law, an inappropriate provision of the law, whereby the power of starting the arbitration is given only to people who have no interest in it?—That is so.

42142. And not to the people who have an interest in it?—That is so.

42143. We know that the tourist traffic is all-important to Killarney?—Yes.

42144. Is it increasing?—Yes, very much.

42145. How much capital do you say has been invested in hotels in that town in your time?—Within the last ten years I believe £40,000 has been invested—a very large amount.

42146. How many of the fifty hotels there would you call first-class hotels?—There are only three really first-class hotels.

42147. In addition to the hotels built by the railway company?—Two. One of the railway hotels is first-class, and there are two other first-class hotels. There are some others that are very good indeed—very good second-class.

42148. Of the two hotels built by the railway company one is a cheap hotel?—One is a cheap hotel.

42149. And in addition to those built by the railway company there are two other first-class hotels?—Yes.

42150. How does the peculiar arrangement which you have described work out? Does it mean that until the railway hotels are full the other hotels have no chance?—It means that for all Irish tourists. It does not apply to English tourists.

42151. In the summer months, during the tourist season, there is no doubt an overflow to the other hotels?—Undoubtedly.

42152. But in the winter months?—In the spring and early summer months it comes very hard.

42153. The railway hotels are not full?—Never at that season.

42154. And you have no chance?—They will not come to us when they can stay at the railway hotel for the few extra shillings added to the fares.

42155. You have no chance except with the few people who care nothing about money?—Exactly.

42156. And most people care about money?—They are becoming more keen every day.

42157. Sometimes, as in the present year, the winter half of the year includes the Easter holidays?—Always.

42158. And this arrangement hits you very hardly at Easter?—Yes.

42159. What is the nature of the arrangement that the Great Southern and Western Railway have with the hotel?—The Great Southern and Western Railway Company built the hotel and ran it themselves directly by a manager until about nine years ago; now they have leased it to a contractor.

42160. They carried on the hotel at first?—Yes, directly.

42161. They gave that up?—Yes.

42162. And leased the hotel to tenants?—To one tenant.

42163. Both hotels?—Both hotels. I presume they have leased them; I have not seen the lease.

42164. At a rent, of course?—Yes.

42165. Do the railway company pay the tenant for each railway and hotel ticket?—I can only assume that. In their time-table they state that the ticket can be extended if the visitor continues to stay at the hotel on payment of a certain rate. The rate was 10*s.* per day for the hotel accommodation.

42166. What is the day's tariff at the hotel built by the railway company for visitors who do not come by the railway?—Their ordinary rate is 12*s.* a day for visitors, but their advertised rate for visitors with these privileged tickets is 10*s.* a day.

42167. That is in case they stay beyond the days that are free?—Yes, and 7*s.* 6*d.* a day in the winter months.

42168. It appears quite plain that by this system the Great Southern Company could get a higher rent for these hotels than they would otherwise receive?—I would pay a higher rent for them if I were the contractor.

42169. This method of combining railway travelling and hotel accommodation makes the rent of the company's hotels in Killarney much larger than it would otherwise be?—It must undoubtedly do so.

42170. I want to understand the figures. Take the winter months first. What does an ordinary passenger pay for a first-class return ticket from Dublin to Killarney?—On an ordinary day?

42171. Yes?—54*s.* 3*d.*

* See Appendix No. 19.

42172. What does the ordinary tourist pay, without any regard to hotel accommodation, for a return ticket during the winter months?—During the winter months there are only the special tickets issued on Fridays and Saturdays.

42173. There are no tourist tickets during the winter?—No.

42174. Only the ordinary Saturday to Monday ticket?—Yes.

42175. How much is that?—36*s.* 6*d.*, first-class return. The privilege ticket issued on Friday or Saturday is 41*s.*

42176. What is the ordinary tourist ticket?—The ordinary tourist ticket, Saturday to Monday, is 36*s.* 6*d.*

42177. It appears that if a man wanted to go from Dublin to Killarney and stay there for a couple of days, without any hotel accommodation, the fare would be 36*s.* 6*d.*?—Yes.

42178. And if he agreed to take a first-class ticket and stay at the hotel, of which the railway company is the landlord, he would pay 41*s.*?—Yes.

42179. Therefore, if we assume that the railway company take the full fare, the passenger has two days' accommodation and board at the hotel for 4*s.* 6*d.*?—Yes.

42180. It is evident that all the other hotels are shut out by this arrangement until the railway hotel is full?—Very often that is so.

42181. It is very clear that they must give either the railway travelling or the hotel accommodation for next to nothing?—The estimate that I make of it is that they continue the 21*s.* ticket in the winter and 10*s.* a day.

42182. Suppose we take that out of the 41*s.* which they receive; they pay the hotel 10*s.* a day; that leaves 21*s.* only for the railway travelling as against the 54*s.* paid by the ordinary traveller and 36*s.* by the Saturday to Monday passenger?—Yes.

42183. Now take second-class. The second-class ordinary fare during the winter months is how much?—41*s.* 3*d.*

42184. The privilege ticket?—36*s.*

42185. The Saturday to Monday ticket?—29*s.*

42186. The ordinary traveller pays 41*s.* 3*d.*, without any reference to the hotel at all?—Yes.

42187. The privilege ticket is 36*s.*—Yes.

42188. The ordinary Saturday to Monday ticket is 29*s.*?—Yes.

42189. So that the cost of the two days' accommodation is 7*s.*?—Yes.

42190. If they pay the hotel 10*s.* a day it leaves only 16*s.* for the railway travelling, as against 41*s.* paid by the holder of an ordinary ticket, and 29*s.* by the holder of a Saturday to Monday ticket?—Yes.

42191. There again it would appear that until the railway hotel is full the ordinary hotels have no chance?—No chance.

42192. I think it is unnecessary to pursue the matter in further detail. It was still more unfavourable to you in former years?—Yes.

42193. In 1906 the privilege ticket was even cheaper?—The privilege ticket was issued daily in 1906.

42194. And the hotel manager had the right to extend the time indefinitely?—Yes.

42195. While if a traveller putting up at your hotel wanted to extend his stay he had to pay the ordinary fare?—That is so.

42196. Do you consider that an undue interference with the trade of the hotel people in the town?—Very much so.

42197. From the public point of view no objection can be taken to the issue of tickets, however cheap, by the Great Southern Railway Company?—No, except that I have a hotel on the lake shore; it prevents persons staying at the lake shore, and compels them to stay in the town.

Complaint that the combined railway and hotel tickets restrict tourist traffic.

42198. Why?—Because they can stay there so much more cheaply.

42199. No matter where your hotel was that would apply equally. No matter how exquisitely situated your hotel might be the financial advantages of the railway hotel would be just as attractive?—Yes.

42200. Of course it is a public advantage that these tickets should be so cheap; but tell me this—what is the real effect of an arrangement of this sort upon the town? Does it tend to limit the toursit traffic to Killarney to the capacity of these special hotels?—It acts as a damper on the people and operates unfairly.

42201. Does it work in this way, that people thinking of going to Killarney inquire whether they can have a ticket including hotel accommodation and railway fare. If they can get it they go to Killarney, whereas if they find that the railway hotel is full for the time they may put off their journey, and perhaps never go?—Possibly.

42202. It tends, therefore, to injure the town by limiting the number of tourists to the capacity of these special hotels?—It would have that tendency.

42203. Suppose there were a public system of railways in Ireland—that the railways were managed as one system by a public authority—no doubt the public authority would issue cheap tickets to Killarney, but would they not give the tourists their choice of the hotels?—Very likely.

The management of the railways by a public authority advocated.

42204. They would say, "We think it desirable that people should visit this beautiful place, and we will facilitate them by issuing cheap tickets, but they may exercise their choice as to the hotels at which they will stay"?—A public authority could not give a preference in the matter of hotels

42205. Would you prefer that system?—I would certainly prefer a system where no preference was given.

A Government Railway Department objected to.

42206. A public authority would, on the one hand, facilitate travelling and the enjoyment of the beauties of the country by tourists, and, on the other hand, would take care to act impartially, and not prejudice the interests of the town or of particular traders there?—That is usually the practice of Governments. But I would like to have a more elastic government with it than is the case with some of the Government departments. There is a want of elasticity about them. I would be afraid that the Government Department would not give sufficient attention to the excursion traffic, and that where an excursion was wanted at four or five days' notice there would be too much running-about business to get it. But a central authority seems ideal.

42207. They have it in several Continental countries and in Australia?—It seems ideal, and it would be a great advantage. But what I am thinking of is the want of elasticity there is about some of the Government departments.

42208. They are rather unbending?—Yes.

42209. But if you had an elective body who had to refer themselves to public opinion they would be likely to make arrangements suited to the public interest, would they not?—That is a matter for consideration.

42210. But if an authority has to act according to the opinion of the community, the interests of the public are likely to be considered, are they not?—The influence of public opinion would be very powerful upon such a body.

42211. You would very much prefer a system of railway management in which every facility was given to the travelling public, and there was no interference with private traders—an impartial system?—Yes.

Mr. Charles Culhane examined by Colonel Hutcheson Poë *(in the Chair)*.

42212. You appear on behalf of the Urban District Council of Thurles?—Yes.

42213. Are you a member of that body?—Yes, up to the late election, when I retired.

42214. You are deputed to give their views before us?—Yes.

42215. You live in Thurles, I presume?—I do.

42216. What do you wish to say in regard to the passenger service?—I do not think there is a very ideal service when you have an interval of six hours between two trains to Cork district, one train being at 11.30 and the other at 5.30. And those trains are as a rule very crowded.

Complaint as to insufficient train service between Thurles and southern stations.

42217. Those trains are both in the same direction?—From Dublin to Cork. There are intermediate trains, but they do not serve farther than the junction—one of them, anyhow, which gets into Thurles at 4 o'clock.

42218. What have you to say with regard to connections between Thurles and stations south of

Jan. 17, 1908.

Mr. Charles Culhane, Representative of Thurles Urban District Council.

Thurles?—That is with reference to goods traffic. My point is this. We in Thurles who have business with Waterford and Cork have to load our goods by half-past twelve in the day if we want to catch that day's goods train; we have no later hour for doing it.

Complaints as to unsatisfactory goods train service,

42219. You have to have your goods at the station and loaded by half-past twelve?—Yes. I do not think that is fair. Take Tipperary or Clonmel. At Tipperary they may be able to load up to seven o'clock in the evening, and at Clonmel it would be about the same—for the same sort of traffic to Limerick or Tralee. I do not consider it a fair thing to have to load goods by half-past twelve in the day. Then, with regard to the delivery of goods. They arrive for the most part about three or four o'clock in the afternoon, and sometimes we cannot get them at all that day—that is, the day after they have been sent from the station of departure, perhaps fifty miles off.

and delays in the delivery of goods.

42220. They arrive at three o'clock in the afternoon, and you cannot get delivery the same day?—Sometimes. Very often it runs to five o'clock in the afternoon, and on a winter's day you cannot do any business after that hour.

42221. You would like to have a goods service by which you could get the goods at an earlier hour?—I do not consider it a reasonable service. No other place of importance has to put up with the sort of thing, although they are equally far from the point of sending.

Futility of making complaints to the railway company.

42222. Have the local authority or individual traders made representations to the railway company in respect of this complaint?—They very rarely indeed make any representations, because they find that it is no use whatever. The whole business seems to be so centralised that a man does not dream of complaining to the stationmaster; it would be simply a waste of time, as the stationmaster does not appear to have power to do anything whatever without referring it to headquarters.

But representation on this subject not made to them.

42223. Let us keep to the one point. As a matter of fact, has any representation been made with reference to this particular complaint?—I do not think so; I am not aware that there has been any. I know a case where a man in a large way of business sent his dray to the station to load certain goods, and the horses were kept there because the ordinary place for loading had been altered to another place which was very inconvenient and totally impossible for the purpose. The matter stopped like that for perhaps a day or two, and the stationmaster was unable to relieve the *impasse* until somebody in Dublin had been communicated with. That was a mere matter of detail, but the stationmaster was unable to take it in hand and settle it.

42224. You speak of the usual place having been altered to an inconvenient place for the trader. Was that a temporary occurrence?—It was so temporary that when the person in Dublin was communicated with he altered it back to the original place. The assumption was that it would save 2*s.* a day to some man who had to do a certain sort of loading.

42225. Was the alteration made by the company at the instance of the trader?—Yes. The trader made representations, and got the thing altered.

Complaint as to inconvenient arrangements for traffic at Thurles station.

42226. Would not that rather tend to show that if you had made representations to the head office in Dublin with regard to the insufficiency of the goods service that matter might have met with some redress?—I cannot say that, because the representations of one individual would hardly be sufficient. The bulk of the traffic does not go in the Cork direction, but in the Waterford direction, and there are not so many people interested.

42227. In this particular instance you or the trader affected made representations to the head office in Dublin, and the grievance was remedied?—Yes, but you can hardly call it a grievance. It was a mere matter of detail, which should not have required to be referred to Dublin at all. Any man in the position of station-master ought to have had power to deal with it himself.

42228. But probably if you had made representations in regard to a much more important matter the railway company would have endeavoured to meet you?—That is a sanguine way of looking at it. We think that it is utterly useless to make representations.

42229. Can you give an instance where you have made a representation and it has not been attended to?—Speaking personally, I do not make any representations, because I do not think it is any use.

42230. You cannot get any grievance redressed if you do not bring it to the notice of the railway company concerned. Have you anything to say with regard to the staff at Thurles?—Yes. There are constant complaints of delays in loading, and in my business, although I pay terminals, the company will not give the necessary help to load the goods. You speak of making representations—I have made representations both to the stationmaster and to the traffic manager here, and in neither case did I get redress. What is the use of doing it?

42231. Do you mean that at Thurles you have to do the loading?—We have to do it all.

42232. That there is not sufficient railway staff to do the service which they charge you for?—Yes.

42233. Have you ever got any rebate in respect of those terminal charges for services which, you say, have not been performed by the company?—None whatever.

42234. Did you ever apply for them?—I applied in this case, because it was their obvious duty to do it.

42235. If a railway company undertake to perform the duties of loading, and so on, and charge for those services, if a trader can show, as you apparently could in this instance, that the railway company have not performed those services, he is entitled to get back whatever he paid in respect of them?—But how am I to get it back?

42236. By applying to the railway company?—I have tried to make them do their obvious duty, and they will not do it.

42237. Of course they might have met your grievance in a way for which you would not care?—They would not admit any grievance at all. They extract all they can, and do as little as possible for it.

42238. I mean it would be more satisfactory to you that they should perform the duties that they undertake?—Yes.

42239. I only asked whether they attempted in any way to remedy the grievance?—They have not done so.

42240. With regard to cross-Channel rates and the rates to Dublin and Cork, have you anything to say? The district in which I live is very largely a tillage district, and there is a considerable quantity of grain, mostly barley and oats, sent from there, particularly to Dublin. We had two services originally from Thurles—I mean we had one to Waterford by the Great Southern branch, which went to Clonmel, and the other direct. Previously to the amalgamation the rate for corn was 9*s.* 4*d.* a ton.

42241. Between what stations?—Between Thurles and Dublin. There was a sort of competition entered into by the Waterford and Limerick; they carried the stuff to Waterford, and then by canal to Dublin. This went on for about three months, and the result was that they brought the rate down from 9*s.* 4*d.* to 7*s.* a ton. In one instance, although it was very unfortunate, as it meant a week's delay in sending the goods, a man still continued sending them *via* Waterford and the canal, and the railway company, finding the traffic leaving them, offered to make a rate for the same direct. But he still continued. He said he would not accept their terms unless they repaid him the extra amount they had collected from him during the preceding three months. I think the demand was for something like £70, and they offered to give him £40 to come back to them. As the result proved, the man was a fool, because he refused to come back; he stopped with the Waterford and Limerick as they then were until they amalgamated.

42242. The Great Southern and Western Railway were dearer; he had been sending his goods *via* Waterford and the canal, and he said that if the railway company would give him the same rate and refund him the excess he had been paying for three months he would deal with them?—Yes.

42243. They offered to compromise for £40?—Yes.

42244. What is the rate now?—7*s.* To Nenagh, 50 miles, it is 6*s.* 6*d.*; to Dublin, 86 miles, 7*s.*; to Cork, 76 miles, 8*s.* 9*d.* Where there is no competition of any kind the rates have been correspondingly high. To Carlow, which is about the same distance as Dublin from Thurles, the rate is 9*s.*; to Waterford, 50 miles, 6*s.* 6*d.*

42245. I suppose the present rate of 7*s.* charged from Thurles to Dublin is practically in accordance with the agreement entered into by the company at

the time of the amalgamation?—It was the rate the other people brought them to, and they have not been able to lift it since, although they have made great efforts to do so.

42246. They are obliged to keep to it. But with regard to other stations which are farther from the point of departure the rates are lower?—Yes. Nenagh is 56 miles and the rate is 6*s.* 6*d.*; Dublin is 86; Cork is 76, and the rate is 8*s.* 9*d.*

42247. I presume that the reason is that the water competition affected the rate?—I do not call it lower if you judge it by the standard of the Kingsbridge rate. To Kingsbridge it is 7*s.*; to Cork, 76 miles, or 10 miles less, it is 8*s.* 9*d.* That is how they carry out all their traffic. Where they do not have competition the rates are always excessive. In the trade I am engaged in I export 200 or 300 tons of hides every year. If I buy them in Tralee I can send a wagon-load of hides to Cork for 8*s.* 6*d.*; if I bring them to Thurles it is 24*s.* a ton. I can get a rate from Tralee to Liverpool—that is, down to Waterford, 160 miles by rail, and then across to Liverpool—for three-quarters of the rate I can get from Thurles. It is a relative rate of 15*s.* to £1.

42248. And the railway journey is longer?—I am about 100 miles farther than here from Waterford. If I bring stuff to Thurles it costs 24*s.* a ton; if I send it to Cork in wagon-loads it is 8*s.* 6*d.* People in the export trade who have to put the stuff on at Thurles are naturally at a great disadvantage in having to contend with that sort of thing. I get stuff from Limerick, about 40 miles, at about 10*s.*; it costs me plus 10*s.* from Tipperary, which is 20 miles, or 10*s.* from Clonmel, which is about 25 miles. Their rates do not appear to be based on mileage at all, but simply expediency.

42249. The effect of these prohibitive rates is seriously to handicap inland stations such as Thurles?—It makes it impossible to carry on a shipping trade. I have also a bed-feather business. I buy feathers from poulterers and export a couple of hundred tons of those a year. By the way, I can get hides from Liverpool to New York or Boston at three-fourths of the rate for which I can get them from Thurles to Dublin.

42250. How do you send them?—From Liverpool to Boston they cost 15*s.*

42251. Do you send them from Thurles to Dubiln and from Dublin to Liverpool?—Yes, or *via* Waterford. I can get them from Liverpool to Chicago for the same price as from Tralee to Thurles. Dealing with feathers, I do not know the distance from Hamburg to Munich, I think it is considerable, but I can send feathers from Hamburg to Munich for the same price as from Killorglin to Thurles. The rates are all of the same sort; they are the highest in the whole world. I have been working for thirty years under them, and I think they have pretty much the best of it.

42252. Naturally the existence of these rates is injurious and detrimental?—So much so that it is impossible for inland traders, when competition is keen, to exist. I have here the rate for cattle from Athenry to Thurles, £2 11*s.* 2*d.* for a wagon, and the same sort of traffic will be carried from Athenry to Hazelhatch and over the same ground for £2 0*s.* 8*d.* Eggs to Manchester cost 15*s.* 10*d.*; butter, 40*s.*; fowls, 85*s.*; while eggs to London cost £3 3*s.* 6*d.*; fowls, 105*s.*; eggs to Waterford, 55*s.* No man can live under these rates. I have known men in the trade who have had to go out; they could not stand it.

42253. *Mr. Sexton.*—In your town?—Yes.

42254. *Colonel Hutcheson Poë.*—There has been a great development of the egg and butter traffic in Ireland?—I do not know much about it; I do not suppose we are worse off in that respect than other towns are

42255. The returns of the Department of Agriculture show that there has been a very large development. But probably the development is not half as large as it would be if the rates were more reasonable?—They are monstrous on everything.

42256. If these rates handicap existing industries in this way I suppose they render it absolutely impossible for anyone to start new industries?—That is so. In my town there is a very large market for barley, and in the natural course of things you would have a malthouse there. But I do not suppose that any malthouse could exist there if it were dependent upon this railway, which makes no concession to anybody that I am aware of.

Jan. 17, 1908.

Mr. Charles Culhane, Representative of Thurles Urban District Council.

42257. In your opinion there should be some tribunal empowered to call upon railway companies to reduce their rates if, in the opinion of that tribunal, they were excessive?—There ought to be some means by which traders, and especially small traders, as they are the people who are fleeced the most heavily, could get redress. You asked me if I made representations. We have made the most obvious claim; there could be no dispute about it, but they will not pay. They pay you what the court decides and no other.

Necessity for some tribunal to enforce reductions of excessive rates.

42258. That is a general statement; can you give any specific instance?—Yes; a case of hides lost in transit.

42259. Can you give the date or particulars?—The case was decided within three months from now. The matter had to be brought into court.

42260. A specific case is much more useful than a mere general statement. We shall be glad to have the particulars of that case?—I did not bring the particulars, but the railway company are quite well aware of them.

The Gt. S. & W. Ry. Co. charged with repudiating just claims for losses in transit.

42261. Can you say, roughly, what the amount of damage was; or was it total loss?—It was displacement—taking out one species and putting in another.

42262. Substituting?—Yes. It is a grievance felt by many traders that they cannot get their claims settled.

42263. Let us keep to this particular case for the moment. You say that you brought a complaint as to the substitution to the notice of the railway company?—Yes, and their servant was not able to deny it, but they would not pay.

42264. What was the amount of the claim?—A guinea or something like that.

42265. The railway company refused to entertain it?—I processed them.

42266. And you succeeded in getting it?—Yes, because their own servant could not state that my claim was other than just.

Claim for hides refused by the company and enforced by the court.

42267. Can you give the date, so that the railway company can inquire into it?—It was in October, I think.

42268. That is a particular instance where you brought a claim to the notice of the railway company and they refused to entertain it; you brought them into court, and they had to pay?—Yes, and they require to be brought into court in every instance, as far as I know.

Powers of the Railway and Canal Commission as to railway rates

42269. With regard to imposing reductions of rates upon the railway companies, you are no doubt aware that the Railway and Canal Commission could not possibly have, under the existing law, any such power as you suggest. They have power to act only in the event of a railway company raising its rates; if a trader objects to the increase he can bring the matter before the Railway and Canal Commission, and then they can call upon the railway company to justify the increase in the rate?—Of course they make that attempt.

42270. But they have not the power to initiate any action, or to call upon the railway companies to reduce rates?—That is where it comes in; some tribunal would need to be there. If traders are to exist under existing circumstances some body would need to be there to snaffle the companies.

Action of the Department of Agriculture as to complaints *re* excessive rates.

42271. The Department of Agriculture, although they have no mandatory powers, can, in the case of high rates or excessive charges, bring the matter to the notice of the railway company, and they have done so very successfully in several cases. You are aware of that?—Yes, if only they could be made amenable to common sense; but in my opinion these people have made a bad bargain; they have purchased a bankrupt railway, and are trying to get the money out of the public. They make no concessions, and there is a general feeling of dissatisfaction throughout the whole staff because they are all made to produce more than before, so that the company may get back in pence what they have lost in pounds.

Desirability of that Department or some other public body having mandatory powers to enforce reductions in rates.

42272. I understand that you would like the Department of Agriculture or some other body to have mandatory powers; at present they have power only to represent a case to the railway company, and if the railway company do not choose to entertain it the Department have no power to compel them to do so. You would like the Department of Agriculture or some other body to be given such powers as you speak of, so that they could call upon a railway company to reduce a rate if they thought that that rate

Jan. 17, 1908.

Mr Charles Culhane, Representative of Thurles Urban District Council

was acting oppressively against traders?—It would be a very good thing, but it would not meet the whole case.

42273. With regard to the general question, you say, from your own experience and that of the Council you represent, that there is great dissatisfaction with the present administration of the railways?—There is, certainly. As far as the people in the country are concerned, they have no power of reaching the person in power. The power is too centralised. Nothing in the way of rebates or anything else can be done without the sanction or personal supervision of the person in charge, and it is difficult to reach him.

The present administration of the railways condemned.

42274. Do you wish to bring forward any instances of rebates?—I am not aware of any. You do not suppose that we would get any in an inland town like that, a town that they have got in their clutches.

42275. There have been general statements made that some traders get rebates at the expense of others. I did not know whether you had anything to say with regard to preferential treatment?—No.

Desirability of transferring the control of the railways to a public body.

42276. What would be the remedy for the present state of things, in your opinion?—I have been reading some of the evidence given before this Commission, and certainly if the railways were in the hands of a sympathetic tribunal that would consider the interest of the public, and not the dividend-paying interest, it could certainly help things immensely. They could help to bring rates and conditions in some fashion to resemble what exists in other countries. I have had some experience of America, and I find that the merchandise I get it would be cheaper to send from New York to Chicago than from Thurles to London.

The through rates for feathers from Thurles to London in excess of the sum of the locals *via* Dublin or Waterford.

42277. You are aware that the analogy is not worth very much, because distances in America are enormous compared with ours. But you know that the railways in America are privately owned, just as they are in this country?—I know; but there is some sort of competition existing there, and there is no sort of competition existing here. As for the through rates, any man having any considerable traffic cannot use them, because they are invariably high. Feathers are bulky articles, and the rate to London is 85*s*. But I can get a rate of 62*s*. by not using the through rate. All their through rates are similar. Thurles is called a clearing house station. No two companies can change the rates there; they must be all on the same footing; there is no competition. I know that in one instance the rate was 95*s*., and the Waterford and Limerick Company gave me a rate of 85*s*. By some means it was discovered in the office of the Great Southern Railway Company; they made a report, and the rate had to be put back to 95*s*. Later on they decided to put it down to 85*s*., which was a considerable concession.

42278. You say that the through rate for feathers is 85*s*., but that by consigning locally and re-consigning you get them carried for 62*s*.?—Yes. It is the same with all their through rates.

42279. Would you mention the destination of this particular through rate?—London.

Transfer of the railways to a central authority responsible to public opinion advocated.

42280. What is the place of re-booking. If you send locally to Dublin or Waterford and re-book, the sum of the two locals is less than the through rate?—Yes.

42281. There is a difference of 22*s*.?—Yes.

42282. You would like the railways to be put in the hands of some central authority responsible to public opinion?—Yes.

Examined by Mr. Sexton.

42283. How long have you been in trade?—Thirty years.

42284. On a very large scale?—Fairly large. I could not possibly bring my business to where I live. I buy and handle a great deal of the stuff elsewhere.

Complaints to the railway officials ineffective.

42285. Judging from what you say in your proof, I should infer that you have frequently had occasion to complain?—Very much so.

42286. When you were young and confiding did you make more complaints than in recent years?—I would complain to the person near at hand, but never any farther.

42287. To the stationmaster?—To the stationmaster, but he seemed powerless in the matter.

42288. Did I understand you to say that you never got satisfaction for any complaint or claim?—I do not know what you mean by that.

42289. Compensation for loss?—I would not say that. They settled some complaints, but the idea seems to be that the latter-day practice is to pay no claim until you bring them into court.

42290. Refuse to pay any claim?—That is the general practice.

42291. The effect of a course of experience of that kind is to discourage complaints?—Particularly amongst small traders. They are unable to bear the expense.

42292. You get tired of complaining and you stop, whatever the cause of complaint may be?—Yes. The truth is, I think, that the bulk of them do not know what their rights are in the matter; they allow the matter to lapse because they are not in a position to carry it forward.

42293. No pains are taken to inform them of what may be their rights?—You have to depend on the courtesy of the servants, and that they need not extend to you if they do not like.

42294. Now, about making representations to the companies. These are not private matters; we are not inquiring into a theft of jewels; we are dealing with public questions, and surely the railway companies know very well, from public meetings, speeches, and letters, what the complaints of the traders are?—I think they know very well.

42295. Are they in need of any additional information to enable them to deal with the grievances of the traders if they are disposed to do so?—I would not think so.

42296. The traders of Ireland are a shrewd, intelligent body of men?—Every man is when it touches him.

42297. If they find that they can make no impression on the companies, do you think that they are pretty well able to judge whether there is any use in going to the Department of Agriculture or the Board of Trade or the Railway and Canal Commission?—I do not know.

42298. The first two, certainly?—From what I have seen of those two bodies I would hesitate before I would go to them, because I think they are utterly useless for the purpose.

42299. If you find a man who has been years in trade, who has often complained, but has obtained little or no redress, coming to the conclusion that there is no use in complaining or in making representations, would you be disposed to say that probably he is about right?—I would think so. They lay down the law and you must accept it. The principle appears to be that if you dispute their right the next lot of goods that comes along they will hold.

42300. If you, as a customer, fail to make an impression upon them in the sense that you desire, you would say that if you go farther you are likely to fare worse?—Yes.

42301. Thurles is an important centre?—It is a great grain and agricultural centre.

42302. It is the trade centre of a fertile and productive district?—That is so.

42303. What is the staff at the station? You think it inadequate?—It might run into six or seven. I am talking of the porters.

42304. At Thurles you despatch and receive great quantities and varieties of goods?—Yes.

42305. You export all the special productions of Ireland?—Pretty well.

42306. Cattle, sheep, eggs, grain, and meat?—Meat we do not.

42307. Not dead meat; live stock?—Yes. There are large fairs there.

42308. On the other hand, you receive almost all kinds of manufactured goods?—Yes, a good deal.

42309. I would ask you as a trader of experience what do you say is the general effect of the export rates upon the export trade of Ireland?—Do you mean from the inland towns.

42310. I mean from interior points in Ireland, across the Channel, to markets in Great Britain?—I think they are ruinous. No trader could stand them. I have always considered the matter in this way. Take towns that are favourably situated, such as Tralee, if a man were in a large way of business, in the pig-killing industry, for instance, the advantage in rates there as compared with the rates in a town like Thurles would represent to him a considerable income.

42311. Ignore for a moment any particular point which may have advantages, and take the country as a whole. Has the present system of export rates between interior towns and the markets in Great Britain had a cramping and crippling effect on the output?—It must have, considering that the charges are the highest in the world, and the country itself is becoming less productive year by year from the point of view of tillage and so on.

42312. You must have paid keen attention to the development of the importation of food supplies from abroad into Great Britain in recent years?—I cannot say that I am much interested in that.

42313. But you have noticed how much more of our special products has come in from Denmark and other countries?—That is one of the results of the present system. Railway rates affect the farming community. In addition to foreign competition, excessive railway rates help still more to drive land out of cultivation, because the produce will produce less.

42314. You know that in countries which compete with Ireland there are State railways, subsidised steamers, and very low rates on the English railways from the port to the British market?—I am quite aware of that.

42315. And by this means Ireland is being gradually ousted from her natural market?—That is so.

42316. Generally, would you say that the exports of Ireland are stationary or shrinking in quantity? I fancy that in the cattle trade it is not shrinking, and as far as produce in the way of tillage is concerned, that is undoubtedly so; the difficulty of working the land and the unremunerative prices have greatly affected it.

42317. The position of Irish farmers is really precarious?—It is so.

42318. And is made more so by the railways?—By the railways, yes.

42319. If the export rates from Ireland could be graded more upon a level with those of the other countries which export to England, do you consider that there might be a great expansion of our exports?—I think so. Take barley. That has to find its market in Dublin. I suppose there are occasions when things are especially bad here, and it sometimes comes to a bad pass in the country owing to the low prices in Dublin. If there were export rates of a fair and reasonable character to England it would help things immensely and give a market for that article, which at present is utterly impossible for us to use owing to the enormous rate.

42320. When you say fair and reasonable, do you mean rates that would be on a fair level with those charged in foreign countries and by the English railways for carrying foreign products to the market?—Yes.

42321. Equality is what we want?—Yes.

42322. We do not ask for favour, but we object to the foreigner being protected in the English market against the Irishman; we object also to the home manufacturer in Ireland being disadvantaged in relation to imported goods?—That is so. We object to being made to pay more than anybody else.

42323. It seems a curious thing that the English railways should give transit advantages to foreign countries with which England might be any day at war, whilst the Irish railways impose disadvantages upon this country which contributes so much to the British Exchequer?—Yes.

42324. That seems very unfair?—It does.

42325. Is it a sound policy for England to allow her food supplies to fall more and more into the hands of countries with anyone of which she may be at war?—No.

42326. Not even from her own point of view, I should think. Have you any doubt that if we got fair play in Ireland in this matter of transit our exports might be so expanded as to admit of a much larger population being well supported?—Business is so keen in the present day, and small matters of that kind would give encouragement and help the creation of small industries. Take the fowl trade. I have known people in a small way of business to take that up, but they have found the rates so exorbitant that they have had to drop it, and they have become, perhaps, common labourers in an already overcrowded market. Anything that would help on small industries would help to increase the population and help them to live. There seems to be sterility every way you turn now, from one cause or another.

42327. The situation has become critical and urgently requires some reformative treatment?—That is so.

42328. Not only has Ireland been driven back in the English markets, but I understand that, through the low import rates into Ireland, even the difficulty of the Irish food-producer in disposing of his produce at home is greatly increased by foreign competition?—That is so. Tillage is discouraged by low prices and the high price of labour. Allowing for this emigration scare, as I might call it, which is making such inroads in the country, the difficulties of a man in working land in the tillage fashion are enormously increasing.

42329. If there is anything in which one might expect the Irish producer to have the Irish market very much to himself it would be butter, eggs, and even bacon. Do you happen to know that we are now importing from Russia into Ireland £50,000 worth of eggs every year?—I was not aware of it.

42330. What does that suggest to you?—It is a very strange thing, but I have seen Australian butter selling in country towns.

42331. If you find eggs being brought from Russia and actually sold in Ireland, does it not imply that there must be something radically wrong with the transit system here?—You would think so.

42332. Internally, from station to station?—You would think so; or there is something very radically wrong in regard to the people who have taken up the instruction of the people to make them produce everything. These itinerant instructors do not seem to have done much good by their labours, otherwise the people would not have to be fed by the foreigner in a country such as ours.

42333. Of butter, nearly half a million pounds' worth is brought every year into Ireland. Surely there must be something very wrong?—Yes.

42334. I bear in mind the question of winter dairying; that affects the matter somewhat. But apart from that, would it be possible to sell foreign butter to any extent in Ireland if the rates for the transmission of butter from one point to another in Ireland were what they ought to be?—You would think not.

42335. In regard to bacon, American bacon is losing the advantage which it formerly had in point of value; it is approaching the home level in price?—It is beyond it.

42336. One and a half million pounds' worth of bacon comes into Ireland every year. Surely an intelligent adjustment of railway rates ought to counteract that sort of thing?—Yes. The establishment of small factories to compete with American meat ought not to be very difficult, but any factory that had its distributing point at a place where the railway had full control would not dream of going into the business.

42337. And the railways have full control over practically the whole country?—Take Tralee; that is a good distributing point.

42338. There is sea competition?—But with an inland town it is different.

42339. Take the inland trade of the country as a whole?—Small factories could be carried on in competition with American bacon of the rougher sort in small towns, but they could not depend altogether on their own trade.

42340. May I sum up what you have said in this way: that the export rates hinder and cramp the export trade, and not only so, but that when you take them in connection with the low import rates you find that the food-producer in Ireland is deprived of his market even in his own country?—He is placed at a disadvantage.

42341. There remains only one other branch of inquiry. What is the effect of the low import rates into this country upon Irish manufactures or upon any effort to create Irish manufacturing industries—I mean, the low import rates coupled with the high inland rates in the country?—It is extremely detrimental. One of the first questions that arise in connection with the starting of a new industry is, How will the railway act? If it acts up to its present reputation of conceding nothing and extracting everything, I think it is one of the most potent influences in the way of preventing anything in the shape of new industries being started.

42342. Commercial railways working for private profit and working in an undeveloped country where

Improved transit arrangements would expand the Irish exports, and admit of a larger population being supported.

Disastrous effect on home industries of the increasing imports of foreign products.

Russian eggs imported and sold in Ireland.

Cheap and speedy transit for home produce necessary to fight foreign competition.

Imports of American bacon.

Existing industries handicapped by the present system of rates and the creation of new industries prevented.

Jan. 17, 1908.

Mr Charles Culhane, Representative of Thurles Urban District Council.

weak industries require help, must act against the public interest, must they not?—They must earn money for the shareholders, apparently.

42343. If they act in a commercial spirit?—Yes.

42344. It is perhaps as much their misfortune as their fault?—They are there for the purpose of doing a certain thing, and they do it, irrespective of any interest but their own.

Unsuitability of the privately-owned system of railways to Ireland.

42345. In your district have you known of any industries, apart from the agricultural or pastoral, that have disappeared in your time?—We had some tanneries there; I cannot say that they have disappeared because of the rates, but they have shrunk to a very small size, one particularly. I do not know that we have had any others. There are traces of old breweries, but they existed so far back, perhaps before the railway was there.

Decline of the tannery industry in Ireland.

42346. You mentioned what I think is one of the most significant and sinister facts in connection with the bearing of the railways upon the public interest. I mean that question of tanneries. Formerly we had a great many tanneries in Ireland. We tanned the leather and made boots and shoes in Ireland. Now we import half a million pounds worth of leather and two million pounds worth of boots every year?—A good deal of that affects England as well. So far as my knowledge leads me, if the Irish tanneries have suffered, so have the English.

42347. But they make boots and shoes in England, at any rate?—Yes.

42348. We do not. Almost everything we wear is imported?—Everything we wear, and nearly everything we eat.

42349. Is not that an unfortunate and most abject condition for a country?—It is most helpless.

42350. The tanneries shrank, and finally gave way?—Yes.

Lack of enterprise on the part of the railways in encouraging home industries.

42351. Do you know of any industries in your town or district which have been developed by special help from the railways?—No, because we do not happen to have any. We sell all raw material; we do not sell any manufactured goods. I think it is extremely likely that an effort might be made to do something in that way with a little sympathetic help from the railways.

42352. We have been told that what the railways say is this: "Show us the traffic and we will give the rate." They want the industry to be full grown at birth?—I have quoted rates which they charge for half the distance as large as those for the whole. The grain traffic is a large one in Thurles, and the railway company charge nearly as much to Nenagh, which is a distance of 50 miles, as they do to Dublin, and it is about the same to Waterford, which is about 50 miles, while the charge to Carlow, which is about the same distance as Dublin from Thurles is 9*s*.

Disastrous effects of the railway companies' policy with regard to rates.

42353. The general scheme of the law intends that the mileage rates shall decrease through a series of zones—for the first so many miles such a rate, for the next so much, the mileage rate decreasing gradually as the distance increases; there is nothing in the law to warrant a higher rate for a shorter distance?—But it exists, notwithstanding.

42354. The railways use their discretion, within the maximum limits, to an extent which certainly the law does not intend?—I do not know what the law intends, but the action of the company is based on expediency pure and simple; they try to extract all that they can get.

42355. They yield to competition so far as they must?—That is so.

Consequent shrinkage and disappearance of traffic.

42356. Where there is no competition, do I understand you to say that in your judgment they impose as high a rate within the law as will not stop the traffic?—They certainly impose as high a rate as they may, and, as to stopping the traffic, it gradually shrinks under the influence of the rates until it stops itself. That is the idea, I think.

42357. They think they are not stopping it?—But they gradually are.

42358. They think they are taking just as much as they can without stopping the traffic, but you say that they miscalculate, and often do, by excessive rates, really stop traffic?—That is so. In my own case, if they gave me anything like decent rates to the town where I live they would get more, and I could do my business in far better fashion, because I would not have to be handling in a rough and ready manner and sending the goods from the places that I do now. It does not show much sympathetic treatment if when I send 40 tons in a lot I get only the same rate as if I send 5 cwt.

42359. Never lose sight of the effect of a system upon those who administer and work it. I submit to you that in an undeveloped country, where you cannot really serve the public interest without concessions to small consignments and struggling industries, a commercial system of railways is not only not suitable, but diametrically opposed to the public interest?—I am entirely of that opinion.

42360. And that in Ireland, as in Australia and several Continental countries, the true system for the public interest is that the railways should be worked by, and for, the public?—Sympathetically.

42361. And not as a money-making concern, worked at least indifferently to the public interest?—That is so.

42362. You have spoken very strongly about new industries in Ireland. How are we to stop emigration from Ireland except by developing industries in towns and providing some resource for the surplus population from the rural districts?—And making living reasonably cheap, and providing cheap housing accommodation.

42363. And providing remunerative work?—Yes.

42364. You say that the railway system effectually prevents the starting of a new industry dependent on a market elsewhere; you mean in Ireland?—Yes.

42365. So that unless the Irish manufacturer can sell what he makes at his own door, if he has to resort to the transit system he is bound to find himself shut out even of the home market?—He is very severely handicapped unless he can obtain other advantages, such as raw material at his own door and cheaper labour. But as for cheap labour, I do not think it exists in Ireland to-day.

42366. Generally speaking, he has to do with a smaller profit than the producer of imported goods, in consequence of the pressure of the railway rates, and that has a tendency to limit his output, and eventually to drive him out of trade?—That is so.

42367. Reductions are imperatively urgent?—They are.

42368. How are we to get them? You suggest a court or tribunal that might impose them. But we must keep within the limits of the practicable. We have to ask ourselves what prospect there is of obtaining a law to impose reductions upon the railway companies, having regard to the amount of their capital and profits?—I quite see that point.

42369. And you would agree with me, perhaps, that if there is any way of doing it by agreement or by buying up their capital on fair terms, it would be much better?—Yes.

42370. You are, doubtless, familiar with the evidence that has been given here. Do you agree that if the railways were purchased by public credit, the annual charge for the capital would be much less than it is now?—It ought to be.

42371. And it ought to leave a surplus out of the present net profits?—Yes.

42372. And united working by one system instead of by so many would probably produce another surplus, even though the public administration had to provide more adequate staffs at stations like Thurles?—Yes; that is so.

42373. These two surpluses together would give us a fund out of which we could experiment a considerable distance upon reductions of fares and rates, to see whether they would really develop traffic?—I can easily imagine such a concern being managed on business lines much more cheaply and efficiently. There seems a superfluous number of overseers at present, and a corresponding decrease of working men as far as I can make it out. Everybody wants somebody else to do the work.

42374. Where you have so many administrations, each with its own little independent territory, there must be more or less of caprice, more or less disparity of intelligence in dealing with these matters of detail?—Yes, I should think so.

42375. One competent administration for the whole would be far preferable?—Far preferable.

42376. In order that the profits of the system should be applied to the reduction of rates, that administration ought to be responsible to Irish public opinion?—It ought to be.

42377. By election?—By election.

42378. And the lines ought to be owned by Ireland, so that the profits should not be alienated to any other purpose?—That is so.

42379. Have you any doubt, if that system were arranged, that an elective body, which is supposed by some critics to be necessarily incompetent because elective——?—Or because they were Irish.

42380. Could have quite as competent a body of experts at its service as any railway in Ireland has now? In fact, is not the presumption that a united system would have a stronger and more capable body of experts than any single company could have?—That is as it ought to be.

Mr. Peter Lawler examined by Colonel Hutcheson Poe (*in the Chair*).

42381. Mr. Lawler, you live at Newtownbarry?—Yes.

42382. Do you appear on behalf of any public body?—Yes, a public meeting.

42383. But not any local authority?—No.

42384. When was this public meeting held?—About a month ago.

42385. Who were present at it?—A great number of the people of the town and district.

42386. Who was the chairman of the meeting?—The parish priest of the place, Father Whitty.

42387. Was it a large and representative meeting?—Yes.

42388. In what connection was the meeting held?—In connection with getting a railway into the district, and also for taking measures to prevent the Dublin and South-Eastern Company from getting a renewal of their powers over the place.

42389. You say that the puprose of the meeting was to secure additional railway extension?—To get railway connection with the place.

42390. From Newtownbarry to where?—Newtownbarry is not connected with a railway.

42391. From what point was the railway to run that you wished to get made—from Shillelagh to Newtownbarry?—The Dublin and South-Eastern Railway have had a Bill over the place for twenty years to construct a line from Shillelagh, and they have never done it, and they are seeking new powers this year. To use whatever means we could to prevent the company from renewing their powers was one of the objects of the meeting.

42392. Was any resolution passed with respect to that extension?—No. The opinion of the meeting was taken whether that route, or an alternative route, would be the more beneficial for the district.

42393. What opinion was expressed?—The opinion expressed was that an extension from Tullow on the Great Southern and Western line would be better for the district.

42394. I presume that the expression of opinion in favour of the Tullow and Newtownbarry route was practically to debar the Dublin and South Eastern Railway from carrying out any work; that would be the effect if the extension were made; the extension would be made by the Great Southern and Western Railway in connection with their line?—We want railway connection with the place. The other company have held a Bill over the place for twenty years, and they will not construct the line. We think that there is no possibility of getting them to construct it, and the opinion was that we should never get a railway if we did not get one from Tullow.

42395. You think that you would have more chance of getting a line made in connection with the Great Southern and Western line than by the Dublin, and South-Eastern Company. That was the opinion of the meeting?—Yes.

42396. With regard to this particular line, am I right in saying that so far back as 1883 or 1884, after the passing of the Tramway Act of 1883, a scheme for a line from Shillelagh to Newtownbarry, and thence to a place called Scarawalsh, was actually promoted and brought before the Privy Council?—It was.

42397. It was approved by the Privy Council?—It was.

42398. They even went so far as to specify the amount of money to be expended on the line?—They did, and they got a guarantee from three counties.

42399. For £78,000?—I do not know the exact amount of capital.

42400. I see, in looking over the Report of the Allport Commission, that of all the ten schemes brought before the Privy Council at that time, everyone, with the exception of this extension to Newtownbarry from Shillelagh, and a little one from Woodlawn to Mountbellew, in County Galway, has been carried out since?—Yes.

42401. Showing that these schemes were necessary in the interests of the country?—They were.

42402. I suppose that the necessity for the line is just as great now as it was in 1888?—I think more so.

42403. Is there a manufacturing and agricultural district round Newtownbarry?—It it a great agricultural and stock-rearing place. We have two small industries—or only one—left now.

42404. What are those?—We have a slate quarry that could be developed with the aid of a railway. There are only six men at present working in it. There is also a small pottery and brick-making industry.

42405. I suppose the traders and agriculturists of the district are seriously handicapped by their having to cart all their produce to Shillelagh?—Ferns is the station generally used. The company give the same rate from Ferns to Dublin on fair days as they do from Shillelagh, though the route is much longer.

42406. Is there any other matter you wish to bring before the Commission?—I have a note of the points which we thought necessitated railway connection with the place.

42407. You might let us have that?—Newtownbarry is situated at the north-end of the County Wexford, on the border of the County Carlow, contains a population of 1,054 at the last Census, and has a weekly market and thirteen fairs in the year. The surrounding district is thickly populated with a number of small landholders, and the soil, being light and sharp, is naturally adapted for tillage and stock-rearing. All sorts of cereals and root crops are grown, and nearly every class of stock is kept. The breeding and fattening of all classes of stock is very extensively carried on, principally pigs, sheep, and fowl. The district is notable amongst buyers for the numbers and superior quality of the animals fed in it. Three-fourths of the fat pigs, nine-tenths of the fat sheep and cattle, and all the fowl that are fed are bought and sent to England. It is on fair days when the pigs and sheep and cattle are sold that the great want of railway communication with the town is seen. It is no unusual sight on these days to see from 600 to 800 fat pigs, and upwards of 1,000 sheep and lambs, and 50 or 100 fat cattle walking along the road to Ferns and Tullow railway stations, nine and ten miles distant, respectively. The effect of the hardship of such a road journey on fat stock, after being driven into the fair that morning from three to seven miles, and standing for hours at the fair, is to waste them so much and to make them so unfit for a long railway journey afterwards that buyers will not give the same price for any of the animals as they would if there was a railway on the spot. In order to give an idea of the volume of business transacted in cattle, pigs, and sheep at these monthly fairs, I may say that the amount for the year averages nearly £5,000 each fair, paid out by the bank alone, which of course does not represent all the cash transactions of buying and selling. At the weekly market the amount paid for fowl varies between £250 and £300. In a district such as this where the breeding, rearing, and feeding of stock is such an industry, it follows that large quantities of feeding stuffs are bought, flour and groceries for the dwellinghouse, and bran, pollard, maize, meal, etc., for the stock, and as all these provisions have to be carted from one or other of the nearest railway stations, at a cost of 5*s.* per ton after the railway rate, it makes a great difference to the consumer. The same additional expense must be added to coal, artificial manures, seeds, and everything that is

Proposal to construct a railway from Tullow to Newtownbarry.

Industries of the district described and the necessity for railway communication explained.

Breeding of live stock a special feature.

Value of cattle depreciated by the long drives to fairs and railways.

Cost of cartage.

Jan. 17, 1908.

Mr. Peter Lawler, Representative of Newtownbarry (Co. Wexford) Railway Scheme Committee.

wanted and not produced in the district. It is thus evident that the farmer loses something on every animal, pig, sheep, and cattle, as well as upon his corn, butter, eggs, and fowl, and has to pay something more for almost everything he wants to buy, because there is not railway connection with the district. The local industries are two oaten meal mills, which grind about 7,000 barrels of oats into oaten meal every year. There is a small pottery and brick-making industry. There is a slate quarry which at present employs only six men, and the district abounds with granite stone which probably could be sent away for building purposes. There is a very large mill or factory now idle only one mile distant from Newtownbarry, at the village of Clohamore. It has a great water power from the River Slaney. The whole premises are in very good repair, and there is not the slightest doubt that if there was a railway near there would be a woollen or some other manufactory in the place. The premises are very extensive and well constructed, and were used as a cotton factory, employing about 300 hands, up to about the year 1866. That was the evidence I desired to give as to the necessity for the railway.

Slate quarries undeveloped and mills idle owing to absence of railway accommodation.

42408. I think the figures you have given as to the size of the fair and the number of pigs, sheep, and cattle, show that it must be a very thriving district?—It is.

42409. Has any effort been made from time to time on behalf of the inhabitants of Newtownbarry to get the Dublin and South-Eastern Railway to construct that extension?—They have got this Bill repeatedly renewed by Parliament, and we have asked them to construct the line. I have a letter here from the company saying that under present circumstances they cannot construct it.

Inaction of the D. and S. E. Ry. in connection with their Bill for a line from Shillelagh.

42410. They are not financially able to do so, I suppose. You had better read the letter?—The letter is dated August 16, 1907. I understand that their last Bill lapsed on August 1. The secretary of the meeting to which I have referred wrote to the company asking what they were going to do, and this is their reply. "Your letter of the 14th inst. has been laid before my directors, together with the accompanying copy resolution respecting construction of railway to Newtownbarry. In reply I am desired to say that the Parliamentary powers granted some years ago for the construction of such a line have expired. An entirely new application to Parliament would accordingly be necessary if the project was to be carried out. Having regard to existing circumstances my directors would not feel justified in advising the shareholders to undertake any further extension at the present time."

Company's recent refusal to construct the line (powers having lapsed).

42411. Were they the original promoters of the Bill you refer to?—They were.

42412. And from time to time they have got those powers extended?—Yes.

42413. According to that letter, those powers have expired, and a new application would now be necessary?—They have a new application at present going before Parliament.

42414. From your past experience you have not very much faith in the schemes being carried out?—We have no faith whatever.

Negotiations with the G. S. and W. Ry. Co. ten years ago as to an extension from Tullow.

42415. Have you approached the Great Southern and Western Railway Company?—Ten years ago, after the second term of renewal had expired, a deputation was appointed to wait on the Great Southern and Western Railway Company. I was one of the deputation. We laid the matter before them, and we promised to give them every possible support from the district. They sent down their engineers privately; they surveyed the whole place, and reported most favourably on the scheme. It was rumoured afterwards that a compromise had been made between the two companies, and that the Great Southern and Western people obtained some small concessions that they wanted at Palace East station on condition that they did not proceed with the scheme.

The route surveyed but nothing further done.

42416. And nothing came of your deputation?—No.

42417. Have they been approached since?—No, because the other people have been holding a Bill over the place. They got the Bill for five years, and they have got it renewed from time to time. The Dublin and South Eastern Railway have the trade of the whole place, and they do not want to spend thousands of pounds to construct a line to hold the trade of a place which they already have.

The South-Eastern Co. having the traffic under existing conditions don't want to build a railway.

42418. Financially the company are in very low water?—I know, but when they wanted to construct a line from New Ross to Waterford two or three years ago they could raise the capital.

42419. *Mr. Sexton.*—They had friends on that occasion.

42420. *Colonel Hutcheson Poë.*—At any rate, the opinion of the people you represent is that the alternative route in connection with the Great Southern and Western Railway would be more advantageous to the district?—That is the prevailing opinion.

Mr. Croker Barrington, Solicitor.—I think you said it was a rumour about this compromise between the two companies?—Yes. It would be very hard to get specific information about such a matter.

Mr. Croker Barrington, Solicitor.—I never heard of it.

Examined by Mr. Sexton.

42421. The position with reference to railway accommodation at Newtownbarry is very tantalising?—It is.

42422. You have a main line a few miles to the east, and another a few miles to the west, and you have two branches breaking off short a few miles to the north?—We have. We are, so to speak, in the centre of a circle with railways on every point, none of which come into the place.

42423. We know that Wexford is a progressive county. Is this a populous district?—Very populous.

42424. With a full agricultural and pastoral output?—Remarkably so.

42425. Produce and cattle?—Yes.

42426. With openings for manufactures?—Yes.

42427. What is the distance from Shillelagh and Tullow, respectively, to Newtownbarry?—Shillelagh, 9 miles, and Tullow, 10.

42428. The cost of the line might be about £50,000?—About that. In every map of the present day they have the line marked out as if they held the place.

42429. The South Eastern Railway have?—Yes.

42430. *Colonel Hutcheson Poë.*—Leading a stranger to infer that they had a line there?—Yes.

42431. *Mr. Sexton.*—How long have they been hankering after this line?—Twenty years, last August.

42432. How often have they got the powers renewed?—Four times.

42433. Have the Great Southern and Western Railway never tried to get powers?—They have not. There has never been any time. Between the expiration of the powers and the meeting of Parliament is the only time the other company have allowed to elapse before getting the powers renewed.

42434. We may assume that they meant well, but we know that they have no money?—I am aware that they are in a bad financial position.

42435. I think they have been obliged to enter into an agreement not to apply any of the money they are entitled to raise by recent legislation, except for specific purposes which do not include the construction of this line?—I am not aware of that. What we complain of is a Bill being before Parliament at the present moment. If the people of the district want to prevent their obtaining their Bill they have got to raise private subscriptions to oppose the Bill in Parliament, which means great expense.

42436. To oppose the Bill?—Yes.

42437. To oppose a Bill before Committees of both Houses is a serious matter?—We say that the company should not have power to apply for a Bill time after time and put the district to the expense of opposing them.

42438. You entertain the view that it would not be desirable that they should make the line?—We have.

42439. You think that they would not manage the line well?—I think the place ought to be left open to give the Great Southern and Western Railway a chance of extending their line at some future time.

42440. This company having obtained powers four times, and each time allowed them to lapse, you think that it is not right that they should apply for further powers which would bar other projectors?—I think it would be a great injustice.

42441. Do you contemplate a guarantee?—No. The guarantee of the Tullow line from Baltinglass comes very near to Newtownbarry, and we have a very bad

Mr. Peter Lawler, Representative of Newtownbarry (Co. Wexford) Railway Scheme Committee.

opinion of the idea. It would be very injurious to the place.

42442. What would be?—A guarantee.

42443. You might have to pay?—More than that. Tullow station, which is only 10 miles from Newtownbarry, would get a great deal of trade on fair days if the company sent down one of their agents to tout for the trade, but they will not come and look for it, because their money is guaranteed. The Dublin and South Eastern Company send a man down every fair day to try and take all the trade of the place for their line, but the other people will not try for it because they are guaranteed.

42444. *Colonel Hutcheson Poë.*—Whether they get the traffic or not?—Yes, they do not look for the traffic.

42445. *Mr. Sexton.*—That is the Great Southern and Western Railway?—Yes.

42446. They are guaranteed from Sallins to Tullow, so that they are indifferent whether they get traffic, as far as that length of the line is concerned?—Yes.

42447. But would it not be well for them if they could get it from Sallins to Dublin?—Yes, but they are not looking for the additional trade that they would look for if they had not a guarantee at all.

42448. We have heard of a case during this inquiry where an offer was made to make a line and even to guarantee the expenses, but the Great Southern and Western Railway would not take it up. It appears that railway companies now will not accept a present of a line—I am referring to the Castlecomer affair. So far from the railway companies being willing to build these small branches, they will not even take a present of them unless they are guaranteed at least against loss and probably some profit. So that the prospect appears not very bright?—The inducement that the deputation held out to the Great Southern and Western people if they would continue their line from Tullow to Newtownbarry and on to Enniscorthy was that they would have one of the finest districts in Ireland for their line. The guarantee on the line to Tullow terminates in 1921, and they will have to do something then.

Injustice of the baronial guarantee system for railways to the localities.

42449. That is a good way off?—Yes.

42450. Thirteen years?—Yes.

42451. Without being too sanguine you may hope to get your line before then?—If the Government were going to deal with it we expect a subsidy would be required for the district, but we think that if any district in Ireland would pay this one would.

42452. What do you think of the equity of obliging limited areas of small occupiers to provide either working expenses or interest on capital for branches which serve, not only the district, but the general trade of the country; is it fair?—I think it is not just.

42453. To put the burden on the locality?—I think it is unjust to the farmers, though they derive nearly all the benefit from the railway service.

42454. But it opens up the country generally as well?—It does.

42455. Do you think it the more intelligent view that is taken in Australia, India, and Continental countries, that the whole community is concerned in the service, and that it ought to be the interest of the whole community to develop the system here and there without looking to a particular locality to make good the charge?—Undoubtedly.

The transit problem to be dealt with as a whole by an Irish authority.

42456. Suppose we had an Irish authority created to take over the transit system as a whole, to see where branches and links were most required, and to provide them as circumstances favoured, do you think that that would be the best way of dealing with the subject?—I do, undoubtedly.

42457. At present it is a mere chance whether any district gets a line, or whether the line is given to the district that wants it most or least; it depends on the prevailing mood of the Government, or the humour of some important politician. Do you think that an important question like the transit of the country should be dealt with any longer in that way?—I do not.

Mr. James Kelly, Representative of Templemore Urban District Council.

Mr. James Kelly examined by Colonel Hutcheson Poë (*in the Chair*).

Complaint as to excessive rates from Templemore.

42458. You appear instead of Mr. Patrick Maher?—Yes.

42459. You appear on behalf of the Templemore Urban Council?—Yes.

42460. Are you a member of it?—Yes.

42461. In giving evidence before us you represent the views of the Council?—Yes.

42462. Do you wish to say anything about the way in which the traders of Templemore are, in your opinion, handicapped by the rates charged on certain classes of goods as compared with those at Thurles and Nenagh?—Yes. We are nearer Kingsbridge, but we have to pay higher rates.

42463. What are the distances to Kingsbridge?—From Templemore 79 miles, from Thurles 86, and Nenagh 97.

42464. The rates between Templemore and Kingsbridge for goods are higher than between Thurles and Kingsbridge or Nenagh and Kingsbridge for the same class of goods?—Yes.

42465. Can you give us the rates charged in respect of feeding stuffs, flour, bran and pollard?—7*s.* 6*d.* a ton in three-ton lots from Nenagh.

42466. What is the charge for three-ton lots from Templemore for the same goods?—10*s.* 2*d.*

42467. And for six-ton lots?—8*s.* 9*d.*

42468. According to that you are charged practically 50 per cent. more on three-ton lots of flour, bran and pollard from Templemore than the trader dealing in the same commodities residing in Nenagh or Thurles?—Yes.

42469. You are paying 50 per cent. more?—Yes, than Nenagh.

42470. Then, with regard to cement, what are the rates in force?—Cement to Nenagh is 7*s.* per ton for three-ton lots.

42471. To Templemore?—Templemore is 10*s.* 2*d.* per ton up to three tons, and 8*s.* 9*d.* for six tons.

42472. Have you the rate to Thurles for cement?—We have 7*s.* 10*d.* in six-ton lots, and 9*s.* 10*d.* for smaller quantities from a ton up.

42473. So Templemore pays 10*s.* 2*d.* for a three-ton lot, Thurles 9*s.* 10*d.*, and Nenagh 7*s*?—Yes, for three-ton lots.

42474. So in respect of that article you again have to pay a much higher rate than either of these other towns?—Yes. Cement is cheap stuff, and for cheap stuff this affects the price very much.

42475. With regard to ale and porter, what are the prices?—The price to Templemore is 13*s.* 2*d.*

42476. Is that for a three-ton lot?—That is for small quantities, for a ton up, or half a ton.

42477. Have you any special rate for a three-ton lot?—No special rate.

42478. That rate of 13*s.* 2*d.* applies to anything from a ton up?—Yes. I cannot say about the six-ton rate, but anything under six tons.

42479. You charge at the rate of 13*s.* 2*d.* per ton anything under six tons?—Yes.

42480. What is the corresponding rate to Nenagh?—11*s.*

42481. Does that apply to any lots from one to six tons?—Per ton.

42482. Up to six tons?—Yes.

42483. Have they got a corresponding rate to Thurles?—Thurles is 10*s.* for three-ton lots

42484. To make the comparison quite right, what do they charge for one-ton lots to Thurles?—I have not got that.

42485. At any rate, for a three-ton lot to Nenagh or Templemore you would have to pay at the rate of 11*s.* in the one case and 13*s.* 2*d.* in the other for three-ton lots?—Yes.

42486. As against 10*s.* for three-ton lots to Thurles?—Yes.

G. S. & W. Co.'s refusal to concede lower rates for quantities above one ton.

42487. *Mr. Sexton.*—The proof says that the railway company have refused to quote a special rate for three-ton lots on any class of goods to Templemore?—That is correct.

42488. Therefore when you speak of a three-ton rate to Templemore you mean that you have to pay according to the one-ton rate for anything under six tons?—Yes.

42489. *Colonel Hutcheson Poë.*—They have to pay a rate of 13*s.* 2*d.* a ton for three tons?—Yes.

42490. They pay 39*s.* 6*d.* for three tons?—Yes.

42491. The railway company have actually refused to put into operation any lower rate in respect of larger consignments than one ton?—Yes.

Jan. 17, 1908.

Mr. James Kelly, Representative of Templemore Urban District Council.

Excessive rates, Templemore and Dublin, compared with Thurles and Nenagh rates.

42492. To go back to bar iron and corrugated sheets, what are the rates?—8*s.* per ton in three-ton lots to Nenagh and to Templemore 10*s.* 2*d.*

42493. Is that also on three-ton lots?—Yes.

42494. Then to Thurles?—Thurles 9*s.* 10*d.* for small quantities, and 7*s.* 6*d.* for six-ton lots. Evidently there is no three-ton rate to Thurles.

42495. Is there a three-ton rate to Templemore with regard to cement?—No, nor bar iron.

42496. For anything over one ton and under six you have to pay at the rate of 10*s.* 2*d.*?—Yes.

42497. What are the rates for timber?—They are the same rates as the others?—9*s.* 10*d.* under six-ton lots and 7*s.* 6*d.* for six tons.

42498. Those figures speak for themselves. They must have the effect of very seriously handicapping dealers in those particular articles at Templemore?—They have.

42499. Can you account for the great difference there is between the rates charged to you and those to Nenagh and Thurles?—The way I can account for it is when the Waterford and Limerick were running to Thurles there were special rates cut down. There was competition given to Thurles—there were special rates cut out for it.

42500. Are the rates in force now in Thurles, rates come to by agreement when the amalgamation was arranged?—They are. We have no special rates in Templemore.

Canal competition to Nenagh.

Mr. Croker Barrington, Solicitor.—We tried to make alterations. We were defeated.

42501. *Colonel Hutcheson Poë.*—Thurles is one of those towns in which the railway company by their undertaking given on the amalgamation cannot raise the rates in force in the old Waterford and Limerick time?—I am not aware of that.

42502. That is so. Then, with regard to Nenagh?—There is canal competition into Dromineer.

42503. And water competition rules the railway company?—Yes.

Templemore traders unfairly handicapped by high rates from Dublin.

42504. Even supposing that water competition has entered into the question, is it your opinion that the difference between the rate charged to your particular town, in this case, seeing that it is considerably nearer to Dublin, should not be so great as it is, even where there is water competition?—The high rates tell against our town. We think on account of being nearer to Kingsbridge than Thurles that we should have a lower rate if anything.

42505. You are aware it is an admitted principle that where you have alternative routes by sea or canal railway companies are obliged to make a lower rate, or else they would not get any of the traffic. Still, are you of opinion that after making all allowances in respect of that competition, they still charge an unduly high rate as between your town and the town served by water?—The difference between our town and Thurles is not great, but it means a good deal in cheap goods.

42506. Those figures which you have quoted show that with regard to Nenagh the difference is a good deal?—It is.

Complaint as to passenger train service with the South.

42507. That is where the water competition comes in. The charge to Nenagh for cement is 7*s.*, and to Templemore it is 10*s.* 2*d.* If they charged 10*s.* 6*d.* it would be practically 50 per cent. higher?—Yes.

42508. With regard to passenger service do you wish to make any remark?—They are complaining in the town that there is no train leaving for the South sooner than 11 o'clock, and they say it is inconvenient for a lot of people.

42509. Is that leaving for Cork?—Yes.

42510. Is that prejudicial in the way of getting your correspondence from Dublin and other places?—If you want to go to Cork it is a very late hour. You cannot get back the same night if you have much business to do.

42511. What time do you get your correspondence?—The correspondence is all right, but we do not get our newspapers until after 11 o'clock, while they have them in Thurles between 8 and 9.

Thurles in this respect better served than Templemore.

42512. How do they manage to have them in Thurles, which is farther away, at an earlier hour?

42513. *Mr. Sexton.*—An early train stops at Thurles, which does not stop at Templemore?—Yes. It passes Templemore without stopping. They did run an early train some years ago, but it appears the passengers were very few, and they took it off.

42514. *Colonel Hutcheson Poë.*—They found it did not pay?—Yes.

42515. Have any representations been made to the railway company by the Urban Council in respect of these matters that you have brought before us?—Yes; they have been written to three or four times.

42516. Has the railway company made any reply beyond the stereotyped reply?—They gave no satisfaction. We had some replies that were not satisfactory. They did not do anything in the way of remitting the high rates.

Examined by Mr. Sexton.

42517. It is quite clear that the railway company make a concession in allowing the three-ton rate for Thurles and Nenagh, but withhold it from Templemore?—Yes.

42518. So, at Templemore, if you wish to secure a reduction of the rate for one ton, you have to go up to six tons?—Yes.

42519. But a six-ton lot of flour, for instance, may be more than a trader in Templemore would want or than is convenient for him to order?—It is very often the case in all these goods.

42520. A six-ton lot of flour costs about £75 at present. It might not be convenient for a small shopkeeper to hold so much at once?—Yes.

42521. What is the reason of the reduction to the other towns and not to you for three-ton lots? That has nothing to do with canals or with the sea?—I cannot answer that question.

42522. It seems to be a differentiation which damages Templemore?—Yes; it is an injury to our place.

42523. It is not explained in any degree by sea or canal competition?—No.

42524. I have not taken from you the rate to Thurles for flour?—7*s.* 11*d.* for six tons.

42525. What about one ton?—For one ton 9*s.* 10*d.*

42526. That is very near the Templemore rate?—Yes; those rates are near the Templemore rate.

42527. As between Templemore and Nenagh, although Nenagh is 18 miles farther on the rail, there is a difference of 2*s.* 8*d.*, or just 4*d.* a sack, in flour?—Yes.

42528. The difference of 4*d.* a sack is a substantial difference, and might affect the market?—Yes.

42529. In the case of cement the difference is 3*s.* a ton between Nenagh and Templemore, and 2*s.* 4*d.* between Templemore and Thurles. In what quantities is cement usually sold by traders in Templemore?—Cement is a thing that you cannot buy a lot together. I am in the business, and I find I have to sell it quickly or it goes bad. You cannot buy six tons as a rule, except in very rare cases. They have a three-ton rate for cement to Nenagh, 7*s.*, that we have to pay 10*s.* 2*d.* for.

42530. The railway company were asked to strike a three-ton rate for Templemore, but refused?—Yes.

42531. They oblige you to have very small consignments or to order more than you want, or more than perhaps a trader has money to pay for at the moment? Yes.

42532. In what quantities do you usually sell cement to a customer?—Two bags and four bags. There are two cwts. in each bag. Sometimes we sell five bags.

42533. A difference of 3*s.* in the rate would mean a difference of 1*s.* 6*d.* on that sale?—Yes.

42534. In ale there is from two to three shillings upon the ton. What is the usual quantity of ale sold at one time by traders; do they sell by the cask?—Some of them buy a ton, and some might buy two tons.

42535. Iron and timber—I have not got the rate for timber to Nenagh?—Timber is the same as iron.

42536. Eight shillings to Nenagh?—Yes.

42537. The rate for one ton to Templemore is the same as up to six ton—8*s.* 9*d.* The difference is not so great, but still it is substantial?—8*s.* 9*d.* No doubt the advantage which Thurles enjoys is due to the fact that the independent rate which it had under the old Waterford and Limerick system was stereotyped in the Bill. That is well for Thurles; but do you consider it right that by reason of a Parliamentary bargain between the parties to a Bill other towns should be permanently injured in their trade or should be obliged to go on paying higher rates? The bargain is well for Thurles, but why should a bargain well for Thurles impose such consequences on Templemore?

Mr. James Kelly, Representative of Templemore Urban District Council.

It is a serious thing for Templemore to have these rates for Thurles. It is not very far distant, and there is great competition.

42538. The railway company say that they cannot alter the rate to Thurles, but they could reduce the rate to Templemore?—That is what we want to get done.

42539. That is the way to amend it?—Yes.

42540. You are not asking that the rate to Thurles or Nenagh should be increased?—No; only that we should be put on equal terms.

42541. What you are asking for is a rate in fair proportion?—Yes.

42542. Have you ever asked why they will not give you a three-ton rate to Templemore?—I believe we have been asking about it, but I am not in a position to tell you the particulars.

42543. I may say I think it inexplicable. Templemore is a rather smaller town than Nenagh or Thurles?—Yes.

42544. Being a small town it has more need of a three-ton rate?—Yes.

42545. So if a three-ton rate is required at Nenagh or Thurles it is so much the more required at Templemore?—Yes; that would be the great advantage, if we had a low rate for three tons.

42546. I suppose you know the general scheme of law in relation to these goods rates?—No, I do not.

42547. It is this: For the first twenty miles out of Dublin you pay a certain sum per mile; for the next thirty miles out a smaller sum per mile; for the next fifty miles a still smaller sum per mile. These three towns mentioned in your evidence come within the third 50 miles or within 100 miles of Dublin. So under the scheme of the law the maximum rates to Templemore, to Nenagh, and to Thurles, would be the same for the first twenty miles, the same for the next thirty miles, and for the remainder of the distance an equal sum per mile. So that according to the spirit of the law the rates to Templemore should be less than the rates to Nenagh or Thurles in the proportion of the lesser to the greater distance?—Yes.

42548. It seems that the practice complained of in your evidence is in contradiction to the spirit of the law?—Yes.

42549. Have you thought at all upon the general question of who should manage the railways?—No; we did not discuss that. All that we discussed was the necessity of being put on an equal footing with neighbouring towns.

An impartial system of Irish railway management advocated.

42550. Would you be in favour of a system of managing Irish railways under which different towns and places would be treated impartially?—I would.

42551. Barley is a very important product, and a product in regard to which Ireland is becoming more and more injured by importation at low rates?—It is

42552. What do you say about barley in relation to the three-ton rate?—We have to pay a higher rate for barley by the wagon load than they have in Thurles. The local brewer has complained about it, and he says he is handicapped in his profits by having to pay a higher freight than Thurles.

Impartial treatment of all towns by the issue of rates on a mileage basis suggested.

42553. Could you give me the figures?—I cannot give the figures, but I am certain that the rate is higher. The figures there are what I got last night, but I am not quite sure of them.

42554. You are now concerned with the export trade?—I am concerned with the rate from Templemore of barley and oats to Dublin.

42555. For the purpose of distilling in Dublin?—Yes.

42556. I see that grain from Templemore to the North Wall is 9*s.* 6*d.* and from Thurles it is only 7*s.*?—I don't want to use those figures; I am not sure of them; they were given to me last night. I intended to inquire at the station, but I had not time, but there is a higher rate from Templemore to Kingsbridge than from Thurles to Kingsbridge for barley.

42557. Does that injure your trade in barley?—It does.

42558. You have to sell it about the place or you cannot sell it at all?—No, but we cannot pay as high a price for it.

42559. You cannot pay as high a price, or you must accept a narrower profit?—Yes.

42560. In this case also the three-ton rate is refused?—We don't want a three-ton rate for that, because it is bought in large quantities.

42561. Does the refusal of the three-ton rate to Templemore apply generally to traffic either into or out of that station?—Yes.

42562. To and from?—Yes.

Mr. Thomas D. M'Carthy examined by Colonel Hutcheson Poë (*in the Chair*).

Mr. Thomas D. M'Carthy, Croom, Co. Limerick.

42563. You live at Croom?—Yes.

42564. Are you a business or professional gentleman?—I am in business.

42565. You wish to say something about passenger fares for school children?—Yes. I look on them as excessive. They have no rate for third-class children. They charge children under eighteen years of age to Limerick city at present £9 16*s.* 8*d.* each for twelve miles.

Complaint of the withdrawal of annual third class tickets for school children between Croom and Limerick.

42566. Is that for a yearly ticket?—That is for a yearly ticket for 12 miles, second-class. In previous years I got the railway company to give third-class tickets to children for £5 16*s.* for the twelve months.

42567. From Croom to Limerick?—Yes. Now there are numbers of children anxious to go into Limerick for a better class of education every day if they could only get reasonable rates to do so.

42568. From Croom or from other towns?—From Croom. I suppose every other town is the same as Croom so far as that is concerned.

42567. Roughly speaking, can you give any idea of what number of children would go daily from Croom?—There should be perhaps a dozen. At present there is only one. There were two previous to Christmas. I know six or eight going six miles daily on bicycles from the village of Croom to get a better class of education.

42570. You say that some years ago you got them to give third-class tickets?—I did. I got those down to £5 16*s* for the twelve months, and I got a poorer class of children to go, children of small farmers and business people.

42571. Are you sure that the third-class tickets have been discontinued?—They have been discontinued.

42572. On what grounds?—I could not tell you.

42573. How long did it last?—It lasted two or three years during my time that I got it for them.

42574. Was that from Croom?—From Croom to Limerick.

42575. Have you any idea how many children availed themselves of it?—I think about a half dozen. We had not a great number at that time.

42576. A half dozen children went every day for a period of two or three years?—Yes.

42577. You don't know on what grounds the railway company took that off?—No. They have no third-class ticket. I used to be fighting with Mr. Colhoun to get traffic by reducing fares, and I got him to do this specially. It was successful, but it would be more successful now, because there are a great deal more children now. There are eight going now every day six miles on a bicycle to a private school out in the country for a better education.

42578. We have heard a great deal about the cheap fares which are given in Belgium. I happened only this morning to read of what they do for the youth of that country. While the system of national education throughout Belgium is so good that there is no necessity for the State to offer special railway facilities for the ordinary school children, yet in order to encourage those who have left school to avail themselves of higher education in large centres, they give tickets at a very low rate, available for any distance up to seventy-five miles. The price of such a ticket for a distance of ten miles for three days in the week is 38*s.* a year.

The system in vogue on the Belgian railways.

Mr. Croker Barrington, Solicitor.—Ask him what the schools at Croom thought when we gave the tickets.

Jan. 17, 1908.

Mr. Thomas D. M'Carthy, Croom, Co. Limerick.

Subscription tickets for school children between Croom and Limerick.

42578A. *Mr. Sexton.*—Only a limited class of children used the facility.

Mr Croker Barrington, Solicitor.—Did not they complain very bitterly of the railway company for giving them?—I never heard of it.

42579. *Colonel Hutcheson Poë.*—If the Belgian Government can give adult students a three days a week ticket for twelve shillings a year, presumably they could go in every day of the week for 60 or 70 shillings, which would be much lower than the £5 16*s.* that the Great Southern and Western charged your school children?—Yes.

42580. You never heard, in answer to Mr. Barrington's suggestion, of any complaint in reference to the 3rd class tickets which were issued to children?—I never heard it. I think I would have heard it if it was going at the time. It was only because I was here in connection with passenger trains on that branch to Cork and Limerick that I introduced this, and I represent the feelings of the people who were sending their children.

42581. At any rate you think there is a general desire on the part of people to get their children eight or nine miles into Limerick to school if they could possibly do so?—I am certain of it. Once they get finished with a good national education they strike them off. They do not get that until they are fifteen. From fifteen to eighteen they put on the tariff, and that is the very time that a boy should go on to get a high-class education.

42582. It is manifestly important that the rising generation in Ireland should get the best education at their command?—Certainly.

Improvement in the connections at Charleville between the main line trains and those on the Limerick branch required.

42583. With regard to passenger service generally, have you any remark to make?—Yes; previously we had always a connection with this 3 p.m. down train from Dublin at Charleville. It took in the branch, and there was a connection at Charleville. Now there is no connection, and a man going the down road cannot get it on that branch, eighteen miles, unless he leaves here by the 9.15 train in the morning.

42584. Previously, you say, there was a connection. When was that?—That was in the time of Mr. Colhoun, the late manager. There was a connection always at Charleville. The 5.10 from Cork leaves Charleville now at 6.45, and the 3 p.m. from Dublin arrives at Charleville at 7.9, that is within twenty-four minutes of the other train.

42585. That twenty-four minutes makes all the difference in passengers making a connection: in fact it prevents them?—Yes, it does. We have lost our fair traffic through that. We had fairs there which were pretty prosperous until this train was turned off, and we could get no buyers from up road stations to come because it would take two days to go there.

Injury to Croom fairs owing to faulty train service.

42586. Is there any other instance of any trains not making a connection where a little adjustment would enable them to do so?—That is the principal. It is very hard for railway companies to meet every man's wishes.

42587. If they would meet you on that point it would do a great deal for that district?—Yes. There are two stations—Kilmallock and Bruree—which are ten miles distant by rail and only four miles by road. If you wanted to go there and back by rail it would take you two days and a night.

42588. Knowing the time table of the railway company pretty well, as I suppose you do, would it involve any great difficulty on their part to adjust the time table to make the connection?—I don't believe it would. No doubt it is a thing they will look into themselves, because they are always anxious to meet the requirements of the people as well as they can.

The company informed that evidence was to be given before the Vice-Regal Commission.

42589. Have you represented the matter to them?—Yes, and sent the correspondence with this office saying I was going to give evidence, but they only thanked me for it and returned it.

42590. Did they make any remark as to the difficulty of making this little adjustment?—They did not.

42591. You generally find them anxious to meet you in every way they can?—I always found them that way, and I spent twenty-five years with them.

42592. That is very satisfactory?—Yes. I was to say something about the connection at Patrickswell, near Limerick, but that has been made, though the time table does not show it.

42593. That loss of connection you alluded to has now been rectified?—It is all right.

Examined by Mr. Sexton.

42594. I should like to understand exactly how this bad connection has injured your fairs. The 3 o'clock afternoon train from Dublin only arrives at Charleville twenty-four minutes after the 6.45 from Cork has left?—That is right.

42595. Buyers for your fair at Croom would go down by this 3 o'clock train from Dublin and other places if they could make the connection at Charleville, and get to Croom that afternoon or evening?—Yes.

42596. You had a good fair?—Yes, for all classes of cattle and sheep.

42597. Any pigs?—No. Pigs are a market in themselves. That is knocked out of Limerick.

42598. Is the fair held still?—It is held quarterly, but it is on the wane a great deal.

42599. Had you a monthly fair?—We had it for some years, but not now.

42600. The quarterly fairs have declined?—Yes.

42601. They are only the shadow of their former selves?—Not much better.

42602. If the train service was so managed that buyers leaving Dublin could get to Croom that evening it would help to revive the fairs?—It would, besides accommodating the general public for eighteen miles of country.

42603. At present buyers from Leinster and the north-east of the country must leave Dublin by the 9.15 train in the morning?—Yes.

42604. Then the trains leaving Croom the next day are so timed that they cannot reach Dublin conveniently?—Passengers travelling from Limerick per 11.30 a.m. can get to Dublin same day at 5.45 p.m. *via* Charleville, but they could not go to any station north of Charleville and return the same day; neither could they get in on this branch from any station north of Charleville unless by joining the 9.15 a.m. from Dublin.

42605. This change destroyed your fair?—It did destroy it, or it helped at least.

42606. I suppose it was a thriving town formerly, and that this may bring it down to the rank of a village?—We are thriving still, and we want to hold it.

42607. Do you think if the lines were under a public authority special care would be taken to facilitate these fairs at business centres through the country?—Under the present management it is very hard to think they could reduce the rates and give trains to suit us all. Railway companies, as a rule, pay very poor dividends, and especially the Great Southern. They are not yet properly equipped with rolling stock. I saw some of the carriages coming along yesterday without even cushions, and they on the main road.

42608. It is just because the railway companies have such heavy capital that they are not able to pay good dividends. We are obliged to look out for some method of reconciling the financial facts of the situation with a system of cheaper rates. Suppose it was possible to pay off the shareholders of the lines on fair terms would you approve of having the railways worked as a unit by a public authority, so that every part of the community would have the means of representing their wants, and of bringing public opinion to bear on the administration of the system?—Certainly.

42609. You are in favour of that?—I am in favour of it.

42610. To remedy an Irish need you want an Irish authority. Would you say that the lines should be the property of Ireland, and that the authority, whatever it was to be, should be of a representative character, so as to satisfy public opinion?—I think so.

42611. As to the school children, do you happen to know that in countries where the railways are owned by the public they make a very special point of carrying school children at low rates; that in New Zea-

land, the Australian States, and some European countries they carry school children great long distances for rates so nominal that they are next to nothing?—I did not go into that.

42612. There is this difference between a public and a private system of railways. A private system of railways wants to get as much as it can, while a public system of railways considers education to be a public interest, and therefore fixes rates for school children at as low a figure as possible. Do you think that is a better principle than the other?—We want education. That is a better principle.

42613. Whatever facilitates the attendance of children at good schools is a benefit to the community?—No doubt.

42614. Mr. Barrington suggests that people of Croom would not be satisfied if children were given facilities to attend school in Limerick. Surely these children would attend the local school in Croom until they had availed themselves to the full of the resources of the local teacher? How, then, could anyone at Croom object to facilities being given to a few children at a later age to complete their education by going to school in Limerick?—Neither would Croom do it.

42615. Of course not. No one advocates the doctrine that because a child happens to be born in a certain district his education should be limited to the school on the spot. Surely a child who has shown special aptitude, and who has exhausted the resources of local education, might well be facilitated by low fares in attending a better school?—Certainly.

42616. Is there any real conflict between what you desire and the interests of the schools at Croom?—Not the slightest.

Jan. 17, 1908.

Mr. Thomas D. M'Carthy, Croom, County Limerick.

The policy of facilitating scholars in reaching centres of education advocated.

The Commission adjourned until 12th March in London.

SIXTY-NINTH PUBLIC SITTING.—THURSDAY, MARCH 12TH, 1908,

In the Board Room of the Lancashire and Yorkshire Railway Offices, Westminster, London.

Commissioners Present:—Sir CHARLES SCOTTER, Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Mr. THOMAS SEXTON; Mr. W. M. ACWORTH; and Mr. JOHN AUDLEY FREDERICK ASPINALL;

Mr. GEORGE E. SHANAHAN, Secretary.

Sir Herbert Jekyll (in the Chair).—The Chairman is detained at the Home Office for a short time upon a Conference there, but we are expecting him very soon. In the meantime, Mr Acworth wishes to ask some questions of Mr. MacNulty, and as he himself is likely to be called away in the course of the morning, that would probably be the most convenient course to take.

Mr. PHILIP MACNULTY, Transit Inspector, Department of Agriculture, examined by Mr. ACWORTH.

Mar. 12, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

Publication of Belgian tariffs.

Number and cost of tariff books published.

42617. I daresay you remember when we were in Dublin—I think it was in Dublin, or, anyway, I spoke about it in Dublin—you mentioned what you called "a book about the size of a Bradshaw" that cost a franc and a half, and contained the Belgian tariffs?—Yes.

42618. And I daresay you remember that I ventured to question whether it could be considered to be anything like an exhaustive tariff?—Of the interior rates; it relates only to local transit.

42619. I thought we had better get the official information, so I sent across to Belgium to the railway people there, and got what I have here—a list of the tariffs applicable to the transport of merchandise on the State railways of Belgium?—Interior transit?

42620. All tariffs?—Including International?

42621. Certainly. Your book, of course, does not describe or deal with the tariffs of the private railways, but only of the State railways?—Yes.

42622. I just want to call your attention to this. Keeping to the question of interior tariffs, this list of mine gives, through six pages, other interior tariffs. It gives a list of six pages of tariffs?—Separate publications.

42623. Separate publications that can be bought?—But do they form parts of the book of which I gave you a copy?

42624. Not as I understand it. Do you remember how your book was described?—I gave you a copy of it.

42625. Have you another copy?—I have one; I can show you a copy of it.

42626. That will save time, perhaps. Anyway, yours is one?—Only one of those?

42627. Yes, I take it so. Keeping to interior tariffs only, these number up to thirty-four. One of them alone costs Fr. 7.60—that is, the distance tables, which, of course, are necessary. You would agree that they are necessary. If you are going to apply a distance tariff, you must have the distance between the points of application?—Yes, if one did not know the locality—a stranger would require it I would require it.

Value of the publications as a check on railway charges.

42628. Before you can apply your mileage tariff, then, you must purchase the documents showing the distances between the stations—that alone cost Fr. 7.60?—Yes, but any time-table would show most of them—an ordinary time-table.

42629. It might in certain cases; a time-table would not show the distance from a local station between Brighton and London, and a local station between Birmingham and Stafford?—It could probably be calculated from a given centre.

42630. If you were going to check accurately the railway charge, you would need to know the official distance?—I would.

42631. Now I find another of these tariffs—for instance, the relations between the stations on the State railways on the one part—that is, the interior of Belgium—and the North Belgian and Chimay Railway on the other side; that will cost you Fr. 2.80. That is another one. Here is another—the relations of interchange between the various private railways—that will cost you another two francs, and so on. I will not go through this in detail. You see the list I have before me—I want to show you the book I have got, and which was given me as comprising all the interior rates of the Belgian State Railway. (*Handing book to Mr. Acworth.*)

42632. Fascicule 1B.—This is described as a standard scale rates table of terminal charges, special tariffs, and miscellaneous information, and that (which I am bound to say is a very moderate price) can be bought for 80 c.?—The price I do not know exactly.

42633. That is one of the thirty-four interior tariffs mentioned in the official list. I daresay you will take that from me. I will show you the list if you like?—I should like to see it.*

42634. You shall have it. And I may mention that some of these tariffs include various supplements—for example, that one you take there includes five supplements—I do not know whether they are attached?—There are a number of supplements.

42635. The one I spoke about as containing the distance tables includes twelve supplements?—Yes. You may remember when you asked me the question originally you merely asked me about the book of rates.

42636. I will tell you frankly the point of view from which I am asking this question. Assuming that there are these thirty-four different publications, many of them with supplements, and so on, in the first place it would be expensive to keep a library?—Yes.

42637. In the second place it would be practically impossible for anyone but an expert to extract the information when it was all printed before him—would you not agree with that?—No, I would not admit that at all. I do not claim for myself any extraordinary intelligence, and I had not very much difficulty, although I did not understand the language, in extracting the rates required.

42638. But surely by now you may consider yourself an expert on rates?—Not on foreign rates; I know a little about home rates.

42639. You would not put yourself in the same class as an average small farmer?—No.

42639A. Or as a local shopkeeper in Enniskillen or Strabane?—I do not know that.

42640. The ordinary shopkeeper, you would not suggest, could possibly, from that welter of information, even if he spent the money on the library, extract accurately the rate and challenge the railway company?—Oh, yes, I think so. I think it is so printed that it is quite easy to understand it.

42641. It? Not "it"—"they"; the thirty-four?—Yes.

42642. Now, then, of course a large part of the traffic of Belgium is not internal, but exchanged—exchanged with foreign countries?—International traffic I have not touched.

42643. International traffic—that is to say, traffic with England—is of supreme importance to Ireland, is it not?—In certain commodities.

42644. We have been told that all the manufactured goods come in, so that we may say most commodities?—Manufactured goods come from England

42645. We have been told that Ireland imports a very large quantity of manufactured goods from England?—Yes.

* A statement was subsequently furnished by the Witness relative to the 34 publications referred to. See Appendix No. 3.

42646. So that in a vast number of commodities not the internal rates of Ireland, but the through rates with England, would be important?—That I have not touched.

42647. Assuming you are correct in the point of view you have taken—that Ireland might have something like the thirty-four internal tariffs of Belgium—before the Irishman would be properly equipped he would need the exchange tariffs of England and Scotland too?—Yes.

42648. Now, I want to show you what the Belgian exchange tariffs are. They run up from number 35 up to number 144. If you take a particular country—take the exchange between Belgium on the one hand and Luxembourg and Germany on the other, the tariffs run in numbers from 41 to 55—that is twenty-five more tariffs—more publications. The first of them costs 60 c., the next costs 80 c., the next costs 80 c., the next fr. 1·20, the next fr. 3, the next fr. 1, and so on?—Yes.

42649. Now, you will agree with me that that would be beyond the resources of the Strabane farmer?—I am afraid you are leading me far beyond the matter upon which I came to give evidence. I am simply giving evidence on Irish interior rates as compared with Continental rates in each country. You are now going into international freights, which is a matter quite beyond the subject I investigated. I am not at all prepared to express any opinion upon that.

42650. I do not want your evidence, which ought to have weight attached to it, to carry something which you would not wish it to convey?—I am not aware that I have up to the present said anything which would lead anybody to believe that I was dealing with more than the interior traffic of each country.

42651. Then what I want to say is this. When you say that a Belgian, for an expenditure of—I think you said fr. 1.50?—I did not know—I assumed about 1*s.* 6*d.*

42652. We will put your case right from your point of view. When you said that for an expenditure of 80 c., or whatever it was, he could get all the internal tariffs, it was not quite accurate, because as I have shown, if he wanted to have a complete set it would be a lot more?—If you read the inscription on the face of the Rate Book I handed to you, you will find it conveys what I was told—that it is for the interior service of the State Railway and the relations with the private railways; is not that so?

42653. Yes?—Both ordinary and special tariffs.

42654. It says so?—Yes.

42655. But here is another official publication?—That is the document itself.

42656. So is this?—But that is the Rate Book itself.

42657. There is no question about this, which is also an official document; it explains that there are thirty-three other publications dealing with internal Belgian rates? May it not be, though, that it is exactly the same as in the case of France?—I bought a book which includes all the rates of France, sections of which are obtainable, for a few centimes. May the catalogue you have not be a list of sections, which would account for the difference between us?

42658. No, because that is described as fascicule 1B, and this is described as fascicule 1B, and has exactly the same heading, and that is only one out of the thirty-four. But we need not say more about the interior. Then it would be misunderstanding you if anybody thought you had implied that anything of this kind was available for anything beyond Belgian internal traffic?—Undoubtedly.

42659. Then I will not carry it any farther. I am bound to say I thought you went farther. I leave that entirely. I am not in the least wanting to question the great value of what you have given us, only I want it to go out to the public as accurately as possible. Now, if I may take another point entirely, I will take a particular inaccuracy. There is something here I think, which must have been a copyist's error, or something of that sort, in your tables. Have you numbered your tables?—Yes.*

42660. Have you numbered them through consecutively in pages?—No; can you give me the Comparison number?

42661. Take 8 B, will you?—Yes.

42662. They have been numbered consecutively throughout in my copy I have gone over several pages?—No, 8 B is for oatmeal, five-ton lots; I have that.

42663. Yes, oatmeal in five-ton lots. Look at the lines at the bottom—lowest percentage—rounded off?—Yes.

42664. The one put down there at the bottom as 32 ought to be lowest one in the column for France?—Undoubtedly.

42665. Just look down the column of France, and see if you can find any 32?—Thirty-six is the lowest.

Mr. Croker Barrington, Solicitor.—Could we have a copy of these tables in order to follow them?—They are new tables, I think.

Chairman.—Yes, certainly.

The Secretary.—Unfortunately there were only just as many copies sent to us as were required by the Commissioners.

Mr. Acworth.—I will pass you mine in half an hour's time, if you like, Mr. Barrington.

Mr. Croker Barrington, Solicitor.—When they are available, I daresay Mr. Shanahan will let us have them.*

Mr. Acworth.—Would you like to come and look over mine?

Mr. Croker Barrington, Solicitor.—No, thank you.

Witness.—That is apparently a typist's error.

42666. *Mr. Acworth.*—There is something much worse than a typist's error, because it is so constant. Look at Germany. The bottom of the page says—"Lowest percentage, 40"?—Yes.

42667. The lowest percentage that you will find is 45?—Yes, I see it. It is an obvious mistake. The percentages in the table above have been checked and re-checked, and they may be taken.

42668. Before this is printed I want to put this straight, because nobody can follow this mass of figures; the summaries will be what anybody would use. Do you see that Austria is given at 38?—Yes.

42669. The lowest figure is 44?—43·71.

42670. Yes—43·71?—I took any fraction from ·50 upwards as a unit in rounding off the percentages for purpose of analysis.

42671. Quite right. Hungary is given at 40?—A wrong analysis has possibly been placed at the foot of the table.

42672. I have not checked this mass myself, but there are four mistakes on that table alone?—That is on 8 B.

42673. If you look at 8 C there are four mistakes again, and they are all in one direction, I think?—8 C, you say, is also in the same way.

42674. 8 C has four mistakes?—Of the same kind?

42675. I think they are all the same. I will check them if you like, but I do not want to take up too much time. There is a 29, and the lowest I find is 34. There is a 37 for Germany, and the lowest I see is 43. There is a 31 for Austria, and the lowest I see is 36, and so on. They are all, I think, in one direction. Was it worked with a calculating machine, possibly?—No. This is simply an analysis of the percentages above, which latter are, I believe, correct. The analysis statements were prepared after the percentages had all been calculated. Subsequently, on checking the percentages, some corrections had to be made, and it is possible that these corrections were not carried into the analysis, or the figures of an analysis may have been misplaced inadvertently.

42676. At any rate, will you see that those are all checked?—Yes, certainly.

42677. I have got other pages, but I will not stop to deal with them. Obviously that would very materially mislead anybody basing his claims on it?—Undoubtedly.

42678. You will see that that gets put straight?—Oh, yes. It will take only a few minutes to do each one.

42679. Would it not tend to prevent error if you took the prevailing percentages?—The "prevailing percentage" only indicates the closest limits within which the greater number of percentages in a comparison occur.

42680. Have you checked that of your own knowledge; if so, I will accept it absolutely; but I have been told that the prevailing percentage is in some cases the lowest percentage?—The lowest?

42681. Yes?—The majority of percentages within the shortest range may sometimes come in the direction of the lowest percentage. It may sometimes go in the direction of the highest. I found it did in some cases go in the direction of the highest percentage. It varies.

42682. Would you mind satisfying yourself that those are accurate?—I will do that. I am very much obliged to you for drawing attention to the discrepancies.

Reliability of the comparative tables of rates submitted on behalf of the Department of Agriculture.

Oatmeal (5-ton lots and 10-ton lots)

Errors in the analyses.

* For complete copies of these percentage comparative tables of rates see Appendix No. 2.

Mar. 12, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

Comparative tables of rates submitted on behalf of Department of Agriculture—*con.*

Rates for agricultural produce on Irish railways and the Continental tariffs compared.

42683. We both have the same object—to get it right?—These comparisons have been prepared under such a tremendous strain that I was quite prepared to find there were some inaccuracies.

42684. I am not throwing any blame on anyone; I am only trying to get the facts?—May I show this? It is a rough index of percentages. You will see bracketed there the prevailing percentages.

42685. I will tell you one thing. If I had it to do I should have made a great many more errors, I am quite sure of that. I do not know how far you want to draw inferences from these tables, or whether you prefer to leave that with us?—I would not attempt to draw any inference at all; I simply submit the figures.

42686. I do not know whether the Board of Agriculture would like to work out any figures. Apart from Ireland, there is a very strong impression that I get that on this table France comes out much better than Germany; France has much lower rates than Germany?—These percentages would indicate that throughout.

42687. Further still, more markedly, Holland comes out much better than Belgium?—Yes, in the majority of cases, speaking now from my recollection of the figures.

42688. I am very glad that your general impression confirms mine—that Germany comes out worse than France, and Belgium comes out worse than Holland, and they are comparable countries?—Holland and Denmark?

42689. Holland and Belgium?—Well, of course, Holland has got innumerable waterways.

42690. So has Belgium?—Not so many as Holland. Nearly every little farm has access by waterway or canal for small boats.

Result as regards France, Germany, Holland, and Belgium.

42691. But the fact is that the Dutch railways do carry at lower rates?—Yes.

42692. Of course, the Dutch railways suffer in competition with the Belgian from the fact that the Dutch have not any heavy coal and iron traffic like the Belgian?—I cannot say.

42693. But we know the fact that there is no coal in Holland, and there is coal in Belgium, and there is no iron in Holland, while there is in Belgium. You know that?—I know that.

42694. Similarly, we know that Germany has the advantage over France of having a much larger and more important mineral traffic?—I have not attempted any analysis of commodities at all.

42695. You know as a matter of fact that Germany is a much more important mineral country than France?—It is.

Some of the Dutch railways State owned, but privately worked.

42696. I do not want to take you further than that. Therefore, one might have thought that Germany ought to be able to give lower rates for agricultural produce than France?—I am not prepared to express any opinion at all on it.

42697. Nor would I ask you to express an opinion on the fact that the German railways are State railways, and the French are private, or on the fact that the Dutch railways are private and the Belgian railways are State?—Some of the Dutch railways are State-owned, but privately worked?

42698. Quite right, privately worked. I merely want to call attention to the fact, because a great deal of evidence has been given on the advantages of State ownership and of private lines. As far as these two pairs of countries are contrasted, it appears that the advantage is with the private lines—that they give lower rates to the public?—There is Denmark.

42699. I have not taken Denmark, but with regard to those two pairs that is so?—With those two, yes; that is apart altogether from the circumstances which may influence the rates, as to which I know nothing.

42700. Of course. We can neither of us afford time to write a book on State ownership here. Now, to come to Ireland, would you agree with me in the first place that the tables come out as showing that Ireland makes a more favourable comparison on the one-ton rate than on the five-ton or possibly on the ten-ton?—Yes.

Percentage of wagon load to total traffic on Continental railways.

42701. We know that on the Continent, especially in Germany and German-influenced countries, the whole tendency is to get the stuff into full truck-loads?—Yes.

42702. In Ireland, on the other hand, the normal rates, apart from special rates, allow the same rates for 3 cwt. as for 30 tons?—Not in Class C traffic—cereals, manures, and so on.

42703. Quite right; that would be two-ton lots?—I am speaking of the wagon-load; the same rate does not apply to a 3-cwt. consignment as to a 30-ton consignment.

Mr. Tatlow.—In Ireland there is no minimum for Class C.

42704. If we are talking of it as an ordinary class rate, if there is no minimum for Class C, which I have granted, if it is a class rate, the same rate applies for 3 cwt. as for 30 tons?—I misunderstood you—yes.

42705. Now, the bulk of the traffic, I suppose, in Ireland—the bulk of the number of consignments—are small consignments, is not that so?—I am not in a position to say that.

42706. I am not either, but we know, you and I, that in Germany pretty nearly everything goes in ten-ton lots?—They have a five-ton wagon rate.

42707. The vast proportion—more than 90 per cent.—goes in ten-ton lots. Perhaps I ought not to give evidence on it, but we know there is a vast proportion. However, is it not true to say that it is the one-ton rates which are of importance in Ireland, while it is the ten-ton rates which are of importance in Germany?—Do you mean relatively to the country?

42708. Yes; to the Irish people, with the Irish habits of consignment, it is the one-ton rates that are the important rates?—Not in commodities such as cereals, feeding stuffs, and artificial manures.

42709. But in the case of eggs and butter?—Perishable produce—yes.

42710. I forget what the others you have given are?—There is bacon.

42711. Yes?—And manufactured goods, such as woollen goods, boots and shoes.

42712. So that the point is, though one must not press it too far in either direction, that it is not quite fair to the Germans to say that their one-ton rates are about as high as the Irish, because the people do not use them. You follow what I mean?—The small consignor makes use of the common carrier in Germany, and gets an advantage; he has not to pay the full one-ton rate.

42713. Do not let us go into that—it is complicated. But it is fair to the Germans to say that it matters comparatively little to them what the one-ton rates are, because the bulk of the traffic never pays the one-ton rate, but the ten-ton rate?—That is so.

42714. On the other hand, it is fair to the Irish railways to say that the ten-ton rate being very high in comparison with Germany does not matter very much, because the bulk of the traffic does not use it?—I do not know what the ratio of the loading is in Ireland.

42715. I do not know either, but we may have a shrewd suspicion; we have all been in goods yards and seen what goes on?—I know that in milled stuff the wagon load is used to a considerable extent in Ireland.

42716. That is a special rate. Now, there are two other points I want to call your attention to. Just let me ask you this. You have taken out averages at the foot of the tables?—Averages?

42717. Well, prevailing rates?—Yes.

42718. Do you think—I am not suggesting it should be done—I am asking you because you have had some experience in this thing now—do you think it would be possible to get an average of the average rates all through, or something of that sort to carry it a little further?—I do not say anything at all about these figures beyond what is on the face of them; the analysis figures were given on the foot of the table to save the Commissioners trouble. I draw no deduction from them at all.

42719. My difficulty is this. You have done an enormous deal for us; you have reduced millions of figures to tens of thousands of figures, but I do not think I am competent to extract the average from the tens of thousands. Could not yourself carry it further, and tell us the impressions that you obtain from these figures. You have told us something about a comparison between Belgium and Holland—could not you tell us the impression it leaves on your mind?—I prefer to leave the figures to speak for themselves.

42720. I do not want to get the impression that the opponents of railways have, or the impression that

the railways have, but the impression made on an impartial person, because I do not feel competent to form my own judgment?—I have simply approached the matter from the official point of view. I have taken out certain figures which I find in certain books, and I have put them side by side in order that the Commissioners might draw their own deductions.

42721. I cannot press you further upon that. You have not an official impression?—No.

42722. I must not press you. Now I want to show you another point. Look at butter, which is No. 2, I think. It is page 10 in our numbers?—No. 2A—one-ton lots.

42723. Yes, 2A is the thing I want to call your attention to. There you have omitted Belgium?—For what sized consignment?

42724. 2B—Butter in five-ton lots?—Yes.

42725. Now, you do not mean to tell me that if I wanted to send five tons of butter in Belgium by slow transit, I should not be allowed to do so?—There is no special rate for five-ton lots in Belgium, neither is there one in Ireland; therefore I omitted a comparison between the two countries.

42726. But, forgive me, you have put in the Irish rates?—But I have left Belgium blank, so there is no comparison; we should simply have been repeating the percentages shown in Table 2A.

42727. But is it not fair to point out that Belgium does not give any advantage on 5-ton lots—that the Belgian farmer has to pay, like the Irish farmer, at the 1-ton rate?—I have done it as fairly as can be.

42728. What you have put down for the Irishman is what he would have to pay if he sent it?—If you think it will make the table more complete to include that comparison, I will do so.

42729. Does it not seem so to you?—If neither Ireland nor Belgium has a 5-ton rate for butter, I cannot see the force of the comparison.

42730. Look at your comparison at the bottom. Ireland, compared with France, is 36 per cent.?—That is the lowest percentage.

42731. And so on—I am keeping to the lowest all through. There is none of them in which the lowest is about 55 per cent. of the Irish rate?—That is for the lowest comparison.

42732. But if you put in Belgium, Belgium would be 55 to 87?—No, that is the comparison of the 1-ton rate in both countries.

42733. But you are repeating the Irish 5-ton rate as the 1-ton rate?—For comparison with countries that have a 5-ton rate.

42734. But I want you to repeat it for Belgium too, because then Belgium would show high. The point is that it is not fair, because it does not bring out the fact that in Belgium——?—One moment. I think it would occur to anybody to look back, and see what the comparison was on the 1-ton lots.

42735. Will you look on to 2c?—Yes.

42736. There are only three countries out of the seven that give a 10-ton rate?—Yes.

42737. Look at the result. It appears that Ireland contrasts with other countries on the basis of 47 per cent., 33 per cent., and 42 per cent.?—47 per cent. in the case of Germany.

42738. Yes, and 33 and 42 per cent. But now, if I brought forward the comparisons from the other ones, Belgium would bring that up to 55, France would not alter it very much, Holland would come in at 33, and Hungary at 55 per cent.?—Do you think it would be more acceptable if I repeated the figures, and carried them forward from table to table?

42739. I will write in those two blanks——

Mr. Sexton.—A different rate for a different lot?

Mr. Acworth.—No, the rate that would be applicable for a 10-ton lot in that country.

Mr. Sexton.—What country?

Mr. Acworth.—Hungary, or whatever country it may be.

Mr. Sexton.—In Hungary there is no 10-ton rate.

42740. *Mr. Acworth.*—Nor is there in Ireland. I think my friend Mr. Sexton will not disagree with me in this. The Irish rate given in the first column of 2c is the rate you would have to pay for ten tons?—Yes.

42741. It is not the rate that is put in as the 10-ton rate, but it is the rate that would be applicable?—The rate that would be applicable.

42742. Similarly these rates that I am suggesting should be put in—Belgium 55 and Hungary 55—are also the rates that would be applicable, because there is not a special rate made for a 10-ton lot?—Yes.

42743. Would you mind noting in your mind, or on your table, that we have now got in 55 in the case of Belgium and 55 in the case of Hungary?—What you want me to do is to carry these rates forward?

42744. Just put it in for a moment for yourself, in light pencil, and I will ask you a question on it?—Yes.

42745. Ten-ton lots?—And the 1-ton comparison for Belgium comes forward?

42746. Yes, and the 5-ton comparison for Hungary comes forward. Take it that in the case of Germany it is 55?—Yes; for France 36 comes forward from the 5-ton comparison.

42747. If you are going to take them all in, yes?—Yes, take them all in.

42748. And Holland comes in at 33. Now, then, we have got it. Have you taken those down?—I have brought them forward, I think, correctly.

42749. Now, I want to ask you this question. In the one case, as you had it printed, the comparison read, for the three countries that were given, 47, 33, 42?—Yes.

42750. As I have suggested revising it, the comparison reads, 36, 55, 47, 33, 33, 42, 55?—Yes.

42751. Whereas it appeared before from your table that there was no country where the rate was more than 47 per cent., it now appears that there are two countries where the rate is 55 per cent.?—No, I do not think my table conveyed that at all.

42752. Please do not think I am suggesting that your table had any wrong intention; but does it not seem to you that that conveys a somewhat different impression?—I do not think so.

42753. Of course we could work it out with your explanation, but would not a mere glance at the table as now readjusted convey a different impression to your mind?—On the face of that comparison 2c, I state that it is shown explicitly that in France and Holland there is no rate for a 10-ton lot, nor in Hungary, and I have the columns blank in the table itself. I do not know that I could have made it plainer.

Mr. Tatlow.—Might I suggest that it should have said also that in Ireland there was no rate?

Chairman.—Quite so—otherwise the column should be omitted altogether.

42754. *Mr. Acworth.*—Mr. Tatlow is not quite satisfied, and the Chairman has made a suggestion?—I will have the figures inserted, and carry them forward in the table.

42755. You can settle it with the Secretary, because of course nobody here can go into these things in detail. Only one other thing. Just let us take an instance, and let me show you what I mean?—May I take it that that is with regard to all the tables where such blanks occur—that the Commission would like that the figures should be carried forward from the lowest tariff?

Chairman.—I think so.

Mr. Sexton.—We must discuss the figures. I consider the figures are clear as they stand, and unless the suggested alteration is justified by further argument, I shall object to it.

Mr. Acworth.—The figures are absolutely clear to anybody reading them carefully.

Mr. Sexton.—Then why not read them carefully?

42756. *Mr. Acworth.*—I would trust you and myself to do so, but I would not trust "the other fellow." Now take 3A—bacon, 1-ton lots—lowest rate, 2*s.* 3*d.*?—Yes.

42757. Highest rate, 5*s.*?—Yes.

42758. Check that with the first country with which it compares. Compared with the 5*s.* rate, the French rate would be only 55 per cent.?—Yes.

42759. On the other hand, compared with the 2*s.* 3*d.* rate, the French rate would be nearly double? It would be 177 per cent.?—121.52.

42760. I am reading from your own figure at the bottom, which says 177?—I beg your pardon.

42761. I beg your pardon—that is another rate. You are more right than I am. It ought to be that the French rate would be 122 per cent.?—Yes.

42762. Now one is correct, I suppose, in assuming that the 2*s.* 3*d.* is a special rate?—Yes.

42763. Whether the 5*s.* rate is a special rate or a class rate I do not know?—The detailed tables would show.

Comparative tables of rates submitted on behalf of Department of Agriculture—*con.*

Errors in the analyses.

Suggested additions to the percentage tables.

Rates for bacon.

Irish and French compared.

Mar. 12, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

Comparative tables of rates submitted by the Department of Agriculture—*con.*

42764. Probably it is a class rate?—Yes, probably.

42765. We may safely assume that the special rates are given where there is a considerable traffic?—I do not know what the circumstance is that may influence it—it may be competition ; it may be considerable traffic.

42766. Special rates are given where it is worth somebody's while to get them—let us put it that way—they are given where somebody asks for them. They do not grow of themselves. The class rates grow ; they are put in as a matter of course?—The class rates, yes.

42767. They are put in whether there would be any traffic or not?—Yes.

The method of compilation of the tables.

42768. The special rates are put in where there is, or is expected to be, some traffic worth consideration. Would not that entitle us to say that the special rate is probably more important in reference to the traffic that is affected than the class rate?—More important from what point of view?

Difficulty of distinguishing between nominal and actual working rates.

42769. Probably where there is an important traffic, it goes at a special rate?—Where there is a considerable traffic.

42770. Where there is not a considerable traffic probably nothing is in the book but the class rate—where there is an inconsiderable traffic?—I ought perhaps to explain that with regard to the stations selected for comparison, I endeavoured to take out pairs of stations between which traffic in bacon, or whatever the commodity might be, would actually pass. I did not take, for instance, two stations between which bacon never would pass in the ordinary course of business.

The stations selected for comparison.

42771. But you agree with me that that 5*s.* probably would be a class rate?—Yes.

42772. If that station which was a potential bacon centre had important traffic, it very likely would have got a special rate?—The railway companies could best answer that question.

42773. I cannot say it would have got, but it would have tended to get, a special rate?—It ought to have got it.

42774. Would you not agree with me in this. Take down those two figures. The French traffic pays 55 per cent. of the rate if it is 5*s.*, or in other words, to put it in a simpler form, the 5*s.* is a lot above the average French rate?—Yes.

42775. While the 2*s.* 3*d.* is a good deal below the average French rate?—Yes.

42776. What I want to put to you is this—that we may be pretty certain that the traffic that goes at 2*s.* 3*d.* is more important than the traffic that goes at 5*s.*—more important in quantity?—Very likely it is.

The Irish railway companies alone able to furnish details of actual traffic.

42777. I am wanting to make your tables as useful as they can be made. It would not be fair to use this as a mere bald statistic, and assume that the 55 per cent. is as important as the 121?—As regards the relative importance I do not know that anybody would be able to give you the slightest evidence of any use excepting the railway companies themselves.

42778. I agree, and I do not think they can give us much. But if they were to say, "We claim that the fact that our special rate is only 55 per cent. of the French rate, even though our class rate be 121 per cent., shows that on the whole bacon in 1-ton lots is carried lower than in France," it would be a fairly reasonable claim?—I think what would be more convincing still would be if the railway companies took the Irish stations which have been used in this comparison, and gave a return showing the comparison between the bulk of traffic passed at 5*s.* and the bulk of traffic passed at 2*s.* 3*d.* I think that would be more valuable still, and that is information which they only can give.

Comparative tables which the companies might with advantage prepare.

42779. I quite agree. I daresay Mr. Tatlow caught the suggestion. It does seem to me that it would be of great value. But on these figures we ought, I think, to go as far as to appreciate that the highest of the Irish rates is not likely to carry as big a volume of traffic as the lowest of the rates. I think we must agree on that?—I agree.

42780. And therefore, in estimating the effect on Irish trade of these rates, we must appreciate that the low rates—I will put it in this way—are more important in actual traffic—in the volume of traffic that they affect—than the high rates?—I am not prepared to say.

42781. Nor am I?—I do not know that anybody could express an opinion upon that except the man who is able to prepare the statistics of the actual volume of traffic carried.

42782. But the worst of it is that he will prepare the statistics to prove it, do not you see? This is a large number. It is an inference from a very large number, and it ought to be true generally. The difficulty, it seems to me, is that if the railways produced cases, anybody might say, "Yes, you have selected cases where they prove your point." That is what I should say to them if I were trying to break down their case?—If you take bacon, there are certain known centres for bacon-curing in Ireland, and where rates were shown for a given distance, between point and point, I, in my comparison, brought in as many as I could, and, in taking five pairs of stations, eight miles apart, between which that traffic was likely to pass, I found that the highest rate was 5*s.* I know nothing whatever as to the volume of traffic that passes at each rate, but I think it is quite possible that the railway companies could give that information.

42783. I do not think you and I can carry it further now. If the railway companies think comparison should be made between certain stations, you will be able to help us as to whether you consider them good stations for the purpose of fair comparison?—The stations I have taken are contained in detailed lists, which I have been authorised by the Department to say will be open to the inspection of the railway companies or any member of the public interested in the inquiry, so long as the Commission is sitting.

42784. If you make available to the railway companies the stations that have seemed to you comparable, and they compare others, you will be able to help us by asking them were they justified in doing it, and between us perhaps we may get something that will help us?—I hope to have finished with the Commission by the time I have given this evidence.

42785. No, I think we have got so much help from you that we shall not let you go yet. I think that is all I want to ask. I am very much obliged to you, Mr. MacNulty.

Examined by Mr. Sexton.

42786. You must be fatigued with detail, and I shall try to mitigate the pressure by putting a few general questions. Have you followed the course of the evidence?—No, I have not had time to read it.

42787. But you are acquainted, perhaps, with the general drift of it?—No, I cannot even say that.

42788. I may say that the general trend of the evidence so far has been to show that Irish agricultural and industrial interests are injured by the relative excess of the interior rates in Ireland over the import rates into Ireland. You appreciate the argument?—Yes, I appreciate the argument..

42789. Have you made any comparison of rates that would throw light upon that evidence?—In compliance with the request made about a fortnight ago by the Commission, the Department has been collecting some information on that subject. Unfortunately, it was not quite complete when I left Dublin last night, but I hope to have the statements to-morrow morning, and will submit them.

42790. You hope to have statements which will indicate the best comparison you can make as to the relative incidence of import rates from Great Britain into Ireland and of inland rates—interior rates—upon the same commodities under like conditions in Ireland?—Yes, that is, I believe, one of the heads under which the return will be made.

42791. Another great head of complaint has been that the agricultural interests of Ireland are damaged and prejudiced by the relative excess of the export rates from Ireland to Great Britain over the export rates from Continental countries to Great Britain—that the Irish output is restricted and Continental trade developed by that disparity. Have you made any comparisons to throw light upon that part of the case?—Yes, I believe a comparison is in course of preparation. That is the second one, I think, the Commission asked for—the second special comparison.

42792. Of course the rates from Irish points of despatch to English markets are easily found—the through rates?—Yes.

42793. But through rates from Continental points of despatch to the English markets are not so easily found?—No, we have had to send men across to the ports to get the information.

42794. What is the comparison you will make on the Continental side—from the Continental point of despatch to the British market, or from the Continental port?—From the Continental port.

42795. Of course the comparisons which are most valuable in these cases are comparisons between rates which in the actual course of traffic do compete?—Yes.

42796. Your comparisons are interesting and important as showing the relative cheapness or dearness of transit in Ireland and in Continental countries, but a comparison closer to the point would be one between are rates at which manufactured goods are carried into Ireland, and the interior rates upon such goods in Ireland, and, on the other hand, between the rates at which food products are carried from the Continent to Great Britain and from Ireland to Great Britain?—Yes, the latter are important, but I think in a country like Ireland the internal rates are the more important of the two, especially on things like cereals, grain milled in the country, and feeding stuffs.

42797. Bacon?—Yes—produce carried within the country itself.

42798. The export rates are chiefly important in their bearing upon agricultural produce, but the internal rates are important not only as regards agricultural produce but also manufactured goods?—Yes, some of them.

42799. I hope that without any excessive labour you will be able to give us some methodised comparison which will enable us to test the two classes of rates upon the basis I have tried to define?—We have endeavoured to tabulate them so that the relative figures may be seen without much trouble.

42800. A question arose in the course of the inquiry as to whether the special rates upon the French State lines were lower than the special rates upon the private lines in France. You were able to give evidence that the tariff is lower upon the State lines, normally, than upon private lines in France?—Yes.

42801. It was then suggested that possibly the special tariffs might be lower upon the private lines?—Yes.

42802. But it was argued that if the normal tariffs are lower upon the State lines than upon the private lines, it is reasonable to infer that the special tariffs would be lower upon the State lines?—Yes.

42803. You promised that you would make some inquiry?—I have some figures in connection with the subject, but if you would postpone the question until after luncheon, I may be able to submit the actual figures. I do not know that I have them here just now.

42804. *Mr. Acworth.*—Might I suggest that it would be useful if you could give, without any difficulty, at the same time, what I expect will probably be the best answer—the average rate per kilometre ton upon the different railways?—I have only the normal rates per kilometre ton.

42805. The average rate upon what had been actually carried?—No.

42806. You can get it, of course?—I have not gone into the statistics at all.

42807. *Mr. Sexton.*—Lest the subject may escape through inadvertence, may I ask you whether your inquiry has confirmed your impression that the further special tariffs, as well as the normal tariffs, upon the French State lines are lower than upon the private lines?—Generally I think they are; I cannot say what the difference is now.

42808. That is your general impression?—Yes. I brought the figures with me, but they are not before me just now.

42809. There was a question also, which I am anxious to clear up, about the control of the alteration—which, I suppose, means the reduction—of rates in France. Any public body interested in traffic may initiate a movement for the reduction of a rate?—Any public body?

42810. Yes. Their proposal is referred to the company?—Yes, I presume that would be the ordinary course of procedure.

42811. It was suggested that unless the company concurred in the reduction the rate would not be reduced?—Well, I do not quite know that I read it in that way, because the fact is that the Minister may cancel a rate—he cannot reduce, but he may cancel a rate in existence.

42812. You said, I think, that the companies generally work amicably with the Minister?—Yes.

42813. Is it not the fact that for many years the Ministerial assent to a rate in France has been conditional?—Yes.

42814. And may be revoked?—Yes.

42815. At the will of the Minister?—Yes, but before a rate is cancelled, as a rule, an inquiry is held at which the parties interested are permitted to submit arguments.

42816. But the matter rests with the discretion of the Minister?—Yes.

42817. Now, if a company, in the opinion of the Minister, unreasonably oppose a proposal for the reduction of a rate, the Minister might withdraw his conditional assent to the existing rate?—Yes.

42818. It was said, of course, that if that were a special rate the company would be remitted to the rate in the normal tariff, but would that be so? A special tariff has a structure, and conditions; surely the company could not import into a special tariff a rate out of another tariff without leave of the Minister?—As I read the authority on it—M. Colson, who is supposed to be the best authority—no rate can be used as a working rate without the Minister's approval.

42819. Nor can a rate be transferred from a normal to a special tariff?—No.

42820. Then the maximum rate—what is called the maximum rate—is not a rate; it is a limit beyond which a rate must not pass?—So I read it.

42821. It is not a working rate?—It is not a working rate.

42822. Therefore, if the Minister withdrew his assent to the working rate, the company would not be in a position to fall back upon the maximum and change that?—No.

Mr. Acworth.—What would it be able to charge?

42823. *Mr. Sexton.*—That is what I want to know. I submit that if the Minister withdraws his assent to the existing rate the company have no rate to work upon, and will be obliged to come to what you call an amicable arrangement with the Minister?—That would seem to be the only alternative. Of course I am not a legal authority.

42824. I am taking your evidence as you gave it before?—I gave the evidence as I had the matter contained in the translation of M. Colson's Book on French Railways.

42825. It would appear, then, that even in France, the Minister has the rates under practical control, and may constrain the reduction of a rate?—Yes, it would seem that he has them under his control.

42826. Now, these systems which you have examined relate to seven different countries?—Yes.

42827. There is a general resemblance between them—the resemblance between them is much more striking than the difference? They resemble each other in matters of principle, and differ in matters of detail?—Well, in principle, Germany, I think, differs from the others in this—that the rates are not reduced in ratio to distance in the same proportion as in other countries. The policy appears to be to give each district the benefit of its geographical position.

42828. In Germany?—In Germany, and it is observable in some rates also in Austria, but not in others.

42829. But I may suggest several main heads in which they resemble each other—namely, for instance, highest rate for express speed lower rate for quick goods speed, still lower rate for slow goods speed; then special tariffs at lower rates for particular classes of goods and for certain classes of transit?—Yes.

42830. These prevail throughout the different countries?—Yes.

42831. Also special parcels and small goods rates?—Yes.

42832. Now, the various countries, acting independently of each other, have built up these systems which have what I may call a family resemblance to each other?—Yes, interchange of traffic has probably obliged them to do it.

42833. That would appear to suggest that the communities in these countries have found that these

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

Procedure as to alterations in rates on French railways.

Discretionary power of the Minister of Public Works.

Similarity of the procedure in other Continental countries.

Germany an exception;

and, to some extent, Austria.

Effect of the interchange of traffic in harmonising Continental railway arrangements.

Mar. 12, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

systems suit their needs?—Yes, I presume the system of rates would not obtain if it did not meet the requirements of the country.

42834. Not in self-governing countries at any rate—not in communities where the people have the power?—That is entering into politics.

42835. Is it not self-evident that where the community have means of impressing their opinion upon the Government, their opinion would prevail—that is what you have said, really?—Yes.

Public control of railway rates.

42836. And if any rate is found to be excessive, or if any rule or condition is found to be irksome, the people interested have a ready mode of obtaining attention to it by reference to the Minister who acts on behalf of the Government?—Yes.

42837. A very different thing from waiting for a half-yearly meeting of shareholders?—Of course, the shareholders do not control the railway rates.

Its advantages compared with the system in this country.

42838. No—a very different thing from waiting for an Act of Parliament, or for the jurisdiction of such a Court as the Railway Commission, which, I suppose, will not touch a rate at all unless it is above the maximum, or above what it was in 1892. I suggest that the means of procuring attention is much more ready and effective on the Continent?—Yes, it appears so from the published regulations.

42839. I think we have it, then, that the public agent—the Minister representing the Government—does control, of course, the rates on the State railways and does control, in effect, the rates on the private railways?—The power of suppression of rates gives control. You speak of France?

Government control of French rates extends to private railways.

42840. Well, France appeared to be most questioned. I think we agree about France, and in the other cases there is no question that the Government does control the rates?—Yes, through the Minister.

42841. Does the Minister in those Continental countries control the rules and conditions of the traffic as well as the rates?—Yes, they have to be approved of by him.

42842. So that, if fault is found with one rule or another, or one condition or another, which we find in these elaborate systems, the reply is that the public have the means of appealing to the Minister, and that the Minister may modify, cancel, repeal, or overrule any irksome condition?—In France, he can withhold his approval, or may cancel.

42843. No doubt, in any other country where general State control prevails, rules and conditions may be altered, just as any rate, if found to be unsuitable, may be altered. The public authority will have some means of cancelling or altering it?—Yes.

The Continental system of publishing rates and conditions of transit.

42844. Now, a very characteristic feature of all these Continental systems is the full publicity attached to every detail of rule as well as of rate?—Yes, it is very striking.

42845. My friend, Mr. Acworth, has rather suggested that a trader on the Continent, in order to obtain sufficient information of what concerns him, would have to invest in a library, and would need great intellectual acumen in order to discover what his interest required. Did you in your travels hear of anything of that kind?—No, the extent of his library would depend very largely upon the extent of his business.

42846. You have conferred, no doubt, with traders, with Ministers, and with officials?—Not with traders.

42847. Well, with Ministers and officials—experts in the countries you have visited. Did you hear from any of them that traders have any difficulty in ascertaining their rights and obligations under these systems?—No. On the other hand, I was told that every document was for sale—that every member of the public could obtain it by paying the price marked upon it.

Enables the public to get full information readily.

42848. Can you confirm the impression I have derived from your evidence—that these Continental systems are drawn up very plainly, with great precision and clearness?—Yes.

42849. There may be a plurality of books or manuals in a country, but is it probable that any particular trader would find one book sufficient for his traffic?—Yes, as I have said, the number of books he would have to purchase would depend very much upon the extent of his business.

42850. If you want to learn a rate, you have not to travel over the country to some particular station, and there disinter a rate from the depths of some booking office; you buy a book for a few centimes, or, at the outside, a few francs?—Yes.

42851. And there you learn not only what rate you have to pay, but under what conditions in every contingency your traffic is to be carried—what are the respective obligations and rights of the railway and of the trader?—Yes, as a rule these traffic regulations are published in a separate volume.

42852. If a man is engaged in trade, surely it matters little to him whether a few centimes or a few francs have to be paid for his permanent guidance as to what he has to pay for transit?—Not at all.

42853. And if he has to refer to more than one book, the difficulty is not increased, it only takes a little more time?—Yes.

42854. Now, I would ask you whether the first great advantage of this publicity which is a primary rule in all the great Continental systems, is to prevent exaction. Every man knows just what he ought to pay; he can calculate it, he can ascertain it, and no railway can with impunity demand a franc or a mark more than the laws allow?—If he provides himself with a published rate book, he is enabled to check the calculations.

42855. A somewhat derisory criticism is sometimes applied to the Continental method of making a separate charge for one small service or another, but it has this advantage, I submit, that the trader knows what he is paying for each part of the service, instead of lumping the whole thing, as in Ireland, into what is called a rate, which few, if any, people can analyse?—It has that advantage—that he is able to analyse the rate himself; he knows what he is paying for, and the exact amount paid for each service.

42856. So that exaction is impossible; but in Ireland you have one figure given which is called a "rate," but which includes numerous heads and items, as to which we learn from the evidence that the trader does not know what he is being charged for?—Under the law, of course, the company will segregate the rate for the public.

42857. I am speaking of the ordinary experience of the trader who receives his delivery note or account, upon which is a figure which may or may not include collection, or delivery, or one service or another, so that he really is at a loss to know what he is paying for. That difficulty can never arise on the Continent?—No.

42858. The second great feature of this publicity, as I submit to you, is that it renders undue preference very difficult?—Yes, so they say in each of the countries. I made particular inquiries with regard to that, and I was assured that this publicity of rates rendered it impossible for the railways to give undue preference.

42859. Where very few people know what is the proper rate, it is easier to give undue preference to an individual than where everybody knows what ought to be done?—Yes.

42860. That is a great advantage?—It is.

42861. Does it appear to you that these systems are drawn up with as much care for the information and interest of the public as for the interest of the railway administration or company, as the case may be?—Yes, they appear to be for mutual information.

42862. You have cited many provisions as to alternative tariffs, Soudure tariffs and so forth, which shows that nothing is left out of these systems which could inform the trader of his rights?—No, there appears to be full publicity.

42863. There are two matters to which I would refer—one as to provision in case of loss or damage. We know that in France there is a law under which the company—or the administration, I suppose—are forbidden to contract themselves in any manner or form, whether public or private, out of liability for loss or damage inflicted upon a trader?—Yes.

42864. Now, there are four heads, I think, of loss—there is total loss, there is delay in transit, there is diminution of the bulk of goods, and there is damage to the goods?—Yes.

42865. On the Continent they pay for total loss?—Yes, they pay for total loss. In France the company may, under a special tariff, limit the amount for which it will be liable.

42866. Yes, if they carry the traffic at a specially low rate they may claim consideration by limiting the compensation in case of loss?—Yes.

42867. In fact, it is I believe a proportion of the freight as a rule?—Well, I have not the figures; I do not know exactly the ratio.

42868. To what head are you referring now—to total loss?—I am referring generally to the conditions of liability attaching to a special rate. If the company lost the goods altogether, and if they carried them at a special rate, and that rate limited their liability, they would only pay up to the extent of that liability.

42869. But if there is a grave fault found against the carrier, all such stipulations disappear?—Yes.

42870. He has to make full compensation?—Full compensation.

42871. In every case?—Yes, so I read it.

42872. To avoid paying that full compensation he must prove—and the onus I think is thrown on him—that that damage arose from the nature of the goods, or from superior force, or from fault of the consignor?—Yes.

42873. As you said on the last occasion of giving evidence, the liability follows the blame, and if the carrier is to blame, or rather if he cannot prove that the blame or cause lay outside him, he has to pay compensation?—Yes.

42874. Then in cases of delay in transit there are elaborate provisions for compensation?—Yes.

42875. There appears to be a great advantage in the specification of times during which the transit must be completed—they may appear to be rather long sometimes, but it is an advantage to have these times stated beyond which compensation for delay must be paid?—Yes.

42876. They define the right of the consignor?—Yes. It is usual in France now to extend the time allowed for transit when a lower rate is given. The time limit is extended as the rate is reduced.

42877. In other words, postponing the time at which he would have to pay compensation—prolonging the period of carriage?—Yes.

42878. Then for diminution of goods also compensation must be paid, unless the carrier can show that such diminution arose from the nature of the goods?—Yes.

42879. And for damage to goods the amount of the damage has to be made good?—Yes.

42880. Does it appear to you that these provisions—which resemble each other very much in these different countries—travel along the general lines of equity?—Well, yes.

42881. And the carrier, it is important to note, has the onus of proof cast upon him?—Yes.

42882. Unless he can show that the damage in any case arose from the nature of the goods, for which he is not responsible, or from superior force by which his will is overborne, of from the fault of the consignor, he is bound to make good the loss?—Yes.

42883. I wish we had such a system in Ireland. Now, another main head. You have spoken of and described the special tariffs for interior, for import, and for export traffic?—Yes.

42884. You have given attention to the commodities which are the subjects of these special tariffs?—Yes, selected commodities—not an exhaustive list in every instance.

42885. Do the special interior tariffs confer benefit upon agricultural and manufacturing industries in the different countries by conveying at low rates agricultural produce, and requisites and raw materials for manufacture?—Yes.

42886. They do?—They do.

42887. Do the import tariffs give favourable terms for the introduction of raw material?—Generally speaking, yes.

42888. Do the export tariffs facilitate reaching external markets for the produce of the country—agricultural and industrial?—Yes, they are apparently so framed.

42889. *Mr. Acworth.*—There was one point I did not ask you about. I notice that your comparisons for butter, eggs, and bacon are with what you call the slow-transit rates?—Yes.

42890. Now, speaking broadly, and omitting details of different countries, it is, roughly, true that the Continental system is that there is a quick transit at double the rates of the slow transit?—Generally, but that does not apply to food tariffs. For instance, in Denmark perishable traffic is carried by fast train at slow-transit rates.

42891. And in Germany certain traffic pays four times as much and so on? Yes.

42892. But, broadly, there is, as my friend, Mr. Sexton, has very truly put to you, a considerable similarity right through the Continent. England is an island, and the rest of the Continent tends very much to run on the same lines. There are big differences, I admit, but still there is considerable similarity?—Yes.

Transit rates for quick and slow traffic.

42893. Taking all Europe, it is, roughly, true that the quick transit traffic pays double rates?—Yes, that is a general principle.

42894. Of course, your comparison being based on the slow rates, if you compared the Irish butter rate, say, with the quick transit rate, you would have to double the percentages?—Not necessarily; because butter comes into the food products, which get certain advantages.

Exceptional treatment for food products.

42895. Quite true, but it would have to go up a good deal, and in some cases double. I do not want to take it too far. I do not know whether you can tell us whether, as a matter of fact, a good deal of this stuff does not go by quick transit?—In Ireland?

42896. In the foreign countries?—I do not know the ratio of traffic carried by quick and slow traffic.

Relative speed of Continental and British goods services.

42897. I will not take you a bit further than this. I think the point ought to be called attention to. It is a commonplace to assert—with what accuracy I would not like to say—that in the British Isles, the normal carriage of traffic is very much quicker?—I do not know.

42898. We have often heard it asserted?—Yes.

42899. If it be true—there is no doubt where the railway companies will differ from you—that the traffic at ordinary goods rates is so quick in the United Kingdom that this perishable traffic does go at ordinary rates, and if it be shown that the slow transit is so slow on the Continent that the butter cannot use it, and has to pay the higher rates, it will upset the percentages?—Undoubtedly. I have compared only goods train transit with goods train transit.

The compilation of the comparative rates tables submitted by the Department of Agriculture.

42900. *Mr. Sexton.*—I have not been able yet to examine the comparisons handed in to-day, but I wish to ask you some questions upon the comparisons previously delivered. These comparisons, I take it, have been impartially and carefully made?—Yes. They have been made only with regard to the transit of actual traffic, so far as we could ascertain what it was: that is, points were taken between which the traffic in the particular commodity was likely to arise.

42901. The comparisons are not speculative; they are not made in an abstract way, but they represent the actual traffic?—The actual traffic. As to the bulk of that traffic, I am not able to speak.

42902. Considering the questions which have been asked, I wish to ascertain your method. You take certain pairs of stations in Ireland, certain distances from each other, and you compare them with the same number of pairs of stations in each Continental country at the same distance from each other?—Yes.

Districts selected in which most traffic exists.

42903. You take the districts in which the traffic most exists?—Yes. Allow me to correct one point. You put it that I compared the rates existing in Ireland between certain pairs of stations with the rates between certain pairs of stations on the Continent. I did not compare rates between pairs of stations on the Continent, but I compared the rates for like distances under the general mileage scales—scales of general application to the whole country.

42904. That is a good comparison for practical purposes?—I take it to be so. I avoided comparing with Continental rates between point and point where I did not exactly understand the conditions under which those rates were issued.

42905. *Chairman.*—You have taken the mileage in scales?—Yes. There are some point to point rates, but I did not use those, because I did not understand the conditions.

42906. *Mr. Sexton.*—For each pair or pairs of stations at each distance you took the lowest rate and the highest rate?—Yes.

42907. Which you found to be actually levied on the traffic?—Yes.

The suggested additions to the tables (Q. 42754)

42908. What do you say as to the point which has been made, that the comparison of five tons and ten tons rates on the Continent with the Irish rates requires to be supplemented? You take the actual rates which are charged the actual traffic in Ireland, and you compare that with the actual rates available on the Continent for lots of different magnitudes?—Well, I think that is rather a small detail.

Mar 12, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

It is merely a question of saving the trouble of looking back from the ten ton comparisons to the five ton, or from the five ton to the one ton. However, if it is considered more satisfactory to have the percentages carried forward, I will show the figures with pleasure.

42909. The Irish rates represent what is actually charged for the traffic as it goes?—Yes.

42910. And you compare on different sheets with that the rates actually charged for lots of different magnitude on the Continent?—Yes.

Continental traffic usually sent in large consignments: which renders competition by Irish goods more difficult.

42911. It has been suggested to you that consignments from the Continent are usually in the larger lots?—Yes.

42912. I suppose they are?—They are, usually.

42913. If that be so does it not, apart from technicality, make the case worse for Ireland? I mean, supposing the Irish traffic is consigned in small lots and the Continental traffic is mostly consigned to Great Britain, we will say, in five or ten ton lots, does not that make the comparison more disadvantageous to Ireland?—I would not like to express any opinion at all on that.

42914. It is carried at lower rates from the Continent?—It is carried at lower rates from the Continent.

42915. We will put it in this way: the more traffic is sent from the Continent in ten ton and five ton lots the more difficult it is for Ireland to get to the British market if its traffic is consigned in smaller quantities?—Yes.

The analyses of rates (Continental and Irish).

42916. As to errors. I think you maintain that the figures which represent the actual calculations are correct?—They have been checked and re-checked. With regard to these errors that have been pointed out in the analysis—which are very obvious—I really cannot explain for the moment how they have crept in.

42917. It did not occur to me as I followed the corrections that they materially affected the comparisons?—No.

The errors do not affect the percentage calculations.

42918. One figure or another was altered by a few points?—The prevailing, I believe, is really the important figure.

42919. As to the analysis at the bottom of the page, the accuracy of that depends on the accuracy of the eye in looking down the column?—Yes. There are no calculations at all in the analysis at the foot of the page.

42920. And, therefore, an error might easily have crept in?—Yes. It is simply the figures above, put out under their headings—forties, fifties, and sixties, and so on—and brought down here.

42921. The lowest and the highest rates in the analysis are of no great importance?—Except as indicating the ratio between highest and lowest rates in Ireland.

42922. They are only one rate each?—The vital matter is the prevailing.

The prevailing rates in the comparative tables the most important figures to be considered.

42923. You take the total number of rates in each column, and you have found between what figures the greater number of these rates varied?—Yes; taking into account the number of pairs of stations between which each percentage applied.

42924. Therefore, the "prevailing" rates in the bottom of the analysis represent the actual greater number of rates in force in each country, as shown in the column above?—Yes; any person can check the analysis by the figures above.

42925. What I think of vital importance is to consider these prevailing rates on the Continent by the light of the actual traffic from the Continent to Great Britain in some of the leading commodities. Take the rate for eggs, Table 1A. Denmark does a great trade in eggs with Great Britain?—Yes.

42926. Belgium, Germany, and France also efficiently compete. You give the prevailing rates for the interior traffic—are they higher than rates to the ports?—The export rate may be a percentage lower.

These rates for interior traffic higher than the export rates.

42927. The rates you give are not export rates?—They are not export rates; they are the interior rates of each country.

42928. Then, if you gave the export rates the comparison would be still more unfavourable to Ireland?—Yes; the comparison may possibly be up to 10 per cent. less.

42929. *Chairman.*—They are all less?—They are all less.

42930. And, therefore, it must be as Mr. Sexton says?—Yes.

42931. *Mr. Sexton.*—There is a set of rates in each of these countries the comparison of which, with Irish rates, would be still more unfavourable to Ireland, namely, the low export rates?—Yes; except for Denmark, which does not show any export rates.

42932. But taking these rates as given, what are the prevailing rates for egg traffic in Denmark as compared with the Irish rates?—In Denmark, for one-ton lots, 40 to 55 per cent. of the Irish rates, for distance extending from 12 to 190 miles, the comparison having been made with fifty two pairs of Irish stations.

42933. I simply want the percentages?—40 to 55 per cent. for Denmark, for one ton.

42934. The Danish rates taken for comparison are only from 40 to 55 per cent. of the corresponding Irish rates?—Yes. For five tons, 30 to 46 per cent. In this case a Danish five ton rate is in most of the instances compared with an Irish single ton rate, there being no five ton rates for eggs in Ireland.

42935. Probably eggs are only carried under the one ton rate from Ireland?—Yes. For ten ton lots the ratio is 27 per cent. to 44 per cent. compared with Ireland—that is, as 100 is to 27 to 44.

42936. Broadly speaking, then, with regard to this branch of traffic, which Denmark has so much developed more than Ireland, the Danish rates are from *half to quarter* of the Irish?—Yes.

42937. Belgium is the most important competitor after Denmark. What are the Belgian rates?—For one ton lots the percentage of the Belgian rate to the Irish is as 48 to 61 is to 100.

42938. About half?—Yes. There is no five ton rate in Belgium. The one ton percentage would apply for five ton lots. Except in a few cases where there is a reduced rate for consignments above one ton. The prevailing ratio is 46 to 63 per cent. of the Irish rates.

Mr. Aspinall.—They do not export much.

42939. *Chairman.*—Belgium does—oh, yes?—They do not export much.

42940. Oh, yes, they do?—We have here a return with the actual value of the exports.

Mr. Sexton.—About one million sterling from Belgium, against the Irish two millions sterling.

42941. *Chairman.*—It is a large and growing traffic?—Belgium has no ten ton rates for eggs, therefore the one ton rate comparison applies as in the case of the five ton lots.

42942. *Mr. Sexton.*—Yes; but the one ton rate is only half as much as the Irish, so it is good enough. The next competitor is Germany. Have you got the German rates?—For one ton lots the ratio is from 69 to 82 per cent. of the Irish rate. For five ton lots 46 to 63 per cent. of the Irish rate. For five ton lots, 41 to 59 per cent. of the Irish rate.

42943. The German rates are from four-fifths to less than half the Irish rates?—Yes. There are special five and ten ton lot rates for eggs in Germany. They are compared, mainly, with the Irish single ton rate.

42944. Then you compare actual with actual?—The actual working rates.

42945. The large consignments from the Continent are compared with the small consignments from Ireland?—Yes.

42946. *Lord Pirrie.*—If you had the export rates, the comparison would be more unfavourable to Ireland——

42947. *Mr. Sexton.*—For France, one ton lots are from 68 to 93 per cent. of the Irish rates. For five tons, 45 to 57 per cent. of the Irish rates. For ten tons, from 33 to 46 per cent., so that the French rates vary from a little more than nine-tenths to one-third of the Irish rate, according to the consignment?—Yes.

42948. Take butter—a very important class of traffic. Your Department's statistical return shows that Denmark exports nearly three times as much butter as Ireland, and three times as much in value. Take the case of butter to Great Britain from Denmark, the most formidable competitor?—For one ton lots, the comparison is 45 to 67 per cent. of the Irish rate. For five ton lots, 38 to 56 per cent. For ten ton lots, 34 to 47 per cent.

42949. The comparison stands at two-thirds to one-third of the Irish rates?—Yes.

42950. The other competitors are France and Holland in regard to the butter trade. Take France?—For one ton lots the prevailing ratio is 67 to 99 per cent. of the Irish rate; for five ton lots, 41 to 58 per cent.

42951. The French rates run down to less than half the Irish rates?—For the five-ton lots. There is no special ten-ton rate for butter in France. Therefore, the five-ton percentage comparison applies.

42952. The five ton runs down to less than half the Irish rate?—Yes.

42953. Now take Holland?—For one ton lots, 45 to 61 per cent. of the Irish rate; five ton lots, 33 to 43 per cent. There are no ten ton rates.

42954. The Dutch rates, therefore, vary from about two-thirds to one-third of the Irish rate?—Yes.

42955. Now take bacon. Denmark exports to Great Britain about double the quantity of bacon that Ireland does. Denmark is really the only formidable competitor in Europe in regard to bacon. What are the Danish rates for bacon?—The comparison for one ton lots is 42 to 62 per cent. of the Irish rate; five ton lots, 36 to 49 per cent.; ten ton lots, 30 per cent. to 44 per cent.

42956. The Danish rates—Denmark being the formidable competitor with Ireland—vary from three-fifths down to less than one third of the Irish rate?—Yes.

42957. Germany also is an effective competitor?—With regard to the prevailing percentages for cereals, I would be glad if that could be deferred until to-morrow, when I shall have had an opportunity of checking these prevailing percentages. So, perhaps, we may pass over cereals because of the mistake which has occurred.

42958. *Chairman.*—What is the nature of the mistake?—After the analyses were prepared we had the percentage calculations all checked, and found some mistakes. Apparently either the resulting corrections were, through oversight, not carried down into the analyses or some figures had been misplaced.

42959. *Mr. Sexton.*—There is one cereal I should wish to take—flour. There are some very curious results in regard to that. Your return shows that Austria-Hungary, Belgium, France especially, Germany, and Holland all import very much more flour into Great Britain than Ireland does?—Yes.

42960. France nine times as much, Belgium seven times as much, Austria-Hungary six times, Germany three times, and Holland something more than Ireland. Therfore, it becomes of great importance to investigate the rates in regard to that branch of traffic. What are the rates with regard to Ireland? Take first France?—The prevailing rates?

42961. Yes?—For France, the one ton comparison is 63 to 80 per cent. of the Irish trade; for five ton lots, 49 to 72 per cent.; for ten ton lots, 37 to 64 per cent.

42962. The French prevailing rates, then, are only from four-fifths to about one-third of the Irish?—Yes.

42963. Now take Austria-Hungary?—Will you take Austria or Hungary, they have different rates?

42964. Take them separately?—Austria, one ton lots, 62 to 92 per cent.; five ton lots, 44 to 86 per cent.; ten ton lots 37 to 71 per cent.

42965. They run down, for the larger consignments, to about one-third of the Irish rates?—Yes.

42966. Now take Hungary?—For one ton lots ,57 to 81 per cent.; five ton lots 43 to 81 per cent.; ten ton lots, 41 to 69 per cent.

42967. From four-fifths to two-fifths of the Irish rate?—Yes.

42968. Now take Belgium?—One ton lots, 90 to 111 per cent., as compared with Ireland's 100.

42969. *Chairman.*—The rate seems to be higher there?—Yes; from 90 to 111—10 below to 11 above. For five ton lots, 40 to 69 per cent.

42970. *Mr. Sexton.*—Therefore the five ton consignment is two-fifths to about two-thirds of the Irish rate?—Yes. There is no ten ton rate for interior transit of flour in Belgium. The prevailing ratio per cent. of the rates chargeable for a ten ton consignment is 44 to 73 compared with 100 for Ireland.

42971. I will only trouble you with one more comparison; it relates to a head of traffic which ought to be of considerable importance to Ireland—potatoes. In regard to France and Holland, France particularly—the export is immense, while the export from Ireland is very small. Will you give the French rates for the carriage of potatoes?—These are the rates for old potatoes, not new. The rates for new potatoes are higher than the rates for old; but I took the rates for old potatoes, because we have to deal chiefly with old potatoes in Ireland.

42972. *Chairman.*—That ought to be clearly stated? We will probably deliver to-morrow some rates for new potatoes. The demand for early potatoes is a growing one in Ireland, and we have taken out some of the special rates given by the railway companies for the development of the traffic, and put them beside the French rates for new potatoes. We could not compare like distance with like distance.

42973. *Mr. Sexton.*—In the meantime take old potatoes?—The ratio is 63 to 84 per cent. for one-ton lots; 46 to 70 per cent. of the Irish rates for five-ton lots; 40 to 79 per cent. of the Irish rates for ten-ton lots.

Mar. 12, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

42974. From 84 per cent. down to somewhat over one-third of the Irish rates. The other competitor in that trade is Holland. What are the rates in Holland?—For one-ton lots the ratio is 61 to 83 per cent. of the Irish rates, for five-ton lots, 44 to 69 per cent. for ten-ton lots 33 to 72 per cent.

Comparison: old potato rates; Dutch with Irish.

42975. They vary from about four-fifths of the Irish rates down to as low as one-third—is that so?—Yes.

42976. These comparisons, Mr. M'Nulty, appear to indicate the great practical value of your investigations, showing that in those branches of trade in which Continental countries have succeeded in greatly developing their traffic with Great Britain, the actual rates upon the actual consignments are very much lower than from Ireland?—Yes. Of course these comparisons have been made quite regardless of the volume of traffic carried; I had no information whatever on that point either as regards the Continent or Ireland.

The comparisons prepared regardless of the volume of traffic carried.

42977. In Ireland, I think you said, you went to the districts from which the traffic went and found the rates that were levied on the traffic?—I took the agricultural statistics of the acreage of potatoes in different counties. I then selected the different market towns in those counties and took the rates to the centres of distribution.

42978. And we know that this organised traffic from the Continent comes in large consignments. Looking through your comparisons, it seems that the prevailing rates are much lower on the Continent throughout, for all the countries and for all the commodities, except in the case of horses carried by passenger trains?—Of course, the slow transit rates are those which affect the essential bulk of the traffic in other countries.

Continental rates for horses by passenger trains.

42979. For heavy traffic the rates of horses carried in passenger trains would be important to individuals but of no great public concern?—Valuable horses are carried in horse-boxes in Ireland.

42980. But their relation to the importance and bulk of traffic as a whole is very minor?—As compared with the other live stock traffic of Ireland, it is; although it is very important to Ireland.

Examined by Mr. Aspinall.

42981. So far as these tables referring to eggs, butter, and bacon are concerned, it appears generally that the Danish rates are less almost than anybody's; it is not absolutely accurate to say that, but it is nearly so?—Yes, they are among the lowest comparisons.

Danish egg and butter rates exceptionally low.

42982. Is there any reason why on the Danish railways they are able to do this work for less money than German and other lines?—I really cannot say. I do not know anything about that; I do not know the conditions of the labour market, and so on.

42982A. *Mr. Aspinall.*—The difference is so marked.

42983. *Chairman.*—Are they State railways?—Some are not; these are State railway comparisons.

42984. *Mr. Aspinall.*—You have included in these percentages which you have given something, have not you, for the terminal services which are equivalent to the terminal services which are rendered by the Irish railways?—In every comparison I have brought in all accessory charges which appeared to be necessary to suit the Irish conditions.

All accessory charges included in the rates to make them comparable with Irish.

42985. You have included all the charges which they make; but are all the charges which they make equivalent to what the Irish railways make—I do not mean in money; I mean are the services rendered equivalent to what the Irish railway companies render?—Under normal conditions, yes. I have dealt only with normal conditions.

42986. So far as you have been able, you have made them similar?—Yes. In Denmark the way-bill is the only additional charge for small consignments. Their rate for traffic in less than wagon loads includes loading and unloading, and station services. I have not put in anything for storage, demurrage, or any penalties. I have dealt only with normal conditions.

42987. In dealing with the Irish rates which you put down for the lowest and highest rates, have you compared those at all with rates for similar services in England?—No; I have not made any comparison with English rates, only the Continental.

Irish agricultural produce rates lower than English.

42988. Are you aware that on the whole the Irish rates—here, again, not in all cases, but in most

Mar. 12, 1908.

Mr. Philip MacNulty, Transit Inspector, Department of Agriculture.

cases—are slightly lower than they are on English railways?—I can quite understand that. England is more a manufacturing country than an agricultural one.

42989. A question was asked you this morning by Mr. Sexton—or several, I think—about the compensation which was paid for damages for lost goods, and so on. Are you familiar with the difficulties which are said to be created, by the German railways more particularly, as to paying damages and compensation?—Not in actual practice; I do not know anything about how it works out.

Recovery of compensation for damaged goods on German railways.

42990. Have you heard it said that the Government regulations are so hedged round with difficulties that it is almost impossible for people to recover compensation in the event of articles being damaged, notwithstanding the fact that these regulations, which are printed on page 71, beginning with No. 558 of your evidence, show the conditions under which compensation can be recovered?—Yes. In actual practice I do not know how the system works out.

42991. My reason for asking you that is that an inquiry recently held in connection with English railway companies disclosed very great difficulties in way of traders in recovering the sums which they considered were due to them?—Yes.

42992. There is nothing in this printed evidence to reveal that?—There is nothing in the regulations to reveal it.

German method of calculating rates on the mileage scale.

Each district gets the benefit of its geographical position.

42993. Just one other point in regard to the tables. Although it is true that in the majority of cases the amount which has to be paid to the foreign railway companies is a very small percentage in some cases of that which has to be paid even to the English or Irish railway companies, if you turn, say, to No. 2A "Butter in one-ton lots, slow transit," you will find that in a great number of cases in Germany—which has been rather held up to us as being a typical country as regards railways—the charges are 105 per cent. going up to 134 and 137 per cent. of the Irish charges?—Yes. That arises from the policy of Germany giving each district the benefit of its geographical position. You observe that they do not reduce the rates as the distance increases in the same proportion as other countries do. They start, for instance, at fifteen miles with 81 per cent. of the Irish rate, and the ratio gradually increases until at sixty-two miles it passes the Irish rate, and goes right up until you get to 137 per cent. at 204 miles.

42994. Would not that act rather hardly upon the man in Westport, for instance, who wanted to export his butter to the English market?—It limits his market, apparently. I do not like to express any opinion upon that. If I were a farmer I should think my markets were rather restricted.

42995. If you turn to bacon, slow transit, No. 3A, one-ton lots, you will see the same thing happens, and there is a very marked difference between the German rates and the rates of other countries. In many cases you would have figures well over the 100 per cent. ranging from 102—I take the first figures that catch my eye—to 138, 176, 142, 157 per cent., and so on—is this for one-ton lots?

Irish rates reduced according to the distance, German rates not.

42996. *Chairman.*—What is the distance there?—The distances go from 8 to 233 in the table. The percentage increases as the distance increases.

42997. In other words, the rates in Ireland are reduced according to distance, and in Germany they are not?—That is so.

Mr. Sexton.—Yet we have seen that the prevailing rates were lower in Germany in several cases.

Chairman.—For shorter distances.

Mr. Sexton.—No, throughout, taking the whole table—the prevailing rates.

Further comparative tables to be submitted on behalf of the Department of Agriculture.

42998. *Mr. Aspinall.*—Did I understand you to say that you were going to give some fresh evidence with regard to the through rates from Continental ports across England into Ireland?—We are giving three sets of comparisons. The Commission asked specially for them about a fortnight ago, and we had to send men across to the English ports to collect the information. I have not received the statements yet, but I expect it will be to hand to-morrow morning. The first comparison is rates for Irish produce from the producing points in Ireland to points of distribution in England, and the rates for like produce from Continental ports into the same centres of distribution in England. The second is Irish interior rates on articles produced or producible in Ireland compared with rates for like products from producing centres in England to the points of distribution in Ireland. The third is a comparison of rates for fat cattle from the fattening districts in Ireland to large centres in England—the principal fat cattle markets in England—reduced to a rate per ton assuming an average weight per animal, and compared with the rate per ton for foreign meat from the British ports to the interior points of distribution.

42999. *Chairman.*—Dead meat?—Yes, the dead meat rates.

42999A. *Mr. Aspinall.*—Take the large import of foreign meat into Birkenhead brought by the White Star steamers—are you going to compare the transit rate for that meat across England?—You cannot call it an actual comparison, because the conditions are so unlike, but it will show the cost to the Irish producer of fat cattle of putting his animal into the market at a certain point in England as compared with what it costs the foreign raiser of cattle to get his carcases of meat from the British port into the same centre of distribution. I do not intend to say anything about it myself; I shall simply submit the figures without comment.

43000. The object is to show that meat can be distributed, we will say, over England at a certain rate if it comes from America, whereas it will cost so much more if it is imported from Ireland?—I presume so.

43001. I only want to get the general idea?—We do not put these figures forward with any comments; we are merely supplying them in response to a request.

Examined by Sir Herbert Jekyll.

43002. You give in some of your tables a comparison with the Continental rates up to distances of 233 miles?—Yes.

43003. As a matter of fact in some of the smaller countries like Belgium, Holland, and Denmark, are there any railway lines as long as 233 miles?—I cannot tell you that, the comparison gives the mileage and gives the rate for it—for interior transit. Whether they can send the traffic 233 miles through the country or not I do not know.

Chairman.—We know they cannot.

43004. *Sir Herbert Jekyll.*—You do not know as a matter of fact whether in a country like Denmark any butter does travel 233 miles by railroad?—No, I do not.

Chairman.—I should think he knows that it does not.

Examined by Lord Pirrie.

43005. So that probably a considerable number of these figures when you get to longer distances, so far as they relate to the small countries, are paper figures—they are not figures representing any actual trade?—That I do not know; I cannot tell you about distances. In Denmark I should think it was possible to send traffic 233 miles, but it is only to some few instances that that applies. Where I had a distance in Ireland between which traffic is passing, say bacon, I took for comparison the Continental rate for that distance in each of the countries—the published rate.

43006. But you did not inquire whether there was any corresponding distance in a country like Denmark over which traffic travelled?—No.

43007. They show the distance in the rate?—Yes; they made provision for such a distance.

Cross-examined by Mr. Balfour Browne, K.C.

43008. Of course it is a difficult thing to compare rates in any case, is it not; it is always difficult to compare rates?—I cannot say that it is.

43009. Let me suggest this. In order to fix a rate should not the manager of a railway consider the cost of carriage? Should not that be one of the bases of fixing a rate?—Yes, but I am speaking of the comparative rates in existence, not the fixing of rates.

43010. In fixing a rate the cost of carriage ought to be considered?—I am not going to express any opinion on that.

43011. If it is cost of carriage, must not the comparison be absolutely fallacious, because the cost of production of a railway must differ in all countries?—I cannot express any opinion on that. The Department of Agriculture was asked officially to submit a comparison of actual rates, and that we have submitted.

43012. In the cost of production, of course, wages must enter—the wages in two countries may differ, is not that so?—Yes; but I am afraid you do not quite appreciate my position.

43013. I do. I am coming to your position immediately; I only want to get the idea of how rates are fixed?—I cannot express any opinion on the wages market.

43014. Are you aware that in all railway management competition must, to some extent, be considered? Do you know that railway companies have been held justified by courts of law to reduce their rates if there is competition?—I must give the same answer as before.

43015. You speak of giving some through rates tomorrow, I think?—Yes.

43016. Might I ask you to do this: can you give the rate from the point of production in a foreign country to the point of consumption in England? Say Manchester is a point of consumption: can you give the same comparison from the point of production in Ireland to Manchester?—No; that is not included.

43017. But that is the point we want to understand—that is what we want to get at. The report does not help us very much?—I am sure the railway companies will be able to supply that.

43018. Yes, but we want your assistance, too. Your tables are exceedingly interesting, but I want to understand them. I find, am I not right in saying, that you talk about a prevailing rate?—Yes.

43019. A prevailing rate, according to you, is what you find in some document?—Entirely; the quoted rates.

43020. Do you know what is called a paper rate in England or Ireland—do you know what it means?—Yes.

43021. It is a rate under which no traffic goes. Many of the rates that you are comparing as prevailing rates, may be paper rates in that sense?—If so, they apply to the countries generally, because I have taken rates only of general application throughout every country.

43022. But you have not got in every sense the traffic that is passing under any of your rates?—I know nothing whatever about the volume of traffic carried under any rate, either Irish or Continental I have simply compared the rate.

43023. I am not complaining at all; I only wanted to understand, and to make perfectly clear in my own mind, what you are doing. Again, I take it from the tables which I have before me, that you are comparing distance with distance—never station to station?—That is so.

43024. Of course, no rates in this country are ever by distance, because, supposing the distance is 100 miles, if there is no station there it must be carried on to the next station, so that in that sense—again, I am not complaining—it is an illusory comparison—is not that so?—I make no deduction at all; I make no comment upon my figures at all.

Comparisons of international rates not prepared by Department of Agriculture.

43025. Then we will reserve it to such time as when we can make a comment.

43026. *Mr. Sexton.*—Your Irish rates are merely from one station to another.

43027. *Mr. Balfour Browne*, K.C.—If you will add to your figures which you are bringing to-morrow the through rate, we will say, from some place in Denmark to Manchester, and from some place in Ireland to Manchester, that would give us a good comparison. If you could do that we would be obliged?—It would take a considerable time to do it. It would necessitate going into international rates. For instance, the rates on eggs from Hungary are international, because they are to the ports on the Channel, and those rates I have not gone into.

43028. I understood, further, that in answer to Mr. Aspinall, you said you had made no comparison of rates in Ireland as compared with the rates in England?—No.

Irish and English rates not compared.

43029. Have you done anything with regard to Scotch rates?—No.

Chairman.—The witness is not here as a railway expert, Mr. Balfour Browne.

Mr. Balfour Browne, K.C.—I know. It was only really to understand his tables that I asked the questions. I was not cross-examining him in any sense whatever.

The Commission adjourned till the following morning at 11 *o'clock.*

SEVENTIETH PUBLIC SITTING—FRIDAY, MARCH 13TH, 1908.

In the Board Room of the Lancashire and Yorkshire Railway Offices, Westminster, London.

Commissioners Present:—Sir CHARLES SCOTTER, Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Mr. THOMAS SEXTON; Mr. W. M. ACWORTH; and Mr. JOHN AUDLEY FREDERICK ASPINALL;

Mr. GEORGE E. SHANAHAN, Secretary.

Mar. 13, 1908.

Arrangements as to further sittings of the Commission.

Mr. Balfour Browne, K.C.—Before you begin, sir, might I ask a question with regard to your further sittings. It was, I understood, arranged or proposed that the next sittings of this Commission should be in Dublin on the 21st April, and that at that time the railway case should be gone into. That is what I understood, sir. We are most anxious that all the evidence to which we should have to give an answer should be given before we give our answer—you can understand that—and if at these sittings that we are now upon all the general evidence is completed, we will be quite ready to go on on the 21st April with the railway case, and in that event, even although there are a large number of tables, such as were put in yesterday, which must be scrutinised before we can make absolutely our proofs, we would be in a position to let you have proofs of the witnesses we propose to call at least a week before the 21st April. I do not know whether that will be convenient to the members of the Commission, but I thought I would like to mention it.

Chairman.—We are to have a meeting to-day after lunch—a meeting of the Commissioners—and we will consider what you have said, and before the adjournment you shall have an answer.

Mr. Balfour Browne, K.C.—If you will allow me, I will mention it again to-morrow.

Chairman.—Oh, I will give you an answer this afternoon.

Mr. Balfour Browne, K.C.—May it please you, sir. Thank you.

Mr. R. A. ANDERSON examined by the CHAIRMAN.

Mr. R. A. Anderson, Secretary, Irish Agricultural Organisation Society.

43030. I think you are Secretary of the Irish Agricultural Organisation Society?—Yes.

43031. How long has this society been in existence?—Over fourteen years.

43032. Your Society is not engaged in any trade, is it?—No; it is not a trading body. It is purely propagandist.

Object and work of the Society.

43033. What do you consider its principal object?—Well, the object is to teach farmers to combine wherever combination can be shown to be of benefit to them in their business, and to combine not in the manner of joint-stock companies, but as co operative societies. Perhaps if I just indicated the main lines upon which these combinations were formed it might be useful.

43034. I think you had better tell us in your own words?—The types of societies which we have formed are creameries, co-operative credit societies, agricultural supply societies, societies of poultry-keepers, bee-keepers, flax-scutching mills, bacon-curing societies, home industries societies, fruit-growers' societies, agricultural show societies, societies for the purchasing of expensive agricultural machinery to be jointly used by the members; and then there are other kinds of societies for cottage industries and for libraries and so forth. I put in a map showing the way in which these societies are distributed over Ireland. There are now over 900 of them.

Number and distribution of its agencies.

43035. We cannot put the map on the notes?—I am afraid not.

43036. But you may state generally that your agencies are distributed practically over nearly the whole of Ireland?—That is so, and therefore every railway company would be more or less affected by the evidence which we propose to tender.

43037. I understand you do not appear here to complain against the Irish railway companies?—No, not, generally speaking. I propose to give evidence to show where in our opinion the railway companies have not quite done as much as we might have expected of them, but our Society has never joined in what I may call the general chorus of abuse of the Irish railways, because we felt that the conditions in Ireland were not such as enabled the railway companies in every case to give the lowest rates or the best facilities for the conveyance of produce; and if I might just explain what I mean here, we aim at organising farmers to produce in large quantities at regular times, and to consign in bulk to the markets, and we claim that if that system were made universal over Ireland, the railway companies would find it much easier to deal with this organised traffic than they could possibly find in dealing with a heterogeneous collection of small parcels of produce.

43038. Not only find it more convenient, but be able to carry it at a cheaper rate?—That is what we contend. If I might be allowed to read the latter part of this third paragraph of my abstract it would explain what I mean. The Committee of the Society recognised from the first that before the lowest rates and best transit conditions consistent with fair profits to the shareholders could be expected from the railway companies the farmers would have to be organised to conduct their business on modern lines; to produce, grade, and pack in accordance with market requirements; to consign regularly in large quantities and at stated times, and in this way to systematise their dealings with the carrying companies. To this object, therefore, the work of the Society was in a great measure directed, and has resulted in the formation of 925 societies having a membership of 93,000, and an estimated turn-over for 1907 of nearly 2¼ millions sterling.

43039. You consider this, to me rather astonishing result, has been in consequence of the action of your Society?—Well, there is no other agency at work to produce the result, because the only society which is engaged in this propagandist work of teaching co-operative principles to farmers is the Organisation Society in Ireland.

43040. I think it would be interesting if you just gave a little more detail with reference to the 925 societies. What are they?—They are made up in this way. There are 345 creameries.

43041. Of course they are in different parts of Ireland?—Yes; they are mostly in the South and in the North-West of Ireland.

43042. How many members are there interested in the creameries?—47,000, and the turn-over in round figures is a million and a half, which is equal to rather more than half the total exports of butter from Ireland during the year.

43043. But of course all these creameries are distributed in the country as well as in the towns?—Oh, yes.

43044. Go on to the next, please?—The agricultural societies number 166, and they have a membership of 15,000, and an estimated trade of £75,000. It really is in excess of that, because a great number of the creameries act also as agricultural supply societies, and do not make any special returns of the trade which they do in that branch. These

societies are mainly formed for the purpose of purchasing wholesale from the manufacturers and from seed-growers, artificial manures, seeds, feeding-stuffs, implements and machinery.

43045. In other words, enabling them to buy wholesale instead of retail?—Quite so.

43046. And then to sell at wholesale prices to retail people in the country?—That is so.

43047. I only want you to give us the societies?—The credit societies are not trading bodies; they are for the object of associating a number of poor men for the purpose of obtaining sums of money to be lent for productive purposes to selected persons.

43048. How many of these societies are there?—There are 261 societies, the membership of which is 16,000.

43049. Go on, please?—The poultry societies we regard, and I think rightly, as being next to the creameries the most important, because the poultry industry in Ireland, which already runs the butter industry very close, is a matter which may be developed very much more rapidly than the industry of dairy-farming. It is all a question of making the poultry-keeping pay, and we find from experience that the isolated poultry-keeper cannot possibly expect to get his produce to the market speedily enough or packed in the way that the modern requirements of the market demand, and therefore we associate these poultry-keepers for the purpose of selling their eggs in large quantities while fresh, and also for the purpose of selling their poultry killed and prepared for the market in the way that the market demands. The egg industry is a most important one to the Irish peasant, and particularly in the very poor districts, where my experience goes to show that eggs are very frequently treated as currency. It may interest the Commission to know that I have myself seen at Donegal a child tender two eggs in payment for a postage stamp.

43050. *Lord Pirrie.*—Did this child get the postage stamp?—No; the postmaster gave the current payment for the eggs, and then the money was exchanged for the stamp, but it was about the equivalent of the stamp.

43051. *Chairman.*—In those particular societies I suppose the poorest peasantry are members?—Yes; that is so.

43052. It must be of great assistance to them?—It has raised the price of the produce considerably, because it has put each of these small producers of poultry produce in a position to obtain the highest prices for their small parcels of produce by combining with other small people.

43053. Go on with the next?—The flax societies aim at improving the methods of after-treatment of the flax crop. The Department of Agriculture, of course, give technical instruction in the growing of the crop, and also to some extent in the after-treatment.

43054. That is in the North, principally?—Yes, that is in the North, but we have now got the farmers in fifteen instances to own their own mills where the fibre is divided from the husk, and properly treated for the market. We have not made much progress with that. Last year was particularly bad for the flax.

43055. On account of the weather?—On account of the weather, but still the farmers who compose these societies have told us that their position would have been very much worse if it had not been for the new methods introduced.

43056. That gives us a general idea of what these societies are, and then there are miscellaneous societies, I see, 104 in number, which brings up the total to 925?—That is so. May I just mention that the starting of these creameries has tended to increase the production of butter in two ways—by realising a better price for the product people have been encouraged to increase the number of milch cows they keep, and also by modern methods of manufacture more butter is produced from a given quantity of milk than hitherto.

43057. And there is improvement in the quality?—Yes.

43058. I think we have had considerable evidence of that from managers of creameries?—In connection with the agricultural societies I should like to mention that I have heard from the managing director of one of the largest artificial manure firms that between the years 1900 and 1906 the purchase of artificial manures by Irish farmers had increased from 120,000 tons to 175,000 tons, and he unhesitatingly stated that the increase in the use of these fertilisers was due very largely to the fact that the small farmers could now purchase through these co-operative societies at wholesale prices. I should like to mention also that the starting of these co-operative societies has not affected the manufacturers' price at all—the manufacturers' price to-day is somewhat higher than when they were first started—but what it has done has been to eliminate the middleman distributor in these articles who had to charge—or did charge, at all events—very high prices.

Co-operative societies have not affected manufacturers' prices.

But excessive "middleman" charges saved.

43059. Does your society go further, and communicate directly with the railway companies in reference to rates and charges?—Yes, we do; and when a society has a grievance, they naturally come to us and tell us about it, and we approach the railway companies and see if we can have whatever they complain of remedied.

The society's relations with the railway companies.

43060. Do you know whether there has been any particular reduction in any particular district consequent upon the action of your society?—It was not so much with a view to getting a reduced rate as with a view to getting improved facilities.

43061. Well, improved facilities?—Yes, I must say that the railway companies, wherever we can show a reasonably good case, do meet us very fairly. The thing we complain of really about the railway companies is this. We maintain that we have spent nearly £100,000 of money, subscribed largely by private individuals, on bringing about this improved method of farming, and what we, and as, I think, reasonably, complain of is that the railway companies are scarcely responsive enough to this work which is going on. We would like to see the railway companies say to our societies, "We are prepared to make special arrangements for your traffic," and we believe they could do it without laying themselves open to the charge of undue preference by saying to every consignor of goods, "If you produce or consign goods in equal quantities in the same way, we will give you this special preference." But we feel that the railway companies treat the co-operative societies very much as they treat the ordinary individual who has really done very little to improve matters for them.

Desirability of further encouraging co-operation by reduced rates for large consignments.

43062. Of course the small trader would consign in very small consignments, and I suppose the consignments would come in what is known as the small parcels scheme, but the co-operative societies would send in larger quantities, and would come under the ordinary rates?—Yes, but it would be quite open for the small traders to combine and form themselves into societies for joint consignment.

43063. The remedy seems, then, to be in the hands of the people?—Very largely, but I think a little encouragement might be given by the railway companies.

The remedy largely in the hands of the people.

43064. Do you mean, say, a rate for a ton lot, or under a ton, or two tons?—Well, it is difficult to fix the exact size of the consignment for which these rates might be given, but I think, generally speaking, if the great carrying companies could see their way to giving a special rate for goods specially prepared for the English markets, and sent at regular intervals, that would meet our case.

43065. Has the question of through rates been brought under your notice?—Yes, there are some cases which I wish to refer to. Perhaps if you will allow me to read this paragraph it will just give the whole case. At present no through rates are available from Limerick and other inland stations to certain important towns in the North-East of England by the North-Eastern Railway. This, it is only fair to say, is not due to any reluctance on the part of the Great Southern and Western Railway Company, but to the action of the North-Eastern Railway Company of England, which will not give through rates except from certain ports.

Through rates to North-Eastern English towns from Limerick and other inland stations required.

43066. What ports?—The information which I have is from the secretary of the Co-operative Agency Society in Limerick. He does not specify the ports.

Chairman.—We had some evidence about that, and I think the North-Eastern has fallen into line.

Mr. Balfour Browne, K.C.—It was mentioned before, sir, and the railway companies are in correspondence with the North-Eastern to try and secure through rates.

The matter in correspondence between the railway companies concerned.

Lord Pirrie.—They have not secured them yet.

Mr. Balfour Browne, K.C.—No, my lord.

Chairman.—Of course Mr. Anderson said he did not blame the Irish railways at all.

Mr. Balfour Browne, K.C.—I am not complaining at all.

Mar. 13, 1908.

Mr. R. A. Anderson, Secretary, Irish Agricultural Organisation Society.

Proposal that the granting of through rates should be made compulsory on the companies.

Difficulty in obtaining settlement of claims on goods sent over two or more systems.

Suggested amendment of carriers' law.

Contracting company to be sued in every case.

Butter sent by passenger train—claims only paid when lost.

Establishment of an agricultural produce parcels post recommended.

Unfairness of present owner's risk conditions.

Witness.—To send butter from Limerick to Durham, it has to be sent *via* Glasgow. While this is cheaper than sending by the shorter but more expensive route, the delay involved is very considerable, and butter is frequently not delivered until a week has elapsed after its consignment. I would submit that the granting of through rates between all stations where goods facilities exist should be made compulsory on all railway companies. In connection with through rates, I wish to call the attention of the Commission to a very serious defect. Where goods are sent over two or more systems, and a claim is made for damage or delay in transit, the consignor finds the greatest difficulty in fixing the responsibility on the particular company which may be to blame. Take a case in point. The Irish Co-operative Agency Society (which is one of the largest butter exporters in Ireland, and is a federation of co-operative creameries) sent a consignment of butter by the Cork Steampacket Company to London, *via* Cork, Liverpool, and the Midland Railway of England. The butter arrived in a damaged condition in London, and a loss of £13 was incurred by the Agency Society. That society took up the matter with the companies concerned. It held a clear receipt from the Great Southern and Western Railway, and that company showed the society that they also held a clear receipt from the Cork Steampacket Company. The Cork Steampacket Company and the Midland Railway, however, refused to facilitate the Agency Society, and legal proceedings had to be instituted against both. The Recorder of Cork gave a decree against the Midland Railway Company alone because, on investigating the case, it was proved that the Cork Steampacket Company held a clear receipt from the company. The case against the Steampacket Company was dismissed, and the Agency Society had to pay the costs. It appears to the Irish Agricultural Organisation Society that the law fixing the responsibility of carrying companies should be so amended as to enable the consignor to obtain redress by suing the contracting company only. There is another important point to which I desire to call attention. In recent years a considerable demand for Irish creamery butter in rolls has sprung up. This traffic has to be consigned by passenger train. If it is sent at the owner's risk rate of ½*d.* per lb., and is pilfered or damaged in transit, the consignor has no redress. Up to about eighteen months ago the railway companies, generally speaking, compromised claims and paid something where pilferage or damage occurred. Now it is only when the consignment is lost altogether that the railway companies pay up. As a result of this change of policy, shippers of creamery butter in rolls are obliged to get an indemnity from their customers for full payment, otherwise the former would be obliged to send it by ordinary rates or by the parcel rate of 1½*d.* per lb., which would make the price prohibitive to the buyer. The giving of such an indemnity naturally reduces the price which the buyer is prepared to pay. The establishment of an agricultural produce parcels post would be of great advantage alike to producers and consumers. Such a system exists in France, where it is largely taken advantage of by the *Syndicats Agricoles*, which correspond to our agricultural co-operative societies in Ireland. There is another point, but I do not know whether you prefer to deal with these two questions first. Shall I proceed?

43067. I think you might give us your views?—Another rather important point I have noted here is about the proof of malice being necessary before a claim can lie against a railway company.

43068. What is the point?—This is the point—and it is yet another serious defect in the system of goods transit. In order to establish a claim against the railway company it must be proved that the injury complained of was due to the malice of the company's servants (that is, in the case of owner's risk), and malice cannot be proved unless the consignor is in a position to show that the officials of the company acted deliberately and maliciously—a clear impossibility.

43069. I see all your remarks relate to goods carried at owner's risk?—This in particular.

43070. And the others too—it is all at owner's risk?—Yes, all at owner's risk.

43071. Of course that question has been fully discussed before us?—I daresay it is unnecessary for me to give evidence about that, because I am sure that evidence has been given by expert witnesses upon the point.

43072. I think so. What do you say about the owner's risk rate, as to the difference between the company's risk rate and the owner's risk rate. Have you considered that question?—Well, I do not think the owner's risk rate is low enough to justify its existence, because the difficulty of getting compensation appears to be so great where the owner's risk rate is taken advantage of.

43073. Do you know anything about the rates—there is considerable difference between the companies?—Considerable difference. I have made comparison between owner's risk rate and ordinary rate.

43074. Taking it all round—taking a year's transit from any of these creameries, do you not think it considerably to the advantage of the creamery to have its traffic carried at owner's risk, and suffer even pilferages now and then, or damage now and then?—I do not think so.

43075. Then why do they not consign at company's risk?—If you want to keep on good terms with your customers, I think you will find that the ordinary risk rate is the one you will adopt—the company's risk.

43076. You say that they are practically prohibitive, because it would be too great a tax upon the articles?—In the case of small parcels it would.

43077. *Mr. Acworth.*—I did not quite understand—you say you did not think the owner's risk rate was low enough?—I do not think it is.

43078. Does that mean that you think if the owners take the risk there ought to be a bigger drop from the company's risk rate than at present?—Yes.

43079. Do you know how much it is as a rule at the present time?—I could not say straight off, but I am arguing from the proportion of butter sent at ordinary, and at owner's risk rates, and the managers of the societies whom I have consulted about this point tell me that they all prefer company's risk rate. But I suppose they gamble against the risks which they run by taking the other rate.

43080. *Mr. Sexton.*—If you pay the company's risk rate, you avoid risks?—Yes.

43081. But you think the difference between the two rates ought to be greater in order to indemnify the owner?—Yes.

43082. *Mr. Acworth.*—Surely there is less margin in the case of butter than in the case of most other things. We have heard of 20, 30, and 40 per cent. reductions?—Yes.

43083. You cannot give us the difference?—No; I would not like to answer that question.

43084. *Chairman.*—Will you pass on to the question of monopolies with regard to through rates. What have you to say about that?—The point my Committee instructed me to make was that we maintain that from every station where there are goods facilities there ought to be a similar rate to every other station similarly circumstanced. There ought to be no difficulty in sending goods from one part of the United Kingdom to any other at through rates.

43085. *Chairman.*—The North Staffordshire have given way, have they not, on this point?

Mr. Croker Barrington, Solicitor.—No, sir.

43086. *Chairman.*—Then there are only two companies left?—There used to be a difficulty with the Midland of England. I have had several complaints about the refusal of the company to give through rates. That means that the goods have to be sent to Belfast, and are booked from there. There is one very important point I should like to mention here, and that is the absolute necessity for affording facilities to small societies and small producers to bring their goods to definite centres where they may be graded and packed for market, and I am bound to say this—that most of the inland rates of railway companies in Ireland for the conveyance of goods or stations to convenient centres for grading are really prohibitive. I will give you a very striking figure in one particular case to start with. It must be remembered that where goods are sent to any one centre from a number of small centres for the purpose of grading those goods are sent out again over probably the same railway system; they are brought in once for grading purposes, and sent out again at a through rate, of which the railway company gets its proper proportion. Therefore, in order to facilitate

Mr R A. Anderson, Secretary, Irish Agricultural Organisation Society.

grading, and to encourage increase in production of these kinds of things like eggs, butter, vegetables, poultry, and so forth, we maintain that the railway companies ought to facilitate the collection of these goods at convenient centres for grading purposes by giving a very low rate, indeed, seeing that they get the conveyance of the goods outwards again when they are graded. Now, some years ago it was suggested that Dublin should be made the great depot for butter, and the butter trade all over the United Kingdom has been crying out for some system of grading butter in order that people may purchase Irish butter as they purchase Colonial butter now, that is to say, under brands, or grades, or marks; whereas at the present time practically every parcel of Irish butter which comes to this market has to be separately examined in order that the buyer may know what he is buying. To facilitate this it was suggested that as Dublin was a convenient centre, all the railways converging there, a depot should be opened for this purpose. And unless a low rate could be obtained for it it would be impossible to add this additional expense to the rate inwards to Dublin and the rate outwards on the goods; it would be impossible to grade the produce economically. Well, the matter was discussed with the railway companies at considerable length, and there was a meeting, at which I was present, at the Irish Railway Clearing House. The utmost the companies were prepared to concede was a through rate increased by ten per cent. This would give us the privilege of intercepting the butter in transit, examining it, grading it, and re-consigning it where necessary. Supposing, for example, a parcel of butter were found sent to the London market which was suitable for the Glasgow market, this would be diverted to Glasgow, and its equivalent taken from another consignment and sent to London. That means, of course, that this depot would be a sort of clearing house for the butter traffic, and would thus entail very considerable expense in working. Well, that extra ten per cent., of course, knocked the thing on the head; we could not go on with it. We asked that the existing through rates should be maintained, but the companies pointed out that if this were so the butter merchants in Dublin could claim to get their butter into Dublin at the same rate, or at a rate equal to that charged on the produce brought in for grading. I argued, but made no impression upon them, that butter coming for grading to Dublin might be so consigned and so marked, and would not be sold in Dublin; that practically it would come into bond when it came into this grading store, and would not be sold locally; it would have to be sent out again. Well, the Department of Agriculture has been urged to establish these depots in different parts, Cork, Waterford, Belfast, and elsewhere, but this question of rates stops it; and I do not know whether this Commission could make any recommendation to the railway companies whereby some facilities might be afforded to people who are really desirous of preparing produce for the market in a way that will command the highest prices.

43087. I thought these creameries were established for that very purpose?—With the creameries you do attain it to a very considerable extent; but even in the creameries you will find the greatest difference between the work of any two of them, and it is necessary to have this produce graded in some way, so as to ensure that it will go to the right market.

43088. Who would do the grading at Dublin?—It would have to be done by experts just as it is done in New Zealand and Australia.

43089. Who would pay the expenses?—There would be a levy on each package of butter graded.

43090. *Lord Pirrie.*—In the Colonies the butter comes to a certain place where it is graded. It is not graded at one place and another, as you are proposing; it is all one grade in the Colonies. Take New Zealand?—By no means, there are several grades.

43091. Several, but not thirty or forty, as you are proposing?—Not at all; but it is not so much grading the butter for character as grading it for quality. I do not suppose there would be more than three grades. There would probably be "extra superfine" or something like that, and "very good," and not "inferior," because you could not admit that anything was inferior—but there would be a third grade.

43092. *Mr. Acworth.*—Would the idea be that it would be all bulked together?—Not at all, but that it should be classified, and classified by some independent judge; not by the seller. At the present time the seller calls everything that he sends into the market "first-class," and the buyer very often finds that it is not. In order to make the creamery system apply to poor districts an experiment was tried in Cork, where there is a large churning factory started, and this had in connection with it at one time fourteen or fifteen branches, the cream from which, having been separated by the centrifugal method, was brought in by train to Cork, and there churned. I must explain that, in order to get uniformity, the cream from these branches or auxiliaries, as we call them, was treated in large vats, and the article thus produced was of uniform quality, by which the small creameries which could not afford to erect churning plants of their own got all the advantages of churning under the most modern scientific conditions. But the rates charged on this cream by the railway companies were a very serious obstacle, and after a considerable amount of negotiation the Great Southern and Western met us very fairly, and made a considerable reduction in those rates. We worked on this system for some time, and then I approached the Great Southern and Western again, because I still thought that the rates were very much in excess of what they ought to be, and the Great Southern and Western offered to give us a rate of §*d.* per gallon for cream for distances of one to thirty miles, and of 9-10*d.* per gallon for cream for distances of one to thirty miles at owner's risk. That worked out at 9*s.* 10*d.* and 14*s.* 9*d.* per ton respectively, and would be something like thirty-three per cent. in excess of the milk rates This would have been an advantage to us, but the other railway companies refused to agree to it, and although the Great Southern and Western were willing to meet us, and they were the principal company concerned, the other companies refused to agree. Now, let me just point out to this Commission what even these reduced rates would have amounted to. The rate would amount to 1*s.* 4*d.* per cwt. on cream; that would be equal to 26*s.* 8*d.* per ton of cream, which would equal, if you take the equivalent of butter resulting from a ton of cream, to £3 on a ton of butter. Well, a ton of butter can be sent from Cork to London at present for £2, and it was actually proposed to charge £3 for the unmanufactured article for distances up to fifty miles. That, I say with great respect to the railway companies, is a mistaken policy.

Development of butter traffic handicapped by high rates for cream.

Reduction in the rates proposed by the G. S. & W. Co.

But refused by the other companies.

Disproportionate rates for the manufactured and the unmanufactured article.

43093. *Chairman.*—That was the passenger train rate?—That was the passenger train rate, quite true; but £3 was the rate for the butter produced from a ton of cream.

43094. At the rate of?—At the rate of. The existing rate for butter was 10*s.*; so they actually charged six times as much for the unmanufactured article as for the manufactured. We did not understand it.

43095. *Mr. Balfour Browne,* K.C.—10*s.* is the goods train rate?—Yes, that is so.

43096. *Chairman.*—You must not compare goods train with passenger train?—This is sent at owners' risk by passenger train. The consignor doing the loading and unloading.

43097. With regard to the goods rates, I think you agree that they are, on the whole, satisfactory, do you not?—Yes. The goods rates on butter and eggs, I do not consider, myself, are any serious barrier to progress, but I do think that these unmanufactured cream rates are excessive.

Rates for butter and egg traffic reasonable.

43098. Has your attention been given to the question of potato growing?—Yes. Some years ago we tried to introduce early potato growing in the Arran Islands, and in spite of the season producing almost the first frost on record, the islanders were able to grow early potatoes under our instructions, early enough to be sold in the Dublin market at 6*d.* a pound. The first consignment was sold at 6*d.* a pound, and a few days afterwards the next consignment reached Dublin and did not pay freight.

Arran Islands early potato growing industry handicapped by excessive rates.

43099. Why?—The freight was too high, although the Midland Railway made us a special consignment rate. The freight was too high, and the market had just dropped sufficiently to leave no margin.

43100. In fact new potatoes from other districts had come in?—Yes, from the Channel Islands.

43101. As long as you could get 6*d.* a pound, of course that would pay?—Oh, yes, that would pay.

Mar. 13, 1908.

Mr. R. A. Anderson, Secretary, Irish Agricultural Organisation Society.

43102. We have had evidence before us with reference to the handling of perishable goods in Ireland, such as butter and eggs; have you anything to say upon that?—Well, I am glad to be able to say generally that there is an improvement in the care that is taken. Still, I think the companies would do well to give more stringent instructions to their employees to handle stuff like eggs, for instance, with greater care. One thing they are not particular enough about. The system of packing eggs which we employ necessitates the putting of the eggs in cases which contain over 800 or 1,200—sometimes half that quantity. The eggs are packed in layers with wood wool—fine wood shavings. If these cases are allowed to become musty, the eggs are destroyed very quickly, because they may look all right outside, but inside the musty flavour spreads with great rapidity; therefore it is most important that these cases should always be protected from the rain, and, of course, from the heat of the sun. Butter sometimes comes into the market in a very soft condition, but it is recognised by us that when the traffic has to be handled by a railway company on the Irish side, by a steamship company across Channel, and by another company on this side, all carrying the goods short distances, it is hardly possible to provide for refrigerating chambers like you have with Colonial traffic.

Improved handling of perishable traffic in transit.

43103. I was just going to ask a question with reference to what I will call the raw material that farmers have to use, such as manures, lime, and so on. Lime, I suppose, is an ingredient used for the land in Ireland?—Yes.

Necessity of protecting egg packages from the weather.

43104. Is that carried by the railway companies at what you would consider reasonable rates?—We have made inquiries about that and we find that whether the rates are reasonable or not, the farmers will not avail themselves of them, and I am inclined to think they would if the rates were reduced. And as every ton of these raw materials for farming carried over the line would produce a very considerable increase in crops, we believe that the railway companies would, indirectly and ultimately, benefit very considerably by giving very low rates indeed for the conveyance of these fertilising ingredients.

Reduction in the rates for natural fertilisers required.

43105. What are they principally?—Town manure, stable manure, limestone, and, of course, there are the manufactured artificial manures. I do not think the rates for the last-named are too high.

43106. It is in the town manure and the lime that you think some reduction might be made to the great benefit of agricultural districts?—To their great benefit. Then with regard to sulphate of copper, which I daresay the Commission may know is highly used by us in spraying our potato crop—and it is more largely used every year—the railway companies have given, very wisely, a reduction in the freight on that, but even a still further reduction would be desirable, because the more people are encouraged to spray their potato crops, naturally the more potatoes will there be to sell, and the more pigs to be fed, and so on. The freights charged on milk are, in our opinion also exceedingly high.

Complaint as to excessive milk rates.

43107. Have you noticed, or have you made any comparisons with the rates charged in England on milk?—No.

43108. You do not suggest that they are high?—The standard of living is so much lower in Ireland than in England that I do not think you can institute a comparison.

43109. You can institute a comparison?—Well, not a fair comparison.

Contention that the rates for agricultural produce should be lower in Ireland than in England.

43110. Your contention being that the circumstances in Ireland are such that the rates should in all cases be less than in England?—Not in all cases.

43111. For that particular traffic?—For things of that kind.

43112. Milk, cream, butter, eggs, and poultry?—Yes. The distances from which milk is brought in Ireland are, I understand, very considerably longer than they are in England—the towns are very much nearer together in England, and each town has, within a reasonable radius, a considerable supply of milk.

43113. What do you suppose the average distance is that milk is conveyed, say, to Belfast?—I should think from within about twenty miles.

43114. Well, I saw a milk train this morning that had travelled 100 miles coming into London, so that I should think the distances in England are much longer than in Ireland?—The Belfast milk trade is very much better done than in the case of any other town in Ireland.

43115. Dublin, for instance?—Dublin is the worst.

43116. Where does the milk come from to Dublin?—Very largely from very near Dublin, but some people send milk over 100 miles into Dublin.

43117. And you think that those rates are rather more than the traffic can bear?—I think they are.

43118. That is what you mean?—Yes, because the retail price for milk is low in Dublin, comparatively speaking. It might be due to bad quality, but the price is low.

43119. What is it?—It varies from 2*d.* to 3*d.*

43120. The retail price?—Yes.

43121. A quart?—Yes. The very high class milk trade would be 4*d.*, but that is very limited. There is plenty of milk sold in the poor parts of Dublin at 2*d.* a quart which I am certain is not pure milk.

43122. Of course you do not suggest that all these reductions of rates for the benefit of the agricultural interest of the country should be made by the railway companies?—I think wherever the railway companies are able to show that they lose revenue seriously by making a reduction without a prospect of recovering it by increased traffic within a reasonable time they ought to be guaranteed against loss.

43123. Guaranteed by whom?—By the State. Or in the case of a new industry which required much assistance in the way of a special rate, the railway companies could not be expected to do this from philanthrophy.

43124. Have you considered the question whether State ownership of the railways would be to the advantage of the agricultural industries of the country?—I have not given it very much thought. Of course I have discussed it often with people who are strong advocates of it.

43125. Have they convinced you?—I do not think they have.

43126. What do you suggest in reference to that? What is your own opinion?—My own opinion is that amalgamation might be an advantage to the country. There are a great number of small lines of railway in Ireland which do not pay, and I do not think ever will pay; and they conduct their business according to their own sweet will, and it would be certainly very much better for the public to have them run by what I may call, without offence to the small companies, a responsible railway company; and if amalgamation would also mean the linking up of the various railway systems at certain points which I propose to mention to you, I think it would be a great advantage to the country.

43127. Do you mean that the railway systems should be in the hands of three or four or more separate companies?—Possibly three or four. Of course it is rather complicated by the fact that now the Midland Railway Company of England has come in and taken over the Northern Counties Railway, and, I believe, exercises a controlling influence over the Donegal Railways. You have got to deal with the Midland Railway Company.

43128. Do you consider that that has been an advantage to Ireland or otherwise?—I know the line pretty well, and I cannot say that it has been an advantage.

43129. It has not been?—I do not think it has; and I would go further and say that the influence exercised over Irish railways by the English railways is a bad influence.

43130. That is your view?—Yes.

43131. You suggest that there should be three or four large companies. Would you compel, say, the Great Northern of Ireland to take over the unproductive railways in its district?—Well, where they are guaranteed I do not see that the Great Northern would suffer.

43132. But where they are not guaranteed, where they do not pay their working expenses, would you compel the Great Northern to work them at their cost?—I do not think that would be fair. I do not think you could expect a successful railway company to suffer in that way.

43133. Someone would have to guarantee them against loss?—Certainly.

43134. Who is that someone?—You would have to fall back upon the State there again, because there is no other source from which you could guarantee.

43135. Then it would be a State guarantee?—Yes, and probably State supervision.

43136. Supposing it was State ownership with Irish management, what do you say to that—an Irish body to manage the railways owned by the State?—This is a subject that my Committee has never expressed any opinion upon, and if I give an opinion it must be taken as being my personal opinion.

43137. I am asking your personal opinion?—Personally I do not think that a State body would succeed any better in railway management in Ireland than different railway Boards have succeeded. I do not see how they could do much more with the resources under their control, and I think if some small suggestions which I have to make about railways were carried out the public would be accommodated just as well, as far as the conditions of the country permit, by the existing railway systems.

43138. Would you agree that there are many districts in Ireland that are suffering now from a want of railway accommodation?—Yes, suffering in a way which really might be amended very easily.

43139. What way?—I have marked on this little railway map here four points to which I will refer in my evidence later on, where different railway companies have failed to make connections. One is between Sligo and Bundoran, which would afford a connection between the Midland Great Western Railway Company and the Great Northern; another is between Ballywillan and Oldcastle, which would give similar connections; another is between Kingscourt and Carrickmacross, a distance of a very few miles, which would connect two very important parts of the Great Northern Railway, and the fourth is a connection between Shillelagh and Carlow connecting the South-Eastern with the Great Southern and Western. There are many others, but these occur to me as being very important, and I know from having travelled over the country what a difficulty it is to get from one part of the country to another owing to the lack of these connections.

43140. What do you suggest—that there should be light railways in these districts?—No; a continuation of the broad gauge so as to avoid the expense of transhipment.

43141. How are you to find the capital?—I think the companies ought to be compelled to make these connections.

43142. The existing railway companies?—Yes.

43143. At their own cost?—Yes.

43144. And risk?—Yes; none of them seems to be a very serious project from the point of view of length or expense.

43145. At any rate that is your view, that the existing railway companies ought to be compelled to make those lines, whether they pay or not?—I have not gone into the question of payment, but I consider that the railway companies have been given practically the monopoly of a very large territory in each case, and that it is only fair, having been given this monopoly, that they should be compelled to make these connections in order to convenience the travelling public. Dealing with the question of State ownership, the opinion of my Committee was, that as a considerable number of the railways do not pay, and cannot pay, a dividend now, it does not seem very likely that the dividend forms a very serious burden or prevents the railways from carrying at a low rate.

Chairman.—I think I understand your views.

Examined by Mr. Acworth.

43146. We had some valuable evidence from the Department of Agriculture yesterday about foreign rates. Would you say that the 10-ton rates that are given for various commodities, and especially in Germany and German-influenced countries, would be of any use, even with your organisation, for things like butter and eggs?—No; we seldom have 10 tons at a time going from point to point.

43147. Do you contemplate getting anything of the kind?—Not to any such dimensions as that.

43148. You can imagine getting up to a 5-ton rate, possibly a truck load rate, but not to a 10-ton rate?—We might conceivably, but it would be very rare.

Mar. 13, 1908.

Mr. R. A. Anderson, Secretary, Irish Agricultural Organisation Society.

43149. Even that you do not get as a rule of course—it is really the ordinary tonnage rates that affect you?—Yes, they apply to lots of three cwt., and upwards.

43150. I want your opinion on a perfectly general question. We have had a good deal of evidence here that the rates on what I may call small parcels, passenger train parcels, are very high, and the conditions onerous; you would agree with me that it is very much more expensive to the railway company to do business in 40-lb. lots than in ton lots?—Oh, yes.

Rates for small parcels of perishables by passenger trains.

43151. What I want to ask you is this: Is it in the interest of the Irish agricultural industries that this petty retail business should be encouraged?—Well, yes, I think it is, because whether the business is done by an individual or through the co-operative society of which he is a member it is a great advantage to either of them to have facilities for doing a retail trade.

43152. Then we have got to accept this—the rates are said to be too high for the 20-lb. package?—Yes.

The 20-lb. package rate excessive.

43153. If they are reduced the company is at any rate losing some portion of its existing profit?—Yes.

43154. Which you say is not too much. Now, is that the best way in which the company can devote its profits, so to speak, or is it better to keep those rates up and help the more or less wholesale distributor? You see you cannot have it two ways?—I do not think it is fair to help one class of traffic at the expense of another.

43155. What is the interest of Ireland as a whole? Which is the best hope for the development of Irish agriculture—to encourage development in collected lots, or to encourage development in petty lots?—Yes, I follow you now. Unquestionably the interest of the country would be best served by the encouragement of large consignments—large lots.

The development of traffic in consignments of large lots recommended.

43156. Then I gather that supposing you could dictate the policy, if you saw your way to devoting a certain amount of additional revenue to the reduction of rates you would rather put it on the reduction of the tonnage rates than on the reduction of the parcel rates?—I should, because the margin of profit is very much higher on a small parcel than on a large parcel.

43157. That is from the point of view, not of the development of the railways, but the development of the country?—I think that is the soundest view.

43158. Of course, you would welcome the reduction of parcel rates if there was the money to spare?—Certainly.

And a reduction of parcels rates if money is available.

43159. But if there was not the money to do both, you would prefer to put it into the tonnage rates rather than into the small parcel rates?—Yes, if we could bring our wholesale production up to a proper level in Ireland I should be quite content to see the distribution left in the hands of the trained distributor, the ordinary shopkeeper, because production is far more important to us than distribution of a certain limited number of retail consignments.

The ordinary shopkeeper the best medium for distribution of produce to consumers.

43160. Then your production would be collected into a wholesale quantity?—Yes.

43161. How would it reach the retailer?—In the same condition.

43162. He could not take a ton of butter?—Oh, yes, they do.

43163. He is a wholesale retailer then?—The ordinary retailer who buys now direct from the creamery, we will suppose, or from the egg society, gets his three cwt. lot at ton rates; so he can always buy three cwt. unless he is a very small man.

43164. You are not anxious to get it into big lots and pass it through the middleman who distributes it into tons?—No, the tendency now is for the buyer to purchase direct from the society.

43165. Let us turn to another question in reference to the development of the dairying and poultry industries, and so on. In your view, which is the most important? You must have constantly had in your mind comparisons with Denmark, for example. Which is the most important? Is it the question of

Relative importance of the conditions of production and transit facilities.

Mar. 13, 1908.

Mr. R. A. Anderson, Secretary, Irish Agricultural Organisation Society.

transit facilities, or is it the advantage that they have in keeping up a steady supply all the year round by their winter dairying that gives them the great pull?—All-the-year-round production is their strength.

43166. Of course we are devoting our attention here to questions of transport?—Yes.

Relative importance of the conditions of production and transit facilities.

43167. But in your view the conditions of production in Denmark, as compared with Ireland, have a greater influence than any question of transit?—Certainly.

43168. Is there any near prospect, or any prospect, of development of winter dairying?—Yes, a very considerable prospect. One does not like to prophecy, but I think, and hope, that in ten years we shall be treble or quadruple our winter supplies. We are being forced into it, because every year we lose our trade and have to regain it again at considerable loss.

The development of winter dairying probable.

43169. Now another question. You have spoken about careless handling?—Yes.

Damages in transit arising from careless handling of traffic.

43170. On the whole should you say the handling is more, or less, careless before it gets to the station or after it reaches the railway?—I say that in some cases I have investigated—I think it is only right to the railway companies to say this—alleged damage in transit was due to carelessness in handling by the society's own carter, but still that does not acquit the railway companies altogether.

43171. Of course not. Clearly one must recognise that your employees, or the railway company's employees, must be the people of the neighbourhood, such as they are?—Yes.

43172. Do you think they are more slack on the railway, or in your employ, than in their own homes?—No, I think they are more careful.

43173. You screw them up?—We try to make it as difficult for them to knock things about as we can by making the cases very large and clumsy so that they cannot throw them about. I daresay the gentlemen here know this—(I hope the reporters will not take this down)—that the railway porter is a very ingenious person; when he gets a big case that he cannot lift or throw, he "walks" it on its ends and edges; and often, of course, the eggs are all telescoped. The cases are only packed to stand a certain fall, not to be dumped on the end in that way. That is what causes the trouble.

43174. Just one question as to liability; of course all the cases you have been speaking of are owners' risk rates?—Yes.

Contracting company liable if goods sent at company's risk.

43175. You are of course aware that if you, in the ordinary course of your own business, choose to send anything by rail, you have a contract with the originating company, and it is responsible to you, and it does not matter a scrap where the things are spoiled?—That is not our experience.

43176. If you send it at company's risk?—Quite so.

43177. But the contracts are different if you choose to send at owner's risk?—Yes.

Undesirability of consigning at "owners' risk."

43178. Your view is that the disadvantages, in the butter trade at any rate, are so great that it is better to pay the higher rate than to send at owner's risk?—If I were to have a high class trade with firms whose custom I desired to keep I should invariably send goods at ordinary rate, and not at owner's risk rate.

Comparison of average rates between the two risks not available.

43179. You cannot help us with any sort of comparison of the average rates between the two?—No. I knew the Commission would be getting evidence from people much more competent than myself to give figures of that kind.

43180. I do not know that I would quite accept that. When did the French get the Agricultural Parcel Post?—I think it has been in existence about ten years.

General application of a low rate for small parcels recommended.

43181. You know the Great Eastern system for instance, in England—5-lb. for one penny practically, with a minimum of 4*d.*?—Yes, we have something like that in Ireland. Some of our railways—I think the Great Northern introduced it first—supply packing cases in which produce can be packed, and carry it at a comparatively low rate of, I think, about a halfpenny a pound, which includes carriage and delivery.

43182. Is that to England?—No, those are local rates.

43183. Something of that kind would meet your view if extended all over the country?—Yes; in the case of people who wish to do a high class retail trade those rates are not too high

43184. You would like to have some sort of interchange system between different lines, making it like the post office, as it were. You would not care what line it went over?—Yes.

43185. You have raised a very interesting question as to grading and packing in transit?—Yes.

43186. You said the 10 per cent. extra charge was prohibitory?—Yes.

43187. How much do you suppose this grading—and I gathered practically guaranteeing—the quality of the butter, would put on to the value of the butter?—Well, it has been estimated by people in the trade who profess to be judges of these things, that it would raise the value of Irish butter at least 2*s.* a cwt.

43188. That is just what I thought. I remember being told by an expert that you put up the value of butter a half-penny a pound by calling it "Normandy" instead of "Brittany." Your figure is 2*s.* a cwt.?—Yes.

43189. That is £2 a ton?—Yes.

43190. The average rate is, say, 40*s.* from Cork to London?—Yes.

43191. Ten per cent. on to that makes it 44*s.*?—Yes.

43192. If you can, by grading it, put £2 per ton on the value of the butter, why cannot you afford to pay 4*s.* a ton extra on the rate?—You have the expense of grading the butter, and until the consignors are educated in what each market requires you will have a great deal of breaking up of consignments, and re-making of consignments, and of having trouble in order that a man ordering a ton of butter to London may get his suitable consignment, and that another ordering a ton of butter to Glasgow may get the consignment which is suitable to his requirements.

43193. But you have got here, on your own or your friends' calculation, an increased value of £2 a ton to work on?—But not all round.

43194. You put somebody down, of course, but on the average you will increase the value £2 a ton?—Not on an average. But it is argued by people opposed to this system that butter which did not succeed in getting a first grade would have to be sold very much lower than it is now sold.

43195. Is that so?—Yes; it cannot be for a moment calculated that we should get £2 increase all round.

43196. Would your £2 figure mean that it would be only the best quality of butter that would be increased?—Only the best quality.

43197. Still, you will agree with me, I am sure, that unless you are going to make a much greater improvement than 4*s.* a ton it would not be worth doing?—It is not so much that, but it is the confidence that it would give the buyer in the quality.

43198. Supposing you are going to make an increase, and a large increase, in the value of the butter, is it not reasonable that the railway companies should get 4*s.* a ton out of it for their extra work?—I do not see what extra work they would have. The whole work was supposed to be done by the associated creameries.

43199. Surely they would have to unload and load again?—They have to do that in any case. The loading, I should say, would have to be done by the officials of the grading depot.

43200. Your suggestion would be that there would be no additional expense to the railway companies whatever?—There might be some additional expense, but if the price of butter were enhanced by this system the traffic certainly would increase very materially, and ultimately the companies would get it back.

43201. In what we have been saying we have not been discussing the question whether the possible seller would be entitled to bring an action in the Railway Commission Court for undue preference; the railway companies are not very much inclined to be shot at?—Naturally.

43202. There is, of course, that risk?—There is that risk if any of this butter were permitted to be sold in the town in which the depot was situated, but supposing it were all sent for cross-Channel traffic?

43203. We had better not argue the undue preference case at this stage. I want you to tell me about those new potatoes—is that a case within your

own knowledge?—Yes, that particular case in the Arran Islands.

43204. Let us see. The first consignment was sold at 6*d.* a pound?—Yes.

43205. That is £54 a ton, roughly?—Yes.

43206. The freight, I suppose, could not be more than 54*s.*?—I forget what the freight was, but the Midland give us a low rate.

43207. It could not be more than 54*s.* a ton—probably not as much. Do you really say the next consignment was sold at a price less than one-twentieth of the first?—I did not bring them over, but I have the sale notes of the second consignment and of the first. The first shows a very large profit to the growers, and the second gives actually only a few shillings return after paying the railway freights.

43208. The first consignment was sold for 6*d.* and the second for a farthing?—Probably. One thing happened which I ought to have mentioned. The weather was very stormy, and the second consignment was delayed in getting from the island.

43209. Probably the potatoes got their skins broken as well?—Probably. That would reduce the value very much indeed.

43210. If it is a fact that such a price can be obtained, under good conditions, as 6*d.* a pound, it cannot be supposed that the cost of carriage, which could not be more than a farthing, could have been the influencing circumstance?—Oh, no. I mentioned that case because I thought it would be of interest to show the Commission what might be done in developing this kind of cultivation in the West of Ireland.

Chairman.—In the case of Jersey, where the new potatoes come from, they begin at £40 a ton, and finish at 40*s.*; but they do not vary to the extent of the case you mentioned. That must have been something very exceptional.

43211. *Mr. Acworth.*—We must not suppose that the cost of carriage was the reason for giving up the trade?—Well, I suppose you could hardly say that was the entire reason.

43212. If you could have got your potatoes in at 2*d.* or 3*d.*, not to say 6*d.*, the cost of carriage would have been only a small part?—Yes.

43213. I will say no more about that. Now take the case of raw materials inward. Take sulphate of copper. Sulphate of copper is pretty valuable, I forget what it is, £1 a cwt. or something of that sort, is it not?—More than that.

43214. You say that ought to be carried at a nominal rate?—Well, having regard to the use to which it is applied.

43215. Take it so. I see the point for a low rate, but when you say a nominal rate (that is your phrase) that means practically a rate that may not even cover the expenses, because you are going to get them back afterwards?—I think you will have to deal generously with the kind of people who want to be encouraged to use sulphate of copper. It must be remembered that the people we wish to see using sulphate of copper are people who have to be encouraged and coaxed to use it.

43216. I quite follow; and you think, under those circumstances, it would be reasonable to carry it at a price that left no profit?—I do not say that—I presume that the railway companies are not carrying at a nominal rate at present.

43217. When you said a nominal rate, I took that to mean at a rate that did not leave a direct profit?—Perhaps "nominal" is hardly the word—a still further reduced rate.

43218. Take it at a rate that will cut down the company's profit. Now, the result is that you would produce more potatoes, and then the Agricultural Society says: "I want you to reduce the rate for potatoes outward to compete with Jersey and Algeria"?—No, because you do not require sulphate of copper for the early potato trade.

43219. Take it in anything else where you want to encourage the trade. Take artificial manure. I only took that instance at random?—I did not say the people would sell their potatoes, but what I wanted to argue was that if you had a good potato crop you could feed more pigs, and the carrying of pigs, I fancy, is a pretty paying business for railway companies.

43220. The way I want to put it to you is this—if you are to cut down your charges on raw materials inwards in order to encourage the outward traffic, and then when the outward traffic comes you are to cut down your charges on that in order to compete with foreign countries, where is the poor railway to come in?—What I said was that where crops could be grown in larger quantities it would pay the railway companies well, in consequence of the increased traffic, to carry these raw materials at very low rates.

43221. I quite admit that you did not put the two points together. I put them together for you. Have you not suggested that cream should be carried cheaper?—Yes, but I did not suggest that butter should be carried cheaper.

Proposed guarantees to railways against loss on reduced rates.

43222. I do not want to press you too far in the least—I only wanted to raise the point with you. Now, tell me this. You spoke of giving guarantees to companies to guarantee them against loss on temporary reductions, or tentative reductions?—Yes.

Practicability of working the scheme.

43223. As a matter of practical politics, do you think it would be possible to give a reduction of that kind to twenty different companies—could you give so much to the Cork and Bandon, and so on?—I think it might be rather difficult to arrive at whether that particular branch of traffic was being carried at a profit or a loss. That is the difficulty I anticipate about it, but I do not believe it is beyond the power of the railway companies to be able to answer the question as to whether the traffic were a profitable traffic or not, and if not, to what extent they lost money by handling it. At a meeting of the Council of Agriculture, of which I am a member, held some two years ago, I think it was, a resolution was unanimously adopted recommending the Department of Agriculture to subsidise the railway companies wherever it could be shown that a subsidy would enable the railway company to handle a certain class of traffic at such rates as would give an inducement to an industry to improve.

Resolution in favour by the Department of Agriculture.

43224. That is just the point I want to ask you about. Is it your suggestion that you should make a rough and ready bargain with the company. "Look here, we want such and such rates reduced; if you do it we are prepared to give you so much money"; or would you attempt to work out what the reduction would be, and pay that precise sum?—I certainly would not give them a subsidy; I would let them work it out, and show in black and white, as far as they could, how the traffic had resulted, and then pay the difference, if there were a difference, against the railway company.

43225. Do you not think you would get the worst of that bargain? Do you not think they would be experts in making up the accounts?—I think the Department of Agriculture might be trusted to look after themselves. They have experts, too, and I think they could probably see themselves safe.

43226. I only raised the point. I wanted to know what you would say about it?—I admit the difficulty at once of telling whether a certain class of traffic pays or not.

Objections to nationalisation

43227. I am interested in what you say about nationalisation. You say that it would mean creating another Board in Ireland?—Yes; I am afraid it would.

43228. As you say you are afraid, I am afraid that must mean that you have not much opinion of the existing Boards?—Perhaps I had better not answer that.

A Government Railway Board would not be sufficiently responsible to public opinion.

43229. Let me put it in this way: I see you say such a Board would probably be insensible to public opinion?—To a very large extent.

43230. And that is an opinion founded upon experience?—Not always; but I think it would be insensible to arguments to which the railway companies at present very often yield.

43231. I see you speak of the criticism of shareholders?—Yes.

43232. Do you think that really has a practical effect?—Sometimes; very, I think.

43233. For example, what is your view. Take a railway like the Belfast and County Down or the Northern Counties, which has a local office in Belfast. Does it seem to you an advantage that a local railway should have its people upon the spot and accessible to the local trader?—Yes, I think so.

The present system of local administration preferable.

43234. You would rather get that than have it concentrated in Dublin?—Yes. I think it would be more satisfactory. Of course, I assume that if the railways were nationalised local grievances would be dealt with locally by persons deputed from the Central Office to do so.

Mar. 13, 1908.

Mr. R. A. Anderson, Secretary, Irish Agricultural Organisation Society.

43235. One other point. Might I look at your map?—I think I know where Shillelagh is, but I am not as sure of it as I might be. You gave four instances, and Shillelagh is the one that sticks in my mind. You propose to carry on the Tullow branch to join at Enniscorthy?—Across to Carlow.

43236. That would give the Shillelagh man a much better and shorter route to Dublin by the Great Southern than he at present has by the Dublin and South-Eastern?—It would give an alternative.

Suggested railway extensions.

43237. Looked at on the map it is a better route?—When I talk of linking up those, I should say a man would have an option of going by one route and coming back by another.

Shillelagh and Carlow connections.

43238. The point I was going to put to you was this: It would give the man at Shillelagh, who at present is the private property of the Dublin and South-Eastern, a chance of going to the Great Southern?—Yes.

43239. Do you think it would be quite reasonable to make the Dublin and South-Eastern pay part of the cost of that operation?—I do not see anything very unreasonable in it.

Responsibility for its construction: South-Eastern or Great Southern?

43240. Is it reasonable to make a shopman pay for the decoration of his rival's establishment?—It is largely a question of traffic facilities. If the facilities on the Dublin and South-Eastern were better than on the Great Southern and Western I presume the Shillelagh man would continue to travel that way.

43241. The Dublin and South-Eastern has got the Shillelagh man at present, safe?—From their point of view.

Or apportionment of cost between both companies.

43242. I am not arguing the interest of the Shillelagh man; I am only asking whether you think it would be fair to make the Dublin and South-Eastern pay to help their neighbours to take their traffic?—In that case, if the Dublin and South-Eastern were to be the company which were to lose by the transaction, I take it whatever tribunal ordered the construction of this line would fix the amount to be paid on each railway company in proper proportion.

43243. I follow; and it might be none?—It might be none.

43244. You would not expect that the tribunal should have power to make the Dublin and South-Eastern pay the whole of the cost?—I have not gone into that.

43245. It does raise difficulties, does it not?—Certainly.

Examined by Mr. SEXTON.

Effect of English companies' influence over Irish lines not beneficial.

43246. You have said—I think with special emphasis—that you think the influence of the English railways in Ireland a bad influence?—Yes.

43247. Will you develop that view?—Well, it is quite natural to argue that a large and wealthy corporation like one of the main lines in England acquiring a small line in Ireland will work that line in the interests of the larger concern rather than in the interests of the small one. That, I think, is the answer which I would give, and I must say that I have not seen any improvement in the Belfast and Northern Counties Railway, over which I have travelled pretty frequently, since it was taken over by the Midland.

The influence growing.

43248. We have had that from other witnesses. Is the influence of English railways upon Irish railways a growing influence?—I think it is, because you have a representative of the London and North-Western as a director of the Dublin and South-Eastern now. That is one instance of where the influence has grown.

London and North-Western, Gt. Western, and Midland instanced.

43249. You have also a combination between the Great Western and the Great Southern and Western?—Yes.

43250. And you have the Midland proprietorship, or part proprietorship, extending to the Western coast of Ulster?—You have, over the Donegal railways.

43251. Is it an influence likely to grow?—I should think it is likely to grow in the case of necessitous Irish railways, although the Belfast and Northern Counties could not be classed as a necessitous railway, because it was paying a good dividend at the time of purchase. But certainly in the case of the poor Irish railways I should think it is very likely to grow. It depends upon whether the English railway companies think the property worth acquiring.

43252. And considering the general poorness of Irish railways and the resources of these colossal English corporations, does it appear likely to you that unless some effectual method is employed to check it the English interest will become financially dominant over the Irish railways?—I think so. Of course, it may also be said that the acquisition of an impoverished railway company by a very rich corporation would tend to better working, greater facilities, and so on.

43253. There comes in the question of the separateness of English and Irish interests?—Yes.

43254. If the English railways acquired either wholly or mainly the Irish lines, and the English railways continued to encourage the highly organised traffic in large consignments from the Continent, what would become of Ireland—the country of small consignments?—I am afraid it would fall upon very evil times.

43255. Again, if the English railways had control of the Irish lines—I mean effectual proprietorial control—what chance would the Irish manufacturers have of defending themselves against the low import rates certain to be allowed from Great Britain to Ireland for the purpose of stimulating English manufactures, and getting traffic for the English lines?—That is a danger I had not foreseen; but I quite see that it might be a very real danger to Irish industries.

43256. These two things must spell economic ruin to Ireland?—They would be very injurious.

43257. Is it not our duty, therefore, to endeavour, before the question reaches such a critical phase, to do something to protect the interest of Ireland?—I do not see how it could be done further than for some still more powerful body than any railway company to step in and acquire the Irish railways.

43258. Precisely. So long as the individual Irish company, more or less needy, is open to the temptations of the plutocratic railways in England there is no safety for Ireland except by public ownership of the lines?—Yes. I do not know whether it would be an improvement. My opinion is that unless you had a very carefully constituted body, which had the interests of Irish agriculture and industry at heart, and who were supervised very carefully in their work, I do not know that that would be any better than the existing railway companies, but I do see very plainly the danger that you point out—that if the railway companies are left to themselves, and if an Irish railway company is left in poor circumstances, and fails to pay a dividend, its shareholders may be very anxious indeed to see it acquired by an English company, greatly to the detriment of the industries and traffic of the country.

43259. In the event of an Irish railway company finding it very hard to pay three per cent., and an English railway, for reasons of its own, finding it convenient to offer to take over the line at a premium, that is a temptation which the shareholders of the Irish railway could not be expected to resist very long?—I am afraid they would be bound to yield to it.

43260. As you have answered me so fully, let us discuss the question of public ownership a little. You see a policy of subsidies is a very partial policy, and, I think you will agree, open to this criticism—that when you subsidise a certain class of traffic, probably that most needing stimulation, you deaden the interest of the railway company in that class of traffic?—Yes.

43261. It is easy to see they would prefer to have the subsidy and let the traffic remain undeveloped?—I think the subsidy could be arranged in such a way as to bear some relation to the stagnation or growth of traffic.

43262. Still, unless the railway company saw its way to develop the traffic so as to bring in as much as the subsidy by way of rates, it would be an easier thing for them to have the subsidy; there is that danger?—Yes.

43263. As to a policy of amalgamation, if you amalgamate all the lines you enable them to apply any profit due to reduced working expenses to increased dividends; while if you purchase the lines and unite them, any saving of that kind might go in reduction of rates?—Yes.

43264. If you carry out a policy of amalgamation you place an obstacle in the way of a policy of purchase. That, of course, would not be in the public interest?—I should think, after all, that amalgamation would be a very necessary and essential preliminary step towards the State ownership of railways.

43265. But State ownership might either proceed gradually or at a jump?—Yes.

43266. You say that your society has not expressed any view upon the question of State ownership?—No; any views I gave upon the subject are purely my own.

43267. And you have not yourself given any very careful thought to it?—No.

43268. You know that public ownership is the rule throughout the world, and private ownership rather the exception?—I am not aware of that. As I say I have not made a study of the question, and I have no figures before me to show that that is so; but in America, where I have been, I do not think it is so. I think the large railroads of America are operated by companies.

43269. There are two countries still where private ownership survives and prevails—Great Britain and the United States?—And Canada.

43270. Well, yes—Canada. I should class that with Great Britain. But elsewhere throughout the world the prevailing and growing rule is, I submit to you, public ownership?—Well, in South America, too, I believe the railways are all independent concerns.

43271. Some in South America?—Yes; there are several very large ones there.

43272. Take the countries of Europe, also Australia?—Well, France, I think—if I recollect aright—some of the railway systems in France are private.

43273. France is one country in which most of the lines are still privately owned. Take the other countries.

Chairman.—In France they are guaranteed by the State.

43274. *Mr. Sexton.*—There are special relations, even in France, between the railways and the State?—I am afraid my knowledge of the Continent is too limited to make my evidence of any value on this point. I know a little about Denmark, because I have been studying this dairy question in Denmark. There I believe the railways are largely controlled by the State. In Sweden I know the railway systems are not altogether so, but there are some independent, and my own experience was that the State-controlled railway I travelled on was not as good as the private concern.

43275. I am rather suggesting to you that the question of State ownership must not be treated nowadays as an abstract or experimental question, because it has been widely applied and tested throughout the world?—Might I, on the other hand, suggest that on the Continent the railway question is inseparable from the military policy of the country, and that the Government of the country has to retain under its control and in its hands the means of transport of large bodies of troops from one point to another.

43276. The Chairman pointed out at a former sitting that that was not the case in New Zealand or Australia?—No.

43277. In countries under all conditions, old and new, the evidence before the Commission is that public ownership of railways has stimulated trade, and led to large reductions of rates and fares?—Well?

43278. Now, assuming a similar and corresponding result were to follow in Ireland (unless Ireland is outside all rules, and to be regarded always as an exception), would not that be a decisive reason for public ownership?—Certainly, if that could be demonstrated.

43279. I think your objection is to an Imperial Board—a Board of the pattern so familiar in Ireland?—Yes, my objection would be very strong to that, I think, and my objection would be equally strong to a Board composed of people other than experts.

43280. First the Imperial matter. You have expressed it very strongly, and I think very well you have said that a Board of the type of which we have so many examples in Ireland would be less vulnerable to attack, and more insensible to opinion, than the existing railway Boards?—Yes.

43281. That is saying a good deal, perhaps?—Yes.

43282. You intended, of course, to refer to a Board controlled from London?—Yes. I presume something analogous to the Board of Works, and you could hardly get anything more insensible than that.

43283. I agree it is pachydermatous. Your view is that a Board controlled from England is naturally careless about Irish opinion?—I should say it cares very little about any opinions except its own, but even if it were controlled from Ireland, it might possibly be insensible to public opinion. I mean if it were in the nature of one of the Government Boards which are controlled now by the Irish Government, I cannot see that those bodies are a bit more sensible to public opinion than those controlled by the Treasury.

Question as to the most suitable body to control Irish railway policy.

43284. What you have courteously and politely called the Irish Government is itself controlled from London, so that you only remove the thing one step back?—Yes.

43285. Surely it is axiomatic that if you want any agency in Ireland to be effective for Irish purposes, it must be responsible to Irish opinion?—Yes, but I think I should like to qualify that by saying that Irish opinion would have to be pretty well educated on the subject before it could exercise a wholesome influence over any body of the kind.

Any Irish agency to be effective for Irish purposes must be responsible to Irish opinion.

43286. Take the whole Irish community as it is, with whatever defects it may be thought to have—would you not say it is upon the whole the best judge of Irish interests?—Yes, I think so.

43287. Then the necessary alternative would be control by a body not responsible to English opinion or the Imperial Government, but to Irishmen, and if such a body were constituted upon an appropriate basis, so as to give due weight to opinion deserving weight, do you not think that would be the most likely method to adopt in order to use the Irish railways, in the terms of Reference to this Commission for "the development of the industrial and agricultural resources of the country"?—I think if you had such a body selected by proportional representation you might possibly have a very useful body, but if you left it purely to popular election, I can conceive a chaotic state of things arising much worse than the present state of affairs.

Suggestion that the body should be selected by proportionate representation.

43288. Chaotic if the public worked the railways for themselves?—I mean if the body which was to control the actions of the Board were to be popularly elected, I can conceive chaos arising.

43289. If the body were to be elected by the farmers?—I do not think the farmers are the only people to be considered.

43290. And by the traders and other electors of the country?—If you had the various interests represented proportionately to the interest they have in railway matters, I think you might conceivably get the body you want.

43291. You say that if they did not work through experts there would be chaos, but no one has suggested that the public controllers of the railways should work the railways themselves?—I did not say that—what I said was that if the body that was to control the policy of the body managing the railways were to be popularly-elected, it might result in chaos.

43292. You have said yourself that the inland rates are really prohibitive?—Yes.

43293. And I think you are sensible that the export rates do not enable the Irish producer to compete on fair terms with the Continent?—I would not go so far as to say that. I do not think I have said that the through rates from Ireland, where they exist, have imposed a serious barrier to the progress of any industry there that I know of. There may be some, but I do not know of any. But I do maintain that the inland rates, and the absence of through rates from station to station, are most injurious.

Complaint as to the inland rates, and the want of more extensive through bookings.

43294. *Mr. Acworth.*—Through rates from station to station in Ireland?—Oh, no—the absence of through rates from some stations in Ireland to stations in Great Britain.

43295. *Mr. Sexton.*—The issues I have suggested is whether or not the inland rates from Ireland compare advantageously with the rates from the Continent. Surely the general intelligence of the country, duly represented in a central body, might be trusted to deal with those questions in the interests of Ireland?—Yes, I think so, if they were fully informed.

43296. Where interests are at stake information is gathered without much delay?—Yes.

Irish inland rates *versus* Continental.

43297. You have said if there were experts under a public authority the same men as now would become absolute dictators, but you see that if there were a competent public body the experts would be under effective control?—I suppose they are under the effec-

Mar. 13, 1908.

Mr. R. A. Anderson, Secretary, Irish Agricultural Organisation Society.

tive control of their various Boards of Directors now. I should imagine each railway manager is under the control of his Board of Directors.

43298. But the Board of Directors may not always lead the expert to answer the public needs in the same way that the public body would?—I would not like to go so far as to admit that, because from what I know of Irish railway directors, they are, generally speaking, public-spirited men who wish to see their lines prospering and industries prospering along each railway system. I do not think they take a particularly narrow view of their duties.

Composition of the most suitable body to control Irish railways.

43299. Have they acquired so much knowledge of Irish railway matters as to be of much help in guiding the affairs of those railways?—I would not say that, but I know many railway directors who are exceedingly capable.

43300. And a good many others who could direct anything else about as well as a railway?—I think so—the Irish people are very versatile.

Estimated cost of State purchase.

43301. It would be very material, of course, in deciding this question of public ownership, to consider whether it would provide a fund out of which rates might be reduced. Assuming that the public credit is applied to purchase on the basis of the Act of 1844, twenty-five years' purchase on the annual average of three years' profits would come at present to something like £42,000,000 sterling, and if that were borrowed at the rates at which the State can borrow, it is obvious that, even allowing a margin for present discount on stock, the annual charge for interest on the purchased system would be very much less than the net profit is at present?—It would depend upon what they were able to borrow it at.

43302. I assume that the State lends the money?—At what rate per cent.?

Margin between net profits and interest on purchase money.

43303. Suppose you say 3 per cent. (in order to ensure the issue of the stock at par) that would be about 1¼ millions per annum?—Yes.

43304. And the net profits are about £1,600,000 now?—Yes.

43305. There is a margin of about £400,000 there. Surely you will not contest that the unification of the railways would result in great economy?—It might. I do not know what economies it would be possible to carry out in each railway system under a unified arrangement.

Economies from unification of management.

43306. I speak in the presence of some of the most distinguished railway experts, and I would submit with much confidence that not only would economy be feasible, but almost inevitable in all departments?—The only evidence I have is the amalgamation of the Great Southern and Western and the Waterford and Limerick Railways, and as far as I know, there were very few of the old hands turned off, and I do not know that there has been very much economy. I know that before the amalgamation took place I was Trustee for some stock in the company which I sold out at 148½. I do not think you could get that now.

Case of the Gt. Southern and Western and Waterford and Limerick Railways.

43307. The Great Southern and Western made a special case in arguing that question. They used uncomplimentary terms after the amalgamation with regard to the condition of some of the lines they had acquired, and said they had to bring up these lines—their permanent way, equipment and rolling-stock—to the level of the Great Southern, which was one of the leading railways in Ireland, and that this necessitated a scale of expenditure which put economy out of the question for a time. I think that is a fair summary of the Great Southern and Western case, but, speaking generally, amalgamation and unification must result in economy. Take the case of the Scotch railways, which are worked at 54 per cent., whilst the Irish are worked at 62 per cent.—does not that contrast indicate that in Ireland a process of amalgamation more complete than that of Scotland would result in even greater economy?—I think the conditions in Scotland are wholly dissimilar to those in Ireland. There is a very much more concentrated traffic in Scotland than in Ireland.

Exceptional circumstances affecting their amalgamation.

43308. No doubt, but still they pay much higher wages, and on the whole, I think you will agree on reflection that the Scotch pecentage does rather confirm the view that concentration leads to economy?—I do not know enough about the relative traffic of the two countries to be able to express an opinion on that point.

Canvassing and other expenses to be saved by a general amalgamation.

43309. But when you change from twenty-five or thirty separate and contending systems, canvassing against each other for traffic, and maintaining wasteful services for the purpose of taking traffic, when you bring all that into coherent and homogeneous concern expenses must diminish?—I wish I could point to a single case in Ireland where two companies are competing for traffic. That is just our trouble.

43310. Not in rates, but in facilities?—Very little.

43311. They have canvassers, and they have to pay them?—But I think the canvassers are for certain routes rather than for certain railways.

43312. Where there are two routes, it is the same point—there are more services than they need have, and one administration would tend to economy?—Take the case of Cavan, where there are two services?—I cannot say that it has struck me as very forcible.

43313. I say that the payment for canvassing and for dual routes is wasteful, and that the abolition of them would necessarily lead to economy—and that is only one typical case. Now, assuming that public ownership were brought about, and that consequently there was a unified system of working, with a prospect of a fund sufficient to enable large and practical reductions to be made in the rates requiring them, that would be a very weighty reason for the change?—Certainly.

43314. Might I now, with your permission, briefly summarise your criticism of the companies? You say they are not responsive enough to the public needs?—I do not think I said that. I said that the railway companies did not, in my opinion, respond sufficiently to the attempts made to simplify their business.

43315. You gave a very striking proof of that—you said you believed the railway companies were sensible of the value of the services of your Society?—Yes.

43316. In enabling them to deal with small consignments?—Oh, they have said so freely enough.

43317. Yet what happened when you asked them to assist you in reference to the provision of a grading depôt for butter in Dublin—they refused, did they not?—Yes.

43318. Even during the periods of the year when winter dairying is not in question, Ireland suffers by reason of the want of grading machinery?—Certainly.

43319. Is it not vital to Ireland, in the struggle with Denmark, which has now become so formidable in this butter trade, that the quality of the butter exported from Ireland should be unquestionable?—It is very important. I would not like to say vital, but it is very important.

43320. There is nothing more important?—Nothing more important.

43321. All that you asked the railways to do was to allow you to examine the grades of butter at Dublin, and possibly to change some of it from one class into another?—Yes.

43322. The railways would not have had to do any different work—they would simply carry as before?—That is so. Of course, we selected a point at the North Wall where the railways all converge, in order to simplify the business for all of them.

43323. They would deliver it as before in Dublin?—Yes.

43324. You asked them to accept the same rate?—The ordinary through rate.

43325. They refused?—Yes.

43326. They said, "If we accept the ordinary through rate, or our actual share of the existing through rate, and allow you to grade the butter at Dublin, then other people who send butter from the country to be sold in Dublin would expect to have it carried at the same rate"?—Yes.

43327. That is to say, they would carry the butter for export at a lower rate than the butter for sale in Dublin?—Yes.

43328. You said, "Well, to provide against that we will guarantee that none of the butter sent for our purposes is sold in Dublin, so that the market there cannot be affected"?—Yes.

43329. That would furnish them with a reply, would it not, to the Dublin people who pressed for the lower rate?—I think so. I do not know—it might be a case of alleged undue preference—but I think that it would be a complete answer.

43330. At any rate, they would be able to say to the Dublin people, "It does not affect the Dublin market"?—Yes.

43331. But they insisted, however, upon putting on a tax of 10 per cent.?—They said they could not do it without that.

43332. So the Irish butter trade to the present moment is being carried on without this necessary provision for grading?—There is no provision for grading.

43333. With regard to the financial argument of Mr. Acworth about so much per ton for the price of butter, and so much per ton for freight, surely the creameries and your society knew what they were about—they knew that the 10 per cent. tax would be prohibitive. If they had thought it would have allowed a fair profit, they would have agreed to pay it?—Yes.

43334. They were driven to refuse?—Yes.

43335. In other respects, as to grading of eggs and carrying of cream, have you obtained due facilities?—We grade the eggs locally. It is different there. The grading of eggs is a much simpler matter than the grading of butter. You require to test the egg for its freshness, and to grade it for its weight. That is all you do, and then one egg is as good as another.

43336. Have you facilities for doing that?—Not altogether, because the local rates are pretty high.

43337. It is essential to the prosperity of the industry to have provincial grading stations?—Yes.

43338. Notwithstanding the prospect of double traffic, the companies have not given you rates which would enable you to establish such stations?—We have not made a formal demand to the Irish railways as a whole—we have merely made inquiries as to the rates at present in existence; and the reason we have not asked the railway companies to give us a special rate for this class of traffic is that we wanted to experiment with it, and to find out the most economical way, and the most economical area, for a grading depôt to operate over. When we have arrived at that we shall go to the railway companies and ask for those concessions; but at present the rates do not admit of our availing ourselves of railway transit.

43339. The Irish egg trade has now become almost as important as the butter trade, and the egg and butter trade together nearly as important as the cattle trade?—Yes.

43340. And the Irish butter trade is allowed to remain under the hampering condition that the quality of exports is not sufficiently ascertained?—Yes.

43341. Now, we have heard a good deal about early potatoes from the Island of Aran. The first consignment was sold in Dublin at 6*d.* per lb?—Yes.

43342. And they sent a second consignment, and no other?—They sent no more.

43343. The must have found some condition prohibitory?—After the second consignment it would be too late to send them to the Dublin market. That year there was an exceptional occurrence—they had a slight frost in the Island of Aran, and that rather delayed even the first consignment. But, late as it was, they got a remunerative price. But the second consignment practically arrived too late on the market, and although it could have been sold at a fair price, the freight would have killed the business.

43344. Still, early potatoes might be well grown at Aran, not in one year only, but in every year, and there is a good market in Dublin, not one year, but every year, and unless something had stood in the way, the early potato trade would have been continued and developed. Now what stood in the way—the freight?—I do not think the freight altogether.

43345. Is it substantially that—is it too high?—That, no doubt, has had a good deal to do with it. No doubt, a specially low freight would give a great encouragement to an industry of the kind there, and it might also lead to the growing of spring flowers, as it did in the Channel Islands; because they can grow them there as well as anywhere.

43346 My suggestion is that, the producers being still in Aran and the consumers in Dublin, and the one experiment having resulted so brilliantly, there was nothing that stood in the way but the freight?—There is another thing which, in justice to the Irish railway companies, ought to be mentioned. The communication between Aran and the mainland is very uncertain owing to the bad steamship service.

43347. Now let me run over the various points you have made against the railway companies. You think through rates should be compulsory?—I do.

43348. You think the contracting companies should be suable as on the Continent?—Yes.

43349. That is one good result of State ownership?—Yes.

43350. You think there should be a produce Parcels Post?—Yes.

43351. You say that in case of loss or damage proof of malice is impossible, and that proof of culpable negligence should be sufficient?—Yes.

43352. You think the owner's risk rate is not low enough?—Not at present.

43353. You say that the butter and egg traffic are still neglected—the butter is left to lie in the sun and eggs get wet and broken?—Yes, but not to the same extent as formerly.

43354. Still to an extent provoking you to complain?—Occasionally, yes.

43355. You say that the rates on limestone and other manures are not such as to induce the farmers to use them?—They do not use them. We tried to get some of our societies in parts of Ireland, where there is no limestone, to bring it from districts where limestone was in profusion, but they found on getting particulars of the rates that they could not bring it from one part to another economically.

43356. You think that the prospect of increased traffic ought to be sufficient inducement for the railways to give lower rates?—Oh, no; we thought the companies ought to get a sufficient rate for the carriage of this stuff, but at the same time it should be a very low rate.

43357. But such a rate as would induce the farmers to use it?—Yes.

43358. We had the Prime Minister of New Zealand before this Commission, and he said in answer to the Chairman that in New Zealand the railways carry lime free for 100 miles when it is to be used by the consignee for his farm. The purpose is to develop agriculture and agricultural traffic. That is a good example of intelligence in railway management?—Yes.

43359. You say that the conditions attached to the hiring of refrigerating wagons are such as to prevent their use?—They do not use them much. I have particulars here, but I did not put them in evidence, because I did not look on the matter as one of great importance. Last year they were not used at all because it was so cold.

43360. You suggest that where two great lines approach each other they should be compelled to make connections at their own cost and risk?—Yes.

43361. Do you know why they do not make these connections?—I do not know, but I can imagine what the reasons are.

43362. It could hardly be what Mr. Acworth said about Shillelagh, because when two towns now separate are connected the change will cut both ways. There will be a certain element of traffic from one to the other, and conversely?—Yes.

43363. Is it not rather the running powers which are feared?—They are not popular.

43364. A railway company would perhaps consider the acquisition of running powers for itself over other lines too dearly obtained at the cost of giving running powers over its own lines?—Yes.

43365. I think the last item in your evidence was that the rates on milk in Ireland to Irish towns, and among them to Dublin, which you think in the worst condition, are such as to deprive the poorest classes of this necessary of life?—It makes the chances of getting pure milk very small.

43366. You have very properly dissociated yourself from unqualified abuse. You say that your Society has never shared in the general chorus of abuse of Irish railway companies. Do you mean still to convey that Irish opinion of the railway companies generally expresses itself in that form?—One hears a good deal of that kind of criticism in Ireland. I think where railway companies are condemned without giving a specific reason for condemnation you can call it nothing but unqualified abuse.

43367. I agree with you. This Commission itself has had the experience of having the opinions expressed before it founded upon specific facts?—Yes.

43368. Does it not occur to you that Irish railway companies might prefer to be abused rather than have to answer so many counts as are contained in your evidence?—I do not know. If my evidence is true, as I hope it is, I do not think any railway company

Points made against the railway companies:—

Liability of contracting carriers;

Produce Parcels Post;

Owner's risk not low enough;

Careless handling of traffic;

Low rates for limestone required;

Free carriage of limestone in New Zealand for agricultural purposes.

Non-use of refrigerating wagons.

Compulsory connections between contiguous trunk lines suggested.

Complaint as to excessive rates on milk.

Irish opinion of the existing railway companies.

Mar. 13, 1908.

Mr. R. A. Anderson, Secretary, Irish Agricultural Organisation Society.

need resent having the truth said about it, and not in an unfriendly spirit, because we are not unfriendly to the railways.

Mr. Sexton.—But reasoned and cogent evidence is even more inconvenient than abuse.

Examined by Mr. ASPINALL.

The project for a butter grading depot in Dublin.

43369. With regard to these grading depots which you wanted to have, did you propose to have a grading depot of your own?—Yes.

43370. Did you ask the railway companies to allow you to make their terminal stations in Dublin that grading depot?—No; we approached the London and North Western in the matter because at their station they had spare ground for building purposes, and it also afforded an opportunity of making connection with all the different lines which converge there, and the London and North Western offered to erect the necessary buildings for us, charging us just interest on the outlay, and without stipulating which route the traffic should follow outwards. We thought it very fair and were prepared to negotiate on that basis.

The L. and N. W. Ry. Co. approached on the subject.

Proposals dropped owing to excessive rates.

43371. Who objected?—Nobody objected, but we did not go on with it. We did not put the London and North Western to the expense of erecting these stores when we could not get a low enough rate for the conveyance of the goods.

43372. I thought your point was that you could not get a through rate at all?—No; what the companies offered us was a through rate 10 per cent. higher than the existing through rate, the 10 per cent. being put on for giving us the privilege of allowing us to intercept the goods and break bulk.

43373. Would you not have been willing to bear the whole expense of putting up a building of your own?—No, because in the first place we had not very much capital, and it would have been difficult to have got the different societies in which we are interested to have joined in putting up sufficient capital for the purpose.

43374. But you were willing to pay a rent?—Yes.

43375. Which would cover the cost of outlay?—Quite.

43376. Would you have been willing to consign everything which you would have sent right through to the destination, so that none could have been used in Dublin?—Yes; we would have done that.

43377. Did you do that for any other port besides Dublin?—No; we determined to make the experiment first in London.

Examined by Sir HERBERT JEKYLL.

Winter dairying.

43378. Are the conditions for winter dairying less favourable in Ireland than in Denmark?—No, they are more favourable, I should think.

43379. Why is it not done?—It has never been customary to go in for it. The Irish farmer is an exceedingly difficult person to get away from his old customs, and I think farmers all over the world are very much the same. I may explain that in the old time, when Ireland was really a butter-producing country, the butter was heavily salted, and it was kept from summer to autumn and winter, and even spring, and as no country was producing unsalted butter at those seasons the Irish butters held the top of the market and realised fine prices. Well, it took a very long time to persuade the Irish farmers that that was a very bad custom, and the only thing that did persuade them was when the price fell to such a low figure that they had to give it up. Then they took to creameries, but continued the summer system, and now they are seeing the necessity of increasing the winter production in order to be able to retain their customers throughout the year.

The conditions more favourable in Ireland than in Denmark.

The development of the butter trade depends largely on education of the people.

43380. So that the development of the butter trade depends largely on the education of the people?—Oh, yes.

Cross-examined by Mr. BALFOUR BROWNE, K.C.

Influence of English companies on Irish railways.

43381. I was going to ask one question which Sir Herbert Jekyll has just asked. It would be an improvement to the trade to carry on winter dairying?—That is so, yes.

43382. And that you think will be done?—Yes, I hope so.

43383. Upon another matter, you spoke of the evil influence of the English companies upon Irish railways. Do you know the Dublin, Wicklow and Wexford, now the Dublin and South Eastern?—I do not wish——

43384. I only said do you know the system?—Yes.

43385. Do you know it is completed to Waterford?—Yes.

43386. Do you know how it managed to do that?—I daresay very largely with London and North Western money.

43387. The London and North Western gave £100,000 to do it?—I did not know that.

43388. Is not that an advantage?—It depends on the conditions upon which the money was given.

43389. But, other things being equal, it is a good thing to give £100,000 to make a railway in Ireland?—I do not know the conditions, and therefore cannot express any opinion.

43390. Can you tell me the value of cream per ton—is it about £112?—It is about one-third the value of butter.

43391. That does not tell me much. Is it over £100?—At the present price about £33.

43392. I think that must be a mistake. How much is it a quart or a gallon?—Of course, if you take the retail price you have all kinds of prices charged for cream, but I am valuing the cream at what butter it will produce.

43393. That is not quite what I wanted; I wanted to get the cream wholesale?—I think I must explain. I gave no evidence at all as to the value of cream as cream or the conveyance of cream as cream; but only as the raw material from which butter is produced. I have nothing to say to the conveyance of cream.

43394. Very well. You spoke of the practice of porters walking these egg boxes along the platform on their corners?—Yes.

43395. I daresay you know there are strict instructions against doing any such thing?—Yes.

43396. You said there were no through bookings from the Midland system to their lines in England?—I said there were cases where they did not exist.

43397. Can you give me an illustration, because we do not know of them?—I have not the facts with me, but I can easily get them for the Commission.

43398. As a fact there are a very large number of through rates?—The particular instance—I do not know the station in Great Britain where it does not exist, but the particular instance was in connection with the Dervock Poultry Society, which is not actually on the Midland Counties system, but consigns over it.

43399. It is not on the system itself?—No.

Mr. Balfour Browne, K.C.—I really think you have been so friendly to the railway companies that I have nothing more to ask you.

Adjourned for a short time.

Chairman.—Is Mr. Balfour Browne here?

Mr. Croker Barrington, Solr.—He is in the House of Lords, sir.

Chairman.—It will be quite sufficient if I say that the Commission has considered the application which Mr. Balfour Browne made this morning, and we have decided that at the meeting in Dublin on the 21st April we shall begin with the railway evidence. It was intimated some time ago that the proofs of the railway witnesses should be sent to the Secretary by the 31st March. The Commissioners think it will meet their views if the proofs of the evidence are sent in fourteen days instead of three weeks before the April sittings.

Mr. Croker Barrington, Solr.—Will this be the last sitting to hear evidence on the general case.

Chairman.—So far as we know at present, but we cannot decide that.

Mr. Croker Barrington, Solr.—What we feel in regard to fixing a date by which we are to send in the proofs of the railway witnesses is that we cannot answer evidence until we have heard it.

Chairman.—We finish the general case to-morrow.

Mr. Croker Barrington, Solr.—If that will be the last sitting, that is all right; but we heard that the sitting held in January was to be the last. I imagined that what Mr. Browne wanted to know was whether this would be the last sitting?

Chairman.—The difficulty with us is that arising out of the railway case; it is within the discretion of the Commissioners to call any person they think proper.

I will give you an instance. Arising out of the railway evidence, we may find it necessary to call evidence from English railway companies.

Mr. Croker Barrington, Solr.—I meant evidence in the first instance, evidence like——

Chairman.—You may take it generally that so far as the public inquiry is concerned that it will be concluded to-morrow.

Mr. Croker Barrington, Solr.—Thank you, very much.

Chairman.—And that we begin to take the railway evidence at our first sitting in Dublin. If you are not in a position to furnish us with the proofs of the evidence fourteen days before the evidence is given, then we must consider whether we shall postpone the sitting.

Mr. Croker Barrington, Solr.—Quite so. Then I understand, sir, that this is the last sitting to hear evidence on the general case?

Chairman.—Exactly, the last sitting as at present arranged.

Mr. Croker Barrington, Solr.—Very well, sir. I understand the whole thing as at present arranged——

Mr. Sexton.—The railway evidence may show the necessity for calling other evidence. The discretion of the Commissioners to hear evidence of any kind is absolutely reserved.

Mr. Croker Barrington, Solr.—That is entirely in the hands of the Commission. I was not referring to that.

Chairman.—Do we understand each other?

Mr. Croker Barrington, Solr.—Yes, I think we always have.

Mar. 13, 1908.

Mr. R. A. Anderson, Secretary, Irish Agricultural Oganisation Society.

The Commissioners' discretion to hear further general evidence if required reserved.

Mr. Patrick Whelan examined by the Chairman.

43400. Mr. Whelan, you appear on behalf of the Monaghan County Council?—Yes.

43401. Are you a member of the County Council?—Yes.

43402. Are you a member of the Rural District Council?—Yes, the chairman.

43403. What particular railway serves your district?—The Great Northern.

43404. Solely?—Solely.

43405. I think you have something to tell us with reference generally to the way in which you consider the inhabitants of your county are treated by the Great Northern Railway?—Yes.

43406. First of all with regard to what you call rebates—what have you got to say upon that?—We are not able to get any specific case in connection with these rebates, but the general opinion in the county is that rebates have been given in order to crush out the Ulster Canal as a competitor. I may say that my own personal experience with large traders, and the reluctance displayed on the part of those traders to discuss the question, leaves a very unsatisfactory impression with regard to the matter on my mind.

43407. In other words, from information you have received, the particulars of which you are not in a position to give, you are of opinion that rebates are given to divert traffic from the canal over the railway—is that so?—Well, generally I believe so. That is the general opinion. My own opinion is very undecided upon it.

43408. Have you anything to say with reference to the want of connection and long waits at Clones Junction?—Yes. Before dealing with that, I should like if you would permit me to point out that I agree with Mr. Anderson as regards the necessity for a connection between Carrickmacross and Kingscourt. That would open up a large portion of the county.

43409. That is the evidence given this morning, and you agree with it?—I do. With regard to Clones Junction, I might say that although this junction is in the County of Monaghan it is not of much advantage under existing circumstances. If you will allow me to read my proof I can point out how very long waits are necessitated under the present system at Clones. Passengers travelling from any station between Carrickmacross, Inniskeen, and Newbliss, inclusive, to Monaghan or Glasslough, or *vice versa*, have long waits at Clones in nearly all cases. Passengers leaving Inniskeen 7.53, Newbliss 8.43, reach Clones at 8.50, and wait there till 10.20, reaching Monaghan at 10.44 and Glasslough at 10.54. Therefore, the wait at Clones is 1 hour and 30 minutes, the previous train having left Clones at 7.35. Similarly, the train leaving Inniskeen at 10.45 and Newbliss at 11.41 reaches Clones at 11.50, the wait at Clones being 40 minutes till 12.30, reaching Monaghan 12.55 and Glasslough 1.7. The evening train leaving Inniskeen at 4.35, Newbliss 5.32, reaches Clones 5.40, making a more reasonable connection, the wait at Clones being only ten minutes, till 5.50. With regard to Monaghan, I should say that it is impossible under present arrangements to reach Dublin from Monaghan until after noonday, one o'clock, unless passengers started from the town of Monaghan, and drove six miles to a flag station, where it is necessary to be there before the train arrives, and have it stopped. This is very inconvenient for the people of Monaghan.

43410. What is the population of Monaghan?—Nearly 3,000, I should say.

Mr. Patrick Whelan, representative of Monaghan County Council.

43411. Is that all you have to say with reference to the connection and the long waits at Clones Junction?—Yes; we consider that this arrangement should be altered so as to effect a more convenient system.

43412. And to avoid waits?—And to avoid waits.

Unsuitable train connections at Clones Junction.

43413. Is there any particular manufacturing industry in the County of Monaghan, or is it an agricultural county?—In the main it is an agricultural county, but at the same time we have some very large mills there, and we have also what is believed to be some very fine deposits of minerals. There are the limestone quarries of Mr. William Phair at Skinnay, in Glasslough, and the diorite quarries owned by Lord Rossmore. There is also the lace industry of Carrickmacross at Monaghan, which is famous, I may say, practically all over Great Britain. There is also a heavy deposit of gypsum outside Carrickmacross which has been successfully worked there for the preparation of plaster of Paris. I think you will find this in Lewis's topographical dictionary dealing with deposits in the County of Monaghan.

Industries of the County Monaghan.

Mineral resources.

43414. Have you any coal in the county?—It is believed there are some deposits of coal. We have not been able to get a boring machine.

43415. It has not been tested?—It has not been tested.

43416. Are there any other manufacturing industries which you have not mentioned?—Yes; there is the wholemeal industry. There is the wholemeal and oatmeal manufactory of Mr. O'Rourke at Inniskeen, Mr. Guinness's mills at Monaghan, and Mr. Hemmel and Mr. Wright's mills at Clones.

Milling industry.

43417. Speaking generally, are these particular manufacturers satisfied with the rates on their traffic that are in operation?—They are not. I will give Mr. O'Rourke's case as an instance. Mr. O'Rourke stated to the Irish Industrial Conference, Cork, 1905, that he was charged 7*s.* 6*d.* per ton for corn for the 64 miles journey from Belfast, or about 1⅜*d.* per ton per mile, while the same corn was carried from Belfast to Strabane, 85 miles, for 4*s.* 5*d.*, *i.e.*, ⅝*d.* per ton per mile, and carried to Monaghan, 62 miles, for 5*s.* 8*d.*, or 1 1-10*d.* per ton per mile.

Complaint as to excessive rate for corn, Belfast to Inniskeen.

Comparison with other rates on the Gt. Northern system.

43418. Do you know if those rates applied to the same quantities?—I do not know; I am just giving his quotations.

43419. Was one rate for ten-ton lots and another rate for five-ton lots?—I do not know. He stated that if he could get a rate of 5*s.* 6*d.* per ton he could increase his turnover to 2,500 or 3,000 tons, and if he had to close down the trade would go to Glasgow or Liverpool.

43420. *Mr. Sexton.*—Would the quantities carried between those two pairs of stations be about the same?—Yes, I believe so.

43421. *Chairman.*—What have you to say about the rates for potatoes and turnips?—In my county the average acre of land produces twenty tons of potatoes, or twenty tons of turnips, or 200 stones of oats, or four tons of straw, or fifty stones of flax, or eight tons of hay. The Great Northern Railway rates for potatoes, turnips, and oats in five-ton loads for a distance of eighty miles are 9*s.* 9*d.* per ton. For hay (machine pressed with a minimum of 2½ tons to a truck), same distance, eighty miles, 18*s* 10*d.*; for straw (same conditions as hay), eighty

Gt. N. Ry. Co.'s rates on agricultural produce prohibitive.

Mar. 13, 1908.

Mr. Patrick Whelan, representative of Monaghan County Council.

miles, 18*s.* 10d. per ton; for flax in bales, five-ton loads, 16*s.* 9*d.* per ton. All these rates are station to station, exclusive of labour and cartage; therefore the cost of sending an acre's produce of potatoes, 20 tons, at 9*s.* 9*d.*, eighty miles, Great Northern Railway, is £9 15*s.*; for turnips, 20 tons, at 9*s.* 9*d.*, 80 miles, Great Northern Railway, £9 15*s.*; for hay, 8 tons machine pressed, at 11*s.* 9*d.*, £4 14*s.*; for oats, 200 stones, at 9*s.* 9*d.*, 12*s.* 2¼*d.*, plus straw, 4 ton, 18*s.* 10*d.*, £3 15*s.* 4*d.*, £4 7*s.* 6½*d.*; for flax, 6¼ cwts., 16*s.* 8*d.*, 5*s.* 2½*d.* Thus, five acres produce, 80 miles transit, cost £28 16*s.* 8¾*d.* I think these rates are prohibitive, and are calculated to injure the agricultural industry in the County of Monaghan.

Allegation that the Gt. N. (I.) Co.'s rates on agricultural produce are prohibitive.

43422. Of course, it goes without saying that it would be an advantage to the small producer if these rates were less?—Yes.

43423. That goes without saying; but are the rates in themselves reasonable—that is the point?—We believe they are not reasonable.

43424. On what do you base your opinion—have you any figures to show that there is a less rate in operation in any other direction?—In Belgium a ton of produce is carried from end to end of the country for 5*s.* a ton. I quote from a statement of Father Dowling made in Dundalk in 1906, who, so far as we believe, has studied this question all over the Continent, and his statement, so far as we can ascertain, has never been contradicted.

Comparison with Belgian agricultural produce rates.

43425. Do I understand in Belgium, according to your statement, a ton of produce, the produce that you have mentioned—oats, turnips, flax, and so on—would be carried at 5*s.* a ton?—Yes.

43426. Just take butter; you produce butter of course in your county?—Yes.

43427. What is the rate for butter, taking it at any place you like?—The rate is 17*s.* 8*d.* on the G.N.R.

43428. For what distance?—For 83 miles.

43429. Do you remember the stations?—Station to station.

43430. Do you remember the particular station at the end of the 83 miles?—I do not.

43431. At any rate, for 83 miles on the G.N.R. in your county the rate for butter would be 17*s.* 8*d.* per ton—that is your point?—Yes, exactly. That would be 2 4-25*d.* per ton per mile.

43432. Never mind that. The total rate is 17*s.* 8*d.* per ton, 83 miles, for butter?—Yes.

Creameries in County Monaghan.

43434. Whereas you say that in Belgium the butter would be carried for 5*s.*?—Yes.

43434. Are there any creameries in your county?—A considerable number in the County of Monaghan.

Export butter trade restricted by excessive rates.

43435. There is a considerable traffic in butter?—Yes, within a reasonable distance of the ports. The English cities import quantities of foreign dairy produce, and the Irish farmers, I might say, might as well be on a coral reef in the Pacific as they are shut in by the walls of railway rates.

Complaint as to excessive rate for eggs, Smithborough to Belfast.

43436. *Mr. Sexton.*—They are shut out by the disadvantage of the railway rates?—I should say that with regard to eggs, a small dealer complained to me on Saturday last that he consigned some eggs from Smithborough to Belfast, and he had to place them in one of these farmer's packages holding a hundred eggs, that would be ten dozen. He paid the railway company 5*d.* for their package, and 5*d.* more at the rate for conveying the hundred eggs* to Belfast, with the result that that put a penny per dozen on his eggs above the local market price and consequently he had to cease sending these consignments.

43437. From where?—From Smithborough.

43438. In what county?—Monaghan.

43439. To Belfast?—Yes.

43440. *Chairman.*—You refer here I see to some exceptional rates on the Great Northern Railway. Those are exceptional rates quoted, I suppose, for exceptional quantities?—All exceptional and temporary rates on the Great Northern Railway are exclusive of loading and unloading and do not include collection or delivery.

Loading, and unloading and cartage services charged for but not performed in many cases.

43441. What do you mean by exclusive? Do you mean to say that the sender does the loading and the consignee the unloading, and the carting to the station, and not the railway company?—Exactly.

43442. I suppose the railway company have cartage establishments in some places?—They collect at some few stations. The general opinion is that the rates include the cost of collection, but the collection is not carried out, that is the general opinion.

43443. But in that case where the rate includes collection and delivery, I suppose if the service is performed by the consignee or sender, he could claim a rebate?—That raises the question of claims, and so far as the general view of the people in the County of Monaghan is concerned it is most unsatisfactory in that connection. They consider it is hardly worth their while to make a claim for a small amount against the Great Northern Railway in face of all the difficulties they have to contend with in order to obtain it.

43444. Do the Great Northern perform cartage services in Dublin?—Yes, I believe so.

43445. Do you think they do it themselves or by an agent?—The cartage is done on the Great Northern Railway by an agent from Glasgow. That is then let to others at different stations. The cartage is let to Mr. Wordie of Glasgow by the Great Northern Railway Company.

43446. On the whole of their system?—On the whole of their system, so far as I know.

43447. And then he sublets?—Then he sublets.

43448. To local people?—Yes.

43449. At certain places?—Yes, at a lower rate of course than he gets it at. We maintain that it is not at all fair to the country. We consider that the money should be expended in the country where the dividends are earned, and we consider that if opportunities were given to the people in Ireland for this business the cartage could be done at a cheaper rate for the Great Northern Railway. Economies effected in that direction could be applied to the reduction of rates.

43450. Is this within your own knowledge—about this Glasgow agent?—It is within the knowledge of the County Council, yes.

43451. So much for the goods and cartage arrangements. What about the passenger arrangements?—With regard to passenger arrangements there is an entire absence of lavatory accommodation on the trains on the north-western section of the Great Northern Railway, that is between Dundalk and Omagh and the branch lines to Bundoran, Cavan, Cootehill and Carrickmacross. The passenger trains on this section are mostly omnibus trains having only a minute or so stop at each station, so that there is not sufficient time to visit the station lavatories. There is a general complaint with regard to this.

43452. I fancy that complaint could be made against every railway company in England?—That is not my experience for the short time that I have travelled in England.

43453. When you travel in England you no doubt travel by the express trains?—Yes.

43454. And you get express accommodation is not that so, Mr. Whelan?—Well, I do not think there is much in that. I think it is very necessary to have this accommodation. Of course, it is a great convenience, but I admit it is a very expensive luxury.

43455. Coming to the question of the conveyance of pork on the Great Northern Railway, I suppose your county produces a good deal of pork?—A considerable amount of pork. This pork is conveyed in coal wagons; it is put into wagons from which coal has been thrown out, probably at the same station.

43456. But surely that is exceptional?—I have seen it frequently with my own eyes—I should say it is rather general.

43457. Would you?—Yes. I have had considerable experience of attending markets and selling pork.

43458. The wagons are cleaned?—They are not properly cleaned.

43459. They are cleaned?—They are not cleaned.

43460. *Lord Pirrie.*—The coal dust cannot do the pork any harm?—We say it does; it changes the colour.

43461. It is dead meat?—Yes, pork.

43462. *Chairman.*—May I ask if a matter like this has ever been brought to the notice of the authorities?—Attention has been drawn to it frequently in the Press and by men connected with the co-operative movement and public bodies in the country.

43462a. We must take your statement for what it is worth?—I could produce scores of witnesses who, like myself, have personal experience of pork in coal wagons.

43463. *Mr. Sexton.*—Is this pork consumed as pork or as bacon?—It is consumed as bacon.

* 120 eggs, called one hundred, *i.e.* 10 dozen.

43464. *Chairman.*—That is to say the pork goes to be cured somewhere?—Yes.

43465. At any rate you say that the carcases are put into the truck and get covered with coaldust. That is your complaint?—Yes.

43466. What about the cattle wagons and the goods trains?—The goods engines are fitted with vacuum brakes, but the cattle wagons are not so fitted, with the result that when the train is suddenly stopped the cattle are thrown down, with consequent injury, and we believe that a vacuum brake similar to the one on the engine should be fitted to the cattle wagons, and they should also have spring buffers.

43466A. *Lord Pirrie.*—There are spring buffers on them.

43467. *Chairman.*—I think Mr. Whelan is wrong. You say, according to your proof, that the goods wagons are fitted with vacuum brakes?—The goods engines.

43468. I beg your pardon. I suppose all the engines are fitted with vacuum brakes?—I suppose so.

43469. The vacuum brake is not used for cattle wagons?—No.

43470. Neither are they in England, or anywhere else, I think. You do not want any exceptional treatment in Ireland?—We do not want any exceptional treatment, but we want treatment that will develop the industries of the country; and we believe that suggestions of this kind made before the Commission may tend to make the system more practicable and workable.

43471. Is it within your own knowledge that a cattle wagon has what they call a dead buffer, or a spring buffer?—I believe the railway companies are introducing spring buffers generally; but this, after all, will not meet the requirements of the case. I think a vacuum brake will be necessary.

43471A. I do not agree with you there. I should have thought myself that you would not find one cattle wagon in Ireland with a dead buffer.

Mr. Croker Barrington, Solr.—We have not a single wagon of any kind or description on our line that has not a spring buffer.

Chairman.—That is what I thought.

Mr. Tatlow.—Both goods and coal wagons.

43472. *Mr. Croker Barrington, Solr.*—And that applies to all the railways in Ireland?—This system may have come into operation recently.

43472A. *Chairman.*—At our first sitting I believe it was said that the railways were fitting or altering the wagons.

Mr. Tatlow.—No; that was not with regard to spring buffers, but with regard to screw couplings.

Chairman.—That is another thing.

Mr. Tatlow.—I never saw a dead buffer on a cattle wagon in Ireland yet, and I have been there twenty-five years or more.

43473. *Chairman.*—I have never seen a dead buffer on a cattle wagon. I think, Mr. Whelan, you are mistaken?—If the Council that I represent have made a mistake in this matter I am very sorry for it.

43474. With regard to the rates charged for cattle, have you anything to say with regard to the part wagon rate?—According to Mr. Cunningham, in his work, "Railway Nationalisation," live animals may be paid for in Germany either according to number or floor space. Thus, to despatch eleven oxen twenty-five miles the charge is about 2*s.* 0½*d.* per head, or a total of 22*s.* 7*d.* To send eleven oxen twenty-five miles on the G.N.R., a wagon and a part wagon would have to be taken, at a cost of 18*s.*, plus 12*s.* 6*d.*, or a total of 30*s.* 6*d.* To send a wagon load of cattle ninety-three miles in Prussia the floor space—236 square feet is charged for—the cost will be £3 12*s.* 0½*d.* The charge for ninety-three miles on the G.N.R. is 47*s.* 11*d.*, but the floor space is only ninety-one square feet, and the wagon holds ten cattle, while the German wagon would hold twenty-eight; the rate per head working out at 4*s.* 9*d.* for the G.N.R., and 2*s.* 7*d.* for the German lines.

43475. What do you quote that from?—From Mr. Cunningham's work, "Railway Nationalisation."

43476. We have had his pamphlet?—With regard to the facilities for fairs, we say that the same facilities in trains and tickets should be given to our fairs that are available for the markets. Market tickets are issued for a certain train on the morning of a market. Very few people travel on that train; but on a fair morning a very large number of people travel, but no such tickets are available. We say that these market tickets should be available on fair mornings as well as on market mornnigs.

43477. What have you to say with reference to through inland rates?—With regard to through inland rates, I believe the system of through rates should be in operation in Ireland. In Ireland, at the present time, one portion of the country is cut away from the other. These station to station rates are not suitable. I do not agree with Mr. Anderson's statement with regard to through rates—that the through rate system is satisfactory. It is not satisfactory so far as Ireland is concerned. There should be a through rate system in Ireland.

43478. From local stations to local stations?—Yes; say, from Ulster to Munster, from Monaghan to Limerick, and such places.

43479. Is it within your knowledge that such rates are not in operation?—They are not, so far as I understand. I made some inquiries, and I cannot find that these rates are in operation.

43480. You could not give us any typical case, I suppose—say, from Monaghan to any place—where you think a through rate ought to be in operation and where it is not?—I should say that a through rate should be in operation from Monaghan to Limerick, and to Belfast—from one centre of industry to another.

43481. That is what I mean; but do you know that there are not at the present time through rates between those places?—There are not in regard to all classes of produce. There may be some special rates with regard to certain classes of produce, but, generally, there are no through rates, so far as I know.

43482. Take butter and eggs?—There are no through rates for butter and eggs.

43483. From Monaghan to Belfast?—No.

43484. If any traffic wants to go, how is it dealt with?—It is sent in the ordinary way. There are special rates, of course, for butter and eggs, but I do not say that they are through rates, as we understand through rates.

43485. *Lord Pirrie.*—He wants through rate prices. He is able to take the produce from Monaghan to Belfast, but he wants that rate to be at through rate prices That is what you mean?—Yes.

43486. *Chairman.*—I do not know what is meant by a through rate price?—The ordinary rates, as compared with what we understand through rates to be—say, from England to Ireland.

43487. Now I am getting at it?—We say that there should be a proportional through rate in Ireland from one part of Ireland to the other.

43488. If there is a rate from Monaghan to Manchester, whatever proportion is accruing to the Irish railway out of that rate, you contend that that should be the local rate?—Yes.

43488A. *Lord Pirrie.*—I am speaking of the inland rates. He says the inland traffic rates should be based upon the proportion accruing to the Irish companies on their through rates.

43489. *Mr. Sexton.*—Based upon?—Yes, based upon.

43490. *Chairman.*—What have you to say with reference to the zone system and fares in other countries compared with Irish fares. Do you think the zone system would be a good system for Ireland?—I think it would.

43491. What is your authority for that?—If you take Mr. Cunningham's and Mr. Edward's and Father Dowling's statements with regard to the zone system in Hungary and other countries you will find that the zone system works out very satisfactorily.

43491A. But have not you got some other authority?

43492. *Mr. Sexton.*—A greater authority?—We have Mr. Acworth. Writing in the Nineteenth Century for 1892 he suggested the adoption of the Hungarian zone system for Ireland.

43493. *Chairman.*—Mr. Acworth did?—Yes.

43494. Proceed?—Because Ireland seemed to him to have many points in common with Hungary. He admitted that the Hungarian railways had not lost by the arrangement, while the gain to the peasantry he described as undeniably enormous. Similarly he believed "That a reduction of third-class fares in Ireland from 1*d.* to ½*d.* would have an immense effect on the prosperity of the country."

43494A. *Mr. Sexton.*—That is in the Nineteenth Century, 1892.

43495. *Chairman.*—We will ask Mr. Acworth about that. Of course the zone fares are considerably lower than the local fares charged in Ireland or in England or anywhere else?—Yes.

Mar. 13, 1908.

Mr. Patrick Whelan, Representative of Monaghan County Council.

The extension of the through inland rate system in Ireland advocated.

Local rates to be based on Irish rail proportion of cross-Channel rates.

Adoption of the Hungarian passenger fare zone system recommended.

Mr. Acworth's opinion in 1892.

Mar. 13, 1908.

Mr. Patrick Whelan, Representative of Monaghan County Council.

43496. Your point is that those fares having been so successful in Hungary might with advantage be tried in Ireland?—Yes.

43497. That is all you have to say?—Yes.

Advantages of the zone system of passenger fares, and its adoption by the North British Company.

43498. And you give your authority for the statement?—I think the zone system has also been applied on the North British Railway, or something similar to it. It issues cheap weekly zone tickets between the terminal points of Waverley, Leith Central, North Leith and Trinity, enabling a passenger to travel as often as he likes between Monday morning and the following Saturday night at a charge of 1*s.* 6*d.* first class, and 1*s.* third class. The zone system is extended to include Granton, also, at 2*s.* 6*d.* first class, and 1*s.* 6*d.* third class. The distances are, Edinburgh to Leith, two miles; Edinburgh to Trinity, 2½ miles; Edinburgh to Granton, three miles. Therefore a passenger travelling only once each way per day can do so at a cost of ⅓*d.* to ½*d.* per mile. The chief advantage of the zone system over other methods of cheapening rates are that the longer the distance travelled and the further goods are sent the cheaper in proportion do the rates become. Thus, the adoption of the zone system in Ireland would bind the North and South more closely together. We also think thereby there would be a saving in printing and a further advantage that tickets could be sold at shops and hotels, as the late Sir Blundell Maple said was freely done in Hungary, thus reducing the labour and crush at ticket offices.

Comparison of Continental with Irish 3rd class fares.

43499. You have some figures of third class fares, which perhaps it would be advisable to get on the notes if you do not mind?—These are the figures quoted by Professor Long.

43500. Will you kindly read them out. First of all take the distance for 66 miles. What are the rates?—In Denmark, 2*s.* 5*d.*; Russia, 3*s.*; Belgium, 3*s.* 3*d.*; Holland, 3*s.* 4*d.*; Sweden, 4*s.*; Germany, 4*s.* 5*d.*; Ireland, 5*s.* 5*d.*

43501. Now, just take the long distance, 165 miles?—The figures are in Denmark, 4*s.* 4*d.*; Russia, 6*s.* 5*d.*; Belgium, 8*s.* 2*d.*; Holland, 8*s.* 2*d.*; Sweden, 10*s.* 5*d.*; Germany, 10*s.* 8*d.*; Ireland, 13*s.* 9*d.*

43502. You have not given England at all?—No.

43503. Under the zone system in use in Hungary what do you say?—Under the zone system in use in Hungary a person could travel from one end of Ireland to the other in an ordinary train for 6*s.* 8*d.*, or in a fast train for 8*s.* third class. We do not think either (1) the adoption of the zone system or (2) fares, ½*d.*, 1*d.*, or ¾*d.* impracticable, but we think Mr. Gladstone was perfectly right when in introducing the Act of 1844 he said, "There is no likelihood that the great experiment of the greatest possible cheapness to the public will be tried under the present system."

Irish railways exempt from the passenger tax.

43504. *Mr. Sexton.*—He said that 63 years ago?—Yes. The Irish railways are exempt from passenger tax.

Lord Pirrie.—You do not object to that?

43505. *Chairman.*—I was just coming to a general question. You have dealt with the goods, passengers, and cattle. May I ask you if you are authorised to speak on behalf of the Council?—Yes.

43506. You are giving us the voice of the Council?—Yes.

The County Council unanimous in approving witness's evidence.

43506A. Are the Council pretty unanimous on this question?—The Council are absolutely unanimous on this question, and the Council is composed of men of various shades of religious and political beliefs.

43507. They have considered the question of the nationalisation of railways?—They have.

Nationalisation of the railways under an Irish authority advocated.

43508. And what conclusion have they arrived at—do they consider it will be an advantage to Ireland if the railways belong to the State?—That the railways should belong to the people of Ireland—belong to Ireland.

43509. And worked by an Irish authority?—And worked by an Irish authority, and we believe that the Prussian system might be very well applied to Ireland, namely, an elective Board, with provincial and district Boards.

Adoption of the Prussian system of control recommended.

The provincial Boards in Prussia are bound to consult the district Boards on all important questions affecting the trade of the district. We consider that that would be of enormous advantage in Ireland, and that if a struggling industry was about to be established in any district, a suggestion from the district council to the railway managing board would be of enormous importance in developing and assisting that industry.

43510. They prefer that system to any system of amalgamation of small railways with large railways and three or four systems of railways?—They do.

43511. They consider that the entire railways of Ireland should be purchased, which would, in their judgment, result in great benefits to the district you represent?—Yes.

43512. And to the whole of Ireland?—Yes, to Ireland as a whole. I will give you an instance. There is a large quarry convenient to my district in the county of Monaghan which contains a reasonable percentage of manganese and iron. I made inquiries at the nearest station to find the cost of sending the raw material to one of the English towns, and I found that it cost exactly the same to send the raw material from there to the English town as it did to send the manufactured article from the English town back again. The company, of course, say, "If you can guarantee us very large consignments we will give you a reduced rate." What we want is something to encourage the small industries. If a small industry of that kind, in its initial stages, has to guarantee large consignments, it is hampered. We think it is impossible under these circumstances to develop small industries properly, and something should be done to develop them.

Examined by Mr. Sexton.

43513. I will take you through the remainder of your proof. Going back for a moment, I think you spoke of the influence of the English companies upon the Irish lines?—Yes.

43514. What is the effect of it?—We believe that the influence of the English railways on Irish lines is calculated to send English produce into Ireland much cheaper than the Irish article can go to the consumer in our own country.

43515 The railway rates give a premium to the importer of goods to the prejudice of the Irish producer?—Yes.

43516. Thereby limiting the output of the Irish producer, and keeping him out of some of the most valuable markets?—Yes.

43517. You said this view is corroborated by some evidence which you have?—That view is generally accepted, and is corroborated by the statement of Lieutenant-Colonel Plews.

43518. That statement was, you say, that if the Irish railways carried interior traffic in Ireland at rates corresponding to those at which they carried imported goods, it would spell ruin and bankruptcy to the Irish railways?—Yes.

43519. That would seem to convey that the imported goods must be carried at much lower rates?—Yes.

43520. Will you now turn to what you have to say in regard to the insufficiency of staff at Great Northern stations?—We consider that the staffs at the stations are not sufficient. Boxes of eggs and things of that kind, and passenger luggage have to be thrown out in a great hurry, and consequently sufficient care cannot be exercised. We do not blame the officials in this case, because they have only a certain time to do a certain amount of work, and they cannot exercise sufficient care. We consider there should be more porters and officials at these stations.

43521. The Great Northern system is the result of many amalgamations?—Yes.

43522. Do you say that these amalgamations have not resulted in due economy?—They have not; that is our belief.

43523. What particulars do you offer in support of that statement?—I compare the salaries and work, and the number of officials that were employed previously with the present system of management, and find that the present system compares unfavourably with the past system. I would also point you to the dissatisfaction all over the country with regard to fares and rates.

43524. Taking the question of inadequate economies since amalgamation, give briefly the grounds for thinking that larger economies might be effected?—I will take the case of the Great Northern Railway alone. The stockyard at Dundalk, we believe, could be amalgamated with the store-keeper's department and worked as one, as is the case on the Great Southern and Western Railway. Then there are fourteen permanent-way inspectors who are supposed

to oversee the skilled artisans as well as the fencers and other men. Not one of those fourteen are able to oversee the work of skilled artisans, and if the inspectors were responsible for the fencers and such-like alone, they could take over a greater amount of work, and six inspectors should be sufficient for that work, appointing a foreman carpenter and a foreman painter to control the skilled workmen over the whole of the line. The present cost of the fourteen inspectors at £105 each is £1,470. By the scheme which we suggest, should it be put into operation, there would be six inspectors at £105 each, making £630, and three foremen at £105 each, making £315, a total of £945, or a saving of £425 annually.

43525. What do you say would be the total sum per annum that might be saved upon that one system by economies of that kind?—We consider that there could be £4,000 or £5,000 saved.

43526. By rearrangements and economies of that description?—Yes.

43527. Will you turn to the paragraph in your proof on the general effect of the present Irish railway policy?—Going from the particular case of the Great Northern to the general case, as much of the foregoing tends to support the evidence from other districts that Irish railway charges are vastly in excess of reasonable rates, preventing the farmer from getting to the consumer without having his profits eaten up, hindering traffic between inland towns and killing home production, lack of facilities, discrimination in favour of the English manufacturer against the home producer even when, in the words of Colonel Plews, this policy spells bankruptcy and the non-possumus attitude of the railways to the trader. I do not propose to deal with the general case at any length.

43528. You say, really, that the system of rates hinders and prejudices the Irish farmer grievously, and prevents Irish manufactures from being established?—We do.

43529. As to the effect of the railway policy on this volume of traffic, what have you to say?—The general effect of the prohibitive tariffs of the Irish railways is to reduce the traffic to a minimum, and the only remedy the directors appear to be able to suggest for this is to encourage tourists to come into the country, thus substituting an artificial passenger business for the ordinary trade which has been killed by extortion.

43530. You think tourist traffic would be no adequate substitute in the case of Ireland for the ordinary development of manufactures and industries?—Certainly not. Although the tourist traffic may be of benefit to the railway company I do not see what good it is going to do for Irish industries.

43531. With regard to through rates, I suppose you are aware that any one company can refuse to give a through rate?—Yes.

43532. Do you suggest that through rates are refused in order that terminal charges may be multiplied?—We do; it looks like it.

43533. Sir Alexander Shaw and other witnesses have testified that through rates in Ireland are usually nothing more than the sum of the local rates; is that what you believe?—We believe that the through inland rates of Ireland appear to be based on something like that.

43534. The total of the local rates?—Yes.

43535. But you think they should be rather based on the charges for which the Irish railways are willing to carry imported goods?—We do; we believe that is the basis which should be fixed upon.

43536. Have you developed your views about the importance of cheap fares for workmen?—I have not. The Irish railways are exempt from the passenger tax. English railways have only been able to get exemption from the tax on third class fares by giving cheap fares and trains for the working man. Cheap fares for the working man practically do not exist in Ireland. On the Italian National Railways there is a regular and fast service of trains morning and evening carrying workmen between Genoa and a number of villages within a radius of twelve miles. Weekly subscription tickets are given at rates varying according to distance, from 50 centimes to 2 francs—this works out at a shade over $\frac{1}{8}d.$ per mile. In Belgium, while the ordinary fare for a return journey of 50 kilometres is 3·05 francs (2*s.* 5*d.*), and for a return journey of 100 kilometres, 6·05 francs (4*s.* 10*d.*)—these figures are given in the Official Belgian Guide for 1907, pages 438-9—the fare for workmen for the return journey of 50 kilometres, or 31¼ miles each way for six days, is 2f. 25c., 1*s.* 9½*d.* a week, or 3½*d.* a day, and for the return journey of 100 kilometres or 62½ miles, 3f. 15c.—2*s.* 6*d.* a week, or 5*d.* a day.

Cheap fares for workmen.

43537. Do you see any prospect of such fares in Ireland under the regime of the private companies?—We do not We consider that these fares will be possible in Ireland only when the Irish nation or its representatives become owners and managers of the railway.

43537A. *Lord Pirrie.*—I think it is only fair to say that the railways have worked trains from Belfast to certain distances, 12 to 15 miles at cheap rates. I only want to keep the witness's evidence in line with what we already know.

43538. The point is that the system on the Continent is much more cheap and elastic in relation to distance, and if it were applied in Ireland, urban workmen, generally, would have more healthful homes and freer access to the country?—Quite so. The Dublin working man would be able to live in Dublin, County Wicklow, Meath or Kildare for 3½*d.* per day. The Belfast man, in addition to the County Monaghan, would have a choice of the Counties Down, Tyrone, Armagh and Antrim, and could even live at Portrush for 5*d.* return fare per day.

Only possible when control by an Irish authority is established.

43539. Besides that, it would develop a class of traffic which does not now exist?—Certainly, and it would relieve congestion in the large cities.

43540. Most railway men would admit that it is better to have a substantial traffic at low rates than not have any traffic at all?—Quite so.

43541. Coming to the point where the Chairman left off his examination, you were about to give some information as to trains on separate systems leaving terminal points at nearly the same times. Briefly give the substance of that?—We consider the fact that trains leaving certain places at the same time, or coming into certain places at the same time, is a considerable inconvenience and danger. I can give you some instances from the "Irish Travelling Guide, 1906." Trains leave Belfast for Londonderry on the G.N.R. at 8.5 a.m., and on the M.R. (N.C.C.), 8 a.m. Trains leave Derry for Belfast on the G.N.R. at 3.15 and 5.15 p.m., and on the M.R. (N.C.C.) at 2.45 and 5.35 p.m., reaching Belfast, respectively, at 6 p.m., 8.15 p.m., and 6.10 and 8.35 p.m. Trains leave Broadstone, 9.15 a.m., and Amiens-street, 9 a.m., reaching Cavan at 12.19 and 12.35, respectively.

Disadvantages of the despatch of trains by competing routes at the same hours.

43542. You give several other instances to show that even the greatest lines in Ireland running between the same points do persistently run trains at or about the same times, and so deprive the public of the benefit of alternative services, services at different times?—Yes.

Examples—Gt. Northern, Northern Cos., M. G. W. trains.

43543. You have something further to say as to the growing influence of English railway companies in Ireland?—We are opposed to the growing influence of English railway companies in Ireland because, apart from any want of sympathy with Ireland's needs, they must continue to obtain traffic for themselves by making English goods cheaper in Ireland than Irish goods.

The influence of English companies on Irish railways.

43544. You do not impute blame to them; they are acting on ordinary commercial principles?—Quite so.

43545. Passing to the question of purchase, you speak for the County Council, and your suggestion is that Ireland ought to be the purchaser?—Ireland ought to be the purchaser.

43546. Whatever might be the financial transaction between Ireland and the Imperial State?—Yes.

Nationalisation of the railways under an Irish elective authority advocated.

43547. And that the Administration should be an elective body?—Yes.

43548. Reinforced perhaps by the presence of some experts?—Quite so.

43549. But it ought to be substantially an elective body?—They ought to be an elective body.

43550. Have you any doubt that a body substantially elective would be both quite intelligent enough to understand the true interests of Ireland in relation to the railway system and public-spirited enough to see that those interests were well served?—I believe it would be a body most capable and most anxious for the development of the country, and would be the party, with the assistance of experts, best of all fitted to carry on the management of Irish railways.

Advantages of public control.

Mar. 13, 1908.

Mr. Patrick Whelan, Representative of Monaghan County Council.

43551. People sometimes talk as if public owners of railways would suffer for want of experts, but surely a body managing all the railways of Ireland would be in a position to offer to experts more attractive, more influential, and more lucrative posts than any railway company?—Yes, they would.

Advantages of public control.

43552. There is no doubt therefore they would have the maximum of expert efficiency at their service?—Quite so. They would also have the assistance of the District Councils and public bodies and industrial societies established in the different districts of the country, who could make suggestions, and if those suggestions were not carried out, or if the railway was not employed for the development of Irish industries, generally, the remedy would be in the hands of the people. As it is now, the remedy is not in the hands of the people and their suggestion cannot have the desired effect.

The employment of expert assistance.

43553. The question of rates and fares might be dealt with in consultation with the County and District Councils?—Yes.

43554. So that each district and locality would be called into counsel upon matters affecting their interests?—Yes.

Over-taxation of Ireland: the Financial Relations Commission.

43555. Have you any views to express upon the claim of Ireland in regard to over-taxation?—Yes. We know that thirteen years ago, a Commission appointed by the Government of this country decided that Ireland was overtaxed to the extent of nearly three millions, and from that time down to now we cannot see that Ireland has got any refund for this over-taxation or that any steps have been taken to reduce it. Therefore we hold that if England made us a free grant of the entire amount necessary to purchase the interests of the present railways of Ireland, she would be only giving us back a portion of the money which has been wrongfully taken from us.

Claim for free grant of purchase money on State credit to be placed at the disposal of the Irish controlling body.

43556. Then you think that at the very least, whatever may be done as regards the over-taxation, the State ought to place its credit at the disposal of any Irish body instituted to administer the railways?—Yes, quite so, and we believe that the present Council of the Irish County Councils could be used as that body.

43557. You believe that body, or such a body, would be willing to assume in the name of the Irish community the responsibility arising from that financial transaction?—I believe they would.

Excess of present railway profits over interest on purchase money.

43558. And they would keep the Treasury indemnified and repay the loan?—Quite so. I do not see how the Treasury would not have the same security in that case as they have for the moneys which they lend for the purchase of Irish land.

43559. Are you satisfied that with the co-operation of the Treasury it would be possible to effect the financial transaction so as to leave a considerable surplus over the present net profits of the railways?—I am satisfied, certainly. If you would allow me to give you an instance of the profits that are made from these railways——

To be increased by economies from unification of management.

43560. We know the profits, you need not go into that; they are about £1,600,000 a year. Witnesses have testified that if the State places its credit at the disposal of the Irish body the purchase could be transacted at a fair price at an annual charge far less than the present net profit of the railways. Do you think there would be a further surplus arising out of economies which have not been made, but which might be made after unification of all the railways?—Yes.

43561. And this would provide a fund enabling the authority to start a large and liberal system of reduction of those rates which most require reduction?—I am satisfied that sufficient economies could be effected to add to the security of the States.

Suggested method of purchase.

43562. Several methods of purchase have been suggested. I believe you think the best method is that provided in the Act of 1844?—Yes. A very slight change in that Act would give the present elective body, the General Council of County Councils, the right to purchase.

Provisions of the Act of 1844.

Powers of the Treasury as to purchase.

43563. It may be useful if the memory of the Commission and the public are refreshed as to the present state of the law. Under the law as it now stands, and has stood since 1844, the Treasury may at any time give three months' notice to any company in Great Britain or Ireland whose lines have been constructed since 1844 to purchase their line at twenty-five years' purchase, estimated upon the average annual profits of the last preceding three years?—Yes.

43564. And if the company is not making 10 per cent. (which is the case of every company now), then the Company may resort to arbitration?—Yes.

43565. But they can only resort to arbitration upon the plea that their prospects are better than their existing profits?—Yes.

43566. In a case where a railway advances the plea that its prospects are likely to improve its present profits, then it may refer to an arbitrator the question whether any, and if so, what additional amount should be paid?—Yes.

43567. The contemplation of the law therefore is that the payment shall be first made on the basis of twenty-five years' purchase, and if the company makes a particular plea that its prospects are better that its present conditions then the matter may be referred to arbitration in order that the arbitrator should determine what additional amount should be paid?—Certainly.

43568. And you say, therefore, that as the law now stands, there is ample power to purchase any railway at twenty-five years' purchase of the net annual profits, subject to the right of the company to refer to an arbitrator, on the ground that its prospects are better than its present condition, and, therefore, that a complementary payment ought to be made?—Yes; that is what I believe.

43569. And your view is that that law ought to come into effect?—Yes. The Act says, "Whatever may be the rate of divisible profit."

43570. Yes. Subject always to the right of the company, if it pleads that its prospects are better than its present condition, to refer to arbitration in order to have those prospects valued?—Yes.

43571. Is there anything else in your proof to which you attach importance?—I attach some importance to the salaries that are paid to officials.

43571A. *Lord Pirrie.*—I think we have had that. I do not think it is necessary to go through that again.

43572. *Mr. Sexton.*—You gave some figures, and you indicated the gross saving that might be made, and I think that will be sufficient for the purposes of the Commission. Is there anything else you wish to say?—I wish to draw the attention of the Commission to a matter in connection with lime—a question which has been already mentioned by the Chairman to-day. In the county of Monaghan large tracts of land in the interior of the county are very much in need of lime. Representatives of some five or six parishes, which were seriously affected, applied to the Great Northern Railway Company for facilities to have lime conveyed from stations near the kilns to stations within the affected area. The railway companies offered to reduce the existing rate per ton—I believe in some instances, from 1*s.* 8*d.* to 1*s.* This seemed reasonable enough, but the company added a condition ensuring that the farmers, in order to secure this rate, would have to have carried over this particular line 470 tons inside the year, and also that wagons would be emptied on arrival. The company had not conveyed more than from six to ten tons annually on the same line previously, and as they refused to give either suitably covered wagons or sheds to protect the lime from the rainfall, the people could not accept the terms, and the matter is still unsettled. The Department of Agriculture took up this question for the committee that represented these five parishes, and the result of their negotiations with the railway company was conveyed to this committee by a letter from the secretary of the Department, dated 22nd June, 1906.

43573. That was the offer made at that time?—Yes.

43574. *Mr. Sexton.*—And you consider it a hardship that they only made that offer to carry the lime at that rate, subject to the conditions stated?—Yes.

43575. You believed that the quantity might have been taken, but you did not wish to bind yourselves to it?—We did not wish to bind ourselves to it under the circumstances. If the railway company had given us sheds or covered wagons suitable for conveying the lime properly, and in safety, we would have given that guarantee; but they would not give us the covered wagons or the sheds. I must say that it would be to the great convenience of many farmers, who have land materially suffering for want of this very valuable

Mr. Patrick Whelan, Representative of Monaghan County Council.

and necessary manure, if they were permitted to put upon the lines a particularly constructed wagon of their own for the purpose of conveying this lime, and have that wagon carried at a proportionately reduced rate. I mean that the farmers might buy this properly constructed wagon from the railway company itself—that the company should agree to make it for them, and the farmers pay them for it.

43576. You consider the wagons they have at present are not suitable for carrying lime?—Yes.

43577. The lime was not carried—that is the end of it all?—That is the end of it all.

43578. The concession was nominally made, but the conditions attached made the concession useless?—Yes. The small farmers in the interior of the County Monaghan who have not horses are unable to get lime from long distances.

43579. Do you wish to say anything further?—I wish to mention a grievance. I am the President of the Gaelic Association of Ulster, a body numbering 20,000 members. The Great Northern Railway have absolutely refused to give facilities to this organisation for Sunday travelling. I wish to point out the following fact: a competition was in operation between the counties of Cavan and Antrim, some years ago. The railway company agreed to run an extension of the Sunday morning train from Belfast to Clones on along to Cavan, a distance of from twelve to thirteen Irish miles. All arrangements were completed, and a guarantee agreement, signed by the secretary, was handed in to the company's officials, at the company's request. However, the company withdrew their arrangement a day or so before the competition, and from that time to this they have never granted any facilities to the organisation in regard to travelling.

Complaint as to unsatisfactory facilities for Sunday travelling.

43580. You say that this Association has 20,000 members; that it is mostly composed of hard-working agricultural labourers, and that they have no time for recreation except on Sundays?—That is so. They are generally employed in the rural districts—young farmers and sons of agricultural labourers. They have no day off except Sundays, and after attending their respective places of worship on Sundays they wish to have a little amusement, and they have no facilities for those amusements or for travelling under the Great Northern Railway system.

Serious inconvenience caused to the Gaelic Association of Ulster.

43581. You think it unfair and unreasonable that people with rigid views with regard to Sunday observance, who happen to be directors of a railway, should obtrude their views into the management of the railway to such an extent as to deprive poor people, who have very little leisure, of the one opportunity they have for amusement?—Yes; quite so. I wish to add that a resolution was passed unanimously by the Monaghan County Council, on the 3rd February, pledging its assistance to farmers, who requested that a Renard road train should be obtained to help them.

Lord Pirrie.—Thank you, Mr. Whelan, we are much obliged to you.

The Commission adjourned till the following morning at 11 *o'clock.*

SEVENTY-FIRST PUBLIC SITTING.—SATURDAY, MARCH 14TH, 1908.

In the Board Room of the Lancashire and Yorkshire Railway Offices, Westminster, London.

Commissioners present:—Sir CHARLES SCOTTER, Bart., Chairman; Sir HERBERT JEKYLL, K.C.M.G.; Mr. THOMAS SEXTON; Mr. W. M. ACWORTH; and Mr. JOHN AUDLEY FREDERICK ASPINALL;

Mr. GEORGE E. SHANAHAN (Secretary).

Mr. WALTER HENRY MACNAMARA, B.L., examined by the CHAIRMAN.

Mar. 14, 1908.

Mr. Walter Henry Macnamara, B.L., Secretary and Registrar, Railway and Canal Commission.

Act regulating the constitution of the Court of the Railway and Canal Commissioners.

43582. *Chairman.*—Mr. Macnamara, you are a barrister-at-law, and Secretary and Registrar of the present Railway and Canal Commission?—Yes.

43583. How long have you been Secretary?—I have been Secretary since March, 1882.

43584. But the constitution of the Court has been altered since that date?—Yes; it was altered by the Railway and Canal Traffic Act, 1888.

43585. And you held practically the same position under the old constitution?—Yes.

Evidence given before the Vice-Regal Commission as to the excessive expense and delay of the Court.

43586. I think you are aware that we have had a great deal of evidence with reference to, first of all, the expense of the Railway Commissioners' Court to traders, and the impossibility of traders in Ireland making use of that Court. Are you aware of the evidence that has been given?—I have read the evidence given before this Commission, so far as it relates to the Railway Commission Court, and I have noticed that some of the witnesses have expressed the opinion that the tribunal is almost an impossible Court for traders, on the ground of expense. There is also, I notice, another complaint, that the proceedings in the Court are dilatory, and that delays take place in the trial of cases. The allegation as to cost in the proceedings of the Court has been made on many occasions during the last twenty years, and I have endeavoured—I will not say whether successfully or not—to try and meet that allegation in evidence before Select Committees of the House of Commons and other Commissions. But the complaint as to delay, and as to the cumbersomeness of the proceedings in the Railway Commission Court, is, I think, made for the first time; and if you will allow me, I will deal with that first. The pleadings in the Railway Commission Court are certainly as simple as those in the High Court.

The procedure explained.

43587. I should have thought more simple than those in the High Court?—In many cases they are. For instance, an application under Section 10 of the Railway and Canal Traffic Act, 1888, to decide a dispute as to the legality of a rate or toll can be made without any pleadings at all, simply on a joint application. But there are sometimes very heavy and complicated proceedings before the Court, in which the pleadings are as complicated as those in the High Court. Those, however, are proceedings between railway company and railway company, or between some public authority and a railway company, and not between traders and railway companies. I have here applications drawn by the applicants themselves—traders—which have been filed in the Railway Commission Court. Here is one by a trader named Goddard against the London and South Western Railway Company. It was heard for many days before the Commission, and in that case the applicant appeared in person before the Commission, and was successful. Under the Railway and Canal Traffic Act Rules, the applicant, at the time of filing his reply (if any), or if the railway company make default in putting in their answer, or at any time after the pleadings are closed, may apply to me to fix a date for the hearing, and I need hardly point out that this is very different from setting down a cause for trial in the High Court, where it takes its place at the bottom of a list, and no one can tell with certainty when it will be heard. All the expense of witnesses waiting about the Courts for days, in a case entered in the day's cause list for trial but which is not actually reached is unknown in the Railway Commission Court, and, as far as possible, a day is fixed which is convenient to the applicant. Section 5 of the Act of 1888 enacts that the Railway Commissioners may hold sittings in any part of the United Kingdom in such place or places as may be most convenient for the determination of proceedings before them, and our rules provide that cases are dealt with by the Commissioners in that part of the United Kingdom in which the cause of complaint arises.

The charge of diliatoriness refuted.

Cases quoted —Goddard *v.* L. and S. W. Ry. Co.

43588. In other words, you can sit wherever it is most convenient to the traders?—Most convenient to the complainant. There is one *ex officio* Commissioner for England, an English judge of the High Court; one in Scotland, a Scotch judge of the Court of Session; and one in Ireland, a judge of the High Court——

43589. Is the judge appointed for a fixed period?—Five years.

43590. In all the countries?—Yes.

43591. *Mr. Balfour Browne,* K.C.—But he can be re-appointed. In one case that has been done. Mr. Justice Wills served two terms, did he not?—No, but Mr. Justice Wright and Mr. Justice Murphy did so.

43592. *Chairman.*—But the appointment is for five years?—Yes. There are instances where a judge has served a second term of five years.

43593. How do you say that there is no delay in these proceedings when you have to depend upon a judge of the High Court?—If you will allow me, I will read the enactment under which the judge sits. Under the Act of 1888 he "is required to hear when, and as soon as the cases are ready to be heard, or as soon thereafter as reasonably may be; and any judge shall be required to perform any of the other duties of a judge of a Superior Court only when his attendance on the Commission is not required."

43594. That is his first duty?—The first claim on his time.

43595. And, therefore, you have no difficulty in fixing a time for the hearing?—No. Now in order to show that cases in the Railway Commission Court are heard promptly, I would refer you to the last three sittings of the Court. The last sitting commenced on February 26th, when a case was heard in which the pleadings closed on February 12th.

43596. That is this year?—Yes. At the sitting of the Court, held in London, on the 16th of last December, the Court heard two cases. In one of them (*the Postmaster-General* v. *Watford Urban District Council*), the application was only filed on November 5th, and the answer on November 26th. The second case was a trader's case (*Castle Steam Trawlers, Ltd.,* v. *Great Western Railway Company*), in which the application was filed on the 16th October, and the answer a month later. Last month (on the 18th February) the Court sat in Dublin, to hear cases arising in Ireland. There were two cases before the Court. In one of them (*Sligo, Leitrim and Northern Counties Railway Company and Great Northern Railway Company (Ireland)* v. *Great Southern and*

Western Company), the application was filed on the 11th September. The defendant company were required to file their answer to the application within fifteen days, which is the usual time shown by the endorsement on an application when it is served, but the applicants in this case voluntarily gave the defendant company until the 30th October, and so the pleadings were not closed until the 22nd November. The applicants did not apply to me until December to fix a date for the hearing, or the case would have been heard even sooner than it was. In the other case, heard in Dublin last month, the application was filed on the 20th December, and the pleadings were only closed on the 28th January. In addition to these two cases, there were two others pending in Ireland, and the Railway Commissioners offered to hear them last month also, but the parties said they were not ready for trial. I notice, in looking through the evidence given before the Vice-Regal Commission, that there is a specific complaint as to delay. Mr. Malone, the Chairman of the Dublin Port and Docks Board. in answer to Question 9813, read a resolution of that Board, that they "Consider that the present system of dealing with railway disputes through the Railway Commission is cumbrous, tardy, and costly." And another member of the Board, Mr. Goodbody, examined in November, 1906, said, in answer to Questions 2770 and 2774, that "The Board have a case against the Great Southern and Western Railway Company before the Railway Commission, of which the particulars were known more than a year ago, but which had not yet come to a head; and the Commissioners had been coming to Ireland to try it for the last six months, but had not come yet—it was so slow in every way."

43597. You had better give us the facts about these cases?—The facts are these: the Dublin Port and Docks Board could not bring their differences with the Great Southern and Western Railway Company before the Railway Commission Court without first obtaining an Order of Reference from the Board of Trade. They applied to the Board of Trade on June 5th, 1905. The Order of Reference to the Railway Commissioners was granted by the Board of Trade on the 29th of the following August, but the Dublin Port and Docks Board delayed doing anything under it until March 7th, 1906.

43598. That is from August, 1905, to March, 1906?—Yes; when they filed their application in the Railway Commission Court. Then came interlocutory applications of an important character, chiefly for discovery, by both parties. I made orders on these interlocutory applications. These orders were appealed from either to the Court or the judge. The appeals were dismissed, but the result was that the pleadings were not closed until the 17th November, 1906, and ten days later the Board applied to me to fix a day for the hearing. So that when Mr. Goodbody made the statement that the Commissioners had been coming to Ireland to try the case for the last six months, the Port Board had not even applied to me to have a date fixed for the hearing. Until application is made to me, as provided by the Rules, I cannot fix a date for the hearing of a case; and I submit that any delay in the hearing of a case is caused solely by the parties and not by the Court. In connection with these exceptionally heavy and important cases, arising out of the amalgamation of the Waterford and Limerick Railway Company and the Great Southern and Western Railway Company, I should like to emphasise the expedition with which the Commissioners arrived at and announced their decision, within almost a few weeks after the long inquiry which took place in February of last year.

43599. Can you give us any dates?—I think the hearing lasted a fortnight, in February, and the Commissioners had their decision ready in April. There was a mass of figures and documents to go through, and the Irish judge—*the ex-officio* Commissioner for Ireland—was away on circuit the whole of March.

43600. Perhaps now you would deal with the complaint as to the excessive costliness of the proceedings?—Yes. In doing so I should like first to refer to the three specific examples which have been given to the Vice-Regal Commission, of large sums incurred for costs by litigants in the Railway Commission Court. The three examples given were the Londonderry case, the Dublin Port and Docks case, and the Great Southern and Western Railway Company's case on the increase of rates. It has been stated that in the Londonderry case the costs of the Londonderry Port and Harbour Commissioners were practically £4,000, This case was heard before the old Railway Commission in 1887. The hearing in Londonderry lasted no less than ten days, followed later by four days' hearing in London. The applicants employed two Queen's Counsel and a junior—all members of the English Bar. The judgment of the Commissioners in that case as to costs was as follows:—"There only remains the question of costs. It was necessary for the applicants to bring the London and North Western Company and the Dundalk and Greenore Company here, because without their presence we could not have dealt in any manner with the through rates, upon which alone we have found them entitled to any substantial relief, but the case as made does not show any breach of duty on the part of these companies, or any complicity on their part in any of the grounds of complaint which we have held to be sustained. The applicants must therefore pay their costs."

Mar. 14, 1908.

Mr. Walter Henry Macnamara, B.L, Secretary and Registrar, Railway and Canal Commission.

The complaint as to excessive costliness of the proceedings.

Explanation of the costs in the Londonderry Port and Harbour Commissioners' case.

43601. That is, the costs of the North-Western?—Yes, and the Dundalk and Greenore Railway Company.

43602. Those costs are included in the applicant's?—Yes. "As against the Great Northern Company, though the applicants have in part succeeded they have failed in the greater part both in value and in expense, and it would not be sufficient, we think, to make an order simply without costs. The applicants must pay so much of the costs as are occasioned by the issues on which they have failed, and receive so much of the costs as is attributable to the issues on which they have succeeded; and of course, as they have succeeded in a substantial part, the general costs of the suit, except that in the costs thus given them they are not to be allowed anything in respect of the hearing in London, which was directly occasioned by their own initial error in pleading." There were no less than four days' hearing in London, which of course was a substantial part of the costs.

The order as to costs.

43603. That was on the application of the Londonderry people?—Yes.—If that case had been heard before the present Railway Commission, English counsel could not have been taken specially over to Ireland, and the losing party could not have been ordered to pay the costs of the successful parties.

The large expense incurred would be much less under the present constitution of the Court.

43604. So that the costs under the present constitution of the Court would have been much less?—They would have been. They could not have been ordered to pay the costs of the North-Western and the Dundalk and Greenore Railway Companies, nor the part costs of the Great Northern of Ireland Railway Company.

43605. With regard to the Dublin case—we have heard a good deal about that?—With regard to the Dublin Port and Docks Board case, I notice that Mr. Field has, in a letter set out in the Appendix to your Second Report, stated that the costs of the Port Board in their recent case before the Railway Commissioners amounted to over £3,000. This case was called on for trial in Dublin, at 1.20 on the 12th February. It lasted the rest of the day, the whole of the next day, and on the day following (the 14th Feb.) the hearing was concluded at twelve minutes past one o'clock. The applicants (the Port Board) called eleven witnesses. But immediately before the hearing of this case, the Court heard two other cases—that is to say, the application of the Great Southern and Western Railway Company, and the cross application of the Dublin and South-Eastern Railway Company. Those cases were consolidated for the purpose of the hearing, but the hearing lasted no less than six and a half days, and the Dublin Port and Docks Board applied for leave to intervene in these two cases, and were allowed to do so. They appeared, in their own case and in these two cases in which they were allowed to intervene, by two King's Counsel and a junior counsel. It is therefore, I submit, inaccurate to state that the application of the Port Board cost over £3,000, when this figure relates not to one case, but to three cases.

The Dublin Port and Docks Board.

The excessive cost relates not to one but to three cases.

43606. That has not been brought under our notice before?—The third example quoted was the application of the Great Southern and Western Railway Company, heard in 1902, to increase their rates. Under a section of the Great Southern Act of 1900—any increase of rates had to be approved by the

The G. S. and W. Ry. Co.'s application to increase rates (1902).

Mar. 14, 1908.

Mr. Walter Henry Macnamara, B.L., Secretary and Registrar, Railway and Canal Commission.

The G. S. and W. Ry. Co.'s application to increase rates (1902)—*con.*

Railway Commissioners. No less than eighty-one parties objected to this increase, on a notice which the Great Southern had issued, stating that objections could be lodged. Amongst these eighty-one parties who objected were the Dublin Chamber of Commerce, several County Councils, and Messrs Guinness. The Board of Agriculture also appeared on behalf of certain objectors, and it has been stated before you that it cost them over £1,000. In connection with that, I point out that the Board of Agriculture thought proper to take up the cases of no less than seventy-six of the objectors, many of whom had the right to appear and object on their own behalf. The hearing of the case occupied two days, and the Board of Agriculture were represented by no less than four Counsel, the Solicitor-General, another King's Counsel, and two junior counsel. One of your Commissioners, I notice, asked a witness from Newry if he could state what the costs were to the Newry Town Commissioners of the application against the Great Northern Railway Company of Ireland, which I see has been referred to before the Vice-Regal Commission on various occasions. I taxed the costs in that case, so I can give you the figure. The case was heard in Dublin, and occupied four days. It was a case of undue preference of towns, and the applicants were given their costs against the Great Northern Company of Ireland. As the facts put forward did not justify the inequality, the Court made the Order applied for, with costs against the defendants. Those costs, as brought in before me for taxation, amounted to £482 odd. I taxed off £173 odd, so that they received as their costs from the railway company £309.

The excessive cost to Department of Agriculture who intervened.

The Newry Town Commissioners' application against the G. N. (I.) Ry. Co.

The cost of the proceedings.

43607. That is the Newry Commissioners?—Yes, the Town Commissioners of Newry—after four days' hearing in Dublin. They called about eighteen witnesses.

43608. *Mr. Balfour Browne,* K.C.—That was the old Commission?—It was in 1892, so that it was not the old Commission. On the question of the cost of proceedings generally in the Railway Commission Court, what I said before the Departmental Committee on Railway Rates in 1905 is, I think, true to-day.

Statement made by witness before the Departmental Committee (Lord Jersey's) on Railway Rates in 1905, regarding the cost of proceedings generally.

43609. I think you had better read what you said?—Yes.

43610. *Sir Herbert Jekyll.*—Is that Lord Jersey's Committee?—Yes. I said this:—"In my opinion, the cost to the parties of coming before the Railway Commission is not excessive. The Court fees are the same, or nearly the same, as in the High Court. They are certainly no higher. The chief expense in the Court of the Railway and Canal Commission, as in every other Court, is the employment of counsel, and it is undoubtedly the fact that the fees of counsel, as of other professional men, have very much increased of recent years. Many of the cases which are brought before the Court are extremely important, and great interests are involved in them. Such cases cannot be decided except at considerable expense, as they have to be gone into very carefully by the parties on both sides. Cases of a complicated and important character naturally require the services of eminent counsel to deal with them, and the Court is glad to have their assistance. With regard to the larger cases, it must be remembered that many of them are test cases, and that they settle the law for a large number of other persons who are traders or agriculturalists, if it is a trading or agricultural case. But in the Court of the Railway and Canal Commission, as in other Courts, there are small cases as well as large cases, and many of the cases which are not of a heavy character can be tried without much expense. In such cases, the cost of proceedings before the Court depends almost entirely upon the parties, that is to say whether they choose to bring in counsel who require a large fee." On the same subject, I should like to quote, as a higher authority, what the then *ex-officio* Railway Commissioner for England, Mr. Justice Wills, said on the subject when he was examined before the Select Committee on Railway Rates and Charges in 1893. The question which was put to him by the Chairman, Mr. Shaw Lefevre, was this:—"It has been represented to this Committee that traders are very much deterred from coming to your Court on account of the very heavy costs that they may be liable to. Have you formed any opinion upon the question of costs"?—And this is Mr. Justice Wills' answer:—"I think with regard to the question of the amount of costs, that nothing can make the majority of the inquiries that come before us cheap ones. They are inquiries of great complexity and great difficulty. Since I have been on the Bench the questions that I have had to deal with as the President of the Railway Commission have been, as a general rule, by far the most difficult that I have ever had to deal with, both in the magnitude of the interests concerned, in the complexity of facts, and in the difficulty of the questions raised; they seem to me to be far beyond the average cases that come before a Judge of the High Court in any division of the Court, and therefore I do not think that any process whatever can make inquiries of that sort cheap." "But with respect to the employment of counsel, I think there is a certain superstition about it. I mean to say that I think there are a vast number of counsel at the Bar who are perfectly competent to deal with questions of this kind, and who would be very glad to do so, and who would require no extravagant fees." I notice that one of the witnesses examined before the Viceregal Commission (I say "one," but most of the references to the Railway Commission, I observe, are not of a complimentary character), said this:—"It is very expensive to invoke the Railway Commission, to get a grievance redressed, and no trader can attempt it." I would submit that it is not expensive to invoke the Railway Commission. If necessary, as I have pointed out, the trader can draw the complaint himself. He has to pay a fee of £1 on filing it, but for that fee he will get the railway company's written and signed answer free of any further expense, and if the railway company are wrong on the complaint filed in our court they will probably settle the case. This has been done in many instances, of which I can give examples if it is desired.

Mr. Justice Wills's opinion on the question of expense.

43611. *Chairman.*—That is to say, the simple process of paying a fee of £1, filing a complaint, and getting an answer, has been the means of settling many disputes?—A very large number. We have to make an annual report to Parliament, and these reports show the cases so settled. No less than 150 disputes between railway companies and traders were settled before trial last year.

43612. One hundred and fifty?—That was much beyond the average, and I should point out, that a large number of those disputes were between railway companies and traders as to demurrage for use of sidings.

43613. And no other fees were paid than those you have stated?—No other fees. If, when the trader gets the answer, he wants to reply, he pays 2*s.* 6*d.* fee on filing his reply, and then there is no other fee until the hearing.

43614. And then the costs are as they make them?—Yes.

43615. According to the counsel employed?—Yes. If the parties do not settle, and the applicant trader does not wish to go on with the case, he can abandon it without being liable to pay the railway company's costs, unless his application is held by the court to be frivolous and vexatious, and even in that case I have never known the railway company ask for their costs. But supposing the case is not settled, and the trader desires to have it heard, he can employ counsel or a solicitor, or he can conduct his case in person.

43616. There is no objection to that in your court?—There is no objection to a litigant appearing in person in any court.

Mr. Balfour Browne, K.C.—It has been done in the Railway Commissioner's Court. Mr. Goddard conducted his own case successfully.

Chairman.—As against the South-Western?

Mr. Balfour Browne, K.C.—As against the South-Western, sir. I did not like to mention that.

43617. *Chairman.*—What date was that case?—That case was heard in 1874. The complainant appeared in person, and a Queen's Counsel and a junior appeared for the South-Western Railway Company. The case lasted six days—five days hearing and one day for the judgment.

43618. Judgment generally is given almost immediately—I suppose the judgment in that case was given the following day, or was there time taken for

the judgment?—The hearing appears to have been concluded on the 3rd January, and judgment was delivered on the 6th. There was also a case of Palmer *v.* the London and South-Western Railway Company—a later case, in 1892—where the applicant drew his own application. The application is made by "David Palmer, of 19, Knightrider-street, carrier."

43619. Why have you selected all South-Western cases?—There was no intention of giving an undue preference, I assure you. In answer to that objection, I will hand in an application drawn in person by a Mr. Wyman against the Midland Railway Company. This was a case in which the applicant appeared in person, and a Queen's counsel and a junior counsel appeared for the respondents.

43620. What was the result?—The applicant did not win, but I do not think his failure was from want of advocacy, if I remember the facts of the case rightly.

43621. You have several other cases?—I have.

43622. To show that applicants can apply, do apply, and have applied successfully to your court?—Yes. I should like to go on to say that, assuming the applicant appears in person, it may be said that he is at a disadvantage in cross-examination. Well, of course he is to some extent, but I think our experience is, that in such cases, the Commissioners generally intervene, and do some of the cross-examination for themselves. The court in all cases wants to get at the truth with regard to the complaint, and if it is not brought clearly out will endeavour to elicit it.

Examined by Mr. Sexton.

43623. Where does the court usually hold its sittings?—It usually holds its sittings in the capital. It is found that it is cheaper to bring witnesses to the capital than to take counsel away from the capital. With regard to Ireland, I may say that the Railway Commission Court has sat in Londonderry and in Belfast—in Belfast on two occasions. But the only application that has ever been made to me since 1888 to have a case heard in any other place than Dublin was in that case which I mentioned of the Newry Town Commissioners. The applicants took out a summons to have the case heard in Newry. I considered the application, which was made on account of the number of witnesses they had, and the expense of bringing them to Dublin. The Great Northern Railway Company having offered to give free passes to the witnesses, the applicants said that they would prefer to have the case heard in Dublin, as they would have to pay their counsel less in Dublin than if they brought them to Newry. I notice that one of the witnesses examined before this Commission—Mr. Cook, a member of the Belfast Chamber of Commerce—stated that whatever tribunal might be appointed in Ireland to carry out the Railway and Canal Traffic Acts, it would be far easier for a trader having a grievance to go to Dublin than for the tribunal to hold an inquiry in West Clare or Donegal.

43624. The court has held all its Irish sittings in Dublin?—It has, since 1888; it has not been asked, except in this one case, to sit elsewhere.

43625. Since 1888 all the Irish sittings have been in Dublin?—They have been, because no application has been made.

43626. Have the Irish sittings been at long intervals?—No.

43627. Not at long intervals?—We clear our list of cases whenever there is a list. There have been intervals when there have been no cases.

43628. How many sittings have been held in Ireland since the Commission was appointed?—I should think an average of about three a year.

43629. Now you say that if a railway company are wrong, they will probably settle a case without trial?—Yes.

43630. You mean if they think they are wrong?—I mean that I do not think a railway company wants to fight its customers, if they can help it.

43631. Of course whether the railway company is wrong can only be determined by the judgment of the court. You mean that after application, and before hearing, if they think they are wrong they will settle?—I think so. Supposing a mistake has been pointed out, which they can set right—say in an allegation of undue preference—they can either level up or level down the rates, and adjust the matter.

43632. The impression in Ireland, rightly or wrongly, is that if the Company will not settle with a trader before he goes to the Board of Trade, or finally invokes your Commission, they will not settle with him after. Have there been many cases in which an Irish railway company, after application and before hearing, have settled to the satisfaction of the applicant?—I cannot say; there are so few applications from Ireland.

43633. Can you name any Irish case in which a railway company, after application and before hearing, has settled with a trader?—I know there was a case in Donegal—I could not give you the name.

Cases settled by the railway companies before trial.

43634. You cannot give me the title of any Irish case settled under those conditions?—There have been cases.

43635. After application and before hearing?—Yes.

43636. In Ireland?—Oh, yes, within the last few years I can recall several cases in which, when we were going to sit, we were told that the case had been settled before trial, and we need not come over.

43637. That may have meant that the trader was afraid to go on?—Oh, no; I am speaking of cases settled before trial. It did not mean that he withdrew the application, except as a term of settlement.

Several in Ireland so disposed of within the last few years.

43638. Were those cases between railway company and railway company, or railway company and a public department, or cases in which traders were parties?—Very few of the cases have been traders' cases; therefore most of the cases would have been cases between railway companies; but there have been one or two.

43639. So far I find little in your answers to justify the hope in the mind of an Irish trader that if he made an application, no matter how right his case might be, he would get it settled without a hearing. Now as to delay. I understand that between the application of the Dublin Port and Docks Board and the delivery of the judgment two years elapsed?—Oh, no; I think it was in March, 1906, that they filed their application.

The delay in obtaining a decision in the Dublin Port and Docks case.

43640. They applied to the Board of Trade in June, 1905?—But the Railway Commission Court had nothing to do with that; we date from the filing in our court.

43641. The Dublin Port and Docks Board naturally considered the whole time occupied in the process?—I am not concerned with any delay outside the Railway Commission Court.

43642. I agree; but this present Commission may inquire what time the whole course of litigation took. The Dublin Port and Docks Board applied to the Board of Trade in June, 1905, and judgment was delivered by your court in May, 1907?—Yes.

Two years between the application and the judgment.

43643. That is two years?—Yes.

43644. How much of the two years do you say the Port and Docks Board consumed? How much of it did they, shall we say, from your point of view, waste through not proceeding with expedition?—I am not suggesting that they wasted time at all; I am only giving dates. All I am concerned with is to show that an application was not filed in the Railway Commission Court until March, 1906, and that the pleadings were not closed until the following November; that no application was made to fix a date for hearing until December; and that when it was fixed in December it was heard in the following February—within two months.

43645. The point of view of the Port and Docks Board would be that they applied to the Board of Trade in June, 1905. You say that they delayed doing anything under the sanction of the Board of Trade from August until March?—Yes.

But delay due to necessary formalities which were not carried out by the parties.

43646. That would still leave eighteen months occupied in the various stages of the proceedings?—Yes.

43647. That is a long time?—You must remember that the Dublin Port and Docks Board did not wish their case heard until these cross-applications were heard also for the Great Southern and Western and the Dublin and South Eastern. These were extremely important inquiries, and there were very many interlocutory applications, all of which went to appeal. It was the most important case we have heard in Ireland, affecting the question of nearly all the through rates in the South of Ireland.

Eighteen months occupied in various stages of the proceedings.

Importance of the case, which affected almost all the through rates in the South.

Mar. 14, 1908.

Mr. Walter Henry Macnamara, B.L., Secretary and Registrar, Railway and Canal Commission.

The Dublin Port and Docks Board case—*con.*

43648. The process from the application to the hearing of the case occupied a very long time?—But this is not a typical case—it is a very exceptional case, arising out of the amalgamation of 1900.

43649. It was very natural that the Dublin Port and Docks Board should speak of their own case, and of no other. They were speaking of their own case?—What I ventured to take exception to was the fact that it should have been stated that "the Commissioners had been coming to Ireland to try it for the last six months," when at that time they had not even applied for a date to be fixed for the hearing.

43650. Of the two years, it appears that only six months' delay can be attributed to the Port and Docks Board. Now as to costs. It appears that the costs, as stated to the Commissioners in previous evidence, were incurred. It appears that the sums stated had to be paid for costs in the several cases. Whatever comment you may offer, the facts is that these costs had to be paid?—I do not know. I have not had the bill of costs before me.

The costs in the Londonderry, the Dublin Port and Docks Board, and the G. S. and W. Railway cases.

43651. I did not understand you, in your evidence, to contradict the statement that these cases had cost these sums?—Which case will you take?

43652. The whole three. I first take the first case—the Londonderry case?—In the Londonderry case, as a matter of fact, I taxed the costs—that is to say, the party and party costs; I do not know about the solicitor and client costs.

43653. Those also are important to the client?—The Londonderry Commissioners brought in their costs at £2,156, and I allowed them, as against the Great Northern Railway, at £980. The Great Northern Railway brought in their costs at £2,700, and I allowed them at £590. That resulted in a balance of £390, which was paid to the Londonderry Commissioners. I do not know whether they have given credit for that.

43654. Considering that the other incidental costs did not come under your notice, judicially or otherwise, have you any reason to question their amount?—I can say nothing about costs which did not come under my notice.

43655. The statement may be quite true?—I cannot say.

43656. You do not controvert it? I think it is a very large sum; I should like to have taxed the bill.

43657. Of course, it was very unpatriotic of them to bring over three English counsel, but was it an unreasonably large Bar—two King's counsel and a junior?—No, I think not. The case lasted ten days in Londonderry. I think two counsel would have been overweighted.

The question of engaging a strong Bar in certain cases.

43658. You recall the description given by Mr. Justice Wills of the extreme difficulty and complexity of those railway cases—he said they were more difficult than those of any other court he had had connection with?—Yes.

43659. Do you consider that a strong Bar is not of importance in such cases?—Yes, I stated so myself, before Lord Jersey's Committee. My evidence was to the effect that the Court were extremely glad to have the benefit in complicated cases of eminent and experienced counsel.

Not regarded as important by the Court.

43660. Then you did not mean to suggest that a Bar of two seniors and two juniors would be an excessive Bar?—You are referring to another case now.

43661. Which case?—The case in which the Board of Agriculture had four counsel.

43662. How many counsel had the railway company in that case, or in any other case?—In the Great Southern case, I think, they had three counsel.

The large number of counsel engaged in the G. S. and W. Railway case.

43663. In the Great Southern case, which you have just mentioned, which was heard in Dublin last year, I think there were twenty counsel—about ten seniors and ten juniors altogether—for the different parties?—There were a great many interests—parties were allowed to intervene.

Deterring effect of heavy costs on the action of private traders.

43664. Now I will put this to you. So long as railways are private property, and directors, having full control of corporate funds for the purpose of legal proceedings, are brought into Court in defence of the companies, considering that a successful case against them may draw a long train of consequences, will they not always expend a large amount of money, and engage a strong Bar, and will not that dictate, necessarily, the expenses of the plaintiff?—But against that you have the fact that a large number of cases are settled.

43665. No Irish case has been settled?—Oh, yes; Irish cases have been settled.

43666. Between companies, yes, but not cases of traders?—There have been very few applications by traders in Ireland.

43667. That cuts both ways—the traders may not have confidence to apply?—I have gathered from the evidence that I have read that it is is not want of confidence so much as ignorance.

43668. Remembering the description given by Mr. Justice Wills and by yourself, I think both Mr. Justice Wills and yourself have really made it clear why these cases are expensive. Even though the case of an individual trader may appear to be simple, surely a first-class counsel will make even a simple case appear rather complicated before he has done with it. Take the simplest case, and give it to Mr. Balfour Browne, for instance—will he not envelop it in a sort of twilight before he has concluded his exposition?—I think I need not answer that.

43669. Would it be prudent or safe for anybody to encounter Mr. Balfour Browne without the best assistance that the Bar could give him?—It is not good assistance he wants, it is a good case. If he has got a good case, my experience of the Railway Commission, since 1882, is that he will not go empty away.

43670. Is it not the view of every litigant in all courts that he must provide himself with as strong a Bar as the other side?—That applies to some cases, but it does not apply to all infringements of the Railway and Canal Traffic Acts. Many of these cases in which we have a large Bar are not cases as to whether a particular rate should be 14*s.* or 15*s.*, but cases such as we heard last year, of complicated questions arising under private Acts; it is in those cases that the great expense is incurred, and that a very large Bar appears.

43671. I submit that in the simplest case, in which a trader objects to a rate, skilful counsel can, owing to the necessary complexities and ramifications of railway law, transform it into a very intricate case; and that no trader is safe in the the Railway Commission Court unless he provides himself with a Bar which, in point of competence, can stand upon a level with the Bar engaged by the railway company. Your Court is not to blame—your fees are moderate?—I think our Court would be to blame if that were so.

43672. How?—Because I think the Court would take care that any fringe, or colouring, put on by counsel did not obscure the real issue; and would take care that if a railway company infringed one of the provisions of the Railway and Canal Traffic Acts, that Order was made against that company.

43673. Is it not the case that not the litigant but the solicitor determines the scale of costs?—That is where the ignorance comes in.

43674. Very likely. But if you have a public not so well informed as the officials of a Court, they have to suffer the penalty of ignorance?—I should like to be allowed to suggest that there is no one better able than yourself to dispel that ignorance in Ireland.

43675. We are in course of doing it, but it takes some time. Now, if a solicitor advises a client that he ought to be represented by such and such a counsel, would the client be safe in disregarding such advice? It is well known that the railway companies do, and will in all cases, provide themselves with a first-rate Bar and I submit to you that so long as the railways are private property, and so long as the railway companies conduct their defence in your Court, the litigation in your Court, no matter how cheap your fees or how just your Court, cannot be otherwise than costly?—I think I have answered that question.

43676. I should like you to answer it a little more fully?—I thought I said that if a litigant has a good case, he is perfecly safe, in my opinion, if he comes into Court with no counsel at all.

43677. A litigant has a right to appear personally in any of the Courts of the King, but how often is that right exercised? What are the Bar for? Why are counsel engaged in all cases, if a litigant has a substantial chance of justice in being his own advocate? We know a man is a fool who is his own doctor—what is he who is his own advocate?—They have tried it in this Court, and not without success.

43678. You have failed to show me any case of an Irish trader doing so?—They will not come. We will welcome them if they come, and try not to send them empty away.

43679. It seems to me that you, as an officer of the Railway Commission Court, are defending the Court from a charge which is not brought against it, because the complaint is that from the nature of the cases.

as described by Mr. Justice Wills and yourself, the complainant is obliged to engage a Bar as efficient as that of the defendant?—What I have tried to make clear is this—that the Railway Commission Court, like every superior court, has to try both large cases and small cases. For instance, the Judges of the High Court may have to try small slander cases and breach of promise cases one day, with mostly junior counsel before them, and the next day they may have to try a very heavy case in which the law officers of the Crown and a large array of counsel appear before them—a case of enormous importance; and what I say is that the small cases in our Court can be heard in the same way that the small cases can be heard, and justice obtained, in the superior courts. There is no reason why small cases should not be dealt with as well as large ones in this as well as in other courts.

43680. There is no reason except that in this Court the defendant is always a corporation with unlimited funds and unlimited power to use them for the purpose of legal proceedings. That puts your Court in a position absolutely peculiar in comparison with other courts?—That is not unknown in other courts. There are defendants other than railway companies who are corporations and who own large funds.

43681. But in your court the defendant is invariably a wealthy corporation—wealthy, that is to say, for the purpose of legal proceedings. The company may pay no dividend, but it always has plenty of money for legal costs. I, at any rate, do not blame your court for the costliness of the proceedings, but, as I have said, costly proceedings are incidental to the nature of the case?—I hope I have endeavoured to answer that.

43682. I do not understand you to question that the Dublin Port and Docks Board did have to pay £3,000 costs?—Their bills of costs did not come before me—I did not have to tax them.

43683. Are you controverting their evidence, or are you not?—No. What I did point out was that it was a mistake to say that their costs were £3,000, because I take it that the £3,000 is the costs in all three cases. They intervened in the other two.

43684. But surely the three cases were virtually one matter?—No; they were under different sections of the Act.

43685. But the Dublin Port and Docks Board are the guardians of the traffic interests of the port of Dublin, and as such guardians were as much obliged to intervene in the first two cases as they were to proceed for themselves in the third?—There were three cases in which they appeared; their own case lasted practically two days, the other cases lasted six and a half days, and when it is stated, in that letter of Mr. Field's that the Dublin Port and Docks Board's costs amounted to £3,000, that amount no doubt includes their costs in the other two cases in which they intervened.

43686. On the legal point you are technically correct, and in a special plea your answer would be most effective; but from the Port and Docks Board's point of view, they being the guardians of the public, it did cost them £3,000 to defend their interests in the matter?—That may very well be. The statement I object to is the statement that their costs in their case were £3,000, when that amount represents their costs in all three proceedings.

43687. They understood by that expression, no doubt, the cost of the effort they made to defend the interests of the port?—As long as that is clear I am satisfied.

43688. Now let us take the Board of Agriculture case?—They had four counsel and they appeared for seventy-six objectors.

43689. I saw there was a railway case the other day before you in London in which there were thirty-four counsel—seventeen of them seniors?—That was not a case under the Railway and Canal Traffic Act, nor was this Great Southern case a case under the Railway and Canal Traffic Act. We were not carrying out our jurisdiction with regard to undue preference to traders, or facilities; those cases were cases under special Acts, which makes a very wide difference.

43690. I am merely suggesting that cases come before your Commission involving most intricate questions of law—cases which require a full assemblage of the most competent men at the Bar?—May I point out again that these cases are not cases which Irish traders would bring; they are under different Acts, and not under the Railway and Canal Traffic Acts at all.

Mar. 14, 1908.

Mr. Walter Henry Macnamara, B.L., Secretary and Registrar, Railway and Canal Commission.

43691. That proves little?—Surely the Commissioners are exercising a different jurisdiction; they are almost sitting as arbitrators. In fact they were sitting as arbitrators in the Dublin Port and Docks Board case—they were appointed by the Board of Trade as arbitrators under the provisions of the Amalgamation Act of 1900.

43692. Do you suggest that the Department of Agriculture and Industries, appearing in their public capacity in a case in which they represented seventy-six other public bodies which also objected, had an excessive Bar in having two senior and two junior counsel. Do you suggest that such a Bar was excessive, or that it was larger than the railway company had?—I notice that there appear to have been two leaders and a junior in the case of the other parties.

Cost incurred by the Department of Agriculture in opposing the G. S. and W. Company's application to increase rates.

43693. Why, the resources of the Court were strained to hold the counsel?—So much the better for the Bar. As an old member of the Bar I would not complain of that.

43694. You are aware, I suppose, that the Board of Agriculture by its Act had the authority given to it, and the public funds provided, for the purpose of appearing on behalf of persons objecting to an advance of rates?—Yes.

43695. That authority really is understood to impose a duty, and if the Department of Agriculture had not taken upon itself the task of appearing for these other objectors it would have incurred blame; and was it not really a measure of economy for the Department to take the cost of objection upon itself?—I daresay, but what I want to point out is that if you have to spread this £1,000 over the various cases it does not work out at much per case.

The number of traders, etc., who were parties to the action.

43696. The Great Southern and Western proposed to increase rates on certain traffic from one station to another, and the question of advance of rate raised in one case would really determine the bulk of them, so that it was one case, although there were many objectors?—If they had liked, they might have taken a test case, and made it very much cheaper; but in taking up the cases of seventy-six objectors and employing four counsel, £1,000 does not work out at very much per case.

43697. They succeeded in that case, and they have since never brought another case?—They have appeared in other cases; they have instructed counsel to hold a watching brief in two other cases.

43698. Have they appeared in cases against proposed advance of rates?—There have been no other cases for advance of rates.

The G. S. and W. Co.'s application one under the Amalgamation Act of 1900.

43699. No railway company applied for advance of rates since then?—This also was not under the Railway and Canal Traffic Act; this was under a special provision of the Amalgamation Act of 1900.

43700. Whatever comment you may make upon the interventions, or the different branches into which questions are split up, it does appear that the costs incurred may be great. You are not in a position to impeach the correctness of the statements made as to the amount of costs?—I have merely made certain observations.

43701. And those observations are no doubt ingenious?—I do not claim ingenuity for them.

43701A. Your observations do not affect the veracity of previous witnesses as to the amount of the costs.

Chairman.—Mr. Macnamara cannot do that.

Jurisdiction of the Court with regard to Irish railway rates.

43702. *Mr. Sexton.*—I want it understood that the evidence of those gentlemen in Dublin who came forward and stated that certain costs were incurred is not impeached. Just to finish, I will ask you a question or two about the jurisdiction of your Court. As to the amount of a rate; if a railway rate in Ireland is within the maximum, and if it is not higher than it was at the end of 1892, what jurisdiction has your Court as to the amount of it?—None.

43703. If a rate is within the maximum of the class, and if it is not higher than it was at the end of 1892, what jurisdiction has your Court with regard to the rate?—I do not quite follow in what way you mean. What is the application with regard to the rate to be?

43704. That it is too high?—That the rate is too high?

43705. Yes—an application to reduce the rate?—No application can be made to reduce the rate.

43706. No application?—No; the rate would be reduced if it was a question of undue preference; it

Mar. 14, 1908.

Mr. Walter Henry Macnamara, B.L., Secretary and Registrar, Railway and Canal Commission.

might be reduced in that way, assuming the Court thought a certain rate amounted to undue preference, then the rate might be lowered, or the other rate made higher; it might be altered in that way.

43707. Levelled?—Yes, levelled up or levelled down.

43708. *Mr. Balfour Browne*, K.C.—I think what Mr. Sexton is alluding to is the increase of a rate?—He did not use the word increase.

Jurisdiction of the Court with regard to railway rates.

Mr Balfour Browne, K.C.—No, but he referred to a certain date—1892. That date is no longer the date which limits an application. If a rate has been raised at any time, the Court of Appeal has held that the Railway Commission Court has jurisdiction.

43709. *Mr. Sexton.*—What is their power to reduce a rate? Of course, it is clear that if a rate is over the maximum, they may reduce that?—If a rate is over the maximum, it is an illegal rate, and the Commissioners would make an Order at once.

Obligation on the railway companies to justify any increase in rates.

43710. But, in any other case, it must be shown that there has been an increase of rate?—A railway company cannot increase a rate now without giving notice. Any trader can call upon the railway company to justify the increase, and the Commissioners may inquire into that, and declare whether or not the increase is reasonable.

Rates within the maxima not open to revision by the Court on the ground that they are too high for the trade and industry of the country.

43711. The general Irish complaint in evidence is this—that classes of rates in Ireland—interior rates and export rates—are too high for the trade and industry of the country to bear them, apart from any question of whether the rate is under the maximum or whether it has been increased. Does the jurisdiction of your Court touch that state of affairs?—Not if they are rates within the maxima. Reasonable maxima rates were fixed for Ireland after a very lengthy inquiry by Lord Balfour of Burleigh and Sir Courtenay Boyle.

Legislation necessary for any extended jurisdiction.

43712. I should like to submit that the real question is this—firstly, that the jurisdiction of the Railway Commission Court is so limited that it does not touch the general Irish complaints with regard to rates; and, secondly, that the costliness of the Court is due in no measure to any fault of the Court or of yourself, but to the nature of the cases brought before it, and the wealth of the corporations, who are always the defendants in those cases?—I am afraid that that involves legislation. We are the creatures of Statute, and we carry out whatever duties Parliament imposes upon us.

Ireland's objection to the Court.

43713. Quite so; and you carry them out, I am sure, ably and justly. But the point is that your Court, by reason of the limits of its jurisdiction, cannot touch, far less cover, the ground of the Irish complaint, and that, willy-nilly, whatever you may desire, litigation in your Court must be costly as long as railway companies are defendants. Have you any objection to make to that statement of the case?—I would rather not express any opinion one way or the other.

Mr. Sexton.—You understand, at any rate, that it is to the want of jurisdiction of your Court, and to the costs incidental to the nature of the proceedings that objection is taken in Ireland, and not in any way to the Court or to yourself.

Examined by Mr. ACWORTH.

The suitability of the Court for dealing with small cases.

43714. I remember Palmer's case—it was a small matter of admission to a yard at the same time as railway vans, was it not?—It was.

43715. Supposing that had taken place at Limerick, would it not have been rather cracking a nut with a steam hammer to have taken the Commission over to Dublin to decide it?—Supposing it had taken place at Limerick, you are assuming that the hearing would have been in Dublin.

43716. Would it not have been almost absurd to have taken a Commission, whose time is valuable, to Limerick to decide a question of that kind?—It does not cost the parties anything to take the Commission over to Dublin.

43717. It costs somebody?—As a matter of fact, we group our cases, and generally manage to hear two or three at the same time; so, probably, we should have to go to Ireland anyway.

43718. But would you not agree with me that, even leaving out counsel, a tribunal of that importance is too big a tribunal to deal with a case such as Palmer's?—I think not.

43719. Very well, I will take it so?—The Court has been constituted to deal with large cases as well as small cases, and there must be many small traders' cases; and I think the Court ought to go and hear them when they arise.

43720. You think they ought to have the benefit of a "red judge," as is said in assize cases—is that your view?—Yes.

43721. You would agree with me, I expect, that railway law is, at least, of average complication?—Yes.

43722. And that the big cases bring up as big masses of complicated facts as almost any cases that come before a High Court?—Yes; but not all cases under the Railway and Canal Traffic Acts. For instance, under section 10 of the Act of 1888, a dispute as to the legality of any rate or charge can be decided by the Railway Commission on a joint application.

43723. Take a case under the Act of 1894, like the increase of coal rates?—You have taken the very biggest case under that Act that we ever heard.

43724. Quite so; I did it intentionally; but in a case of that kind, there are complicated questions both of law and of fact?—Yes.

43725. Would it not, therefore, seem to follow that counsel are at least as necessary as in an ordinary law court?—In large cases, yes.

43726. And, as Mr. Sexton has said, people in the law courts who try to do without counsel are not very wise. Now, I just want to ask one or two other questions. There has been a suggestion to us that matters might be made better for the trader if counsel were excluded and solicitors were allowed—do you care to express any opinion on that question?—Solicitors are allowed now.

43726A. But the suggestion is that the rule should be altered, and solicitors allowed to appear, and counsel not allowed to appear.

Chairman.—As a barrister, Mr. Macnamara would not, perhaps, care to discuss that.

Mr. Acworth.—He is not a practising barrister. I only wanted his opinion.

Witness.—I thought I had already said there are cases in the Court in which an applicant can appear in person, given that his case is good, and not very complicated; there are other cases in which he can appear by solicitor (a solicitor appeared only last month against two counsel); and then there are still other cases which require the most eminent counsel to plead them.

43727. I am afraid you do not quite appreciate my point. The suggestion is that in order to reduce the costs to the litigants counsel should not be allowed to appear?—I beg your pardon—I missed your point.

43728. Both sides would be permitted to have a solicitor—the railway company would have their own solicitor, and the trader would have his own solicitor?—I would rather not express any opinion on that.

43729. Perhaps you would not care to express an opinion on this point either—on the change in the law since 1894 as to not awarding costs?—It was passed in consequence of the Report of the Committee of 1893. In that Report they justified the proposed alteration of the law on the ground that evidence had been given before them that many traders had been prevented from bringing complaints before the Railway Commission because of the fact that if they lost they were liable to pay the costs of the railway company, and they recommended that alteration of the law. I do not wish to express any opinion.

43729A. If you do not wish, I will not ask you.

Examined by Mr. ASPINALL.

43730. A suggestion has been made by a number of witnesses that a County Court Judge in Ireland should be the authority to deal with many cases of complaint. Would you, from your experience, consider that County Court Judge, who may be one man to-day and another to-morrow, in different parts of the country, could deal effectively with complaints about railways?—As an officer of the present Railway Commission, I would rather not express an opinion upon what the constitution of any tribunal for carrying out our present duties should be.

43731. But assuming that the railways in Ireland did not remain in their present state, and were not made up of a number of companies, but were thrown into one concern, managed by the Government, would there not still be cases in which traders would have to bring complaints against rates, especially in the case of through rates from Ireland to England, by an Irish railway, and by a steamship company, and then an English railway—would not such cases be very

complicated, and would they not require counsel?—In such cases as that, no doubt there would be complicated questions.

43732. Supposing they were Government railways, you might have arrayed the law officers of the Crown on the one side, and it would be necessary for the other parties to have counsel to meet that array—is not that so?—Very likely.

43733. *Chairman.*—Do you wish to ask any questions, Mr. Balfour Browne?

Mr. Balfour Browne, K.C.—No, sir; I feel I have been on my trial. There is only one thing, perhaps, Mr. Macnamara could tell me. Supposing the solicitor to have the sole audience in the Court, there would be no objection to counsel being debarred, I suppose?

Chairman.—Mr. Macnamara, we are much obliged to you for attending to give evidence.

Mar. 14, 1908.

Mr. Walter Henry Macnamara, B.L., Secretary and Registrar, Railway and Canal Commission.

Mr. JAMES F. O'DONNELL, J.P., examined by the CHAIRMAN.

Mr. James F. O'Donnell, J.P., Burtonport, Co. Donegal.

43734. I think you are a Justice of the Peace from Burtonport, County Donegal?—Yes.

43735. Are you in business there?—Yes.

43736. Have you been requested by any authority to come and give evidence before us?—No.

43737. You have come in your individual capacity?—I have. I am a member of the Glenties District Council; I am an hotel proprietor at Burtonport.

43738. What railway serves your district?—The Lough Swilly.

43739. What is the particular industry in Burtonport—it is a pleasure place, is it not?—A fishing place; that is our chief industry.

43740. What have you to say about the fishing industry?—Some five or six years ago the Government constructed a line of railway, at a cost of £215,000, from Letterkenny to Burtonport.

Mr. Shanahan.—The line cost £315,000.

43741. We have had evidence upon that. It has been brought under our notice several times. Do you consider the working of that railway satisfactory?—I consider it most unsatisfactory.

43742. Why?—Because there are constant breakdowns upon it. We have many reasons of complaint. It is detrimental to the tourist traffic of Donegal. The first year that the railway opened the receipts at my hotel exceeded what I have received for the last four years. We had tourist traffic, excursion tourists, and all those have turned their backs by reason of the bad reports they have heard of the railways.

The Letterkenny and Burtonport Railway.

43743. Your contention is that that large amount of money spent for making that railway has not tended to develop the district?—Yes, it was made for that purpose, but it is not properly worked. My contention is that the railway could be made to serve the district much better.

43744. If properly worked by the railway company?—Yes.

43745. Are the rates and fares reasonable?—Well, the rates are fairly reasonable, but still the rates on fresh fish we consider far too high.

43746. You are not directly interested in the fish trade, only as a resident in the district?—I am directly interested in the fish trade. I was instrumental in bringing a man from London, Mr. John L. Sayer, of Billingsgate, to spend over £14,000 on that coast. He has done much to develop the fish industry on that coast.

43747. Is the industry fairly prosperous?—Fairly prosperous, but it has not been so this year on account of the weather. It is entirely due to the weather.

43748. Not to the railway?—Not to the railway.

43749. What is the length of that line?—The length from Letterkenny to Burtonport is forty-nine miles.

43750. I see you, like most of the witnesses, agree that if the rates were reduced it would be an advantage to the district. I suppose that goes without saying, does it not?—Yes. That applies particularly to the rates on fresh fish. A man coming to Burtonport and landing two or three boxes of fresh fish is debarred from putting them into the fish market, or any station along the line, owing to the excessive rates charged. Fish coming from England or Scotland can reach Letterkenny almost as cheaply as fish coming from Burtonport, although Burtonport is only forty-nine miles away.

43751. Is the fish sent all over Ireland, or only to England?—Principally to England, and also to the Continent and America. It is cured at Burtonport, and goes direct to the Continent and America.

43752. And that gives employment to a good many people, I suppose?—Oh, yes, it does.

43753. What, in your judgment, would be a remedy for this state of things of which you complain?—It was for the development of the fish industry that this railway was principally built, and I think that if the rates on fresh fish were much reduced, or if the fish were carried at the same rates fresh as when cured, the line would benefit the man who catches the fish very much, and the fresh fish traffic would increase.

The development of the fishing industry retarded by high railway rates.

43754. How many fishing boats are employed?—Over 400, principally small open yawls about twenty-seven feet keel.

43755. I suppose there are about five men in each?—Yes; five men in each yawl and seven in fishing luggers.

43756. It is a most important industry?—It is a most important industry; in fact it is *the* only industry on the coast of Donegal. We had granite quarries opened up some years ago, but for some reason or another they failed.

43757. Would you like to see the railway worked by a larger railway company or by the State?—I think from my own personal opinion State ownership would be much the best.

State ownership of the railways under the control of an Irish authority advocated.

43758. And worked by an Irish authority?—Well, I should say so.

Examined by Mr. SEXTON.

43759. This appears to be a case of good intentions, and considerable effort, which failed to secure the desired results?—That is it.

43760. The Government came to the rescue in this case, and expended over a quarter of a million upon making a line of fifty miles for the purpose, mainly, of developing that fish industry?—Quite so.

Industries undeveloped under existing management of Burtonport Railway.

43761. Secondly, for the purpose of bringing the farmers in that district into touch with the markets?—Yes.

43762. The line has been four years working?—More than that; five years on the 7th March last.

Mr. Shanahan.—The line was opened on the 9th March, 1903.

43763. When the Government came in with funds, and the Board of Works superintended the construction, and a prosperous existing company was found to work the line, one would have thought that all needful conditions combined to ensure success. Do you agree?—One would have expected that between them they might have done more good?—Yes.

43764. What you say is that the live stock rates are unsatisfactory?—They are, to a great extent. Cattle-dealers complain frequently.

Live stock rates unsatisfactory.

43765. That the fish rates are far too high?—They are far too high for fresh fish.

43766. That even the women who cure fish are charged fares too high?—They are not even treated on the same basis as their fathers and brothers who travel on the same lines in the same carriages.

Complaint as to unequal treatment of fish curers and reapers in the matter of fares.

43767. How do you account for that?—I can account for that. I have known cases where a father, his son and daughter travelled from Burtonport to Londonderry by rail on their way to earn a livelihood in Scotland; the father and son got reapers' tickets, which were something like 3*s.* 3*d.*, while the daughter had to pay 5*s.* 8*d.*

43768. *Chairman.*—Those are cheap tickets for reapers?—Yes.

43769. That is an advantage to the reapers?—Of course it is; but I do not see why the daughter should not go at the same rate.

Chairman.—She is not a reaper.

43770. *Mr. Sexton.*—A woman cannot use a sickle so well as a man. I suppose she had to sell fish?—She was going to work at the fish, cleaning and gutting them.

43771. And what she fails to understand—I confess I share her difficulty—is that while her father and brother go as reapers at the lower rate, she cannot take advantage of that lower rate to travel for the

Mar. 14, 1908.

Mr. James F. O'Donnell, J.P., Burtonport, Co. Donegal.

The Letterkenny and Burtonport Railway—*con.*

purpose of her work in preparing fish for the market?—Yes.

43772. You are in sympathy with that complaint?—Very much.

43773. And so am I. If they want to develop the district, why not give these low rates for the purpose of developing the district as well as in the case of peope going to work at Glasgow?—It should be done, in order to give our women a chance to earn a living.

Inadequacy of the Burtonport landing slip for the requirements of the fishing boats.

43774. It is a curious thing that when the Government have provided funds for constructing this railway to meet certain public needs, they have kept this fish traffic down to the minimum by not providing even fair accommodation?—Although over 400 boats land fish at Burtonport during the fishing season, there is not accommodation for six boats to come alongside the slip at low water.

43775. *Chairman.*—How is the fish landed?—It is landed at a pier that was built for the ratepayers for landing seaweed at.

43776. But still they can land fish there?—Not at low water. It is a dry dock. The men have to carry the fish in boxes and baskets right through the mud, and heave them up by ropes at the end of the pier.

43777. *Mr. Sexton.*—And that pier was intended for a different class of boats?—Yes; it was built for the use of the ratepayers, and is maintained by them.

43778. Boats that run for seaweed are not the class of boats that go for fish?—Not in all cases.

43779. *Chairman.*—Is the harbour dry at low water?—Yes, it is.

The slip constructed by Board of Works as well as the railway.

43780. The boats are all aground?—All aground at low water along the pier.

43781. *Mr. Sexton.*—How long has the slip been there?—It was built by the Board of Works at the time the railway was constructed.

43782. Probably the Board of Works intended that slip to be supplementary to the railway?—That is what it was meant for.

43783. But it is not efficient for that purpose?—No, it is not large enough.

43784. Not long enough, and in other ways not suitable?—Entirely unsuitable. Even the sea-wall which was constructed at that time between the railway station at Burtonport and the ratepayers' pier has been carried away since it was built some five years ago.

The sea-wall carried away since construction of line.

43785. This pier you speak of?—Yes, the breakwater between the railway station and the ratepayers' pier.

43786. Is there no pier available now?—No pier at low water.

43787. The ruins of it are available?—The ruins of it are available at high water.

Accident on the railway at Owencarrow.

43788. How long has this been so?—Since last Saturday fortnight or thereabouts. We had a collapse on the Lough Swilly Railway also that day—a train blown over the Owencarrow viaduct.

43789 What is the crew of a fish-boat?—Five for open yawls.

43790. And there are 400 boats?—Yes.

Number of boats and people engaged in the fishing industry at Burtonport.

43791. So that there are 2,000 men?—Yes, when the fleet are all fishing.

43792. Therefore the fishing represents the subsistence of about 10,000 people, I suppose?—More, I should say, including all who are employed—women and men.

43793. In order to allow fishing to be carried on as it ought to be, the efficiency of the railway as a help to the fishing industry consists in this—in the degree in which it promotes cheap and rapd transit of the fish to the market?—Yes.

43794. But it is neither cheap nor rapid?—No; and there are no facilities for landing the fish at the terminus, resulting in loss of market very often.

43795. You have been there for four seasons endeavouring to use this pier. Does the use of this pier mean that the fishermen are incommoded and hampered at their work?—They are very badly handicapped.

The trade greatly hampered by the unsatisfactory landing facilities.

43796. How many boats can be accommodated at the pier at the same time?—At low water none can be served on the pier.

43797. When it is available, at high water?—At high water I suppose 40 to 50 boats can be served—not at the railway pier, but at the ratepayers' pier, or the County Council pier.

43798. There are two piers?—There is a small pier used for seaweed at high water, and the railway breakwater.

43799. It is of no use to you?—Not for the fishing business, because it is principally used for seaweed in the seaweed season, and is good for nothing at low water. There is no proper approach to the railway station. The Board of Works made an attempt to make an approach road, and when it was half finished, for some reason or another it was stopped.

43800. The Board of Works retired from that job exhausted?—They were stopped. The only access for the travelling public is the ratepayers' pier, which is dangerous on dark nights.

43801. So that in point of fact, although this Board of Works pier was made to make the railway useful to the fishermen, the fishermen have to use the other pier?—They have no pier to use at low water.

Mr. Shanahan.—I happen to know the reason why the Board of Works could not complete the road. It was that some intervening owner could not be arranged with as to the transfer of his rights in the land.

43802. *Mr. Sexton.*—The Board of Works have not got it all their own way. (*To the Witness*).—Do you know the intervening owner?—I do.

43803. He refused to facilitate the Board of Works?—There was a misunderstanding about that. There was a Mr. John Herdman, who owned a steam-boat store on the pier and the land adjoining, thirty feet behind, who was quite satisfied to allow this approach road to be made at the time the railway was made. He was quite agreeable to allow this approach road to be carried on without any difficulty whatever. In the meantime, the Board of Works delayed the construction of the road (for want of money), and John Herdman died, and then his agents thought that they could get a pile of money from the Board of Works for the site. The Board would not agree to this, and the work was stopped. That is the truth of the case; and even the brother-in-law, Sir Nicholas Gosselin, was as well aware as I was that the late Mr. John Herdman offered this site.

43804. Considering that fact, do you think the Board of Works were justified in resisting what they might regard as an exaction?—In that case I think the Board of Works did all they could. However, they did not wish to pay the executors or agents of John Herdman money for making a rock cutting for him, and the interference of Herdman's agents left the public to suffer.

43805. But you have not got the road?—No; and the public are left to suffer. The railway has built that station there, but it is not connected with any county road.

43806. Between one thing and another, the great bulk of that fleet of boats have to wait about for pier accommodation?—They have to waste their time, often resulting in the loss of a night's fishing.

43807. Wasting fresh opportunities of fishing?—Quite so. I do not know any fishing port in Ireland much more handicapped for want of facilities than Burtonport.

43808. This extraordinary railway keeps away the tourists, you say?—Very much so.

43809. Do you mean that there are fewer tourists than before the railway came?—There are.

43810. They prefer to jog along on jaunting cars rather than trust their lives to this line?—As far as Burtonport is concerned, they do. The first year they travelled by that line they had ample time to get out at some stations and kill a salmon or two while the engine was being got ready to go on again.

Mr. Acworth.—That must have been an attraction, I should think.

43811. *Mr. Sexton.*—Have break-downs become so frequent on that line that they have ceased to have the interest of novelty?—Yes, it is unpleasant, and very much against the tourist traffic and the development of the district.

43812. It is not only that the trains break down, but there was a bridge also?—Still worse, the train has been blown over lately.

43813. We simply want the fact that there was a break-down some time ago?—Yes.

43814. And quite lately a train was blown against the parapet of the viaduct?—It was.

43815. Was that by the force of the wind?—There is a sharp curve on the approach to the viaduct.

43816. Either the wind or the curve must have been exceptional?—There is a curve going on to the viaduct, and it was very stormy that day.

43816A. *Chairman.*—It was a frightful gale?—Such gales are nothing new on the Donegal coast.

Mr. James F. O'Donnell, J.P., Burtonport, Co. Donegal.

Complaint as to excessive fish rates.

43817. *Mr. Sexton.*—Are trains on that viaduct liable to be blown against the parapet?—Yes. People are very much afraid to travel since in any storm.

43818. Well, if this is the result of an expenditure of a quarter of a million of public money, and of the joint exertions of the Imperial Government, the Board of Works in Dublin, and a prosperous working company, do you not think that if you had the Irish railways worked as one system by an authority responsible to Irish opinion you would be more likely to get a better service on this line at lower rates?—Oh, yes; I think it would be much more satisfactory for all concerned.

Examined by Mr. ACWORTH.

43819. The present Government arrangement as to the pier has been pretty bad, I gather?—Yes; it could not be worse.

43820. And they made a bad bargain, I gather, with the railway company. They did not succeed in making the railway company do their duty?—No.

43821. But you think if you call it an Irish Government instead of an English Government, you will change its nature, and it will do everything it ought to do?—I do not say that. The Irish Government would do very badly if it did not manage it better than it is managed at present.

43822. At present the position is that the taxpayer has paid £300,000 odd to make your railway—it has made a present of that to the district?—Yes.

43823. The railway is working, and is just about a little more than paying its working expenses. That is right, is it not?—I think it is paying a fairly good dividend.

43824. Oh, no; it is paying about £500 or £1,000 a year beyond the working expenses.

Mr. Shanahan.—It is paying no dividend at all, because there is no dividend to pay.

Mr. Acworth.—It is providing about £500 net money, of which a portion goes to the Government as interest on £300,000, so that the Government is getting one-tenth of 1 per cent., or something of that kind. You cannot call that a dividend.

Mr. Balfour Browne.—£1,619 is the exact figure.

43825. *Mr. Acworth.*—How much did the Treasury get out of that?

Mr. Shanahan.—One-half goes to the working company, the other half to the Treasury.

Mr. Tatlow.—It goes to reduce the liability of the Treasury.

43826. *Mr. Acworth.*—I see. That being so, you want to have the rates reduced further?—Yes. But take two years ago—last year was a bad year, there was no fishing. Take two years ago, and you will find that the receipts differed very much from last year.

Mr. Tatlow.—This is 1906. These are the last available figures.

Witness—1905 was our best season, and the best for the railway.

43827. *Mr. Acworth.*—You want to get the rates reduced further?—I want the rates on fresh fish reduced further—reduced from station to station—and better service.

43828. Who is to stand the loss?—When the Government build the railway free, we think that the people living in the district ought to benefit by it. It was built to develop the fishing industry—and it has done little or nothing in that respect.

43829. When the county makes a new road, do you expect them to pay for driving your jaunting-car as well as providing the road? Does it not seem enough that the Government has given you the railway for nothing, and do you not think you ought to pay at least the expense of moving the fish along?—I think the only party which has derived any benefit from it is the railway company. I have lived all my life there, and the only benefit that the Donegal man has derived from it is that he is in out of the rain. As far as developing the fish industry is concerned, the railway has done practically nothing.

43830. When you have to go to Letterkenny, do you ever drive nowadays?—No.

43831. You have got that benefit then?—Yes; but I was certain of reaching it some time with my horse and car, which is very questionable on the Lough Swilly Railway, some days.

43832. Why do you go by railway?—Well, we all like to keep in out of the rain, if possible.

43833. You say that the rate for fresh fish to Letterkenny is very high?—Yes.

43834. What is the rate?—It is over 15*s.* a ton, in any case.

43835. Over 15*s.* a ton from Burtonport to Letterkenny?—Yes.

43836. You said it was very nearly as high as from England to Letterkenny?—They can have small parcels of fresh fish from Grimsby, of 6 lbs. weight—I do not know whether by rail or post—for 2*s.*; and if we sent 6 lbs. on the Lough Swilly to Letterkenny we would almost have to pay 2*s.* freight on it.

43837. You think the rate from Burtonport to Letterkenny for 6 lbs. of fish would be 2*s.*?—No, I do not say that. I say that if you send a parcel of fresh fish to Letterkenny by railway it will be 1*s.* for 6 lbs. It is sent at parcels rate; it is perishable.

43838. You gave me a 15*s.* rate to Letterkenny; you are not comparing that with the tonnage rate from Grimsby?—No. What I wish to explain is this. For instance, a fisherman lands two or three boxes of fresh fish of a morning at Burtonport, and this man, although he has been out all night with his lines, finds in the morning when he lands his fish at the port, that there are only two or three shopkeepers there, and he must dispose of his fish to these people at whatever price they are prepared to give.

How the senders at Burtonport are affected thereby.

43839. That is not the railway's fault?—It is entirely the railway's fault. If he could get his two or three boxes of fish at a reasonable rate to some of the intermediate stations, where they could be used, and sold at a remunerative price—if he could get his boxes of fish at 6*d.* a cwt. to Letterkenny or some intermediate station, it would encourage his neighbours and himself. But when he comes to Burtonport with his fish, and sees that he is at the mercy of these two or three shopkeepers, he says, "I am not going there any more," and neither will his neighbours.

All the trains "mixed."

43840. Can you tell me what the rates are to which you object from Burtonport to any of these local stations?—They exceed 15*s.* on fresh fish.

43841. They exceed 15*s.* a ton?—Yes, on fresh fish.

43842. Is that the passenger train rate?—We have none but the passenger train there. The passenger trains bring goods, and the goods trains passengers.

43843. They are mixed?—Yes.

The issue of cheap tickets to fish curers advocated.

43844. Just one other thing: you do not object to the reapers getting cheap tickets, do you?—No, I do not.

43845. Do you think everybody else ought to have cheap tickets?—Those that can afford to pay, I think, should pay.

43846. How is that to be settled? Are you and I to go to the booking office, and say we cannot afford to pay?—A labourer is quite different to a gentleman.

43847. Do you suggest that all labourers should be entitled to go at these low rates always?—I do.

43848. You know there is no other railway in Ireland that does it?—Oh, yes; on the other side of Donegal, that is now owned by the Great Northern, they give reapers' tickets.

And the extension of reapers' tickets to women urged.

43849. But you have reapers' tickets here, too?—We have, but not for our women.

43850. Do they give reapers' tickets to women on the other railways?—I think all labourers—men and women—should pay alike.

43851. *Chairman.*—You said to me that these women came in groups to Scotland and other places for gutting the herrings?—That is so.

43852. They go in parties, just the same as the reapers go to reap the grain?—Exactly.

43853. And you contend that if one class gets a low rate the others should?—Yes.

43854. That is your contention?—Yes.

43855. It is not the case of a single girl?—Certainly not.

43856. *Mr. Acworth.*—I was dealing with the case you gave. You gave the case of a man, his son, and his daughter?—Yes.

43857. That was not a party of reapers or a party of fish girls; that was three people?—But there were hundreds travelling with them on the occasion I refer to.

43858. You did not tell me that?—I only took this case in point. The girl was one of the party; she came to me, and said, "My father and my brother have got reapers' tickets; would you go and speak for a lot of us?" I did so, and when I was refused, I threatened to drive them myself in my cars to Fintown, on the Donegal line.

43859. There are cheap tickets given to reapers, and you think the same class of tickets ought to be applied to girls going to work in the fish trade at Wick or Aberdeen, or whatever it is?—Yes.

Mar. 14, 1908.

Mr James F. O'Donnell, J.P., Burtonport, Co Donegal.

43860. That is all you are really asking for, as far as that is concerned?—Yes.

43861. You do not, of course, suggest that every workman ought always to travel at less than the third-class fare?—I do not at all. Another matter I might mention is the rates from station to station. For instance, a man orders a 5-ton lot of turnips from Londonderry, he will get five tons of turnips to Burtonport at 5*s.* per ton, whereas if he orders them from Newtowncunningham or Letterkenny, both of which are nearer, the charge will be 8*s.* 4*d.* or 8*s.* 6*d.*

Comparison of rates for turnips, Londonderry to Burtonport with Newtowncunningham and Letterkenny rates.

43862. I suppose steamers come occasionally from Derry to Burtonport?—No; there have been no steamers for the last six or eight months.

43863. But you have had them?—We have.

43864. I suppose you will not suggest to the railway company now that the steamers are put off that they had better put up their rates?—I must say for the railway company, that they have not put up the rates.

43865. *Mr. Sexton.*—They have left the rates down?—Yes; to fit the rate from Derry.

Examined by Mr. ASPINALL.

The bulk of the "catch" cured and exported by steamer at low rates.

43866. What proportion of your fish goes to England?—I should say that three-fourths, at least, goes to Scotland and England and the Continent.

43867. And the other quarter is distributed in Ireland?—Very little in Ireland owing to the high rate.

43868. Where does the other quarter go to?—It is very few of our fish that are consumed in Ireland.

43869. So that the railway rate is of great importance to you?—Yes, it is.

43870. The railway rate must be of great importance to you if it all travels by rail through Ireland to England?—It does not all travel by rail.

43871. How does it go?—By steamers direct. We get a much cheaper rate by steamers.

43872. *Mr. Acworth.*—It is mostly cured fish?—Yes; we get our cured herrings from Burtonport to Glasgow at 1*s.* a barrel, whereas if we sent by rail it would cost 2*s.* 3*d.* or 2*s.* 6*d.*

Reduced rates required to encourage the fresh fish trade.

43873. *Mr. Aspinall.*—The majority of the fish goes by sea?—All the cured fish, I may say.

43874. So that the railway rate is not of much importance, because you do not send much by rail?—But if we had a much cheaper rate for fresh fish it would benefit the fishermen—the men who caught the fish as much more would be sent fresh.

43875. You want that to go from Burtonport in the same way as it is sent from Grimsby in small parcels without the intervention of the middleman?—Not in small parcels. Suppose I want a five-ton lot of fresh fish to go to Billingsgate, I want the rate from Burtonport to Londonderry to be the same as if I sent a five-ton lot cured.

43876. You mentioned a certain arrangement which was in force with regard to Grimsby fish—an arrangement for sending small parcels; I understood you wanted that in force?—Not at all. What I wanted to explain was this, that the rate on fresh fish should be much lower than it is in order to develop the fishing industry on the coast of the county; more fish would be sent fresh if the rate was lower.

43877. You are not aware that at Grimsby and similar places there is a very large trade done by sending fish in small parcels direct to the consumer at very low rates?—Yes, I understand there is.

43878. And that you have not asked for?—No. What we want is a cheap rate for our fresh fish by the railway.

43879. *Chairman.*—When the fresh fish is caught you want a cheap rate to send it into the country?—Yes; men going out with their lines, when they come in with fresh fish, are left to the mercy of the few shopkeepers for want of a cheap rate. Suppose a man comes and sells five shillings worth of fish at Burtonport, if that went to Letterkenny, or some place where they could get a good price, it might command a pound.

43880. *Mr. Sexton.*—If this railway gave a better system of service and rates, would there be a great development of the fish traffic?—There would, certainly.

43881. The receipts might be greatly increased, and the profits be more?—Much more. Take the case of one man landing a few boxes of white fish; there would be 100 men the next night if this man was successful in getting a good price for his fish, but there is no encouragement by the railway.

43882. If all the receipts were in one purse for Irish railways it would be much easier to get such questions as this determined?—Yes, I think so. Take the Post Office; it gives the same facilities to a Donegal man, although he may be living in the mountains nine miles from the nearest Post Office, as if he lived in the heart of Dublin.

43883. You think transit ought to be dealt with as a general question, and not every line dealt with according to the particular circumstances of that line?—Certainly not.

Mr. Balfour Browne, K.C.—This gentleman said, sir, that the rate for a small parcel under 5 lbs. from Burtonport to Letterkenny would be 2*s.*

Witness.—I said 6 lbs.

Mr. Balfour Browne, K.C.—I have the rate here; not exceeding 6 lbs. for that distance would be 6*d.* That is the right rate.

Mr. Acworth.—And from Grimsby it would be 2*s.*; so that allows 1*s.* 6*d.* for the value of the Grimsby fish.

Witness.—Supposing there were 6 lbs. of fresh fish sent on the line from Burtonport to Derry, it is a very small fish that is only 6 lbs. weight, it is not a big fish, and to put 6*d.* on to the price of a haddock or a whiting would be a good deal.

43884. It would be a very big haddock which weighed 6 lbs.?—It would kill the price dead.

Mr. Balfour Browne, K.C.—Of course for larger parcels the rate is much lower; 24 lbs. go for a shilling.

43885. *Mr. Sexton.*—You do not get haddock and whiting of 6 lbs. weight, do you?—We get haddocks 6 lbs. in weight. You will get very few whiting of 6 lbs. weight. Of course there would go no such small parcels from Burtonport at all; but I say with two or three boxes of white fish the fisherman is debarred from sending them owing to the high rate.

43886. *Chairman.*—You had better instruct these fishermen to go to the station and see what the rates are, because evidently you do not know?—Yes, I do. I am in the fish line myself; I cure fish, and I send them fresh; I know it is 15*s.* I was the first man to cure at Burtonport, twenty years since.

43887. Fifteen shillings a ton?—Yes. During the month of November last I bought fish at Donegal town as an experiment. I got them railed from Donegal to Londonderry, and from Londonderry by the Lough Swilly to Burtonport. I had to pay 30*s.* for that, 15*s.* from Donegal to Londonderry, and 15*s.* from Londonderry to Burtonport. I cured the same fish at Burtonport, and got them carried back on the Lough Swilly for 10*s.* when cured.

43888. When they were cured?—Yes, although it cost 30*s.* to get them from Donegal to Burtonport fresh.

43889. The rates on fresh fish, of course, are higher than on salt fish?—I think they should be the same when carried at owners' risk. The fishermen would be quite satisfied to let them go at owners' risk provided they got them carried at the same rate as the cured fish, and that is the thing that would do most to develop the fishing industry. It would benefit the railway also, as more of our fresh fish would be consumed in Ireland if the rates were reduced.

Mr. John Joseph Rossiter, Representative of the Rosslare and Wexford Ratepayers' and Forth Farmers' Association.

Mr. JOHN JOSEPH ROSSITER examined by the CHAIRMAN.

43890. For whom do you apear here?—For the ratepayers of Rosslare, Wexford, and the Forth Farmers' Association.

43891. Have you been authorised by the Farmers' Association?—I have.

43892. Has there been a ratepayers' meeting?—There has.

43893. To consider the question of railways generally?—More particularly the matters involved here.

Complaints relative to train connections at Wexford.

43894. What do you wish to bring here under our notice in reference to Wexford?—In reference to Wexford, the subject of communication between the north and south stations—that is, between the Great Southern and Western and the Dublin and South-Eastern.

43895. Is that a recent subject?—Yes, since the 1st January.

43896. This year?—This year.

43897. How has that affected the interests of Wexford?—Well, it breaks the communication between the stations North and South Wexford.

43898. What is the distance between the two stations?—About a mile as near as may be; it may be a little short of a mile.

43899. What is the complaint?—The complaint is that people wanting to travel have to get out at the lower station and find their way to the other station, or where they want to do business at the other end of the town. They have had the advantage of it hitherto, and *vice versa*.

43900. But do you say that hitherto up to 1st January of this year there was a constant communication between the two stations?—Constant communication practically.

43901. And now if you want to go from one station to the other you have to take a cab or walk?—Some of the trains still go from the north to the south, but some of them do not. There were three of them at the 1st of January last—three trains from the north do not go to the south, and three from the south do not go to the north.

43902. Three trains each way?—Yes, and one of them a very particular train, a train of very considerable importance.

43903. *Mr. Sexton.*—Connecting with the Kingstown mail service?—Yes.

43904. *Chairman.*—Do I understand that until the 1st January last all the trains stopped at that station?—Not the whole of them.

43905. Local trains?—Local trains, yes.

43906. What have you to say about Rosslare?—Rosslare has been, I think, very badly treated by the Great Southern and Western Company.

43907. Tell us, in your own words, what complaint you have got against the company?—The station in it is the same as was put up there, I suppose, twenty years ago.

43908. Rosslare is now the port for the new service—No; that is Rosslare Harbour, but Rosslare Strand is where I complain of—the bathing place.

43909. That is a pleasure place?—A pleasure place.

43910. Visited in summer by a large number of tourists?—A large number of people.

43911. Who spend the summer there?—Yes.

43912. It is a seaside place?—Yes. Wexford, unfortunately, although on the sea, has no bathing place.

43913. But Rosslare has?—Rosslare is perhaps the best bathing place in the United Kingdom.

43914. And is much patronised?—Yes, by the local people.

43915. How do you mean the local people?—Seventy or eighty families go down and take houses there.

43916. From the country round?—Yes; Wexford County, County Carlow, Wicklow, Tipperary, and other places.

43917. What is your complaint against the railway company?—I will explain. From Wexford, during the bathing season, they run a cheap train down, and if it turns out a wet day, all the people come up from the Strand for shelter, and remain until the return train starts. I have seen 100 and 150—they have to stand in the wet.

43918. There is no shelter?—There is a shelter that holds about a dozen or eighteen to 20 people, but even that is used as a goods shed.

43919. Have you represented that to the railway company?—I did to one of the directors privately some time ago—in November last.

43920. What was the answer?—I do not know whether I am at liberty to state that—he considered it a private interview.

43921. Then do not tell us. You are a shareholder, are you not?—I am a small shareholder.

43922. Do you attend the meetings?—I do not.

43923. You do not?—No.

43924. You have the opportunity twice a year to ventilate your grievance?—Yes; this grievance was ventilated.

43925. What was the result?—A clergyman, who probably uses Rosslare as I do, drew attention to the matter, but I am not aware that the Chairman made any reply at all, judging by the reports of the newspapers.

43926. What is your complaint? First of all, you complain that there is no covering to the station. What other complaint is there?—Practically there is no accommodation at the place at all.

43927. You want a new station?—Yes.

43928. With modern accommodation?—Yes.

43929. Do you think that would tend to develop the traffic of the place?—Most certainly.

Mar. 14, 1908.

Mr. John Joseph Rossiter, Representative of the Rosslare and Wexford ratepayers' and the Forth Farmers' Association.

A new station required at Rosslare.

43930. With regard to rates and fares, have you anything to say with regard to that?—Nothing, except one item—that is an item that affected myself—the price of coals. I think it is stated in my proof that the rate for coals has gone up to 2*s.* a ton, and the distance is only six miles.

Complaint as to excessive coal rate from Wexford to Rosslare.

43931. Where is the coal landed?—On the quays at Wexford. The rails run along the quays, and they began to charge haulage rates comparatively recently. I asked why the price of coal had gone up, as it was so very cheap, and that was the statement made to me—that the railway company charged at the rate of £1 a truck for five or six tons. I think representations have been made to the company by some of the local people who are concerned, but I do not know with what result. I did not go into that matter at all.

43932. That is the only question you wish to raise with reference to the rates and charges?—That is all.

The break of connection between the north and south stations, Wexford.

43933. Your principal complaint is want of proper station accommodation at Rosslare and want of communication between the two stations?—Yes. I might point out, with regard to those trains which have ceased running between those two stations, that the engine is unyoked and taken from the south to the north station, the carriages are left behind, people have to get out and walk, the engines goes on, and I have seen people sometimes begging for their luggage to be put on the engine as it goes to the other station. That seems a stupid arrangement.

43934. As a shareholder, why do you not write to the company?—I have, as I say, had an interview.

43935. But that was private?—It was private. I see matters have happened since—that that they have put more capital on the market, and it is quite possible that the attention drawn to it here may induce the company to do something, in fact, give a proper station.

43936. But I understand this was a service which was discontinued—it was not a question of capital outlay?—But I am speaking of Rosslare station.

Examined by Mr. Sexton.

Complaint of increased haulage charges for coal, Wexford Quay to station.

43937. This coal traffic which you speak of is carried from Wexford to Rosslare Strand?—Yes.

43938. About six miles?—Yes.

43939. What was the occasion for the increase in the freight?—That I cannot say—haulage was not charged for it until recently; it was landed by the shippers—landed into the truck—and now they charge from wherever that truck happens to lie on the line to the South Station.

43940. Is it charged for that mile between the two stations?—Or half a mile, or a quarter of a mile or a dozen yards.

43941. It is charged on that distance?—Yes.

43942. Was a smaller freight charged for the same haulage formerly?—It was.

43943. The increased freight is not for an increased haulage, but for the same?—There is no haulage charged for the railway—they charge from the south station.

43944. Was the whole of the conveyance formerly the same distance?—They gave that, I suppose, in.

43945. But it was done formerly for a lower rate?—Yes.

43946. I understand you to say that the rate was 5*s.* a truck, or 1*s.* a ton, from Wexford to Rosslare?—Formerly.

43947. And now they have added on another 1*s.* a ton for this piece of quay?—Yes.

43948. So the distance remains six miles, and the freight has been doubled?—Yes.

43949. Have you inquired the reason—have you asked for an explanation?—The reason was given to me by a gentleman at the ratepayers' meeting, and he gave me no explanation more than that they simply charged the haulage, which they had not charged for before.

43950. We may assume that the 5*s.* a truck formerly paid was paid for everything that was done?—Everything done, I suppose.

43951. And the payment has been doubled without any fresh service, or additional service?—Yes.

Representations made to a director of the G. S. and W. Co.

43952. As to complaining to the company, you had an interview with a director, and you say that a gentleman who inquired at the half-yearly meeting of

Mar. 14, 1908.

Mr. John Joseph Rossiter, Representative of the Rosslare and Wexford ratepayers' and the Forth Farmers' Association.

shareholders did not succeed in getting a reply, so that it would appear to be of very little use for you to complain?—Very little. The company have treated that end of Wexford very badly indeed.

43953. How long have they had that line?—I cannot say—three, or four, or five years probably. Their representative here would know.

43954. Was this stoppage of connection between the north and south stations abruptly done?—A short notice was given, I think, in December.

43955. Was any reason stated?—No reason.

43956. You were quite in the dark?—As far as I know, there was no reason given.

The discontinuance of passenger trains between Wexford north and south stations.

43957. The Great Southern and Western trains arriving at the south station detach the engine, and it runs to the north station?—They have no turn-table—it has to run on.

43958. Leaving the train behind, and leaving the passengers who want to go to the north end to walk, and carry their luggage?—Just so.

43959. It seems inexplicable?—It does.

43960. Is there any explanation for it?—No; the train that connects with their boats crossing from Rosslare Harbour to Fishguard, and *vice versa*, runs into the north station.

43961. I can understand the Great Southern Company stopping the trains from the south at the south station and not running on to the north station if they wanted to embarrass the South Eastern Company, or embarrass passengers going to the South Eastern line, but why do they stop running their engine from the north station to the south, because that only embarrasses passengers going on their own line?—I do not know, unless for some reason or other to diminish the other company's traffic.

43962. Do you suppose that if they ran trains regularly from the south station to the north the passengers, say, from England, coming to Rosslare would be more likely to take the South Eastern route to Dublin if there were not a mile of road, with so few trains, in the town of Wexford?—The steamer train they do connect.

The effect on through passenger *via* Fishguard or *via* Kingstown.

43693. They facilitate the Rosslare passengers getting by the South Eastern to Dublin?—Yes; they connect the steamer train. There are several trains—I have mentioned three trains that stop: the 1.10 p.m., 3.45 p.m., and 9.18 p.m., up; and 7.35 a.m., 8.40, and 6.30 p.m. down. There is one particular train—the mail that leaves Wexford at 4.20—that connects with the mail to Kingstown; they stop that at the south. The train that connected the south station with the north they stopped.

43964. You suggest that the object is to lead passengers from the South to go to England by Rosslare rather than by Dublin?—I take it it would lead them, at all events, to go rather than by Dublin.

43965. Or to go from the South to Dublin by one of the Great Southern routes rather than by the South-Eastern?—No doubt.

43966. Or by Rosslare to England?—I do not quite follow you.

43967. Passengers to England—do you think that this mile of road with no full train service, would prevent people from going by the South-Eastern line?—No doubt.

43968. It seems a small device for accomplishing rather a large purpose. Has it that effect?—I cannot say.

43969. Has it diverted passenger traffic from the South Eastern to the Great Southern line?—The thing is so recent that one has scarcely had time to see the effect.

The inadequate station accommodation at Rosslare junction.

43970. You make other complaints—you say that the station at Rosslare is unsuitable, unsheltered, and has a dangerous platform?—It has.

43971. And that when the boat is late, the fast boat runs behind the slow train, causing a dangerous situation?—On two occasions I saw the slow train that leaves Rosslare Harbour when the boat is late (I am speaking now of last summer) come out first in order to get into Wexford to keep its time, where it connects—it is absolutely the connection to the boat train.

Dangerous system of working passenger traffic.

43972. The fast train runs after the slow one?—Yes. On two occasions I was on Rosslare Strand platform when this slow train had to be rushed out of the station, and run half a mile up, to get out of the way of the fast train, with some people in and some out, and the doors not closed.

43973. At what station is the fast train to get in front?—At Rosslare.

43974. And when the slow train arrives there first it runs up the line?—It runs up towards Wexford, and the other comes behind, and turns off to Waterford.

43975. Does the slow train go to the down platform?—Yes; it backs into the down platform when it returns to the station.

43976. The wrong platform?—Yes.

43977. The people have to enter the train at the wrong platform?—They have to come back across the line.

43978. The train comes first to the wrong platform, and then goes to the right one?—No, it does not.

43979. Have the people, in order to get into the train, to go to the wrong platform?—Yes; I have done it over and over again.

43980. So that when the boat is not late, the people at Rosslare may get on to the train at the right platform, but when it is not they have to go to the wrong platform?—Yes.

43981. That state of affairs seems to suggest disastrous results at some time or other?—No doubt; and to do that you have to go down to the public road and up on to the other platform. There ought to be a bridge across.

43982. In order to know which platform they have to reach to get into the train, the people would want first to know whether the boat was late?—Yes.

43983. They cannot know, and it must create a great state of uncertainty?—Yes. People I have seen waiting—you go up to the up-platform, where your train naturally should be, and there on two occasions the train came in, and some people got in and with the doors still open—it had to rush away up the Wexford line.

43984. In the summer season at this bathing place you have from 1,500 to 2,000 people at the station?—Yes, on occasions.

43985. Crowded about a platform, able to hold, how many?—Able to hold 150 to 200 people.

43986. The rest are all crowded about the place?—Yes; and on the holiday, which is a strict holiday in the sense that there is no business in that part, you get the same state of affairs.

43987. You have an express train rushing by, and the people, crowded together to any number up to 2,000—with accommodation for only 200?—That is so. There is only covered shelter on that platform for about four or five people, and no attempt at any sanitary accommodation on that platform, nor, indeed, on the other very much.

43988. Did the Great Southern Company say that when the steamer arrangements were complete they would give you a proper station?—That was the general belief at the time. When complaints were made occasionally, that was the statement made—not to me personally. I have had it from others. I only made one personal complaint myself.

43989. The company may or may not be acting within the law, but if we are to assume that the company are acting within their legal rights, it appears to follow that a railway company may act in a very arbitrary manner, to the prejudice of a district, and yet be irresponsible?—Yes. You will see in my statement that there is a prosecution against the company by the County Council for breaking up the public road.

43990. Is it true that they have to bring water twenty miles for cattle?—There are no cattle to serve—the Board of Agriculture prevents them shipping cattle at all until a proper water supply is provided.

43991. And they have no local water supply?—They are providing water now.

43992. What do they bring water twenty miles for now?—There is no other way to get it.

43993. Water to drink, or for any other purpose?—For any purpose. It is marl, or gault, there, and water is very scarce. They are now bringing it a considerable distance by a special train. They made an application to the County Council to cross the road, and the County Council said they would give them permission if they would give the farmers a guarantee that the water taken in the summer time from seventeen or eighteen farms that were fed by that water—and used by the cattle and so on—failed they would see to it.

43994. They wanted to get the water without indemnifying the farmers?—Oh, no; they bought the source or bought the farm which the stream runs through, but the County Council would not facilitate them crossing the road, or allow the road to be broken up, unless they gave a guarantee that if the water failed in the summer time they would give a sufficient

Mr. John Joseph Rossiter, Representative of the Rosslare and Wexford ratepayers' and the Forth Farmers' Association.

supply, and not deprive those farms of the water they have at the present time.

43995. They refused to give a guarantee?—They did, and broke up the road, although they were refused permission by the County Council to do so.

43996. Your evidence suggests that keeping within the law is only a small part of the matter, and if the public interests are to be efficiently served by public carriers there are questions involved apart altogether from legal obligation?—Certainly. The County Council have directed the company to be summoned for breaking up the road.

Examined by Mr. Acworth.

43997. I gather you have not, except through a confidential conversation with a director, taken any steps to ascertain from the company what the reason is for the changes in reference to service between the two stations?—I have not.

43998. Is Rosslare Strand the same as Rosslare Junction?—It is.

43999. During a month or two of the year, especially on holidays, there is a considerable traffic there?—There is, for three or four months of the year, especially on the Sundays and on the holidays.

44000. How much traffic is there for the remaining eight months of the year?—Well, it is a training place for the Coastguards, for the Naval Reserve ,and at times I have seen fifty or sixty of those men there—sometimes more. There is a Marconi Station there, too, and a big hotel.

44001. How many do you think there would be on an ordinary week-day in March or November?—Perhaps not so many.

44002. What is the return fare? I suppose you get cheap tickets from Wexford?—Cheap tickets in the afternoon.

44003. What is the return fare?—Sixpence single fare—in the afternoon sixpence return in the bathing season.

44004. Have you any idea what a shelter, such as you suggest, for 1,000 people would cost?—1,000 people would be the maximum. I do not ask for any such number; I only propose that there should be a shelter for, say, 50 to 100 or 150.

44005. A good substantial station with large platforms, a bridge over the top, and that sort of thing—what do you think it would cost?—I do not know what it would cost, but I would answer that in this way—there are five stations between Rosslare and Waterford, and they have given fairly substantial stations to each of those places, where there is no traffic, or very little traffic, and Rosslare Strand is without any accommodation at all, where it is most wanted, and a good paying traffic.

44006. But have they given accommodation on the basis of a big excursion traffic, or on the basis of a little local everyday traffic?—At these small stations?

44007. Yes?—Ordinary local traffic.

44008. But this is a case where you say there is no ordinary traffic, but quite a big traffic on occasions at specially low fares?—Yes, but there is a greater ordinary traffic to Rosslare Station than to those other small stations where proper accommodation is given.

44009. Do you mean that there is greater traffic on ordinary week-days to Rosslare Strand than to these other stations you speak of?—Certainly; double, treble, quadruple.

The inadequate station accommodation at Rosslare junction for passenger traffic.

44010. Therefore, you think Rosslare Strand ought to have as good accommodation as, say, Kilrane, or any of these other small stations?—Well, Kilrane is in the same condition as Rosslare, if not worse.

44011. I thought you said they were all right except Rosslare?—I did not mention Kilrane; I mean Killinick, Bridgetown, or Wellington Bridge, all of which are respectable stations suitable to the traffic.

The extent of the improvements required.

44012. I understand your case is this—that, leaving out the excursion traffic, there is as much traffic at Rosslare Junction as there is at Killinick or Bridgetown?—Much more.

44013. Leaving out excursion traffic?—Yes.

44014. And that therefore they ought to give Rosslare at least as good accommodation as they give Bridgetown?—Certainly, and much better, as it is more important.

44015. That you would be satisfied with?—Yes. For three or four months of the bathing season you may have a hundred people on the average waiting at the station.

44016. Is what you think they ought to give such accommodation as they have at Bridgetown, or accommodation to meet the big excursion traffic?—No, better than at Bridgetown, but no one would ask the company to provide merely for holiday traffic only.

The population of Wexford.

44017. What is the poulation of Wexford?—Between 11,000 and 12,000 people, but on Sundays and holidays people come from thirty to forty miles around, and make a big crowd.

Mr. Philip MacNulty further examined by the Chairman.

Mr. Philip MacNulty, transit Inspector, Department of Agriculture.

44018. We have received from you several statements of comparative rates from Continental ports to stations in Great Britain, and from certain stations in Ireland to the same places?—Yes.

44019. I only propose to ask you just one or two questions, and I suggest that we give the railway companies a copy of these rates. I am not going into detail. I do not know whether these are numbered?—They are lettered in three sets, A, B, and C.

44020. Will you take the table of butter rates from Continental ports to stations in Great Britain—say the rate from Rotterdam *via* Grimsby to Birmingham?—Yes.

44021. What have you got that rate as?—46*s.* 6*d.*

44022. Then you have Antwerp, Hamburg, Esbjerg, Dieppe, and Boulogne?—Yes.

44023. You have also the rates for butter from Limerick, Longford, Cavan, Enniskillen, Donegal, Tuam, Cork, and Tralee to the same stations in England?—Yes.

44024. That is an example of what you have prepared for various articles?—Yes.

44025. You have got them for poultry?—May I take them in the order in which they were asked for?

44026. Read them in your order?—The order in which they were asked for by the Commission.

Chairman.—Mr. Balfour Browne, you will get a copy of these.

Mr. Balfour Browne, K.C.—I am quite satisfied, sir, if I get a copy; then I shall have an opportunity of looking into them.

Witness.—Butter, eggs, bacon, dead poultry, potatoes in sacks. These constitute Set A.

44027. *Chairman.*—And particulars of all those rates will be given to the railway companies, and will be printed in the minutes?—Yes.

Comparative tables of rates from Continental ports and from Irish stations to Great Britain submitted for Irish staple exports:—Goods produced or producible in Ireland and cattle exports (see pages 172 to 191 inclusive).

44028. Now Set B—what is that—will you just explain what they are?—The Irish interior transit rates for goods produced, or producible, in Ireland, such as flour, butter, bacon, cheese, soap, furniture, shirts, and slates, compared with import rates on like commodities from some important trading and shipping centres in Great Britain to the same points of destination in Ireland as those selected for the Irish rates.

44029. That is Set B?—That is Set B. Statement C consists of only one sheet—rates for fat cattle from a few of the leading centres in Ireland to the best known British markets for Irish fat cattle, compared with the rates to these latter places from the ports of debarkation for foreign dead meat, taking an average weight avoirdupois for Irish fat cattle for the purpose of calculation of freight charged on tonnage basis.

44030. We had that discussed the day before yesterday?—Yes.

44030A. Those are the figures for what they are worth—that is the principle adopted. For what they are worth, you shall have a copy of those rates.

Mr. Balfour Browne, K.C.—Thank you, sir.

The following tables were handed in:—

			London, ...	Leeds, ...	2 10 0	C. & D.
					1 15 0	3-Ton truck loads. C. & D.
					1 17 6	3-Ton truck loads, C. & D., inclusive of hampers and cloths.
			London, ...	Birmingham, ..	1 10 0	3-Ton loads. C. & D.
			London, ...	Derby, ...	1 11 8	2-Ton loads. C. & D.
			London, ...	Wakefield, ..	2 10 0	C. & D.

In making comparison of weight of Live Beasts with the Dead Meat, a deduction of about 45% may be made from the Live weight to ascertain the weight of a carcase (dead weight).

At the places where the *principal markets* for Irish Fat Cattle are held in Great Britain there are also markets for Dead Meat, as at London, Liverpool, &c., and here comparison of rates is impossible.

LIST OF SEA DISTANCES TAKEN TO ARRIVE AT FIGURES AS SHOWN IN COMPARATIVE TABLES.

Sea Distances.		
62 miles,	From Rosslare,	To Fishguard.
70 miles,	From Dublin,	To Holyhead.
80 miles,	From Greenore,	To Holyhead.
85 miles,	From Belfast,	To Ardrossan.
106 miles,	From Waterford,	To Fishguard.
117 miles,	From Belfast,	To Glasgow.
138 miles,	From Dublin,	To Liverpool.
140 miles,	From Dublin,	To Heysham.
140 miles,	From Belfast,	To Fleetwood,
146 miles,	From Belfast,	To Heysham.
149 miles,	From Dundalk,	To Liverpool.
151 miles.	From Newry,	To Liverpool.
152 miles,	From Cork,	To Fishguard.
166 miles,	From Londonderry,	To Glasgow.
167 miles,	From Dublin,	To Manchester.
174 miles,	From Wexford,	To Liverpool.
189 miles,	From Belfast,	To Manchester.
193 miles,	From Wexford,	To Bristol.
214 miles,	From Londonderry,	To Fleetwood.
222 miles,	From Dublin,	To Bristol.
223 miles,	From Dublin,	To Glasgow.
230 miles,	From Waterford,	To Bristol.
245 miles,	From Londonderry,	To Liverpool.
253 miles,	From Waterford,	To Liverpool.
276 miles,	From Cork,	To Bristol.
299 miles,	From Cork,	To Liverpool.

The distances are irrespective of whether through rates exist or not, and are for the purpose of arriving at the shortest approximate mileage from the Irish Station to point of destination

Mar. 14, 1908.

Mr. Philip MacNulty, transit Inspector, Department of Agriculture.

Comparisons between Irish and Continental interior goods rates.

Comparative tables of rates from Continental ports and from Irish stations to Great Britain.

Mr. Sexton.—You produced some additional tables last Thursday.*

44031. *Chairman.*—Just explain the others?—The comparisons which I handed in on Thursday relate to cattle feeding cake in one-ton lots, five-ton lots, and ten-ton lots. The comparisons are shown in shillings and pence only.

44032. *Mr. Sexton.*—Between Irish and Continental rates?—Yes, interior rates of each country.

44033. *Mr. Acworth.*—Instead of in percentages as in the other case?—Yes, there was not time to work out the percentages as in the others. The next comparison refers to sulphate of copper, used for spraying potatoes in Ireland, one-ton lots and five-ton lots. Comparison No. 28 refers to agricultural drain-pipes in one-ton lots, five-ton lots, and ten-ton lots. Comparison No. 29 refers to dead pigs in one-ton lots. Comparison No. 30 refers to slates in one-ton lots, five-ton lots, and ten-ton lots. Comparison No. 31 refers to soap; No. 32 to woollen goods; No. 33 to boots and shoes in one-ton lots; No. 34 to round timber—rough timber—in five-ton and ten-ton lots; No. 35 to roughly-sawn timber in one-ton lots and five-ton lots; No. 36 to coal in five-ton lots and ten-ton lots; No. 37 to basic slag (which is used for reclamation of bog-land) in five-ton and ten-ton lots.

The omission of certain Continental ports.

44034. *Mr. Aspinall.*—May I ask a question with regard to the rates for eggs, butter, and bacon. You have given the rates from Rotterdam, Antwerp, Hamburg, Esbjerg, Dieppe, and Boulogne, but you have left out Copenhagen, the largest place of all. Is there any reason for that?—I am not aware of any. † These rates have been obtained within the last ten or twelve days by a couple of officials who were sent over to England specially for the purpose, and as the figures were put together in a great hurry, there may be omissions from unavoidable circumstances.

44035. You know the principal import is from Copenhagen?—If we have the rates, and the Commission would like us to add them; we could insert them before the sheets go into the minutes.

44036. I do not think we want anything additional—I merely commented upon that point?—I do not know whether we have the rates or not.

44037. *Mr. Acworth.*—What I want to understand is this. Take from Limerick to Birmingham, sea distance 70 miles?—Is this for butter?

44038. Yes, but it does not matter. I just want you to explain how it is done. Limerick to Derby, sea distance 167; Limerick to Leeds, sea distance 140; Limerick to London, sea distance 230; Limerick to Liverpool, sea distance 138. There are five sea distances, which I presume implies that the rate has been taken by five different routes?—I cannot tell you the basis upon which these have been taken out, but I presume it is upon the shortest route, and that these are the approximate distances by the shortest route.

44039. Perhaps you would not mind verifying that. As I understand you, the rate from Limerick and various places is taken by the shortest combined mileage route?—Yes.

44040. And then the sea distance on that is used?—Yes.

44041. I do not think that can be so. Take Limerick to London. Surely the shortest route from Limerick to London cannot be 230 miles sea. However, would you kindly verify that for me?—It is clear that the rates are taken by different routes in all five cases?—Yes.

44042. Let us know upon what principle the rates are selected, and upon what principle the sea distances and land distances are worked out?—I can have the route inserted if you like.

44043. No, do not insert it; simply give us the information as to what the distance is?—I will ascertain that.

Chairman.—We will adjourn until we have the pleasure of meeting you, gentlemen, in Ireland.

The Commission adjourned till Tuesday, 21st April.

* See Appendix No. 2.

† See preceding pages 172 to 191 inclusive.

INDEX TO THE EVIDENCE.

A.

ABBEYLEIX.

Delays -Passenger train delayed to let goods train pass (P. A. Meehan), 40169.

Class of people travelling—Business men (P. A. Meehan), 40492.

ADDITIONAL RAILWAYS, PROVISION OF.

See title Extension of Railways, Provision of Additional Railways, etc.

AGRICULTURAL PRODUCE PARCELS POST.

Establishment proposed (R. A. Anderson), 43066, 43350.

Date when post was given in France (R. A. Anderson), 43180.

Great Eastern System in England—Similar system on some Irish railways, Extension of system would meet the case (R. A. Anderson), 43181-4.

AGRICULTURAL SOCIETIES.

Fertilisers, increased use of due to Societies—Small farmers enabled to purchase at wholesale prices, manufacturers' prices not affected (R. A. Anderson), 43058.

Number, membership, estimated trade, purpose, etc. (R. A. Anderson), 43044-6.

AGRICULTURE AND TECHNICAL INSTRUCTION DEPARTMENT.

Animals, Transit of—Great improvement effected since establishment of Department, room for further improvement (J. W. Shea), 41910-2.

Complaints to Railway and Canal Commission—

Cases taken up by Department—Great Southern and Western Railway, proposed increase of rates, *see* Great Southern and Western Railway.

Public knowledge as to powers of Department—Powers not generally known (J. W. Shea), 41886.

Powers in respect of Railways—

Mandatory powers in regard to reduction of rates would be a good thing, but would not meet the whole case (C. Culhane), 42272.

Rates, Reduction of—Nothing effected by action of Department (J. P. Rafferty), 40687-91.

Useless for redress of traders' grievances (C. Culhane), 42297-8.

Trade of the country had been benefited in various directions—Department was a new body and too much should not be expected at present (J. W. Shea), 41995-8.

Transfer to, of Agricultural work of Congested Districts Board (F. W. D. Mitchell), 39441-2, 39449.

AMALGAMATION OF RAILWAYS—ADVANTAGES AND DISADVANTAGES OF UNIFIED MANAGEMENT.

Appliances and resources of the system as a whole would be available for the needs of the country at large (B. E. F. Sheehy), 41569-71.

Books of tickets permitting travel over any part of the system would be obtainable under unified management (B. E. F. Sheehy), 41561.

Competition, question of, in event either of Amalgamation or of some form of Public Ownership.

Antagonism between rival railways—no curtailing of facilities in the way of connections in Ulster (J. Murland), 40940.

AMALGAMATION OF RAILWAYS—*continued.*

Disappearance of competition under united management, question of (B. E. F. Sheehy), 41563-4.

Objection to State purchase (J. Murland), 40938.

Even where railways had entered into an agreement competition made for better working (J. Murland), 40939.

Expense and inconvenience of existing want of co-operation—Argument in favour of Amalgamation (G. J. Greene), 39918-9.

Facilities, Competition in, an existing argument in favour of private ownership—Pooling and working agreements coming into operation which did away with competition (J. W. Shea), 41978-86.

No competition at present—what canvassing there was was for routes rather than railways (R. A. Anderson), 43309-12.

Complaints arising from different degrees of ability and diligence brought to bear on the different systems would disappear under united management (B. E. F. Sheehy), 41562, 41564.

Connections—Trains not timed to make connections under existing system (G. J. Greene), 39919.

Economy, question of, in event either of Amalgamation or of some form of Public Ownership (Rev. P. J. Dowling), 41165; (P Whelan), 43559-61.

Administration, concentration, etc.—Possibility of economy (W. L. Micks), 39310, 39313; (G. J. Greene), 39917; (J. Butler), 40010; (C. Culhane), 42372-5.

Directors fees—

Existing amount—Very small part of the whole (W. L. Micks), 39311-3.

Ornamental directors would be replaced by 8 or 9 men (P. A. Meehan), 40488-91.

Surplus would be produced even though more adequate staffs had to be provided (C. Culhane), 42372.

Waste involved in present system (P. A. Meehan), 40148.

Amount of saving—large saving (W. L. Micks), 39186-7, 39304.

Annual charge for interest on purchase money compared with net profits—

Difference would depend on rate at which purchase money could be borrowed (R. A. Anderson), 43301-4.

Public credit, use of, would lessen annual charge for capital (C. Culhane), 42370-1.

Application of savings—

Additional railways, provision of, *see* title Extension of Railways.

Rates, reduction of, *see* Rates.

Sinking fund, rate could be devoted to, over all the lines (B. E. F. Sheehy), 41497.

Canvassers for traffic, no expenses in connection with (W. L. Micks), 39313.

Doubtful if there would be economy in working—

Great Northern Railway, case of—Instances where further economies might be effected, etc. (P. Whelan), 43521-6.

Great Southern and Western and Waterford and Limerick case, etc. (R. A. Anderson), 43305-12.

Scotch railways, case of—Conditions in Ireland wholly dissimilar (R. A. Anderson), 43307.

AMALGAMATION OF RAILWAYS—*continued.*
Economy, Question of—*continued.*
Great Central and Great Northern of England, Amalgamation of—Economy presumed in terms of arrangement, similar economies would result in Ireland (Rev. P. J. Dowling), 41150-4.
Increased plant and working staff needed, extent to which economies would be swallowed up (P. A. Meehan), 40387-92.
Leakages might also exist (J. Murland), 40916.
Legal expenses, saving in (W. L. Micks), 39313, 39316-7.
Parliamentary costs would be saved (W. L. Micks), 39314-5.
Rolling Stock, *see* that title.
State management more expensive than private management—General experience of Continental countries (J. Murland), 40936.
English Railways in Ireland, complication introduced by (R. A. Anderson), 43127.
Extension of railways, Provision of Additional Railways, etc., *see* that title.
Necessary preliminary to State Ownership (R. A. Anderson), 43264.
Objections to a central system—Responsible head should be as near as possible to part affected, head of a central system would not know local conditions (J. Murland), 40907-8, 40913-5, 40917-21.
One system—
One company under public control proposed (B. E. F. Sheehy), 41496.
Opinion in favour of (J. F. O'Donnell), 43818, 43882-3.
Opinion against (J. Murland), 40830-1.
Opinion in favour of (J. W. Manning), 41252.
Public control, Unification of railways under, proposed (G. J. Greene), 39917; (J. Butler), 39993-5; (J. O'Dea), 41356-8.
Small railway companies, amalgamation of, or absorption by large companies—
Guarantee by the State would be necessary in case of non-guaranteed lines (R. A. Anderson), 43131-5.
Opinion in favour of (R. A. Anderson), 43126.
Staff, position of, under Unified Management—
Abolition of Office—Provision for compensation of surplus officials, etc. (W. L. Micks), 39188, 39292-302, 39385-9; (J. W. Shea), 41926-7, 41956.
Minor appointments—Clerkships should be open to competition in event of Nationalisation of Railways (J. W. Shea). 41928.
Three or four companies, Opinion in favour of (R. A. Anderson), 43127.
Two or three companies—Competition would keep matters right, but if one of the companies got control the arrangement would not work so well (B. E. F. Sheehy), 41532-4.
Two Systems, objection to—Desirable that reserves of whole system should be available to supply deficiencies in any part of system (Rev. P. J. Dowling), 41154-7.

ANDERSON, Mr. R. A.—*Secretary, Irish Agricultural Organisation Society.*
Evidence, 43030-399.

ANIMALS, TRANSIT OF.
Delays—Injury to cattle and deterioration in value owing to delays in transit (P. A. Meehan), 40269, 40275.
General complaint (P. A. Meehan), 40270.
Instances in Queen's County (P. A. Meehan), 40271-4.
Department of Agriculture—Great improvement effected since establishment of Department—Room for further improvement (J. W. Shea), 41910-2.
Rates—
As high as when cattle trade was at its best, too high for present condition of trade (P. A. Meehan), 40269.
Continental Rates, *see* State Railways—sub-heading Animals, Transit of.

ANIMALS, TRANSIT OF—*continued.*
Rates—*continued.*
Department of Agriculture, comparative statistics of rates for fat cattle from Ireland to English markets, reduced to a rate per ton, and compared with the rate per ton for foreign dead meat from British ports to interior points of distribution (P. MacNulty), 42998-43001, 44029-30A, p. 190.
State Railways, *see* that title.

ANNSBOROUGH (Messrs. Jas. Murland & Co., Flax Spinners).
Coal imported *via* Dundrum (J. Murland), 40867.
Disposal of goods—Nature of goods exported, etc. (J. Murland), 40868-72.
Employment—Number of men employed, Amount paid in wages (J. Murland), 40942-4.
Extent of business (J. Murland), 40884.
Position of industry—Very little dependent on railways (J. Murland), 40874-5.
Preference of County Down Railway, Reason for—Firm had always dealt with that line and saw no reason to change (J. Murland), 40895-6.
Rates—
Advantages granted by County Down line (J. Murland), 40899.
Amount paid in freight per annum exclusive of coal (J. Murland), 40883.
Distance from Dundrum Station to Castlewellan, Addition to rate when new connection was made (J. Murland), 40823-4, 40892.
Satisfactory rate (J. Murland), 40825-6.
Great Northern Railway, special rates given for flax and linen (J. Murland), 40842-7.
Rates did not affect anyone else, witness's firm the only one of the kind in the neighbourhood (J. Murland), 40848-9.
Incidence of freight (J. Murland), 40876-88.
Satisfactory, but witness would have no objection to a reduction of 50 per cent. (J. Murland), 40850-1, 40854-5, 40902-4.
Raw material—
Import of—
Belfast, Import *via*—Inconvenient to bring it *via* Dundrum (J. Murland), 40864-6.
Belgium, flax imported from (J. Murland), 40842.
Irish flax—Places whence Irish flax was obtained (J. Murland), 40836-41, 40873.
Relations with railway company, pleasant and amicable relations (J. Murland), 40821-2, 40833-5, 40889-94, 40922-3.
Siding given by County Down Railway (J. Murland), 40894, 40896.

ARAN ISLANDS.
Early potato growing—Profit realised on first consignment, next consignment too late to pay freight, market having dropped in the meantime (R. A. Anderson), 43098-101, 43203-5, 43208-9, 43341-3.
Cost of Carriage, question how far cost was responsible for giving up the trade (R. A. Anderson), 43207-12, 43344-5.
Uncertain Communication between Aran and the mainland owing to bad Steamship Service (R. A. Anderson), 43346.
Steamer service subsidised by Congested Districts Board, Loan for provision of vessel, etc.—Service not prosperous, but very beneficial (F. W. D. Mitchell), 39407-20, 39450-9, 39470.

ARIGNA DISTRICT. RAILWAY SCHEMES.
Cavan and Leitrim Railway Extension to Arigna Coal Mines, *see* Cavan and Leitrim Railway.
Railway extension desirable (W. L. Micks), 39325-6; (Capt. H. M'Ternan), 41180.

ATHLONE.
Rates to, from British centres of distribution compared with rates from Irish centres for butter, cheese, bacon, flour, soap and shirts (P. MacNulty), 44030A, pp. 182-9.

AUSTRIA.
State Railways, *see* that title.

AUTHORITY FOR CONTROL AND MANAGEMENT OF IRISH RAILWAYS.
Central Authority—
Extensions and additional lines best obtained by a strong central authority working a united system (W. L. Micks), 39195-203.
Ideal authority (J. Hilliard), 42206-7.
Opinion in favour of (J. Hurley), 41822; (J. W. Shea), 41987.
Experts, management by—
Control of experts—Public body compared with existing Directors as controlling authority (R. A. Anderson), 43297-300.
Proposals for, under control of Irish representative Authority, *see* sub-heading Irish representative Authority.
Impartial Authority, Opinion in favour of (J. Kelly), 42550.
Imperial Authority, Objections to (Rev. P. J. Dowling), 41070.
Elasticity, lack of, in Government Departments (J. Hilliard), 42206-8.
Hopeless to get railways managed from England—Non-Irish administration would not have the knowledge nor the time (W. L. Micks), 39269-73.
Not likely to be an improvement on present railway Boards (R. A. Anderson), 43137, 43227-8, 43279.
Insensibility of Government Boards as compared with railway Boards (R. A. Anderson), 43229-32, 43280-4.
Local administration, advantages of (R. A. Anderson), 43233-4.
Irish Authority—
Board of Control having the assistance of experts proposed (J. W. Shea), 41924, 41926-8.
Opinion in favour of and proposals for (P. F. Mullally), 39605; (J. W. Shea), 41924, 41926; (J. F. O'Donnell), 43758.
Preferable to leave the railways as they were rather than have them worked by a body that did not understand the country (G. J. Greene), 39922-4; (J. Butler), 39993-5.
Qualifications of Irishmen for railway administration (C. Culhane), 42379-80.
See also sub-heading Central Authority.
Irish Representative Authority—
Board of twenty-eight members—suggestions as to election of members (W. L. Micks), 39183-5, 39274-7, 39349-53.
Not suggested as a supreme authority—Ultimate control to rest with the Committee to be appointed as a substitute for the Irish Parliament (W. L. Micks), 39377-84.
Districts and localities could be consulted as to rates and fares affecting them (P. Whelan), 43552-4.
Education of Irish public opinion needed before it could exercise a wholesome influence on any Board (R. A. Anderson), 43285, 43295.
Experts, management by, under a representative body, proposed (B. E. F. Sheehy), 41495, 41498-502, 41528-31, 41568-9.
Board consisting of, say, two members from each province, with three railway experts under them (Rev. P. J. Dowling), 41165-6.
Four to six railway experts under control of an Irish Representative Authority proposed (J. O'Dea), 41316-20.
General Council of County Councils as Authority—Opinion in favour of (P. Whelan), 43556-8.
General Council of County Councils, plan adopted by—State to purchase railways and work them through an Irish Authority—
Opinion in favour of (P. A. Meehan), 40148-50, 40348-9.
Queen's County County Council, Members unanimously in favour of proposal (P. A. Meehan), 40151-8.
AUTHORITY FOR CONTROL AND MANAGEMENT—*continued.*
Irish Representative Authority—*continued.*
Monaghan County Council in favour of (P. Whelan), 43509, 43547-9, 43552.
Opinion in favour of and proposals for (W. L. Micks), 39181-2; (P. A. Meehan), 40501; (J. P. Rafferty), 40726-8, 40811, 40813-4; (Rev. P. J. Dowling), 41070-2; (Capt. H. M'Ternan), 41170-2, 41206; (T. D. M'Carthy), 42610; (J. W. Manning), 41254-5; (J. F. O'Donnell), 43818.
Proportional representation might result in a useful body, popular election might very well result in chaos (R. A. Anderson), 43287-91.
Public opinion would be very powerful with an elective body (J. Hilliard), 42209-10.
Qualifications of an elective body for railway administration (P. Whelan), 43550.
Prussian system, Elective Board with provincial and district Boards, Opinion in favour of—Monaghan County Council (P. Whelan), 43509.
Public Authority, Opinion in favour of (G. J. Greene), 39917.
Sympathetic Authority that would consider public interest rather than dividend paying interest, need for (C. Culhane), 42276, 42282, 42359-61.

B.

BACON.
Rates—
Canada, rates to London compared with rates from Irish ports (P. A. Meehan), 40254-5, 40261-3.
Comparison of Irish interior rates to certain points of destination, with import rates from British centres of distribution to the same point of destination (P. MacNulty), 44030A, pp. 184-5.
Continental ports, rates from, to Stations in Great Britain—Comparison with rates from Irish Stations to the same Stations in Great Britain (P. MacNulty), 44030A, pp. 176-7.
Danish Rates, Percentage of, to Irish Rates for one-ton, five-ton, and ten-ton lots (P. MacNulty), 42955-6.
Germany—Rates exceeded Irish charges above a certain distance owing to rates not being reduced as distance increased in same proportion as other countries (P. MacNulty), 42995-7.
One-ton lots, highest and lowest rate between various pairs of Irish stations—Relative percentage of French rate, and question of relative importance of traffic carried at the two rates (P. MacNulty), 42756-83.

BALBRIGGAN.
Great Northern Railway Rates—Statement by Drogheda Development Association—
List and particulars of Railway Vouchers in which Rate exceeded maximum (G. de Belle Ball), 41360, p. 86.
Maximum class Rates between Dublin and Balbriggan (G. de Belle Ball), 41360, p. 85.

BALL, Mr. G. de BELLE.—*Representative of Drogheda Development Association.*
Evidence, 41359-426.

BALLINA.
Flax-growing industry (J. P. Rafferty), 40518.
Rates for Flax—
Cork, rate to—Cheaper to send flax to Glasgow and re-book to Cork (J. P. Rafferty), 40639, 40771-2.
Monaghan, rate to, Comparison with rate between Belfast and Dundrum (J. Murland), 40926.
Explanation of difference—Only one market in the year at Ballina, whereas the other rate was for constant traffic (J. Murland), 40927-9.

BALLYFIN.
Grit flag quarries, quality of stone, etc. (P. A. Meehan), 40104-5.
Causes retarding development of industry (P. A. Meehan), 40106-7.

BALLYNAHINCH.
Rates for Fish—Special rate to Glasgow arranged (F. W. D. Mitchell), 39541.

BALLYSHANNON.
Postal Service—Late morning delivery, etc. (J. P. Rafferty), 40684.
Shirt Industry, Establishment proposed, *see* Shirt Industry.

BANTRY, GLENGARIFF, ETC.
Steamer Service subsidised by Congested Districts Board (F. W. D. Mitchell), 39434-5.

BARLEY.
Market for—question of Irish barley being shut out from the market afforded by Irish Breweries and Distilleries owing to want of railway accommodation, etc. (G. J. Greene), 39925-35, 39978-9; (J. Butler), 40027-36.

BELFAST.
Cattle Trade—Lairage Accommodation Question, Distance of Inspection yard from Quay—Injury to Cattle (J. P. Rafferty), 40802.
Remedy proposed—Moving pens from Victoria Station to Central Station (J. P. Rafferty), 40802-4.
Linen industry, centre of (J. Murland), 40859-62.
Rates—Undue preference given to Belfast, effect on Donegal and Bundoran (J. P. Rafferty), 40799-801.

BELFAST AND COUNTY DOWN RAILWAY.
Amalgamation with Great Northern proposed—Opinion against absorption (J. Murland), 40832.

BELGIUM.
State Railways, *see* that title.

BENDUFF SLATE QUARRIES.
Development of, *refer* to title Clonakilty Railway Station and Glandore Harbour—Railway Communication proposed.

BIRMINGHAM.
Rate to, from Continental Ports, compared with Rate from Irish Stations for butter, eggs, bacon, dead poultry and potatoes (old) (P MacNulty), 44030A, pp. 172-181.

BLACKROD.
Congested Districts Board—Failure of efforts to establish a Mackerel fishery, Steamer chartered, etc. (F. W. D. Mitchell), 39433-4.

BOYLE.
Passenger Accommodation—Third class carriages on Midland Great Western very bad and dirty (Capt. H. M'Ternan), 41177-9, 41216-7.
Rates—high rates for small parcels—Instances (Capt. H. M'Ternan), 41173, 41201-3.

BUNDORAN.
Postal service—Late morning delivery, etc. (J. P. Rafferty), 40684.

BUNDORAN TO SLIGO.
Railway Extension proposed (W. L. Micks), 39329.

BURTONPORT.
Approach to Station—No proper approach, Board of Works unable to complete road owing to action of intervening owner (J. F. O'Donnell), 43799-805.

BURTONPORT—*continued.*
Fares for women employed in fish curing—Cheap tickets should be given on same lines as Reapers' tickets (J. F. O'Donnell), 43766-73, 43844-50, 43859.
Parties, women going in—not suggested that every workman or woman should travel at less than 3rd class fare (J. F. O'Donnell), 43851-8, 43861.

Fishing Industry—
Curing at Burtonport, employment provided, etc. (J. F. O'Donnell), 43751-2.
Market for fish—Fish sent principally to England, also to the Continent and America (J. F. O'Donnell), 43751.
Proportion going to England, proportion consumed in Ireland (J. F. O'Donnell), 43866-8.
Number of boats and men employed, importance of industry (J. F. O'Donnell), 43754-6, 43789-92.
Pier and Slip accommodation, *see* that sub-heading.
Railway built to develop fishing industry—It had done little or nothing in that respect (J. F. O'Donnell), 43828-9.
Transit neither cheap nor rapid (J. F. O'Donnell), 43794.
Rates, *see* that sub-heading.
Steamer transit—Most of the cured fish going to England went by steamer direct (J. F. O'Donnell), 43870-3.
Pier and Slip Accommodation, Inadequate accommodation hampering fishermen (J. F. O'Donnell), 43795, 43819.
Absence of landing facilities often resulted in loss of market or of night's fishing (J. F. O'Donnell), 43794, 43806-7.
Pier built for landing seaweed—Useless at low water (J. F. O'Donnell), 43775-80, 43796, 43799.
Number of boats that could be accommodated at high water (J. F. O'Donnell), 43797.
Sea wall carried away, etc. (J. F. O'Donnell), 43784-8.
Slip built by Board of Works not long enough and entirely unsuitable (J. F. O'Donnell), 43774, 43781-84.

Rates for Fish—
Cured Fish—Rate per ton from Burtonport to Letterkenny (J. F. O'Donnell), 43834-5, 43840-1, 43886-7.
Fresh Fish, rates for—Rates far too high, hindering development of industry (J. F. O'Donnell), 43745, 43750, 43753, 43765, 43827, 43833, 43874-8, 43880-1, 43885.
Letterkenny, rates to—Fish from England or Scotland reaching Letterkenny almost as cheaply as from Burtonport (J. F. O'Donnell), 43750, 43836-7.
Monopoly given to Burtonport shopkeepers, Fisherman had to sell his fish for what they would give him (J. F. O'Donnell), 43838-9, 43879.
Rate for fresh fish should be same as that for cured fish at owner's risk (J. F. O'Donnell), 43875, 43889.
Small parcels of fish, Comparison of rates to Letterkenny from Grimsby and Burtonport (J. F. O'Donnell), 43836-7, 43883-5.
Londonderry, Rates from, lower than rates from Newtowncunningham or Letterkenny, though distance was longer (J. F. O'Donnell), 43861.
Steamer Competition—Steamers had ceased running, but rates had not been put up (J. F. O'Donnell), 43862-5.
Passenger train rate—No goods rates, all trains were mixed trains (J. F. O'Donnell), 43842-3.

BURTONPORT EXTENSION:
See Letterkenny and Burtonport Railway.

BUTLER, Mr. JOHN, J.P.—*Representative of Callan Rural District Council*:
Evidence, 39988-40054.

BUTTER:
Care needed in transit—Difficulty when traffic was handled by several companies (R. A. Anderson), 43102.
Compensation for loss or damage—Creamery butter in rolls sent at owner's risk—Nothing now paid unless the whole consignment was lost (R. A. Anderson), 43066.
Foreign Competition, *refer* to sub-heading Rates.
Grading—
Centre proposed at Dublin, *see* Grading and Packing—Centres.
Importance of the grading question (R. A. Anderson), 43318-20, 43340.
Importance of trade (R. A. Anderson), 43339.
Price, Decrease in recent years—Causes, notwithstanding improved methods (J. W. Shea), 41870-4, 41958.
Quality of Creamery Butter—Great difference between two Creameries (P. Murphy), 39809
Rates—
Anomalies on Great Southern and Western Railway—Instances of short distances where the rates were higher than for long distances (P. Murphy), 39732-42, 39810-11.
Comparison of Irish interior rates to certain points of destination with import rates from British centres of distribution to the same point of destination (P. M'Nulty), 44030A, pp. 182-3.
Foreign rates and the foreign competition question—Effect of rates on Irish industry, etc. (Rev. P. J. Dowling), 41094-7.
Danish butter, rates from Copenhagen to Dublin, etc.—
Amount of traffic from Denmark—Possibility of Ireland's capturing part of the trade (P. A. Meehan), 40452-4.
Galway to Liverpool rate, comparison with (P. Murphy), 39716-28, 39730-1—Size of consignment, nothing to explain the difference of rate (P. Murphy), 39785-93.
Less than from Skibbereen to Dublin (J. Hurley), 41778, 41848-51; (J. W. Shea), 41868-9.
Germany—Rates exceeded the Irish Rates above a certain distance, owing to rates not being reduced as distance increased in same proportion as other countries (P. M'Nulty), 42993-4.
One ton, five ton, and ten ton lots, Percentage of Continental to Irish rates in Denmark, France, and Holland (P. M'Nulty), 42948-54.
Prospects of Irish farmers—Difficulties of foreign competition and increased cost of labour due to emigration (J. W. Shea), 41863.
Through Rates—Rates from Continental ports to certain stations in Great Britain compared with Through Rates from Irish towns to the same stations (P. M'Nulty), 44018-24, 44030A, pp. 172-3.
London, rates to, compared with rates from Irish ports (P. A. Meehan), 40258-6, 40264, 40283-6, 40450-1—Rates per ton in each case (P. A. Meehan), 40286.
Unfavourable situation as compared with foreign countries which had State Railways (J. W. Shea), 41864.
Winter production, absence of, in Ireland—Important factor telling against Irish industry (Rev. P. J. Dowling), 41098-100.
Reduction of rates would be an encouragement to start winter dairying, and would probably assist in recovering trade now in hands of foreigners (Rev. P. J. Dowling), 41143-5.

BUTTER—*continued.*
Rates—*continued.*
Reduction—No reduction of railway rates at all corresponding to reduction in price (J. W. Shea), 41879-82.
Unmanufactured cream, rate for—Reduced rate given by Great Southern and Western, comparison with rates on milk and butter for distances up to 50 miles (R. A. Anderson), 43092-6.
Passenger train rate, cream charged at, whereas butter rate was a good rate (R. A. Anderson), 43093, 43095-6.
Value of cream, question of—Witness was speaking of cream only as the raw material of butter (R. A. Anderson), 43390-3.
Refrigerating wagons—Not used last year owing to the cold weather (R. A. Anderson), 43359.
Supply—Danish Butter imported in winter, Irish Butter bought from the Creameries (P. Murphy), 39804-8.
Refer also to Dairying.

C.

CALLAN:
Railway Communication, need for—
Agreement with evidence given by Mr. Greene (J. Butler), 39988-40054.
Agriculture—Fertility of district (G. J. Greene), 39835.
Area in which there was no railway accommodation (G. J. Greene), 39826, 39833, 40054; (J. Butler), 40053.
Attitude of people—Public meetings had been held and applications had been made to Great Southern Railway (G. J. Greene), 39842-3.
Barley—Cartage Expenses, question of Irish Barley being shut out from market afforded by Irish Breweries and Distilleries (G. J. Greene), 39835-6, 39857-8, 39913-6, 39925-35, 39978-9, 39998; (J. Butler), 40027-36.
Cartage—
Expenses destroyed all chance of lucrative trade (G. J. Greene), 39907-11; (J. Butler), 39999-42000.
Number of public carriers working in Callan and Ballinamore (G. J. Greene), 39859-61.
See also sub-headings Barley, Slate Quarries, etc.
Cattle Fairs, Decline of, owing to difficulty of getting to the town and of getting the cattle away (G. J. Greene), 39862-3, 39911-12.
Coalfields—
Dormant at present—Railway would tap coalfields (J. J. Greene), 39841; (J Butler), 39999.
Supply of coal practically inexhaustible (G. J. Greene), 39898-9.
Corn-growing almost prohibited owing to difficulty of getting it to market (J. Butler), 40005.
Creameries—Produce damaged by carting (J. Butler), 40001-5.
Development of industries if railway were made (G. J. Greene), 39845-7.
Distance of town of Callan from various railway stations (G. J. Greene), 39828-9.
Failure of all previous efforts to obtain better means of communication (G. J. Greene), 39885.
Finance Question—
Guarantee—District willing to give a limited guarantee (G. J. Greene), 39851-6.
Only method was to get the Imperial Treasury to make a grant (G. J. Greene), 39886-92.
Manure—Cost of importing manure practically prohibitive (G. J. Greene), 39837-40.
Marble Quarries—Not working at all (G. J. Greene), 39904; (J. Butler), 39999.

CALLAN - *continued.*

Railway Communication, Need for.

Mineral resources of the district were large and valuable, but very little developed (G. J. Greene), 39895-7.

Motor Service—

Renard train not considered sufficient to cope with the traffic (G. J. Greene), 39847-8, 39871-2, 39981-7.

Roads in Tipperary and in Callan District were all steam rolled (G. J. Greene), 39868-70.

Population (G. J. Greene), 39834.

Route suggested, *see* title Kilkenny to Carrick-on-Suir.

Slate Quarries—

Cartage expenses made it impossible for slate to compete with English slate (G. J. Greene), 39832, 39965-71.

Dublin, slate from Windgap used in (G. J. Greene), 39974.

Practically dormant for want of railway accommodation, one of the quarries recently shut up (G. J. Greene), 39331, 39905; (J. Butler), 39999.

Quantity of slate (G. J. Greene), 39972-3—Output could be doubled with railway accommodation (G. J. Greene), 39972.

Rates—

Barley—No complaint, rates small as compared with cost of cartage (G. J. Greene), 39978.

Prohibitive for Agricultural purposes (G. J. Greene), 39995.

CAPITAL OF IRISH RAILWAYS:

Inflated by the fact that all legislation had had to be done in London, question of (W. L. Micks), 39245-55.

CARTING OF TRAFFIC:

See title State Railways, sub-heading Collection and Delivery, also Names of Places.

CASHEL RAILWAY.

Guarantee—Ratepayers in Mullinahone and district paying guarantee and deriving no benefit from railway (P. F. Mullally), 39554.

CASTLECOMER COALFIELDS.

Output, price and quality of coal—comparison with Slieveardagh coal (G. J. Greene), 39953-62.

Railway needed for development of collieries (W. L. Micks), 39323, 39326; (P. A. Meehan), 40162.

Agreement with evidence of Dr. Higgins and Col. Cosby (P. A. Meehan), 40147-8.

Route, question of—Castlecomer *via* Stradbally and Portarlington the best route (P. A. Meehan), 40465.

CASTLECOMER *via* Kilkenny and Callan to Carrick-on-Suir.

Railway proposed, *see* title Kilkenny to Carrick-on-Suir.

CASTLEREA.

Rates for Cattle—Cheaper to have cattle sent from Dublin to Ballyhaunis and back to Castlerea than direct from Dublin (Capt. H. M'Ternan), 41174-5.

Competition at Ballina might account for rates (Capt. H. M'Ternan), 41176.

CATTLE.

Transit of, *refer* to title Animals.

CATTLE-FEEDING CAKE.

Rates—Comparisons between Irish and Continental Rates were shown in shillings and pence only (P. M'Nulty), 44031-3.

CAVAN.

Rates—

Flour and Furniture rate to Cavan from British centres of distribution compared with rates from Irish centres (P. M'Nulty), 44030A, pp. 184-7.

Pork—Through rate to Glasgow higher than sum of local rates, effect on Cavan and Clones (J. P. Rafferty), 40778-87.

No unloading or changing (J. P. Rafferty), 40785.

CAVAN AND LEITRIM RAILWAY.

Arigna Coal Company, Connection with—

Dissatisfaction caused by connection, same kind of thing likely to arise with proposed extensions (Capt. H. M'Ternan), 41208-10.

Audit of Accounts, question of facilities for Baronial Auditor—

Board of Works, practice of, in regard to auditing accounts of light railways (G. E. Shanahan), 40533.

Last Auditor, Extent of supervision exercised (P. Gannon), 40584-4A.

No facilities—One single journey pass given to make one audit in the year (P. Gannon), 40519-20, 40588.

Supervision provided for under Order in Council, Auditor restrained from exercising—Auditor not allowed access to Station Books, Accounts presented for inspection at Dublin not complete (P. Gannon), 40520-3, 40525-8, 40534-4A, 40554A-6.

Board of Works' Letter (Chairman), 40532; (P. Gannon), 40532, 40560A.

Application to inspect Station Books made since receipt of Board of Works letter—Resolution of Leitrim County Council of 13th November, copy sent to Secretary of Railway on 15th November (P. Gannon), 40577-8—Correspondence between Auditor and Secretary (P. Gannon, R. R. Stewart), 40579.

Construction put on letter by Board of Works (Croker Barrington), 40581.

Desirable that any suspicion should be cleared up—Prevailing belief that the management of the railway was responsible for everything (P. Gannon), 40582A-3.

Everything given that was usual (Croker Barrington), 40529.

Instances of traffic of which there was no account at Dublin (P. Gannon), 40523-5, 40534A, 40548-54, 40558-60, 40562-7.

Director's car mended in workshop of locomotive department (P. Gannon), 40558-60.

Free passes given which were not included in list shown in Dublin (P. Gannon), 40548-54, 40561-7.

Old stores, sale of—Point not referred to on certificate to Grand Jury (P. Gannon), 40534A-5.

Special train employed on 15th August for collection of hay from Arigna Mining Company (P. Gannon), 40523-5—Contradiction (R. R. Stewart), 40524.

Nothing refused—Books, station accounts, original way-bills, etc., brought to Dublin and shown to Mr. Gannon and his co-auditor (R. R. Stewart), 40522-3, 40525, 40557; (Croker Barrington), 40522-3, 40533A.

Order in Council—Amount of supervision to which Auditor was entitled (P. Gannon), 40520.

Stewart's, Mr., Reply to Auditor's request to be allowed to examine station accounts (P. Gannon), 40527.

Text of section 18 (W. M. Acworth), 40531A.

CAVAN AND LEITRIM RAILWAY—*continued.*

Audit of Accounts, etc.—*continued.*

Text of sections 42 and 44 as to keeping and auditing accounts—Question of interpretation of sections (Croker Barrington), 40529A-31.

Directors, number of—

County Council (guarantors) directors—Should have a majority, guarantee given under impression that guarantors would have a permanent majority (P. Gannon), 40506-7, 40512.

Order in Council, provisions of (P. Gannon), 40513.

Shareholders' Directors—Majority controlling line, their 5 per cent. being secured (P. Gannon), 40513.

Extension to Arigna Mines proposed—

Bill before Parliament for proposed line to Collooney—

Line up Arigna Valley left out of Bill—Objections to Arigna Valley line being made with private means and privately owned (Capt. H. M'Ternan), 41182, 41191, 41210-5.

Promoters (Capt. H. M'Ternan), 41207.

Government grant offered (Capt. H. M'Ternan), 41181.

Rejection by Leitrim Co. Council, grounds of—

Distrust of Mining Company (P. Gannon), 40585-8.

Ratepayers afraid to run any risk although there was no interest to be charged (Capt. H. M'Ternan), 41182.

Working expenses—Offer by Great Northern of £500 a year to guarantee Arigna Valley line (Capt. H. M'Ternan), 41186-90.

Guarantee—Ratepayers' Liability—

Amount of rate at present (P. Gannon), 40511.

Forgery of signatures to original document (P. Gannon), 40505, 40536-6A.

Proof, question of—Witness withdrew statement, but there were living men who would prove it (P. Gannon), 40537-9.

Guarantors under impression that they would have a permanent majority on the Board (P. Gannon), 40506-7.

Highest Rate paid (P. Gannon), 40510.

Limit of Liability—

Guarantee given under impression that rate was not to exceed 4*d.* in the £, whereas it had reached 1*s.* 11*d.*, and was now 1*s.* (P. Gannon), 40508-11, 40568.

Proportion of Guarantee covered by a 4*d.* rate, question of—Guarantors did not go into Statistics (P. Gannon), 40569-75.

No limit—Guarantee given without any limit (Capt. H. M'Ternan), 41184.

Reduction from profits of working (P. Gannon), 40576.

Management by Shareholders having no interest in result—Consequent extravagances and abuses (P. Gannon), 40513-5.

Instances (P. Gannon), 40516-8.

Undue preference, rebates, etc., given to particular customers—Instance given not an isolated case (P. Gannon), 40516-8, 40540, 40547-8.

Data could be given in case cited and in other cases (P. Gannon), 40541-6.

CHEESE.

Rates—

Comparison of Irish Interior Rates to certain points of destination with Import Rates from British centres of distribution to the same point of destination (P. M'Nulty), 44030A pp. 182-3.

Cork Industry discouraged—

Dublin, Rate to, comparison with rate for butter (P. Murphy), 39793-803.

CHEESE—*continued.*

Rates—*continued.*

Monaghan, Rate to, compared with New York to Monaghan (J. P. Rafferty), 40656-9, 40793-7.

CHILDERS, Mr.—PROPOSAL FOR REDUCTION OF RATES AND FARES ON IRISH RAILWAYS.

Opinion in favour of—Adoption of suggestion would enable Ireland to raise a loan for purchase of railways (W. L. Micks), 39288-9.

CLARE COUNTY.

Motor Services, proposed—

Agricultural products carried by Motor would be sufficient for good Steamship Service and also as a feeder for the railway (J. O'Dea), 41345-8.

Coach service between Ennistymon and Ballyvaughan did not pay, because it only ran during the season for the tourist traffic (J. O'Dea), 41343-4.

Cost was a very small proportion of cost of a Light Railway—Motor Service would pay (J. O'Dea), 41308.

Districts specially affected by the high rates (J. O'Dea), 41295.

Nothing done as yet (J. O'Dea), 41298-301.

Three Motor Services required to run through area not served by railways at present (J. O'Dea), 41306.

Railways, Provision of—No new railways suggested until turnover of industries was ten times what it was at present (J. O'Dea), 41307-8.

CLARE RAILWAYS.

Absorption by Great Southern and Western Railway and conversion to broad gauge, benefit of pending the State taking over the railway systems of the country (J. W. Shea), 41929-31.

CLARECASTLE AND DISTRICT.

Industries and Exports (J. O'Dea), 41269-72.

Motor Services, proposed, *see* Clare County.

Port of Clare Castle—Tonnage of Steamers which could get into the port (J. O'Shea), 41306.

Rates—

Preferential rates—Six-ton lots of petroleum from Limerick, Reduced rate given after trader had refused to pay the 7*s.* 3*d.* asked at first (J. O'Dea, — Smyth), 41310-5, 41321-7.

Through Rates—

Cardiff, rate to—Difference in rate by boat and rail, Pressed Hay instance (J. O'Dea), 41273-7, 41349-50.

Comparison of rates from Chicago to New York with rates from Wolverhampton to Clare Castle (J. O'Dea), 41291-3, 41352-4.

Hardware—Rates from Wolverhampton, Reduced Rate obtained by trader as result of negotiations with Railway Company (J. O'Dea), 41278-90.

Steamboat Services—

Good cross-Channel Service would materially advance County Clare (J. O'Dea), 41305.

Limerick Service fell through—Steamship people did not exactly suit the requirements of customers (J. O'Dea), 41304-5.

Competition with railway desirable Enough traffic for both, no desire to leave railway derelict (J. O'Dea), 41338-42.

Prospect of resuming service, question of (J. O'Dea), 41306.

Traction engine service, Failure of attempt to establish (J. O'Dea), 41296-7.

Train Service—Improvement in Goods Traffic, Goods formerly often delayed a day and a night at Ennis (J. O'Dea), 41302-3.

CLIFDEN.
Rates for Fish—Special rate to Glasgow arranged (F. W. D. Mitchell), 39541.

CLONAKILTY RAILWAY STATION AND GLANDORE HARBOUR.—Railway Communication proposed (J. Hurley), 41737, 41761.
Authority for control of railways—An Irish Authority would not leave such a rich district undeveloped (J. Hurley), 41818-9.
Brick Trade, question as to development (J. Hurley), 41806-7.
Character of district between Clonakilty and Skibbereen (J. Hurley), 41745.
Cost (J. Hurley), 41764-5, 41815.
Cost per mile—Estimate for portion of the line to Ross (J. Hurley), 41808.
Emigration—District had suffered very considerably from want of work, Slates imported while home quarries were undeveloped owing to lack of railway facilities (J. Hurley), 41823-9, 41834.
Engineering question—No physical difficulty (J. Hurley), 41763.
Fairs of Leap and Rosscarberry would be developed (J. Hurley), 41769-71.
Fishing Industry—
Carting difficulty—Industry hampered by (J. Hurley), 41739-44.
Cured fish trade principally owing to difficulty and expense of geting fish iced (J. Hurley), 41788.
Decrease in fishing on South Coast (J. Hurley), 41791.
Extent of (J. Hurley), 41738, 41789, 41836.
Harbour at Glandore—Improvement of, Question of Quay Accommodation (J. Hurley), 41766-7, 41838-9.
Markets (J. Hurley), 41783-5.
Season, Duration of (J. Hurley), 41790.
Steam trawlers only carried their own catches, and the large fishing companies had steamers to take up fresh fish (J. Hurley), 41781-7.
Terminus of railway at deep water at Glandore Harbour—Advantage, saving of handling of fish (J. Hurley), 41762.
Gauge—Ordinary Gauge preferred (J. Hurley), 41813-4.
Guarantee Question—Heavy guarantees being paid in connection with other lines, Railway would have to be made either by Private Capital or by State Assistance (J. Hurley), 41810-1
Length of line (J. Hurley), 41809.
Manganese and Copper Mines reopened at Glandore, unsatisfactory results (J. Hurley), 41802-5.
Marketing Agricultural Produce—Existing expense as compared with other districts in West Cork (J. Hurley), 41769-72.
Plans and Estimates—Had been made at one time to Rosscarberry but no further (J. Hurley), 41762.
Potato-growing—Early potato industry—
Facilities given by railway had made development of industry possible (Rev. P. J. Dowling), 40986-94.
Immense development possible along coast from Glandore to Baltimore—Existing rates killed traffic (J. Hurley), 41780-2.
Profit question—District capable of so much development that line might eventually be made a paying concern (J. Hurley), 41816.
Railway Facilities, Provision of—
Companies not in a position to build a railway (J. Hurley), 41793.
Would make it possible to drive the Welsh Slates out of Cork (J. Hurley), 41792.
Rates—
Butter rates in district—Rates to Dublin more than twice as much as rates from Cork City (J. Hurley), 41772-6, 41841-6.
Danish Butter—Rate from Copenhagen to Dublin less than from Skibbereen (J. Hurley), 41778, 41848-51.

CLONAKILTY RAILWAY STATION AND GLANDORE HARBOUR—Railway Communication—*cont.*
Rates—*continued.*
High rates owing to want of railway facilities —Statement made relative to Butter Rates applied all round (J. Hurley), 41777, 41847.
Sheltered position of Glandore Harbour (J. Hurley), 41768.
Slate Quarries—
Decay of industry—Causes, quality of Slate, Supply unlimited (J. Hurley), 41745-8, 41750-9, 41826-9.
Earnings of Workers (J. Hurley), 41830.
Market for Slates, Output, Quality, etc. (J. Hurley), 41795-802, 41832-3.
Reason why no company had been formed to take the quarries from the old company (J. Hurley), 41794.
Slate Chippings—Industry which might be developed if a railway were made (J. Hurley), 41760.
Welsh Competition successful owing to expense of Carting the Benduff Slate (J. Hurley), 41749, 41792.
Terminus—Suggested position (J. Hurley), 41767.
Winter dairying in district (J. Hurley), 41779.
Irish producer at a disadvantage as compared with the Danish producer (J. Hurley), 41852-6.

CLONES JUNCTION.
Connections—Long waits necessitated under present system, Instances (P. Whelan), 43409, 43411-2.

CLONMEL.
Rates for Butter—Rate to Liverpool compared with rate to Manchester and with rate from Tipperary to Manchester (J. W. Shea), 41896-7, 41962.

CLYDE SHIPPING COMPANY.
Steamer Service on South Western Coast subsidised by Congested Districts Board. *See* Cork, Schull, Bantry, etc.

COAL.
Castlecomer and Slieveardagh Coal compared (G. J. Greene), 39953-5.
Inexhaustible supply in Castlecomer and Slieveardagh districts—Disgraceful that coal should be imported and the population reduced for want of employment (G. J. Greene), 39896-902.

COLLECTION AND DELIVERY.
Great Northern Railway, Carting arrangements, Unfairness to Ireland, etc. (P. Whelan), 43444-50.
Receiving Offices existed for Parcels Traffic, but goods were received at Stations only (P. M'Nulty, Tatlow), 39016.
State Railways, *see* that title.

COMPANY'S RISK RATE.
Contract with originating company (R. A. Anderson), 43175-6.
Prohibitive in case of Small Parcels (R. A. Anderson), 43075-6.

COMPENSATION FOR INJURY.
See title State Railways *also* Names of Commodities

COMPETITION.
Amalgamation of Railways, *see* that title
Pooling and working Agreements which deprived the public of the advantage of competition (J. W. Shea), 41913-5, 41971-4, 41978-86.
Running powers of one railway company over the lines of another company—Competition might bring about a reduction of rates (J. W. Shea), 41916, 41969-70.
Water Competition, *see* that title.

CONDITION OF IRELAND.
Refer to Development of the Country.

CONFECTIONERY.
Anomalies in Rates—Belfast to Enniskillen rate higher than from Belfast to Sligo (J. P. Rafferty), 40797-8.

CONGESTED DISTRICTS BOARD, IRELAND.
Capital of one and a half millions sterling—Church Surplus Grant—
Applications had been twice made for permission to use Capital but had been refused (F. W. D. Mitchell), 39522-33, and *note*.
Had been removed from the Guarantee Fund (F. W. D. Mitchell), 39520-1.
Constitution (F. W. D. Mitchell), 39391-2.
Fisheries, Work in connection with (F. W. D. Mitchell), 39400-4, 39433-4, 39445-6; (J. W. Shea), 41932-4.
Income (F. W. D. Mitchell), 39398-9, 39404.
Inadequacy—Powers wide and varied, but not of much use where expenditure was essential (F. W. D. Mitchell), 39479-81.
Increase of Income—Intention of Mr. Gerald Balfour partly defeated by the Treasury arrangements relative to administrative charges (F. W. D. Mitchell), 39482-98.
Application to British Government (F. W. D. Mitchell), 39517.
Steamboat Services, Abolition of—Indirectly a result of the Treasury action (F. W. D. Mitchell), 39499-503.
Powers (F. W. D. Mitchell), 39393-4.
Enlargement of powers had been very slow—Land work had developed since the institution of the Board (F. W. D. Mitchell), 39504-8.
Railway Construction or Extension—Board not in a position to give effective financial assistance—Small offers made, but not taken advantage of, the schemes not having been carried out (F. W. D. Mitchell), 39438-40, 39444.
Rates and Facilities—Arrangements made by the Board in connection with transit of Fish or Agricultural Produce—
Fish and early potatoes, Favourable rates and quick transit to English markets arranged by the Board—Railways always willing to assist (F. W. D. Mitchell), 39440-3, 39445-9.
Export of fish by rail was small, because in most cases it was carried straight to the English market (F. W. D. Mitchell), 39538-40.
Kenmare, Bantry and Tralee—Arrangement on withdrawal of Clyde Shipping Company's subsidy that the then existing Railway rates should not be increased (F. W. D. Mitchell), 39430-2, 39535-7.
Transfer of Agricultural work of the Board to Department of Agriculture (F. W. D. Mitchell), 39441-2, 39449.
Steamer Services subsidised by the Board, *see* Steamer Services.
Temporary relief, Funds not to be applied for (F. W. D. Mitchell), 39395-7.

CONGESTED DISTRICTS COUNTIES.
Population (F. W. D. Mitchell), 39478.
Total area scheduled (F. W. D. Mitchell), 39473.
Proportion of area of whole country, Proportion of water waste and bog (F. W. D. Mitchell), 39474-7.

CONNECTIONS AT JUNCTIONS.
See Train Service and Names of Places.

CONNECTING LINES.
Linking up of various railway systems needed, *see* Extension of Railways.

CONSIGNMENT NOTE.
State Railways, *see* that title—sub-heading Waybill.

CONTINENTAL PORTS, RATES FROM, TO STATIONS IN GREAT BRITAIN.
Comparison with Rates from Irish Stations to the same Stations in Great Britain—*see* Through Rates.

CONTINENTAL RAILWAYS, RATES, ETC.
See title State Railways.

CO-OPERATION.
Bulk, consignment by—Organisation of farmers to produce in large quantities at regular times, and to consign in bulk—Work of Irish Agricultural Organisation Society, *see* Irish Agricultural Organisation Society.

CORK.
Passenger Service—Great Western Railway of England, controlling interest in railways of South of Ireland—Advantage from Cork standpoint of alternative route to London (W. B. Ronan), 41619-20.

Rates—Cheese industry discouraged—
Comparison of rate to Dublin with rate for Butter (P. Murphy), 39793-803.
Monaghan, rate to, from Cork compared with rate from New York (J. P. Rafferty), 40656-9, 40793-7.

CORK AND FERMOY RAILWAY.
Suggestion that the £93,000 held by the Treasury pending construction of line should be transferred to proposed line between Youghal and Cappagh, *see* title Youghal and Cappagh.

CORK CITY RAILWAYS.
Bill of 1905—Bill thrown out (W. B. Ronan), 41579.
Bill of 1906 for making connection in the other way was passed (W. B. Ronan), 41579.

Capital—
Balance of Capital other than Government Grant, Question as to provision of (W. B. Ronan), 41583, 41585.
Government Grant of £25,000 (W. B. Ronan), 41582.

Company incorporated, Cork City Railways—Composed of Great Western Railway and Cork and Bandon Railway Companies (W. B. Ronan), 41581.
Cost of Scheme (W. B. Ronan), 41584.

CORK, SCHULL, BANTRY, ETC.
Steamer Service subsidised by Congested Districts Board (F. W. D. Mitchell), 39427-8, 39470.
Withdrawal of Service—
Arrangement by Board with Great Southern and Western and Cork and Bandon Railways that the then existing Railway rates to Kenmare, Bantry, and Tralee should not be increased (F. W. D. Mitchell), 39429-32, 39462-3.
Local opposition to subsidy a factor in withdrawal of service (F. W. D. Mitchell), 39460-1, 39464.

CORN LAWS, REPEAL OF.
Destruction of tillage and consequent depopulation resulting (P. A. Meehan), 40333-4, 40359-60.

COUNTY COUNCILS.
Authority for control and management of railways, General Council as—Opinion in favour of (P. Whelan), 43556-8.

CREAMERIES.
Increase in production of butter—Two ways in which production was increased (R. A. Anderson), 43056.
Number, distribution and membership of Creameries in Ireland (R. A. Anderson), 43040-3.
Quality of butter, improvement due to Creameries (R. A. Anderson), 43057.

CREDIT SOCIETIES.
Object, number and membership of Societies in Ireland (R. A. Anderson), 43047-8.

CROOM.
Attitude of Railway Company—Anxious to meet requirements as well as they could (T. D. M'Carthy), 42588, 42591.
Fares for School Children—Excessive fares to Limerick (T. D. M'Carthy), 42565-6.
Importance of question, number of children who would go into Limerick if rates were reasonable, etc. (T. D. M'Carthy), 42567-9, 42581-2, 42611-3.
Third-class tickets given some years ago—Discontinued (T. D. M'Carthy), 42566, 42570-4, 42577.
Belgian rates, comparison with (T. D. M'Carthy), 42579.
Croom schools attitude of—Witness had heard no complaints (T. D. M'Carthy), 42578A, 42580, 42614-6.
Number and class of children who used the tickets (T. D. M'Carthy), 42570, 42575-6.
Train Service—
Dublin 3 p.m. down train, no connection at Charleville—Loss of fair traffic at Croom (T. D. M'Carthy), 42583-6, 42594-606.
Connection could easily be made—Representations had been made to Company (T. D. M'Carthy), 42588-90.
Kilmallock and Bruree, ten miles by rail and four by road—Two days and a night required to go and return (T. D. M'Carthy), 42587.
Patrickswell connection—Loss of connection had been remedied (T. D. M'Carthy), 42592-3.

CULHANE, Mr. CHARLES.—*Representative of Thurles Urban District Council.*
Evidence, 42212-380.

CULLENAGH.
Grant by Irish Parliament for establishment of woollen industry, grant voted but never given (P. A. Meehan), 40094, 40487.

D.

DAIRYING.
Danish Government subsidised the Dairy Industries, and the carrying companies, and protected Danish produce in English market for a certain number of years (J. W. Shea), 41990.
Increase in, could not be expected under existing railway system (J. W. Shea), 41866.
Piracy, protection against—Commissioner appointed had done useful work but more stringent conditions were needed (J. W. Shea), 41960-1.
Pooling and working—agreements between English railway companies in Lancashire and Yorkshire—Reduction of rates hoped for as long as competition had existed (J. W. Shea), 41913-5.
Winter Production Question—
All the year round production rather than transit facilities accounted for success of foreign competition (R. A. Anderson), 43165-7.
Conditions in Ireland more favourable than in Denmark (R. A. Anderson), 43378.
Prospect of developing winter dairying in Ireland—Ireland being forced into it (R. A. Anderson), 43168, 43379-82.

DAMAGE TO LIVE STOCK, GOODS, AND PRODUCE DURING TRANSIT—BREAKAGES, ROUGH HANDLING, ETC.
Careless handling by railway servants—
Improvement in care taken, still greater care needed (R. A. Anderson), 43102, 43173, 43353-4.

DAMAGE TO LIVE STOCK, GOODS, ETC.—*continued.*
Careless handling by railway servants—*continued.*
Question whether there was more or less carelessness on the way to the station or on the railway (R. A. Anderson), 43170-3.
Company's Risk Rate and Owner's Risk Rate, *see* those titles.
Compensation—Proof of malice necessary before a claim could lie against railway company—Impossible to obtain proof, proof of culpable negligence should be sufficient (R. A. Anderson), 43067-8, 43351.
Owner's risk rate, Statement referring to (R. A. Anderson), 43069.
Cross-Channel goods more carefully handled and delivered in better time than goods sent locally (P. A. Meehan), 40202-10, 40399-407.
Responsibility in case of through rates over two or more systems, difficulty in fixing, etc. (R. A. Anderson), 43066, 43348.
State Railways, Compensation question, *see* title State Railways.

DELAYS IN DELIVERY.
Compensation—State Railways, *see* that title.
Responsibility in case of through rates over two or more systems, difficulty in fixing, etc. (R. A. Anderson), 43066.
Rolling stock, inadequate supply of—Instances of delay due to want of wagons (P. A. Meehan), 40216-9.

DENMARK.
State Railways, *see* that title.

DEPARTMENT OF AGRICULTURE.
See Agriculture and Technical Instruction, Department of.

DEPOPULATION OF IRELAND.
Refer to Development of the Country and Emigration.

DERBY.
Rate to, from Continental ports compared with rate from Irish Stations for butter, eggs, bacon, dead poultry, and potatoes (old) (P. M'Nulty), 44030A, pp. 172-181.

DEVELOPMENT OF THE COUNTRY.
Backward condition of Ireland—Responsibility of Railway Companies (P. A. Meehan), 40148; (J. P. Rafferty), 40790.
Complete change in Railway and Canal system needed (P. A. Meehan), 40344-5.
General feeling that present system was a block to the development of the country (P. J. Dowling), 40953-4, 41013.
Many reforms could be initiated in the interests of the railways and to the material benefit of the country (J. Murland), 40925.
Steps should be taken to bring about reforms, and witness would not oppose such change in system as would bring them about (J. Murland), 40932-4, 40941.
No single instance in witness's experience of a body of men satisfied with the working of railways in Ireland (Rev. P. J. Dowling), 40952-3.
Undue blame attached to railway companies, who did very well considering the enormous difficulties of their position (Rev. P. J. Dowling), 40454-5, 41013.
Capacity of the Country for development (Rev. P. J. Dowling), 41055-6.
Coal imported while inexhaustible native supplies were undeveloped—Domestic system of Government which would further home industries was the only remedy (G. J. Greene), 39896-903.
Financial position of Railway Companies not good enough to enable them to run risks in development of traffic (W. L. Micks), 39167.

DEVELOPMENT OF THE COUNTRY—*continued.*
Industries killed by legislation in the past (P. A. Meehan), 40307-19, 40365-9.
Common articles in daily use, boots, knives, etc., etc., all imported (P. A. Meehan), 40320-2, 40341.
Comparison with industries in England—Changed conditions of transit, etc., had caused transfer of industries from one part of the country to another in England, whereas in Ireland industries had been killed out (P. A. Meehan), 40373-81.
English manufacturers indirectly subsidised by legislation in question (P. A. Meehan), 40445.
Irresistible claim to help for Ireland in connection with settlement of railway question (W. L. Micks), 39256-9; (P. A. Meehan), 40449.
Present position—Newly established Irish industries handicapped by competition of long-established English manufacturers (P. A. Meehan), 40448.
Prohibition of manufactures for Irish consumption, question as to (P. A. Meehan), 40365-8.
Regulations by the Irish Parliament prohibiting import of English manufactures between 1780 and 1800, question as to (P. A. Meehan), 40370-2.
Population, decline in, since the Union (P. A. Meehan), 40324-7.
Causes—Great famine, resulting in the great emigration, repeal of the Corn Laws (P. A. Meehan), 40331-4.
Railway rates, system of, completing work begun by famine and repeal of the Corn Laws (P. A. Meehan), 40335-8.
Critical position of Railways, connection with (P. A. Meehan), 40328-30.
Public Ownership and Unified Management—
Opinion in favour of in connection with development of the country (W. L. Micks), 39347-8.
Want of enterprise on part of railways—Unification of railway management as remedy (J. P. Rafferty), 40725.
Rates and Fares, reduction of, as a means of developing industries, etc., *refer* to title Rates and Charges.

DONEGAL.
Postal Service—Horse-vehicle taking mails owing to high railway rates, Inconvenience and delays resulting, etc. (J. P. Rafferty), 40684.
Rates for Tweed—Cheaper to bring tweed to Bundoran from Leeds than from Donegal (J. P. Rafferty), 40679.
Steamer service subsidised by Congested Districts Board (F. W. D. Mitchell), 39427.
West Coast, Light Railways avoided Seaports—
Advantage of a railway touching Ramelton and running round by sea coast (W. L. Micks), 39327.
Railways were made across country instead of where the population and harbours were—Instances (W. L. Micks), 39330-1.

DOWLING, Rev. P. J.—C.M., Cork, *Lecturer for the Department of Agriculture.*
Evidence, 40945-1166.

DROGHEDA.
Delays in delivery of goods to Laytown—Left at Balbriggan all night (G. de Belle Ball), 41404.
Rates, Great Northern Railway Rates—Statement by Drogheda Development Association.
Collection of dockets with a view to testing accuracy of Drogheda Traders' Complaints that charges were variable (G. de Belle Ball), 41435-7.
List and particulars of railway vouchers in which rates in some cases exceeded the maximum and in which there was overcharge or other irregularity (G. de Belle Ball), 41360, pp 87-8, 41367-80.

DROGHEDA—*continued.*
Rates—*continued.*
Maximum Class Rates between Dublin and Drogheda and Belfast and Drogheda (G. de Belle Ball), 41360, p. 85.
No rate quoted on dockets (G. de Belle Ball), 41361-5, 41417-8.
Harbinson, Mr., and a few other Traders insisted on having rate quoted (G. de Belle Ball), 41421.
Traders not capable of checking charges—No time to undertake intricate calculations (G. de Belle Ball), 41423-5.

DUBLIN.
Milk supply—Bad arrangements, low price, etc. (R. A. Anderson), 43115-6, 43118-21, 43365.

DUBLIN AND SOUTH EASTERN RAILWAY.
Completion to Waterford—Capital provided by the London and North Western Company, Advantage depended on conditions on which money was given (R. A. Anderson), 43383-9.
Newtownbarry, proposed line from Shillelagh—Powers obtained for construction, etc., *see* Newtownbarry.

DUBLIN PORT AND DOCKS BOARD AND TWO RAILWAYS *v.* GREAT SOUTHERN AND WESTERN RAILWAY.
Costs question, Costs amounting to over £3,000—Intervention of Port Board in two other cases, Costs related not to one, but to three cases (W. H. Macnamara), 43605, 43683-7.
Slowness of proceedings of Railway and Canal Commission, case an illustration of—Mr. Goodbody's Statement, etc.
Delays in no way due to Railway and Canal Commission, Date when pleadings were closed, date of application to fix date for hearing, etc.—Mr. Goodbody's statement made before Port Board had applied to have a date fixed (W. H. Macnamara), 43597-8, 43639-45, 43649.
Expedition with which decision was arrived at after inquiry had been held (W. H. Macnamara), 43598-9.
Time occupied in the various stages of the proceedings—Port Board did not wish their case heard until cross-applications were heard also for Great Southern and Western and for Dublin and South-Eastern, Importance and complication of case (W. H. Macnamara), 43646-8.

DUBLIN, WICKLOW AND WEXFORD RAILWAY.
See Dublin and South Eastern Railway.

DUNMANWAY.
Flower industry killed by railway rates—Cheaper to get flowers for Cork from Covent Garden or the Continent (Rev. P. J. Dowling), 40977-81, 41038-44, 41079, 41080-9.
Character of witness's informant made him give credit to her charges (Rev. P. J. Dowling), 41080-7.
Contradiction—Rate from London four times that from Dunmanway to Cork, rates from Continent still higher (— Smyth G. S. & W. R.), 41073-7.
Distance from Dunmanway to Cork (Rev. P. J. Dowling), 40979, 41037.
Postal facilities would not suit traffic (Rev. P. J. Dowling), 41078-9.

DYSART.
Iron ore deposit, quality, etc.—Transit facilities needed to develop industry (P. A. Meehan), 40109-11, 40118-20.
Industry killed by landowners' prohibition of working the ore further (P. A. Meehan), 40382

E.

EDINBURGH.

Rate to, from Continental ports compared with rate from Irish stations for butter, eggs, bacon, dead poultry, and potatoes (old) (P. MacNulty), 44030A, pp. 172-181.

EGGS.

Care needed in transit—Cases needing protection from rain and sun, etc. (R. A. Anderson), 43102, 43173, 43353, 43394-5.

Currency, eggs treated as, in very poor districts (R. A. Anderson), 43049-50.

Grading, Local grading—Grading of eggs simpler than grading of butter (R. A. Anderson), 43335-6.

Importance of trade (R. A. Anderson), 43339.

Increase in output (J. W. Shea), 41959-60.

Due largely to efforts of Department of Agriculture and County Committees (J. W. Shea), 41887-8.

Further development, room for (J. W. Shea), 41889.

Rates—

Continental Rates—

Continental ports, rates from, to Stations in Great Britain compared with rates from Irish Stations to the same Stations in Great Britain (P. MacNulty), 44030A, pp. 174-5.

London, rates to compared with rates from Irish ports (P. A. Meehan), 40256-8, 40264.

Percentage of Continental rates to Irish rates in Denmark, Belgium, Germany, and France (P. MacNulty), 42932-47.

Higher rate for shorter distance—Comparison of rates, Limerick to Bolton, Tipperary to Bolton (J. W. Shea), 41892-5, 41962.

Increase in trade in spite of existing rates but the better rates would stimulate the trade largely (J. W. Shea), 41891-2.

Owner's risk and Company's risk, difference between—Difference in Continental and Irish rates (P. A. Meehan), 40413-9.

Foreign Competition so keen that it necessitated use of Owner's Risk rate (J. W. Shea), 41890.

EMIGRATION.

Causes of—Land tenure (P. A. Meehan), 40108.

Decrease in population of County Kilkenny and of the whole country—Urgency of question of employment for people at home (G. J. Greene), 39873-80.

Means of preventing (C. Culhane), 42362-3.

ENGLISH RAILWAY COMPANIES.

Acquisition of Irish Railways in whole or in part—Effect on development of Irish industries, etc.

Authority for control of Irish Railways—If Railways were worked by a non-Irish authority they would eventually become simply feeders to the English Railways (G. J. Greene), 39922-4.

Growing influence of English lines (R. A. Anderson), 43248-52, 43258-9.

Public Ownership the only safeguard, and it was doubtful whether that would be an improvement (R. A. Anderson), 43257-8.

Interest of English Companies in stimulating traffic into Ireland (P. Whelan), 43513-4, 43543.

English companies acted on ordinary commercial principles (P. Whelan), 43544.

Objections to Domination of English Companies (R. A. Anderson), 43127-30.

English and Scotch Officials, important appointments on Irish Railways given to (P. A. Meehan), 40357-8.

Unfavourable to Irish interests (P. A. Meehan), 40356; (R. A. Anderson), 43247, 43253-6.

ENGLISH RAILWAY COMPANIES—*continued.*

Acquisition of Irish Railways—*continued.*

South of Ireland, Great Western's interest in—Cork people found it very convenient to have an alternative route to London (W. B. Ronan), 41619-20.

ENNISKILLEN.

Rates from British centres of distribution compared with rates from Irish centres for furniture (P. MacNulty), 44030A, pp. 186-7.

EQUIPMENT OF RAILWAYS—WORKING STAFF, PLANT, ETC.

Inadequacy—Railways starved at present (P. A. Meehan), 40385-7.

Refer also to Rolling Stock, Staff, etc.

EXTENSION OF RAILWAYS, PROVISION OF ADDITIONAL RAILWAYS, ETC.

Amalgamation, Public Control, etc.—

Central Authority working a United System the best way of providing required additional lines (W. L. Micks), 39195-203.

Certainty that necessary additional lines would be made (G. J. Greene), 39893-4, 39936-9.

Finance question, *see* that sub-heading,—State Ownership.

Glandore District—an Irish Public Authority would not leave such a rich district undeveloped (J. Hurley), 41818-9.

Congested Districts Board—

Attitude of Board—Regarded means of communication as one of the most important needs of the country (F. W. D. Mitchell), 39510.

Funds too limited to render effective financial assistance—Small offers made but not taken advantage of, the schemes not having been carried out (F. W. D. Mitchell), 39438-40, 39444, 39511-16.

Connecting Lines needed to link up the various railway systems (R. A. Anderson), 43126, 43138.

Capital, question as to provision of—Existing Companies should be compelled to make connections at their own cost and risk (R. A. Anderson), 43141-5, 43360.

Difficulty that one railway company might be paying to help their neighbours to take their traffic—Contributions levied on each company could be fixed by tribunal ordering construction (R. A. Anderson), 43238-45.

Gauge question—Continuation of broad gauge advocated (R. A. Anderson), 43140.

Points where companies had failed to make connections (R. A. Anderson), 43139, 43235-8.

Reason why railways did not make connections—Unpopularity of running powers (R. A. Anderson), 43361-4.

Existing system of guarantees and appeals—Not the remotest chance of getting the needs of Ireland attended to, Expensive and defective legislation (J. Hurley), 41820-1.

Finance Question—

Connecting Lines, Provision of capital for, *see* sub-heading Connecting Lines.

Private enterprise providing capital, possibility of—Not the least chance, no sign of such a thing for many years except Waterford and Rosslare line (W. L. Micks), 39169.

Railways could not provide additional capital—Not in a position to incur loss (W. L. Micks), 39170.

Ratepayers guaranteeing loss—

Too many guarantees had been given already (W. L. Micks), 39204.

Unjust to farmers though they derived nearly all the benefit (P. Lawler), 42452-4.

EXTENSION OF RAILWAYS—*continued.*

Finance Question—*continued.*

State Aid—Overtaxation of Ireland, All who required branch railways could be provided for if a grant were made as a set off against overtaxation (J. Butler), 40044-52.

State Ownership—

Best way to settle the difficulty, not much hope of obtaining required extensions under the present system (Capt. H. M'Ternan), 41193-9.

British Government should provide Capital to purchase existing system and in the working of the system the extensions would follow (J. Butler), 40016-7, 40020-1, 40024-6.

Economies effected would provide sufficient money, but the claim for restitution of overtaxation should not be abandoned (P. A. Meehan), 40299-300.

Irish Authority taking over transit system as a whole—

Best solution (P. Lawler), 42455-7.

If Ireland were allowed to use her own revenues there would be enough money for extensions, etc. (G. J. Greene), 39940-41A.

Only solution of the difficulty (P. A. Meehan), 40298.

Need for extension of railways (W. L. Micks), 39168, 39195; (Capt. H. M'Ternan), 41180, 41191-2.

See also sub-heading Connecting Lines.

F.

FACILITIES.

Competition, Facilities in, an existing argument in favour of private ownership—Pooling and working agreements coming into operation which did away with competition (J. W. Shea), 41978-86.

FARES.

Average fares—

Excessive fares (B. E. F. Sheehy), 41457, 41550.

Higher than in other countries (P. A. Meehan), 40164-6.

Hungarian zone system, Question of introducing system into Ireland—

Advantages of system (P. Whelan), 43498, 43503.

North British Railway, weekly zone tickets issued (P. Whelan), 43498.

Not likely to be tried under present railway system—Mr. Gladstone's statement in 1844 (P. Whelan), 43503-4.

Opinion in favour of system—Mr. Acworth's suggestion in the "Nineteenth Century" in 1892, etc. (P. Whelan), 43490-4A, 43496-7.

Zone fares considerably lower than local fares anywhere (P. Whelan), 43495.

Reduction question—

Commercial basis of railways, Reluctance of railways to reduce profits and dividends (B. E. F. Sheehy), 41555.

Development of traffic in connection with development of resources of the country, *refer* to title Rates and Charges—Reduction.

Lower fares would induce more people to travel (B. E. F. Sheehy), 41466-7, 41519, 41551-4.

Opinion in favour of for purpose of encouraging development of traffic (W. L. Micks), 39205.

Tourist business was the one thing in the country which was growing fast (J. W. Manning), 41250.

Second Class Fares—

Excess over third class fares—Comparison with England and Scotland (P. A. Meehan), 40167-8, 40439-41.

FARES—*continued.*

Second Class Fares—*continued.*

Reduction Question—

Development of 2nd class traffic would result (P. A. Meehan), 40442-4; (Capt. H. M'Ternan), 41221.

Opinion in favour of reduction (B. E. F. Sheehy), 41520.

Third Class Fares—

1*d.* a mile—Irish labourer could not afford it—Money to go to England had to be borrowed as a rule (W. L. Micks), 39208-10.

Comparison with fares in Continental countries for short and long distances (P. Whelan), 43499-501.

Reduction advocated—Traffic would increase (Rev. P. J. Dowling), 41162-4.

Traders. Concessions to—Poultry traffic in Austria-Hungary, Concessions to attendants travelling in same train (P. MacNulty), 38820.

Traders' Tickets—Engineer in Limerick who asked for a 50-mile radius season ticket—Price quoted, Applicant desired to wait until after Amalgamation of Waterford and Limerick with Great S. & W. Railway (B. E. F. Sheehy), 41457-65.

Workmen's Fares—

Fares comparable with those on Italian and Belgian lines not likely to be given under present system (P. Whelan), 43536-7.

Need for and advantages of (P. Whelan), 43538-40.

FARRANFORE AND KILLORGLIN, EXTENSION OF LINE BETWEEN.

Guarantee—

Amount (J. Hilliard), 42098, 42102; (Croker Barrington), 42112.

Area over which guarantee was levied (J. Hilliard), 42099-101.

Date when guarantee was given (J. Hilliard), 42110.

Incidence of levy decided by late Mr. Posnett (Croker Barrington), 42112, 42119, 42121.

Circumstances of Award, evidence taken, etc. (Croker Barrington), 42120.

Rate in the £ in the different baronies (J. Hilliard), 42103-6.

Terms of guarantee, Inquiry from time to time provided for by the Act on initiative of Railway Company (J. Hilliard), 42107-9, 42123, 42133.

Applications for Arbitration by Urban District Council (J. Hilliard), 42137.

Initiative lay with Railway Company, which refused to move, having no interest in Arbitration—Defect in the law (J. Hilliard), 42109, 42116, 42123, 42138-42.

Need for a new Arbitration, incidence fixed on estimate not on actual results (J. Hilliard), 42123, 42125-6, 42136.

Original letter of the Board of Trade of 30th November, 1899 (J. Hilliard), 42114-5, 42123.

Subject on which Arbitration would decide—Profits of the line, so as to ascertain amount of levy (Croker Barrington), 42119, 42123.

Incidence of levy, not total amount, Arbitration affecting (Croker Barrington), 42113-4, 42119

Terminable guarantee (Croker Barrington), 42126.

Variation in annual amount (J. Hilliard), 42112

No connection with Killorglin and Valentia extension (J. Hilliard), 42093.

Train Service—Better service from Farranfore to Tralee than to Killarney, traffic diverted from Killarney though Killarney paid more, better connections at Tralee (J. Hilliard), 42129-32.

FARRELL, Mr. THOMAS—*Representative of Councils and Local Bodies in Cork County and City.*

Evidence, 41679-733.

FERMANAGH.

Postal Service—Horse-vehicle taking mails owing to high railway rates, Inconvenience and delays resulting, etc. (J. P. Rafferty), 40684.

FERMOY.

Rates to, from British centres of distribution compared with rates from Irish centres (P. M'Nulty), 44030A, p. 188-9.

FERTILISING INGREDIENTS, LIME, ETC.

Rates, Reduction needed in order to induce use of lime, etc., by farmers (R. A. Andeson), 43103-6, 43355-8.

FINANCIAL POSITION OF RAILWAY COMPANIES.

Not good enough to enable them to run risks for the development of traffic (W. L. Micks), 39167.

FINANCIAL RELATIONS OF GREAT BRITAIN AND IRELAND.

Over-taxation of Ireland, *see* title Nationalisation —Financial Aspect.

FISHERIES.

Congested Districts Board, Work in connection with Fisheries—

Blacksod, Failure of attempt to establish a Mackerel Fishery—Steamer chartered, etc. (F. W. D. Mitchell), 39433-4.

Loans to fishermen—Amount, Amount written off in bad debts (F. W. D. Mitchell), 39400-4.

Quays at fishing ports, Congested Districts Board had done valuable work, Beneficial if they came a little further towards Kilrush (J. W. Shea), 41932-4.

See also sub-headings Rates and Special Trains.

Delays in transit of fish—Only complaint witness had heard in connection with the fish traffic (J. W. Manning), 41249.

Rates for Transit of Fish—

Congested Districts Board—Favourable rates secured to English markets (F. W. D. Mitchell), 39440-3.

Export of fish by rail was small, because in most cases it was carried straight to the English market (F. W. D. Mitchell), 39538-40.

No complaints in Rosapenna district (J. W. Manning), 41249.

Special rate to Glasgow from Galway, Clifden, Ballynahinch, and Maam Cross (F. W. D. Mitchell), 39541.

Special trains for quick transit in connection with mackerel fishing in the West—Arrangements with Midland Railway by Congested Districts Board (F. W. D. Mitchell), 39445-6.

State Railways in France and Germany—Regulations imposed in regard to Packing and Labelling (P. M'Nulty), 38847-58.

FISHGUARD AND ROSSLARE RAILWAY.

Board—Predominance of Great Western Directors (Croker Barrington), 41618.

Expense of line as at present existing, Allocation of (W. B. Ronan), 41618.

Great Southern and Western Railway—Public convenience sacrificed to favour the Rosslare Route, *see* title Great Southern and Western Railway.

Great Western Railway of England—Controlling interest in Railways in South of Ireland —Advantage from Cork standpoint to have an alternative route to London (W. B. Ronan), 41618-20.

Harbour Improvement at Fishguard—Additional powers required, but original estimate covered proposed additional works (W. B. Ronan), 41621-2.

FISHGUARD AND ROSSLARE BILLS OF 1898 AND 1899.

Cork Harbour Commission, Opposition of, in order to get Protection (W. B. Ronan), 41579.

FLAX-GROWING.

Import of Flax—Reasons for import, question whether Ireland could grow amount and variety required, etc. (J. P. Rafferty), 40754-70.

Railway Rates—

High inland rates restricting production in Ireland (J. P. Rafferty), 40762-70.

Very little effect on cultivation of flax (J. Murland), 40931.

Suitability of Irish soil and climate (J. P. Rafferty), 40751-3.

Value of crop per ton (J. P. Rafferty), 40758-9; (J. Murland), 40881.

FLAX SOCIETIES.

Objects, distribution, results obtained (R. A. Anderson), 43053-5.

FLOUR.

Imports into Great Britain—Much larger amount imported from Continental countries than from Ireland (P. M'Nulty), 42959.

Rates—

Comparison of Irish Interior Rates to certain points of destination with Import Rates from British centres of distribution to the same point of destination (P. M'Nulty), 44030A, pp. 184-5.

Continental Rates—Percentage of, to Irish Rates for one ton, five ton, and ten-ton lots in France, Austria, Hungary, and Belgium (P. M'Nulty), 42959-70.

FLOWER TRAFFIC.

Packing Question—Improvement among Irish packers (Rev. P. J. Dowling), 41091-3.

FOREIGN COMPETITION.

Land Purchase—If existing railway policy continued farmers might never be able to discharge their obligations to the Government (J. W. Shea), 41952-3, 41993-4.

Prospects of Irish farmer becoming more precarious—

Foreign Governments controlled railways and subsidised sea carriage, while English railways granted very liberal terms to Continental consignments (J. W. Shea), 41947-51.

Refrigerating plant and cold storage made it possible to bring Dairy produce from the remotest corners of the earth to Manchester, London, etc. (J. W. Shea), 42000.

Refer also to Rates, Through Rates, and Names of Commodities.

FORTH, BARONY OF, IN CO. WEXFORD.

Fruit-farming, success due to reduced railway rates, half railway rates paid by Department of Agriculture (Rev. P. J. Dowling), 40995-8.

FOXFORD.

Improvement in condition of people, housing, etc., during last twelve or fifteen years (Rev. P. J. Dowling), 40957-61.

Possibilities of the district—Value of egg trade, etc. (Rev. P. J. Dowling), 40968-71.

Vegetable and Fruit-growing—First-class vegetables grown, industry blocked by railway rates (Rev. P. J. Dowling), 40961-4, 41029-30, 41032.

Rate charged to Dublin—£2 17*s.* for 17 or 18 cwt. (Rev. P. J. Dowling), 40962.

Mistake—Rate was from 12*s.* to 15*s.* per ton for vegetables, 7*s.* 6*d.* for potatoes in wagon-loads (J. Tatlow), 41005-7.

FOXFORD—*continued.*
Vegetable and Fruit-growing—First-class Vegetables, etc.—*continued.*
Rate charged to Dublin—*continued.*
Inquiries to be made—Witness had made a note of rate when he heard it from the person who started the industry (Rev. P. J. Dowling), 41005, 41008, 41031.
Representations made to Congested Districts Board, no result (Rev. P. J. Dowling), 40965-7.

FRANCE.
State Railways, *see* that title.

FREE RAILWAYS.
Time coming when railways would be free, like the roads (Rev. P. J. Dowling), 41064-6, 41126-34.

FURNITURE.
Rates—Comparison of Irish Interior Rates to certain points of destination with Import Rates from British centres of distribution to the same point of destination (P. M'Nulty), 44030A, pp. 186-7.

G.

GAELIC ASSOCIATION OF ULSTER.
Facilities for Sunday travelling refused by Great Northern Railway (P. Whelan), 43579-81.

GALWAY.
Rates—
Butter—
Manchester, Rate to (P. Murphy), 39729.
Through rate to Liverpool compared with rate from Copenhagen to Dublin (P. Murphy), 39716-28, 39730-1.
Size of consignment—Nothing to explain the difference of rate (P. Murphy), 39785-93.
Fish—Special rate to Glasgow arranged (F. W. D. Mitchell), 39541.

GALWAY AND CLIFDEN LIGHT RAILWAY.
Route—Across country instead of round the sea coast, where population and harbours were (W. L. Micks), 39330-1.

GANNON, Mr. PETER—*Representative of Ballinamore Rural District Council, Baronial Auditor of the Cavan and Leitrim Railway.*
Evidence, 40503-88.

GLASGOW.
Rate to, from Continental ports compared with rate from Irish stations for butter, eggs, bacon, dead poultry, and potatoes (old) (P. M'Nulty), 44030A, pp. 172-181.

GRADING AND PACKING.
Centres for grading and packing produce of small societies and producers, Agricultural Organisation Society's Scheme to establish centre at Dublin—10 per cent. addition to through rate demanded by railways for permission to intercept butter at Dublin (R. A. Anderson), 43086-7, 43317-25.
Buildings—London and North Western had spare ground, and offered to erect buildings required, charging interest on outlay (R. A. Anderson), 43370, 43373-5.
Depot was to belong to the Society (R. A. Anderson), 43369.
Double freight secured to railways, because goods would be sent out again, probably over same system (R. A. Anderson), 43086.
Expenses entailed—Payment by levy on each package graded, proposed (R. A. Anderson), 43088-9.
Extra work entailed on railway companies, question of payment for—Practically no extra work, moreover, companies would be recouped by increase in traffic (R. A. Anderson), 43198-200, 43322-3.
Method of grading, number of grades, etc. (R. A. Anderson), 43090-2.

GRADING AND PACKING—*continued.*
Centres for grading and packing, etc.—*continued.*
No formal demand made to Irish railways as a whole—Organisation Society wished to find out by experiment the most economical methods and area for depot to operate over (R. A. Anderson), 43338.
Rate asked for—Ordinary through rate (R. A. Anderson), 43324.
Rise in value of butter that would follow grading, Amount of rise (R. A. Anderson), 43187-9.
Not sufficient to pay extra freight in addition to expenses of grading, not an all-round increase (R. A. Anderson), 43190-7.
Scheme dropped owing to the extra 10 per cent. charge (R. A. Anderson), 43086, 43186, 43331-4, 43371-2.
Undue preference, objection of, met by undertaking that butter so consigned should not be sold in Dublin (R. A. Anderson), 43086, 43201-2, 43326-30, 43376.
Eggs, Local grading—Grading of eggs simpler than grading of butter (R. A. Anderson), 43335-6.
State Railways, *see* that title—Packing and Labelling of Goods.

GREAT NORTHERN RAILWAY.
Amalgamation of eleven different lines—Economy not effected, present system comparing unfavourably with past system—Instances in which economies might be effected (P. Whelan), 43521-6.
Cartage arrangements—Carting let to Mr. Wordie of Glasgow, who sub-let to local people (P. Whelan), 43444-50.
Unfairness to Ireland—People in Ireland could do the cartage at a cheaper rate (P. Whelan), 43449.
Rates and Facilities—
Drogheda Development Association—Statement giving maximum class rate to Drogheda, Skerries, Balbriggan, Laytown, and Swanlinbar, with list and particulars of railway vouchers in which rates exceeded the maximum, over-charge or some other irregularity occurred (G. de Belle Ball), 41360, pp. 85-88, 41366, 41394, 41419.
75 per cent. of the dockets had some error (G. de Belle Ball), 41405-12.
Collection of dockets with a view to testing accuracy of Drogheda Traders' complaints that charges were variable (G. de Belle Ball), 41413-7.
No rate quoted on dockets, and where it was quoted an over-charge seemed to be made (G. de Belle Ball), 41361-5, 41417-8, 41420-2.
Traders not capable of checking charges—No time to undertake intricate calculations (G. de Belle Ball), 41423-5.
Refer also to Names of Towns.
Exceptional and temporary rates all exclusive of loading and unloading and of collection or delivery (P. Whelan), 43440-2.
See also Names of Subjects and Places.
Staff, insufficiency of, at Great Northern Stations (P. Whelan), 43520.

GREAT SOUTHERN AND WESTERN RAILWAY.
Amalgamation—Absorption of Waterford and Limerick line, etc.—
Bad bargain, Railway trying to recover its loss from the public and the staff (C. Culhane), 42271.
Cork Harbour Commission, Opposition of, in order to get protection (W. B. Ronan), 41579.
Mayborough, effect on—
Canal extension prevented (P. A. Meehan), 40177.
Competition removed (P. A. Meehan), 40177, 40455-7.
Improvements resulting, New Stores, etc., at Maryborough (P. A. Meehan), 40177.
Working staff, decrease in—Extent of inconvenience to passengers, etc. (P. A. Meehan), 40178-83.

GREAT SOUTHERN AND WESTERN RAILWAY—*continued.*
Disinfecting Carriages proposed—Dirty state of carriages generally (B. E. F. Sheehy), 41490-2, 41547-8.
Impovements effected good so far, but much more was needed (P. A. Meehan), 40407.
Rates and Facilities—
Anomalies—Instances of higher rates for short than for long distances (P. Murphy), 39732-42, 39810-11.
Attitude of Railway—Doing as much as it could to assist traders by providing suitable wagons for transit of Dairy Produce (J. W. Shea), 41925.
Increase proposed in 1901-2—Successful opposition by Department of Agriculture and others (J. W. Shea, Croker Barrington), 41885.
Cost to Department, excessive cost alleged—
Amount of costs not disputed (W H. Macnamara), 43700-2.
Special Act, case under (W. H. Macnamara), 43689-91, 43699.
Unnecessary costs incurred—Number of objectors whose cases were taken up by Department, Number and eminence of counsel employed (W. H. Macnamara), 43606, 43688, 43692-6.
Other cases in which Department had appeared (W. H. Macnamara), 43697.
No rates quoted on dockets, *see* title Rates—Information.
Rosslare Route, Public convenience disregarded.
Limerick—Passengers from Dublin delayed at Ballybrophy on the night mail (B. E. F. Sheehy), 41482-6, 41505-12, 41535-7, 41539.
Local connections sacrificed (B. E. F. Sheehy), 41475-81, 41513-5, 41518, 41538.
Sanitary accommodation at Railway Stations as primitive as it could be—Inspection proposed (B. E. F. Sheehy), 41488-90.
Staff—Reduction in number of railway servants on all the platforms (B. E. F. Sheehy), 41493.
Train service—Delays in passenger service, Instance at Sallins (P. Murphy), 39711-5.

GREAT WESTERN RAILWAY OF ENGLAND.
Controlling interest in Railways in South of Ireland—Advantage from Cork standpoint to have an alternative route to London (W. B. Ronan), 41618-20.

GREENE, Mr. GODFREY J., J.P.—*Representative of Callan Rural District Council.*
Evidence, 39826-987.

GUARANTEED RAILWAYS.
Amount in the £ should be limited, and there should be some prospect of relief from taxation (P. A. Meehan), 40134-7.
Authority which could give grant—Local Authority could give the grant under the Grand Jury Laws (P. A. Meehan), 40363.
Objection to guarantees—Guaranteed lines were indifferent whether they got traffic or not (P. Lawler), 42443-7.
Proportion of traffic going to main line should be credited to branch line (P. A. Meehan), 40296-7.

H.

HAMILTON, Mr. A.—*Representative of Omagh Board of Guardians.*
Evidence, 39618-78.

HAY.
Price, Decrease in—Causes (J. W. Shea), 41875-8.

HILLIARD, Mr. JOHN.—*Representative of the Killarney Urban District Council.*
Evidence, 42021-211.

HOLLAND.
State Railways, *see* that title.

HOME RULE FOR IRELAND.
Coal imported while inexhaustible native supplies were undeveloped—Domestic system of Government which would foster home industries was the only remedy (G. J. Greene), 39896-903.
Possible that matters requiring legislation might be dealt with more rapidly, Parliament having more business than it could manage (F. W. D. Mitchell), 39509.

HUNGARY.
State Railways, *see* that title.

HURLEY, Mr. J., J.P.—*Leap, County Cork.*
Evidence, 41734-856.

I.

IMPORTS AND EXPORTS.
State Railways, Special Rates on, *see* State Railways—Rates.

IRISH AGRICULTURAL ORGANISATION SOCIETY.
Attitude towards railways—Society had never joined in the general chorus of abuse (R. A. Anderson), 43037, 43366-8.
Communications with railway companies—Society communicated directly, but more with regard to getting improved facilities than reduced rates (R. A. Anderson), 43059-60.
Railway companies met Society fairly when Society could show a fairly good case, but were scarcely responsive enough in their treatment of the co-operative societies (R. A. Anderson), 43061-4.
Length of existence (R. A. Anderson), 43031.
Objects of Society—Not a trading body, purely propagandist (R. A. Anderson), 43032-3, 43037-8.
Types of Societies formed—Number, distribution, membership, etc., of the different types of Societies (R. A. Anderson), 43034-6, 43038-56.

K.

KELLY, Mr. JAMES.—*Representative of Templemore Urban District Council.*
Evidence, 42458-562.

KILDARE.
Rates to Monasterevan less than to Kildare owing to Canal competition (P. A. Meehan), 40250-2, 40458-9.

KILKENNY.
Rates from British centres of distribution compared with rates from Irish centres of distribution for butter, cheese, bacon, flour, soap, and shirts (P. M'Nulty), 44030, pp. 182-9.

KILKENNY TO CARRICK-ON-SUIR.
Railway proposed—Route question, etc. (P. F. Mullally), 39576, 39579, 39601.
Callan district—Needs would be served without taking in Castlecomer (G. J. Greene), 39442-50, 39953.
Castlecomer as starting point instead of Kilkenny (G. J. Greene), 39844.
Coal of district—Comparison of quality, output, and price of Castlecomer and Slieveardagh coal (G. J. Greene), 39953-62.
Cost question (G. J. Greene), 39881, 39883.
Length of proposed railway (G. J. Greene), 39882.
Outlet for the Castlecomer people southward (G. J. Greene), 39951-4.
Cost per mile, question of (G. J. Greene), 39976.
Distance of Slieveardagh from Templemore and Ballyragget (G. J. Grene), 39963-4.

KILKENNY TO CARRICK-ON-SUIR—*continued.*
Railway proposed, etc.—*continued.*
District served, necessities of, etc., *refer* to titles Callan and Mullinahone.
Length of proposed line—Not many physical difficulties (P. F. Mullally), 39577-8.
Opinion as to the route was unanimous (G. J. Greene), 39864-7.
Profit question—Light railway should pay a fair dividend after the first year or two (G. J. Greene), 39849-50, 39884, 39977.
Slieveardagh Coalfields would be tapped if railway ran *via* Callan (G. J. Greene), 39841.

KILLARNEY.
Guarantee paid in connection with Farranfore and Killorglin Extension, *refer* to Farranfore and Killorglin Extension.
Hotels—
Class of—Number of first and second-class hotels (J. Hilliard), 42146-9.
Money spent on hotels by private individuals during the last ten years (J. Hilliard), 42026-8, 42145.
Number of hotels in the district (J. Hilliard), 42030.
Railway Hotels, *see* that sub-heading.
Killorglin and Valentia Extension Guarantee—Killarney district paid nothing (J. Hilliard), 42127-8.
Railway Hotels—
Class of—One was a cheap hotel (J. Hilliard), 42148.
Leased to a tenant, not run by railway company (J. Hilliard), 42031-2, 42076, 42159-64.
Number of (J. Hilliard), 42029.
Privileges enjoyed by lessees—Instances of special fares for persons using Railway Hotels (J. Hilliard), 42034-8, 42045-58, 42170-89.
Advantage to Railway Company, higher rent secured (J. Hilliard), 42168-9.
Arrangement between Railway Company and privileged hotel keeper, question of—advertised tariff of hotels, etc. (J. Hilliard), 42165-7, 42181-2, 42189-90.
Privileges were part of understanding on which hotel was taken (J. Hilliard), 42076.
Development of district, effect on (J. Hilliard), 42072, 42074.
Tendency to limit number of tourists to capacity of privileged hotels (J. Hilliard), 42197-202.
Extension of privileges to all hotels alike proposed (J. Hilliard), 42075.
Fares, etc., before 1906—Position of non-railway hotel keepers worse than at present, Instances (J. Hilliard), 42059-65, 42192-6.
Hotel opened by Railway Company during tourist season of 1907, Privileges granted (J. Hilliard), 42077-83.
Injury to other hotels (J. Hilliard), 42040-2, 42066-71, 42150-8, 42180, 42191.
Public system of railways would remedy the evil (J. Hilliard), 42203-5.
Representatives of non-privileged hotels excluded from railway platform until present year, while porters of privileged hotels were allowed to canvass all passengers—Injury to non-privileged hotels (J. Hilliard), 42085-8, 42090-1.
Reason for withdrawal of prohibition—Current opinion ascribed it to fact that Railway Commission was sitting (J. Hilliard), 42089.
Tourist traffic—Extent of traffic. Increase of recent years (J. Hilliard), 42025, 42073, 42143-4.
Train Service—Undue preference given to Tralee, better connections at Tralee, etc. (J. Hilliard), 42129-32.

KILLORGLIN AND VALENTIA EXTENSION.
Guarantee (J. Hilliard), 42094-5.

KILLYBEGS.
Rates for Fish—Rate of 34*s.* to 50*s.*, witness had heard nothing in reference to the rate (F. W. D. Mitchell), 39542.

KINSALE.
Fishing Industry—Fish from Kinsale and other places sent to Grimsby by boat, some of it being sent back to Cork (Rev. P. J. Dowling), 40972-7, 41050, 41102-3.
Bulk, fish sent in, from Kinsale, small proportion came back (Rev. P. J. Dowling), 41135-6.
Distance from Kinsale to Cork (Rev. P. J. Dowling), 41045.
Facilities for return journey of fish, it was not only a question of rates (Rev. P. J. Dowling), 41104, 41108-10.
Grimsby buyers fixed price and fishermen had to take it or let their fish rot (Rev. P. J. Dowling), 41139.
Increase in cost and decrease in quality of fish (Rev. P. J. Dowling), 41051.
Industry practically killed (Rev. P. J. Dowling), 41052.
Kind of fish—chiefly mackerel (Rev. P. J. Dowling), 41101.
Refrigerating boats waited to take fish to Grimsby, whereas railway companies did not provide ice, and there was cartage from harbour to station and from Cork terminus to fish market (Rev. P. J. Dowling), 41047-9, 41106-7, 41138, 41140.
Equal facilities would make Cork a great distributing centre for fish (Rev. P. J. Dowling), 41137.

L.

LADDER.
Varying charges and weights entered on docket for the same ladder and the same journey (B. E. F. Sheehy), 41437-50, 41524-7, 41541-4.
Explanation of rates for ladders or any other article which on account of length would not fit into a single wagon (— Smyth (G. S. & W. R.)), 41542.
Length of ladder—question of whether it travelled open or folded (B. E. F. Sheehy), 41451-6.

LAND TENURE IN IRELAND.
Emigration caused by land tenure (P. A. Meehan), 40108.

LARGE AND SMALL QUANTITIES—DIFFERENCE IN RATES, IRISH SYSTEM OF TRADING, ETC.
Germany and Ireland—Difference in size of consignments, One-ton rates were important in Ireland, while in Germany the bulk of the traffic paid the ten-ton rate (P. MacNulty), 42700-15.
Ten-ton rates would not be used in Ireland even with co-operation (R. A. Anderson), 43146-9.
Organisation of farmers to produce in large quantities at regular times and to consign in bulk—Work of Irish Agricultural Society, *refer* to Irish Agricultural Organisation Society.
Small Parcels Rate—
Advantages of facilities for doing a retail trade (R. A. Anderson), 43151.
Excessive rate—Reduction desired (R. A. Anderson), 43152, 43158.
If there were only money enough for one set of reductions the interest of the country would be best served by encouraging large rather than small consignments (R. A. Anderson), 43152-9.
Distribution could be left to the ordinary shopkeeper who usually bought direct from the creamery or other society (R. A. Anderson), 43159-64.

LAVATORY ACCOMMODATION.
Great Northern Railway, North Western section —Lack of accommodation on trains, waits at stations too short to permit of use of station lavatories (P. Whelan), 43451-4.
Primitive accommodation of Great Southern and Western Railway Stations—Inspection of sanitary accommodation (B. E. F. Sheehy), 41488-90.

LAWLER, Mr. PETER.—*Representative of Newtownbarry (Co Wexford) Railway Scheme Committee.*
Evidence, 42381-457.

LAYTOWN.
Delay in delivery of goods from Drogheda—Goods left at Balbriggan all night (G. de Belle Ball), 41404.
Rate for two bags of oats from Drogheda—Particulars of voucher in which rate exceeded maximum (G. de Belle Ball), 41360, p. 86.

LEATHER INDUSTRY.
Decay of Irish Tanneries—English industry had also suffered, but boots and shoes continued to be made in England (C. Culhane), 42346-8.
Rates—Limerick and Liverpool Rates to Irish ports—Rates prohibitory for Irish leather (Rev. P. J. Dowling), 41016-24, 41146-9.

LEEDS.
Rate to, from Continental ports compared with rate from Irish stations for butter, eggs, bacon, dead poultry, and potatoes (old) (P. MacNulty), 44030A, pp. 172-181.

LEGAL EXPENSES IN PROMOTION OF RAILWAYS.
See Parliamentary Powers.

LETTERKENNY AND BURTONPORT RAILWAY.
Benefit to district, extent of—it was possible to travel in shelter (J. F. O'Donnell), 43830-2.
Condition of Carriages—Complaints by tourists that no heat was supplied (J. W. Manning), 41231-4.
Connections at Letterkenny—not very satisfactory (J. W. Manning), 41237-8.
Cost of construction (J. F. O'Donnell), 43740.
Date of opening of line (J. F. O'Donnell), 43762.
Delays in delivery, Occasional complaints—no recent cases (J. W. Manning), 41239-40.
Funds for construction—Line built as free gift to district (J. F. O'Donnell), 43822.
Management—bad management, unsatisfactory working, etc. (J. F. O'Donnell), 43741-4.
Inquiry into working and management—Unsuccessful appeal by Sir J. Olphert to the Board (J. W. Manning), 41241-6.
Fishing Industry, effect on, *see* Burtonport.
Petitions to Viceregal Commission from townlands of Falcarragh, Dunfanaghy, Creslough, and Dungloe (J. W. Manning), 41256-8.
Tourist traffic, effect on (J. F. O'Donnell), 43742, 43808-11.
See also sub-heading Train service.
Mileage (J. F. O'Donnell), 43749.
Object of building Letterkenny and Burtonport line was to develop the district—Object not attained (J. F. O'Donnell), 43753, 43759-61, 43763.
Receipts—
Amount of Profits, Amount over and above working expenses (J. F. O'Donnell), 43823-4.
Application of Profits (W. M. Acworth, G. E. Shanahan), 43824-5.
Fluctuation from year to year (J. F. O'Donnell), 43826.
Rolling Stock—Number of passenger carriages, Complaint of inadequate number during summer months (J. W. Manning), 41235-6.

LETTERKENNY AND BURTONPORT RAILWAY—*continued*
Train Service—Passenger Service—
Breakdowns and Accidents (J. F. O'Donnell), 43810-7.
Service had improved during the past season (J. W. Manning), 41227-30.
Train blown over Owencarrow Viaduct (J. F. O'Donnell), 43788.
Engines and Rolling Stock, Defects in, were probably the cause of the various breakdowns (J. W. Manning), 41259-60.
Tourist traffic—Want of connection with Strabane and Letterkenny Railway (J. W. Manning), 41261-6.
Working—Unsatisfactory working, *see* sub-heading Management.

LETTERKENNY RAILWAY.
Condition of Carriages—Complaints by tourists that no heat was supplied (J. W. Manning), 41231-4.
Connections at Letterkenny—not very satisfactory (J. W. Manning), 41237-8.
Delays in delivery, Occasional complaints—no recent cases (J. W. Manning), 41239-40.
Rolling Stock—Complaint of inadequate number of passenger carriages during summer months (J. W. Manning), 41235-6.
Train Service—Passenger Service—
Breakdowns, complaint as to—Service had improved during the past season (J. W. Manning), 41227-30.

LIME.
Rates for lime—Reduction needed to induce farmers to use lime (R. A. Anderson), 43103-4, 43355-8.

LIMERICK.
Amalgamation of Waterford and Limerick with Great Southern and Western Railway—Disadvantage to Limerick, instances of facilities withdrawn (B. E. F. Sheehy), 41482-6, 41505-12.
Rates—
Ladder for which varying charges and weights were entered on docket, *see* Ladder.
Leather, comparison of rates from Limerick and Liverpool to Irish ports—Rates prohibitory for Irish leather (Rev. P. J. Dowling), 41016-24, 41146-9.
Staff, Reduction of, at Limerick Junction (B. E. F. Sheehy), 41493-4.
Train Service—Passenger Traffic—
No convenience of any sort on 6 a.m. train to Tralee (B. E. F. Sheehy), 41468-74.
Rosslare Route, Public convenience made to yield to special circumstances of (B. E. F. Sheehy), 41539-40.
Dublin, Passenger Service from, not so good since opening of Rosslare route —Delay at Ballybrophy on the night mail (B. E. F. Sheehy), 41482-6, 41505-12.

LINEN INDUSTRY.
Belfast the centre of the industry (J. Murland), 40859-62.
Fostered by British Parliament (P. A. Meehan), 40310-2.
Raw material, value per ton (J. P. Rafferty), 40758-9; (J. Murland), 40880-2.
Value of linen per ton, Average value (J. Murland), 40876-7.

LINKING UP OF THE VARIOUS RAILWAY SYSTEMS, *see* Extension of Railways.

LIVERPOOL.
Rates—
Bacon in bales—Through rate from Tralee *via* Waterford or Cork compared with Through rate from Tipperary (J. W. Shea), 41908-9, 41963-5.
Continental ports, rate from, compared with rate from Irish stations for butter, eggs, bacon, dead poultry, and potatoes (old) (P. MacNulty), 44030A, pp. 172-181.

LONDON.
Rate to, from Continental ports compared with rate from Irish stations for butter, eggs, bacon, dead poultry and potatoes (old) (P. MacNulty), 44030A, pp. 172-181.

LONDONDERRY.
Railway and Canal Commission, case before—Cost to Port and Harbour Commissioners—
Amount of costs that came under witness's notice (W. H. Macnamara), 43652-6.
Details of case—Counsel employed, length of time occupied in hearing, etc. (W. H. Macnamara), 43600, 43657.
Judgment of Commissioners as to costs—Costs of the North-Western and Dundalk and Greenore Companies included in applicant's costs (W. H. Macnamara), 43599.
London, hearing in, additional cost involved—Hearing in London occasioned by Commissioner's initial error in pleading (W. H. Macnamara), 43602.
Old Railway Commission, case heard before—Costs under present constitution of Court would have been much less (W. H. Macnamara), 43603-4.
Rates for Meat—Advance in rates from 10*s.* to 15*s.* a ton for coarse meat from Derry to Dublin (P. Murphy), 39682-3.
10*s.* rate—Railway Company made the reduction from 11*s.* 8*d.* voluntarily (P. Murphy), 39747-54.
No special condition with regard to the 10*s.* rate (P. Murphy), 39686-8.
Period during which 10*s.* rate had been in force (P. Murphy), 39689.
11*s.* 8*d.* rate prior to August, 1906 (P. Murphy), 39689-93, 39745-6.
12*s.* 6*d.* rate offered by railway company after communication with merchants who supplied the goods from Derry (P. Murphy), 39695, 39699, 39768.
11*s.* 6*d.* rate subsequently offered to the Derry merchants, Messrs. Rolleston and M'Loughlin (P. Murphy), 39699-701, 39768.
All three rates had appeared in the rate column of the invoice (P. Murphy), 39757-9.
Alternative route adopted for traffic—Derry to Heysham, Heysham to Dublin (P. Murphy), 39702-10, 39760-7.
Description of traffic and method of packing (P. Murphy), 39697-9.
Notice of alteration of rates—Witness had not seen any advertisement of the change (P. Murphy), 39779-83, 39833-5.
Representations to Railway—Reply that rate ought to be satisfactory (P. Murphy), 39684.
Representative of the railway company had called upon witness—Conversation relating to witness's intention to give evidence before the Viceregal Commission (P. Murphy), 39771-6.
Steamship Service—Rate raised immediately on withdrawal of Steamers (P. Murphy), 39684, 39694, 39755-6.

LONGFORD.
Rate to, from British centres of distribution compared with rates from Irish centres for flour (P. MacNulty), 44030A, pp. 184-5.

M.

MAAM CROSS.
Rates for Fish—Special rate to Glasgow (F. W. D. Mitchell), 39541.

M'CARTHY, Mr. THOMAS D.—*In business in Croom, County Limerick.*
Evidence, 42563-616.

MACNAMARA, Mr. WALTER H., B.L.—*Secretary and Registrar, Railway and Canal Commission.*
Evidence, 43582-733.

MACNULTY, Mr. PHILIP.—*Transit Inspector, Department of Agriculture.*
Evidence, 38724-9164, 42617-43029, 44018-43.

M'TERNAN, Capt. H., D.L.—*Boyle, Co. Roscommon.*
Evidence, 41167-221.

MAGILLIGAN.
Railway extension in connection with Northern Counties Railway proposed (W. L. Micks), 39327.

MANCHESTER.
Rate to, from Continental Ports compared with rate from Irish stations for butter, eggs, bacon, dead poultry, and potatoes (old) (P. MacNulty), 44030A, pp. 172-181.

MANNING, Mr. J. W.—*Representing Hotel and Tourist Traffic, Rossapenna County Donegal.*
Evidence, 41222-66.

MARYBOROUGH.
Cattle—Delays in delivery, etc.
Dublin, time taken to reach (P. A. Meehan), 40271.
Fairs lost owing to delays, results of legal actions against railway (P. A. Meehan), 40272.
Kilkenny traffic kept waiting till all stock for Waterford was loaded and despatched (P. A. Meehan), 40274-5.
Through booking from Kilkenny needed—Cattle having to be re-booked at Maryborough (P. A. Meehan), 40272, 40462-4.
Contradiction (— Smyth (G. S. & W. R.)), 40463.
Cross-Channel goods handled more carefully and delivered in better time than goods sent locally (P. A. Meehan), 40202-10, 40399-407.
Instances (P. A. Meehan), 40210-5.
Facilities for handling goods, lack of, absence of lifting crane, etc.—Resulting inconveniences and delays (P. A. Meehan), 40184-91.
General Complaint against railway company—Excessive rates, Delays and insufficient working staff (P. A. Meehan), 40177.
Facilities good both for passengers and goods, working staff insufficient (P. A. Meehan), 40383-5.
Representations to Railway Companies without result (P. A. Meehan), 40177.
Goods store, distance from station, delay in getting information as to rates, etc., telephone would remedy evil complained of (P. A. Meehan), 40191-8.
Milling industry (P. A. Meehan), 40098.
Cartage of goods—Reasons why cartage was resorted to (P. A. Meehan), 40493-4.
Rates—
Amalgamation of Great Southern and Western with Waterford and Central Ireland Railways—Rates had been lower before the amalgamation—Instances (P. A. Meehan), 40227-44.
Great Southern and Western rates unchanged, but there was no longer the advantage of the competitive rates (P. A. Meehan), 40230-43.
Carlow, rates to, less than to Maryborough owing to Canal competition—Instances (P. A. Meehan), 40245-50, 40458-60.
Cross-Channel rates and Local rates compared—Bacon (P. A. Meehan), 40221.
Passenger rate charged for chest of tea—Some reduction might have been made in case of good and regular customer (P. A. Meehan), 40224-6, 40408-12.
Poultry—
Geese, rates for—Representations to Board of Agriculture, no steps taken so far as witness knew (P. A. Meehan), 40420-2.
Leicester, rates to—Prohibitive rates (P. A. Meehan), 40277-9.

MARYBOROUGH—*continued.*
Train Service—
Delays—Preventable delays—Instances (P. A. Meehan), 40169-72.
Passenger train kept waiting at Abbeyleix for goods train to pass—
Class of people travelling—Business men (P. A. Meehan), 40492.
Frequent and fast trains (P. A. Meehan), 40164.

MAYO COUNTY.
Flax-growing (J. P. Rafferty), 40617.

MEAT—DEAD MEAT.
Comparative Statistics of rates for live cattle from Ireland to English markets, reduced to a rate per ton, and compared with the rate per ton for foreign dead meat from British ports to interior points of distribution (P. MacNulty), 42998-43001, 44029-30, p. 190.

MEEHAN, Mr. P. A.—*M.P., Representative of Queen's Co. County Council.*
Evidence, 40055-502.

MICKS, Mr. W. L.—*Member of Local Government Board, Ireland.*
Evidence, 39165-389.

MIDLAND GREAT WESTERN RAILWAY.
Third class passenger accommodation—bad accommodation (Capt. H. M'Ternan), 41177-9, 41216-7.

MIDLAND OF ENGLAND.
Acquisition of Irish lines—Disadvantageous to Ireland, no improvement on Northern Counties line since it was taken over (R. A. Anderson), 43127-30, 43247.
Through rates, refusal of, in several cases (R. A. Anderson), 43086, 43396
Particulars to be obtained—Particular instance was in connection with the Dervock Poultry Society (R. A. Anderson), 43397-9.

MILK.
Dublin, retail price in (R. A. Anderson), 43118-21.
Rates and facilities—
English rates, comparison with—Different conditions making comparison unfair (R. A. Anderson), 43108-16.
High rates (R. A. Anderson), 43106, 43117-21, 43365.
Wales, South—Large trade could be created if better rates and facilities were given from Limerick Junction *via* Rosslare Route (J. W. Shea), 41901-4.
Organisation of trade—Object of such societies as the Tipperary Farmers' Association (J. W. Shea), 41905-7.

MITCHELL, Mr. F. W. D.—*Secretary of Congested Districts Board, Ireland.*
Evidence, 39390-551.

MONAGHAN.
Population (P. Whelan), 43410.
Rates—
Cheese—Rate from Cork compared with freight from New York (J. P. Rafferty), 40656-9, 40793-7.
Collection and delivery, loading and unloading not included (P. Whelan), 43440-1.
Cartage arrangements on the Great Northern (P. Whelan), 43442-50.
Rebate for service not performed—not considered worth while to make small claim, difficulty in obtaining it too great (P. Whelan), 43443.

MONAGHAN—*continued.*
Rates—*continued.*
Corn—Rate from Belfast to Monaghan compared with rate from Belfast to Strabane—Case of Mr. O'Rourke (P. Whelan), 43417-9.
Quantities carried between the two pairs of stations about the same (P. Whelan), 43420.
Department of Agriculture, work of—Nothing effected (J. P. Rafferty), 40687-91.
Flax—Rate from Ballina to Monaghan, Comparison with rate from Ballina to Sion Mills (J. P. Rafferty), 40618-31.
Concession would be an encouragement to start an industry (J. P. Rafferty), 40629-31.
Manner in which rate was made up (J. P. Rafferty), 40717-9.
Rate to Monaghan in excess of maximum (J. P. Rafferty), 40715-6, 40720.
Size of consignments (J. P. Rafferty), 40634-9.
Hay—Export trade possible but for railway rates (J. P. Rafferty), 40651-5.
Inequality of rates to and from the same place—
Grass seed from and to Belfast (J. P. Rafferty), 40609-13, 40661.
Amount of traffic from Belfast to Monaghan, question as to (Croker Barrington), 40615.
Rates should be the same both ways (J. P. Rafferty), 40615.
Same thing occurred wherever there was Canal competition, Canal freight must be a boat-load (J. P. Rafferty), 40700-2
Seeds to and from Newry (J. P. Rafferty), 40702-3.
Rate book not examined by witness (J. P. Rafferty), 40704-5.
Large traffic as a condition of concession, policy of railway company to require—Criticism of policy, etc. (J. P. Rafferty), 40623, 40646-8, 40659, 40746-50.
Lower rates given for longer distances owing to canal competition—
Grass seed—Rates from Monaghan to Belfast, Armagh, and Lurgan (J. P. Rafferty), 40596-603, 40606.
Belfast rate was special rate (J. P. Rafferty), 40597.
Destination of seed sent to Belfast or Newry—Often distributed in Ireland, Monaghan and Lurgan superseded distributing centres (J. P. Rafferty), 40773-7.
Lurgan, rate to, in excess of maximum—Rate had been put into operation to witness's knowledge (J. P. Rafferty), 40709-14.
Parcels—20 lb. parcel cost 6*d.* to Cavan, 4*d.* to Dublin, 120 miles further (J. P. Rafferty), 40673-4.
Dublin rate was fair, other rates should be in proportion (J. P. Rafferty), 40676-8.
Position of railways—Low rate necessary to secure traffic where there was water competition (J. P. Rafferty), 40706-8.
Position of railway company—Great Northern paid 6½ per cent. and could afford to give equitable rates (J. P. Rafferty), 40640-1.
Rate book inaccessible (J. P. Rafferty), 40604-5.
Raw material—Rate to English town the same as rate from English town for the manufactured article (P. Whelan), 43512.
Through rates—No through rates for butter and eggs to Belfast (P. Whelan), 43482 4.
Turnips—Refusal of railway to give special rate for abundant crop, rate offered was 28 per cent. over cost of article (J. P. Rafferty), 40642-50, 40721-4, 40788-9, 40791-2

MONAGHAN—*continued.*
Representations to railway directors—stereotyped answer given, nothing done (J. P. Rafferty), 40680-3, 40744-5.
Train Service—bad connections, convenience of passengers not considered, etc. (J. P. Rafferty), 40669-70.
Belfast and Ballyshannon, train arriving from, at 2 p.m.—no connection with train till 5.40 p.m. (J. P. Rafferty), 40667-8.
Carrickmacross, time taken to get to, longer than to get to Dublin (J. P. Rafferty), 40671.
Cavan, bad connection with—Passenger from Enniskillen or Monaghan to Mullingar could not return in same day, times of trains, etc. (J. P. Rafferty), 40663-6.
Dublin—no train from Monaghan arriving in Dublin before 1 p.m., no mid-day train except that leaving at 3 p.m. which necessitated travelling by limited mail—Remedy proposed (J. P. Rafferty), 40734-9; (P. Whelan), 43409.

MONAGHAN COUNTY.
Agricultural interest—County mainly agricultural (P. Whelan), 43413.
Attitude of railway company—Concessions given only where there was competition (J. P. Rafferty), 40595.
Claims against railway company—not considered worth while to make claims for small amounts in view of the difficulties in obtaining claims (P. Whelan), 43443.
Fares—Market tickets should be available on fair mornings (P. Whelan), 43476.
Manufacturing industries (P. Whelan), 43413, 43416.
Mineral resources (P. Whelan), 43413-5, 43512.
Rates—
Agricultural produce (potatoes, turnips, hay, straw, and flax), cost of transit for produce per acre, etc. (P. Whelan), 43421.
Belgian rates, comparison with Father Dowling's statement (P. Whelan), 43424-5.
Prohibitive and unreasonable rates (P. Whelan), 43421-3.
Station to station, rates for, exclusive of labour and cartage (P. Whelan), 43421, 43435, 43441-2.
Butter Rate for 83 miles, comparison with Belgian rates, etc. (P. Whelan), 43427-4.
Amount of traffic, creameries in the County, etc. (P. Whelan), 43434-5.
Cattle, part wagon rate—Comparison with rates in Prussia and Germany, Extract from Mr. Cunningham's work on Railway Nationalisation (P. Whelan), 43474-5.
Eggs—Smithborough to Belfast rate raising price above local market price, traffic stopped (P. Whelan), 43436-9.
Lime—Reduction offered by railway, conditions attached making it impossible to accept offer (P. Whelan), 43572-8.
Rebates given to crush out Ulster Canal competition (P. Whelan), 43406.
No specific case, but it was the general opinion that rebates were given (P. Whelan), 43406-7.
Wagons—
Cattle wagons, Vacuum brakes and spring buffers needed for (P. Whelan), 43466-70.
Dead buffers—Question whether there were any cattle wagons in Ireland with dead buffers (Croker Barrington, — Tatlow), 43471A-2A.
Lime—Unsuitable wagons used, Company should agree to make properly constructed wagon, for which farmers would pay (P. Whelan), 43575.
Pork carried in coal wagons not properly cleaned, damage to pork (P. Whelan), 43455-65.

MOUNTJOY RAILWAY STATION—RE-OPENING PROPOSED.
Attitude of people—Public Meetings had been held and Resolutions passed (A. Hamilton), 39644-5.
Children going to school—Benefit of re-opening of Station (A. Hamilton), 39657, 39660-2.
Distance without station accommodation (A. Hamilton), 39626-7.
Goods siding without passenger trains—Concession would be acceptable, but both were required (A. Hamilton), 39657-8.
Guarantee of possible loss, offer to Railway Company (A. Hamilton), 39642-3.
History of opening, closing and removal of site of Mountjoy Station (A. Hamilton), 39624-5.
Industries in district that would be served if station were re-opened (A. Hamilton), 39631-42.
Deterioration of produce due to carting, Restriction of Markets (A. Hamilton), 39665-8.
Loss occasioned by absence of railway facilities—Requirements were very moderate (A. Hamilton), 39659.
Position desired for station between Omagh and Newtownstewart (A. Hamilton), 39628.
Profit Question—Reason for refusing to re-open station, station more likely to pay now than before it was discontinued (A. Hamilton), 39663-4, 39674.
Not fair to deny concessions in the case of small railway stations simply because they would not pay when the railway company had monopoly of transit over a wide district (A. Hamilton), 39675-8.
Reason for closing station, question of (A. Hamilton), 39664.
Representations to Authorities—
Board of Trade correspondence—Refusal by the Board to re-open communication with railway company (A. Hamilton), 39646-7, 39669-70.
Everything possible done short of instituting proceedings before the Railway Commissioners (A. Hamilton), 39648-9, 39671-2.
Representations to Railway Company—Refusal of Directors to re-open station (A. Hamilton), 39629-31.
Value of traffic in the district, Population that would be served (A. Hamilton), 39650-6.

MOY, TYRONE.
Fruit trade handicapped by rates to Dublin (P. J. Dowling), 41033.

MULLALLY, Mr. P. F., J.P.—*Resident at Mullinahone, Co. Tipperary.*
Evidence, 39552-617.

MULLINAHONE AND DISTRICT.
Motor Service—
Beneficial pending construction of railway (P. F. Mullally), 39587-8, 39606-9.
Local opposition, question of (P. F. Mullally), 39610-7.
Roads in Tipperary nearly all steam rolled (P. F. Mullally), 39589-90, 39594-5.
Railway communication, absence of—Additional Railway proposed—
Attempts in the district to get better communication almost ever since the establishment of railways (P. F. Mullally), 39592-3.
Attitude of people—Whole country unanimous on the need of a line, prepared to give a reasonable guarantee (P. F. Mullally), 39579-80, 39602-4.
Cartage—Number of Carriers, Station to and from which goods were carted, etc. (P. F. Mullally), 39555-7.
Deputation proposed to Great Southern and Western Railway—Reply that no deputation could be received pending report of Vice-Regal Commission (P. F. Mullally), 39591.
Distance from various railway stations—Nearest station (P. F. Mullally), 39553-4.

MULLINAHONE AND DISTRICT—*continued.*

Railway Communication, etc.—*continued.*

Guarantees paid for existing railways from which the district derived no benefit (P. F. Mullally), 39554, 39579-82.

Imports and Exports of district (P. F. Mullally), 39555, 39558-61.

Mineral resources, Quarries and industries which might be developed if a railway were made—Cartage killed the traffic in each case (P. F. Mullally), 39561-6.

Output of Collieries and Quarries could be considerably increased if there were transit facilities (P. F. Mullally), 39567-75.

Route suggested, *see* title Kilkenny to Carrick-on-Suir.

MULLINGAR.

Connections, bad connections—Impossible to return from Enniskillen or Monaghan to Mullingar the same day (J. P. Rafferty), 40663-6.

Extension of line to, needed (P. A. Meehan), 40431-4.

Rates to, from British centres of distribution compared with rates from Irish centres of distribution for butter, cheese, bacon, soap, furniture, and shirts (P. MacNulty), 44030A, pp. 182-9.

MURLAND, Mr. JAMES.—*J.P. (Messrs. Jas. Murland and Co.), Annsborough, Co. Down.*

Evidence, 40815-944.

MURPHY, Mr. P.—*Wholesale Provision Dealer, Dublin.*

Evidence, 39679-825, 42003A-42020.

N.

NAAS.

Sallins to Tullow, bad connection (P. A. Meehan), 40200-1, 40393-5.

Guarantee, effect of—If there were no guarantee all possible connections would be made (P. A. Meehan), 40397-8.

Traffic, question as to amount of (P. A. Meehan), 40396-7.

NATIONALISATION OF RAILWAYS—STATE PURCHASE, ETC.

Advantages and disadvantages of unified management, *refer* to title Amalgamation of Railways.

Agreement with Mr. Field's evidence (P. A. Meehan), 40282.

Amalgamation a necessary preliminary (R. A. Anderson), 43264.

Competition—Advantages and disadvantages of unified working, *see* title Amalgamation of Railways.

Development of the country, *refer* to that title, *also* Rates—Reduction.

Disputes and Litigation—

Disappearance of, if railways were conducted in public interest (W. L. Micks), 39318.

Nature of cases that might arise, question as to necessity for employment of counsel (W. H. Macnamara), 43731-2.

Economy, question of, under Unified Management, *see* title Amalgamation of Railways.

Experts—Public owners of Railways would have maximum of expert efficiency at their service (P. Whelan), 43551-2.

Financial aspect—

Amount of purchase money, question of (W. L. Micks), 39262-3.

Division of anything over the Sinking Fund and an allowance for bringing the small lines up to the level of the whole system (B. E. F. Sheehy), 41557.

Limitation of dividends to percentage paid on Consols proposed (J. P. Rafferty), 40695.

NATIONALISATION OF RAILWAYS, ETC—*continued.*

Means of providing capital—

Childers's, Mr., recommendation in draft report of Financial Relations Commission, adoption of would enable Ireland to raise a loan (W. L. Micks), 39288-91.

Imperial aid—

Government grants to be given on same lines as loans for purchase of land proposed (G. J. Greene), 39920-1.

Imperial credit, use of, for purposes of floating a loan—not so satisfactory as provision of purchase money by the Imperial State, but it was the next best thing (W. L. Micks), 39281.

Imperial State to provide purchase money proposed (W. L. Micks), 39181, 39189, 39191-2, 39261, 39278-80; (J. Butler), 40018-9, 40021.

Ireland herself to raise the money, question of (W. L. Micks), 39282-7.

Money due to Ireland—Restitution for overtaxation (J. W. Shea), 41955; (P. Whelan), 43555.

2½ millions per annum would buy out the railways piecemeal in 12 years (J. P. Rafferty), 40695-7.

Amount due (W. L. Micks), 39337-9.

Attitude of England (W. L. Micks), 39332-6.

Not unfair considering the financial relations between the two countries (W. L. Micks), 39190, 39194, 39264-8.

Proportion of fund required for purchase of railways, proportion which would remain available for other public uses (J. P. Rafferty), 40805-8.

State should at least place its credit at the disposal of any Irish body administering the railways (J. P. Rafferty), 40809-10; (P. Whelan), 43556.

Profit question—

Test of success of a private railway was profit, but the object of a public system should be to promote prosperity of the country (Rev. P. J. Dowling), 41058-64, 41067.

True economy to hand over railways to an Irish governing body; if present competition of foreign goods continued Irish tenants would not be able to pay their rents and the land agitation would begin again (Rev. P. J. Dowling), 41003-5, 41068-9.

Shareholders, position of—

Arrangement proposed was to give shareholders either the value of their stocks or to convert stocks into stock of the public system (B. E. F. Sheehy), 41558-60.

Market value of property should be given (J. W. Shea), 41926-7, 41956-7.

Shareholders would be no worse off than Landlords (J. P. Rafferty), 40729-33.

Value for money—question of a public authority being able to get as much for 20*s.* as a private trader (W. L. Micks), 39354-61.

General Council of County Councils, proposal that State should purchase railways and work them through an Irish Authority—Opinion in favour of (P. A. Meehan), 40148-50, 40348-9.

Queen's County County Council—Members unanimously in favour of proposal (P. A. Meehan), 40151-8.

Political opinions of the Council (P. A. Meehan), 40425-30.

Irish Government would do very badly if it did not manage better than railways were managed at present (J. F. O'Donnell), 43821.

NATIONALISATION OF RAILWAYS, ETC.—*continued.*

Method of purchase—Methold laid down by Act of 1844 (P. Whelan), 43562-70.
Act ought to come into effect (P. Whelan), 43569.
Only solution of the transit question (P. J. Dowling), 41010; (J. W. Shea), 41954.
Opinion in favour of and proposals for (W. L. Micks), 39176-9, 39189; (G. J. Greene), 39917; (J. Butler), 39993-5; (P. A. Meehan), 40501; (Capt. H. M'Ternan), 41170-2; (B. E. F. Sheehy), 41495, 41556; (J. W. Shea), 41925-6; (T. D. M'Carthy), 42608-9; (J. F. O'Donnell), 43757.
First proposal to hand over railways to a public body made by witness (P. J. Dowling), 41001.
Opinion in favour of State Ownership if it led to stimulation of trade and reduction of rates and fares (R. A. Anderson), 43277-8.
Ownership of railways—Irish people themselves should own the railways (J. P. Rafferty), 40692-3, 40812; (Capt. H. M'Ternan), 41205.
Monaghan County Council, unanimous opinion of (P. Whelan), 43506A-12, 43545-9.
Profits, application of, *refer* to Rates—Reduction—Public Ownership.
Public needs, greater consideration for, under a public authority (A. Hamilton), 39674-8.
Railways worked for the public benefit were naturally more beneficial to the public than railways worked for private profit (J. W. Shea), 41968.
Railway and Canal Commission, costliness of procedure—Argument in favour of public ownership (J. W. Shea), 41935-43.
Universal tendency towards Public Ownership, question of—Exceptions, countries where railways were wholly or partly owned privately (R. A. Anderson), 43268-73.

NEW YORK.

Rate to Liverpool (J. O'Dea), 41293.

NEWBRIDGE.

Rate to, from British centres of distribution compared with rates from Irish centres of distribution for soap, furniture, and shirts (P. MacNulty), 44030A, pp. 186-9.

NEWRY.

Preferential treatment of Belfast, New Rates issued on traffic from Newry to Armagh *via* Market Hill—Railway Company cited before Railway Commissioners, Costs awarded to Newry Town Commissioners—Amount, etc. (W. H. Macnamara), 43606-7.

NEWTOWNBARRY, RAILWAY EXTENSION TO—ALTERNATIVE SCHEMES.

Distances from Shillelagh and Tullow (P. Lawler), 42427.
Dublin and South-Eastern Railway—Power to construct line from Shillelagh obtained and renewed from time to time for 20 years—Prevention of further renewal desired (P. Lawler), 42388, 42391-5, 42411-4, 42431-4, 42438-40.
Cost, estimated cost of line from Shillelagh (P. Lawler), 42428.
Financial position of company rendering them unable to construct the line—Letter from the company (P. Lawler), 42409-10, 42434.
Money straits had not hindered the building of line from New Ross to Waterford (P. Lawler), 42419.
New application at present going before Parliament (P. Lawler), 42413.
Prevention of bill desired in order to save cost of opposition in Parliament (P. Lawler), 42435-6.

NEWTOWNBARRY, RAILWAY EXTENSION, ETC.—*cont.*

Dublin and South-Eastern Railway—*con.*
Scheme approved by Privy Council, Guarantee given, etc., so far back as 1883 or 4 (P. Lawler), 42396-9.
Industries of the district (P. Lawler), 42403-4, 42407.
Need for railway—Need greater now than in 1888, Traffic of district, etc (P. Lawler), 42400-2, 42404-8.
New industries which might be created and developed (P. Lawler), 42407.
Position of Newtownbarry with reference to railway accommodation (P. Lawler), 42421-2.
Profits, prospect of—If any district in Ireland would pay this one would (P. Lawler), 42448-51.
Public Meeting (Dec., 1907) held to demand railway extension and to prevent the Dublin, and South-Eastern line from getting a renewal of their powers (P. Lawler), 42384-92.
Traffic of district, Fat stock, etc. (P. Lawler), 42407-8, 42423-6.
Tullow, Extension from, on Great Southern and Western line—Alternative to Dublin, and South-Eastern Company's Schemes (P. Lawler), 42393-5, 42420.
Deputation to Great Southern and Western 10 years ago—no result, rumoured that the two railways had arranged a compromise (P. Lawler), 42415-6, 42420.
Guarantee—not contemplated—Guaranteed lines did not trouble to get traffic (P. Lawler), 42441-7.
Parliamentary powers—Great Southern and Western had never as yet tried to get powers (P. Lawler), 42433.

NORTH AND SOUTH OF IRELAND, bad connections between (P. A .Meehan), 40435-6.

NORTH EASTERN RAILWAY OF ENGLAND.

Through Rates not given except from certain ports (R. A. Anderson), 43065-6.

NORTH STAFFORDSHIRE RAILWAY.

Through Rates not given to inland towns (R. A. Anderson), 43085.

NORTHERN COUNTIES RAILWAY.

Magilligan, Railway Extension to, proposed (W. L. Micks), 39327.

O.

O'DEA, Mr. JOHN.—*Trader, Clare Castle, Co. Clare.*

Evidence, 41267-358.

O'DONNELL, Mr. JAMES F.—*J.P., Burtonport, Co. Donegal.*

Evidence, 43734-43889.

OMAGH.

Rates from British Centres of distribution compared with rates from Irish centres of distribution for butter, cheese, bacon, flour, soap and shirts (P. MacNulty), 44030A, pp. 182-9.

OVERTAXATION OF IRELAND.

See Taxation, and *refer also* to Nationalisation—Financial Aspect.

OWNER'S RISK RATE.

Difference between owner's and company's risk rates insufficient, Owner's risk rate not low enough in view of the difficulty of getting compensation (R. A. Anderson), 43072-4, 43077-81, 43352.
Reason for adoption—Company's risk rate prohibitive in case of small parcels (R. A. Anderson), 43075-6, 43178.

P.

Packing and Labelling of Goods.
State Railways, *see* that title.

Parcels Post.
Agricultural Produce Parcels Post, *see* that title.

Parliamentary Powers, Cost of obtaining.
Capital of Irish Railways, Question of inflation by expense of legislation carried on in London (W. L. Micks), 39245-55.
Unified management of railways—Saving that would be effected (W. L. Micks), 39314-5.

Passenger Tax.
Irish railways exempt from (P. Whelan), 43504, 43536.

Passenger Traffic.
Accommodation—
Disinfection of Railway carriages suggested—Dirt of carriages on Great Southern and Western Railway (B. E. F. Sheehy), 41490-2, 41547-8.
No convenience of any sort on line from Limerick to Tralee—Same thing occurred on several different lines (B. E. F. Sheehy), 41468-74.
Refer also to Names of Railways.
See also titles Fares and Third Class Passengers.

Postal Service.
Horse vehicle used for mails in part of Tyrone Fermanagh and Donegal owing to high railway rates—Resulting delays and inconvenience (J. P. Rafferty), 40684.
Postmaster-General should have power to compel railway in such a case (J. P. Rafferty), 40685.
Power existed (Croker Barrington), 40685A-6.

Potato-spraying Material (Sulphate of Copper).
Rates—Reduction needed to encourage spraying—Railways would profit by increased production of potatoes and consequent increase in pig traffic (R. A. Anderson), 43106, 43213-7, 43219.

Potatoes.
Facilities for quick transit—Congested Districts Board has been able to make arrangements and found the railways always willing to assist (F. W. D. Mitchell), 39446-9.
Rates—
Early potatoes—
Aran Islands, *see* that title.
Favourable rates to English markets secured by intervention of Congested Districts Board (F. W. D. Mitchell), 39440-3.
Old potatoes—
Old potatoes in Sacks—Rates from Continental Ports to Stations in Great Britain compared with rates from Irish Stations to Stations in Great Britain (P. MacNulty), 44030A, pp. 180-1.
Percentage of Rates in France and Holland to Irish Rates (P. MacNulty), 42971-7.

Poultry.
Compensation for injury—State Railways in Austria-Hungary, Limitation with regard to Compensation payable (P. MacNulty), 38821-2.
Rates for dead poultry (by goods trains)—Rates from Continental Ports to stations in Great Britain compared with Rates from Irish stations to stations in Great Britain (P. MacNulty), 44030A, pp. 178-9.
State Railways—Rates and conditions for transit of live poultry in Austria (P. MacNulty), 38811-15.

Poultry Societies.
Objects and results obtained (R. A. Anderson), 43049-52.

Private Ownership—Commercial System of Railway Administration under existing Ownership.
Attitude of Railway Companies—
Ability and public spirit, etc., of Irish Railway Directors (R. A. Anderson), 43298-300.
Always willing to assist—Experience of Congested Districts Board (F. W. D. Mitchell), 39446.
Martyrs to circumstances—As good management as could be expected (W. L. Micks), 39173-4, 39321-2; (J. W. Shea), 41925-6.
Indictment of System—
Diametrically opposed to public interest in an undeveloped country (C. Culhane), 42359.
Dividend-earning policy—Railways had no concern with the public good and could not be expected to make sacrifices for it (C. Culhane), 42342-4.
Inadequate working staff, plant, etc., Railways starved under existing system (P. A. Meehan), 40385-7.
Shareholders' interests considered before those of the country at large (J. W. Shea), 41865.
Interests of private companies—Railways should give facilities for passengers and goods in their own interests (P. A. Meehan), 40500.

Q.

Queen's County.
Agricultural Products (P. A. Meehan), 40062.
Area, Acreage, Cultivation, etc. (P. A. Meehan), 40057-9.
Land under Water, Acreage of—Land liable to flooding not included (P. A. Meehan), 40473-8.
Tillage, decline in since '48—Common case of Irish Counties (P. A. Meehan), 40323-4, 40466-7.
'Waste' Land—
Meaning of waste (P. A. Meehan), 40467-70.
Reason why land was left uncultivated (P. A. Meehan), 40471-2.
Canal Communication (P. A. Meehan), 40142.
Extension needed (P. A. Meehan), 40461.
Cattle Industry, Importance of (P. A. Meehan), 40163.
Delays in delivery—Instances (P. A. Meehan), 40215-9.
Flax-growing—Attempt to revive flax-growing had failed; Queen's County not suitable (P. A. Meehan), 40495-9.
Industries—Manufacturing industries—
Existing industries (P. A. Meehan), 40063-80, 40098, 40143-6, 40301-2.
Lime manufactured at Ballyroan and Dunamane—Distance from railway, farmers having to cart lime long distances (P. A. Meehan), 40090.
Extinct manufactures—Causes of decay of Woollen Manufacture, etc. (P. A. Meehan), 40092-124, 40303-19.
Mineral Resources (P. A. Meehan), 40081-90.
Grit rock quarries at Clonaslee—Distance from railway, one small vein only worked, quality of stone, etc. (P. A. Meehan), 40084-9.
Limestone quarries round Stradbally—Industry practically killed by lack of transit (P. A. Meehan), 40081-3.
Market for limestone (P. A. Meehan), 40481-3.
Population—Decrease since 1851 (P. A. Meehan), 40060-1.
Causes—Evictions (P. A. Meehan), 40479.
Poultry trade—High rates, delays, pillage, etc. (P. A. Meehan), 40277-80.
Owner's risk rates referred to—Company's risk rate prohibitive (P. A. Meehan), 40280.

QUEEN'S COUNTY—*continued.*
Railways serving the County (P. A. Meehan), 40141.
Rolling stock, shortage of, at certain stations (P. A. Meehan), 40384.
Train Service—Faulty Connections between South of County and Dublin, impossible to get to Dublin before 12.30 p.m. (P. A. Meehan), 40173.
Representations to railway companies of no avail (P. A. Meehan), 40174-5.
Transit Facilities needed to develop industries (P. A. Meehan), 40120, 40123.
Attempts made to provide facilities—
Canal from Monasterevan to Castlecomer mapped, etc., but never made (P. A. Meehan), 40126-32.
Map and Report dealing with scheme to be supplied to Commission (P. A. Meehan), 40132.
Tramway from Clough, Castlecomer to Athy proposed in 1883-4—Guarantee refused by Grand Jury (P. A. Meehan), 40133.
Railway and Canal Extensions proposed (P. A. Meehan), 40159-62.

QUEEN'S COUNTY COUNTY COUNCIL.
Political Opinions—Impartiality in Appointment of Officials (P. A. Meehan), 40425-30.

R.

RABIER'S LAW, 1905.
Provisions of (P. MacNulty), 39027-33, 42863.

RAFFERTY, Mr. J. P.—*Ex-Flax and Seed Merchant.*
Evidence, 40589-814.

RAILWAY AND CANAL COMMISSION COURT.
Constitution—Alteration by Railway and Canal Traffic Act, 1888 (W. H. Macnamara), 43584.
Costs, awarding Costs—Costs no longer awarded, alteration in Law in consequence of Report of Committee of 1893 (W. H. Macnamara), 43729.
Counsel—Expense greatly raised by Railway Companies' practice of employing special assistance—other party to Litigation obliged to employ equally efficient assistance, alleged (W. H. Macnamara), 43668-781.
Applicant could conduct his case in person (W. H. Macnamara), 43615-6, 43676-7, 43726A.
Cross-examination difficulty—Commissioners usually intervened and did some of the cross-examination themselves (W. H. Macnamara), 43622.
Instances in which trader had conducted his own case (W. H. Macnamara), 43616-21.
Eminent and experienced Counsel, assistance of, greatly appreciated by the Court in complicated cases (W. H. Macnamara), 43658-9.
Exclusion of Counsel and substitution of Solicitors, question as to—Solicitors were allowed to appear (W. H. Macnamara), 43726-8, 43733.
Nature of cases which came before the Court, employment of Counsel largely dependent on—
Complicated and important cases, many of which were test cases, necessitated employment of counsel and could not be tried except at considerable expense (W. H. MacNamara), 43610, 43679, 43723-5.
Small cases and many cases not of a heavy character—Cost depended almost entirely upon the parties, that is, whether they chose to bring in expensive counsel (W. H. Macnamara), 43610, 43614-5, 43679.
Wills,'s, Mr. Justice, evidence before Committee on Railway Rates in 1893 (W. H. Macnamara), 43610.

RAILWAY AND CANAL COMMISSION COURT—*continued.*
Department of Agriculture, Power of Complaint to Commission—
Cases taken up by Department, Great Southern and Western Railway proposed increase of rates, *see* Great Southern and Western Railway.
Public knowledge as to powers of Department—Powers not generally known (J. W. Shea), 41886.
Expensive and Cumbersome Procedure, Ordinary Trader had no chance against railway companies, alleged (J. W. Shea), 41883.
Argument in favour of Public Ownership (J. W. Shea), 41935-43.
Counsel as a factor in expense, *see* sub-heading Counsel.
Examples of prohibitive costliness—Explanation of alleged costliness—
Dublin Port and Docks Board and two railways *v.* Great Southern and Western Railway Co. (W. H. Macnamara), 43683-7.
Great Southern and Western Company's attempt to raise rates in 1901-2—Opposition by Department of Agriculture at cost of £1,000 (W. H. Macnamara), 43606, 43688-96, 43699.
Londonderry Case (W. H. Macnamara), 43599-604, 43652, 43657.
Expense not excessive—
Applications could be drawn by applicants themselves at very slight expense (W. H. Macnamara), 43587, 43610-3.
Court fees the same or nearly the same as in the High Court (W. H. Macnamara), 43608-10.
Newry Town Commissioners, Amount of Costs awarded to (W. H. Macnamara), 43606-7.
Pleadings as simple or as complicated as those in the High Court, but the complicated cases were not those between traders and railway companies (W. H. Macnamara), 43586-7.
Settlement of cases before trial, *see* that sub-heading.
Nature of cases heard—Small cases, *e.g.*, Palmer's case, suitability of court, question as to advisability of taking the court to Ireland to hear such cases (W. H. Macnamara), 43714-20.
Place where sittings were held—
Capital, sittings usually held in—Cheaper to bring witnesses to the capital than to take Counsel away from it (W. H. Macnamara), 43623.
All Irish sittings in Dublin since 1888 (W. H. Macnamara), 43624-5.
Only one application since 1888 to have case heard elsewhere than in Dublin Application subsequently withdrawn (W. H. Macnamara), 43623.
Cases dealt with in that part of the United Kingdom in which cause of complaint arose (W. H. Macnamara), 43587-8.
Rates, Reduction of—Court had no jurisdiction if rates were within the maximum (W. H. Macnamara), 43702-11.
Settlement of cases before trial—Railway Company if wrong on complaint filed, would probably settle the case (W. H. Macnamara), 43611, 43629-31, 43664.
Ireland, cases in—Several cases, mostly between railway companies, but there had been one or two traders' cases (W. H. Macnamara), 43632-8, 43665-6.
Number of cases between traders and railway companies settled before trial last year (W. H. Macnamara), 43611-2.
Slowness of proceedings alleged—
Date for hearing cases—Applicant could apply to witness to fix a date at any time after the pleadings were closed (W. H. Macnamara), 43587.
Dublin Port and Docks Board and two Railways *v.* Great Southern and Western Railway, *see* that title.

Railway and Canal Commission Court—*continued.*
Slowness of proceedings alleged—*continued.*
First claim on time of Judge was in attendance on Railway and Canal Commission—Extract from Act of 1888 (W. H. Macnamara), 43593-5.
Instances to the contrary—Cases heard at last 3 sittings of the Court, brevity of interval between date when pleadings were closed and date of hearing (W. H. Macnamara), 43495-6.
Number of sittings held in Ireland, Intervals between sittings (W. H. Macnamara), 43626-8.
Term of office of Judge—Possibility of re-appointment (W. H. Macnamara), 43589-92.

Railway Construction or Extension.
See title Extension of Railways, Provision of additional Railways.

Rates and Charges.
American rates, comparison of Irish rates with—Cheaper to send from New York to Chicago than from Thurles to London (C. Culhane), 42276-7.
Anomalies abounded, Principles upon which rates were fixed were obscure—Rates operated against the interests of the country (J. W. Shea), 41966.
Classification—New Classification difficult owing to relations between the railways in England and Ireland (J. W. Shea), 41944.
English and Irish Rates compared—
English rates slightly higher—England was more a manufacturing country than an agricultural one (P. MacNulty), 42988.
Slates, rates for (P. MacNulty), 44030, p. 190.
Fixing and altering of rates, authority for—Board of 28 members for management of railways, Powers and duties in connection with rates proposed (W. L. Micks), 39349-52.
High Inland Rates—Handicapping Irish Industry (P. Murphy), 39810; (B. E. F. Sheehy), 41549; (R. A. Anderson), 43293.
Agricultural purposes—Rates prohibitive (J. Butler), 39995.
Indictment of present system (P. Whelan), 43527-9.
Information as to rates—
All rates should be published (J. P. Rafferty), 40660, 40714, 40720.
No rate quoted on dockets—
80 per cent. of Traders had no weekly account and no means of ascertaining whether the charges were right or wrong (P. Murphy), 42014A-8.
Great Southern and Western Railway (P. Murphy), 39814-22, 42003A-13A.
Majority of principal Traders had weekly accounts which showed the rate charged—Delivery notes were simply used for the purpose of carters taking goods at Railway Stations (— Smyth (G. S. & W. R.)), 42014.
Person in the habit of getting consignments of the same goods, Rate not given (Croker Barrington), 42011.
Rate column was there, but it was the general practice not to put in the rate (Croker Barrington, T. Sexton), 42020.
Right of traders to examine rate books—
Public not aware of their right (J. P. Rafferty), 40741-3; (P. Murphy), 42019-20.
Simplification of finance of transit—Traders not able to check charges without undertaking intricate calculations (G. de Belle Ball), 41423-6.
State Railways, *see* that title.

Rates and Charges—*continued.*
Maximum rates, rates above the maximum—Great Northern Railway (Ireland), Maximum class rates to Drogheda, Skerries, Belbriggan, Laytown, and Swanlinbar, with list and particulars of railway vouchers in which rates in many cases exceeded the maximum (G. de Belle Ball), 41360-80, 41384.
Mileage rates, Opinion in favour of (J. P. Rafferty), 40608-9, 40640.
No complaints (J. W. Manning), 41241.
Notice of increase in rates, Instance of rates being raised without any advertisement—Coarse meat traffic, Derry to Dublin (P. Murphy), 39779-83, 39833-5.
Overcharge—Great Northern Railway (Ireland), list and particulars of railway vouchers in which overcharge occurred (G. de Belle Ball), 41360, pp. 85-88.
Reduction—
Advantage to the country (F. W. D. Mitchell), 39547.
Amalgamation of Railways—Reduced rates, unification would be to the public good (J. W. Manning), 41253.
Amount of reduction proposed—50 per cent., not suggested that there should be such a reduction of rates (W. L. Micks), 39342.
Classification, revision proposed—Object of a new classification might be met by reductions of existing rates (J. W. Shea), 41945.
Commercial basis of railways—Railways not in a position to make experiments which would possibly result in decreased dividends (W. L. Micks), 39171-2, 39237-44; (J. Murland), 40852; (B. E. F. Sheehy), 41551; (T. D. M'Carthy), 42607.
Development of traffic recouping railways, question of—
Development of traffic would eventually result in profit, but not unless development of resources of the country took place at the same time (W. L. Micks), 39211-13, 39222, 39290, 39364-6, 39373-5.
Government to find capital and float business where necessary, eventually passing it on to private capitalists (W. L. Micks), 39376.
Grant for development of the country suggested—Equivalent of Technical instruction given in England (W. L. Micks), 39367-71.
True principle would be to afford facilities in order to develop traffic (Rev. P. J. Dowling), 41026.
Development of traffic would result and would provide additional surplus to be used in further reduction of rates (J. Butler), 40031-2.
Opinion in favour of revision of rates (W. L. Micks), 39205.
Development of Trade and Industry, question of,
Agricultural and Industrial development would be promoted (J. Murland), 40857-8; (J. W. Shea), 41924.
Large traffic required as condition of concession—Railway policy strangling new and struggling industries (J. P. Rafferty), 40623, 40646-8, 40659, 40747-8; (Rev. P. J. Dowling), 40956, 41000; (P. Whelan), 43512.
Contrary to interests of railways as well as fatal to industries (J. P. Rafferty), 40746-50.
Instances of industries handicapped or killed by high rates (Rev. P. J. Dowling), 40957-81, 41029-33, 41037-52.
Monopoly of railways should be used for the development of the country, not merely to earn dividends (J. P. Rafferty), 40641.
Railway facilities wherever granted had resulted in flourishing industries—Instances (Rev. P. J. Dowling), 40986-99, 41055.

Rates and Charges—*continued.*

Reduction—*continued.*

Development of trade and industry, etc.—*continued.*

Railway rates not the only difficulty in the way of Irish development (Rev. P. J. Dowling), 41093.

Sufferers had every right to improve their position, but they must look after themselves (J. Murland), 40898-905.

Technical knowledge in connection with manufacturing industries lost—Difficulty in the way of establishing industries (P. A. Meehan), 40339.

Difficulties confronting railway companies, sparse population of the country, etc. (F. W. D. Mitchell), 39545.

Loss to railways, question of—Methods of meeting loss—Guarantee to be given by the State under certain circumstances, proposed (R. A. Anderson), 43122-3.

Deadening interest of railway company in class of traffic most needing stimulation, danger of (R. A. Anderson), 43260-2.

Department of Agriculture resolution (R. A. Anderson), 43223.

Difficulty of giving such a guarantee to twenty different companies—Not insuperable (R. A. Anderson), 43223-6

Need for reduction (J. Butler), 39996.

Land purchase legislation, etc., useless if, owing to railway rates, farmer was unable to market to advantage the output of his farm (J. W. Shea), 41945-6.

Opinion in favour of reduction (J. W. Manning), 41251.

Pooling and working arrangements which wiped out the chance of reduction of rates for dairy produce (J. W. Shea), 41913-5.

Position of railways if rates on raw materials inwards were reduced in order to encourage outward traffic, and rates on outward traffic reduced in order to compete with foreign countries, question as to (R. A. Anderson), 43220-2.

Price of commodities, butter, etc.—No reduction of railway rates at all corresponding to reduction in price of commodities (J. W. Shea), 41879-82.

Public Ownership as a remedy for existing state of affairs, question of (W. L. Micks), 39260; (B. E. F. Sheehy), 41556, 41566-7.

Central Authority working a unified system required in order to secure a more favourable system of rates (W. L. Micks), 39197.

Development of districts and doing away with unnecessary expense would bring the rates down (J. Butler), 40006-15, 40022.

Economies effected by use of public credit and by unified working would provide a fund for reduction of rates and fares (W. L. Micks), 39305-9; (J. Butler), 40023, 40037-40; (B. E. F. Sheehy), 41561; (R. A. Anderson), 43263.

If economies would produce a fund large enough to make sensible reductions in rates it would be a weighty argument for nationalisation (R. A. Anderson), 43312.

Irish Representative Authority necessary in order to secure proper application of profits (C. Culhane), 42376-8.

Security needed that every surplus should be applied to reduction of rates (Capt. H. M'Ternan), 41204.

Grant from British Government for purchase of railways—Rates to be reduced by 50 per cent. (W. L. Micks), 39340-4, 39346.

Rates and Charges—*continued.*

Reduction—*continued.*

Public Ownership—*continued.*

Loss, question of—State could afford to make reduction and to be at a loss for a certain period, arrangement should be temporary (J. W. Shea), 41991-2, 42001-2.

Sea rates—State-owned Railways could afford to compete with (Rev. P. J. Dowling), 41034-6.

Railway and Canal Commission Court, powers of—No jurisdiction if rates were within the maxima (W. H. Macnamara), 43702-11.

Running powers of one railway company over the lines of another—Owing to competition there might be a reduction of the rates (J. W. Shea), 41916, 41969-70.

State Aid—

Childers, Mr., proposal was very fair and reasonable (W. L. Micks), 39288.

Subsidising of railway companies would be one way to assist industries (F. W. D. Mitchell), 39550.

Subsidy pending the Government taking over the Irish railways, proposed (J. W. Shea), 41989.

Temporary arrangement—Whatever help was given should be of a temporary nature (J. W. Shea), 41991-2, 42000.

Tribunal with power to reduce rates—Question as to practicability of proposal (C. Culhane), 42363.

Short Distances—Higher rates for short than for long distances, conditions being similar—Instances on Great Southern and Western Railway (P. Murphy), 39732-42, 39810-11.

Special Rates—State Railways, *see* that title—sub-heading Rates.

State Railways, *see* that title.

Through Rates, *see* that title.

See also Names of Places and Commodities.

Rathdowney.

Brewery and malting industry—Distance from Station, etc. (P. A. Meehan), 40143-6.

Refrigerator Wagons.

No special charge, but witness thought a minimum consignment was specified (P. MacNulty), 38953.

Rolling Stock.

Inadequate supply, Delays resulting—Instances (P. A. Meehan), 40216-9.

Unification of railway management, Advantages of—

Less rolling stock required (W. L. Micks), 39313.

Manufacture of Rolling Stock in Ireland—Economy in production (W. L. Micks), 39313; (B. E. F. Sheehy), 41496, 41571.

Supply of Wagons—Rolling Stock might be interchangeable and thus more available generally (W. L. Micks), 39313.

See also Wagons.

Ronan, Mr. Walter B., *Solicitor—Representative of Councils and Local Bodies in Cork County and City.*

Evidence, 41573-678.

Roscrea.

Bacon factory had been established—Reasonable rate would be a great assistance (J. W. Shea), 41909.

Rossiter, Mr. John J.—*Representative of Rosslare and Wexford Ratepayers and Forth Farmers' Association.*

Evidence, 43890-44017.

ROSSLARE.
Fares—Ordinary and cheap fares from Wexford (J. J. Rossiter), 44002-3.
Fast train running behind slow train when boat was late, passengers having to get on to train from wrong platform, etc. (J. J. Rossiter), 43971-83.
Rates for Coals—Additional charge for haulage, Consequent increase in price of Coal (J. J. Rossiter), 43930-2, 43937-51.
No explanation given (J. J. Rossiter), 43949.
Station at Rosslare Harbour, defects of (J. J. Rossiter), 43970.
Station at Rosslare Strand, inadequate accommodation, etc., new station needed (J. J. Rossiter), 43907-29, 43985-8.
Amount of traffic—Number of summer visitors, Amount of traffic during non-holiday season (J. J. Rossiter), 43909-16, 43984, 43999-40001.
Cost question—Fairly substantial stations between Rosslare and Waterford at places where there was far less ordinary traffic (J. J. Rossiter), 44004-16.
Representations had been made to railway company, witness not aware that any reply had been elicited (J. J. Rossiter), 43919-25, 43934-6.
Water Supply—Water being brought from source 20 miles distant (J. J. Rossiter), 43990-3.
Guarantee for summer supply in district demanded by County Council and refused by railway—Road broken up by railway company without County Council permission, prosecution ordered (J. J. Rossiter), 43989, 43993-6.

RUNNING POWERS.
Railway Companies in Ireland exercising running powers over the lines of other companies (J. W. Shea), 41975-7.
Rates, Reduction of—Competition of railway company having running powers over the lines of another might bring about a reduction of rates (J. W. Shea), 41916, 41969-70.

S.

SALLINS.
Tullow, connection with—Bad connection, *see* Naas.

SALLINS AND TULLOW EXTENSION.
Guarantee given under impression that the profits from traffic from Tullow and intermediate stations to Dublin would be credited to line—only profit allowed was profit from Tullow to Sallins (P. A. Meehan), 40133, 40360A, 40363-4.
Injustice—Proportion of traffic going to main line should be credited to branch line (P. A. Meehan), 40296-7.
No suggestion of the kind made when Bill was carried through Parliament (Croker Barrington), 40363.

SHEA, Mr. JOSEPH W., *J.P., Representative of Tipperary Farmers' Society.*
Evidence, 41857-42003.

SHEEHY, Mr. BRIAN E. F., *C.E., Limerick.*
Evidence, 41427-572.

SHIRT INDUSTRY.
Ballyshannon, Establishment of Shirt Factory proposed—Reduction of rates to Derry, Reduced rate prohibitive (F. W. D. Mitchell), 39543-7.
Example of the fact that rates that would pay the railway company could not be paid by the industry (F. W. D. Mitchell), 39549.
Subsidy might have been given if the Government wished to foster the industry (F. W. D. Mitchell), 39548.

SHIRT INDUSTRY—*continued.*
Rates—Comparison of Irish Interior Rates to certain points of destination with Import Rates from British Centres of distribution to the same point of destination (P. MacNulty), 44030A, pp. 188-9.

SIZE OF CONSIGNMENTS.
See Large and Small Quantities.

SKERRIES.
Great Northern Railway Rates—Statement by Drogheda Development Association—
List and particulars of railway vouchers in which rate exceeded maximum (G. de Belle Ball), 41360, p. 85.
Maximum Class Rates between Dublin and Skerries (G. de Belle Ball), 41360, p. 85.

SLATES.
Rates—Comparison of Rates in England with Rates in Ireland, No through rates between English and Irish Stations (P. MacNulty), 44030A. p. 190.

SLIGO AND BROADHAVEN.
Steamer Service subsidised by Congested Districts Board—Discontinuance (F. W. D. Mitchell), 39424-6.

SOAP.
Rates—Comparison of Irish Interior Rates to certain points of destination with Import Rates from British Centres of distribution (P. MacNulty), 44030A, pp. 186-7.

STAFF.
Great Northern Stations, Inadequate Staff (P. Whelan), 43520.
Great Southern and Western Railway, Reduction of Staff since amalgamation (P. A. Meehan), 40178-83; (B. E. F. Sheehy), 41493.
Unified management of railways, *see* title Amalgamation of Railways.

STATE OWNERSHIP.
Refer to Nationalisation.

STATE RAILWAYS, STATE-CONTROLLED RAILWAYS, ETC., IN FOREIGN COUNTRIES.
Acceptance and Despatch of Traffic—Regulations—
France (P. MacNulty), 38876.
Germany (P. MacNulty), 38877-8.
Holland (P. MacNulty), 38878.

Animals, Transit of—
Attendants accompanying animals, conditions as to (P. MacNulty), 39093-4.
Belgium—Rates and Regulations about the same as in France (P. MacNulty). 39148.
Compensation for loss or damage, Limitation of value, Insurance—France (P. MacNulty), 39096-9, 39145-6.
Conditions regulating conveyance and delivery, Time limit for transit, etc.—France (P. MacNulty), 39101-4, 39125.
Disinfecting wagons—Fees—
France (P. MacNulty), 39126.
Varied slightly in the different countries (P. MacNulty), 39105.
Junction or transmission fees in France (P. MacNulty), 39121-2.
Lairage accommodation—Charges—
France (P. MacNulty), 39123-4.
Germany (P. MacNulty), 39156.
Loading and unloading—Charges and regulations in France (P. MacNulty), 39100, 39120, 39147, 39149.
Rates—
Continental rates, prevailing rates lower than Irish rates except in the case of horses carried by passenger train (P. MacNulty), 42978-80.

STATE RAILWAYS—*continued.*

Animals, Transit of—*continued.*

Rates—*continued.*

Prussian State Railways—Tariff for live animals—
Consignment fees (P. MacNulty), 39155.
Distance rate per square mile and per kilometre (P. MacNulty), 39155.
Head rates (P. MacNulty), 39155.
Horses, etc., in specially constructed wagons, special rates for (P. MacNulty), 39155.
Minimum freight for each class (P. MacNulty), 39155.

Quick Transit—France, State Railways (P. MacNulty), 39093, 39095-6, 39106-9, 39131-7.

Slow Transit—France, State Railways (P. MacNulty), 39110-19, 39138-40, 39144-5.

Special rates for animals going to pasture —Ouest line (P. MacNulty), 39140.

Tables to be discussed—Estimate to be made to cover little charges without going into details (P. MacNulty), 39157-64.

Shows, Regulations with regard to horses and attendants — France (P. MacNulty), 39127-30

Collection and Delivery—Carting arrangements, Charges, etc.—
Branch offices for receiving goods in Paris (P. MacNulty), 39013-5.
France (P. MacNulty), 38989-39005.
Germany (P. MacNulty), 39017-21.
Paris (P. MacNulty), 39006-7, 39010-12.

Compensation question—Liability of Railways, Insurance question, etc.—

Animals, Transit of—Regulations in France (P. MacNulty), 39096-9, 39145-6.

Claims in respect of goods lost or damaged—Time allowed for ascertaining damage and notification of complaints, Limitation of delay in suit—
France (P. MacNulty), 39069-72.
Germany (P. MacNulty), 39077-8.

Delay in Transit—
Belgium—Provisions of Transport Law of 1891 (P. MacNulty), 39034-7.
France (P. MacNulty), 39023-6, 42874-7.
Germany (P. MacNulty), 39044-9.

Deliberate or gross carelessness on part of railway, detriment caused by—Compensation for total detriment might be claimed (P. MacNulty), 39052-4, 42869-73.

Diminution of goods—Liability of railways—
Compensation paid unless carrier could show that such diminution arose from the nature of the goods (P. MacNulty), 42878.
Germany, regulations in (P. MacNulty), 39064.

Extent of railway liability in internal transit—
Conditions under which no liability attached to railway for loss or damage—
Belgium—Conditions practically the same as in France (P. MacNulty), 39060.
Denmark (P. MacNulty), 39067-8.
France, (P. MacNulty), 39055-9.
Germany (P. MacNulty), 39060-4.
Holland—Regulations practically the same as in Germany (P. MacNulty), 39066.
Sender or agent accompanying goods, Railway not liable for damage which attendant was expected to obviate — Germany and Belgium (P. MacNulty), 39065.
France—Provisions of Rabier's Law, 1905 (P. MacNulty), 39027-33, 42863.

Free carriage back to sending station of damaged portions of cast-iron goods—Germany (P. MacNulty), 39065.

STATE RAILWAYS—*continued.*

Compensation Question, etc.—*continued.*

German railways, difficulty in obtaining compensation notwithstanding printed regulations—Witness did not know how the system worked out in practice (P. MacNulty), 42989-92.

Limitation of liability of railways on the Continent, question of—Conditions regulating amount of compensation (P. MacNulty), 38823-4.
Belgium—Provisions of Transport Law of 1891 (P. MacNulty), 39042-3.
France (P. MacNulty), 39042, 42865-8.
Germany (P. MacNulty), 39050.

No compensation payable in case of accident, superior force, or an outside cause (P. MacNulty), 38869.
Abnormal traffic considered a case of superior force (P. MacNulty), 38869-72.
Damage had otherwise to be made good—Onus of proof was laid upon carrier (P. MacNulty), 42879-82.

Poultry—Limitation with regard to compensation payable for loss or injury to breeding poultry (P. MacNulty), 38821-2.

Profit, Insurance of, in Austria-Hungary, etc. (P. MacNulty), 38827-31.

Release from liability—Germany, Release could not be claimed on basis of non-liability regulations if damage was incurred through fault of railways (P. MacNulty), 39051.

Remote places not situated on the railway, Extent of Carriers' Liability—Germany (P. MacNulty), 39049.

Through Booking—Modification of tariffs or regulations in case of international transports (P. MacNulty), 39038.
Belgium (P. MacNulty), 39038-9.

Total loss—Railway companies paid for total loss (P. MacNulty), 42865.

Value of goods, how estimated (P. MacNulty), 39041-50.

Complaints and Representations—
Means of procuring attention was much more ready and effective on the Continent—Ministerial control of rates and conditions of traffic in France (P. MacNulty), 42835-43.

Notification, Time limit allowed by the law—France (P. MacNulty), 39069.

State Representative at every important station for the purpose of receiving complaints—
Belgium—Practically the same as in France (P. MacNulty), 39075.
France (P. MacNulty), 39070-2.

Consignment Note, *see* sub-heading Way-Bill.

Despatch and Acceptance of goods, *see* sub-heading Acceptance and Despatch.

Development of the country by means of State Railways—

Belgium—
Free traffic given to Antwerp in order to create fruit trade with London (Rev. P. J. Dowling), 41025.
Progress due to qualities of people themselves, not to railway administration (J. Murland), 40910-2.

Danish Government subsidised Dairy Industries and carrying companies, and protected Danish produce in the English market for a certain number of years (J. W. Shea), 41990.

Ideal principle on which Australian railways were worked (Rev. P. J. Dowling), 41125, 41158-61.

New South Wales—Extract from Year Book (Rev. P. J. Dowling), 41062.

Fares—

Comparison of Australia and Ireland—Ordinary fares higher and few special concessions in Australia — Mr. Davies's evidence.

State Railways—*continued.*
Fares—*continued.*
Comparison of Australia and Ireland, etc.—*continued.*
Difference in purchasing power of money—Australian fares really much lower than Irish fares (Rev. P. J. Dowling), 41114-21.
Proportion of difference, question of—Criticism of Mr. Davies's evidence (Rev. P. J. Dowling), 41119-20.
Standing facilities on Victoria and New South Wales Railways—Instances (Rev. P. J. Dowling), 41122-4.
Traders, concessions to—Poultry traffic in Austria-Hungary, concessions to attendants (P. MacNulty), 38820.
Workmen's fares on Italian and Belgian State Railways (P. Whelan), 43536.
Fast Train Traffic, parcels by passenger train—Regulations in France (P. MacNulty), 38986-8.
Irregularities apart from complaints—Duty of State Representative to report—
Belgium—Practically the same as in France (P. MacNulty), 39075.
France (P. MacNulty), 39073-4.
Labelling of Goods, *see* sub-heading Packing and Labelling.
Loading and Unloading, *see* sub-heading Terminals.
Loss, deficiency, or damage to goods.
Compensation question, *see* that sub-heading.
Inquiry—Duty of railway companies, question of costs, statement from railway regulations—Germany (P. MacNulty), 39080-91.
Mixed consignments, Austria—Regulations the same as in other countries (P. MacNulty), 38817.
Ownership of Railways (P. MacNulty), 42697.
Denmark (P. MacNulty), 38774.
Packing and Labelling of Goods—Regulations.
France (P. MacNulty), 38845-8.
Germany (P. MacNulty), 38849-58.
Profit and Loss—
Belgium—Decrease in profits (J. Murland), 40935.
General experience of Continental countries was that State control and management meant increased expenditure (J. Murland), 40936.
Large profits shown where railways were unified (Rev. P. J. Dowling), 41601.
Publicity attached to every detail of rule as well as of rate—Advantage in preventing exaction or undue preference (P. MacNulty), 42844-62.
Rates—Continental Rates—
Actual rates the same as the maximum rates—Denmark (P. MacNulty), 38787.
Advantage to agricultural and manufacturing industries of the special tariffs for interior, import, and export traffic (P. MacNulty), 42883-8.
Animals, Transit of, *see* that sub-heading.
Austria—Under the German system, with many supplementary regulations and rates (P. MacNulty), 38803-4.
Bulky Goods—Charges, Conditions—
Austria—Regulations the same as in other countries (P. MacNulty), 38817.
Holland (P. MacNulty), 38735.
Claims in respect of over-charge—Time allowed by the law for notification of complaints, Five years' limitation in suits arising out of a contract for conveyance—France (P. MacNulty), 39069-72.
Comparison of Continental with Irish rates for cattle, feeding cake, sulphate of copper, agricultural drain pipes, etc.—Comparisons handed in were shown in shillings and pence only (P. MacNulty), 44031-3.
Comparison of Continental with Irish rates for different sized consignments—Percentages—
State Railways—*continued.*
Rates—Continental Rates—*continued.*
Comparison of Continental with Irish rates—*continued.*
Accessory charges had been introduced into the comparisons so far as it appeared necessary to suit Irish normal conditions (P. MacNulty), 42984-6.
Bacon—
One-ton, five-ton, and ten-ton lots, Percentage of Continental to Irish rates in Denmark (P. MacNulty), 42955-6.
One-ton lots, highest and lowest rate between various pairs of Irish stations—Relative percentage of French rate, and question of relative importance of traffic carried at the two rates (P. MacNulty), 42756-83.
Butter—
Belgium, rate for butter in five-ton lots omitted, neither Ireland nor Belgium had a five-ton rate for butter (P. MacNulty), 42722-9.
One-ton, five-ton, and ten-ton lots, Percentage of Continental to Irish rates in Denmark, France, and Holland (P. MacNulty), 42948-53.
Continental rates only had been compared—no comparison had been made with Irish rates (P. MacNulty), 42987.
Danish rates were among the lowest comparisons (P. MacNulty), 42981-3.
Eggs—One-ton, five-ton, and ten-ton lots, Percentage of Continental to Irish rates in Denmark, Belgium, Germany and France (P. MacNulty), 42932-47.
Error in figures of analysis, question of (P. MacNulty), 42659-84, 42916-24, 42957-8.
Export rates on the Continent lower than prevailing rates for interior traffic—If export rates were given comparison would be still more unfavourable to Ireland (P. MacNulty), 42925-31.
Flour—One-ton, five-ton, and ten-ton lots, Percentage of Continental to Irish rates in France, Austria-Hungary and Belgium (P. MacNulty), 42959-70.
France and Germany—Rates much lower in France, where there were private lines (P. MacNulty), 42686, 42694-9.
Germany—Charges exceeded the Irish charges above a certain distance owing to rates not being reduced as distance increased in same proportion as other countries (P. MacNulty), 42993-7.
Holland and Belgium—Rates more favourable in Holland, where the railways were privately worked (P. MacNulty), 42687-93, 42697-9.
Ireland made a more favourable comparison on the one-ton rate than on the five-ton or ten-ton rate—Difference in size of consignments in Germany and Ireland (P. MacNulty), 42700-15, 42911-15.
Lower prevailing rates on the Continent for everything except in the case of horses carried by passenger train (P. MacNulty), 42978-80.
Method of making comparisons—Actual traffic represented, rates compared for like distances under general mileage scales (P. MacNulty), 42900-10, 43023.
No inferences were drawn from the figures, Witness preferred to leave them to speak for themselves (P. MacNulty), 42685, 42717-21, 43011-14, 43024.

STATE RAILWAYS—*continued.*
Rates—Continental Rates—*continued.*
Comparison of Irish rates—*continued.*
Perishables—Comparisons had been made with slow transit rates, quick transit on the Continent cost double, roughly speaking—Question as to conditions which might upset percentages given (P. MacNulty), 42889-99.
Potatoes (old)—Ratio of rates in France and Holland to Irish rates (P. MacNulty), 42971-7.
Quoted rates had been used—if they were paper rates they applied to the countries generally (P. MacNulty), 43018-21.
Ten-ton rate—Only three of the seven countries under discussion gave a ten-ton rate, question of revising statistics and inserting rates that would be applicable for ten tons (P. MacNulty), 42735-55, 42908.
Volume of traffic carried under any rate had not been taken into consideration (P. MacNulty), 43022.
Disinfecting goods wagons, Charge for—
Austria-Hungary (P. MacNulty), 38832.
Holland (P. MacNulty), 38742-5.
No similar charge in Ireland (P. MacNulty), 38833-4.
Distances given in statistical comparison, question whether there were any railway lines so long in some of the smaller countries—Provision was made for 233 miles in Denmark, Witness had taken the published rate (P. MacNulty), 43002-7.
Empties—Holland, nothing calling for comment (P. MacNulty), 38738.
Exhibition, goods for—Austria, conditions practically the same as in Ireland (P. MacNulty), 38825
Export rates—Austria-Hungary—export tariffs only applied when goods were sent direct out of the country, Conditions under which rebate might be claimed (P. MacNulty), 38837-8.
Express goods, charges for, Conditions, etc.—
Austria (P. MacNulty), 38808.
Belgium (P. MacNulty), 38724-5.
Denmark (P. MacNulty), 38766, 38773.
Holland (P. MacNulty), 38728-9.
Fast train, conveyance by—Charges, minimum freight (P. MacNulty), 38787-9.
Subscription rate for fast goods—Austria (P. MacNulty), 38815.
Fixing and altering rates—France, initiation of movement for reduction of rates, question of—Powers of Minister of Public Works, (P. MacNulty), 42809-25.
Hungary—differences between rates system in Germany and Hungary (P. MacNulty), 38804-7.
Information as to rates—Publicity attached to every detail, rates and traffic regulations drawn up with precision, every document being for sale (P. MacNulty), 42844-53.
Advantages—Exaction prevented, trader able to analyse the rate himself, undue preference rendered very difficult (P. MacNulty), 42854-62.
Belgium—List produced by Mr. Acworth of 34 separate publications, expense and difficulty in ascertaining rates—Book quoted by witness related to interior transit only and was quite easy to understand (P. MacNulty), 42617-58.
Perishable goods, charges for, conditions, etc.—Denmark (P. MacNulty), 38766-71.
Poultry—Rates and conditions for live poultry—Austria (P. MacNulty), 38811-15, 38818-20.
Private Railways, comparison of rates with those on State Railways in France—Special tariffs on State Railways were, generally speaking, lower than on private railways (P. MacNulty), 42800-3, 42807-8.

STATE RAILWAYS—*continued.*
Private siding goods, charges in France (P. MacNulty), 38900.
Quick or fast goods, charges for, conditions, etc.—
Austria (P. MacNulty), 38809-10.
Denmark (P. MacNulty), 38766-71, 38784-6.
Holland (P. MacNulty), 38729-31.
Resemblance between systems of rates in the seven Continental countries examined by witness (P. MacNulty), 42826-33.
Slow goods and slow parcels goods—Charges, Conditions—
Austria-Hungary (P. MacNulty), 38816.
Denmark (P. MacNulty), 38790-1.
Holland (P. MacNulty), 38731.
Special Rates—Holland—
Agricultural produce (P. MacNulty), 38732, 38746-50.
Coal and Coke carried under yearly agreements (P. MacNulty), 38751-3.
Import and Export traffic (P. MacNulty), 38754-9.
Terminals, *see* that sub-heading
Unit Rates—
Austrian and Hungarian Railways—Tables of unit rates to be handed in (P. MacNulty), 38842.
Holland—Table to be handed in (P. MacNulty), 38764.
Wagon-load Rate—Quantities, Conditions—
Exclusive use of wagon—Sender required to pay for full capacity of wagon (P. MacNulty), 38739-41.
Holland (P. MacNulty), 38733-4, 38736-7.
Removal of Traffic—
Advice to sender in case of delayed removal, obligation on railway—Posting fee charged—
France (P. MacNulty), 38911-2.
Germany (P. MacNulty), 38924-7.
Storage fees when goods were not removed within prescribed time—
France (P. MacNulty), 38906-11.
Germany (P. MacNulty), 38928-9.
Strategic reasons for State Ownership of Continental railways (R. A. Anderson), 43275.
Terminals—
Loading and Unloading—
Austria-Hungary (P. MacNulty), 38839-41.
Cranes, use of—Fees—
France (P. MacNulty), 38905.
Germany (P. MacNulty), 38916-8.
Germany (P. MacNulty), 38914-5.
Heavy traffic, loading done by senders—Germany (P. MacNulty), 38923.
Station Terminals included in charge—France (P. MacNulty), 38892-5.
Time limit, demurrage charges, etc.—France (P. MacNulty), 38880-7, 38921-2.
Germany (P. MacNulty), 38919-21.
No fee charged by railways where they did not to do the work—France (P. MacNulty), 38896-8.
Exception in cases where goods were loaded by railway and unloaded by consignee (P. MacNulty), 38891.
Small consignments, not exceeding 40 Kg., exempt from loading, unloading, and station charges—France (P. MacNulty), 38903-4.
Time limits for conveyance of goods traffic—France (P. MacNulty), 38957-85.
Wagons—
Covers—Sender had either to provide covers or pay railway for providing them—Fees and Regulations (P. MacNulty), 38931-47.
Ordering of wagons for Merchandise—Regulations—
Belgium (P. MacNulty), 38864-9.
France (P. MacNulty), 38859-62.
Germany (P. MacNulty), 38874-5.

STATE RAILWAYS—*continued.*

Wagons—*continued.*

Refrigerator or Ice wagons for transport of provisions—Regulations—
France (P. MacNulty), 38948-52, 38954-6.
No special charge made in Ireland, but witness thought a minimum consignment was specified (P. MacNulty), 38953.

Unused portions of wagons, right of railway to make use of in Germany (P. MacNulty), 38887-91, 38930.

Way-bill—
Charge for—Given away in Ireland (P. MacNulty), 38777-80.
Colour—Different coloured way-bills for the various modes of transit (P. MacNulty), 38775-6.
Invoice and receipt, way-bill served as, on the Continent (P. MacNulty), 38780-2.

Weighing or counting of goods, charges for (P. MacNulty), 38879.

Working of State Railways—
No country existed where public opinion desired to substitute a system of railways worked for private benefit (J. W. Shea), 41967.

Not as good as that of private lines—Sweden (R. A. Anderson), 43274.

STEAMER SERVICES.

Congested Districts Board—Steamer Services subsidised by the Board, Amount spent, Duration of Services, Benefit derived, etc. (F. W. D. Mitchell), 39405-37, 39450-9.

Local Opposition to Board granting subsidies, Instances of—Not a serious difficulty (F. W. D. Mitchell), 39460-9.

New Services or run in connection with existing lines, question of (F. W. D. Mitchell), 39470.

Services would doubtless be continued if subsidies had been increased (F. W. D. Mitchell), 39472.

Smallness of subsidies, question of—Branches which did not pay for their own mileage but paid as figures for the main line (F. W. D. Mitchell), 39471.

Treasury economy in connection with Administrative charges of Congested Districts Board—Abolition of Steamboat Services an indirect result (F. W. D. Mitchell), 39499-503.

STRABANE AND LETTERKENNY RAILWAY.

Tourist traffic, Hindrance to owing to want of connection with Letterkenny and Burtonport line (J. W. Manning), 41261-6.

STRADBALLY.

Limestone Quarries near—Industry practically killed by lack of transit facilities (P. A. Meehan), 40081-3.

SUBSIDIES.

Policy of subsidies to assist communications a very good one—Difficulty of local opposition not serious (F. W. D. Mitchell), 39467-9.

SUNDAY TRAVELLING.

Gaelic Association of Ulster, Facilities for Sunday travelling refused by Great Northern Railway (P. Whelan), 43579-81.

SWANLINBAR.

Rates—

Bacon—Through rate from Liverpool compared with local rate from Belfast to Florencecourt (G. de Belle Ball), 41394-7.

Belfast to Florencecourt—Goods booked to Enniskillen and re-booked instead of being booked through—Resulting in higher charge (G. de Belle Ball), 41381-4, 41389-91.

SWANLINBAR—*continued.*

Rates—*continued.*

Great Northern Railway Rates—Statement by Drogheda Development Association—
List and particulars of Railway Vouchers in which Rates in some cases exceeded the maximum and in which there was overcharge or other irregularity (G. de Belle Ball), 41360, pp. 86-7, 41393-4, 41397-404.
Maximum class Rates from Belfast and Londonderry to Florencecourt (G. de Belle Ball), 41360, p. 85.

T.

TAGOAT, COUNTY WEXFORD.

Poultry trade, development due to railway facilities (Rev. P. J. Dowling), 40998-9.

TANNERIES.

See Leather Industry.

TAXATION—OVER-TAXATION OF IRELAND.

Amount—Estimate by Financial Relations Commission constituted a good working hypothesis (F. W. D. Mitchell), 39518-9.

Extension of Railways—If a grant were made as a set-off against Over-Taxation all the branch railways required could be provided (J. Butler), 40044-52.

Refer also to Nationalisation—Financial Aspect.

TEMPLEMORE.

Rates—

Kingsbridge, Higher rates to and from Kingsbridge for Templemore than for Thurles and Nenagh though distance was less (J. Kelly), 42462-97, 42507.
Ale and porter (J. Kelly), 42475-91.
Bar iron and corrugated sheets (J. Kelly), 42492-6, 42535-6.
Barley—Witness could not give figures, but rates were higher than for Thurles—Injury to Trade (J. Kelly), 42551-9.
Cement (J. Kelly), 42470-4, 42507.
Explanation of difference—Company unable to raise rates in force to Thurles at time of amalgamation, Nenagh rates ruled by Water Competition (J. Kelly), 42499-503, 42537.
Feeding stuffs (J. Kelly), 42465-9.
Flour (J. Kelly), 42524-8.
General scheme of law in relation to goods rates, practice in contradiction to spirit of law (J. Kelly), 42546-8.
Remedy desired—Reduction of rate to Templemore, not increase of rates to Thurles and Nenagh (J. Kelly), 42538-41.
Serious handicap on dealers in Templemore (J. Kelly), 42498, 42504-6, 42537.
Timber (J. Kelly), 42497, 42535-6.

Three-ton rate withheld from Templemore while given to Thurles and Nenagh—Differentiation injurious to Templemore not explained by water competition (J. Kelly), 42477-91, 42495, 42517-23, 42542-5.
Ale—Quantity usually sold at a time (J. Kelly), 42534.
Cement, inconvenience in case of—Quantity of cement usually sold to a customer, etc. (J. Kelly), 42529-3.
Refusal of rate applied generally to traffic into or out of station (J. Kelly), 42561-2.

Representations to Railway Company—Company gave no satisfaction (J. Kelly), 42515-6.

Train Service—
Cork—no train leaving for the South before 11 a.m., difficult to get back in one day (J. Kelly), 42508-10.
Newspapers not delivered till after 11 a.m., while Thurles had them between 8 and 9 (J. Kelly), 42511-4.

TERMINALS.
State Railways, *see* that title.

THIRD CLASS PASSENGERS.
Better accommodation needed—Third class passenger paid the dividend (Capt. H. M'Ternan), 41218-20.
Fares, *see* that title.
Midland Great Western, Bad accommodation (Capt. H. M'Ternan), 41177-9, 41216-7.

THROUGH RATES—Difference between cross-Channel Rates and Local Rates, giving a preference to Imported Goods——Inland Through Rates, etc. (W. L. Micks), 39228-32; (B. E. F. Sheehy), 41503-4.
Continental Ports to Stations in Great Britain—Irish Stations to same Stations in Great Britain—Mr. MacNulty's Comparison of Rates—
Bacon (P. MacNulty), 44030A, pp. 176-7.
Butter (P. MacNulty), 44030A, pp. 172-3.
Copenhagen, question as to omission of from list of ports (P. MacNulty), 44034-6.
Description of what the Tables comprised (P. MacNulty), 44018-30.
Eggs (P. MacNulty), 44030A, pp. 174-5.
Potatoes (old in sacks) (P. MacNulty), 44030A, pp. 180-1.
Poultry (dead) by goods Train (P. MacNulty), 44030A, pp. 178-9.
Principle upon which Rates were selected and upon which sea distances and land distances were worked out (P. MacNulty), 44037-43.
Sea distances used in arriving at figures shown in comparative tables (P. MacNulty), 44030A, p. 191.
Crippling and suppressing of Irish Industries (P. F. Mullally), 39597-600; (P. A. Meehan), 40220; (P. Whelan), 43515-6.
Australian butter, American bacon and Russian eggs sold in Ireland, value of, etc. (C. Culhane), 42329-35.
Itinerant instructors, failure of (C. Culhane), 42332.
Small factories could be established to compete with American bacon, but no one would go into the business where a railway had full control (C. Culhane), 42336-9.
Department of Agriculture had collected statistics for the purpose of showing that Irish agricultural and industrial interests were injured by the relative excess of interior rates over import rates (P. MacNulty), 42788-90, 42998.
Everything worn and almost everything eaten was imported (C. Culhane), 42348-9.
Food producer in Ireland deprived of his market even in his own country (C. Culhane), 42340.
Injury more far-reaching than that directly inflicted by the trade and navigation laws (P. A. Meehan), 40343.
Interest of the railways was to encourage Irish industries—no explanation of the fact that they did not do so (P. A. Meehan), 40350-55.
English Railway Companies, Domination of, a possible cause (P. A. Meehan), 40356.
Interior points, effect on—Crippling effect on output (C. Culhane), 42310-1.
Internal rates more important than export rates in a country like Ireland (P. MacNulty), 42796-8.
Manufacturing Industries, creation of—Low import and high inland rates most potent influence in preventing (C. Culhane), 42341, 42364-7.
Plews's, Col., Statement that railways would be ruined if they carried interior traffic at rates corresponding to those for imported goods (P. Whelan), 43517-9.
Damage or delay in transit, difficulty in fixing responsibility for, in rates over two or more systems—Instances (R. A. Anderson), 43066.

THROUGH RATES—*continued.*
Damage or delay in transit—*continued.*
Amendment of law making contracting companies suable proposed (R. A. Anderson), 43066, 43348.
Equalisation of Through Rates and Local Rates needed (P. A. Meehan), 40347.
Foreign Competition—Irish Producers supplanted in British Markets (P. A. Meehan), 40336-8, 40342; (C. Culhane), 42312-5; (P. Whelan), 43435-6.
Amount of imports into Great Britain from abroad of special products of Ireland (Rev. P. J. Dowling), 41053-4, 41141-3.
Comparison of outward rate from Galway to Liverpool with rate from Copenhagen to Dublin (P. Murphy), 39716-28, 39730-1.
Size of consignment—Nothing to explain the difference of rate (P. Murphy), 39785-93.
Critical position of Irish farmers—Tillage discouraged, land going out of cultivation, etc. (C. Culhane), 42313, 42316-8, 42327-8.
Department of Agriculture had made a statistical comparison showing that Irish agricultural interests were injured by the relative excess of export rates from Ireland to Great Britain over export rates from Continental countries to Great Britain (P. MacNulty), 42791-5, 42998.
More favourable rates for food products from Canada, Denmark, etc., to London than from Irish ports—Instances (P. A. Meehan), 40253-64, 40283-6, 40450-1.
Questionable policy for England to allow her food supplies to fall into the hands of countries with which she might be at war (Culhane), 42325.
Reduction of Outward Rates desirable in order to give the Irish Agriculturist a chance (W. L. Micks), 39224-7; (P. A. Meehan), 40454; (Rev. P. J. Dowling), 41057.
Great expansion of exports would result—Instances (C. Culhane), 42319, 42326.
High Export Rates placed Ireland under a disadvantage, but there were other more important factors (W. L. Micks), 39233.
Nature of reduction desired—Equality not a favoured position (C. Culhane), 42320-2.
Reduction of outward Rate to parity with Import Rates, Opinion in favour of (P. A. Meehan), 40346.
Goods produced, or producible, in Ireland—Comparison of Irish Interior Rates with Import Rates from trading and shipping Centres in Great Britain to the same points of destination in Ireland as those selected for the Irish Rates—
Bacon (P. MacNulty), 44030A, pp. 184-5.
Butter (P. MacNulty), 44030A, pp. 182-3.
Cheese (P. MacNulty), 44030A, pp. 182-3.
Flour (P. MacNulty), 44030A, pp. 184-5.
Furniture (P. MacNulty), 44030A, pp. 186-7.
Sea distances used in arriving at figures shown in comparative tables (P. MacNulty), 44030A, p. 191.
Shirts (P. MacNulty), 44030A, pp. 188-9.
Soap (P. MacNulty), 44030A, pp. 186-7.
Inequality of Inward and Outward Rates—High outward rates—
Bacon in bales—Tipperary to Liverpool rate compared with rate from Liverpool (J. W. Shea), 41963, 41965.
Paris instance (Rev. P. J. Dowling), 40982-3
Blame attached not to railways but to City of Cork Steam Packet Co. (Croker Barrington), 40994.
Raw material sent to English town, cost the same as for manufactured article sent back to Ireland (P. Whelan), 43512.
Reverse should be the case (Rev. P. J. Dowling), 40985-6.
Information as to rates—Publication of rates would result in great saving to the public (W. L. Micks), 39320.

THROUGH RATES—*continued.*
Inland through rates—
Basis—
Proportion accruing to Irish Companies on their through rates—basis proposed (P. Whelan), 43485-9, 43535.
Usually sum of local rates (P. Whelan), 43533-4.
Need for through rates from one centre of industry to another—They did not exist for all classes of produce at present (P. Whelan), 43477-84.
No Through Rates—
Compulsory through rates between all stations where goods facilities existed, proposed (R. A. Anderson), 43066, 43084, 43347.
Injury to Irish trade (R. A. Anderson), 43293-4.
North-Eastern Railway of England, Through rates not given except from certain ports (R. A. Anderson), 43065-6.
North Staffordshire line, Through rates not given to inland towns (R. A. Anderson), 43085.
Object of refusing Through rates—Increase in terminal charges (P. Whelan), 43532.
Power of railway companies to refuse Through rates (P. Whelan), 43531.
Slates (P. MacNulty), 44030, p. 190.
Protection in their own markets desired for Ireland—Fair conditions would tend to stimulate Irish Production (W. L. Micks), 39233-6; (C. Culhane), 42322-4.
Publication of rates would result in great saving to the public (W. L. Micks), 39320.

THURLES.
Compensation for loss seldom given, recent practice was to pay no claim till company was brought into court—Small traders unable to bear the expense, and ignorant of their rights (C. Culhane), 42289-93 42299-300.
Delivery of goods—Goods arriving about 3 or 4 p.m., sometimes impossible to get them delivered the same day (C. Culhane), 42219-21.
Dissatisfaction with present administration of railways, power too centralised, etc. (C. Culhane), 42273.
Importance as grain and agricultural centre, kind of goods imported and exported (C. Culhane), 42301-8.
Industries—
Industries which had shrunk or disappeared (C. Culhane), 42345, 42350.
Prospects of developing industries—Good deal might be done with help of railways (C. Culhane), 42256, 42351.
Rates—
American Rates, comparison with—Cheaper to send from New York to Chicago than from Thurles to London (C. Culhane), 42276-7.
Bed feathers—Killorglin to Thurles, Rate the same from Hamburg to Munich (C. Culhane), 42251.
British centres of distribution, rates from, compared with rates from Irish centres for flour (P. MacNulty), 44030A, p. 184-5.
Cattle—Athenry, rate to Thurles compared with rate to Hazelhatch (C. Culhane), 42252.
Eggs, butter and fowls—Rates to Manchester, London and Waterford (C. Culhane), 42252.
Excessive unless there was competition—Impossible for inland traders to exist when there was keen competition (C. Culhane), 42249, 42252-3, 42255-6.
Grain—
Anomalies in rates, Lower rates for longer distances, etc.—Rates to Nenagh, Carlow, Waterford (C. Culhane), 42244, 42246-7, 42352.
Dublin—Reduction of rate due to competition by the Waterford and Limerick (C. Culhane), 42240-4.

THURLES—*continued.*
Rates—*continued.*
Grain—*continued.*
Raising rate since Amalgamation—Railway unable to raise rates though they had made great efforts (C. Culhane), 42245.
Hides—
Cheaper to send from Tralee to Cork or Liverpool than to send from Thurles (C. Culhane), 42247-9.
Dublin, rate to, higher than rate from Liverpool to New York or Boston (C. Culhane), 42249-51.
Tralee, rate to, Thurles the same as from Liverpool to Chicago (C. Culhane), 42251.
Higher rates charged for shorter distances—Practice existed, though contrary to general scheme of the law, company's action based on expediency (C. Culhane), 42353-5.
Stopping traffic—Rates did gradually stop traffic, whatever the intention of the company (C. Culhane), 42356-8.
Through Rate for feathers to London higher than combined local rates (C. Culhane), 42277-81.
Rebates—None given so far as witness was aware (C. Culhane), 42274-5.
Representations to Railway Company—
Rarely made, stationmaster had no power to settle anything without referring to headquarters (C. Culhane), 42222-30, 42286-7.
Substitution, Complaint as to, brought to notice of railway company claim refused until witness brought the company into court, when they had to pay (C. Culhane), 42257-68.
Traders' complaints perfectly well-known to the companies (C. Culhane), 42294-5.
Staff—
Inadequate staff, trader had to do the loading though he paid terminals—No rebate given by railway (C. Culhane), 42230-9.
Number of porters (C. Culhane), 42303.
Train Service—
Cork district, inadequate passenger service to (C. Culhane), 42216-7.
Waterford and Cork, goods for—Goods having to be loaded by 12.30 to catch the day's goods train (C. Culhane), 42218.

TIPPERARY.
Rates—
Bacon in bales—Rate to Liverpool *via* Waterford or Cork compared with rate from Tralee to Liverpool (J. W. Shea), 41908-9, 41963-5.
Butter—Rate to Liverpool *via* Waterford was double the rate from Clonmel, although it was only 21½ miles from Tipperary (J. W. Shea), 41896, 41962.
Competiton had existed for a time owing to running powers of Dublin and South Eastern Railway to Tipperary and Limerick Junction (J. W. Shea), 41969-70.
Eggs—Through rate to Bolton compared with through rate from Limerick, Injustice to Tipperary (J. W. Shea), 41892-5, 41962.
Manchester a larger centre for distribution of Irish produce than Liverpool—High rates from Tipperary and Clonmel as compared with rate to Liverpool (J. W. Shea), 41896-7.
Milk—Existing rate to London prohibitive, large trade could be created in South Wales if better rates and facilities were given (J. W. Shea), 41901-7.

TIPPERARY COUNTY.
Motor Services suggested for Butter and Eggs (J. W. Shea), 41917-23.

TIPPERARY FARMERS' SOCIETY.
Non-political and non-sectarial Society, started in 1907 (J. W. Shea), 41857-8.

Tourist Traffic.
Encouragement by directors as a set-off against reduction of traffic by high rates—Inadequate substitute for development of manufactures and industries (P. Whelan), 43529-30.

Trade, Board of.
Railways, powers in respect of—Useless for redress of traders' grievances (C. Culhane), 42297-8.

Traders' Tickets.
See Fares.

Train Service.
Connections—
Great Southern and Western Railway—Local connections sacrificed to favour the Rosslare route (B. E. F. Sheehy), 41475-81, 41513-5, 41518, 41535-8.
Midland Great Western and West Clare Railway—No passenger service now, only a goods service (B. E. F. Sheehy), 41515, 41517-8.
Unified management as remedy for bad connections (P. A. Meehan), 40436-8.
Refer also to Names of Places.
Passenger Service—Great Southern and Western Railway, delays and unpunctuality, Instance at Sallins (P. Murphy), 39711-5.
Trains on separate systems leaving terminal points at nearly same time, inconvenience and danger—Instances (P. Whelan), 43541-2.

Tribunal for dealing with complaints against Railway Companies.
Cheap and accessible tribunal desirable (J. Murland), 40889; (J. W. Shea), 41883.
Need for some means whereby traders, especially small traders, could get redress (C. Culhane), 42257, 42269-70.
Public Ownership of railways—
Disputes would not be reduced, but models for an authority to settle disputes could be found in countries which now had State railways (W. L. Micks), 39318-9.
Nature of cases that might arise, question as to necessity for employment of counsel (W. H. Macnamara), 43731-2.
Railway and Canal Commission, *see* that title.

Tyrone.
Postal Service—Horse vehicle taking mails owing to high railway rates, Inconvenience and delays resulting, etc. (J. P. Rafferty), 40684.

W.

Wagons.
Covers—
Provided free in England and Ireland (P. MacNulty), 38944.
State Railways throughout the Continent—Fees and Regulations (P. MacNulty), 38931-47.
Disinfecting Goods Wagons—
No charge in Ireland similar to that on the Continent (P. MacNulty), 38833-4.
State Railways, *see* that tile—Animals.
Private Goods Wagons—Practically none in Ireland (Tatlow), 38947-8.

Water Competition, Effect on Rates.
Lower rates given for longer distances owing to existence of water competition—Instances (P. A. Meehan), 40245-52, 40458-60; (J. P. Rafferty), 40596-603, 40606-7.
Injustice of penalising places where there was no competitive route (P. A. Meehan), 40461.
Rates should be equal in proportion to mileage (J. P. Rafferty), 40608-9, 40640.
Position of Railways—Low rates necessary to secure traffic against water competition (J. P. Rafferty), 40706-8.

Waterford, Dungarvan and Lismore Railway.
Guarantee—Ratepayers in Mullinahone and district paying guarantee and deriving no benefit from railway (P. F. Mullally), 39554.

Way-bill.
State Railway, *see* that title.

Westport, Clifden and Belmullet.
Steamer service subsidised by Congested Districts Board (F. W. D. Mitchell), 39421-4, 39513.
Local opposition to subsidy (F. W. D. Mitchell), 39466.

Wexford.
Communication between north and south stations, partial suspension of, since 1st Jan. (J. J. Rossiter), 43894-905.
Boat trains did connect (J. J. Rossiter), 43960, 43962.
Engines went on, while passengers and luggage were left behind (J. J. Rossiter), 43933, 43957-61.
Notice—Short notice given, but no reason (J. J. Rossiter), 43953-6.
Number of trains which did not connect (J. J. Rossiter), 43901-3, 43963.
Object of alteration, question as to—Diversion of traffic from South Eastern line (J. J. Rossiter), 43964-9.
Representations to Railway Company not likely to effect anything (J. J. Rossiter), 43952.
Population (J. J. Rossiter), 44017.

Whelan, Mr. Patrick.—*Representative of Monaghan County Council.*
Evidence, 43400-43581.

Woollen Manufactures in Ireland.
Decay—Causes of decay, evictions and Acts prohibiting export of Irish woollens (P. A. Meehan), 40093-7, 40305-13.
Factories formerly flourishing in Queen's County (P. A. Meehan), 40092.
Grant by Irish Parliament for establishment of industry at Cullenagh (P. A. Meehan), 40094.
Voted but never given (P. A. Meehan), 40484-7.

Workmen's Tickets.
See Fares.

Y.

Youghal and Cappagh—Railway proposed for purpose of shortening route between Queenstown and London *via* Rosslare and Fishguard (W. B. Ronan), 41587.
Brick trade might be developed, hampered at present by cartage expenses (T. Farrell), 41699, 41720-1.
Capital—£93,000 held by the Treasury pending fulfilment of conditions by Fishguard and Rosslare Company—Transfer of money which should have been appropriated to Cork and Fermoy line to Youghal and Cappagh line proposed (W. B. Ronan), 41610-4, 41623-31; (T. Farrell), 40701.
Arrears of interests, loss in respect of—Question of Treasury reluctance to give a further grant (W. B. Ronan), 41667-9.
Attitude of Fermoy people (W. B. Ronan), 41616-7.
Conditions imposed prior to return of money to railway company, question of (W. B. Ronan), 41660-6, 41670-5.
Purpose of Cork to Fermoy Railway would be as well, if not better, served by the line from Youghal to Cappagh (W. B. Ronan), 41632-3, 41639-41.
Railway Companies would probably find remainder of capital if the £93,000 were made available (W. B. Ronan), 41654, 41658.

YOUGHAL AND CAPPAGH—*continued.*

Ratepayers of west and south-west of County Waterford—proposed railway would be some return for the payments made in respect of the Dungarvan line (T. Farrell), 40701-4A, 40711-16.

Rates between Cork and Fermoy based on assumption that there was a direct line between the two places (W. B. Ronan), 41615, 41639.

Cappoquin and neighbourhood—Steamer service (T. Farrell), 41708.

Conference of Representatives of Councils and Local Bodies in Cork City and County (T. Farrell), 41682-3.

Opinion unanimous in favour of railway (W. B. Ronan), 41635-6.

Cost question (W. B. Ronan), 41591; (T. Farrell), 41722-3.

Country which would be opened up—no towns on line itself, merely a connecting line (W. B. Ronan), 41606-7.

Distribution of imports would be facilitated (T. Farrell), 41717-8.

Engineering—no great difficulties, question as to breadth of bridge across the Blackwater (W. B. Ronan), 41588-9; (T. Farrell), 41692-4, 41724.

Existing route between Queenstown and Dublin somewhat congested, proposed line would afford considerable relief (W. B. Ronan), 41596-7.

Fermoy, attitude of, with regard to proposed railway (W. B. Ronan), 41637-8; (T. Farrell), 41732-3.

Fish trade practically undeveloped, existing mode of transit (T. Farrell), 41700.

Increased facilities desired for Queenstown (W. B. Ronan), 41604.

Length (W. B. Ronan), 41590.

Loop-line at Queenstown Junction, question of (W. B. Ronan), 41598-9.

YOUGHAL AND CAPPAGH—*continued.*

Markets, access to best markets would be obtained (T. Farrell), 41719.

Minerals which would be tapped by line (T. Farrell), 41705, 41720.

Naval and Military uses—Strategic value of line along the coast (T. Farrell), 41706.

Ordinary mail, acceleration of—Night mail from Cork to London sent *via* Rosslare (W. B. Ronan), 41600-2.

Profit Question—

Development of traffic sufficient to pay a 3 per cent. dividend, question of (T. Farrell) 41725-31.

Local traffic would not pay, line would rely on mails and through traffic (T. Farrell), 41709-10.

Queenstown and the American Mails, shortening route in interest of—desire to keep American Mail traffic in South of Ireland (W. B. Ronan), 41587, 41641, 41652, 41676-8.

Harbour at Queenstown—Largest vessels could enter at low tide (W. B. Ronan), 41651.

Increase in bulk of American Mail, Importance, etc. (W. B. Ronan), 41603-4.

Post Office decision for the present in favour of Queenstown as American Mail Station (W. B. Ronan), 41608-9, 41649-51.

Saving in distance and time (W. B. Ronan), 41592-5, 41642-8; (T. Farrell), 41686-8.

Survey of line in 1864 by Brunel (T. Farrell), 41684.

Terminus at Youghal—Inconvenient position, cartage expenses which would be saved by proposed line (T. Farrell), 41689-97.

Tourist traffic, development of (T. Farrell), 41698, 41707-8.

Waterford County—Districts which would be served (W. B. Ronan), 41655-7.

VICE-REGAL COMMISSION ON IRISH RAILWAYS.

INDEX TO THE APPENDICES.

Page

Appendix 1.—Statement as to Rates, Transport Arrangements, &c., in connection with Continental Railways, submitted in evidence by Mr. Philip MacNulty, a Transit Inspector of the Department of Agriculture and Technical Instruction at the Public Sittings in Dublin, January, 1908, ... 231

Appendix 2.—Revised Tables of Comparison with Continental Railway Rates prepared by the Department of Agriculture and Technical Instruction, and handed in by Mr. MacNulty, Transit Inspector, during his examination on the 12th March, 1908, ... 336

Appendix 3.—Explanatory Memorandum, furnished by Mr. P. MacNulty, Department of Agriculture, on the subject of the publication of Continental Railway Rates, referred to during his examination on the 12th March, 1908, ... 405

Appendix 4.—List of Complaints as to traffic arrangements in connection with the Transit of Cattle, furnished to the Commission by Mr. William Field, M.P., on behalf of the Irish Cattle Traders' and Stockowners' Association, ... 407

Appendix 5.—Explanatory Memorandum, furnished to the Commission by the Manager of the Midland Great Western Railway, in connection with the statement transmitted by the Granard Urban District Council (Appendix No. 13, Vol. I., Minutes of Evidence), . . 409

Appendix 6.—Explanatory Memorandum, furnished to the Commission by the General Manager of the Great Northern Railway (Ireland) in connection with Mr. Harold Barbour's statement as to Flax Rates, etc. (Appendix No. 18, Vol. II., Minutes of Evidence), . . 409

Appendix 7.—Explanatory Memorandum, furnished to the Commission by the Manager of the Midland Great Western Railway, in connection with the statement of grievances transmitted by the Roscommon Traders' Association (Appendix No. 27, Vol. II., Minutes of Evidence, . 410

Appendix 8.—Explanatory Memorandum, furnished to the Commission by the Great Southern and Western Railway, through the Irish Railway Committee, in connection with Sir Alec. W. Shaw's letter of October 12th, 1907 (Appendix No. 34, Vol. II., Minutes of Evidence), . 411

Appendix 9.—Memorial, regarding a proposed Station at Ballinascaula Bridge, between Kilmallock and Knocklong, addressed to the Directors of the Great Southern and Western Railway by a large number of residents in Kilfinane, Kilmallock, Bruff, and other places in that district; and correspondence between the Commission and the Secretary of the Company on the subject, ... 411

Appendix 10.—Correspondence relative to the proposed re-opening of Mountjoy Station on the Great Northern Railway, forwarded by Mr. A. Hamilton, representative of the Omagh Board of Guardians, in connection with his evidence on this subject, submitted to the Commission on the 13th January, 1908, ... 413

Appendix 11.—Extracts from a book published in 1800, containing resolutions, estimates, reports, &c., relating to a proposed canal from Monasterevan to Castlecomer, handed in by Mr. P. A. Meehan, M.P., a representative of the Queen's County County Council, after his examination on the 14th January, 1908, ... 415

Appendix 12.—Correspondence between the Commission and Mr. Peter Gannon, Baronial Auditor for the Cavan and Leitrim Railway, and representative of the Ballinamore Rural District Council (who gave evidence on the 14th January, 1908), with copy of his report on the accounts of the Cavan and Leitrim Railway to the Treasury and County Council, &c., ... 417

Appendix 13.—Statement transmitted by Rev. P. J. Dowling, C.M., Cork, supplementary to his evidence of the 15th January, 1908, and explanation subsequently furnished by the Manager of the Midland Great Western Railway, ... 419

Appendix 14.—Letter handed in by Captain H. MacTernan, D.L., Heapstown, Boyle, County Roscommon, after his examination on the 15th January, 1908, and explanation subsequently furnished by the Manager, Midland Great Western Railway, ... 427

Page

Appendix 15.—Petitions to the Commission relative to the working of the Letterkenny to Burtonport Railway, handed in by Mr. J. W. Manning, Carrigart, County Donegal, during his examination on the 15th January, 1908, ... 423

Appendix 16.—Extracts from Documents as to disinfection of Railway Carriages and Horse Boxes, &c., handed in by Mr. Brian E. F. Sheehy, C.E., Limerick, during his examination on the 16th January, 1908, . 424

Appendix 17.—Railway Dockets handed in by Mr. J. Hurley, J.P., Leap, County Cork, during his examination on the 16th January, 1908, . . 425

Appendix 18.—Correspondence relative to Rebates, &c., between the Commission and Mr. J. W. Shea, J.P., representative of the Tipperary Farmers' Society (who gave evidence on the 16th January, 1908), and explanatory memoranda subsequently furnished by the General Managers of the Great Southern and Western and Dublin and South Eastern Railways, ... 426

Appendix 19.—Correspondence relative to the appointment of Arbitrators (Farranfore and Killorglin Railway Act, 1880), handed in by Mr. J. Hilliard, representative of the Killarney Urban District Council, during his examination on the 17th January, 1908, and explanation on the subject subsequently furnished to the Commission by the Irish Railway Committee, ... 427

Appendix 20.—Statement, *re* County Leitrim Coal Field, dated 30th January, 1908, furnished by Captain H. MacTernan, D.L., Heapstown, Boyle, Co. Roscommon, ... 430

Appendix 21.—Explanation furnished by Mr. Alic. J. P. Wise, Cappoquin, relative to matters referred to during his examination on the 4th January, 1907, ... 430

Appendix 22.—Statements as to excessive rates for Eggs, &c., transmitted by Messrs. Joseph Minchin and Sons, Clonmel, on the 14th January and 21st February, 1908, and explanations in connection therewith subsequently furnished by the Traffic Manager of the Great Southern and Western Railway, ... 431

LINEAR MEASURE.

All above Countries, ...	1 Metre (m) = 39·3708 inches, or 1·0936 yards. 1 Kilometre (Km.) = 1093 633 yards, or ·62138 of a mile.

SQUARE MEASURE.

All above Countries, ...	1 Square Metre = 10·7643 square feet.

NOTE.—The letters in brackets indicate abbreviations used throughout the text.

LEGAL MAXIMUM RATES.

FRANCE.

2. How fixed

The Maximum Rates are contained in a "Charge Book" issued by the State to each large company. The working rates and conditions are, in the first place, proposed by the Railway Administration, but must have the approval of the Minister of Public Works. For railways of local interest and tramways

LEGAL MAXIMUM RATES—*continued.*

it is the Prefect of the Department who confirms the working rates, etc. The right of direct confirmation has been reserved in only two cases—(1) In case of tramways conceded by the State, and (2) in rates common to several lines.

The maximum rate fixed for quick transit on the large railways is a uniform one of 36 centimes per tonne per kilometre.

The maximum tariffs (exclusive of accessory fees, such as registration, handling, &c., &c.), fixed by the charge book for slow transit on the State and other large railways are:—

Goods per tonne and per kilometre.

Class 1, . . .	Fr. 0·16
Class 2, . . .	Fr. 0·14
Class 3, . . .	Fr. 0·10
Class 4—	
Journeys of 0 to 100 km. (max. tax, 5fr.*)	Fr. 0·08
Journeys of 101 to 300 km. (max. tax, 12fr.*), ...	Fr. 0·05
Journeys of more than 300 km., . . .	Fr. 0·04

* Applies to State Railway only.

BELGIUM.

3. How fixed.

Rates and conditions of transport are fixed on the State railways by a special law or in virtue of the General Transport Law of 25th August, 1891, and on the conceded railways and light railways by their governing authorities within the limits of the specification and with the approval of the proper Minister, with the exception of the modifications agreed to in virtue of a special law.

There is no information in the published documents or books of the railway showing the maximum prices fixed.

GERMANY.

4. How fixed

There are no statutory maximum rates for large railways. Each State Railway Administration fixes its own rates, but the Imperial authority exercises through the Imperial Railway Office a certain control, which has for its aim, among other things, (1) uniformity of working regulations of all German railways; (2) equality of tariffs on as low a basis as possible, and reduced rates, to meet the needs of agriculture and industry, for various commodities, such as coal, ores, timber, manures, &c., sent over long distances. As regards conceded railways, Article 26 of the Law of Railways of 1838 enacts that for the first three years after 1st January following the opening of the railway the company has the right, subject to existing Imperial and National laws, to fix the rates for conveyance of passengers and goods. It must, however, report the rates to the Government for acceptance. Under the Concession Treaty for broad gauge secondary railways, *i.e.*, branch lines of minor importance, it is provided that for the first *five* years after the 1st January following the opening of the railway the concessionaire has power, subject to Imperial and National laws, to fix rates for passengers and goods traffic. Subsequently the fixing and alteration of tariffs is subject to approval of State Supervising Authority. With regard to goods traffic, however, after the expiration of each period of five years, and so long as the railway, in

LEGAL MAXIMUM RATES—*continued.*

the opinion of the Supervising Authority (whose judgment on the point is final), is mainly of local interest, the Minister of Public Works will fix, from five years to five years, maximum rates for the different goods classes with special reference to the financial state of the enterprise.

The Concessionaire may, in accordance with Imperial and National regulations, and within the limits of the maximum rates, fix working rates according to his judgment, and undertake increases and decreases without the sanction of the Supervising Authority.

The Concessionaire is bound to accept the tariff system existing on the Prussian State railways, and to follow the principles governing the same in making through rates in so far as it is deemed desirable by the Minister of Public Works.

As regards local railways ("Kleinbahnen"), it is provided that in the interests of public traffic the necessary steps must be taken by the competent authority with regard to the transport rates; at the same time the periods are to be named at which such arrangements shall be subject to revision. The fixing of rates is to be left to the Concessionaire for a period to be named in the concession, but for not less than five years, subsequent to which the right of the State extends only to fixing of maximum rates All tariffs and regulations must be reported to the Supervising Authority, so that the latter may be in a position to fulfil its functions.

HOLLAND.

5. How fixed.

All tariffs must be sanctioned by the Minister of Waterways and Works under Article 28 of the Law. They are proposed by the railways for the Minister's approval.

DENMARK.

6. How fixed

The rates and conditions of transit are fixed by the Minister of Public Works for State railways and conceded railways.

The following are the maximum rates authorised for the *State railways*:—The rate per 100 kg. computed weight must not exceed—

	Constant.	Conveyance.
For Fast Goods, ...	50 Ore plus,	2 Ore per Km.
For Slow Goods, ...	15 Ore plus,	1 Ore per Km.
For Fast Goods in Wagon-loads,	15 Ore plus,	1 Ore per Km.
For Slow Goods in Wagon-loads,	6 Ore plus,	0·5 Ore per Km.

Express goods are conveyed at one-and-a-half times the fast goods rates. For long distances the rate may be substantially reduced, and lower rates may be charged for slow goods in large consignments, and for such wagon-load goods as judged from value and condition are known to require a lower rate than the usual wagon-load rate. (Mem.—To meet this the State Railway has divided wagon-load goods into three classes—Nos. 4, 5, and 6.)

Easily perishable goods which come under the heading of the most important necessaries of life shall be conveyed with extra speed with the limits, however, made necessary by the conditions of transit, and shall be charged as under:—

When carried as fast goods, at slow goods rate.
When carried as express goods, at fast goods rate.

LEGAL MAXIMUM RATES—*continued.*

Used packings are conveyed at a low rate *fixed by the railway company* with a *minimum charge* as follows:—

For Fast Goods, ...	50 Ore.
For General Slow Goods, ...	30 Ore.
For Fast Goods in Wagon-loads,	10 Kroner per Wagon.
For Slow Goods in Wagon-loads,	5 Kroner per Wagon.

Stamped parcels shall be conveyed between all stations, stopping places, and booking offices when they have the following Government Railway stamps at 25 Ore each affixed:—

Parcels up to 5 Kg.	1 Stamp
Parcels over 5 Kg. up to 10 Kg.	2 Stamps.
Parcels over 10 Kg. up to 15 Kg.	3 Stamps.
Parcels over 15 Kg. up to 25 Kg.	4 Stamps.

(Government Railway Stamps are sold in sheets of 25 stamps at 6 Kroner per sheet, and singly at 25 Ore each.)

The maximum rates for the South Funen Railway (authorised by the Minister of Public Works on 27th June, 1906), are as under:—

For Stamped Parcels.

Packages up to 2½ Kg.	1–15 Ore Stamp.
Packages over 2½ Kg. up to 5 Kg. ...	1–25 Ore Stamp.
Packages over 5 Kg. up to 10 Kg. ...	2–25 Ore Stamp.
Packages over 10 Kg. up to 15 Kg. ...	3–25 Ore Stamp.
Packages over 15 Kg. up to 25 Kg. ...	4–25 Ore Stamp.

(Stamps—15 Ore and 25 Ore—are sold in sheets of 25 at a price of 3·50 Kroner and 6 Kroner per sheet respectively, and singly for 15 Ore and 25 Ore each.)

Parcel goods and wagon-loaded goods:—

Carried on all parts of the railway except the Svendborg-Nyborg section, the rates for which are given later.

Freight per 100 Kg. in Ore.

Between all Stations, except on Svendborg-Nyborg Section.	Consignment in Less than Wagon-loads.			Wagon-load Goods.
	Fast Goods.	Slow Goods.	Slow Goods Reduced.	Min. Wt. 5,000 Kg.
	Rate 1.	Rate 2.	Rate 3.	Rate 4.
Constant, ...	50	16	12	6
For each of the first 60 Km.	1·6	0·8	0 6	0·25
For each of the following Km.	1·0	0·5	0·4	0·15

On the Svendborg-Nyborg Railway the charges are:—

—	Consignments in Less than Wagon-loads.			Wagon-loads. Min. Wt 5.000 Kg.	
	Rate 1.	Rate 2.	Rate 3.	Rate 4.	Rate 5.*
Constant, ...	32	10	10	5	5
For each Km., ...	2·12	1·0	0·7	0·4	0·3

* Rate 5 applies to Special Wagon Load Goods brought under Special Class "6" on the State Railways.

Easily perishable goods are charged as follows:—

1. Charged at ordinary freight or slow goods rate when carried at fast goods train speed.
2. Charged rate 2 (slow small goods rate), with 50 per cent. added by increase of calculated weight when carried by greatest speed allowed by time-table—not conveyed, however, *by fast trains.* Minimum weight charged 30 kg.
3. Charged at rate 1 (fast goods rate) when conveyed as express goods.

LEGAL MAXIMUM RATES—*continued.*

Used packings are conveyed as slow goods at the following rates per 100 kg.:

1—30 km.,	12 ore
31—60 km.,	16 ore
61—90 km.,	20 ore
Over 90 km.,	24 ore
Minimum freight,	20 ore

AUSTRIA.

How fixed

The older Charters of Concession prescribed maximum rates for different classes of traffic, and in many cases for individual articles, but owing to altered traffic conditions the existing rates are much lower than the maxima. In the newer Deeds of Concession which apply to local lines no maximum rates are fixed, but the regulation of tariffs is provided for by the condition that the latter are subject to the sanction of the State, the public interest on the one hand and the financial success of the railway on the other being taken into consideration. In accordance with a Statute of 14th September, 1854, the State is empowered to effect a reduction of rates if the net annual profits of a line exceed 15 per cent. of the invested capital, and in the case of various private railways the Deed of Concession provides that the right of the State to reduce tariffs may be exercised even before the foregoing limits have been exceeded by the net profit.

HUNGARY.

8. How fixed.

The rates and fares of the Hungarian State railways are fixed by the Minister of Commerce. The private railway companies fix their own rates and fares within the limits of their Acts of Concession, but these rates are subject to the approval of the Minister of Commerce.

PUBLICATION OF RATES.

FRANCE.

9. Publication of Rates.

The working rates originate with the railway companies who submit their proposals to the Minister of Public Works for his sanction. The proposed rates must also be posted up and sent to the Prefects of the Departments concerned.

Rates can only be put in operation one month after being posted, and if any modifications of proposed rates are prescribed by the Ministers of Public Works a new posting of one month is necessary. For the purpose, however, of facilitating exportation of French products it was decreed in 1862, that without awaiting the expiration of the delay of posting or the results of the ordinary Ministerial direction or confirmation, the railways can put exportation rates into operation five days after placing them at the Ministry, provided that in these five days the Minister has not notified his opposition.

10. Tariff Books for Sale.

Books containing the tariff of all railways are printed and can be obtained by the public.

BELGIUM.

11. Publication of Rates.

The management of every railway is bound to publish tariffs in their stations by means of placards or otherwise.

12. Tariff Books for Sale.

Books containing all the rates in operation are printed and can be obtained by the public.

GERMANY.

13. Publication of Rates.

Under Art. 46 of the Law of Railways it is provided that railways must report tariffs to the Government and must also make the same public.

14. Tariff Books for Sale

All tariff books are printed and can be obtained by the public.

PUBLICATION OF RATES—*continued.*

HOLLAND.

15. Publication of Rates.

Art. 30 of the Dutch Railway Law enacts that notice of tariffs shall be published at least one month before they come into force.

16. Tariff Books for Sale.

Art. 28 of the Dutch Railway Law enacts that before coming into force, tariffs are to be publicly announced and printed and sold at fixed prices.

Publication in all cases is to be in accordance with regulations issued by the Minister of Commerce, Industry, and Waterways.

DENMARK.

17. Publication of Rates.

It is provided by Paragraph 59 of the Railway Law of 15th May, 1903, that rates shall be properly published; that the traffic rules and conditions shall be kept for sale at the larger stations, and can be ordered at any station; and that coincident with the publication of rates a notice shall be inserted in the newspapers of the time when the rates come into force. The kilometer table can be bought at the stations.

18. Tariff Books for Sale.

Books containing the rates of each railway are printed and can be bought by the public.

AUSTRIA.

19. Publication of Rates.

Cost of carriage is calculated according to the existing properly published tariffs, copies of which are obtainable by the public at the Railway Direction Bureau and at stations.

20. Tariff Books for Sale.

Alterations of rules are made in the form of supplements to existing tariffs, and are announced in the official Railway traffic and Shipping Journal.

HUNGARY.

21. Publication of Rates.

Alterations in existing tariffs are published in the Hungarian newspaper—"Vasuti és Közlekedési Közlöny."

22. Tariff Books for Sale.

Tariffs can be bought from the railway management (*i.e.*, the Tariff Sale Bureau of the Railway Direction) and in the offices of the State railway.

VARIATIONS IN RATES AND TRANSIT CONDITIONS.

FRANCE.

23. How effected.

The initiative as to the variation of rates within the limits of the maxima fixed by the charge book lies with the railway, but such variations cannot be put into operation without the approval of the Minister of Public Works, who has a discretionary power to grant or withhold his official confirmation. Rates proposals must be posted by the railways and sent to the Prefects of Departments, who must communicate the proposals to the Chambers of Commerce along the railway and at terminal points for their observations. The proposed rates, with the remarks made by the Chambers of Commerce, are examined by:—

24. Notice of variations

(1) The Inspector of the commercial working of the district.
(2) The Controller-General.
(3) Port Engineers.
(4) The Inspector-General of Railways.

The draft proposals are then sent to the Consulting Committee for Railways, which discusses a written report drawn up by one of its members. For very important cases a Commission is drawn up in the Committee and in its name a report is presented to the General Assembly. The representatives of the interested parties and of the railways are heard; the Committee gives its opinion and the Minister gives his decision, usually conformably to the Committee's advice.

When once a rate is confirmed it cannot afterwards be suppressed by the Company except by a proposal of withdrawal duly confirmed. On the other hand, this withdrawal cannot be forced on the railway.

VARIATIONS, ETC.—*continued.*
France—*continued.*

Since the year 1857 the Minister of Public Works grants only a provisional confirmation of rates, which he reserves to himself the right to withdraw when he thinks fit. Before such withdrawal of confirmation an inquiry similar to that preceding confirmation is held. Temporary rates have been proposed by the railways, but usually confirmation has been refused. Interior goods rates cannot be increased unless they have been one year in operation. Season rates are, however, sanctioned.

Special export rates may be put into operation five days after being placed at the Ministry of Public Works provided that within that period the Minister has not notified his opposition. Transit rates for goods crossing French territory in competition with a foreign route may be applied immediately by merely posting them up and communicating them to the Minister, who can, at any time, forbid them.

NOTE.—The Consulting Committee for Railways referred to is a Council to the Minister of Public Works on matters relating to the commercial working of railways. The Committee deliberates particularly on rates submitted for Ministerial confirmation. The number of members on the Committee is ninety-two, consisting of representatives of railway management, the Ministers' Directors, State Councillors, Inspectors-General of Ordnance Survey and of Mines, Delegates of the Ministers of Commerce, Agriculture, Finance, Posts and Telegraphs, members chosen by the Minister of Public Works to represent Agriculture, Commerce, and Industry (Senators, Deputies, Members of Chambers and Courts of Commerce and Agricultural Societies, Civil Engineers and managers of different undertakings).

BELGIUM.

25 How effected.

No Ministerial Decree approving or modifying the price and conditions of freights may be put into effect until after the lapse of fifteen days after its publication in the "Moniteur" (the official Gazette). This time limit, however, shall be at least three months in the case of any raising of a rate, except in the event of an arrangement to the contrary in the Act of Concession. The foregoing two time limits may be reduced to twenty-four hours when international freights are concerned.

26. Notice of variations.

GERMANY.

27. How effected.

Increases in tariffs or in the difficulties of transport conditions (which must be sanctioned by the Minister of Public Works) do not come into force until a period of six weeks has elapsed after their publication, except in the case of temporary rates, of which shorter notice may be given.

28. Notice of variations

Under Act 46 of Statute Law it is provided that in times of want or necessity, in particular, in case of an extraordinary increase in the price of food from any exceptional cause, railways are obliged to introduce specially low rates for food-stuffs, particularly grain, flour, husk fruits, and potatoes. These rates are fixed by the Crown on the representation of the Federal Council Committee ("Bundesraths Ausschuss") concerned, but the reduced rates must not be less than the lowest rate for raw materials on the railway in question.

This law does not apply to Bavaria. It has not been exercised up to the present, because the railways have voluntarily made reductions in rates in such emergencies.

HOLLAND.

29. How effected

Under Art. 28 of the Railway Law, increases in rates require to be sanctioned by the Minister of Waterways and Works, and, under Art. 30, must be published at least one month before they come into force. With the sanction of the Minister shorter notice may, however, be given.

30. Notice of variations

VARIATIONS, ETC.—*continued.*
Holland—*continued.*

Under Art. 29 of the Railway Law, tariffs may, at any time, be reduced by the State. If, in consequnece of such reduction of tariffs, the net profits of the railway companies are reduced, they receive an indemnity out of the State Treasury. When such a reduction in net profits is obvious, and when an amicable arrangement as to the amount of the indemnity cannot be arrived at, it is settled by a judge. In no case is indemnity awarded to a larger amount than is necessary, in order to bring the net profit of the year or years for which it is demanded up to 8 per cent. of the company's capital.

DENMARK.

31. How effected.

Variations of rates must be sanctioned by the Minister of Public Works.

32. Notice of variations.

When special circumstances do not make an exception necessary, increases in rates can only come into force six weeks after published notice has been given. In the Government's Railway Annual Traffic Report sent to Parliament particulars must be given of all rate alterations which have been made during the year.

AUSTRIA.

33. How effected.

Same general conditions as in Germany. The railway authorities cannot independently determine rates of conveyance and other transport conditions, but are subject to the assent of the State authorities, who, under certain circumstances (not defined), may even order the reduction of tariffs already sanctioned and in force.

34. Notice of variations.

HUNGARY.

35. How effected.

Same general conditions as in Germany.

36. Notice of variations.

The approval of the Minister of Commerce must be obtained before any variation in rates can be made.

EQUALITY OF RATES.

FRANCE.

37. Preferential treatment prohibited.

Article 48 of the Charge Book formally prohibits all kind of private treaties, with two exceptions. Equality of treatment is an absolute rule, which the administration cannot admit to be modified. The company would commit an offence if it violated the rules regarding confirmation of rates, or entered into arrangements contrary to the regularly approved rates. In addition to damages payable to the injured parties, the railway company would be liable to a fine of 1,600-3,000 francs, imposed by Art. 21 of the law of 25th July, 1845. In case of a second offence the fine is doubled, and the court can pronounce imprisonment besides of from three days to one month. The Minister of Public Works has the duty of supervising the exact observation of the rates. He can interfere in case of a complaint of the public founded on a violation of the confirmed tariffs—either by injunctions to the companies, or even in case of resistance, by having summons issued to them.

38. Exceptional treatment in certain cases.

The exceptions referred to above are (1) arrangements between the Government and the railways in the public interest, and (2) abatements granted to the needy.

BELGIUM.

39. Preferential treatment prohibited.

Railways are forbidden to conclude private treaties modifying prices and conditions of tariffs.

40. Exceptional treatment in certain cases.

Reductions in price are, however, authorised when duly published and equally accessible to all on similar conditions and under the same circumstances.

EQUALITY OF RATES—*continued.*

GERMANY.

41. Preferential treatment prohibited.

The same conditions having been fulfilled, tariffs are to be applied to everybody in the same manner. All preferential reductions in price or other favour with regard to tariffs are forbidden, and of no avail.

42. Exceptional treatment in certain cases.

Favourable conditions in the case of consignments for charitable or public objects, and also in the service of the railways, are allowed, with the sanction of the public authorities.

HOLLAND.

43. Preferential treatment prohibited.

Art. 31 of the Dutch Railway Law enacts:

Carriers are bound to convey passengers and goods presented (provided such are not excluded by law) at the rates of the published tariffs and under the conditions laid down in the regulations, without favour to certain persons, associations, enterprises, or bodies. They must not make any special agreement with one or more shippers for transport at a rate lower than that of the published tariff.

44. Exceptional treatment in certain cases.

To this the following exceptions are admissible:—

(*a.*) For the transport of large quantities; (*b.*) in the case of subscriptions for one or more wagon loads; (*c.*) for philanthropic objects and exhibitions.

Carriers must report reductions made in accordance with (*a.*) and (*b.*) directly to the Minister of Commerce, Industry and Waterways. Such reductions apply equally to all goods of the same nature, carried over the same route, and under the same conditions. They are immediately made public by the carriers, and remain in force during the time agreed upon, and announced in the public notice, or in the absence of a stipulated term, from the date of expiration of the one month's notice required in case of alteration of tariffs.

EQUALITY OF RATES—*continued.*
Holland—*continued.*

As regards collection and delivery of goods, special agreements at a lower rate than that of the published general tariff may be made with senders and receivers for the cartage of large quantities or by subscription, provided that under similar circumstances the same favourable conditions are granted to everybody.

DENMARK.

45. Preferential treatment prohibited.

Any private agreement which is made to grant one or more persons a reduction of rates is forbidden, and invalid.

46. Exceptional treatment in certain cases.

On the other hand, reductions in rates are allowed when they are properly published and equally available to everyone under the same conditions.

AUSTRIA.

47. Preferential treatment prohibited.

Tariffs are to be applied to everyone in the same manner, provided that the same conditions be fulfilled in each case.

48. Exceptional treatment in certain cases.

The Deeds of Concession granted to railway companies contain a restriction that in granting reductions of rates, etc., no favouring of individuals may take place, consequently, when a reduction in rates or other advantage is allowed to a consignor or carrier under certain conditions, this reduction or advantage must be allowed to all consignors or carriers who comply with the same conditions.

HUNGARY.

49. Preferential treatment prohibited.

All undue preference is interdicted.

PASSENGERS.

51. Traders' tickets.

There are no traders' tickets (so-called) in France, Belgium, Germany, Holland, Denmark, Austria, or Hungary.

52. Market tickets.

There are no reduced fares in operation for persons attending markets in France, Belgium, Denmark, Austria, or Hungary.

In Germany there are no special fares, but passengers are permitted to take with them, free of charge, in fourth-class carriages (for which the fare is 2 pf. per km.) such market produce as they can carry.

The tariffs obtained in Holland do not contain any information as to market tickets.

53. Workmen's tickets.

FRANCE.

The following are examples of the charges made in France for conveyance of workmen:—

OUEST RAILWAY.

Day return tickets, third class, are issued for workmen, and available for designated trains in the morning and evening:—

Locality.	Distance	Amount.	Ordinary Return Fare for comparison.
	Km.	c.	c.
Rouen and vicinity, ..	6	30	45
	7	30	55
	8	30	65
	9	35	70
	10	35	80
	11	45	85
	13	50	105
	15	50	120
Havre and vicinity, ...	6	30	45
	7	35	55
	8	40	65
	9	45	70
	10	50	80

OUEST RAILWAY—*continued.*

Locality.	Distance.	Amount.	Ordinary Return Fare for comparison.
	Km.	c.	c.
Barentin and vicinity, ..	10	50	80
	13	65	105
	14	70	110
	16	80	125
	20	100	160
	21	105	165
	24	120	190
	25	125	195

In the above cases there is no defined Regulation as to production of Certificate of Employment.

NORD RAILWAY.

Daily return tickets, third class, are issued, available morning and evening by designated trains.

Locality.	Distance.	Amount.	Ordinary Return Fare for comparison.
	Km.	c.	c.
Between Paris and Auber-villiers—la Corneuve ..	7	40	55
Between Paris and Pont-de-Saint—Ouen, ...	8	30	65

In the above cases there is no defined Regulation as to production of Certificate of Employment.

PASSENGERS—*continued.*

FRANCE—*continued.*

Workmen, and other employees in Paris having an income of less than 2,000 fr. per annum, are granted, on production of Way-Book ("Livret"), Employer's Certificate, or Mayor's Certificate, third class weekly tickets on the Nord Railway at the following fares:—

Km.	Fr.
0—5	1·0
6—11	1·40
12—18	2·05
19—25	2·80
26—32	3·60
33—40	4·30

The above tickets are available for one journey out and one in, per day, in specially designated trains.

STATE RAILWAY.

Third class Workmen's weekly tickets, available going to or coming from work, are granted within a radius of 30 km. of Bordeaux, Nantes, Angers, Orleans, Tours, La Rochelle, Rochefort, and Niort at the following prices:—

Km.	c.	Km.	c.	Km.	c.
1	40	11	120	21	190
2	45	12	130	22	195
3	50	13	140	23	200
4	55	14	145	24	200
5	60	15	155	25	205
6	70	16	160	26	210
7	80	17	165	27	215
8	95	18	170	28	220
9	105	19	180	29	225
10	115	20	185	30	230

There is no specific Regulation as to the trains by which the Workmen travel.

The Workmen must prove their occupation by production of their Way-Book ("Livret"), Employer's Certificate, or Mayor's Certificate.

Periodical third class tickets are granted by the State Railway for 1, 3, 6, 9, or 12 months on production of Employer's Certificate to Apprentices and Young Workmen under 21 years of age at 50 per cent. reduction on ordinary periodical ticket fares, which for the under-mentioned distances are:—

—	1 Month.	3 Months.	6 Months.	9 Months.	12 Months.
Km.	Fr.	Fr.	Fr.	Fr.	Fr.
8	12	31	46	58	68
16	20	51	77	99	116
24	26	65	99	126	148

The published Regulations do not contain any restriction as to use of trains or number of journeys per day.

BELGIUM.

The following arrangements as to Workmen's Tickets apply in Belgium. Application for Ticket to be made 8 days in advance at Station of workman's residence and to be accompanied by a certificate from the Mayor or Chief of Police of the District in which the workman resides and by a certificate from the Employer. These Tickets are not available by International Trains or other Trains specially indicated in the Time Table.

BELGIUM—*continued.*

45	210	245	95	305	355
50	225	260	100	315	360

Subscription tickets for *one return journey* per week for distances up to 375 km.

Examples of charges for specific distances:—

Km.	c.
10	55
36—40	100
86—90	145
136—140	190
186—190	235
236—240	280
286—290	325
336—340	370
371—375	405

GERMANY.

In Germany workmen are carried up to a maximum distance of 50 km. at 1 Pf. per km. (equal one-half of the 4th class fare) with a minimum charge of 10 Pf. for a single journey. There is no information as to restriction in use of trains or production of certificate of occupation.

Weekly return tickets are issued to workmen at the total of ordinary workmen's single fares.

HOLLAND.

No information.

DENMARK.

In Denmark there are no specially reduced fares granted to workmen.

PASSENGERS—*continued.*

AUSTRIA.

In Austria the following arrangements relative to Workmen's Tickets are in operation:—

Workmen carried single journeys, third class, at the following scale, on production of certificate of occupation:—

Km.	Heller.
1—10	13
11—20	26
21—30	40
31—40	49
41—50	62
51—60	75
61—70	89
71—80	102
81—90	111
91—100	125

The Regulations do not contain any restriction as to use of trains.

HUNGARY.

In Hungary, when labourers or workmen present a certificate as to their occupation they are charged half ordinary third class fare, without, so far as is known, any restriction as to use of trains.

CLASSIFICATION OF GOODS.

FRANCE.

54. Arrangement of Classes.

Fast goods include commodities of all kinds.

Slow goods are either by their own nature and specification or by assimilation arranged under the four classes of the tariff book.

The goods named in the tariff book or assimilated are arranged in six series, corresponding to the four classes mentioned above.

The foregoing provisions do not apply to the small-circle railway of Paris, for which special tariffs are fixed.

In October, 1906, the classification consisted of 4,392 items, which were divided as follows:—

Series 1,	1,399 items
,, 2,	839 ,,
,, 3,	977 ,,
,, 4,	713 ,,
,, 5,	373 ,,
,, 6,	91 ,,
Total,	4,392 items

55. Description of Goods in each Class.

The foregoing classification applies to all the large systems ("Grande Reseaux"). Each of the small lines ("Economiques," "D'Interet local," etc.) has a special classification, based in some cases on that for the large railways, but generally much simpler in character.

The following lists give a general indication of the nature of the goods contained in each series:—

Series 1.—Brushes and brooms (hair and feather), new barrels and casks (+50%); fresh butter, biscuits, candles, cauliflowers, sucking pigs, not exceeding 30 kg. each (+50%); fresh flowers (+50%); cheese, fresh fruit, milk, live rabbits (+50%); dead rabbits, fresh bacon, fresh vegetables, fresh margarine, jams, honey, fresh shellfish, eggs, baskets (+50%); buttermilk, plants (+50%); feathers (+50%); sausages, soap, saddlery (+50%); sugar and manufactured tobaccos, cotton and woollen tissues, dead or live poultry (+50%); fresh herrings and woollen goods.

Series 2.—Beer, cabbages, and cabbage plants, agricultural machinery (+50%); hair, ink, hams, raw or carded wool, osiers, sacks, leaf tobacco, and smoked or salt bacon.

Series 3.—Salt butter, beer in casks, carrots, tanned leather, mineral waters, peat fibre, hay (+50%); condensed milk, dried vegetables, salt margarine, turnips, oaten straw (+50%); new potatoes, flax, and grain in sheaf (+50%).

CLASSIFICATION OF GOODS—*continued.*

France—*continued.*

Series 4.—Grain, timber for joinery, hides, raw or salted, with hair on, wheaten flour, salt or pickled herrings, kainit, malt, barley, potatoes, lard, Indian corn, and bran.

Series 5.—Beet root, firewood, pitwood, lime, coke, flagstones, ground bones, sea salt, drain pipes, and sulphate of copper.

Series 6.—Coal, manures, phosphate of lime, sand, superphosphate of lime, turf fuel, peat litter, and basic slag.

BELGIUM.

56. Arrangement of Classes.

Goods are classified as follows:—

Express Goods.—Which include packages of every description and weight to be delivered at domicile by express service. The railways are not, however, bound to carry by express train packages of more than one cubic metre volume or weighing more than 150 kg.

Fast Goods.—Which include packages of every description weighing up to 200 kg. per consignment, unless the sender has asked, in writing, that the goods be carried as express goods or slow goods. With this reservation, oysters, fresh fish, and barm are forwarded as fast goods, whatever may be the weight of the consignment.

Slow Goods.—The general classification divides slow goods into four classes, as under (all undesignated goods being included in Class 1):—

Class 1,	521 items
Class 2,	310 ,,
Class 3,	270 ,,
Class 4,	260 ,,
Total,	1,361 items

57. Description of Goods in each Class.

The following lists indicate the nature of the commodities included in each of the four classes:—

Class 1.—Alcohol (in casks), brooms (hair), butter, biscuits, candles, boots and shoes, empties (returned), jams and preserves, cream, hair, leather (tanned), ink (in barrels), tissues, cotton, wool, linen, and silk; cheese, fruits (fresh, homegrown), oysters, hams, milk, rabbits (live or dead), bacon (fresh), bacon (salt), flax (carded or combed), margarine, honey, eggs, barley (pearl), feathers (in bales), fresh fish, sacks (empty, new), lard, soap, saddlery, pigs' bristles, spirits in casks, tobacco leaves (packed) barrels (empty wooden), poultry (dead) and poultry (live).

Class 2.—Hides (salted), mineral waters, herrings (salt), herrings (pickled), vegetables (fresh homegrown), osiers (peeled), skins (sheep, etc.), plants, fish (salt), apples (fresh), and sacks (empty used).

Class 3.—Oats, brushes, brooms, beer in casks, grain, timber for buildings, cereals, cabbages, flagstones, flour, green fodder, agricultural seeds, Indian corn, malt, barley, osiers (not peeled), straw in bales, stones for building, potatoes, rye, and bran.

Class 4.—Beet roots, firewood, pitwood, bricks, turf briquettes, carbonate of lime, coal, lime for manure, manures (including phosphates); hay, ice, flax stalks, peat litter, basic slag, turnips, bones (ground), phosphate of lime, stones (rough), sand, salt, suet (in sacks), turf, cattle cake, and drain pipes.

GERMANY.

58. Arrangement of Classes.

Goods are classified as under in nine classes and three sub-classes:—

Express Goods.—Comprising commodities of every description, and without limitation as to weight.

Fast Goods.—Ordinary (all goods not in special tariff).

Special tariff for certain fast goods (nine items).

Slow Goods.—Ordinary parcels (all goods not in special tariff).

Certain Parcel Goods.—Special tariff (twenty-eight items).

Wagon Loads.—Four main classes as under:—

Class B.—All goods not in special tariffs, I., II., or III.

Special Tariff I.,	96 items	Minimum weight, 10,000 kg. per wagon
Special Tariff II.,	97 items	
Special Tariff III.,	207 items	

CLASSIFICATION OF GOODS—*continued.*

Germany—*continued.*

Three sub-classes to above main classes, as under:—

Sub-class A1 (sub. to cl. B.), Sub-class A2 (sub. to S.T. I. & II.) Sub-class Special Tariff II. (sub. to S.T. III.)	Minimum weight 5,000 kg. per wagon.

59. Description of Goods in each Class.

The following lists indicate the nature of the goods in restricted classes:—

Special tariff for certain fast goods.—Berries of all kinds, butter, buttermilk, field or garden produce (including roots), fresh vegetables, fresh and salted herrings, skim milk, fresh fruit, and plants.

Special tariff for certain slow parcel goods.—Manures, cattle feeding stuffs, grain, lime (for manure), potatoes, Indian corn, seeds, blacking, and peat litter.

Special wagon load tariff, Class I.—Hides and skins, fresh vegetables, grain, timber, calcium carbide, Indian corn, Indian meal, malt, mineral waters, rice, seeds, blacking, and starch.

Special wagon load tariff, Class II.—Field and garden produce, broken flax, hemp, hops, jute, paper, stones (worked), and hair (cleaned).

Special wagon load tariff, Class III.—Trees, shrubs, etc. (unpacked), manures, ice (in covered wagon), barrels (new wooden), raw flax, hay, lime (for manures), potatoes, hoofs, bones, coke, baskets (new), creosote, rags, bentwood furniture, cane, used sacks, salt, slates, basic slag, stones (rough), straw, tobacco juice, hair (uncleaned), earthenware goods, peat litter, turf, and cement.

HOLLAND.

60. Arrangement of Classes.

Fast goods are classified in same way as slow goods, but charged *double* the slow goods freight *according to class.*

Slow goods are divided into seven classes, viz.:—

Slow Parcel Goods—Ordinary	*i.e.*, all goods under 5,000 kg., unless that weight in wagon-load class is cheaper.
Slow Parcel Goods—Exceptional	*i.e.*, certain goods marked X in classification under 5,000 kg., 106 items in all, i.e., 4 in Class B, 3 in Class C, 99 in Ex. tariff 2.
Slow Wagon-load Goods.	Class A. (Min. weight 5,000 kg.) All goods not in Class B, Class C, or Ex. Tar. 2.
,, ,,	Class B. (Min. weight 5,000 kg.) No. of items, 334.
,,	Class C. (Min. weight 10,000 kg.) No. of items, 198. Note—Charged Class B in less than 10,000 kg., unless latter charge is lower.
,, ,,	Exc. Tariff No. 1—Light and bulky goods, 107 items.
,, ,,	Exc. Tariff No. 2—Certain specified goods, 143 items.

61. Description of Goods in each Class.

The following lists indicate the nature of the goods contained in each limited class:—

Small consignments in exceptional tariff class in lots under 5,000 kg.:—Grain (oats, barley, wheat, Indian corn, rye, and rice), grain products and offal (oatmeal, meal, all kinds, bran, and chaff), draff and grains, potatoes (fresh and dried), beans, peas, turnips, vetches, and vegetable roots, seeds (grass hemp, clover, turnip, cabbage, and flax), feeding cakes, common ploughs, harrows, reaping and other agricultural implements and tools.

Slow wagon-load goods, Class B.—Brooms, butter, drain pipes, eggs, hay, hides, margarine, tiles, timber, fat, flagstones, &c.

CLASSIFICATION OF GOODS—*continued.*

Holland—*continued.*

Slow wagon-load goods, Class C.—Alkali, beer, beetroot, cement, Chili saltpetre (manure), coke, hair for manure, phosphates (manure), basic slag, pitwood, stone, coal, turf, peat litter, &c.

Slow wagon-load goods, Exceptional Tariff No. 1—Fresh flowers, growing trees, growing plants, hemp, hops, agricultural machines, furniture, straw, empty wooden barrels, feathers, wool, &c.

Slow wagon-load goods, Exceptional Tariff No. 2—Potatoes, apples, berries of all kinds, orchard fruit, barley, fresh vegetables, oats, chaff, cabbages, Indian corn, malt, rice, rock salt, ice, roots, sea salt, &c.

DENMARK.

62. Arrangement of Classes.

On the State Railway goods are divided into seven classes as under:—

Express goods (all kinds).

Fast goods (all kinds).

Ordinary slow goods—Small consignments under 400 kg.

Ordinary slow goods—reduced—small consignments over 400 kg.

Slow wagon-load goods—Ordinary, all goods not in rates 5 and 6,	Whole wagon-loads. Minimum 7,500 kg. for large wagon. Minimum 5,000 kg. for small wagon.
Slow wagon-load goods, special (Rate 5),	do.
Slow wagon-load goods, special (Rate 6),	do.

63. Description of Goods in each Class.

The following lists indicate generally the nature of the commodities in wagon-load goods special tariffs:—

"Rate 5."—Bone ashes, concrete, tow, grains, cement, drain pipes, artificial cattle-feeding stuffs (*i.e.*, cake, &c.), glass ware (hollow), straw for paper-making, cabbage heads, lime, rags, corn goods and mill manufactures (including wheat, rye, barley, Indian corn, oats, vetches and peas, malt, flour and bran), potters' ware and brick-manufactory products (including china, delft-ware, crockery, majolica, terra-cotta), root fruits (turnips, potatoes, onions), slates, building stone, marble slabs, timber for building, &c., pitwood, wood pulp (for paper-making), willows, compressed peat fuel, wood-wool, oakum, &c.

"Rate 6."—Bones, fresh fodder crops, cullet, manures (natural and artificial), straw, hay, seaweed, chaff, heather, leaves, moss, rushes, ice, porcelain, sand, brick dust, mollusc shells, rough stone, paving stones, fire brick, tiles, clinkers, common bricks, coal, coke, cinders and ashes, sugar beets and refuse, and tops of same, twig firewood, unpeeled willows, used empty barrels, turf, peat litter, and turf mould.

AUSTRIA.

64–5. Arrangement of Classes and description of Goods in each Class.

The following classification applies:—

Express Goods.

All goods coming under definition of "fast goods" when carried by request of owner and consent of railway by express trains.

Fast Goods.

1. Ordinary fast goods, *i.e.*, those not included in Classes 2 to 5 hereunder:—

2. Reduced fast goods consisting of 51 commodities, such as beer, eggs, lard, butter, margarine, bacon, hams, sausages, tallow, fresh and salted fish, fresh meat, meat goods, vegetables, grain samples, yeast (liquid and solid), honey, potatoes, peas, malt, milk, cream, whey, mineral waters, cider, fresh fruit, forest and fruit trees, soda water, dead animals, pottery, game, &c.

3. Specially reduced fast goods, comprising certain empty used packages, such as barrels under 8½ hectolitres capacity, boxes and crates taken to pieces, packing frames in bundles, coops, baskets, lath and poultry baskets, card-board boxes, &c.; also cases or baskets containing other empty used packages or packing materials.

CLASSIFICATION OF GOODS—*continued.*

Austria—*continued.*

4. Ordinary fast goods when consigned in lots up to 50 kg. and 10 packages per way-bill.

5. New and old sacks of all kinds and used milk vessels.

Slow Goods.

Class 1 (normal class), ...	–	–	–	14 items.
Class 2, ...	–	–	–	620 items.
Wagon-load Classes A., B., and C.	A. 544	B. 122	C. 192	858 items in all.
Wagon-load Special Tariffs, 1, 2, and 3, ...	1. 10	2. 14	3. 17	41 items in all.
Bulky Goods, ...	–	–	–	37 items.
Total, ...	–	–	–	1,570 items.

The following lists indicate the nature of the goods contained in each of the slow goods classes:—

Class 1.—Wool, garden furniture, boats, &c.

Class 2.—Trees, berries, brooms, beer, brushes, manures, eggs, barrels (empty wooden), fats, fresh fish, dried fish, broken flax, cattle feeding roots, vegetables, hemp, herrings (fresh and salt), timber, cheese, candles, bones, rags, malt, agricultural machinery, milk, mineral waters, furniture, fruit, paper, cane, seeds, basic slag, coal (under five tons), blacking, soap, starch, stones, tobacco (raw), dead meat, hair, turf, peat litter, wool (also Cl. I.), cement, tiles.

Wagon-load, Class A.—Berries (fresh and dried), brooms (S.T., 2), beer, brushes, manures, eggs, fish (dried), flax, raw (also "bulky"), roots (cattle feeding), vegetables, grain (S.T., 1), hemp, herrings, (fresh), hay and straw (also "bulky"), timber, bones, rags, milling products (S.T., 1), malt (S.T., 1), agricultural machinery, mineral waters, furniture, fruit, oilcake, paper, rice (S.T., 1), sacks (new), seeds, (S.T.), basic slag, blacking, coal (min. five tons), soap, whiskey, starch (S.T.), stones, tobacco (raw), dead meat, hair, turf, peat litter (S.T., 3), wool, cement, and tiles.

Wagon-load, Class B.—Vegetables, agricultural machinery, stones, and hair.

Wagon-load, Class C.—Barrels (empty wooden), flax (raw), roots (cattle feeding), hemp, timber, bones, rags, oilcake, basic slag, cement, tiles, and coal.

Wagon-load, Special Tariff No. 1.—The following goods in 10-ton lots:—Grain, husk fruits, milling products, malt, cattle cake and oilcake meal, oil seeds, rice and starch.

Wagon-load, Special Tariff No. 2.—The following goods in 10-ton lots:—Brooms made of brushwood, barrel hoops, and timber roughly cut.

Wagon-load, Special Tariff No. 3.—The following goods in 10-ton lots:—Brewery refuse, ice and snow, sand, ores, saw-dust, slag, stones, turf, and peat litter.

Bulky Goods.—Pictures in frames, bark in lots of less than five tons, tubs in lots under five tons, and not placed one inside the other, bicycles, flax (raw), in lots under five tons, hollow glass ware in lots under five tons, hats, cardboard boxes, perambulators, boxes, crates, baskets in lots under five tons, plants, shrubs, flowers, millinery, wadding, handcarts, and hay and straw in lots under five tons.

HUNGARY.

66. Arrangement of classes and description of goods in each Class.

The Austrian classification applies in Hungary for all normal tariffs, except on one or two small local lines.

CALCULATION OF FREIGHT CHARGES.

FRANCE.

QUICK (OR FAST) TRANSIT.

("*Grande Vitesse.*")

67. Conditions of transit.

The Regulations as to Registration of consignments, minimum distance charged for, unit of money in calculating freight charges, minimum charge per consignment, and additional charge for bulky goods, are precisely the same as for slow transit, shown hereafter.

68. Unit of weight.

Packages weighing up to 5 Kg. are charged as 5 Kg., packages from 5 Kg. to 10 Kg. are charged as 10 Kg., and packages exceeding 10 Kg. are charged per indivisible 10 Kg.

69. Bases of ordinary and special tariffs.

Goods and Merchandise (*certain Food Commodities excepted*) sent by quick transit on all large railways, including the State line, are rated irrespective of their nature in so far as they do not contain money, securities, or artistic objects, for which there is an *ad valorem* tariff, according to the following bases:—

1.—Consignments not exceeding 40 Kg.

Up to 200 Km. Fr. 0·35 per tonne per Km.	Inclusive of loading and unloading.
200 to 300 Km. Fr. 0·32 per tonne per Km.	
300 to 400 Km. Fr. 0·31 per tonne per Km.	
400 to 800 Km. Fr. 0·30 per tonne per Km.	
800 to 1,000 Km. Fr. 0·28 per tonne per Km.	
Over 1,000 Km. Fr. 0·25 per tonne per Km.	

In no case may the charge exceed that of a consignment weighing more than 40 Kg.

2.—Consignments weighing more than 40 Kg.

Up to 100 Km. Fr. 0·32 per tonne per Km.	Exclusive of loading and unloading.
100 to 300 Km. Fr. 0·30 per tonne per Km.	
300 to 500 Km. Fr. 0·28 per tonne per Km.	
500 to 600 Km. Fr. 0·26 per tonne per Km.	
600 to 700 Km. Fr. 0·24 per tonne per Km.	
700 to 800 Km. Fr. 0·22 per tonne per Km.	
800 to 900 Km. Fr. 0·20 per ton per Km.	
900 to 1000 Km. Fr. 0·18 per tonne per Km.	
1000 to 1100 Km. Fr. 0·16 per tonne per Km.	
Over 1100 Km. Fr. 0·14 per tonne per Km.	

Provisions (excepted from above tariffs) as follows:—Butter, beer, cider, vinegar, wine, mushrooms, pork, butcher's meat, preserves, fresh shell fish, gherkins, crabs, shrimps, crayfish, lobsters, rocklobsters, edible snails, cheese, lemons, strawberries, olives, oranges, raisins, and such fruits; dead game, ice for refrigerators, margarine, lard, fresh suet, herrings, oysters, milk (except as specially provided hereafter), vegetables, barm, melons, eggs, bread, pastry, fish, live turtles, vintage in tubs or casks, meat and dead poultry, and live animals, viz:—lambs, quails, kids, guinea pigs, sucking pigs (not exceeding 30 Kg. each including packing), rabbits, pigeons, and poultry.

CALCULATION OF FREIGHT CHARGES—*continued.*

France—*continued.*

1.—In consignments not exceeding 40 Kg.

The rates fixed for ordinary Quick Goods and Merchandise apply, but with the proviso that the charge shall not be greater than that made under the following tariff for a consignment of more than 40 Kg. of *provisions.*

2.—Consignments weighing more than 40 Kg.

Up to 100 Km. Fr. 0·24 per tonne per Km.	Exclusive of loading and unloading.
100 to 300 Km. Fr. 0·225 per tonne per Km.	
300 to 500 Km. Fr. 0·21 per tonne per Km.	
500 to 600 Km. Fr. 0·195 per tonne per Km.	
600 to 700 Km. Fr. 0·18 per tonne per Km.	
700 to 800 Km. Fr. 0·165 per tonne per Km.	
800 to 900 Km. Fr. 0·15 per tonne per Km.	
900 to 1000 Km. Fr. 0·135 per tonne per Km.	
1000 to 1100 Km. Fr. 0·12 per tonne per Km.	
Over 1100 Km. Fr. 0·105 per tonne per Km.	

The foregoing rates apply to Consignments over 40 Kg. even though composed of separate packages from one sender to one consignee, but articles from carrying agents must be united in one package.

In addition to the above rates the railways have in operation special quick transit tariffs for a number of commodities, including provisions, fish, and returned empties for *interior distribution,* and provisions, fruit, vegetables, and cut flowers *for export.* Where such tariffs are used for comparison with Irish rates, full particulars of the relative conditions will be shown.

SLOW TRANSIT.

(*"Petite Vitesse."*)

70. Rate for parcels of slow Goods under 40 Kg. in weight

Packets and parcels of slow goods traffic weighing singly 40 *Kg. and under* are charged on all large railways except the State line at a uniform rate of 0·25 franc per tonne per Km. whatever be the series to which they belong, but in no case must the charge be higher than that at ordinary tonnage rate for a consignment of the same nature weighing more than 40 Kg. On the State railway there is a special scale under which the charge per tonne per Km. is the same as above for distances up to 54 Km., but decreases thereafter as the distance increases.

The difference is as under for specific distances up to 800 Km.:—

State Railway.		All other large Railways.
Km.	Per Tonne.	Per Tonne.
54	13·50	13·50
100	24·00	25·00
200	44·00	50·00
300	60·00	75·00
400	79·80	100·00
500	100·00	125·00
600	120·00	150·00
700	140·00	175·00
800	160·00	200·00

The rates of ordinary tariffs (general or special) are applicable to all packages or parcels, *even when packed separately,* when they form part of consignments weighing together more than 40 Kg. sent by one consignor to one consignee. Carriers, carting contractors, and other transport agents cannot obtain the benefit of ordinary tariffs for small packages under 40 Kg. each unless they are included in a single parcel exceeding that weight.

CALCULATION OF FREIGHT CHARGES—*continued.*

France—*continued.*

71. Parcels of Slow Goods in different series

Every parcel or package weighing more than 40 Kg. and containing goods in different series is charged at the rate of the highest series unless the consignor declares the nature and weight of the objects conveyed, in which case these goods are charged separately according to whatever series they belong.

72. Unit of weight and minimum charge for Slow Goods.

The rates for packages both under and over 40 Kg. in weight are charged per indivisible fraction of 10 Kg., and whatever be the distance carried the minimum charge is fixed at 40 c. per consignment, inclusive of loading, unloading, and station charges.

73. Bulky Goods.

Provisions (*i.e., foodstuffs*) and objects not mentioned by name in the tariff book and not weighing 200 Kg. below the volume of 1 cub. metre are rated at one-half more than the charges fixed by the general tariff, according to the series of the said tariff to which these objects belong, provided that the rate in no case shall be higher than that which would result from the application of the simple tariff to the fictitious weight calculated at 200 Kg. per cubic metre. When these provisions and objects are mentioned by name in a special tariff the rates of that tariff are applicable without addition unless there be an express indication to the contrary. The additional tax is, moreover, not applicable to parcels under 40 Kg. charged at the exceptional tariff indicated therefor. Goods subject to be charged one-half more than ordinary rate are marked with an asterisk in the general classification.

74. Articles of unusual length, dimensions or weight.

The general rule is that articles exceeding 3,000 Kg. to 5,000 Kg. are charged tariff rate plus 50 per cent., and these from 5,000 Kg. to 20,000 Kg. are charged double freight. In masses from 10,000 Kg. to 20,000 Kg. the minimum freight is 25 c. per Km. 20,000 Kg. is the maximum weight accepted by the railways, and articles exceeding the normal size of carrying stock (6·50 metre long by 2·80 metre wide) are accepted only under special arrangement. On the Nord line the charges are:—

(1.) For weight not exceeding 10,000 Kg. and length not exceeding 7½ metres, freight as on ordinary consignments at general or special tariffs.

(2.) For weight exceeding 10,000 Kg. and lengths from 7½ to 30 metres, freight at (*a*) rates for consignments in incomplete loads with a minimum charge of 20c. per Km. and per indivisible 7½ metres length, or (*b*) at rates of general or special consignments in complete wagon loads with minimum of 5,000 Kg. per 7½ metres for rates of complete wagons of 5,000 Kg., of 10,000 Kg. per 7½ metres for rates of complete wagons of 10,000 Kg., of 20,000 Kg. per 15 metres for rates of complete wagons of 20,000 Kg.

75. Registration.

A charge of 10c. per consignment is made for registration, but when goods are carried over several railways this charge is made once only.

76. Transhipment and transmission.

At junction stations of one railway with another railway owned by a different company with which the exchange of rolling stock is possible, a charge of 40c. per ton is made, applicable per indivisible fraction of 10 Kg. and to be evenly divided between the two companies upon goods forwarded from one line to the other. This fee is not charged at points of junction with private sidings.

When transhipment of goods is made between two lines where exchange of rolling stock is impossible, there is charged, instead of the fee of 40c. named above, a fee of 70c. per ton applicable per indivisible fraction of 10 Kg., and to be apportioned as follows:—40c. station charges to be divided equally between the two companies, and 30c. to the company that does the transhipping. In the absence of provisions to the contrary in the Deeds of Concession, no transhipment fee is chargeable at the points of junction of lines between which rolling stock cannot be exchanged when these lines are worked by the same company or the same concessionaire. Such an exception has been made in the case of certain narrow-gauge lines conceded to the Orleans Company, where a charge of 5c. has been authorised for consignments not exceeding 1,000 Kg. and of 5c. per 1,000 Kg. or part for consignments exceeding 1,000 Kg. Consignments not exceeding 40 Kg. in weight are, in all cases exempt from transmission and transhipment fees.

77. Minimum distance charged for.

The minimum distance charged for is 6 Km., and every fraction of a Km. is reckoned as a full Km.

CALCULATION OF FREIGHT CHARGES—*continued.*

France—*continued.*

78. Unit of money calculation.

In calculating the charge on a consignment of goods taxed at the same unitary rate the amount is arrived at by rounding off the figures to the 5*c.* above when the fraction amounts to 2½*c.*, and to the 5*c.* below when it is under 2½*c.* If a consignment comprises goods charged at different unitary rates, the cost is rounded off separately for each of the rates.

79. Special Goods tariffs.

The eight large railway systems have in operation 29 special goods tariffs, each of which applies to various kinds of merchandise classified under a generic heading. This classification is as under (omitting No. 1, which applies to animals):—

No.
2. Grain, flour, seeds, vegetables (dry), food pastes, potatoes.
3. Provisions, fruits, vegetables (green), dairy produce.
4. Sea water, rock salt, sea salt.
5. Beet root, sugar, molasses, dextrine glucose, syrup.
6. Beverages.
7. Fuel (coal, &c.).
8. Charcoal, firewood and peat.
9. Timber for construction.
10. Lime, cement, and plaster.
11. Building materials.
12. Stone and earth used in arts and industries.
13. Minerals.
14. Metal manufactures.
15. Resin, pitch, mineral oils, and combustible liquids.
16. Fats and their derivatives.
17. Dyeing materials.
18. Chemical products.
19. Paper, cardboard, and materials for manufacturing them.
20. Tissues and textiles (linen, woollens, &c.).
21. Pottery and glass ware.
22. Manures and fertilisers.
23. Trees and shrubs (live), hay, fodder, straw, &c.
24. Furniture, manufactured objects, &c.
25. Empty packages.
26. Empty packages returned.
27. Animal refuse and accessory products.
28. Contractors' materials for railways and tramways, vehicles, etc.
29. Objects of abnormal dimensions, goods in owners' wagons, exhibits for agricultural shows, exhibitions, &c.
30. Export and seaport traffic.

Of the above special tariffs eighteen (Nos. 2, 3, 6, 7, 9, 12, 13, 14, 16, 17, 18, 19, 20, 21, 22, 23, 24, and 27) are each sub-divided into five distinct tariffs applicable respectively to

(*a.*) Local traffic on each railway;

(*b.*) Through interior traffic between the large French railways;

(*c.*) Through interior traffic with foreign railways and navigation companies;

(*d.*) Export and "transit" (*i.e.*, through intermediate) traffic carried on French railways;

(*e.*) Export and "transit" traffic through booked with foreign railways and navigation companies.

In five of the Special Tariffs (Nos. 4, 5, 10, 11, and 15) the sub-division marked "c" above is omitted, in two (Nos. 26 and 28) the sub-division marked "e" is omitted, and in two (Nos. 8 and 25) the sub-divisions "c" and "e" are both omitted.

In all special tariffs substantial reductions are made, especially for consignments in wagon loads or larger quantities. In cases where such tariffs are used in comparison with Irish rates, full details will be shown.

80. Request for Special tariff.

Every consignor wishing to benefit by a special tariff, whether "internal" or "common" (*i.e.*, "local" or "through"), must make a request to that effect on his consignment declaration, either by explicit declaration of the tariff to be applied or by one of the following entries:—"special tariff," "reduced tariff," or "lowest tariff," with or without indication of the route to be followed. Any one of these entries indicates acceptance by the consignor of all the conditions implied by the tariff to be used. It entails on the carrier or carriers the obligation of

CALCULATION OF FREIGHT CHARGES—*continued.*

France—*continued.*

applying for the entire journey the lowest total rate, consolidating if necessary at one or several points, the special tariff rates (local or through) either with each other or with those of the general tariffs, when there is no clause to the contrary, conforming on each system to the special tariff regulating the conditions of consolidation, as well as the following provisions:—If the consignor after making one of the entries as to special tariff indicated above, indicates a route to be followed, the forwarding station will apply the lowest tariff in connection with that route. If the consignor does not indicate a route the forwarding station must select, even outside its own system, and, if necessary, by a roundabout way, the route most economical for the consignor. In default of an entry requesting any special tariff, the goods are forwarded at the rates and conditions of the general tariffs. (*See "Soudure" Tariffs, referred to hereafter.*)

81. Increased rates for certain Goods under Special tariffs.

The transit rates in the special tariffs, local or through, for goods coming under the category given below are only applicable when increased by the percentage indicated for each of them in the following table. No increase is, however, applied when these goods are destined for export or are travelling with an international way-bill under the terms of the Convention of Berne.

The rates of special tariffs subject exclusively to the conditions of the general tariffs are likewise exempt from any increase. The list of goods subject to increase includes the following:—

	Increase per cent.
Bottles, empty, with or without metallic corks, not packed,	2
Mineral waters in demijohns or carboys,	2
Earthenware, packed or not,	2
Plate glass, with or without silvering,	3
Rough plate glass, unpolished,	3
Animal oils not named,	2
Vegetable oils not named,	2
Agricultural implements and machinery *without* the packing provided for in the special tariffs,	1
Machinery and mechanical apparatus, *without* the packing provided for in the special tariffs, except the following:—Weighing machines, concrete machines, turn-tables, hydraulic lifts, excavators not running on rails, portable forges, and mortar mills, packed or not,	3
Nitrates and Azotites in demijohns and carboys,	2
Eggs in baskets,	3
Eggs in cases,	2
Pottery, common, stoneware, or terra cotta, *without* the packing provided for in the special tariffs,	2
Tissues and cloth, not named, unpacked,	3
Window glass,	3

82. Accessory charges on special tariff Goods.

Accessory charges for handling, transhipment, transference, and cranage are added to the rates given in the tables and to the exceptional rate of special tariffs if there be nothing to the contrary in the said tariffs. When through tables of rates or fixed rates are applied to goods carried over more than one railway, unless there be a stipulation to the contrary in the tariff, no charge for transmission is made at the points of junction connecting the railway systems participating in these through tables of rates or fixed prices. When the rates of a special tariff comprise loading and unloading and station charges, or only station charges, or when in accordance with the stipulations of the tariff, nothing is added to these rates for loading, unloading, and station charges, no transmission fees are charged for the benefit of the railway or railways, parties to the rate, at a point of junction with another railway which is not a party to the rate for goods coming from or going to that other railway, but nothing is deducted from the rate of the special tariff. When the special tariff stipulates the addition to the rates of a kilometric table, of accessory fees, fixed at the total sum of 1·50 fr. per ton, *i.e.*, station and handling charges, one half of these accessory fees is deducted at each point of

CALCULATION OF FREIGHT CHARGES—*continued.*

France—*continued.*

junction with another company which does not participate in the tariff, and one-half of the transmission fee is charged for the benefit of the company or companies participating in that tariff.

83. Incomplete loads, surplus weight and minimum weight of special tariff Goods.

Every consignment, the weight of which is less than the prescribed minimum either per consignment or per wagon load required by the special tariff, is rated according as it is more advantageous to the consignor either at the rate and minimum weight of that tariff or according to the general or special tariffs of each company. For special tariffs applicable with a minimum tonnage per wagon, when a consignment exceeds the minimum weight it is charged at the rates of the special tariff if it can be loaded into a single wagon. When it cannot be so loaded the surplus weight to be loaded in another wagon is, if less than the minimum fixed per wagon, charged as for an incomplete load. The minimum weight per full wagon or per consignment may be comprised of goods coming under the same tariff or under different tariffs, with the same tables of rates or same exceptional rates, provided these goods be subject, by the said tariffs, to the same special conditions, that they be forwarded by the same consignor to one and the same consignee, and that they are incapable of injuring or damaging each other by contact. An exception to this regulation is made on the Nord and Est Railway systems, inasmuch as the minimum weight per wagon may be made up of goods, some of which, under the terms of the tariff, must be loaded and unloaded by consignors or consignees and the others by the railway company, on condition that the loading of the full wagon shall be effected by the consignor direct from cart to train, and the unloading by the consignee direct from train to cart within the shortest period allowed by the tariff for any of the goods composing the consignment. Nevertheless, when it is of advantage to the public, the rate is calculated for each kind of goods either at the rate of the general tariff on the actual weight or at the rate of the special tariff on the minimum weight fixed for the application of that tariff. A full wagon load may also be made up of goods of all kinds (excepting valuables, dangerous goods, and certain drapery goods), in which case loading must be effected by consignor directly from cart to train and unloading by consignee directly from train to cart, and the rate is calculated on the Nord system at the rates of table I, with a minimum of 5,000 Kg. per wagon or paying for that weight.

Under the same conditions the minimum weight may be made up on railway systems other than the above, of goods belonging to different tables of rates or exceptional rates, if payment is made as if the total weight were exclusively made up of the goods rated highest.

84. Exhibits for Agricultural Shows and Official Exhibitions.

On the Nord Railway objects and produce conveyed for exhibit pay full rate on outward journey and are carried free on return journey within fifteen days from close of show, etc., on payment of registration fee and receipt stamp plus ordinary expenses of loading and unloading prescribed in the tariff. Return may be effected in portions. Consignors must produce railway receipts showing they paid full freight on forward journey. In case of exhibits of a perishable nature which cannot be returned, a refund of 50 per cent. of the full forward freight is made any time within two months of close of the Show and on production of the railway receipt and a certificate from the President of the Show that the exhibits were not sold or re-forwarded to another Show.

85. Special tariff bulky Goods.

In cases where goods not weighing more than 200 Kg. per cubic metre volume are named in a special tariff, the rates of that tariff are applicable without addition provided there be no expressly formulated indication to the contrary.

86. General regulations relative to special tariff Goods.

The application of the special tariffs is subject to the conditions of the general tariffs of each company in everything which is not contrary to the foregoing general regulations and to the conditions expressly indicated in the tariffs themselves.

87. Through interior rates for special tariff Goods.

When a through tariff stipulates the application of a table of rates, the charge is calculated by the shortest route as resulting from the current edition of the distance table from system to system, the drawing up of which has been approved by Ministerial Decree, provided that this itinerary employs exclusively the lines of railways participating in the tariff. Otherwise the rates fixed by the table are calculated according to the length of the most direct route obtained from the table of distances belonging to each of the participating railways, including the Circle Railways of Paris if necessary, and in the latter case by the shorter route, *via* Inner or Outer Circle. As regards the Nord and Ouest Railways, the distance to be taken as a basis for the calculation of rates are the actual distances.

CALCULATION OF FREIGHT CHARGES—*continued.*

France—*continued.*

88. Intermediate Stations.

Goods sent under the terms of an ordinary special tariff, whether local or through, to or from a station not named, but intermediate between two stations named, will enjoy the benefits of the said tariffs on paying for the entire distance comprised between the first station named which precedes the forwarding station and the first station named which follows the station of destination, if the rate thus calculated is more advantageous to the consignor than that of the general or special tariffs of each company. Goods forwarded under the terms of special export tariffs, through or not, by a French station, not named, but intermediate between two points named, may profit by the rates of these tariffs by paying for the distance between the named point which precedes the forwarding station and the frontier port or point whence export is effected, if the rate thus calculated is more advantageous than that of the general or special tariffs of each company. Only the stations situated on the shortest route between each of the named stations and the points of transit indicated in the tariff are considered to be intermediate stations between two stations named. Nevertheless (with a few exceptions) stations in Paris situated on the most direct route between forwarding station and station of destination by way of the Inner Circle of Paris are treated as intermediate even though conveyance between two named stations is by way of the Outer Circle of Paris. When a through tariff stipulates the application of a table of rates for consignments between any station of a system and any station of another system conditional on the journey taking in the two systems the above clause will apply as if each of the stations of these two systems were designated for its connection with each of the stations on the other system.

89. "Soudure" tariffs.

In the case of transport from point to point, over a line of which an intermediate section, or sections, enjoys a fixed price, the lowest rates applicable to the various sections of the journey are, in throughout transit, simply added together without the addition of accessory charges. This is called "Soudure." Soudure is applied in order to avoid the trouble and expense incident to re-forwarding, and is now common to all French lines. It is subject to a fee of 40 centimes (station charges) on the Orleans and Midi systems, but is effected free of charge on other lines. At the junction of two systems the soudure of their internal tariffs, whether mileage scales or fixed prices, is obligatory on the companies, in virtue of the clause in the charge book which ensures continuity of transport. A transmission fee is added to the combined rates. In some cases, however, where the companies grant reduced rates, soudure is expressly forbidden. Even re-forwarding is sometimes prohibited when it would cause traffic to leave its ordinary channel. But, as a rule such exceptions are rare, and it may be said that in France to-day *Soudure is the general rule.* The question as to whether Soudure should be automatically applied by the companies or only on special request of the sender is a delicate one. In the case of consignments travelling over only one railway system, the request made for "special tariff" or "reduced tariff" is sufficient to oblige the companies to ascertain the route most advantageous to the consignor, and to make, automatically, the soudure of tariffs which gives the lowest rates. For transport over several systems the question is more complex, as the officials at each station cannot know the tariffs of neighbouring lines as well as they do those of their own. The companies do not, therefore, take the entire responsibility of selecting the most advantageous route. The publications issued also vary very much, and in some cases certain tariffs are not applied unless the consignor gives their actual distinguishing number.

CALCULATION OF FREIGHT CHARGES—*continued.*

France—*continued.*

Within a recent period the large companies have accepted the obligation to automatically direct through consigned goods into the most economical channel, provided that a request is made simply for the most reduced tariff, but the company receiving the goods from the sender will not be responsible for errors in the choice of route, unless there has been a "grave fault" on its part.

The application of "Soudure" has a special significance in its relation to the formation of "Penetration Rates" (*i.e.*, International Import Rates) for commodities which are likely to come into competition with French products in home markets. Formerly the railways held that they did not violate any principle when the *total* freight on foreign products from point of origin to the consuming centre in France remained higher for foreign than for French products. This omitted from consideration the difference that might exist in the economic conditions of production in the different countries, and in endeavouring to develop their import traffic the railways upset the economic equilibrium by annihilating almost totally the effect of difference in distance. To obviate this result international rates are at present as a general rule formed on the "Soudure" principle, that is, they are nearly always made up of the total of the home rates of the countries concerned. In this way foreign goods pay from the French port or frontier as much as similar French goods carried like distance within the country. Exception is, however, made when it is deemed expedient to effect special reductions in order to obtain reciprocal treatment for exportation of French products or to bring in raw materials, and particularly when such reductions are necessary on the part of the French railways to enable them to meet outside competition arising chiefly from irregular boat services which carry at very low freights. In Conventions dated 1883 the French railways admitted the right of the Minister of Public Works to suppress tariffs favouring foreign products.

The following are the conditions of "Soudure" of rates on the Nord Railway:—(1) Each rate for part of the journey is calculated separately in accordance with its special conditions, having regard, if necessary, to the minimum of distance, weight, and amount charged. (2) Accessory fees are collected at the stations of departure and arrival, and at junctions with other lines in accordance with the tariffs applied. Nothing special is added at points of combination of rates, but nothing is deducted from exceptional rates for part of the distance carried unless by special arrangement. (3) The periods of the different tariffs combined are added together to form the total time of transit. The times allowed for dispatch and delivery are counted once only, but the extensions of time specified in these different tariffs are not cumulative, and the longest only is applied. (4) If one of the combined tariffs contains any special stipulation as to liability of the railway in case of delay such stipulation applies to the whole journey.

90. Special export and "transit" (*i.e.*, through intermediate) tariff regulations.

The rates of special export tariffs are applied immediately to goods exported by land or sea or simply consigned to one of the ports named in the tariff, either to a navigation company or to the representative of the Colonial Office. In all other cases, except such as are explicitly provided for in the tariff, the special export rates are applied by way of rebate. In cases of immediate application of the rates the companies may require every necessary proof of the destination of the goods, and where the rate is applied by way of rebate the application for the rebate must be made within three months (unless otherwise provided in the tariff) from the day of arrival of the goods at the frontier point or port of embarkation—the ordinary tariff rate being applied on departure. The rebate application must be accompanied by the original waybills or receipts and the bills of lading or Customs certificates proving export. In default of sufficient proof within the prescribed period of three months, the rate of the ordinary tariff is maintained. The rates of "transit" tariffs are applied to goods coming from or going to foreign parts and traversing French territory. These rates and also the total international transit tariffs may be applied as export rates as far as the French frontier under

CALCULATION OF FREIGHT CHARGES—*continued.*

France—*continued.*

the conditions and subject to the proofs required for the application of export tariffs to French goods destined for foreign parts and coming from either a station situated on the direct route of the rate applied or from a station situated on one of certain indirect routes defined in the tariff book, or from a station distant by rail 50 Km. at most from the *direct* route, on condition that the distance between that station and the export station shall be less than the distance separating the export and import stations between which the rates of transit apply. There are certain exceptions to the foregoing regulations in the case of traffic destined for the Gex district, the free zone of Haute Savoie, and the part of the Valley of the Valserine included between the left bank of that river and the crest of the Jura mountains, which is subject to a special method of charging whenever it is to the advantage of the parties that such exceptional method should be adopted.

91. Special tariff parcels under 40 Kg.

By way of exception in the case of export and transit traffic, there is no restriction as in interior transit requiring transport agents to make up such parcels in packages weighing over 40 Kg.

92. Disinfection of Goods wagon.

When disinfection is required by the regulations a fee of 2 fr. per wagon is charged for the disinfection of wagons which have been used for the transit of infectious matter.

93. Reimbursements (*i.e.*, "cash on delivery.")

When sums are charged by a consignor on consignments in the form of reimbursements of part or whole value of goods sent by railway, the company charges on return of such reimbursement to the consignor a tax or commission equal to the charge for conveyance of money as fixed in the quick transit tariff. This charge is as follows:—0·00252 fr. per indivisible fraction of 1,000 fr. and per km. (duty included), with a minimum charge of 0·25 fr. per 1,000 fr. The charge per consignment may not be less than 0·40 fr.

Note.—As regards the application of the different special slow traffic tariffs of the Ouest railway to Paris local stations there are several exceptional provisions as to the conditions under which the tariffs are applied. These conditions are apparently of local interest only, and have no bearing on the general question of rates.

Note.—Where special tariffs contain regulations differing from or supplemental to those given above the variations or additions will be found noted in any case in which the special tariff is used for purpose of comparison with an Irish rate.

94. Bases of calculation of normal slow Goods tariffs

The following are the bases of calculation of ordinary rates charged per 1,000 Kg. for the six series of goods shown in the classification for distances up to 1,100 Km. on the Nord, Ouest, Orleans, and P. L. & M. Railways:—

SERIES 1.

	Nord.	Ouest.	Orleans.	P.L. & M.

Mem.—It is to be noted that the foregoing rates of the Etat Railway for series 1, 2, and 3 gradually decrease in zones up to 300 Km., but that for distances from 301 Km. upwards the rate per Km. per tonne is raised to about the level of the 140-160 Km. zone, while for series 4, 5, and 6 the bases of charge are raised twice, *i.e.*, series 4 at 201 and 301 Km., and series 5 and 6 at 101 and 301 Km.

94—*continued.*

CALCULATION OF FREIGHT CHARGES—*continued.*

BELGIUM.

EXPRESS GOODS.

("*Exprés.*")

95. Rates charged for Express Goods.

Express goods are charged at Tariff No. 1, which is applied on written request from the sender, to packages of every weight to be sent to consignee's domicile by express.

96. Accessory fees not included in Express tariff.

The tariff comprises all accessory expenses except collection, disbursements, reimbursements, advice of arrival, and premium on declaration of interest in delivery.

97. Unit of weight and minimum charge for Express Goods.

The rates are charged per package and per every 10 Kg. for packages of more than 10 Kg. in weight, but the cost of transit may not be less than the minima, *i.e.*, Frs. 3·50 when prepaid and 3·70 when forwarded "to pay," under the tariff of which the basis is shown in tabular statement appended hereto.

98. Express packages of 60 Kg. and under prepaid by stamps.

Prepaid packages of 60 Kg. and under must be accompanied by a consignment docket in the form prescribed by the railway companies. The prepayment is effected by means of adhesive railway stamps, which can be bought at all railway stations and at the principal post offices.

99. Rates for above.

The rates for prepaid packages of 60 Kg. and less are as follows *for all distances*:—

	Fr.
Packages not exceeding 5 Kg. in weight, .	0·80
,, over 5 and up to 10 Kg. ,, .	1·00
,, ,, 10 ,, 20 Kg. ,, .	1·50
,, ,, 20 ,, 30 Kg. ,, .	2·00
,, ,, 30 ,, 40 Kg. ,, .	2·50
,, ,, 40 ,, 50 Kg. ,, .	3·00
,, ,, 50 ,, 60 Kg. ,, .	3·50

Bulky packages, the chargeable weight (50 per cent. added) of which does not exceed 60 Kg., come under the above regulation and scale of charges.

With regard to small prepaid packages of 5 Kg. and under, the following only are deemed to be bulky:—

(*a.*) Packages exceeding 1·50 metres in any direction.

(*b.*) Packages which by reason of their shape cannot be easily loaded with other packages, which are voluminous or demand special precautions, such as plants and shrubs in baskets, empty cages, or cages containing live animals, empty cigar boxes in bundles, cardboard boxes and wooden hat-boxes, furniture, basket goods, flower stands, children's carriages, spinning wheels, etc.

100. Express packages exceeding 60 Kg. cannot be prepaid by stamps.

Unwieldy and other packages exceeding 60 Kg. may not be prepaid by stamps nor be charged according to the foregoing scale.

101. Rates for unstamped Express parcels.

The scale of rates for packages not prepaid by means of railway stamps and the chargeable weight of which does not exceed 60 Kg. is the same as for prepaid stamped parcels, plus an excess fee of 20*c.* per *package*.

102. Railway not bound to accept Express packages above certain volume and weight.

The railways are not bound to accept for transit, by express, packages of more than one cubic metre volume or weighing more than 150 Kg. In case of acceptance of such packages for transit, and if the regularity of the service on the intermediary lines should require it, the traffic may be transferred in the course of the journey to goods trains.

103 Unwieldy packages excluded from Express transit.

In no case are packages which are unwieldy or difficult to load or which may delay passenger trains accepted for conveyance as express goods.

QUICK (OR FAST) GOODS.

("*Service Accéléré.*")

104. Tariff chargeable and maximum weight.

Accelerated goods are charged at Tariff No. 2, which applies to packages weighing up to 200 Kg. per consignment (*i.e.*, one or several packages sent by one single consignor to the address of one single consignee) unless the sender has expressly asked in writing for the application of Express or Slow Goods Tariff.

CALCULATION OF FREIGHT CHARGES—*continued.*

Belgium—*continued.*

105. Accessory fees not included in above tariff.

The tariff comprises all accessory expenses except those provided for in respect of collection, disbursements, reimbursements, advice of arrival and interest in delivery.

106. Exceptions to above maximum weight.

With the reservation provided above, oysters, fresh fish, and barm are forwarded at the rate and under the conditions of accelerated goods tariff whatever may be the weight of the consignment. The sender is authorised to ask in writing for the transit under this tariff of consignments weighing more than 200 Kg.

107. Accelerated packages of 60 Kg. and under prepaid by stamps.

Prepaid packages of 60 Kg. and under should be accompanied by a consignment docket in the form prescribed by the railway. The prepayment is effected by means of adhesive railway stamps to be affixed to the consignment docket. These stamps are on sale in all stations and in about 380 specified Post Offices.

108. Rates for above.

The rates for single packages weighing 60 Kg. and under, prepaid as above, are the following for all distances:—

	Fr.
Packages not exceeding 5 Kg. in weight, .	0·50
,, over 5 and up to 10 Kg. ,, .	0·60
,, ,, 10 ,, 20 Kg. ,, .	0·70
,, ,, 20 ,, 30 Kg. ,, .	0·80
,, ,, 30 ,, 40 Kg. ,, .	0·90
,, ,, 40 ,, 50 Kg. ,, .	1·00
,, ,, 50 ,, 60 Kg. ,, .	1·10

Packages considered to be unwieldy (already defined), the chargeable weight of which does not exceed 60 Kg., may be prepaid by means of railway stamps in accordance with the above rates, and at the excess weight (*i.e.*, 50 per cent. added to actual weight).

109. Accelerated packages exceeding 60 Kg. in weight cannot be prepaid by stamps.

Unwieldy and other packages of which the chargeable weight exceeds 60 Kg. cannot be prepaid by means of railway stamps nor obtain the advantage of the foregoing rates.

110. Accelerated unstamped parcels.

Consignments not prepaid by means of railway stamps and to be forwarded under the conditions of accelerated goods tariff are chargeable as follows:—

111. Rates for above when under 60 Kg.

(*a.*) Single packages and consignments of several packages, the chargeable weight of which (in accordance where necessary with regulation as to "Bulky" Goods) does not exceed 60 Kg.:—

	Fr.
Packages not exceeding 5 Kg. in weight, . .	0·70
Packages or consignments over 5 & up to 10 Kg.,	0·80
,, ,, 10 ,, 20 Kg.,	0·90
,, ,, 20 ,, 30 Kg.,	1·00
,, ,, 30 ,, 40 Kg.,	1·10
,, ,, 40 ,, 50 Kg.,	1·20
,, ,, 50 ,, 60 Kg.,	1·30

112. Rates for above when over 60 Kg.

(*b.*) Single packages and consignments of several packages which exceed 60 Kg. are charged according to the gross weight calculated evenly to the 10 Kg. above (in accordance where necessary with the provisions as to Bulky Goods), but the charge for transit may never be less than the minima (*i.e.*, Fr. 1·10 when prepaid and Fr. 1·30 when forwarded "to pay") under the tariff of which the basis is shown in the tabular statement appended hereto.

113. Accelerated consignments of unusual length.

For consignments exceeding the normal length of carrying stock the regulations are the same as for slow goods, except that while the gross weight is charged at Tariff No. 2 the excess charge is calculated according to Class 1 of Slow Goods Tariff.

SLOW GOODS.

("*Petite Vitesse.*")

114. Registration of Slow Goods.

All consignments of slow goods are subject to a Registration Fee of 20c., chargeable in addition to the tariff rates.

115. Consignments of Slow Goods in different classes.

When a consignment by slow train contains goods of different classes or chargeable at different special tariffs, the rate of the class or special tariff which is the highest is applied to the whole consignment. Nevertheless, if it be advantageous to the public, and

CALCULATION OF FREIGHT CHARGES—*continued.*
Belgium—*continued.*

if the way-bill shows separately the weight of each category of goods, consignments composed of different classes or belonging to special tariffs with the proviso of a minimum of 10,000 Kg. or under, may be charged separately, at the price of the class or special tariff applicable to each category of goods. In this case the whole consignment should at least amount to the weight fixed for the class or special tariff which presupposes the *highest minimum weight.* If the minimum is not attained, the weight of the goods rated at the class or special tariff *the cost of which is the lowest* should be increased by the difference necessary to make up the required minimum.

116. Minimum charges for Slow Goods and unit of weight.

The minimum charges under Slow Goods Tariff (No. 3) are fixed as follows:—For Class 1 at the rates fixed in the tariff, which are exclusive of Accessory Fees. For classes 2 and 3 at a weight of 5,000 Kg. Consignments of less than 5,000 Kg. are rated according to class 1 unless there be some advantage to the consignor in paying the rate for 5,000 Kg. in the class to which the goods belong. For Class 4, at a weight of 10,000 Kg. Goods of Class 4 presented for conveyance in quantities of less than 10,000 Kg. are assimilated to Class 3 and rated accordingly unless it be to the advantage of the consignor to pay the rate for 10,000 Kg. under Class 4. As an exception the rates of Class 4 are applied to consignments of beet roots weighing less than 10,000 Kg. when the consignment occupies only one wagon and that vehicle is fully loaded. If goods in Class 4 (ordinarily forwarded in open and uncovered wagons) are sent, on written request of consignor, in closed or covered wagons, they will be charged at Class 3 rates, but ice is excepted from this regulation when the railway has suitable wagons available.

Beyond the foregoing minima the charges are calculated per indivisible fraction of 10 Kg.

With the exception of goods which may not be loaded with others, defined in the Regulations, and of goods of any description in incomplete loads for which the consignor requires a separate wagon, all Slow Goods presented in consignments of less than wagon loads are charged at the rate of Class 1 on a minimum weight of 400 Kg. if it be not to the advantage of the consignor to apply the rate of a complete load in the class to which the goods belong.

117. Slow Goods to and from private sidings.

Consignments coming from or destined to a private siding are subject, according to the circumstances, to the rates and regulations of the tariff of the station at which the siding connects or at the rates and conditions of the tariff specially fixed for the business establishment connected by the siding. Nevertheless, for consignments weighing less than 1,500 Kg. a supplementary rate of 3 fr. is charged in respect of goods forwarded from a private siding, and if necessary on goods received at it, unless the establishment interested finds it advantageous to pay the tariff rates for 1,500 Kg. To this regulation there are certain exceptions in the case of specified private sidings to which traffic is admitted without increase of rates. The establishments connected by private sidings may free themselves from payment of the supplementary tax by loading into a returning wagon several consignments destined for the same station and weighing together at least 1,500 Kg., but the period allowed for return of carrying stock will not be increased on this account, that is to say, wagons thus used will be considered as returned empty. When several consignments intended for different consignees living in the same locality, or in different localities in the same direction with regard to the station of departure, are loaded in the same wagon by a sole consignor, they are considered both in respect of the tariff rate for 1,500 Kg., or of the supplementary tax of 3 fr., as constituting the same and only consignment. In such a case when the chargeable weight of the consignment is less than 1,500 Kg., only the supplementary tax of 3 fr. is payable, and this must always be handed in at the station of departure. Consignments of empty packages and used packing materials necessitating the exclusive use of a wagon, are likewise free from the supplementary tax of 3 fr., either coming or going.

118. Bulky Slow Goods.

Certain goods defined as "Bulky" are charged at an increase of 50 per cent. on their actual weight up to a maximum equal to half the tonnage of the carrying stock employed. Nevertheless, if necessary, the provisions relative to goods which may not be loaded together with others may be applied. The maximum taxable weight of bulky goods loaded on wagons, the tonnage of which is more than 10,000 Kg. is fixed in exceptional cases as if 10,000 Kg. wagons were used.

CALCULATION OF FREIGHT CHARGES—*continued.*
Belgium—*continued.*

119. Slow Goods of unusual dimensions.

The charges on goods exceeding six metres in length are calculated as follows:—Over 6 m. and up to 12 m.—on the gross weight, if the latter be at least 6,000 Kg. and on the gross weight plus 1,500 Kg. if below 6,000 Kg., with the latter weight as *maximum.*

Over 12 m. and up to 18 m.—On the gross weight, if this be at least 10,500 Kg., and on the gross weight, plus 3,000 Kg., if below 10,500 Kg. with the latter weight as *maximum.*

Over 18 m. and up to 24 m.—On the gross weight if this be at least 15,000 Kg., and on the gross weight plus 4,500 Kg., if below 15,000 Kg. with this weight as *maximum.*

120. Empty packages and packing.

Empty packages and packing having served in consignments by rail (including packages containing empty bottles in which liquids have been carried, except in ordinary traffic with the Gand-Terneuzen line), when forwarded as Slow Goods are charged at the gross weight and at Class 1 rates per unit of 10 Kg., with a minimum weight of 100 Kg. Nevertheless this reduced rating is only applicable if the packages in question are removed at their destination within the prescribed term (*i.e.*, generally eight hours after the notice of arrival has been handed to the consignee or his representative). In default of such removal, these packages are subject to the rates of the ordinary tariffs, independently of the usual storage charges. The packages can also be sent at the rates and on the conditions of express and accelerated goods, and according to gross weight, if the consignor requests this in the way-bill.

New packages and packing sent empty and intended for use in the conveyance of goods by rail, are carried under the ordinary tariff conditions, but the consignor or consignee may obtain the diminution in rate on actual weight if he proves the transit by rail of such objects in a load of at least 5,000 Kg.

121 Special Rates.

In addition to the ordinary rates there are in Belgium many specially reduced rates for export, import, and interior traffic.

These special rates include, among others, the following:—

Export traffic:—	
Coal, coke, stone, and earth,	10 tonne and 50 tonne lots.
Clay, lime, and gravel,	10 tonne lots.
Alcohol, matches, butter, chairs, combed flax, honey, eggs, paper, fine pottery, toilet soap, leaf tobacco, etc.,	5 tonne and 10 tonne lots.
Starch, hemp seed, salted and raw hides, beans, turnip seed, sheet lead, etc.,	10 tonne lots.
Metallurgic products, earthenware, porcelain, screws, nails, etc.,	10 ,, ,,
Glass ware,	7 ,, ,,
Import traffic:—	
China clay,	10 ,, ,,
Lead and copper in pigs,	5 ,, ,,
Rock and sea salt,	50 ,, ,,
Alcohol, butter, cider, salt, bacon, toilet soap, green osiers, leaf tobacco, starch, hides, flax seed, salt herrings, sulphate of copper, etc.,	Some in 5 tonne and others in 10 tonne lots.
Planks,	10 tonne lots.
Coal tar,	10 ,, ,,
Minerals, pyrites, etc., 10 tonne &	50 ,, ,,
Raw cotton in bales,	10 ,, ,,
Interior traffic:—	
Minerals, pyrites, etc., consigned to Belgian firms,	50 tonne lots.
Limestone,	50 ,, ,,
Steel,	10 ,, ,,
Coal for zinc and lead furnaces,	50 to 100 tonne lots.
Manures and certain agricultural products,	200 Kg. and upwards.
Coal on certain connections,	10 to 50 tonne lots.
Products for land improvement, cattle food, and road-making,	10 ,, ,,
Sweepings and city sewage,	10 to 50 tonne lots.
Do. do. do.,	100 tonne lots.
Beet roots,	50 ,, ,,
Sand,	50 ,, ,,
Coal for limekilns,	10 ,, ,,
Rough castings,	50 ,, ,,
Cereals,	5 ,, ,,
Large goods,	5 ,, ,,

CALCULATION OF FREIGHT CHARGES—*continued.*
Belgium—*continued.*

Where any of the foregoing specially reduced rates are hereafter used for comparison with Irish rates, the conditions will be fully shown.

121a. Goods for Exhibition.

Agricultural and industrial products intended for exhibition or show purposes (whether under private or Government patronage), as also materials of every description to be used in the installation of such exhibits, are charged ordinary tariff and accessory fees on the forward journey, and are carried free on the return journey, subject only to collection and delivery charges (according to a special scale), and when the exhibits are conveyed by slow goods train fees for registration and advice of arrival are charged in addition. The application of the foregoing special tariff is subject to the following conditions:—

1. The articles must be addressed to the President or Secretary of the Organising Committee of the Exhibition or Show.

2. The application for the special tariff must be expressly inserted in the consignment note or way-bill for the forward journey.

3. On the return journey the articles must be accompanied by the outward way-bill, and also by a special way-bill stating that the articles are being sent back to the exhibitor, and bearing the stamp of the Exhibition or Show.

4. The consignments must be returned by the same mode of transit (*i.e.*, Express, Fast, or Slow) as that by which they were carried on the outward journey.

5. The return way-bill must have at the top the name of the Exhibition or Show in respect of which the special tariff has been granted.

122. Conveyance by subscription.

Subscriptions are allowed to consignors and consignees who engage to employ regularly during six months at least one or several wagons with full loads of goods of the same nature to be carried between two stations fixed upon and addressed to the same consignee. Subscription conveyance applies only to indivisible quantities of 5,000 Kg. for goods in Classes 1, 2, and 3, and of 10,000 Kg. for goods in Class 4. When a subscription is applied for by a consignee he must supply proof of the consent of the consignor who by the fact of such consent agrees to the subscription wagons being taken into account in the distribution of carrying stock. The subscriber may change at the end of each month of subscription the points of departure and destination of consignments. The consent of a fresh consignee is always required. Subscriptions of one year or over are charged at the ordinary tariff rates. Subscriptions of from 6 to 12 months are subject to an increase of 25c. per ton. In the rate of conveyance a reduction of 25c. per ton is allowed on subscriptions entailing the use of carrying stock travelling in both directions between two points to be determined. The subscriber may use the wagons on the return journey for goods other than the description carried on the outward journey. The rates in force at the moment of entering of a contract

CALCULATION OF FREIGHT CHARGES—*continued.*
Belgium—*continued.*

of subscription are only agreed to with a reservation of any modifications which may be made in the tariffs during the time of subscription. The railway authorities regulate the route taken by the wagons and fix the periods for loading and unloading. These periods are reduced to four hours of the day for each of these operations should the exigencies of the service demand it. The railway authorities also reserve to themselves the selection of the carrying stock to be employed in the service of the subscribers. Subscriptions may be suspended on Sundays and legal holidays. The subscriber is empowered to increase at the end of every month of his subscription the tonnage fixed by his contract on the same conditions and in consideration of the regular employment during 30 days at least of the supplementary carrying stock. The railway authorities reserve the right to limit the tonnage to double the quantity fixed in the original agreement. All requests with regard to subscription for supplementary wagons or to a change of route must be addressed in writing to the stationmaster eight days in advance. In case of default of the subscriber as regards the contract he is liable to a penalty equal to half the cost of carriage which was not effected unless he can prove that the failure arose from some unforseen cause, from a fault of the railway, from the closing of barriers, the accidental extinguishing of a blast furnace, the forced interruption of mining operations, or any other cause of similar nature. The railway authorities are, on the other hand, freed from their obligations towards the subscriber in case of obstruction or from facts analogous to those which free the subscriber from his obligations to the railway.

123. Disinfection of Goods wagons.

When wagons have been used for conveyance of poultry in cages, baskets, or loose, either by fast or slow goods train, a disinfection charge of 1·25 fr. is made per full wagon, or wagon reputed to be full.

124 Disbursements (*i.e.* "paid ons")

For amounts paid out by the railway on goods handed in for conveyance commission is charged as follows:—

(*a.*) On 20 fr. and under, 20c.

(*b.*) On more than 20 fr. per consignment and per indivisible fraction of 100 fr., 25c.

125. Reimbursements (*i.e.* cash on delivery.)

For amounts charged by a consignor on an express, fast, or slow goods consignment in respect of part or whole value of the contents thereof commission is charged as follows by the railway for collection of the amount from consignee and return of it to consignor.

On 200 fr. and under, 20c.
On 200 to 1,000 fr., 60c.
On more than 1,000 fr., 50c., fixed tax, with an additional charge of 10c. per indivisible unit of 1,000 fr.

126. Bases of Normal Rates.

The normal or ordinary working rates are based on the figures shown on attached statement.

CALCULATION OF FREIGHT CHARGES.

(continued.)

GERMANY.

127. Unit of weight.

Freight is calculated per unit of 10 Kg., with a minimum charge as for 20 Kg. If for the purposes of calculation of freight the actual weight of a consignment is either increased or diminished, then the rounding off to an even 10 Kg. only takes place after the increase or diminution of the weight.

128. Unit of money.

The amount of freight is rounded off to an even 10 Pfennige, sums under 5 Pf. being omitted, and those of 5 Pf. and upwards counted as 10 Pf. The calculation of freight differs according as goods are sent by Express, Fast, or Slow Goods train.

Express Goods.

("Beschleunigtes Eilgut.")

129. Express Train transit.

Express goods are given preference before fast goods and forwarded by the most favourable trains allotted to the purpose by the railway administration. The following rates are charged without distinction of articles for goods sent by express, even in the case of articles under the special tariff for certain fast goods, viz. :—

130. Express Train parcel Goods.

For parcels, the Fast Goods Parcel Rates are charged for double the actual weight, but with a minimum of 40 Kg.

131. Express Train wagon Goods.

For wagon loads, the rates of the general Slow Goods Wagon Class (B. or A 1) are charged for four times the minimum weight on which freight is calculated in accordance with the Regulations of that Class.

132. Minimum charge.

A minimum of one mark is charged for each way-bill consignment. In case of a fresh freight calculation *en route*, a minimum of 10 Pf. is charged for the additional freight

Quick (or Fast) Goods.

("Eilgut.")

133. Fast Goods transit.

All articles (except those mentioned in the special tariff for certain fast goods, specified hereafter), when handed in as Fast Goods parcels ("Stückgut") are forwarded under the conditions of the Fast Goods Parcels Tariff; if handed in as Fast Goods in wagon loads they are forwarded under the regulations governing the general Slow Wagon Goods Class (B. or A.1) for *double the maximum weight* on which freight is calculated for this class in accordance with the regulations.

134. Minimum charge per Consignment of Fast Goods.

Not less than 50 Pf. will be charged for each way-bill consignment. If freight cannot be at once calculated to the destination by the forwarding station in Germany so that a fresh calculation becomes necessary on the journey, then the minimum amount charged as further freight is 10 Pf.

135. Special Tariff Fast Goods.

For the articles named in the special tariff for certain fast goods, whether sent as "Parcels" or in wagon loads, only the freight for goods under the conditions for slow traffic is calculated.

136. Mixed Consignments Fast Goods.

If special tariff articles are entered with other goods on a fast goods way-bill, then fast goods freight is charged for the whole consignment unless, the weights being given separately, separate calculation works out more cheaply. In the case of consignments of fast goods "parcels" separate calculation is admissible only when the goods under the special tariff for certain fast goods and the other goods are delivered in separate packages. In case of separate calculation the freight for each description of goods is reckoned in units of 10 Kg. or part thereof.

Slow Goods.

("Frachtgut.")

137. Ordinary Parcel Goods by slow transit.

Goods not handed in as wagon goods are charged at "Parcels" (or "Stückgut") Rates with a minimum charge of 30 Pf. per way-bill consignment. In case of a fresh freight calculation *en route*, a minimum of 10 Pf. is charged for the additional freight, as in the case of Fast Goods and Express Goods.

138. Special Parcel Goods by slow transit.

For goods coming under the "special tariff for certain parcels goods" by slow transit, the rates of such special tariff are charged, and for all other slow goods the rates of the general parcels class are charged.

Germany—*continued.*

139. Mixed Consignments, Slow Goods.

If slow goods under the special tariff are handed in with others belonging to the general "parcels" class in separate packages, but with one way-bill, then freight is calculated according to the rates of the general "parcels" class, provided, the weights being given separately, a separate calculation does not come cheaper. In case of a separate calculation the freight for the goods belonging to the general "parcels" class and to the special tariff class is counted by every 10 Kg., and weights in excess of this are calculated evenly to the next 10 Kg. If goods under the special tariff are united in one parcel with others belonging to the general "parcels" class in so far as this is admissible under the Traffic Regulations the freight for the whole weight is calculated at the rates of the general "parcels" class.

140. Wagon Goods by slow transit.

At the rates of the wagon load classes are forwarded all goods which a sender hands over as a wagon load, with one way-bill for each wagon.

All goods not mentioned in special tariffs belong to the general wagon load class.

For the application of the rates of the wagon load Main classes a minimum weight of 10,000 Kg. for every wagon used is taken as the basis of calculation of freight, and for the application of the rates of the sub-classes a minimum weight of 5,000 Kg. for every wagon used is taken as the basis of calculation, even when the actual weight is less per wagon than 10,000 Kg. and 5,000 Kg. respectively. For consignments of less than 10,000 Kg., but more than 5,000 Kg., freight is calculated at the actual weight at the sub-class rates or as for 10,000 Kg. at the Main class rates, according as one or the other calculation works out cheaper.

The following regulations apply generally to all wagon loads:—The loads may be composed of goods of different kinds or belonging to different Main classes, provided there be nothing to the contrary in the Railway Traffic Regulations. When a wagon load is composed of goods coming under different tariffs, the freight charged for the whole consignment is at the highest tariff applicable to any part of the goods provided (when separate weights are given) a separate calculation, in accordance with the foregoing provisions as to charging of parcel goods and wagon load goods does not come cheaper. If both parcels rate and wagon rate are charged in separate calculations on a way-bill consignment, then a minimum weight of 10 Kg. is accepted for parcels freight. In other respects the regulations respecting wagon loads apply to that portion of the consignment rated as parcel goods.

141 Fragile Goods.

Fragile articles, such as stoneware, pottery, glass, porcelain, are accepted unpacked as "parcels" goods if consigned in lots of at least 1,000 Kg., or if the sender declares in the way-bill his willingness to pay freight for that weight. Earthen and stoneware pipes are also accepted unpacked in quantities of less than 1,000 Kg., freight being calculated on the actual weight forwarded. The sender must, however, make a declaration in prescribed form as to the absence of packing.

142. Empty packages

When certain specified empties are handed in as separate parcels, freight is calculated according to the regulations applicable to the general parcels class, for *half the actual weight* with a minimum of 20 Kg., provided, in the case of packages used for conveyance of certain goods in parcels carried under a special tariff, no cheaper rate is fixed for their full weight under the terms of that special tariff.

Among the specified empties are included barrels, tubs, kegs, metal barrels and pails, metal biscuit boxes, tin cans, canisters and cases, bottles of all kinds, sweet and jam jars, lath baskets and crates (even when taken to pieces and made up in bundles), packing boards and laths, packing straw, packing cloths with cordage or not, hay and other packing materials, cages, ladders, rollers, baskets, fowl coops, boxes, paste-board boxes, sacks, separate or not. If the packages named above cannot be loaded through the side doors into covered wagons, freights will be calculated according to the rules governing the *general parcels class* for half the actual weight, but with a minimum of 1.000 Kg. for each wagon used: provided the freight for the full weight according to the rates of the ordinary parcels goods class or of the special tariff for certain goods in parcels does not come cheaper. If used empty beer barrels, or used empty beer bottles, or cases containing them, are loaded into wagons specially equipped for the conveyance of beer, and which are returning to destina-

CALCULATION OF FREIGHT CHARGES—*continued.*

Germany—*continued.*

tion of the consignment of empties, then freight is calculated for the actual weight of the consignment, but for not less than 1,000 Kg. per wagon at the rates of Special Tariff III., unless freight according to the rates of the general small goods class for *half the weight* comes cheaper. The regulations for wagon loads apply to such consignments. The foregoing regulations do not apply to used packages forwarded as fast goods. For used packages not mentioned above freight is calculated on the *full weight* according to the rates of the general small goods class, or of the special tariff for certain small goods. To this category belong, for example, packages made of skins and hides, chests and ammunition boxes.

143. Objects of unusual length.

If objects of more than 7 metres in length (except boats) are handed in as parcel goods, then freight is calculated for every way-bill consignment on at least 1,500 Kg., according to the rates of the General Parcel Goods Class or of the special tariff for certain parcel goods or (when forwarded as fast goods) according to the fast goods rates. The foregoing calculation is also applied when other goods are handed in for forwarding with a way-bill containing goods of more than 7 m. in length. When runner wagons are used, a fee of 15 Pf., otherwise charged per runner wagon and per Km., is not collected.

144. Bulky Goods.

Certain goods which in proportion to their weight take up an unusual amount of space, are charged one and a half times their actual weight, according to the rates for express parcel goods or the rates for ordinary parcel goods class—the minimum weight for each consignment being 30 Kg. The following are among the articles classed as bulky:—Trees, shrubs, and plants when unpacked and not well tied up or in tubs or pots—these are deemed to be unpacked when only the roots are packed—raw bark (except bark of oak and pine, and also of trees which are not industrial products of European forestry), new empty barrels (except when set one inside another, and oak barrels iron hooped and above certain capacity), feather beds, feather down and stripped bed feathers, agricultural winnowing machines (except those made chiefly of iron), chopped straw, hay (except in bales of at least 80 Kg. each, or in trusses), baskets (except when packed one inside another, or made of peeled wood or shavings, or of low form), new empty hencoops, basket work goods (such as furniture, etc.), bentwood furniture when not sent in pieces, reeds and rushes, seaweed (except in bales or trusses), straw (except in bales of at least 80 Kg. or in trusses), wool, and wool refuse factory cleaned, except in balls of round or cylindrical shape of at least 100 Kg. (for such balls of over 66·6 to 100 Kg. freight is charged on 100 Kg.).

145. Mixed Consignments of bulky and non-bulky Goods.

Consignments consisting partly of bulky goods and partly of non-bulky goods (fast goods or slow goods) are charged 1½ times the weight of the bulky goods and actual weight for non-bulky goods. When such consignments are conveyed by express the bulky goods are charged at three times the actual weight and the non-bulky goods at double the actual weight. The freight is then calculated on the gross weight so ascertained, but with a minimum of 30 Kg. for fast and slow transit and of 60 Kg. for express transit. In the case of consignments consisting partly of bulky goods and partly of goods coming under the special tariff for certain parcel goods the freight is calculated separately. The minimum weight in the latter case is 20 Kg. for bulky goods and 10 Kg. for other goods

146. Bulky Goods. Part of a house removal.

In the case of defined bulky articles which have been already used, such as feather beds, wooden chairs, bentwood furniture and the like, freight is charged on the *actual weight only*, when the articles form part of a consignment of small goods belonging to a house removal.

147. Fresh Meat.

Freshly slaughtered animals or fresh meat, except game and dead birds, are forwarded *without packing* in accordance with the regulations governing wagon load goods, freight being charged for at least 2,000 Kg. per wagon used and per way-bill consignment. When handed in as fast goods they are sent at the fast goods rates, and when handed in as ordinary slow goods at the ordinary parcel goods rates. If, however, there be a lower rate under the ordinary wagon tariff, then the latter is charged.

148. Fish.

Live fish, fresh and smoked fish, pounded fresh fish, salted codfish in water, slightly salted (undried) herrings and sprats, etc., are conveyed as express goods at fast goods rates, with a minimum charge, however, of 50 Pf. per way-bill consignment.

CALCULATION OF FREIGHT CHARGES—*continued.*

Germany—*continued.*

The transit of live fish in water at the special tariff rates for certain fast goods, as well as their transit as express goods under the terms of the regulation given above, depend on the following conditions being observed:—(*a.*) The fish must be placed in vessels gauged or stamped by the Excise Office. For every litre or part of a litre capacity of the vessel as shown by the Excise Stamp, freight is charged on 1 Kg. weight, whether the vessel be full or not. In exceptional cases, however, fish are accepted for transit in tin vessels which have not been stamped by the Excise authorities, the freight being calculated on the gross weight, provided the latter does not exceed 25 Kg. for each vessel. (*b.*) The capacity of each *tub* or *vat* must not exceed 350 litres in consignments sent by fast trains or 150 litres in consignments sent by express trains—the vessels must be fitted with folding handles, vessels of more than 250 litres capacity must be fitted with four such handles, or with two of such size that four persons can take hold of them. (*c.*) The tubs or vats must be closed by means of a lock, or with solder, as a protection against splashing out of water and to prevent unwarranted opening of the vessels. The lock should be placed either in a perforated lid or fixed to a funnel set in the filling hole and fitted in the middle with a perforated covering. (*d.*) The restrictions under (*b.*) and (*c.*) *i.e.*, as to folding handles and locking or soldering do not apply to consignments of at least 5,000 Kg., or when freight is charged as for that weight. (*e.*) Live fish are accepted for transit in wagon loads in vessels not gauged or stamped by the Excise Office, in which cases freight is calculated on the actual weight of the consignment at the rates for wagon loaded goods. The conveyance of pounded fresh fish at the rates of the special tariff for certain fast goods and also their transit as express goods is subject to their being packed in strong, tightly closed barrels. With every consignment of live fish, and even when a consignment consists of more than one wagon load, one attendant is allowed to travel with each wagon. When he takes his place in the wagon in which the consignment to be accompanied is loaded he must pay a fare of 2 Pf. for every Km. travelled—the fare being calculated on the distance for which freight of the consignment is charged. If the attendant when travelling by a passenger train takes his seat in a passenger compartment he must take a ticket for the class of carriage used.

CONDITIONS FOR THE REGULAR TRANSIT OF MILK.

149. Milk traffic.

Payment of Freight.—For the regular transit of milk (sterilised or not), whole milk and cream, and the return of the milk vessels empty or full of skim-milk, buttermilk, or whey, between two certain stations by the trains arranged for the purpose by the railway administration, payment of freight may be made monthly.

The agreement for payment may begin and end on any day.

Application by Consignor.—If a consignor desires to open an account he must make an application to that effect to the express goods or despatch office of the consigning station, at the same time acknowledging these regulations, to be supplied free by the despatch office, at least ten days before the time when the freight account is to commence.

Security.—Security for absolute observance of the contract may be given by sureties or deposit, but by sureties only with consent of the administration. The surety must deliver his bond as prescribed by the administration.

The amount of the deposit to be given amounts at the least to the total freight for one month and a half.

The administration may permit the deposit of a general pledge for a large number of stations on the State railway which guarantees all the freight payments to be made by the person opening the account at the stations in question.

The administration retains the right at any time to increase the general pledge to the amount, at most, of the separate pledges in place of which it is deposited if it be not considered large enough to guarantee the liabilities of the person opening the account. The administration may also at any time withdraw its sanction to a general pledge, and require that, in place of the latter, the necessary separate pledges be deposited within a period to be fixed by the administration. In this case the general pledge is not re-

CALCULATION OF FREIGHT CHARGES—*continued.*

Germany—*continued.*

leased until all the separate pledges have been deposited.

As pledges, may be deposited either demands entered in the Imperial debt book or in the State debt book of a Federal State, cash, securities, deposit receipts in the Imperial Bank, savings bank book, or bills of exchange.

(*a*) Cash deposited becomes the property of the administration. It is not subject to interest. The person holding the account may only make a claim for restitution when he has no further responsibility in the contract.

(*b*) The following are deemed to be securities:—Promissory notes issued and guaranteed by the Imperial Government, or by one of the federal German States, or original preference shares of railways legally recognised by the Prussian State at the full current value; the other effects accepted at the Imperial Bank at the fraction of the current rate of exchange there accepted.

(*c*) Deposit receipts of the Imperial Bank for mortgageable securities there deposited are accepted if at the same time a mortgage deed of the opener of the account and a delivery note of the Imperial Bank are handed in by direction of the administration.

(*d*) Savings bank books are accepted as the administration sees fit. Simultaneously a deed of mortgage on the savings bank balance is to be executed by direction of the administration.

(*e*) Bills of exchange are accepted as the administration sees fit if they are drawn on the exchequer represented by the competent administrative authorities, payable at sight, and accepted Private bills are only accepted when payable at sight and guaranteed, and when the exchequer is named as taker of the bill.

It may be demanded that a pledge deposited be supplemented should the pledge not continue to afford sufficient security by reason of part of it having been used or because of a decrease in its exchange value.

Payment is made from the debt book claims, securities, deposit receipts, savings bank books, and bills of exchange, in accordance with the provisions of the law.

The administration reserves to itself the right at any time to require other security in place of the security deposited in the shape of bills or guarantees.

Renewal notes must always accompany interest-bearing securities. Interest, dividend, and share warrants may be left in the hands of the opener of the account, in accordance with the terms of the contract. Otherwise they will be handed to the owner at the time of maturity, so long as no realisation of the securities to meet possible liabilities is in view.

The administration pays no heed as to whether the securities, deposit receipts, savings bank books, and bills deposited with it are called on for payment or are called in, or whether any other change occurs in them. To attend to these matters, and do what is needful, is solely the business of the party who pledged them, on whom alone fall the losses if the necessary steps are not taken.

The pledges are returned provided they are not required to meet the liabilities of the owner, and unless they are deposited as a general pledge, after the person pledging them has completely met all his liabilities, and if the pledges have served as security for guarantee obligation they are returned when the guarantee period has expired. In the absence of any other agreement it is deemed to have been stipulated that the pledges are detained to their full amount for the purpose of covering any liabilities which may arise from the guarantee.

Construction and Marking of Vessels, etc.—Vessels used for milk transit must be of a handy form and provided with a strong lid, so as to prevent the milk splashing out, even should the vessel be overturned.

The capacity of a vessel shall not exceed 40 litres, and must be plainly marked on the vessel, together with the weight of the latter, so that there may be no need of official gauging or ascertainment of capacity by the railway.

Each vessel intended for milk transit must be provided with a strong square plate of sheet brass, generally 20 cm. long by 7 cm. high, bearing in clear engraved letters, easily legible in artificial light, the name of the despatching and receiving stations, and the names of consignor and consignee. In the case of barrels the shields are to be fastened on the body

CALCULATION OF FREIGHT CHARGES—*continued.*

Germany—*continued.*

of the cask between the topmost and second hoop, and in the case of tin tankards where the neck begins to narrow. If the space between the first and second hoops on wooden vessels is less than 7 cm., then the shield need only be wide enough to cover that space.

The shields must be renewed by the owner when the inscription becomes faint.

If the milk is forwarded in vessels (for example, glass bottles) which are placed in boxes, then these boxes when full must not weigh more than 40 Kg. each, must be strongly put together, and be fitted with handles on each side.

On the lid of the box is to be stated in plain lettering, on the one hand the maximum weight of the box when it has its full complement of filled bottles, and on the other hand when the latter are empty. When the transit is about to commence these boxes must be submitted to the despatch office to have their weight tested.

Each box must also bear the names of sender and consignee, and also the name of the despatching station and destination.

Vessels or boxes containing milk vessels which do not comply with the foregoing regulations will not be accepted for transit.

Way-bills.—The consignor must always, when delivering the milk at the despatch office, hand over with it a written declaration (way-bill) showing how many vessels he is

1. sending;
2. how many litres of milk these vessels contain in accordance with the figures printed on them;
3. what is the weight of the vessels themselves.

When milk is sent in vessels enclosed in boxes the number of the boxes, together with their weight when the vessels are full and empty, must be stated.

The milk way-bills consist of one principal form with two detachable sections. The original form remains at the despatch office and section 1 at the station of destination. The consignee receives section 2.

Milk way-bill forms can be had at the various despatch offices at the rate of 35 pf. per 100.

Forwarding to several consignees at the same station—

One and the same consignor is permitted to send milk vessels or boxes containing milk vessels to different consignees.

In this case the sender must appoint a representative at the arrival station, to whom the whole consignment is to be delivered. If this is not done, then he must make out as many way-bills as there are consignees.

Incorrect Declaration of Weight or Measure.—If the quantity of milk delivered or the weight of the returning vessels, whether empty or filled with skim-milk, buttermilk, or whey, or the weight of the boxes with full or empty vessels is understated on the way-bill, then action will be taken in accordance with the general traffic regulations. The administration also reserves to itself the right of annulling the transit contract.

Loading and Unloading.—Loading and unloading milk vessels and boxes containing milk vessels is left to the sender and consignee. Assistance may be afforded by the railway, provided there be at the stations a suitable staff for the purpose. This assistance is, however, not to be taken as an undertaking by the railway to load and unload. The railway, therefore, is liable in no case for any damage which may occur in loading or unloading or inefficient transfer of the load.

Acknowledgment of Receipt.—The acceptance of the milk and the receipt of section 2 of the milk way-bill will constitute an acknowledgment of correct receipt of the consignment.

Time of Delivery and Removal.—Vehicles for bringing or fetching milk vessels and boxes containing milk vessels must not be brought to the railway station more than one hour before the departure or arrival of the train in question.

By special permission of the railway, returning vessels, whether empty or filled with skim-milk, buttermilk, or whey, may be brought to the station more than one hour before the departure of the train by which they are to be returned.

The return of such vessels and boxes containing

CALCULATION OF FREIGHT CHARGES—*continued.*

Germany—*continued.*

milk vessels must also be accompanied by a way-bill made out by the sender, and showing the number and weight of the vessels. Copies of these forms may be had from the despatch offices at the price of 35pf. per 100.

Any milk vessels or boxes with milk vessels which are missing must be at once demanded at the receiving office, otherwise no subsequent claim for them can be entertained.

Calculation of Freight.—For every transit account a monthly statement will be prepared at the despatching station, in which the quantity of milk according to the number of litres marked on the vessels and the weight of the boxes with full milk vessels (for calculation of freight outward and on the return journey), will be entered, and also the weight of the returned milk vessels, whether empty or filled with skim-milk, buttermilk, or whey, and of the boxes returned with empty vessels (for calculation of freight on return journey), will be entered from the daily way-bills.

The weight of the returned milk vessels, whether empty or filled with skim-milk, buttermilk, or whey, and of boxes with empty milk vessels is not entered until return at the receiving station from the entries on the way-bills. On the last day of the month the freight account is closed, and the freight on the *total weight* of whole milk and cream (with a minimum, however, of 500 kg.), calculated according to the ordinary parcels goods rate, and also on half the weight of the returned milk vessels whether empty or filled with skim-milk, buttermilk or whey, and of the boxes returned with empty milk vessels. If the freight so calculated amounts to less than 5 M., then the latter sum is charged.

If the transit arrangement is made during the course of a month, then not less than 16 kg. per day and not less than one-sixth of a mark are charged. If the arrangement is given up before the expiration of a calendar month then a minimum sum of 5 marks is generally charged for the transit already effected. If, however, the sender or consignee dies during the course of a month, or if the forwarding of the milk becomes impossible from unforeseen circumstances not dependent upon the will of the contractor, for example, an outbreak of foot and mouth disease, then freight is charged for the time elapsed on a minimum weight of 500 kg., or not less than one-sixth of a mark per day, whichever be more favourable to the railway administration.

In calculating the weight of milk not carried in vessels set in boxes, one litre of whole milk, rich milk, cream, skim-milk, buttermilk, or whey, inclusive of the vessel, is counted as 1 kg. Every 10 kg. commenced is counted as full 10 kg. The freight to be charged will be calculated evenly to 10 pf., sums of less than 5 pf. not being counted, and sums of 5 pf. and upwards taken as the full 10 pf.

Errors in the monthly account cannot be corrected later on.

Payment of Freight.—The freight may be paid, at the option of the contractor, either at the despatching station, or it may be left to be collected at the receiving station from the consignee.

Freight is to be paid within three days after the bill has been furnished. If after the expiration of this time limit the freight left for collection to the receiving station has not been paid in by the consignee, then the contractor becomes liable to the railway for the debt. If the contractor is in arrears with his payment, then the further transit of milk on these conditions may be refused.

Payment by Instalment.—When the amount of freight entered in the course of the month has reached the full amount of his credit, then the contractor must pay an instalment of the amount due, otherwise the transit of further consignments of milk on these conditions may be refused.

NOTIFICATION OF THE REGULAR TRANSIT OF MILK CONSIGNMENTS WITH DELAYED PAYMENT OF FREIGHT.

"The undersigned, with full acknowledgment of the "regulations printed above, hereby desires to notify "the consignments of milk described below (1) for "regular transit from the despatch office at.....
.....

"Weight of boxes with empty milk vessels.....kg.

"6. It is desired that the full vessels—boxes with "full milk vessels—be forwarded by train No..... "and that empty vessels—boxes with empty milk "vessels—to be returned by train No.....

"7. The consignments will commence on.....190

"Signature.....

"(1.) Portions not required are to be struck out."

150. Milk vessels filled with skim milk, butter milk or whey.

For the return conveyance of vessels which have been used for occasional consignments of milk when marked with the name of the owner to whom they are being returned, freight is charged for *half the actual weight*, but with a minimum as for 20 kg. at the rates of the general parcels goods class.

151. Goods of malodorous nature.

Perishable animal refuse, such as unsalted fresh hides, fat, bones, horns, hoofs unlimed, fresh glue, leather, and all other goods which diffuse an unpleasant odour or which excite disgust (with the exception, however, of manure and fresh calves' stomachs), are only admitted to transport under the following conditions:—

A.—Perfectly dry and clean bones, pressed tallow, hoofs, *i.e.*, the horny feet of ruminating animals, without bones and soft portions, if packed in stout sacks, are accepted as small goods.

B.—Goods not named under A above, but of the same nature, are only admitted to transport as small goods if packed in tightly-closed casks, tubs, or boxes. Way-bills must enumerate the goods packed in such receptacles. They are carried only in open wagons.

C.—Fresh sinews, unlimed fresh glue, leather, and refuse from the same, also unsalted fresh hides and bones not cleared of flesh and skin fragments, when offered for transit in wagon loads are subject to the following regulations:—

(*a*) From 1st March to 31st October these goods must be sent in strong whole sacks, which must be then wetted with diluted carbolic acid, so that the putrifying smell is not noticeable. Every consignment must be covered with a stout cloth soaked in diluted carbolic acid, and the latter completely covered with a thick untarred waterproof cover—these covers to be supplied by consignor.

(*b*) In the months of November, December, January, and February the goods need not be packed in sacks. Consignments must, however, be covered with a stout cloth, and this again covered with a large water-tight untarred cover. The undermost cover must if necessary be soaked in diluted carbolic acid, so as to prevent the bad smell. Covers to be supplied by sender.

(*c*) Consignments the smell of which cannot be obviated by the use of carbolic acid must be packed in strong, tightly closed vats or tubs, in such a way that the smell of the goods cannot penetrate the packing.

D.—The conveyance of the goods not named under C, but of similar nature, is effected in open wagons under tarpaulin covers. Covers to be provided by consignor.

E.—Railways may require prepayment of freight.

F. Sacks, vats, or tubs, in which and under which goods of this kind are forwarded, are only admitted to transit when they have lost their bad smell by suitable treatment with carbolic acid.

152. Disinfection of goods wagons.

The railway is bound to disinfect wagons in which natural manure or goods of a malodorous nature have been conveyed loose after every time of using in the same way as in the case of disinfection of cattle wagons. Costs of disinfecting (1 M. per wagon) must be paid by consignor or consignee.

153. Oversea Export Regulations.

In so far as, in the goods classification of the German railway goods tariff, the application of reduced rates or more favourable freight conditions is dependent upon the fact of export, or when exceptional tariffs for export are in existence, such re-

CALCULATION OF FREIGHT CHARGES—*continued.*

Germany—*continued.*

ductions in rates or favourable freight conditions are only granted on the following conditions:—

Export rates are only put into force by the consigning station when the way bill contains the export mark either in the place reserved for the address, and under the heading "Transport route desired," or in the space where the contents are declared.

This mark in the case of small goods must be as follows:—

"For export over sea to foreign countries," or "For export over sea to German colonies."

In the case of wagon-load goods the mark must be as follows:—"For export over sea," unless in accordance with the regulations, export over sea to a non-German or non-European country must be specially prescribed in the way-bill.

The consignor is bound to mark small goods consigned for export in a clear and durable manner with the words, "Export goods," as well as with the name of the port from which they are shipped. If gummed labels are used they must be of a bright green colour.

In the case of wagon-loads of export goods the following particulars are to be entered on the back of the way-bill, and on the half of it which does not contain (on the front) the statement of the fees payable, the number, mark, and description of the parcels loaded into the wagon, weight of each parcel, or total weight of each class of goods when several parcels of the same class are loaded.

For each wagon containing export goods one way-bill is to be made out. The consignment of several such wagons on one way-bill is not permitted.

If only a portion of a wagon-load consignment described as export goods and despatched in accordance with the export tariff is actually exported, then the rate is not altered if the portion not exported does not amount to more than five per cent. of the weight taxed.

If the portion not exported exceeds five per cent. of that weight then the difference in freight for the whole consignment is collected afterwards. These provisions do not apply to export parcel goods.

If in the case of parcels only a portion of a consignment is exported, then the difference in freight for the whole consignment entered on a way-bill is collected subsequently.

154. Goods in exceptional tariffs.

There are in operation a number of exceptional tariffs for specific commodities conveyed for use within the country and for export to foreign countries (including the German colonies). To each of these tariffs is attached special conditions. In any instance in which such an exceptional tariff is used for purpose of comparison the attending conditions

CALCULATION OF FREIGHT CHARGES—*continued.*

Germany—*continued.*

will be fully shown. The commodities to which these tariffs apply include, amongst others, the following:—

Interiorally used commodities—Beer (in barrels), chestnuts and fresh nuts, milk (conveyed by contract), articles sent from art and industrial museums, Berlin, to the provinces, for purposes of exhibition, wood (round and coarsely worked), raw materials, such as coal, coke, charcoal, compressed peat fuel, manures, lime, phosphates of all kinds, earth, sand, gravel, china clay, peat mould and ores, potatoes, roots, slag (transformed) clay, peat litter and peat mould, potash, lime and marl for manurial purposes, iron and steel for building, raw sugar going to refineries, and grain of various kinds for seeding purposes. Commodities for export—Beet sugar, grain (various kinds), roots, malt, milling products, dextrine, starch, iron and steel, and goods made therefrom and raw iron.

155. Disbursements and reimbursements.

For monies paid out or collected on behalf of a consignor the railway charges commission at the following rate.

Amount up to 100 marks, 1 per cent.
For first 1,000 marks, 1 per cent.
Amounts over 1,000 marks, ½ per cent.
Minimum, 10 Pf.

156. Accessory fees.

The following accessory fees in addition to those already referred to are payable in respect of goods conveyed by railway:—

Price of way-bill forms and declarations, each, (Interior Traffic.)	1 Pf.
,, way-bill forms and declarations, each, (International Traffic.)	2 Pf.
,, Customs and tax forms where required,	1 Pf. or 3 Pf.
,, Statistical forms where required,	1 Pf. or 2 Pf.
,, For filling up and issuing where required,	10 Pf.
,, For filling up duplicates,	10 Pf.
,, For supplying and issuing receipt forms,	10 Pf.
,, For stamping forms not printed at expense of railway, per 100,	10 Pf. or 20 Pf.
,, Declaration as to absence of packing—Single form,	1 Pf.
,, Declaration as to absence of packing, 100 forms,	75 Pf.

157. Bases of normal rates.

The bases on which all normal or ordinary rates are calculated are shown on the attached statement.

UNIT RATES ON GERMAN RAILWAYS FOR GOODS TRAFFIC.

—	—	Express Goods ("Beschleunigtes Eilgut").	Quick (or Fast) Goods. ("Eilgut.")	SLOW GOODS ("FRACHTGUT").

						Do.	over 500	do.	0·6 do. do.

HOLLAND.

158. Unit of weight.

159. Minimum of weight.

Consignments of less than 50 Kg. are reckoned as 50 Kg., additional weight in the case of small or parcel goods being calculated per 10 Kg., or part, and in the case of wagon-loads per 100 Kg., or part. In the case of goods not accepted according to weight, freight is calculated according to the tonnage of the wagons, their cubic capacity, or the space occupied in accordance with any conditions laid down in the tariffs applied or the special traffic regulations of the railways. Weight of goods is ascertained by weighing or by calculation on the basis of the standard figures given in the Railway Tariffs.

Goods offered for conveyance are rated as Quick or Slow Goods according as they are handed in with a regulation blue way-bill for Express Goods, red way-bill for Quick Goods, and white way-bill for Slow Goods.

Express Goods.

("*Bestelgoederen.*")

159*a* Rates for Express Goods.

All consignments of goods not specially excepted, and under 300 Kg. in weight, unless it is expressly requested that they be carried as Fast or Slow Goods, and consignments over 300 Kg., when desired by sender, are forwarded by ordinary Passenger trains. The rates for such goods include delivery (where organised) to consignee within the boundaries of the district ("parish") in which the railway station is situated, or within a radius of 3 Km. from the station to remote places. Collection is not included in the rates, except in a few specific places for consignments of 10 Kg. and under. The following are the rates charged for Express Goods:—

(*a*) Consignments of 10 Kg. and under for any distance:—

Up to 1 Kg.	From 1 to 3 Kg.	From 3 to 5 Kg.	From 5 to 10 Kg.
Cents.	Cents.	Cents.	Cents.
15	20	25	30

(*b*) Consignments over 10 Kg.—First 10 Kg. 30 cents, as above; every additional 10 Kg., as under:—

Km. 1-10.	Km. 11-20.	Km. 21-50.	Km. 51-100.	Km. 101-150.	Km. 151-200.	Km. 201-250.	Km. Above 250
Cents.	Cents.	Cents.	Cents.	Cents.	Cents.	Cents.	Cents.
4	5	6	9	12	17	22	27

Quick or Fast Goods.

("*Ijlgoederen.*")

160. Quick Goods.

Quick Goods consigned as Parcels Goods or Wagon-load Goods are charged double the freight of Slow Parcels or Wagon-load Goods. The minimum charge for Quick Parcels Goods is as for 50 Kg., additional weights being reckoned per unit of 10 Kg. The minimum charge per way-bill is 0·30 Fl., including cost of loading and unloading.

Slow Goods.

("*Vrachtgoederen.*")

161. Slow Goods.

All consignments of less than 5,000 Kg. are charged at ordinary Parcels Goods Class rate (see basis of calculation attached) unless freight for 5,000 Kg., according to the proper Wagon-load Class is cheaper, in which case the latter mode of charging is applied with due observance of the conditions applicable thereto. Goods which are unsuitable when in an unpacked condition for loading with other goods, and

Holland—*continued.*

goods which on account of their dimensions cannot be loaded through the door of an ordinary ten-ton closed goods wagon are excluded from Parcels Goods Class.

Certain specified goods, such as potatoes (fresh and dried), grain, offal, flour, beans, draff, peas, agricultural harrows, barley, millet, grains, grass seed, oats, oatmeal, hemp, hempseed, chaff, cottonseed meal, cloverseed, turnips, turnip seed, feeding cakes (of various kinds), cabbage seed, agricultural implements (as rakes, spades, and such like), flaxseed, Indian corn, meals of various kinds (including Indian meal), oilseed (not specially denominated), pearl barley, poppy seed, common ploughs, reaping implements (not machines), rye, rice, wheat, vetches, roots (vegetable), and bran, are charged under an Exceptional Parcels Goods Class rate if offered for transport in quantities of less than 5,000 Kg., the minimum weight charged for being 50 Kg., and additional weights counted by units of 10 Kg. The minimum charge per way-bill is 0·20 Fl., including cost of loading and unloading.

162. Wagon load Goods

The rates of Wagon-load Class A are applied to the carriage of all goods consigned with one way-bill in quantities of at least 5,000 Kg., or paying for that weight, and not belonging to Classes B or C or *Exceptional* Tariff No. 2, according to the Goods Classification, or for which, in accordance with the following conditions, no other mode of rating comes into account:—Goods which are unsuitable when in an unpacked condition for loading with other goods, and those which on account of their dimensions cannot be loaded through the door of an ordinary ten-ton closed goods wagon are excluded from Wagon-load Class A. If for consignments consisting of goods belonging to Class A, wagons of *more than* ten tons burden are asked for by the consignor, and such carrying stock is provided, freight is charged for at least half the tonnage capacity of the wagon used.

The rates of the Wagon-load Class B are applied to goods which, according to the classification, belong to that class, if they are consigned with one way-bill in quantities of at least 5,000 Kg., or paying for that weight. If for this class traffic wagons of more than ten tons burden are asked for by the consignor they are charged for, as already described in the case of Class A Wagon-load Traffic. The freight for goods which according to the classification belong to Wagon-load Class C is always charged on at least 10,000 Kg. per wagon used. If such goods are offered in quantities of less than 10,000 Kg. they are charged at the rates and under the conditions of Class B, unless the charge as for 10,000 Kg. per wagon used according to Class C. is more advantageous to consignor or consignee. If, however, wagons of *less than* 10,000 Kg. *burden* are in such cases supplied by the railway, then freight is charged for the tonnage of these wagons Requests of consignors for wagons of less than 10,000 Kg. burden for conveyance of goods in Class C are not complied with by the railway. If the railway, owing to scarcity of 10,000 Kg. wagons, supplies wagons of greater capacity, then freight is charged only on the actual weight of the consignment loaded thereon, but for not less than 10,000 Kg. per wagon. A consignor may offer for transit with one way-bill goods of different kinds belonging to the same or to different Wagon-load Classes, each kind weighing less than 5,000 Kg., but forming together a complete wagon-load, and may load such goods together, irrespective of any provision to the contrary contained in the General Traffic Regulations. In such case the goods are charged at the rate for the Wagon-load Class to which the highest-rated goods in the consignment belong.

163. Bulky Goods.

The goods named in the classification, among which are included Cotton, Flax and Wool Refuse, Hemp, Hay, Straw in unpressed bales, Bedding, Trees and Plants, Butter Tubs, Beehives, Sofa and Chair Frames, Cardboard Boxes (under 200 Kg. per cubic m.), Wheelbarrows and Handcarts, Perambulators, Empty Wooden Boxes and Boards and Laths, Cork, Agricultural Machines, Empty Match Boxes, Wooden Furniture, and Feathers, are charged at Exceptional Tariff No. 1. For such goods when carried either by quick or slow transit the freight is calculated on

CALCULATION OF FREIGHT CHARGES—*continued.*

Holland—*continued.*

double the actual weight. If it be more to the interest of consignor or consignee when the traffic is carried as quick goods to charge as for 10,000 Kg. per wagon used of ten ton burden at most, or when it is carried as Slow Goods to charge as for 5,000 Kg. per wagon used of ten tons burden at most, and both according to rate of Class A when conveyance is in closed or covered wagons, and according to rate of Class B when conveyance is in open wagons, then that mode of charging is applied. If, on application of the consignor, wagons of more than ten tons burden (to which, however, he has no right) are placed at his disposal, then when goods are conveyed by Quick Transit, freight for the whole tonnage capacity of the vehicle is charged, and when conveyed by Slow Transit freight for at least half the tonnage capacity of the wagon used is charged, if the cost of carriage calculated as double the actual weight at the rates for Quick or Slow Goods, as the case may be, does not come cheaper. Bales of Goods which when forwarded in an unpressed state come under Exceptional Tariff No. 1 are regarded as "unpressed" when they do not weigh at least 200 Kg. per cubic metre.

Goods which are defined in the Classification as coming under Exceptional Tariff No. 2 are carried in closed wagons, or wagons covered with tarpaulins, at the rates of Wagon-load Class B when they are consigned in lots of at least 5,000 Kg., and at the rates of Wagon-load Class C when freight is paid on at least 10,000 Kg., or when wagons of less than ten tons capacity are used, for the whole tonnage of such wagons. If for consignments of Goods under Exceptional Tariff No. 2 wagons of *more* than ten tons capacity are asked for by the consignor, and, if such vehicles are supplied, freight is charged according to the rates of Wagon-load Class B for at least the half of the tonnage capacity of the wagons used, provided, however, that if the freight for 10,000 Kg. under the rate for Wagon-load Class C is cheaper, the latter rate shall be applied.

164. Empty Packages

Packing materials returned empty, which, in accordance with the original way-bill (to be produced by the sender of the empties) have been carried full over the same part of the railway at the rates of the *ordinary* tariff, when conveyed as Slow Goods are charged as follows:—(*a*) Carboys (earthenware), bottles and pitchers in baskets, and demijohns, at the rate of Parcels Goods Class on half the actual weight, but for a minimum of 1,000 Kg. per wagon used, unless the charge on the *full actual* weight is more to the interest of the sender or consignee, in which case the latter is applied; (*b*) Beer Casks or Barrels, and in general, all packing materials in which malodorous goods or stuffs have been carried are charged at the rates of the Parcels Goods Class on half the actual weight, but with a minimum of 1,000 Kg. per wagon used; (*c*) Sacks and Covers for packing bales of cotton, wool, and the like, are carried *free*, provided the return journey takes place within one month, and the consignment is accompanied by a way-bill on which is clearly written "To be carried free." In this case the railway is not responsible for damage or other detriment occurring to the Sacks or Covers. If the foregoing instruction be omitted conveyance is charged as under condition ("*d*") given immediately hereafter; (*d*) all other packing materials, although not named in the Goods Classification, also yarn-winders or reels, returned empty and cardboard cases, are charged at the rates of Parcels Goods Class on *half* the actual weight with a minimum of 0·20 Fl., even when the charge as for 5,000 Kg., according to the Wagon-load Class is cheaper. For packages returned empty by Quick Transit, and which, according to the original way-bill (to be produced by the sender of the empties), have already travelled full over the same portion of the railway as delivered *Parcels* or Quick Goods, freight is calculated at the ordinary Quick Goods rate on the *actual* weight with a minimum of 0·20 Fl. For packing in which objectionable goods or stuffs have been carried freight on at least 1,000 Kg. per wagon used is, however, charged. For packing materials forwarded empty, in order to be carried back when full over the same section of railway, the same reduced freight is charged as for packing

CALCULATION OF FREIGHT CHARGES—*continued.*

Holland—*continued.*

materials returned empty, provided it is clear from the way-bills handed in with the packing materials when forwarded that they are intended to be carried full later on over the same section of railway, and that the *consignment* then weighs at least 5,000 Kg. In such cases the ordinary rate is applied on the outward journey, the difference between the rate thus charged and that calculated as previously described being refunded when the packings are sent back full on production of the original way-bill. The foregoing methods of calculating freight on packing materials do not apply when a higher value than 60 cents per Kg. or a money interest in delivery has been declared in respect of them.

165. Objects of unusual dimensions or weight

Indivisible objects for the loading of which special appliances are required, or which, on account of their dimensions or weight, cannot be carried on ordinary ten ton wagons, are only accepted for transit when a special agreement as to cost of conveyance has been made by the sender with the forwarding station. Consignments which are unsuitable when conveyed unpacked for loading with other goods and goods which (irrespective of packing), on account of their nature, *i.e.*, smell, uncleanliness, danger of leakage, etc., require, in the opinion of the forwarding station, the use of one or more separate wagons, are charged according to Parcel Goods rates at two-and-a-half times the weight of the consignment, with a minimum of 1,000 Kg. per wagon used. The freight thus calculated per wagon used of at most ten tons burden may not exceed that for 5,000 Kg., under Wagon-load Class B, when carried in open wagons, or of Wagon-load Class A when carried in closed wagons. If goods or objects are consigned in lots of less than 5,000 Kg., and on account of their dimensions cannot be loaded through the door of an ordinary ten-ton closed goods van, necessitating the use of one or more open sides, then, if the cost for 5,000 Kg. according to the proper Wagon-load Class is not cheaper, the freight is calculated at Parcel Goods rate for two-and-a-half times the actual weight, with a minimum of 1,000 Kg. per wagon used. In conveying objects for which, in the judgment of the forwarding station, one or more runner wagons are necessary (such as long timber, long iron bars, etc.), then, in addition to the freight for the principal load, a charge of 0·03 Fl. per Km. is made for each runner wagon used. Consignors of goods necessitating the use of runner wagons are allowed to load on these wagons goods destined to the same station as the goods forming the principal load under the following conditions:—The goods must be so loaded that the centre of gravity shall lie, if possible, in the centre of the wagon, between the principal load and the side-walls of the runner-wagon, or the goods loaded thereon, a margin of 30 cm. must be left if the principal load reaches only half-way along the runner wagon, and a margin of 50 cm. must be left if it reaches beyond the half-way; also, between the principal load and the floor of the runner wagon, or the articles loaded on it, there must further be a vertical distance of 10 cm. for margin. The goods loaded on the runner wagon must be so secured by the centre that shifting or touching the main load is impossible. For goods so loaded on a runner wagon the ordinary normal rate is charged, but this must be accepted by the railway in part-payment of the charge for the runner wagon. If the normal freight for the goods loaded on the runner wagon is more than what is to be paid for the wagon, then no special charge is made for it. If conveyance is effected by means of coupled wagons (timber trucks) then, if freight is not calculated according to Wagon-load Class C rate, a charge as for at least 5,000 Kg. is made for every wagon used.

166. Exclusive use of Wagons.

For goods consigned in lots of less than 5,000 Kg., for which the sender asks for use of a separate wagon, irrespective of whether the wagon is sealed by him, freight is charged for 5,000 Kg., according to the Wagon-load Class to which the goods belong.

167. Goods of malodorous nature.

The regulations in Holland are identical with those given for Germany.

168. Disinfection of Goods Wagon.

The cost of disinfection of wagons used for conveyance of malodorous goods and manure must be borne by the sender or consignee. The fee is 0·60 Fl. per wagon.

CALCULATION OF FREIGHT CHARGES—*continued.*

Holland—*continued.*

169. Special Rates.

In addition to the ordinary rates, there are in Holland many specially reduced rates for Interior, Import, and Export Traffic.

These special rates apply as under:

For Interior Traffic on the Holland Railway and on the Dutch State and Central Railways, or on one or other of these systems, various goods (mainly agricultural commodities), from March to the end of November in each year, 10T, 5T, and less than 5T lots. Peat Litter 10T lots, Compost and Sewage 10T wagon-loads, Grain, Grain Offal, and Feeding Cake, 10T and 5T lots, Potatoes 10T lots, Natural and Artificial Manures 10T and 5T lots, Beetroots, Clay and Sand, Bricks, Basic Slag, Tiles, Hay, Straw, Meal, Groats, Oatmeal, Sawn Wood, Cabbage, etc., Chloride of Lime, Mineral Acids, Crockery in 10T lots, Preserved Vegetables 10T and 5T lots, Tobacco 5T and less than 5T lots, Rushes for mat-making, Flax (unritted), Beer and Ice in Owner's tanks, Peat, New Wooden Boxes, all in 5T lots, Linen Goods and Soda in 5T and less than 5T lots, Refined Sugar 5T lots, Bulbs, Grain, Husk Fruits, Seeds, Fruit (tree, garden, and forest), Vegetables and Fruits (except grapes), and Butter, Margarine, and Eggs by Fast Trains, Paper, Milk, Liquorice in barrels, Bacon, Smoked and Salt Meats, Potatoes from June till August, all in any quantity, Timber and Planks 250T in twelve months, Coal and Coke 45 and 5T lots, Coal and Coke in 200-300 Train-loads under yearly agreements.

For Import Traffic, various kinds of goods (mainly agricultural products) from March to end of November in each year, 10T, 5T lots, and less than 5T lots; various kinds of goods (chiefly raw materials and manufactured goods), 10T and 5T lots, Grain 10T, Earthenware 10T and 5T, Canes 10T, Pottery 10T, Resin 10T, Jute 10T and 5T, and less than 5T, Cottonseed Oil 10T, Chalk 10T, Margarine, Lard and Fat 10T, Dyewoods 10T, Seeds 10T, all kinds of goods in 10T, 5T, and less than 5T lots, Cotton and Yarn 5T and in less than 5T, Machines 5T and less than 5T, Agricultural Implements 5T, Glass and Glassware 5T, Oakum, Hemp, Honey, Artificial Wool, Paper, Raw Sugar, Tobacco, Flax, Wool, all in 5T lots, and Bulbs in any quantity.

For Export Traffic.—Earthenware in 10T and 5T lots, Canes 10T, Pottery 10T, Resin 10T, Jute 10T, Cottonseed Oil 10T, Chalk 10T, Margarine, Lard and Fat 10T, Dyewoods 10T, Seeds 10T, Condensed Milk 10T, Drapery 5T and less than 5T, Glass and Glassware 5T, Oakum and Hemp 5T, Honey 5T, Artificial Wool 5T, Agricultural Implements 5T, Paper 5T, Raw Sugar 5T, Tobacco 5T, Flax 5T, Wool 5T; various goods (mainly Agricultural Commodities), from March to end of November, 10T, 5T, and less than 5T. All kinds of goods in any quantity. Various kinds (mainly Raw Materials and Manufactured Goods), 10T and 5T. All kinds in 10T and 5T lots.

Where any of the above rates are used in comparison with Irish rates full particulars will be shown.

170. Disbursements and reimbursements.

Disbursements (*i.e.*, "*paid ons*") when under 50 Fl. are paid out directly (at once), but when 50 Fl. or upwards are not paid out until the amount has been collected from consignee. The payment of such advances is not incumbent on the railway, and is only done when goods are not liable to decay, and when their value exceeds the total amount advanced, together with the Freight and Accessory Fees for conveyance of the goods both outward and back. If direct payment is refunded by the railway the amount may be charged forward on the goods as a reimbursement.

Reimbursements (*i.e.*, cash on delivery) are not handed over to the consignor until they have been liquidated by the consignee, and an acknowledgment of the amount given to the forwarding station.

The Commission for Disbursements and Reimbursements is fixed in the Accessory Fees Tariff at ¼ per cent. on amounts over 5 Fl. Minimum 0·15 Fl. If the commission is not paid by the sender it is charged to the consignee. No commission is charged on amounts paid out as freight and other expenses with which goods are charged when taken over from another railway.

171. Accessory fees.

Way-bill.—Charge for single form, 0·01 Fl.

Stamping of forms not printed by railway, 0·05 Fl. for 10 forms.

Filling in way-bills when done by railway, 0·05 Fl. each.

Shunting Fee.—When by arrangement loading and unloading is effected on lines other than those prepared for the purpose within the precincts of the railway, the fee for bringing wagons to and removing them from such place of loading or unloading is 0·50 Fl. per wagon.

Premium on Value declared above 60 cents per Kg.—For each unit of 150 Km. 0·01 Fl. per 10 Fl. calculated evenly to 5 cents above, minimum 0·10 Fl. per consignment.

Declaration by Sender as to absence or insufficiency of packing of goods, per form, 0·05 Fl.

172. Bases of rates.

The bases of calculation of normal or ordinary rates are shown on the attached statement.

UNIT RATES ON DUTCH RAILWAYS FOR GOODS TRAFFIC.

State and Central Railways.

—	Per	Express Goods (Bestelgoederen)	Quick (or Fast) Goods. ("Ijlgoederen.")	Slow Goods ("Vrachtgoederen.")

* The Terminal Charges for Quick Goods and Slow Parcel Goods include loading and unloading fees.
† According as Goods are presented as Small Parcel or Wagon-load Goods.

CALCULATION OF FREIGHT CHARGES—*continued.*

DENMARK.

173. Minimum weight and freight.

The freight for each consignment is calculated on the basis of the rates, which show for each class the freight per 100 Kg. for the different distances, and the total charge is worked out to a multiple of 10 Ore. Where no other minimum is specified the lowest freight charged is 30 Ore. The gross weight for freight purposes is worked out to a multiple of 10 Kg. in the case of Slow Parcel or piece Goods, and to a multiple of 100 Kg. in the case of Slow Wagon-load Goods. Consignments under 20 Kg. are reckoned as 20 Kg.

EXPRESS GOODS.

("*Ekspresgods.*")

174. Express Goods.

General Goods and Live Poultry are carried by *Express* train (*i.e.*, by a certain train, and as quickly as the time-table allows), when handed in with a Brown Way-bill. For conveyance of such goods the Rate 1, applicable to Quick Goods, plus 50 per cent., is charged with a minimum of 75 Ore. The freight calculation is made as follows:—The original weight is increased by 50 per cent., and is then worked out to a multiple of 10 Kg., the smallest weight charged for being 30 Kg. If light goods are sent by express train the augmented weight mentioned above is increased by 50 per cent., and then worked out to a multiple of 10 Kg., the smallest weight charged for being 50 Kg.

When the easily perishable Goods hereafter described are handed in with a Brown Way-bill they are conveyed as Express Goods, and charged under Rate 1 (*i.e.*, as for Fast Train Goods).

QUICK (OR FAST) GOODS

("*Ilgods.*")

175. Basis of Rate for Quick Parcel Goods.

All general Goods (except easily perishable goods) and Live Poultry intended for conveyance by quick train must be handed in with a Red Way-bill. They are charged at Rate 1, which is based on the following scale per 100 Kg.:—

Constant (or Station Terminal),	50 Ore	
Conveyance for first 60 Km.,	2 Ore	per Km.
,, next ,,	1·2 Ore	,,
,, ,, ,,	0·6 Ore	,,
,, each succeeding Km.,	0·3 Ore	,,

And the minimum charge is 50 Ore.

176. Basis of Rate for Perishable Goods.

In so far as traffic conditions do not prevent it, easily perishable goods, such as fresh bread, fresh and smoked fish, fresh and slightly salted bacon and meat (including Dead Fowl and Sausages, but not Game), fresh lard, fresh fruit (including nuts, but not fruit of southern countries), berries (including tomatoes), yeast, fresh vegetables (including edible onions and horse radish, but not potatoes), milk, cream, buttermilk, whey, cheese packed in boxes with cross-bars, and in baskets, etc., butter, eggs, and beer, when handed in with way-bills which do not include other goods are conveyed and charged as follows:—When handed in with a White Way-bill they are conveyed as Parcel and Wagon-load Goods at the same speed as Quick Goods, but charged only at Slow Goods rates. When handed in with a Red Way-bill they are conveyed as Parcel Goods at the fastest speed allowed by the time-table, but not, however, by Express train, and charged for conveyance 50 per cent. above Rate 2 (ordinary Slow Parcel Rate) for consignments under 400 Kg., which is based on the following scale per 100 Kg.:—

Constant (or Station Terminal),	15 Ore	
Conveyance for first 60 Km.,	1 Ore	per Km.
,, next ,,	0·6 Ore	,,
,, ,, ,,	0·3 Ore	,,
,, for each succeeding Km.	0·15 Ore	,,

The freight calculation is made by increasing the original weight by 50 per cent., and working it out to a multiple of 10 Kg. The minimum weight charged in such a case is 30 Kg., and the lowest freight 50 Ore.

CALCULATION OF FREIGHT CHARGES—*continued.*

Denmark—*continued.*

177. Quick Parcels prepaid by stamps.

Single packages of Goods up to 25 Kg. weight are conveyed by fast train between all stations and stopping places without a Way-bill when the following amount of Government Railway Stamps value 25 Ore each are affixed:—

Up to 5 Kg.,	1 Stamp	= 25 Ore
Over 5 Kg. and up to 10 Kg.,	2 Stamps	= 50 ,,
Over 10 Kg. and up to 15 Kg.,	3 Stamps	= 75 ,,
Over 15 Kg. and up to 25 Kg.,	4 Stamps	= 100 ,,

Parcels which have not a sufficient amount of stamps affixed are conveyed and charged as fast goods, without any allowance being made for the stamps used.

178. Basis of Rate for wagon load Quick Goods.

If Wagon-load Goods are consigned by Fast Train the freight is calculated without regard to the nature of the goods on double the prescribed weight of ordinary Wagon-load Goods, and according to Rate 4 (*i.e.*, ordinary wagon-load rate for slow transit), which is based on the following scale per 100 Kg.:—

Constant (or Station Terminal),	6 Ore	
Conveyance for first 60 Km.,	0·5 Ore	per Km.
,, next ,,	0·3 Ore	,,
,, ,, ,,	0·2 Ore	,,
,, for each succeeding Km.,	0·15 Ore	,,

The minimum freight for each wagon is 10 kronen.

SLOW GOODS.

("*Fragtgods.*")

179. Basis of Rate for Slow Parcel Goods.

Slow Parcel Goods in consignments under 400 Kg. in weight, or when that weight is not paid for, must be handed in with a White Way-bill, and are charged at Rate 2, which is based on the following scale per 100 Kg.:—

Constant (or Station Terminal),	15 Ore	
Conveyance for first 60 Km.,	1 Ore	per Km.
,, next ,,	0·6 Ore	,,
,, ,, ,,	0·3 Ore	,,
,, for each succeeding Km.,	0·15 Ore	,,

Slow Parcel Goods in consignments of at least 400 Kg., or when that weight is paid for, must be handed in with a White Way-bill, and are charged at Rate 3, which is based on the following scale per 100 Kg.:—

Constant (or Station Terminal),	15 Ore	
Conveyance for first 60 Km.,	0·66 Ore	per Km.
,, next ,,	0·4 Ore	,,
,, ,, ,,	0·2 Ore	,,
,, for each succeeding Km.,	0·15 Ore	,,

180. Basis of Rate for wagon load Slow Goods.

When Slow Goods are handed in as Wagon-load Goods the freight is calculated separately for each wagon, according to the goods loaded in it, with a minimum of 7,500 Kg. for a large wagon, and of 5,000 Kg. for a small wagon. The goods are charged at Rates 4, 5, or 6 (particularised later), according to the nature of the traffic, a reduction of 10 per cent. being given in the freight when at least 10,000 Kg. are sent in one wagon, or freight is paid for that weight, the calculation being made by decreasing the original weight of the goods (minimum 10,000 Kg.) by 10 per cent., and then working out to a multiple of 100 Kg. If the railway places two small wagons instead of one large one at a sender's disposal they are reckoned as one large one, and if the railway in absence of a small wagon places a large one for disposal it is open to a sender to load it with goods up to 6,300 Kg. (*i.e.*, 6,000 Kg. + 5 per cent.) on payment as for a small wagon, but if a heavier weight than this is loaded in it charge is made as for a large wagon. The minimum freight charged in respect of each wagon ordered is 5 Kronen. For the use of closed wagons an additional freight charge is made of 40 Ore per wagon and of 10 Ore for every 10 Km. or part thereof of the conveyance distance. (This applies also to fast goods.)

CALCULATION OF FREIGHT CHARGES—*continued.*

Denmark—*continued.*

All kinds of Goods conveyed in whole wagon-loads, except those which come specially under the reduced wagon load Rates 5 and 6 (referred to later) are charged at Rate 4 already stated.

Goods such as Bark, Pitch, Bone Ashes, Concrete, Tow, Grains, Cement, Drain Pipes, Artificial Cattle Feeding Stuffs (*i.e.*, Cake, etc.), Seeds for oil pressing, Plaster and Plaster Work, Glassware (hollow), (*i.e.*, Bottles, Drinking Glasses, Lamp Glasses, etc.), Straw for paper-making, Pig and Scrap Iron, Cabbage Heads, Lime, Mortar, Rags, Corn Goods and Mill Manufactures (including Wheat, Rye, Barley, Oats, Indian Corn, Rice, Vetches and Peas, Malt and Malt Dust, Flour, Bran, and Groats of all kinds), Potter's Ware and Brick Manufactory Products, except those coming under Rate 6 (including China, Delft Ware, Crockery, Majolica, and Terra Cotta), Molasses, Plants (Living), Root Fruits (Turnips, Potatoes, and Edible Onions), Salt (Kitchen and Table, Rock Salt, Glauber's Salt, Wood Effects (as Christmas Trees, Horse Chestnuts, etc.), Slates, Stone for Building, Millstones, Grinding Stones, Stone Slabs, Marble Slabs, Glazed Tiles, Tar, Timber for Building and other Purposes, planed or unplaned (as Beams, Boards, Laths, Planks, Rafters, Sleepers, Telephone and Telegraph Poles, Creosoted included, and Pit Props), Wood Pulp for paper-making, Rough Wooden Articles (as Shovel and Rake Handles, Spokes, Naves, Fellies, Pegs, Bungs, Stave and Butt Corks, Staves, Wooden Blocks for Paving, Hoops, Willows, barked, etc.), Charcoal, Compressed Peat Fuel, Wood Wool, Oakum, etc., are charged at Rate 5, which is based on the following scale for 100 Kg. :—

Constant (or Station Terminal),	6 Ore	
Conveyance for first 60 Km.,	0·33 Ore	per Km.
,, next ,,	0·2 Ore	,,
,, ,, ,,	0·15 Ore	,,
,, for each succeeding Km.,	0·12 Ore	,,

Goods such as Bones (whole and powdered), Fodder Crops, fresh (as grass, clover, etc.), Cullet, Manures (natural and artificial of all kinds, including manure salts), Straw, Hay, Seaweed, Chaff, Heather, Leaves, Moss, Rushes, etc., Ice, Porcelain—earth, Sand, Brickdust, etc., Bog Iron Ore, Mollusc Shells, whole and broken, Rough Stone (as boulders, broken stone, quartz, flint, marble, basalt, limestone, sandstone, etc.), Pulverised Stone, Paving Stones, Burnt Stone, Firebrick, Tiles, Clinkers, Arch Stones and Ordinary Moulded Bricks, Coal, Briquettes, Coke, Cinders and Ashes, Sugar Beets and Refuse and tops of same, Woods in lengths up to 1·3 metres split or unsplit and with or without bark, Wood Refuse up to 1·3 metres in length, Wood Shavings, Twig Firewood, Willows, unpeeled, used Empty Barrels, Turf, Turf Litter, Turf Mould, and Moss Litter, are charged at Rate 6, which is based on the following scale per 100 Kg. :—

Constant (or Station Terminal),	6 Ore	
Conveyance for first 60 Km.,	0·2 Ore	per Km.
,, next ,,	0·15 Ore	,,
,, ,, ,,	0·125 Ore	,,
,, for each succeeding Km.,	0·1 Ore	,,

181 Mixed consignments. It is open to a trader, at his own risk, to load together different kinds of goods in one wagon, in as far as no special regulation prohibits it. The freight in such case is calculated according to the highest tariffed goods included in the consignment.

182. Milk traffic. When milk (under which is included cream, buttermilk, and whey), butter and beer (all of which are on the list of "Easily Perishable Goods") are sent in whole wagon-loads it is permissible to complete the wagon-load during the journey with goods of the same kind, or to unload some of the goods at intermediate stations, but both loading and unloading of a wagon *en route* are not permitted on one and the same journey. In case of loading or unloading *en route* the freight is calculated from the wagon's starting station to the station of ultimate destination on a weight equivalent to the full bearing capacity of the wagon, which must not be exceeded. The Way-bill in such cases must be made out for one sender and one consignee.

CALCULATION OF FREIGHT CHARGES—*continued.*

Denmark—*continued.*

183. Empty package Used packings (*i.e.*, returned empties, etc.), are conveyed as general slow goods, and charged according to the following scale per 100 Kg. :—

Distances.	Rates.	Distances.	Rates.
Km.	Ore.	Km.	Ore.
1–30	15	181–240	50
31–60	20	241–300	60
61–90	25	301–360	70
91–120	30	361–420	72
121–180	40	421 and over ..	75

The traffic to be handed in with a way-bill which does not include any other Goods. The freight is worked out to a multiple of 10 Ore, with a minimum charge per consignment of 30 Ore, except for—

1. Sacks and tarpaulins.
2. Milk cans of metal, also those with wooden covers, when they are stamped with the owner's name.
3. Fish boxes and fish baskets.
4. Butter and Margarine tubs.

The following cannot be included under the heading of "Used Packings," viz. :—

Paraffin Barrels and other Barrels which have been used for ordinary Commercial Goods, Boards, Laths, Binding Ropes, Packing Canvas, Hay (used for packing), Wooden Frames for the protection of Paper, Cheese, Cycles, and other Goods. Sticks for rolling paper, etc., on; Tanks for conveyance of Gases in liquid and compressed state, Hides and Skins, Carpets and Mats, Furniture, Trunks, etc.

If used packings are consigned and sent as Fast Goods the freight calculation is made according to the ordinary rules applying to Fast Goods Consignments.

184. Bulky Goods. Certain defined commodities and objects, the weight of which is small in proportion to the space which they occupy in the wagon, are considered as *light goods*.

When light articles are sent as *small* goods (Fast or Slow Transit) freight is calculated according to Rates 1, 2, or 3. The weight of the goods is increased by 50 per cent. The minimum weight for Rates 1 and 2 is 30 Kg., and for Rate 3, 600 Kg.

If light articles and other articles are sent with the same way-bill, the actual weight of the general goods is added to that of the light goods increased by 50 per cent. Freight is calculated for the weight so determined and rounded off in the usual way, on a minimum of 30 Kg. for Rates 1 and 2, and of 600 Kg. for Rate 3. If, however, a lower freight is arrived at for slow goods by calculating according to Rate 3 for a minimum of 400 Kg. for the general goods and according to Rate 3 for the light goods, this method of calculation is to be adopted.

In the case of light articles sent in wagon loads, freight is reckoned according to the general regulations for wagon loading already described, but the minimum weight on which freight is charged is only 5,000 Kg., even if a large wagon is ordered for the consignment.

185. Reimbursement and d bursem Senders may charge Goods carried by rail with "Reimbursement" (*i.e.*, Cash on delivery) up to their value. For such charge a fixed fee of 5 Ore per 10 Kr., or part with a constant of 15 Ore per consignment is payable whether the Reimbursement is paid by Consignee or not. Reimbursements are paid to Consignor in return for receipt as soon as sending station has been advised that Consignee has paid. If goods are delivered to a Consignee before he has paid the Reimbursement charge the railway company is responsible to the sender for the loss, and

CALCULATION OF FREIGHT CHARGES—*continued.*

Denmark—*continued.*

must indemnify him at once, not exceeding, however, the amount charged on the goods and without prejudice to their right to recover from the Consignee.

There is apparently no commission charged on Disbursements, *i.e.*, "Paid ons."

186. Interest in delivery.

The fee charged is 5 Ore per 10 Kr. per every 200 Km. of the distance carried.—Min., 40 Ore.

187. Accessory fees.

Way-bills, charge per form, 5 Ore—for 100 forms,	60
Stamping way-bills not supplied by the Railway, per 1,000 forms, or part thereof,	75

Receipt for goods per Book,	50
Receipt for goods, filling in per consignment,	5
	Kr.
Disinfection of goods wagons, per wagon,	1
Supplying meat hangers, per wagon,	1

AUSTRIA AND HUNGARY.

188. Unit of money.

Freight is calculated in Kilograms, unless another system is ordered, and Rates are expressed in Kronen, amounts under 5 Heller being omitted, and those of 5 H. to 10 H. being counted as 10. The freight is charged according as Goods are sent by Fast or Slow Transit.

189. Unit of weight.

In calculating freight according to weight of consignment the weight is always rounded off as follows:—For Fast Goods every 5 Kg. begun is counted as full 5 Kg., and for Slow Goods every 10 Kg. begun is counted as full 10 Kg., with a minimum weight as for 20 Kg.

190. Government duty charged on Goods traffic in Hungary.

In transit on the Hungarian Railways, a transport duty fixed by law is added to the freight. This duty amounts in the case of Quick Goods to 7 per cent. and of Slow Goods to 5 per cent. of the freight (including handling fees), and is included in the calculated Goods tariffs. If, however, freight has to be calculated by unit rates, then the handling fee, if any, and provided it is not included in the Unit Rate, is added to the freight for the distance in Kilometers, and to this sum is added the transport duty above referred to, fractions under a half Heller being omitted, and those of a half Heller and upwards being reckoned as 1 Heller.

If the total length of *a line of railway* is less than 8 Km., then freight for 8 Km. is charged on that line.

The minimum freight payable, as a rule, on all Austrian Railways is 40 Heller, and on all Hungarian Railways is 42 Heller.

EXPRESS GOODS.
("*Schnellzug Gut.*")

191. Rates for Express train transit

When Fast Goods are forwarded by request of the sender and with consent of the railway by express train, then the rate for ordinary Quick Goods, with an addition of 50 per cent., is charged. The minimum freight for such a consignment is 60 H. on the Austrian Railways and 64 H. on the Hungarian Railways, even when no transport duty is to be paid.

QUICK (OR FAST) GOODS.
("*Eilgut.*")

192. Rates for quick Goods transit.

These are divided as regards freight (see bases of charge in Statement appended) under the following five heads:—

1. *Ordinary Quick Goods* to which belong all goods not included under any of the four other heads.

CALCULATION OF FREIGHT CHARGES—*continued.*

Austria and Hungary—*continued.*

2. *Reduced Quick Goods,* which include unfermented apple and pear juice, berries, beer, eggs, fats, butter, margarine, lard, bacon, tallow, fish salted or fresh, fresh meat, meat goods such as ham, sausages, etc., vegetables, hazel nuts, yeast, liquid and solid, in packages of not more than 50 Kg. each; honey, potatoes, chestnuts, cheese, crabs, malt, milk, cream and whey; mineral waters, cider, fresh fruit, fruit and forest trees, pottery, game.

3. *Specially Reduced Quick Goods,* to which belong certain specified used packages, but excluding sacks and milk cans.

4. *Ordinary Quick Goods, when consigned in lots up to 50 Kg. and 10 packages per way-bill,* and conveyed at double the rates of Class I., unless the normal rates of ordinary Quick Goods are cheaper.

5. *New and Old Sacks of all kinds and used Milk Vessels* bearing the owner's marks, when consigned as Quick Goods and charged at the rates for Class II., unless the rate for specially reduced Quick Goods is cheaper.

193. Mixed consignments.

When Fast Goods, for which different tariffs are provided, are handed in with one way-bill and packed either together or separately, the freight for the whole consignment is calculated at the rates of the class to which the highest rated articles in the consignment belong, unless when they are separately packed separate ratings work out cheaper. In the latter case separate calculations are made, the weight being rounded off in units of 5 Kg. for each class of goods.

194. Live poultry.

When sent as Fast Goods in coops or crates, with solid walls, are charged on the gross weight of the consignment at the rates for reduced fast goods. If such consignments are sent in baskets or sacks, then the rates for reduced fast goods, plus 50 per cent. on the gross weight, are charged, if the freight at ordinary fast goods rate does not come cheaper.

For Live Poultry, not enclosed, but simply handed in for conveyance as Fast Goods, and conveyed in Railway Poultry "Vans" (*i.e.*, small receptacles to be loaded in wagons), if such can be provided by the railway, freight is charged at the reduced fast goods rate for the sum of the weight of the poultry and the tare of the "Van," which is taken as 250 Kg., and when conveyed loose in Fowl Wagons or ordinary goods wagons belonging to the railway, freight is charged according to the ordinary Fast Goods tariff.

195. Breeding poultry.

Enclosed in coops, crates, baskets, and the like are charged at the reduced fast goods rate on the gross weight of the consignment. They must be accompanied by a certificate as defined hereafter in the regulation relating to transit by slow goods train.

196. Subscription rate, Fast Goods.

Regularly sent consignments of provisions or returned empty packages belonging to the ordinary fast goods class may be admitted for transport, accompanied by forwarding notes, and the freight paid in monthly accounts.

To such consignments the ordinary tariff conditions apply, with certain modifications.

Notice of sending to be given in writing at despatching station at least eight days before the first consignment is sent. Destination and name of consignee to be stated.

Cash security is to be given up to the maximum amount of freight paid in a month. This security to be treated as freight in advance, and not subject to interest.

Forwarding notes supplied by the railway are to be used. They can be bought at the stations at 3 Heller each, with impressed 2 Heller stamp, and at 11 Heller per form with 10 Heller stamp (the 3 Heller forms for use up to 38 Km., and the 11 Heller forms for longer distances).

A duplicate forwarding note can be had on request of sender, showing receipt of goods for forwarding. No receipt forms are issued.

Each parcel must bear consignee's address, and owner's marks must be plainly legible.

Milk vessels must have the official stamp of the revenue authorities.

CALCULATION OF FREIGHT CHARGES—*continued.*

Austria and Hungary—*continued.*

Proof of deposit of security must be shown on demand of the station receiving the goods for transport.

Loading and unloading done by railway. Sender and Consignee, however, may be asked to assist in same.

Goods are sent by passenger train when a mixed or goods train is not preferable. Express trains are not to be used. If the railway designates certain trains to be used, then goods are to be forwarded exclusively by such trains.

The forwarding of consignments not handed in at least half-an-hour before departure of train cannot be claimed.

Consignments may not be charged with cash advances or reimbursements—nor may a declaration of interest in delivery be made.

The railway may forward goods consigned to a halting place, and which cannot be immediately removed by the train officials, to the nearest station, and advise the addressee from there.

Receipt of goods is to be confirmed on the forwarding note which remains in the hands of the railway.

Any claims made must be accompanied by all the entries contained in the forwarding note.

Freight is charged according to the Fast Goods rates for the goods in question and the distance in question. For goods sent to or received at halting places freight is calculated on the basis of the distance from these halting places, according to the zone division in the local goods tariff of Austrian State Railways.

The weight on which is based calculation of freight in the case of milk consignments in tin cans or of returning cans, is ascertained, not by actual weighing, but in the following way:—The actual weight of an empty can of not more than 10 litres capacity is taken as 4 Kg., of not more than 15 litres as 5 Kg., and so on. 1 Kg. for every 5 litres capacity.

The net weight is calculated according to the capacity of the vessels, taking 1 litre as equal to 1 Kg. The gross weight is found by adding the net weight to the standard weight of the empty can.

For other consignments the State Railway Direction may dispense with actual weighing in each individual case, and take a weight to be agreed on with the party once and for all. For this purpose each vessel (or package) is to be subjected to official weighing, both when empty and when filled to its utmost capacity. The weight of the vessel, empty and full, with name of contents are to be impressed plainly on the vessels. In the case of milk consignments in glass bottles, the number and nature of bottles placed in the cases are to be printed on the cases.

Freight is calculated on the gross weight as ascertained above, regardless of whether the whole capacity of a receptacle is used or not.

Register of consignments according to station is to be kept in sending stations. Monthly account in accordance with the same is to be furnished to the party concerned, who has to defray cost of stamping the account.

In the register is to be entered each consignment, with its weight rounded off for purposes of tariff.

In the account furnished, the weights of consignments for which same rate is charged are counted together; freight is calculated on total weights. Receipt stamp fees amounting to 10 Heller for each consignment are added, and also any other fees for transfer, etc.

Parties may inspect register during the course of the month.

The account is made out at forwarding station on the last day of each month in the presence of the party concerned, or his agent. If the party has, however, declared that he will not be present, then the account is sent to him at his own expense.

Accounts to be paid within two days after being drawn up or sent to the party. Receipt and copy of register are sent to the party.

CALCULATION OF FREIGHT CHARGES—*continued.*

Austria and Hungary—*continued.*

Accounts may be paid through the Post Office Savings Bank on forms to be had at stations, price 6 Heller.

Accounts are made out, without waiting till end of the month, when the amount due exceeds the security deposited, and when a payment on account is not immediately made.

This method of forwarding may be stopped at any time by the railway or party concerned without reasons given. The railway is, however, only obliged to return the deposited security when it is certain that no further charge or obligation rests on the party. A receipt for return of security must be given by the party to the railway.

SLOW GOODS.

("*Frachtgut.*")

197 Rates for Slow Goods transit.

These are divided for purposes of rating (see bases of charge on appended statements) into the following nine Classes:—Class I. (Normal Class), Class II., Wagon-load Classes A, B, and C, Special Tariffs 1, 2, and 3, and Bulky Goods. At Class I. rates are forwarded all slow Goods designated in the tariff as rated under that Class, or which are not included in the Classification or among the articles subject to special rates. In like manner goods belonging to Classes II, A, B, or C, or Special Tariffs 1, 2, or 3, for which in the Goods Classification a special method of packing is prescribed are, when in another form of packing rated according to Class I., unless the Goods Classification contains some other regulations with regard to the goods in question. The Goods Classification shows what Goods are included in Classes II., A, B, and C, and in the Special Tariffs 1, 2, and 3, or the Bulky Goods Class. If articles for which a particular tariff is provided when they are consigned in quantities of at least 5,000 Kg. or 10,000 Kg. per way-bill and wagon or on payment of freight for the tonnage of the wagon used, are consigned in smaller quantities than those prescribed or the tonnage of the wagon used, then freight is charged for the actual weight according to the proper tariff, unless the freight for 5,000 Kg. or 10,000 Kg. per way-bill and wagon or for the tonnage of the wagon used works out cheaper according to the tariff fixed for those quantities. When wagons of lower tonnage than 10,000 Kg. are provided for the Wagon-load Classes, conditional on the consignment or payment of freight on 10,000 Kg. per way-bill and wagon, freight on the actual weight, but for not less than the tonnage of the wagon used, is charged according to the rate of the wagon load class in question. For the following articles freight is always charged for not less than the minimum tonnage of the wagons used, when the rates in the Goods Classification apply to them:—Asphalt, ice, raw iron, oak railway sleepers, roots for fodder, mineral coal, refuse from potato or root pressing, slag, stones, tiles, sugar beet, whole and sliced. An exception to the foregoing rule is made with respect to traffic from Narrow Gauge lines to Main (Normal Gauge) lines and from lines with weaker superstructure to main lines, in which case the rates are not applied to less than 10,000 Kg. per way-bill and per normal gauge wagon.

198. Mixed consignments

When Slow Goods, subject to different tariffs are packed either together or separately, are included on one way-bill freight is reckoned as if the whole consignment consisted only of such articles as are subject to the highest rate, unless in case of separate packing and the respective weights being stated a separate calculation comes cheaper. In the latter case, the stated weight of each separately packed description of goods is rounded off to an even 10 Kg. in calculating the freight.

199. Bulky Goods

Bulky, Small, or Parcel Goods are charged 50 per cent. additional to Class I. rate. If Bulky Goods, for which in consignments of 5,000 Kg. and 10,000 Kg. the reduced Wagon-load rates of Classes A, B, or C are charged, are placed with other goods in a wagon-load of at least 5,000 Kg., then the rates of Class I. are applied to the whole consignment unless, in case the goods are not all packed together, separate calculations work out cheaper. If this be so,

CALCULATION OF FREIGHT CHARGES—*continued.*

Austria and Hungary—*continued.*

in making the separate calculations the weight of each class of goods is rounded off to an even 10 Kg. The foregoing regulations apply also to Exceptional Tariffs contained in the Goods Tariff, and to other reduced rates provided there be no special regulation to the contrary with regard to the same.

When several tariffs are provided for a commodity the nature and composition of the article to be sent must be declared in the way-bill, otherwise the highest tariff for the article in question will be applied. Such articles are specially indicated by an X in the Goods Classification.

200. Live poultry.

For Live Poultry forwarded by Slow Goods in coops or crates with solid walls freight is charged on the gross weight of the consignment at the rates of Class II. When live poultry is forwarded in baskets or sacks the rates of Class I. are charged on the gross weight. If simply handed in, without being enclosed in any way and conveyed loose in *poultry "Vans"* (*i.e.*, small vehicles to be loaded on ordinary trucks) belonging to the railway (if such can be provided), freight is charged for the sum of the weight of the poultry and the tare of the Poultry "Van," which is always taken as 250 Kg., at the rates of Class I., unless freight at the Reduced Fast Goods rate is cheaper. For live poultry consigned and forwarded loose in fowl wagons or other goods wagons belonging to the railway, freight is charged according to ordinary Slow Goods tariff.

201. Breeding poultry.

For breeding poultry consigned as Slow Goods and enclosed in coops, crates, baskets, etc., a specially reduced rate is charged of 0·52 Hellers per Km. per 100 Kg. In this rate the handling fee is included, but the Transport Duty for Hungarian lines must be added. The application of this specially reduced rate is to be expressly prescribed by the Sender in the way-bill. With the consignment must be presented a Certificate from certain defined Bodies or Authorities comprising Sectional Boards of Agriculture, Royal Agricultural Societies, Land and Forestry Societies, a Central Federation of Agricultural Societies, and, in the Crown Lands of Hungary only, by the Hungarian Minister of Agriculture or the District Veterinary Inspectorate.

Persons accompanying Live Birds, if they travel in the wagon with the traffic or in another wagon indicated to them by the stationmaster of the sending or junction station, in the same train in which the birds are forwarded, enjoy the following concessions as to payment of fare for the journey:—If three or more wagons are sent on one way-bill, then one attendant is carried free for every three wagons. When an attendant travels with a number of wagons less than 3 or exceeding three or a multiple of 3, then the attendant with one or two wagons, or additional attendants for fractional parts of multiples of 3, must pay a fare of 2·3 Heller per person and per Km., including Austrian Railway Ticket Duty and Hungarian Transport Duty. This fare is calculated on the distance the birds are conveyed—amounts up to 5 H. being omitted, and those of 5 H. and upwards counted as 10 H. If, however, the fare on the basis of this unit rate comes higher than the regular fare for 3rd class in a passenger train, the latter is charged. Persons accompanying consignments for the transit of which a separate wagon is not required do not enjoy any concession in fare, but must pay ordinary 3rd class fare if they travel in the wagon with the birds, or (by direction) in another truck. The food supply for birds in transit is carried free.

For the purpose of fixing compensation in the case of loss, depreciation, or injury of Breeding Poultry carried at specially reduced rates already referred to, the ordinary commercial value or ordinary value is taken, but with a maximum of 100 Kronen for 100 Kg.

202. Goods for Exhibition

For the transit by Fast or Slow Goods trains of articles for Exhibition, on request of the Exhibition Committee and with consent of the railways concerned, the following conditions are applicable:—Full freight is charged to the place where the Exhibition is to be held. Transit back to the original sender and by the same route as on the outward

CALCULATION OF FREIGHT CHARGES—*continued.*

Austria and Hungary—*continued.*

journey is effected free of charge, provided the sender states in the original way-bill that the goods are for Exhibition, that no other goods are included in the same way-bill—that return must be effected within four weeks after the close of the Exhibition, and always to the same station in which the goods were received—that the way-bill for the forward journey is produced by the sender of the articles to be returned, and that a certificate is submitted from the Exhibition Committee that the articles were exhibited and remained undisposed of or unsold. If only a portion of a consignment of Exhibits remains undisposed of or unsold, then the free return of that portion is allowed on presentation of the original way-bill for the whole consignment and the Exhibition Committee's certificate. Free return conveyance of exhibits can only be effected in one consignment to the Consignor on the outward journey. The return of the exhibits in several consignments is not allowed. Return free conveyance as Fast Goods can only be claimed if the goods were sent on the outward journey as Fast Goods. The benefit of free conveyance of returned exhibits is only allowed when the sender makes a special request for the same in the way-bill. All special services, such as weighing, loading, etc., are charged for according to accessory fees tariff.

For the purpose of fixing compensation in case of loss, depreciation, or damage on the return journey of exhibits carried free, the ordinary commercial value or ordinary value is taken, but with a maximum of 120 Kronen per 100 Kg.

203. Used empties.

Such as tubs, barrels, milk cans, boxes, packing frames, boards, cages, coops, baskets and fowl crates are charged at Class A rate. Empty sacks in any quantity are charged at Special Tariff 1.

204. Disinfection of Goods wagons.

For the disinfection of wagons used for the conveyance of animal raw products, a fee of 4 H. per 100 Kg. is charged, with a minimum of 40 H. per consignment and a maximum of 3 Kr. per wagon, and for stable manure, if wagon must be disinfected in accordance with special regulations, the charge is 3 Kr. per four-wheeled wagon, and 5 Kr. per wagon with more than four wheels.

205. Premium on declaration of interest in delivery.

The charge is 2·5 H. per Km. per 1,000 Kr. charged per 10 Kr. and 10 Km., rounded off to an even 10 H. —Minimum charge 40 H.

206. Disbursements and reimbursements.

Disbursements ("Paid ons") are only admissible up to 300 Kr. The fees for disbursements are 2 per cent., excluding Customs Duty, on which the fees are only one-half per cent. On Reimbursements, commission at the rate of one-half per cent. is charged with a minimum of 5 H. per consignment.

207. Export tariffs.

Are only applied when goods are sent direct outside of the Austro-Hungarian Customs area, except in such cases as they are allowed by way of rebate in respect of goods conveyed to frontier stations, stored there for a time on the railway premises, and then exported. In this case the application for rebate must be accompanied by the original way-bill to the frontier station and the duplicate of the re-forwarding way-bill or a ship's bill of lading proving actual export.

208. Accessory fees.

The following are chargeable, in addition to the fees already referred to throughout the general Regulations:—

Customs and Statistical Forms.

Charge for each form filled up, . .	10

Declaration as to absence of packing.

For each form, ...	2
For 100 forms, ...	1·00

Receipt for Goods handed in.

A charge of 4 H. is made in respect of each receipt form, book of 50, 2 Kr., and 10 H. is charged for filling in each form by the railway.

Advice to Sender of Delivery of Goods.

For each advice sent, ... 10 H.

Feeding and Watering Poultry.

For each time poultry are watered and fed the fee charged, including actual cost of food supplied by the railway, is 50 H. per 100 Kg.—which fee is also charged even though a Sender supplies the food. The feeding and watering are done by the railway employees.

Transfer of Goods to or from Owner's Carts.

(*a.*) Charge for transfer of goods between owner's drays and station when undertaken by the railway:—Objects exceeding 750 Kg. in weight or 7 M. in length, up to and including 1,000 Kg. each object, 6 H. per 100 Kg. of the whole consignment; up to and including 2,000 Kg. each, 8 H. per 100 Kg., and

CALCULATION OF FREIGHT CHARGES—*continued.*

Austria and Hungary—*continued.*

over 2,000 Kg. per object, 10 H. per 100 Kg., and for other slow goods and fast goods 2 H. per 100 Kg.—Minimum per consignment, 5 H. Certain goods, chiefly in bulk, must always be transferred by owners.

(*b.*) Transfer from lorry to railway wagon, when incumbent on owners of goods, and done by the railway:—Loading or unloading full barrels, with supports, 5 H. per 100 Kg. of the full consignment.—Objects exceeding 750 Kg. in weight or 7 metres in length:—

Up to 1,000 Kg. each, 8 H. per 100 Kg. of whole consignment.

Up to 2,000 Kg. each, 10 H. per 100 Kg. of whole consignment.

Over 2,000 Kg. each, 12 H. per 100 Kg. of whole consignment.

For every 100 Kg. of other weights, 3 H., with minimum of 5 H. In these cases transfer fees and loading and unloading fees are not charged. When work of transfer or transport is undertaken at request of a sender, upon whom the transfer is incumbent, the workmen to whom the transfer or transport is allotted are regarded as agents of the sender or consignor, and not of the railway.

209. Special rates in Austria.

In addition to the ordinary rates, there are in Austria many specially reduced rates for Interior, Import, and Export traffic. Among others there are the following:—

For Interior Traffic.—Hay, straw, wood, chalk, potatoes, coal, sand, stone, cement, beetroots, drain pipes, ice and snow, earth, feeding roots, charcoal, quartz sand for glass-making, cullet, turf, peat litter, turf mould, roofing tiles, for minimum weight according to capacity of wagon used. Tinware, hollow glassware, basketwork, leather-work, furniture, stripped tobacco leaf, flax waste, willows, used empty packages, wooden barrels, wooden hoops, raw flax, hemp, wood wool, reeds, hemp waste, hay and straw per square metre of floor area of wagon used, sugar in 5,000 and 10,000 Kg. lots.

For Export Traffic.—Beer, eggs, woodware, clover and grass seeds, wine, cider, fresh fruit, paper, cardboard, iron and steel, iron and steel goods, furniture, and timber in 5,000 and 10,000 Kg. lots.

For Export and Import Traffic with Trieste Port.—Fats, vegetables (pickled), grain, milling products, malt, oil seed, husk fruits, potatoes, fruits (of various kinds) dried, plum jam, oil cake and oil cake meal, starch, and used empties in 10 ton lots; China clay in wagon-loads, condensed milk, mineral waters, sugar and sugar candy in 10 ton and 5 ton lots; furniture and furniture frames (bentwood), not in parts, unpacked or only packed in straw matting or canvas, 10 ton, 5 ton, and under 5 ton lots; sheep's wool, with a minimum of 5,500 Kg. per wagon; cotton yarns in 5 ton lots.

210. Special rates in Hungary.

For Interior Traffic.—Lignite, burnt lime, tiles, brushes, manures (stable and artificial), iron ore, slag, turf, peat litter, turf mould, coal and coke in wagon-loads, wood fuel, charcoal, potatoes, boxes, turf, compressed peat fuel, growing trees, plants, and flowers, in 10 ton lots; Slow Goods of all kinds in 10 ton and 5 ton lots; mineral waters, spirits, glass and hollow glass goods, iron and steel goods of all kinds in 10 ton, 5 ton, and lots under 5 ton; grain and milling products in 5 ton lots; paper in 5 ton and lots under 5 tons, and fruit trees, seeds, dead poultry, sulphate of copper, in any quantity.

For Import and Export Traffic.—No particulars of reduced rates are shown in the tariff books obtained.

In cases where any Austrian or Hungarian Special Rates are used for comparison with Irish rates the full conditions will be given.

211. Bases of rates.

The bases of calculation of normal or ordinary rates in Austria and Hungary are shown on attached statements.

211—*continued.*

PACKING AND LABELLING OF GOODS.

FRANCE.

212. General regulations.

Railways are not bound to accept, unpacked, goods which in ordinary commerce are packed, nor are they obliged to accept defectively packed goods or such as show evident traces of deterioration. Goods liable to get mixed with others, or which may be injurious in contact with others, are not accepted in a loose state, except in complete wagon-loads of 4,000 kg., or paying for that weight. Goods not clearly addressed or marked may not be accepted. Chalk markings are not admissible.

213. Regulations for particular commodities.

Commodities mentioned in Special Slow Transit Tariff No. 2 (cereals, flour, grain, dried vegetables, &c.), must be sent packed, except chestnuts, acorns, dry onions, and potatoes, which may be sent in bulk in full wagon-loads. This requirement applies only to the Nord system for this tariff.

Trees and shrubs, growing plants packed, and green vine branches carried over the seven chief railway systems must be made up in such manner as to render it possible to lay them flat and on top of each other on the trucks. Oysters and fresh fish sent from Boulogne and other seaside places on the Nord system under Common Special Tariff No. 114 to all stations on the P.L.M. system must be handed in in baskets, chests, or barrels of a design approved of by the companies, and such receptacles must be labelled clearly with marks, address of consignee and name of arrival station in large letters. Consignments not complying with these conditions will be charged at rates of general tariff.

Fruit and vegetables (except truffles) conveyed from any station on the Orleans system to any station on the Nord under special Tariff No. 114 G.V. must be sent in sacks or wooden boxes without projections or in covered baskets with flat bottoms to allow of them being piled up. The dimensions of the packages may not exceed one metre on each face. The packages must be made up in such a way as is suitable to the length of the journey, and so that if they are meddled with some trace of tampering is sure to appear.

Fresh fish sent over the Nord system without conditions as to tonnage under the terms of exceptional rates No. 1 of special tariff No. 14 for express traffic must be consigned in baskets of conoid or rectangular shape or in boxes of a model approved by the company. Consignments not fulfilling the foregoing conditions will be charged at the rates of the general tariff. Fish sent in wagons loaded with at least 2,000 kg. may be packed in crates, boxes, or casks. The baskets, crates, or casks must be supplied with labels of a design fixed by the railway company, and bearing in a very clear and legible manner the brands of the packages, the address of the consignee. and the name in large characters of the station of destination.

BELGIUM.

214. General regulations.

Every parcel must bear a very legible address or mark. The consignor must supply goods with sufficient packing. Objects presented in bad order or with insufficient packing must be accompanied by way bill containing a clause declaring non-liability of the railway. Packing is deemed insufficient when parcels are in a state such that they can be tampered with without being broken open. If the railway demand a declaration of non-liability on a separate form such form is supplied free to the sender.

Parcels liable to injure goods with which they may come in contact may be refused.

215. Regulations for particular commodities

Empty sacks must be made up in bundles securely corded. The ends of the cords should be provided with a plate or a piece of parchment showing the name and address of consignee and the station to which consigned. The railway is only responsible for the number of packages and the total weight of the consignment.

PACKING AND LABELLING OF GOODS.—*continued.*

Belgium—*continued.*

Rates are only applicable if packages of goods are provided with an address. This address may, however, be replaced by a special mark under conditions laid down in the regulations.

GERMANY.

216. General regulations.

Necessary packing for protection of goods against loss, depreciation, or damage during transit devolves upon the sender. If the railway accept unpacked or defectively packed goods it is entitled to require the sender to admit absence or deficiencies of packing on the way-bill, and to notify the same to the station of destination in a special declaration on prescribed form. A general declaration once and for all may be made if a consignor is in the habit of sending similar goods to the same station. In such cases a note of the general declaration must be made by the sender on the way-bill. These forms of declaration are supplied at stations at a fixed price of 1 pf. per single form and 75 pf. for 100 forms. Without such declarations the railway will not accept, for example, consignments of hides simply roped up or sugar in loose loaves. When filled barrels, such as dirty oil syrup barrels, are so covered with dirt that their condition cannot be ascertained when handed in they are accepted for transit only when the consignor acknowledges their defect in the way-bill.

217 Regulations for particular commodities.

The following goods are not accepted for transit even when accompanied by a declaration, if they do not comply with the undermentioned conditions:—

1. Cigars and meat wares to be packed separately in sealed or leaded packages offering sufficient security that theft cannot take place without injury to the seals or lead soldering. In these cases an impression of the seal used must be made on the way-bill.

2. Barrels containing liquids must not show leakage or depressed knot holes in the staves, and must be tightly bunged. Barrels containing goods liable to fermentation must be fitted with appliances to allow air to escape.

3. Empties that have been filled with acid, corrosive, caustic, or evil-smelling liquids must be dry outside, and properly closed.

4. Packages containing fresh fish, packed in ice, must, as a protection to other goods, have straw, shavings, or turf moss on the inside, bottom, and sides.

5. Filled sacks must be bound with ropes (not straw), and so fastened as to leave sufficient neck to take hold of.

6. Empty sacks must be made up in bundles, securely tied together, the address to be on wooden or paste-board labels.

7. Full potato sacks must have the address on a tablet of wood or other lasting substance fastened securely at the upper end of the sack.

8. Glaubers salt refuse accepted only in thick barrels of sound wood so hooped that the contents cannot scatter through the seams by jolting during transit.

9. Stuffs containing free acids, such as superphosphates and other acid artificial manures, are accepted for transit in packages only, when the packages, particularly sacks, are thick and durable.

10. Unpacked objects of metal, &c., must not be freshly tarred or sticky.

11. Bees in baskets and hives are accepted only when it is impossible for the bees to escape.

When corn, husk fruit, clover, malt, or oil seed is conveyed loose (in bulk) in wagon-loads the absence of packing must be acknowledged by the sender in the prescribed form of declaration.

Goods sent in packages must be marked or branded on the outside in clear and durable manner, in

PACKING AND LABELLING OF GOODS.—*continued.*

Germany—*continued.*

exact accordance with the entries in the way-bill. The railway is empowered to demand that goods in separate packages shall be marked by the sender with the name of the station to which consigned, unless their nature does not admit of marking. If the sender omits to mark the name of the station this will be done by the goods department of the sending station when the nature of the goods permits without any special difficulty, and a marking fee of 5 pf. per parcel fixed in the Accessory Tariff will be levied.

HOLLAND.

218. General regulations.

The regulations in force in Germany apply to Holland as regards unpacked, defectively packed, or soiled goods being accepted only for transit on declaration by sender as to their condition. In Holland damaged goods is added.

219. Regulations for particular commodities.

The German regulations as to labelling of sacks of potatoes, the marking of separate packages, and the prevention of damage to other goods by packages of fresh fish in ice, and by casks of Glauber's salt refuse, also apply in Holland; but the German regulation as to non-acceptance by the railway of certain goods, even when accompanied by a declaration of sender, unless they are packed in a prescribed way, is not in force in Holland. Costs incurred by the Holland Railway in mending packages of goods for their preservation during transit must be paid by the sender or consignee.

DENMARK.

220. General regulations.

Regulations similar to those in Germany and Holland apply as regards unpacked and defectively packed goods being accepted only on declaration by sender as to their condition. All package goods must also be marked and provided with name of station of destination in a durable manner. For mistakes caused by absence of marking or confusion with older marks on the goods the railway company will not accept any responsibility.

221. Regulations for particular commodities.

The railway may demand that consignments consisting of small pieces or packages, according to their nature, shall be put in boxes, baskets, or sacks. When the sender requires it the railway will do the necessary marking for a fixed fee of 5 ore for each bundle or piece. No charge is made by the railway for declaration forms as to unpacked, &c., goods.

Stamped parcels must be well packed, so that they can stand stowing together.

AUSTRIA AND HUNGARY.

222. General regulations.

The regulations are the same as in Germany as regards

(*a*) Sender being responsible for adequate packing.

(*b*) Acceptance by the railway of unpacked or defectively packed goods and of full barrels so soiled that their nature is not apparent only when their condition is described on the way-bill and a declaration is made by sender. (The charge for declaration forms is 2 Heller each or 1 kr. per 100.)

(*c*) Non-acceptance, even when declaration made by sender, of leaky barrels of liquids, of empty barrels, which have been filled with corrosive, &c., &c., liquids, and which are not dry outside and properly closed,—Glauber's salt refuse, unless sent in thick, sound, and well-hooped barrels; of freshly tarred or sticky objects, and of bees, unless their escape during transit is rendered impossible.

(*d*) The tying of sacks with string and leaving sufficient neck for taking hold of.

(*e*) The *marking or branding* of all package goods in a clear durable manner.

(*f*) The right of the railway to demand that all goods sent in separate packages shall be marked in durable manner with the *name of station to which consigned.* There is no provision for the railway supplying the omission as in Germany.

PACKING AND LABELLING OF GOODS.—*continued.*

Austria and Hungary—*continued.*

223. Regulations for particular commodities.

The following are detailed official regulations not obtaining in Germany or any of the other countries under comparison except Hungary:—

The packing materials used must be strong enough and thick enough to enable parcels to be handled without injury to the contents, and so that the texture of the packing may not be altered by the shaking inseparable from transit. To this end packing must comply with the following conditions:—

(*a*) If tissues are used to wrap up bales they must be sewed firmly enough to obviate the risk of the stitches giving way.

(*b*) Sacks may not be so porous or so ragged that when shaken the contents come through.

(*c*) Baskets and other receptacles made of wicker-work may not be too coarse meshed in comparison to the contents, and must be sufficiently strong, so that, in lifting, the weight of the contents does not burst the wicker-work. If baskets contain objects which will not bear crushing (in particular grapes or other soft fruit) they must be covered, not only with a textile material, but also with a solid lid.

(*d*) Boxes (especially those containing vessels of fluids) must have strong walls, and be made in a solid manner, so that they may not bulge with the weight of the contents or be burst in the joints, and heavy boxes must be hooped in addition.

(*e*) Cases made of laths or rods must not bulge outwards with the weight of the contents. The laths or rods must be so close together that objects cannot be abstracted from the interior.

(*f*) Barrels must not be in a damaged or mended condition, and hoops must be driven firmly down. Large casks must be provided with extra hoops. Barrels with dry contents must not leak, and the bottoms of such barrels must be fastened with inset hoops. If barrels, containing liquids liable to fermentation, are not provided with appliances to allow escape of air the carter bringing in the goods must remedy the defect, possibly by boring through the barrel, and sticking twigs in the hole thus made.

(*g*) and (*h*) Same as Germany, and already described.

(*i*) Packages containing mirrors, glass ware, or other fragile articles must be packed in such a way that the packed goods cannot move.

(*k*) Melted tallow must, as a rule, be packed in receptacles of sufficient solidity, such as barrels, tubs, or troughs. In the months of December, January, and February this commodity may, however, be accepted for transit in sacks.

(*l*) Liquid yeast will be accepted as fast goods in the months of May, June, July, August, and September, only when the vessels containing it are supplied with covers of sacking.

(*m*) Senders of fresh fish, &c., packed in ice are bound to enter the words "packed in ice" on the way-bill below the declaration of contents.

No package is accepted for transport in a state which may give rise to danger to the safety of the traffic or the property of the railway (for example, the vehicle in which carried), or to any other goods. For instance, heavy objects which are cracked and show danger of a heavy piece becoming detached and falling down, or liquids in bad, leaky, or obviously too weak vessels are not accepted for conveyance.

The railway may refuse to accept damaged goods unless the sender makes a note in the way-bill of the damage and of the external signs of the same. A statement in the way-bill as to damage is required in the following cases:—

(*a*) Sugar in loaves and salt in drums, if the loaves or drums have crumbled, and, further, in the case of sugar loaves, if the paper wrapping or cord is injured.

(*b*) Cut stone, unpacked glass, earthen or cast-iron goods if there are any breakages or cracks.

(*c*) Unpacked iron goods if they are rusted.

(*d*) Unpacked hides and skins when they have holes in them or are rubbed through.

PACKING AND LABELLING OF GOODS.—*continued.*

Austria and Hungary—*continued.*

(*e*) Full barrels, particularly such as contain beverages, if the tin over the bung hole is damaged or if the barrels are pierced and partially emptied.

(*f*) Parcels containing mirrors, glass ware, or other fragile objects, if, on being shaken, injury is proved by the noise.

(*g*) Packs and bales containing drapery (particularly cloth, silk, and linen goods, clothing, &c.), if there are signs pointing to injury to the goods by the packages having been taken hold of with hooks.

(*h*) Goods which must be kept dry if they have been wetted. If goods have been brought in in rainy weather, or from such remote places that conveyance of them has taken several days, then for the purpose of investigating whether the goods are wet, the opening of some of the packages at least may be required of the carrier even when no outward signs of wet are shown. This applies particularly to consignments of sugar, flour and grain, and to cases of eggs and the like.

All fragile objects, such as glass, porcelain, pottery, and all goods which can be spilled, such as fruits, green stuffs, stone, and, further, goods capable of soiling other objects, such as coal, lime, ashes, clay, and earth colours, cannot be carried as small goods if not otherwise provided in the tariffs, unless they are protected by packing and cording against breakage or scattering, or against the possibility of their soiling other objects.

ORDERING OF WAGONS.

FRANCE.

224 Consignor's application.

Consignors are bound to intimate, at the departure station, the number of wagons which they require for consignment of their goods, the loading of which they must or are able to effect; and they must indicate at the same time the nature and approximate weight of the goods, as well as the railway system to which they are destined, specifying whether the consignment is to be forwarded under the conditions of general or special tariffs. Consignors may make in one and the same letter requests for wagons for different days.

225 Railway record of applications.

Requests are entered according as they are received by the company in a special register kept at stations.

226 Notice to Consignor that wagons are available.

The company must, on the day following the receipt of an application for wagons, provided the latter has been sent so as to arrive before the station is closed, inform the consignor of the day and hour when the wagons will be placed at his disposal, if the application be for one occasion only; and, when the first supply of wagons will be available, if they are applied for for different days. In the latter case like information is given for each such subsequent supply of wagons by an advice, which must be sent so as to reach the consignor, at latest, on the evening before the date indicated by the company for the corresponding delivery of wagons.

Consignors applying to the Nord Company for wagons for conveyance of timber under special tariff, No. 9, are bound to indicate on their application the maximum length of the objects composing the consignment.

BELGIUM.

227. Consignor's application.

In applying for carrying stock the consignor must give full particulars of tonnage, nature of goods, etc.

Application must be made at least forty-eight hours, in advance when exclusive use of a wagon is required, and the period is doubled for five wagons.

228. Railway record of applications and deposit to cover demurrage

All applications for wagons are registered by the railway, which may demand five francs per wagon as security at time of registration, which sum will be forfeited if the goods are not delivered by the consignor at the station on the day the wagon is provided except when the vehicle can be made use of immediately by another consignor.

ORDERING OF WAGONS.—*continued.*

Belgium—*continued.*

229. Penalty on Railway for not supplying wagons

If the railway refuses a request for supply of wagons it must compensate for damage caused thereby. No compensation is payable in case of accident, superior force, or an outside cause, not imputable to the railway. Abnormal traffic is considered a case of superior force.

GERMANY.

230. Consignor's application.

Wagons which are required to be placed in readiness for such goods as are to be loaded by the sender must be ordered for a certain day. Orders for wagons to be loaded with goods by sender should, as a rule, be sent in writing to the station where the loading is to take place. The written order must state the number of wagons required, whether covered or open, the nature of the goods to be loaded, their destination, the day when wanted, the date of application, and the signature of the sender.

231. Deposit to cover demurrage.

In ordering wagons, security is to be given, if required by the railway to cover one day's loss of time in loading.

232 Penalty on Railway for not supplying wagons.

When the railway fails to supply promised wagons punctually it is bound to pay to the party ordering them compensation equal to the wagon dues (demurrage) for the time over which the delay extends. A wagon is held to be promised when a written statement to that effect has been issued.

HOLLAND.

233. Consignor's application.

Consignors are bound to apply to the station-master before a certain day for the wagons required to convey goods to be loaded by them. In applications for wagons must be stated the specification and probable quantity of the goods to be sent, the place of destination, and the kind of wagon required.

234. Notice to Consignor that wagons are available.

The wagons asked for will be placed in readiness as soon as available and in the order in which the applications for them were received and entered at the departure station. The forwarding station informs the consignor as to the period during which the wagons are at his disposal.

235 Deposit to cover demurrage.

The railway may, on application being made for wagons, require security equal to the amount of wagon hire (demurrage) for one day.

236 Penalty on Railway for not supplying wagons.

The railway is bound to pay a like sum to the applicant when a promise that wagons will be supplied is not fulfilled.

DENMARK.

237 Consignor's application.

Orders for wagons must be handed in in good time, in writing, when not given by telephone or telegram. All orders must contain full particulars of kind of wagons wanted, time required, etc. (Note.—Small wagons, carry 6,300 kg., and are about 19 feet long, and large wagons carry 10,500 kg., and are about 27 feet long.)

238. Railway record of applications.

A record of wagon orders received is kept by the railway. Orders must be filled without unavoidable delay. The railway is not bound to supply wagons of a certain kind and size, nor is it liable if unable to provide wagons.

AUSTRIA.

239. Consignor's application.

Wagons are to be ordered from the station-master of the station where loading is to take place. Orders may be given either by word of mouth, letter, or telegraph.

A consignor has no claim to the use of a wagon of a certain tonnage, or loading capacity, or of a peculiar construction.

240. Deposit to cover demurrage.

When ordering wagons security, amounting to one day's demurrage (9 kr. 60 heller per wagon), is to be deposited.

ORDERING OF WAGONS.—*continued.*

Austria —*continued.*

In ordering wagons, the following information must be given:—

1. Day on which required.
2. Description of goods to be sent.
3. Number of wagons required, and kind of wagon.
4. Station of destination.
5. Address of sender of the order.

When ordered by letter, a postal order to be sent; if by telegraph, security to be wired.

Orders are treated consecutively in the order of receipt.

Acceptance of security does not imply a promise of wagons.

A wagon is only held to be *promised* when the order reaches the station-master, at latest, two days before wagons are required, and if the person ordering the wagons has not received notice (accompanied by returned security) that the wagons cannot be supplied, before the day on which the latter were required.

The security is forfeited to the railway:—

1. If loading is not completed within regulation time.

2. When the consignment is sent to a station other than the one named in the order; when the wagon ordered cannot, in accordance with the rules for wagon-loading, be loaded for that station.

3. When goods other than those named in the order are sent, and for which the wagons supplied are not considered suitable.

241. Penalty on Railway for not supplying wagons.

If promised wagons are not supplied punctually the railway must return the security deposited, and also pay compensation, in proportion to the demurrage, up to the maximum sum of the security deposited.

HUNGARY.

242. Regulations in Austria apply.

General regulations identical with those of Austria.

ACCEPTANCE AND DESPATCH OF TRAFFIC BY RAILWAY.

FRANCE.

243. Certain articles only accepted when carriage is prepaid.

Articles subject to deterioration or of no value are only admitted for transit when carriage is paid in advance.

244. Hours of acceptance of traffic.

From 16th March to 15th October, stations are open for reception and delivery of goods for slow transit from 6 a.m. to 6 p.m. On Sundays and holidays the stations are shut at 9 a.m. for the acceptance and delivery of slow goods, even of those sent in full wagon loads, the handling of which is incumbent on the trader. Nevertheless the acceptance and delivery of poultry, game, fish, oysters, and shell-fish, dead meat, beer, barm, malt, unfermented wine, ice for refrigerators, fresh fruits and vegetables, milk, butter, cheese, and eggs may be effected up to 10 a.m.

245. Despatch of traffic.

The printed regulations, as published in "Chaix," do not contain any provisions as to despatch of traffic.

BELGIUM.

246. Hours of acceptance of traffic.

Consignments are accepted at forwarding stations during the following hours:—

Express Goods.—From the half-hour preceding the departure of the first train till the half-hour preceding the departure of the last train, in so far as the hours of acceptance are included between 6 a.m. and 9 p.m.

Fast Goods and *Slow Goods.*—Between 6 a.m. and 7 p.m. from 1st April to 30th September, and between 7 a.m. and 7 p.m. from 1st October to 31st March, Sundays and the holidays of the Ascension, the Assumption, All Saints and Christmas Day excepted.

247. Despatch of traffic.

There is no information in the printed Regulations obtained as to despatch of Traffic.

ACCEPTANCE AND DESPATCH OF TRAFFIC BY RAILWAY.—*continued.*

GERMANY.

248. Obligation to accept goods for transport.

The railways are only bound to accept goods for *transport* when the forwarding of them can be effected at once.

249. Hours of acceptance of traffic.

Goods must be handed to the railway within regulation hours, not specified. Ordinary slow goods are not accepted for transit on Sundays and holidays. Express goods which are free of duty and of tax are accepted on those days, but only at hours which are to be fixed once and for all, and made public in a local newspaper, and also in notices to be hung up in the despatching stations.

250. Despatch of traffic.

Goods are despatched by fast and slow train, in accordance with the way-bill, and the despatch takes place in the order in which the goods were accepted for transit unless urgent reasons connected with the working of the railway or the interests of the public do not justify an exception being made. Procedure to the contrary justifies a claim against the railway for damage for the injury caused. Railways are bound to make arrangements under which successive despatch of goods can be effected.

HOLLAND.

251. Certain articles only accepted when carriage prepaid.

In the case of goods which, in the opinion of the railway first accepting them, are subject to rapid deterioration, or the value of which does not fully cover carriage, and accessory fees, prepayment of freight can be demanded. In addition to various kinds of dangerous goods, the following goods are only forwarded when prepaid (unless the contrary has been agreed to with the sender):—Potatoes (from 1st October to 30th April), used empty carboys (in baskets), empty casks and empty boxes, growing trees and plants, dead poultry, yeast, fresh vegetables, oysters, lobsters and other shell-fish, smoked or fresh fish, fresh meat, game, ice, and fresh fruit (from 1st October to 30th April).

252. Obligation to accept goods for transport.

Railways are not legally bound to accept goods for conveyance on Sundays and generally observed Christian holidays, except it be otherwise ordered in exceptional cases by the Minister of Waterways, Commerce and Industry. On the Holland and State railways, however, goods are accepted on those days under the Railways' General Regulations. The railways are not bound to accept goods for transit when the available rolling stock of the company is not sufficient to forward the goods within the regulation time limit. They are, however, obliged to accept them for temporary storage pending transit, in so far as available space permits, but during such storage the goods are in the care and at the risk of the sender, who must declare himself (in due form) as satisfied with this arrangement.

253. Hours of acceptance of traffic.

Goods must be handed in within the hours specially designated for the purpose in the traffic regulations. Fast and slow goods must be handed in on all working days from 1st of April to 30th September from 7 a.m. to 7 p.m., and from 1st October to 31st March from 8 a.m. to 6 p.m.

254. Despatch traffic.

Fast goods are forwarded before ordinary slow goods, and with speed. In other respects goods are sent off according to the order in which they were handed in. One sender must not be favoured in preference to another, unless there is good reason for the same, either on account of the working arrangements, the amount of traffic, or the public interest. Action contrary to this regulation justifies claim for damage incurred thereby. Railways are bound to take the necessary steps so that the order in which goods were despatched can be proved.

Parcels of not more than 10 kg. are conveyed by all trains, if sent to station half an hour before departure of train. Parcels over 10 kg. and under 300 kg. are sent under similar conditions by all trains, except express trains. Parcels of unusual dimensions, and the weight of which exceeds 50 kg., are carried by the trains specified for the purpose by the railway authorities. Parcels of 300 kg. and upwards are forwarded at least once daily.

ACCEPTANCE AND DESPATCH OF TRAFFIC BY RAILWAY.—*continued.*

DENMARK.

255 Hours of acceptance of traffic.

Express goods are received for conveyance in the "Luggage Despatch Office," when these are open, up to a quarter of an hour before the fixed time for departure of train by which they are to be despatched.

Slow goods, in less than wagon loads, which it is desired to forward by rail, must be handed in, together with properly made out way-bills, at the offices arranged for the purpose, and at the hours (not stated) during which such offices are open, in accordance with the regulations of the railway.

256 Despatch of traffic.

Goods are conveyed by fast train and by slow train. The railway decides by what trains, fast and slow, goods shall be conveyed. It is not obliged to convey by any fixed train or route. If goods are required to be sent by a certain train, and as quickly as the time-table allows, they are considered as "express" goods. Fast and slow goods may be forwarded either as "parcel" goods or in wagon loads, but "parcel" goods can only be sent by fast train in so far as the weight, shape, bulk, and further nature of the goods, according to the judgment of the railway, permits of quick loading and unloading, and their conveyance with luggage. The same rule applies to express goods, which can only be conveyed in the form of "parcel" goods. Separate parcels of fast goods, the weight of which does not exceed 25 kg., can be conveyed as stamped parcels. Explosive, inflammable, poisonous, bad-smelling, or dirty goods, in so far as they are received for conveyance at all, cannot be sent either as express goods or stamped parcels, and can be excluded by the railway from fast goods conveyance.

AUSTRIA AND HUNGARY.

257. Obligation to accept goods for transport.

The transit of goods cannot be refused provided (1) the transit conditions and other general arrangements of the railway are complied with; (2) that transit with the ordinary means of transport is possible; and (3) that circumstances which may be regarded as "superior force" do not prevent the transit. Articles the loading and unloading of which require special apparatus need only be accepted by the railway at stations where such apparatus is available. For fast-train transit only such goods are accepted as the railway considers suitable for that mode of conveyance.

258 Hours of acceptance of traffic.

The hours during which the warehouse and office for reception of goods are open are announced in the despatching departments.

259. Certain articles only accepted when carriage prepaid.

In the case of goods which, in the judgment of the railway accepting them, are liable to rapid decay, or which, on account of their small value, are not certain to cover cost of transit, prepayment of freight may be insisted on. For example: the freight on ice, yeast, crustaceans, fresh fish of all kinds, fresh vegetables, fresh meat, game, dead poultry, live plants, used empty baskets, boxes, and carboys in baskets, and fresh fruit must always be prepaid. (See similar regulations in France and Holland).

260. Despatch of traffic.

There is no information in the printed Regulations obtained as to despatch of Traffic.

WEIGHING AND COUNTING GOODS.

FRANCE.

261. Weighing by Railway at request of consignor or consignee

262. Weighing fees.

For all goods which, on demand of the consignor or consignee, shall be subjected to an additional weighing to that which the companies have to make at their own expense on departure, in order to determine the freight, the following charges are made:—A fee of 10c. per indivisible fraction of 100 Kg. and for each supplementary weighing when the weighing is effected per dray or cart or per full wagon load passed on to the weighing machine the fee is 30c. per indivisible ton, with minimum of 75c. and a maximum of 2 fr. per cart or dray; a minimum of one

WEIGHING AND COUNTING GOODS—*continued.*

France—*continued.*

fr. per wagon and maximum of 2 fr. per wagon of 10 tons and under, and of 3 fr. per wagon of more than 10 tons. In this case the company must, on request of the parties interested, issue gratuitously a note of the weight of the goods weighed. The supplementary weighing fee cannot be demanded if this weighing shows an error made to the prejudice of the consignor or consignee.

263. Checking by Railway of number of packages.

264 Checking fees.

When a consignor has asked for checking of the number of parcels composing a consignment admitting of twenty pieces to the ton, and comprising more than ten pieces, a fee of 15c. for counting each group or fraction of a group of twenty pieces is charged, with a minimum of 1 fr. and maximum of 3 fr. per wagon when the consignment is in full wagon loads. In no case may a counting fee be charged if each parcel bears a distinct mark and number mentioned in the Declaration of the Consignment contained in the way-bill. The indication of the number of parcels or pieces in a consignment is not obligatory when it is composed of loose objects, such as planks, poles, bricks, tiles, etc., or when the loading is done by the sender and when counting cannot be effected from outside the wagon without shifting the load.

265. Weighing of consignors' or consignees' carts.

266 Cartweighing fees.

On the Nord system it is provided that in stations equipped with a weighing machine suitable for vehicles, consignors and consignees may, on entering or leaving these stations, weigh their drays or carts in return for payment of the following charges:—

For various Goods.

50c. per vehicle loaded with 2,000 Kg. or under.
60c. per vehicle loaded with more than 2,000 Kg.

For Coal, Coke and Turf.

25c. per vehicle loaded with 2,000 Kg. or under.
30c. per vehicle loaded with more than 2,000 Kg.

BELGIUM.

267 Weighing by Railway at request of consignor to consignee.

The consignor may demand in the way-bill the verification of the weight declared therein. The railway must proceed to this verification, when possible, at the station of departure.

The weight as declared must be entered on the way-bill by the consignor, and the railway itself enters a second time on that document the weight ascertained on request of consignor.

The way-bill is, however, not to be altered if the difference does not exceed 1 per cent. for coal and coke, and 1½ per cent. for minerals, marl and sand, loaded fresh.

No allowance is made on departure in the case of other goods.

When weight cannot be verified as requested on departure, it is checked either during journey or at destination, and for eventual correction of cost of transport the method of procedure followed is, that when the difference does not exceed 2 per cent. no excess is charged, but when the difference ascertained exceeds 2 per cent. of the declared weight it is taxed according to weight.

Weight may also be verified at request of consignee. If such verification shows a difference in weight exceeding 2 per cent. it is charged as above, plus a penalty of double the freight which would have been evaded if verification had not taken place. The railway has the right to verify the weight declared in the way-bill, due notice of such verification to be given to consignor or consignee.

The difference passed in weight ascertained during transit or on arrival is raised to 5 per cent. in the case of coke.

268. Weighing fees.

The following fees are charged for verifying weight:—

(*a*) One centime per 100 Kg. when asked for at station of departure.

(*b*) Five centimes when asked for at arrival station.

This charge is, however, reduced to one centime in the case of wagons going to establishments in connection with the railway when the operations

WEIGHING AND COUNTING GOODS—*continued.*

Belgium—*continued.*

necessary to place the wagons on the weighbridge are performed without delay by the locomotive or horses belonging to such establishments.

These fees are charged per 100 Kg. and rounded off to the 10c. above.

For consignments of incomplete loads of traffic under Tariff No. 3, comprising indivisible masses of more than 100 Kg., the request for verification of weight must be made and be explicitly formulated by the consignor on the way-bill when the latter does not show the weight.

269. Checking by Railway of number of packages.

When loading is carried out by a consignor without special supervision, the railway, on request of the party concerned formulated in the way-bill, allows packages loaded in the station to be counted by its agents, only if they can be counted with ease and rapidity. In this case a note of the verification is made on the way-bill, and, in addition, a receipt is sent to the consignor indicating the number of the packages. Counting is subject to a tax of 1c. per indivisible fraction of 100 Kg. This tax applies to the gross weight and is rounded off to the next 10c. above.

270. Checking fees.

GERMANY.

271 Weighing by Railway at request of consignor or consignee.

A consignee is entitled to demand, on receiving goods, the re-weighing of such goods in his presence in the railway station. This demand must be always complied with by the railway in the case of goods in packages, but, in the case of wagon loads, only in so far as the weighing apparatus available will permit. Should the available weighing apparatus not admit of the weighing of wagon loads of goods in the railway station the consignee is entitled to have the weighing carried out at the nearest place where such weighing apparatus is available in the presence of a representative to be appointed by the railway. If the weighing fails to show any weight deficit for which the railway is liable (*i.e.*, over 2 per cent.), then the consignee must bear the expense of the weighing, and, if required, compensate the representative appointed by the railway for his services. On the other hand, if a weight deficit is proved, which is to be borne by the railway and which has not already been reported by it, then the railway must reimburse the consignee for all expenses connected with the re-weighing. The following are the weighing fees charged:—For parcels goods by express and slow trains, 5 pf. per 100 Kg. This fee is also charged when a sender, after the usual weighing by the railway for purposes of freight has taken place, demands a second weighing whereby the first weighing is proved to have been correct. For wagon loaded goods:—

272. Weighing fees.

(*a*) For weighing individual packages per 100 Kg., ...	4 pf.
(*b*) For weighing on the weighing machine per railway wagon used, or per railway vehicle running on its own wheels, ...	1 M.

The above wagon load fees are charged only when (1) the sender has omitted to state the weight on the way-bill; (2) the sender has expressly asked the weight to be ascertained; (3) the sender, the weighing by the railway having taken place for freight purposes, demands that the weight be ascertained once more and when the first weighing is thereby proved to have been correct; and (4) the consignee demands the re-weighing and when thereby no diminution of weight for which the railway is liable is discovered. If, at the request of the sender or consignee, the empty wagon is re-weighed, then a fee of 50 pf. for every wagon is charged, provided the ascertained weight shows no greater deviation from the weight painted on the wagon than 2 per cent.

273. Checking by Railway of number of packages.

274 Checking fees.

Requests by a sender or consignee that the number of parcels in wagon-loaded goods be checked must be complied with provided the nature of the goods admits of their being so checked without any long delay, and that a counting fee be paid as follows:—For every 20 packages begun, 10 Pf., minimum charge per wagon 1 M., maximum charge per wagon, 3 M.

WEIGHING AND COUNTING GOODS—*continued.*

HOLLAND.

In the case of goods accepted for transit by weight, the weighing, as a rule, takes place in the sending station. If they cannot be weighed at the sending station, the weighing can be effected either at an intermediate station or the station of destination. The sender may be present at the weighing of goods. If he, after the weight has been determined by the railway officials, and before goods are loaded, demands a fresh weighing in his presence or in the presence of his representative, the railway authorities are entitled to demand a weighing fee in accordance with tariff given hereafter. This weighing fee may also be charged if the consignor has not entered the weight in the way-bill and leaves the inserting of the information to the railway officials.

275. Weighing by Railway at request of consignor or consignee.

A consignee is entitled to have goods weighed again on delivery at the railway station. The railway officials must comply with such request in same way and under same conditions as in case of a sender, and in addition when a deficiency is proved for which the railway is liable and which was not already acknowledged, it must indemnify the consignee for the expense incurred by him through re-weighing.

The following are the weighing fees chargeable:—

276. Weighing fees.

(1.) For small goods (Fast or Slow), 2 cents per 100 Kg. Minimum charge for consignment, 20 cents.

(2.) For wagon loads and empty wagons weighed on request of sender or consignee before loading or after unloading, 60 cents per wagon. When the weight of wagon loads is required *per parcel*, the fee as for small or parcel goods is charged. If at the arrival station there are no suitable appliances for weighing wagon-loaded goods and the consignee desires weighing at another station where such appliances are available, then in addition to the weighing fee and freight both ways between the two stations a fee of 1.50 Fl. per wagon is charged for the presence of the authorised official at the weighing.

The railway is bound to check the number of packages in a wagon load consignment on request of sender or consignee provided the working of traffic is not impeded thereby. The fees charged for counting in such cases are 0.06 Fl. per ten packages, with a minimum charge of 0.60 Fl. and a maximum charge of 1.80 Fl. per wagon.

277. Checking by Railway of number of packages.

278. Checking fees.

DENMARK.

The railway is obliged to weigh and check goods handed in in small consignments, but in the case of wagon loads such verification is only undertaken on request and when it can be done without much delay and there is the necessary weighing apparatus at the station. When so undertaken the sender must pay the following fees:—

279. Weighing by Railway at request of consignor and checking by Railway of number of packages.

For weighing small goods when requested, 5 Ore per 100 Kg. or part thereof.

280. Weighing fees.

For weighing wagon-loads of goods, per single package, 5 Ore—per whole wagon-load, 1 Krone.

281. Checking fees

For counting wagon-load goods at request of sender or consignee, 10 Ore per 20 pieces or part thereof, with a minimum charge of 1 Kr. per wagon and a maximum charge of 3 Kr.

Goods stowed in bulk are not counted.

AUSTRIA AND HUNGARY.

282. Weighing by railway at request of consignor or consignee.

Weighing fees are charged (1) when a sender has omitted to state the weight of goods for which a normal weight is not provided in the tariff, or for which freight is not calculated according to the number of parcels; (2) when the sender requests that the weight be ascertained by the railway; (3) when the sender has in the case of small goods given the weight more

WEIGHING AND COUNTING GOODS.—*continued.*

Austria and Hungary—*continued.*

than 1 per cent. too high or too low, and in the case of wagon-load goods more than 5 per cent. too high; (4) when the sender, after goods have been weighed by the railway for freight purposes, asks that they shall be re-weighed; (5) when on delivery of goods the consignee requires them to be re-weighed and when re-weighing shows no diminution of weight or only such diminution as has been already acknowledged by the railway or for which the latter does not accept liability. The weighing fees are:—

283. Weighing fees.

For Fast Goods, 4 Heller per 100 Kg., with a minimum charge of 10 H. per consignment.

For Slow Goods—if weighing takes place on a store or yard weighbridge—4 H. per 100 Kg. of consignments weighing less than 5,000 Kg., with a minimum charge of 5 H. per consignment, and in case more than 2,500 Kg. are weighed at once a maximum charge of 1 Kr. for each weighing. For consignments weighing 5,000 Kg. and upwards the charge is 2 H. per 100 Kg., provided that weighing takes place all at once or in continuous succession of the different parts, but in order to avail of this reduced fee when different lots of goods forming one consignment are weighed in continuous succession, all the lots belonging to the consignment must be weighed within twenty-four hours. If in the case of consignments of 5,000 Kg. and upwards, lots of less than 5,000 Kg. are weighed in interrupted succession in consequence of successive delivery or collection of the goods, then the conditions as to weighing of lots under 5,000 Kg. are applicable.

For Slow Goods, if weighed on the line (or wagon) weighbridge, the charge is 1.20 Kr. per wagon. If, on request of sender or consignee the weight of the empty wagon is checked before or after, then in addition a weighing fee of 60 H. is charged per wagon.

A consignee's demand for re-weighing of goods in his presence must be *always* complied with in the case of goods in packages, but only so far as the available weighing apparatus will permit, in the case of wagon loads. Should the available weighing apparatus not admit of the weighing of goods in the railway station at which they are received, a consignee is entitled to have the weighing carried out at the nearest place where such weighing apparatus is available in the presence of a representative to be appointed by the railway. If the weighing fails to show any weight deficit for which the railway is liable, then the consignee must bear the expense of the weighing, and, if required, compensate the representative appointed by the railway for his services. On the other hand, if a weight deficit is proved, which is to be borne by the railway and which has not already been reported by it, then the railway must reimburse the consignee for all expenses connected with the re-weighing.

When wagon-load goods are weighed on a line (or wagon) weighbridge, the weight of the wagon itself is taken as the weight indicated on the body of the vehicle unless a special weighing of the wagon when empty gives a different weight.

If re-weighing of the goods by the railway without special ascertainment of the weight of the wagon does not show a greater deviation than 2 per cent. from the weight of the wagon as indicated thereon, then the weight so arrived at is taken as correct for the purposes of calculation of freight.

284. Checking by Railway of number of packages.

285. Checking fees.

When, on request of sender or consignee, the number of parcels of wagon-load goods is checked by the railway, then a charge of 10 H. is made for every ten parcels or fraction thereof checked, with a minimum charge of 1 Kr. and a maximum charge of 4 Kr. Like fees are charged if on request of a sender and after the number of parcels has been ascertained by the railway (for their own purposes) the number has to be re-checked. The time required for checking by the railway at sender's or consignee's request is not counted in the time allowed for loading or unloading wagon-load goods, unless the party concerned, having requested that the goods be checked in his presence, has delayed the work by failing to appear in good time.

LOADING, UNLOADING AND REMOVAL OF TRAFFIC.

FRANCE.

286. Time limit for loading.

The loading of wagons by senders must be completed in the course of the day on which they are placed at the disposal of the consignor, provided that the advice note respecting the vehicles has been addressed to the person concerned, so as to reach him on the previous evening before six o'clock, and that the wagons have been placed at his disposal from the usual hour of opening the station. When one or other of these conditions has not been fulfilled, the period assigned to the consignor for loading is increased by twenty-four hours.

287. Demurrage charges for delayed loading of wagon goods.

When the foregoing periods have elapsed without completion of loading, demurrage is charged per wagon, partly loaded or not, whatever be the contents, and per day of delay as follows:—10 fr. per wagon for each of the three first periods of twenty-four hours, and 12 fr. per wagon for each additional period of twenty-four hours. But if the number of wagons placed at the disposal of a consignor exceeds the maximum figure in the application formulated by him for one of the five preceding days, the loading period cannot commence to run each day for any number of wagons greater than that maximum, and the demurrage fee is charged only on the difference between the maximum and any lesser number of wagons actually loaded. The surplus is carried over to the next day in calculating loading time and demurrage, subject to being carried again forward if the maximum is exceeded on the next day.

288. Time limits for unloading of wagon goods.

As regards the unloading of wagons, the company is obliged to place the vehicles at the disposal of the consignee at latest on the day after the advice note of their arrival has been sent and at the usual hour of opening the station. Wagons must be completely discharged during the course of the day on which they are placed at the disposal of the consignee, provided that the advice note has been sent to the party concerned, so as to reach him before six o'clock on the previous evening. Otherwise, the time allowed the consignee for unloading is increased by twenty-four hours. When the number of wagons notified by letter of advice on the same day exceeds ten, the consignee is not bound to effect in one day the unloading of more than ten wagons. An additional day is allowed for the unloading of the rest of the wagons, whatever be their number, unless the complete consignment has been placed at disposal simultaneously by request of consignor or consignee.

289. Demurrage charges for delayed unloading of wagon goods.

When the above-named periods have expired without completion of unloading, the company may either effect discharge itself of the goods yet unloaded, charging for the operation 30c. per ton irrespective of the ordinary storage fees for the goods so unloaded, or it may leave the goods in the wagons, charging, at the expiration of the proper term, demurrage fees of like amount to those charged in case of delayed loading. The foregoing regulations as to loading and unloading apply to wagons belonging to private persons, except that for such vehicles only one-half the usual demurrage fees are charged.

290. Goods in less than wagon loads.

Any consignment of small goods not completed within twenty-four hours may be refused and the goods sent back to the domicile of the consignor or to a public warehouse at his expense.

291. Consignors of wagon goods entitled to whole use of wagons.

A consignor who, under the terms of the tariff, effects loading is entitled to make use of the entire capacity of the wagons used, on the condition that he does not exceed the maximum weight which the wagon can carry and the dimensions of the loading guages of the companies participating in the transport of the traffic.

292. Fees charged by Railway for handling goods.

For the manipulation of goods of all kinds by the railway the following fees are charged:—

Fr. 1.50 per ton for goods carried according to tonnage.

Fr. 1.00 per ton for goods carried per consignment of 4,000 Kg. and upwards, or per full wagon,

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

France—*continued.*

whatever be the tariff applied, unless there be a stipulation to the contrary in the special tariff duly confirmed. The charge is made per indivisible fraction of 10 Kg. and the fees are made up as follows:—

Goods carried according to tonnage—

	Per indivisible fraction of 10 Kg.
1. Loading at departure, . .	40c. per tonne.
2. Unloading on arrival, . .	40c. ,,
3. Station charge on departure, .	35c. ,,
4. Station charge on arrival, .	35c. ,,

Goods carried per consignment of 4,000 Kg. and over, or by full wagon-load—:

	Per indivisible fraction of 10 Kg
1. Loading at departure, . .	30c. per tonne.
2. Unloading on arrival, . .	30c. ,,
3. Station charge on departure, .	20c. ,,
4. Station charge on arrival, .	20c. ,,

The foregoing fees are applied whatever be the method of loading and unloading employed (hand, crane, gangway, or weighing machine, etc.).

293. Loading and unloading charges deducted when goods handled by owners.

For goods carried per consignment of 4,000 Kg. and over, or per full wagon-load, and when the labour of loading and unloading is performed by the consignor or consignee in accordance with the tariff applied, the fee of 30c. per ton for each operation of loading or unloading is deducted and the station charges only of 20c. per ton on departure and on arrival are payable.

294. Terminal charges on private siding goods.

The following charges are made for goods to or from private sidings, 20c. per tonne to the first departure station on the main line, and 20c. per tonne to the station of destination, or *vice-versa*.

Consignments not exceeding 40 Kg. are in all cases exempt from loading, unloading, and station charges.

295. Use of Railway cranes by the public, and charges therefor.

When loading or unloading of goods is effected by the consignor or consignee, the company must, in stations where there is hoisting apparatus of sufficient power and when it is not engaged in the service of the railway or undergoing repairs, place it at the disposal of the parties interested, at the request of the latter and in return for the following charges:—

Apparatus worked by hand without the assistance of the company's staff, 15c. per tonne per operation of loading or unloading, with a minimum charge of 25c. per indivisible half-hour. Apparatus worked by motor, 30c. per tonne per operation, with a minimum charge of 1 fr. per indivisible half-hour, which charge includes the wages of the company's mechanician and the supply of motive force necessary to work the hoisting apparatus. The time devoted to shunting wagons into position for such loading or unloading is not included in the calculation of the time limit on which the minimum charge is based. On the State railways hoisting apparatus is placed gratuitously at the disposal of the public, except in case of indivisible masses and objects exceeding certain dimensions charged under Slow goods special tariff No. 29, for which the charge is 15c. per ton and per operation. Hoisting apparatus is only placed at the disposal of consignors and consignees under the express condition that the manipulation of it shall be in the latter's charge and at their expense, risk, and peril, under the conditions of the common law.

NOTE.—There are many exceptional provisions as regards loading and unloading of traffic in specially reduced tariffs for various kinds of traffic. These are shown hereafter where such special tariffs are used in comparison with Irish rates.

296. Storage and wharfage charges.

When goods addressed to a station are not removed, from whatever cause, within the prescribed time, a fixed storage fee is charged per indivisible fraction of 100 Kg. as follows:—

5c. for first period of twenty-four hours.
5c. ,, second ,, ,, ,,
5c. ,, third ,, ,, ,,
10c. ,, fourth ,, ,, ,,
15c. ,, fifth ,, ,, ,,
20c. ,, every additional period of twenty-four hours.

In all cases the minimum charge is 10c.

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

France—*continued.*

The foregoing fees are also charged for storage of goods addressed to domicile when consignee is absent, unknown or refuses to accept delivery, but subject to notice of the fact being given immediately to the sender. (In such a case the cartage of the goods back to the station is also charged). Storage may also be charged, after the lapse of twenty-four hours after handing in, on goods which the railway, on request of a sender, agree to store on their platforms or in their warehouses at the despatching station beyond that time. Railways are not, however, bound to accept any goods but those ready to be forwarded.

Railways are bound in the event of delay in removal or delivery of goods from station of destination to advise the sender directly of the fact. For goods addressed to station the advice must be posted by the arrival station within twenty-four hours after ascertainment of the material fact preventing delivery, and for goods addressed to domicile the time is extended by a period equal to that allowed for cartage, provided, however, that such extension does not exceed forty-eight hours. The foregoing periods are increased by Sundays and holidays. Goods are held to be delayed or in suspense when (1) they have been refused by the consignee; (2) when the consignee is unknown or does not reside at the address given; (3) when goods have not been claimed within a period of four days calculated, in the case of goods to be delivered at station, either from the expiration of the regulation periods, or from delivery of advice note to consignee, and, in the case of goods to be delivered at domicile, from which the consignee is absent, from the day after return of the goods to the station, and (4) goods which are the object of legal distraint, seizure or claim. Goods of which delayed removal or delivery has been advised to a sender remain at disposal of the original consignee until the receipt by the arrival station of further instructions from the consignor. The railway may *not* collect storage charges unless the advice note as to undelivered goods, which must be sent to a consignor, shows the day when the storage began. A fee of 10 centimes is charged for sending advice of non-delivery of goods to a consignor.

297. Advice of arrival of goods.

An advice of arrival must be sent to consignee by post, telephone, telegraph, or express, provided the cost does not exceed 10 centimes, unless the consignee undertakes to pay any additional cost involved.

BELGIUM.

298. Goods in less than wagon loads handled by Railway.

Express goods (Tariff No. 1) and accelerated goods (Tariff No. 2) are loaded and unloaded by the railway. The loading and unloading of incomplete loads of slow goods are also effected by the railway, except when the consignor requires the exclusive use of a wagon, to be sealed by him, and are subject to a charge of 10c. on every 100 Kg., in addition to the supplementary expenses of handling, if, in default of instructions from the consignee, or at his request, the railway hoist the goods to the upper floors of a warehouse or lower them into the cellars of the same. No deduction is made for assistance rendered by consignor's or consignee's workmen during these operations.

299. Loading and unloading of goods in bulk.

The loading and unloading of goods presented in a loose state (in bulk) in full wagon-loads must be effected by and at the expense of the consignor and consignee.

300 Loading and unloading of wagon goods by owner.

In the case of goods other than those in bulk sent in complete wagon-loads the consignor and consignee may load and unload them. Loading of complete loads by a consignor entails upon the consignee the duty of unloading and removal at his own expense. Goods, the loading of which is not undertaken by the railway, must be loaded by and at expense of consignor within prescribed time limits, unless specially authorised otherwise by the railway.

The railway may, on demand of the consignor, undertake the loading and unloading of wagon goods. The fee for handling is charged integrally, even when unloading has been effected by a consignee.

301. Loading and unloading by Railway.

The railway is not bound to effect the loading and unloading of full or incomplete loads comprising indivisible masses of more than 500 Kg., or of objects the handling of which requires special apparatus (crane, etc.) when the station does not possess the same or has not a sufficient staff for the purpose.

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

Belgium—*continued.*

The railway in no case undertakes the handling of packages of mirror glass the weight of which is more than 3,000 Kg., or the dimensions of which are such that they cannot be loaded into closed vans. Returned empty packages and packing loaded and unloaded by railway are charged from 100 Kg. to another 100 Kg. The *freight* is charged per unit of 10 Kg.

302. Use of Railway cranes and charges therefor.

When loading or unloading is incumbent on the consignor or consignee, the employment of loading apparatus (cranes, shears, wagon cranes, etc.) belonging to the railway is subject to a charge of 3c. per 100 Kg. for each operation. This charge is applied to every 100 Kg. of the gross weight, and is rounded off to the next 10c. above. Employment of apparatus used at departure is not obligatory at arrival, and *vice versa*.

An additional charge of 2c. per 100 Kg. is made if the electrically-worked 25-ton crane of the N. Belgian Co. at Liege is employed, provided that in respect of indivisible masses of more than 15,000 Kg. such additional charge is only levied on that weight.

303 Time limit for removal of goods.

Goods which are not to be unloaded or sent to domicile of consignee by the railway must be removed from the railway station by the consignee or his representative during the hours specified for acceptance of goods (*i.e.*, between 6 a.m. and 7 p.m. from 1st of April to 30th of September, and from 7 a.m. to 7 p.m. from 1st October to 31st March), unless in cases of special permission to perform the work at another time. The period allowed to effect removal, including, if necessary, the unloading of the wagons, is fixed in a general way at eight hours, beginning with the moment that the notice of arrival was handed to the consignee or his representative.

This rule admits of the following exceptions: (*a*) when the consignee resides in Belgium, in a locality which is not habitually served by the station of arrival of the goods, or when he resides in a foreign country, the removal period commences with the moment when the letter of advice of arrival was posted or handed in as a telegram at the telegraph office; (*b*) wagons forwarded to establishments connected to the railway by private sidings or junctions must be returned within the space of six hours per operation of loading or unloading, or twelve hours if the wagon forwarded loaded to the establishment is returned with a fresh load, unless in cases where other periods are fixed in the general or special conditions of conventions or authorisations relative to private sidings, which are defined in an appendix to the published traffic regulations, and show time limits, varying from eight to twenty-four hours; (*c*) a period of ten hours is allowed for the discharge of fully loaded consignments to a bonded warehouse—the consignee being allowed five days in which to remove goods so discharged in a Customs bonded warehouse, or to bond them in his own name, and to pay off the expenses of transit and other charges owing to the railway companies. In calculating removal periods, only the hours are counted during which the offices are open to the public, and which are determined in the case of the railway as already indicated, and in the case of the Customs by the special regulations of the bonded warehouse in each town. No account is taken of Sundays or of the following legal holidays:—1st January, Ascension Day, 21st July, Assumption, All Saints and Christmas Days, Easter Monday and Whit Monday. When, at the request of a consignor or consignee, the weight of goods is verified on arrival, the period allowed for unloading is suspended from the time when the demand for weighing was made until the completion of the operation. In the event of unusual congestion of traffic, the time allowed for unloading may be temporarily reduced by a special notice, published in the *Moniteur*, which notice, in case of necessity, is applicable to all consignments delivered to the railway subsequent to such publication.

Goods liable to rapid deterioration may, after the expiration of the time limit for removal, be sold, even from hand to hand, after notice has been given to the consignee, and with no other formality than a preliminary statement as to their condition by a police officer. The result of the sale is announced to the consignor and consignee. In all other cases, if the consignee does not take delivery of goods within the time fixed by the regulations, the railway authorities are authorised to effect the sale of the goods in accordance with Article 8 of the Belgian Transport Law, or to hand them over to the State, in pursuance of the existing laws. Article 8 of the Transport Law provides that in case of refusal of goods, their condition is to be examined, if one of the parties concerned desires it, by one or three experts, nominated by an Order of the President of the Court of Commerce, issued in response to a request for the same. The consignee of the goods will be summoned by a registered letter, giving the day and hour of the expert's examination. The Order may prescribe the deposit or sequestration of the goods and their removal into a public or private place. It may also direct their sale for the benefit of the carriers to the extent of the amount due for conveyance. Such sale takes place in public, in a place designated by the President, and three full days, at least, after a notice has been served on the consignor and consignee. This time limit is doubled when one of the parties concerned lives abroad. In case of urgency, the President may shorten these time limits. No opposition to or appeal against the Order is allowed. It constitutes a writ of summary execution, and requires no registration.

303*a*. Penalty for over loading and for incorrect description of goods.

When a wagon loaded by consignor is overloaded excess freight is charged for the whole journey from point of departure to destination equal to ten times the freight on the overload, but this supplementary tax is not charged if verification was requested by the consignor in the way-bill. A false or insufficient declaration as to the nature of a consignment entails a penalty of twice the freight due in respect of transport in addition to the difference payable in respect of the proper charge from point of departure to that of arrival. A consignor who shall have forwarded by means of a false or insufficient declaration articles excluded from transport under the regulations, or others which are only carried under special conditions, will be liable to a penalty of 15 fr. per Kg. on the gross weight.

304 Advice of arrival of goods.

Consignee is advised of arrival of goods not to be delivered by the railway. Advice is sent free of charge in the case of consignments under Tariffs 1, 2 and 4 sent "bureau restant," or destined for stations where carrying is not organised. A fee of 10 centimes is charged in case of slow goods (Tariff 3), including those sent over private siding lines belonging to consignees. Advice notes are sent by post or messenger, but consignees may claim to be advised by express messenger, or telegraph on paying cost of same.

305. Demurrage storage and wharfage.

For delayed loading or unloading of wagons demurrage is charged at the rate of 25c. per hour per wagon of any size. When goods are not removed by consignee within regulation time limits, storage is charged at the rate of 5c. per day per 100 Kg., and in the case of private wagons at the rate of 10c. per hour per wagon. This charge also applies to goods refused by consignee. During press of traffic the foregoing demurrage and storage charges may be increased by special public notice. Goods stored in the open on the railway premises are allowed ten days free; from the eleventh day a fee of 1c. per 1,000 Kg. per day is charged, with a minimum of 10c. Sundays and church holidays are not counted in calculating storage and demurrage. Storage and demurrage may be remitted in certain cases. In the event of the parties interested not effecting unloading within time limits the railway may unload at the cost and risk of those interested, and may store the goods, charging in addition to demurrage and storage a special unloading fee of 5c. per 100 Kg.

GERMANY.

306. Goods handled by and at expense Railway.

Loading and unloading of goods handed in, as parcels (*i.e.*, other than in wagon loads), for express or slow transit, on to railway wagons or off the same is effected at the expense of and by the railway. Explosive, inflammable, corrosive and other dangerous goods are, however, excepted. In the case of objects which weigh separately more than 750 Kg., or which cannot be loaded through the side-doors of covered wagons, the railway may require the loading to be done by the sender and the unloading by the consignee.

307. Goods handled by owner.

All goods other than those dealt with by the railway ,as above described, are to be loaded and unloaded by the sender and consignee, unless the railway undertake these operations in return for the follow-

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

Germany—*continued.*

ing fees:—For parcels, in the case of objects weighing, separately, more than 750 Kg. and also for full wagon loads.

308. Fees payable when goods handled by Railway at owner's request.

(a) Loading or unloading fees per 100 Kg., 4 Pf.; (b) cranage fees per 100 Kg., additional to loading or unloading fee, 3 Pf.; maximum cranage charges for one way-bill consignment, 50 Pf.; maximum cranage charges for one wagon, 2 M.; unloading fee for corn, husk fruits, clover, malt and oil seed, loose, by side of line, per 100 Kg., 6 Pf.

The hire for loan of sacks to hold the corn, etc., or indemnity for procuring the same, is charged at the local rate, and to the amount of the sum actually expended.

In the case of loading or unloading goods by the railway side, when the construction of the wagon does not admit of the loading or unloading of articles weighing less than 750 Kg. each (*e.g.*, petroleum in barrels, and the like), without the use of a crane, the loading fee of 4 Pf. per 100 Kg. only is charged—that is, without the addition of a special cranage fee.

309. Use of Railway cranes and charges therefor.

If the sender or consignee is allowed the use of a crane, on his request, to carry out loading or unloading, then cranage alone is levied. For the conveyance of a crane from one station to another, if a request for such is complied with by the railway, a fee of 3 M. is collected from the party making the application. An application for loading to be performed by the railway must be made by the sender, in writing, on the way-bill, and application for unloading to be performed by the railway must be made, in writing, by the consignee. If the railway accede to such applications, the sender or consignee has no power to interfere with the work of loading or unloading. Should the railway, without proper written application, place a sufficient number of men at the disposal of a sender or consignee to perform the work of loading or unloading under the direction of the railway or its representatives, this is not deemed to be an undertaking by the railway of the work of loading or unloading, and the provision in the general regulations, that the railway is not liable for damage arising from risks attaching to loading or unloading of goods which under such regulations should be dealt with by the sender or consignee is, therefore, not affected.

310 Time limits for loading by sender.

In case loading is to be performed by a sender it must be done within regulation hours of service.

311. Storage, wharfage and demurrage charges.

When goods under same way-bill are to be loaded by the railway and are sent in by instalments, the railway is empowered, should the handing in be prolonged by the sender over twenty-four hours to collect storage fees as under:—

When goods are stored in covered premises, for every twenty-four hours and 100 Kg., commenced, 10 Pf.

When the goods are deposited in the open air, for every twenty-four hours and 100 Kg., commenced, 4 Pf.

The above regulation applies when goods to be loaded by the railway are delivered with an incomplete or incorrect way-bill and the error is not corrected within twenty-four hours after the objection was made.

Should the loading of goods by a sender not be effected within time limit, which must be made public by notices in the despatching offices and in a local newspaper, he must, after its expiration, pay wagon dues or demurrage as follows:—

For the first twenty-four hours, per wagon, 2M.

For the second twenty-four hours, per wagon, 3 M.

For each additional twenty-four hours, per wagon, 4 M.

The foregoing demurrage applies also to private wagons after expiration of the prescribed unloading time limit. The time limits do not include Sundays and holidays or the time occupied in operations of Customs or Tax Offices, provided these are not prolonged by the sender; but, after expiration of time allowed for loading and unloading, demurrage is charged for Sundays and holidays. Demurrage is further charged in the case of goods to be loaded by sender which have been delivered with an incorrect or incomplete way-bill, and when the correction has not been made within the time limit fixed for loading. When the time limit is exceeded, the railway is empowered to unload the goods at the cost of the sender, and to store them at his expense and risk.

312. Bulk loading must be done by senders.

Loose (or bulk) loading of goods, such as corn, husk fruit, clover, malt, and oil seeds, must be effected by sender, and precautions taken by him for prevention of the goods from scattering.

313. Advice of arrival of goods.

When goods are to be unloaded by consignee, notice of arrival must be given to him, at his expense, in writing, either through post or by messenger, unless some other means have been agreed upon, in writing, between the railway company and the consignee, the time limit within which the goods should be removed being stated in the notice. No notice is sent when the consignee so desires, or in case of goods stored at the railway. Should a consignee desire to arrange with the railway, either for a single case or once and for all, the manner in which notice of arrival of goods is to be given to himself or his representative, by messenger, post, telegraph, telephone, or otherwise, he must make a written request to this effect to the goods department. A special form is prescribed for requests which are made once and for all. In the case of ordinary goods, the notice of arrival must be sent out, at latest, after the arrival of the goods, and when they are ready for removal. In case of express goods, provided extraordinary circumstances do not make a longer term unavoidable, the notice must be sent out within two hours. These terms do not include Sundays and holidays, from twelve o'clock noon, and working days from six p.m. to the commencement of the working hours of the following day.

314. Fee for sending advice of arrival of goods.

No fee is charged for making out advice of arrival, but a fee of 5 Pf. is charged for sending it by hand, and postage is charged if sent through post.

315. Penalty for incorrect description of goods, under-declaration of weight of wagon loads and for over-loading.

When the contents of a consignment are incorrectly given, or the contents of a wagon load underestimated, or when a wagon loaded by a sender is over-loaded, there is charged (apart from the subsequent payment of any difference of freight and of compensation for any damage caused or of any penalty provided under criminal or police regulations) an additional freight, as penalty, which is to be paid to the railways taking part in the carriage, and the amount of which is fixed as follows:—

When explosives, inflammable goods, etc., are handed in with an incorrect or incomplete declaration of contents, or the precautions prescribed by regulations are neglected, then the amount of additional penalty freight is 12 M. per Kg of the gross weight of the whole package. In all other cases of incorrect declaration of contents the additional freight, provided the incorrect declaration of contents does not imply a diminution of freight, is 1 M. per way-bill, and, otherwise, double the difference between the freight from station of consignment to destination for the contents, as declared and as ascertained, with a minimum of 1 M.

In the event of the weight of a wagon-load being under-declared, the additional penalty freight is double the difference between the freight for the declared and ascertained weights for the distance from station of consignment to destination.

In the event of over-loading beyond registered tonnage of a wagon loaded by the consignor himself, the additional freight penalty amounts to six times the freight from station of consignment to destination for the weight in excess of the legal tonnage. This rule is also applicable to objects, freight of which is not calculated according to weight. In particular, if freight is to be calculated according to loading area, then the additional freight or penalty is made out in the following way:—First of all, the freight, according to the loading area of the wagon used, is regarded as freight for the maximum loading weight allowed in each case. The amount of the charge so ascertained for the maximum loading weight of load is applied in calculating the over-weight, and the amount of the freight arrived at for the over-weight multiplied by six. When, simultaneously, too low a declaration of weight is made, and a wagon is over-loaded, then the additional freight for too low a declaration of weight and also that for over-loading are charged.

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

Germany—*continued.*

316. Time limits for removal goods.

Goods unloaded by the railway must be removed by the owners within the free storage time, which is not less than twenty-four hours after despatch of advice note of arrival. The time within which goods unloaded by consignee are to be unloaded and fetched away is fixed by each railway, and properly announced. If advice note is sent by post, the time limit begins not earlier than three hours after the note was posted. In case of goods stored in station, or not required to be delivered to consignee by the railway, the period begins from the time of arrival of the goods. If wagons are not placed in readiness for unloading, the time allowed for unloading does not begin until they are so placed.

In case of great press of traffic, the railway may shorten the time allowed for loading and for free storage, and may increase storage and demurrage fees.

317. Storage, wharfage and demurrage charges.

If goods are not removed within specified time limits, storage or demurrage fees are charged. The railway may also have goods unloaded at risk and expense of consignee. On the other hand, the railway must defray the cost, if the consignee has attempted in good time, but in vain, to remove the goods, and if notice of arrival having been issued, the goods are not placed at disposal of the consignee, at latest, within one hour after arrival of the carrier to fetch them away.

Railways are bound to store, temporarily, goods (excepting perishables) handed in by consignors, but which cannot be forwarded at once, in so far as the available storage room permits, and to issue a receipt for the same, with the proviso that acceptance for transit only takes place when forwarding is possible.

The sender must declare his agreement to this procedure in the way-bill. In a case of this kind, the railway is responsible as depository until the freight contract is concluded.

318. Wagons not fully used by sender.

The railway may make use of the empty parts of a wagon loaded by a sender.

HOLLAND

319. Goods handled by and at expense of Railway.

The fee for loading and unloading small goods (*i.e.* less than wagon loads), both fast and slow, is included in the cost of transport.

320. Wagon-loads handled by and at expense of consignor and consignee.

The loading and unloading of wagon-load class goods must, *as a rule*, and of objects of unusual weight or dimensions, or for which special arrangements must be made must *always* be effected by consignor and consignee. The workmen employed thereat must obey instructions given to them by the railway officials. Neither sender nor consignee may make any claim to the use of the goods sheds, and goods must be loaded and unloaded at the places in the stations which the railway officials shall indicate.

321. Charges for loading and unloading goods by Railway.

If on demand of consignor or consignee goods rated, or to be rated, according to the wagon-load classes are loaded or unloaded by the railway (for which, however, there is no obligation), then the following charges for the service are collected, viz.:—Loading, when the sender acknowledges that no liability is imposed thereby on the railway, than if the sender has himself loaded the goods, or loading of parcels up to 1,000 Kg. each, fee, 0·02 Fl. per 100 Kg. For parcels of more than 1,000 Kg. each, 0·07 Fl. per 100 Kg.

322. Charge for use of railway cranes.

For the use of cranes, hoisting apparatus, or other unusual appliances, in loading or unloading, the following fee is charged:—For objects of more than 1,000 Kg. but not heavier than 5,000 Kg., by senders or consignee's workmen for each operation 0·05 Fl. per 100 Kg. If senders or consignees themselves load or unload, and wish to make use of the steam cranes belonging to the railway, with service of mechanicians, then a fee of 0·50 Fl. per hour is charged for the hire of same, with a minimum of 4 Fl. The foregoing rule applies only to steam cranes of, at most, 5,000 Kg. lifting capacity. In loading and unloading objects of not more than 1,000 Kg., the use of the cranes placed in stations is allowed free, both to sender and consignee, as when loading and unloading are carried out by the railway. The use by senders or consignees of cranes, hoisting apparatus, and tools or tackle belonging to the railway is subject

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

Holland—*continued.*

to the liability of the former, and damage to such apparatus, etc., must be immediately made good by the person using them.

323. Regulation hours for loading and unloading.

If loading is to be done by sender, fast and slow goods must be loaded by him within regulation hours, viz., between 7 a.m. and 7 p.m., on all working days, from 1st April to 30th September, and between 8 a.m. and 6 p.m. from 1st October to 31st March.

324. Time limits for loading by sender.

When a consignor receives notice in a forenoon that wagons are at his disposal, loading must be completed on the same day; and, when he receives it in the afternoon, loading must be completed on the following day by two o'clock p.m.

325. Storage, wharfage and demurrage charges.

When goods entered in the same way-bill are not all brought in at the same time, or are offered with an incomplete or inaccurate way-bill, and, in consequence, have to lie until a completed or corrected way-bill has been received, then the railway, when delivery has not been completed within twenty-four hours and an obvious delay is caused, or when in that time the way-bill has not been completed or corrected, may, after the lapse of twenty-four hours, charge storage or demurrage for the already delivered goods, until the consignment entered on the way-bill is all brought in or the way-bill is completed or amended. When goods are in question which have to be loaded by the sender, and for which one or more wagons have been placed at his disposal, if the loading is not completed within the fixed time, and the goods ready for forwarding, wagon hire or demurrage is collected as follows:—For each wagon, 0·12 Fl. per hour with a minimum of 0·60 Fl. per wagon. The railway authorities are also empowered, when the loading period has elapsed, to unload the wagons at the expense of the sender, to make use of the wagons for other purposes, and to stack up the unloaded goods at his risk, and subject to payment of wharfage or storage at the following rates:—Wharfage (in the open), 0·01 Fl. per 100 Kg. per day, with a minimum of 0·10 Fl. per consignment; and for storage in goods sheds, 0·02 Fl. per 100 Kg. per day, with a minimum of 0·10 Fl. per consignment.

326. Penalty for overloading and for under-declaration of weight.

When goods are loaded by a consignor, the latter must only load wagons to the carrying capacity indicated on the wagons, and within the loading gauge fixed for the purpose. For overloading, the railway authorities may, in addition to compensation for the damage caused thereby, impose a penalty as follows:—Should the tonnage of the wagon be exceeded only, double freight is charged on the excess weight for the whole of the journey entered on the way-bill, and if, in addition to overloading, the weight has been under-declared, four times the freight on the additional weight is charged. In this penalty the conveyance freight for the overweight is not included, this latter being calculated separately, and added on. When overweight is discovered in the course of a journey, the cost of unloading the excessive weight and of reloading it into another wagon is further taken into account.

327. Time limits for removal of goods.

On production of the way-bill bearing acknowledgement of payment to the railway of freight and other charges, and in return for a receipt in the register of goods received—nothing but receipt of the goods being certified in such case—the goods (not carted by the railway) are delivered to consignee in the goods department or goods sheds or on the platform, or wagon-loaded goods are placed in readiness for unloading at the unloading places, and this with due observance of the following conditions:—Goods must, except as hereafter provided, in case of those unloaded by consignee, be carted away on all working days between the fixed hours, which are the same as for loading, and within the period fixed as free of storage or demurrage, which may not be less than twenty-four hours. This period commences, as a rule, from the moment when the advice of arrival is received, but for goods, the arrival of which cannot be notified to the consignee, for goods addressed "station restante," and for goods of which the consignee has declared, once and for all, in writing, that he requires no advice of arrival, the period runs from the moment of the arrival of the goods When the advice is given through the railway officials, the hour alone entered on the receipt, constitutes a proof of the time of their arrival; and, when the advice is sent by post, the hour of arrival of this advice note

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

Holland—*continued.*

is calculated to be two hours after the latest hour at which, according to the post-mark, the notice was posted. The consignee must cart away the goods which are to be unloaded, but not delivered by the railway, from the station of destination, within twenty-four hours after receiving notice, as above, of their arrival. The period within which goods loaded by a sender must be unloaded by consignee and carted away are fixed by the special traffic regulations of each railway, and are made public in every station by placards in the goods office, and from time to time notified in a newspaper. The existing regulations of the Holland and the Dutch State and Central Railways fix the period at eight hours after receipt of advice of arrival, but within the working hours hereinbefore specified. If only a part of the goods entered in the same way-bill has arrived, and such a part is of value in itself, the acceptance of that part and the payment of freight due in proportion, may not be refused by the consignee, without prejudice to his right to delivery of the remainder or to damages, if any.

328. Wharfage, storage and demurrage.

Anyone omitting to take over goods within the time fixed and to cart them away from the station is liable to payment of storage, wharfage, or demurrage. On the other hand, the railway is bound to make good the expense proved to have arisen through the consignee having attempted, in good time, but in vain, to cart away goods, when such goods, the arrival of which having been already notified by the railway, are not placed at disposal of consignee within one hour after the carrier has reported himself for unloading or carting away. To this regulation exception may be made by the Minister of Waterways, Commerce and Industry, in the case of certain stations to be designated by him. It is therefore stated in the advice of arrival if the goods can be unloaded and carted away. When wagons loaded by the sender are not unloaded within the fixed time and the goods carted away, the railway, without thereby assuming any responsibility, is empowered to have the wagons unloaded at the expense of the sender or consignee, and to demand the sum fixed for storage, wharfage, or demurrage. When, in consequence of a measure from superior authority—for instance, temporary detention of goods by the Revenue officers or judicial seizure—the railway is prevented from carrying or delivering the goods, it is empowered, if the goods remain in the wagon, to collect demurrage. When regular traffic is threatened by a great accumulation of goods, the railway is empowered to raise the amount of storage, wharfage, and demurrage fees, to lengthen the period within which wagons will be placed at disposal of consignee, having due regard to the powers of the Minister of Waterways, etc., in this respect; and also, if these measures be not sufficient, to reduce the time during which goods may be left lying, and also the free demurrage period, all for so long as the pressure lasts, provided that due regard be paid to the provisions for the prolongation of time limits of conveyance of traffic. Goods which a consignee refuses or neglects to take over within the regulation time, or goods, the delivery of which is impossible, also goods addressed "station restante," which have remained at their arrival station longer than the time fixed in the special traffic regulations (*i.e.*, forty-eight hours for the Holland, Dutch State, and Central Railways), without the consignee having reported himself, remain at the expense and risk of the sender, who, if fast goods are in question, must receive notice thereof as soon as possible. The railway authorities are empowered to have such goods placed in a public store, or to hand them over to a carter ("expediteur") at the expense and risk of the party concerned, and there placed at disposal of consignor (to whom notice accordingly should be sent at once), on payment of the freight, advances, and expenses with which they are charged.

329. Fee for sending advice of arrival of goods.

The fee for sending advice note of arrival of goods is—for delivery by railway service, 0·05 Fl. each, and through post, 0·05 or 0·03 Fl., according to postage of each note. When sent through post, the advice is despatched within four hours after arrival of fast goods and six hours after arrival of slow goods, excluding the time between 10 p.m. and 8 a.m.

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

DENMARK.

330. Goods loaded by and at expense of Railway.

Parcel goods (*i.e.*, in less than wagon loads) are loaded by the railway without any special fee being charged, with the exception of certain dangerous goods and of packages weighing more than 500 Kg., which must be loaded by a consignor himself.

331. Loading charges.

Where circumstances permit, the railway will, on the request of consignor, undertake to load such goods on payment of the charges fixed as below, but it does not thereby accept any other responsibility than if the sender himself had effected the loading. The loading charges are usually 3 Ore per 100 Kg. or part thereof, but special rates may be fixed for different stations and also for heavy or difficult goods.

332. Storage of goods and charge therefor

The complete handing in of a consignment of parcel goods must be effected within twenty-four hours reckoned from the time when the way-bill was handed in with the first instalment of the consignment, otherwise he must pay in respect of the whole consignment from the expiration of the above-mentioned period until the consignment is properly handed in to the railway (during which time the goods lie at his own risk), a storage charge of ½ Ore per 100 Kg. per twenty four hours, or part, if the goods are stored in the open, with a minimum of 5 Ore and a charge of 1 Ore per 100 Kg per twenty-four hours, or part, if the goods are stored under cover, with a minimum charge of 10 Ore. Where the railway has established special storehouses for certain kinds of traffic, special charges and rules can be fixed.

333. Wagon goods to be loaded by sender

The loading of goods sent in entire wagon loads is incumbent on the consignor. He must, in doing this, obey the rules and instructions laid down by the railway with regard to transit, particularly with reference to the distribution, form, and dimensions of the load, its securing and support, and he must himself supply the ropes and other materials required for the purpose. Wagons placed by the railway at the disposal of a consignor must be in good order and condition, thoroughly cleaned and purified, and the tarpaulin covers whole. If the consignor thinks that this is not the case he must immediately, and before commencing to load, make his objection, so that the wagons may be put in proper order and the tarpaulins replaced by others. The consignor must himself supply the necessary material for laying under his goods to protect them from the dampness of the wagon floor. Wagons must not be loaded in excess of their proper tonnage, or with a greater weight than that given in the way-bill.

334. Loading by senders must be within regulation hours

Loading must be performed during the hours when the loading stations are open (from 6 a.m. to 6 p.m.). If, in exceptional cases, goods are allowed to be loaded during hours other than the above, the railway is entitled to demand full payment in accordance with a calculation made of the expenses it may have thereby incurred for labour, night charges, keeping up steam in the shunting engine, light, etc. When the consignor wishes, and when circumstances at the station in question admit, the railway undertakes to do the loading in return for the fees already specified, but it does not thereby accept any liability other than if the consignor himself had carried out the loading.

335. Time limits for loading wagon goods.

The wagons ordered by a consignor must be loaded ready for departure and the proper way-bill for them must be issued, at latest, twenty-four hours after the wagons have been placed at the consignor's service. Holidays and natural obstacles, such as snow-drifts, are always left out of account when calculating the loading time limit. A wagon is deemed to have been placed in readiness when it is brought on the loading track and the consignor has received due notice of the fact. The notice must be given gratis, by post card, unless it is given free of charge by word of mouth, by messenger, from the station. On request the notice is sent to the consignor by special messenger, by telephone or by telegram, but in this case the expenses so incurred by the railway must be refunded. The railway's record of notice having been sent is taken as decisive should any doubt arise as to what notice has been given or at what time. If the station sends out the notice by post card, the consignor is deemed to have received it six hours after the departure of the first post by which the card could have been

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

Denmark—*continued.*

despatched from the usual posting place of the station unless the consignor can prove that the advice note could not have come to hand until a later hour on account of postal arrangements. If a consignor has omitted to give his address in ordering wagons, the railway is not bound to inform him of the time they will be at his service, and the loading time is counted from the time when the wagons were placed on the loading track. The loading time allowed shall include at least six hours of the usual working time of the day for small wagon-loads, at least nine such hours for large wagon-loads, and, for several wagon-loads or for wagon-loads of 20,000 Kg. each, some additional time is given. For longer distances than 8 Km. from the station in addition to the above-mentioned minimum times, three hours are allowed.

336. Demurrage and storage charges for delayed loading and security against demurrage.

When the loading time is exceeded, or when a wagon ordered is not used, demurrage is charged at the rate of 2 Kr. per twenty-four hours, or part thereof. The railway is, moreover, empowered in such a case to dispose of the wagons in some other way or to unload the already partially loaded goods and store them at the risk and expense of the party who ordered the wagons. As security for payment of possible demurrage a deposit of 4 Kr. per wagon may also be required when wagons are ordered. If the loading time limit is exceeded the demurrage is calculated from the time of expiration of the same. If a wagon ordered is not used the following rules are applicable in calculating the demurrage: (1) a charge as for one day is made when an order for a wagon is cancelled on the same day as the wagon was ordered, or if the cancelling takes place at latest at the time when the wagon was to have been supplied; (2) otherwise demurrage is charged from the midnight next following the receipt of the wagon order until notice is received that the wagon ordered is not required, or until the railway disposes of the wagons otherwise, but at *most* for two days; (3) if a wagon order is cancelled thirty hours before the time when the vehicles were to be supplied no demurrage is charged. Sundays and holidays are counted like working days when an ordered wagon is not used. When the supply of wagons is particularly scanty the loading time limit may be reduced by the railway authorities on notice to that effect being given previously.

337. Advice of arrival of goods.

When goods accepted for conveyance have arrived at the station of their destination the railway must see that the consignee is advised of the fact. This may be done, at the option of the railway, (1) by "bringing in" (presenting) the corresponding way-bill, in which case the consignee, if he does not redeem the way-bill, is bound to certify that it has been produced —the way-bill can be presented ("brought in") between the hours of 6 a.m. and 9 p.m.; (2) by sending a written notice of advice of arrival of the goods to the domicile or place of business of the consignee; (3) by sending a prepaid letter or post card, in which case the railway may require the outlay on postage to be refunded unless the consignment consists of wagon-load goods; (4) by telephone, if the consignee is connected by telephone with the arrival station and has given written instruction to have advice of arrival of goods sent to him in that way. The railway's record of sending advice of the arrival of goods by one of the four methods above-described is decisive should any doubt arise as to whether arrival was advised, or at what time. On request of a consignee, advice of arrival of certain consignments may also be sent by express messenger or by telegram, the expenses thereby incurred being paid by him. The obligation of the railway to inform a consignee of the arrival of goods is cancelled when they are addressed "to be kept in station," or when the consignee cannot be found. The railway is likewise entitled to omit advising arrival when a consignee has given instructions that such advice shall not be sent to him, either in a general way for all goods addressed to him or in the case of a particular consignment.

338. Charge for sending advice of arrival of goods.

339. Goods unloaded by (a) Railway and (b) Owner.

Parcel goods are unloaded by the railway without any special fee, but with the same exceptions as apply in the case of loading. Such excepted goods, as well as wagon-load goods, must be unloaded by consignees. When the consignee desires, and when the conditions at the railway station admit of it, the railway does, however, undertake to unload on his behalf in return for charges similar to those applicable in case of loading goods by request of sender and under like conditions as to non-liability.

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

Denmark—*continued.*

340. Time limits for unloading and removal of goods.

Goods which are not delivered at domicile by the railway shall, as soon as possible, be placed at disposal of the consignee—wagon-loads by bringing the wagons to the railway's unloading place. The consignee must remove the goods from the railway precincts at latest twenty-four hours after the railway has given notice of their arrival, or if removal has already been commenced, twenty-four hours after such commencement. If advice of arrival is sent by prepaid letter or post card the time of notification is reckoned in same way as in case of advice through post, to a sender, of wagons being placed at his disposal, and which has already been defined. The letter of advice should contain information as to when the time allowed for removal expires. If the railway is under no obligation to inform a consignee of the arrival of goods they must be removed, at latest, twenty-four hours after their arrival at their destination. Holidays or natural obstacles, such as snow-drifts, are not included in calculating time allowed for removal. The time allowed for removal may be reduced when the supply of wagons is specially scanty, provided a preliminary notice to that effect is issued by the railway authorities.

341. Regulation hours for unloading and removal.

Goods must be removed during the usual hours of the goods department, and wagon-load goods must be unloaded during the hours when the loading places are open. In exceptional cases goods may be unloaded outside of these hours, and then the railway is entitled to compensation, as in the case of like extension of time for loading operations, already referred to.

342. Storage and demurrage charge.

For goods not removed within the prescribed time, storage for parcel goods and demurrage for wagon-load goods is charged at rates already quoted. If a wagon is not unloaded within the time allowed, the railway is thereby empowered to unload the vehicle and store the goods at the risk and expense of the consignee, storage being charged from the time of unloading in place of demurrage.

343. Wagons not fully used by sender.

If a sender does not use the whole bearing capacity of wagons placed at his disposal, the railway is entitled to use the empty parts of the wagons for conveyance of other goods, taking the risk, however, of any damage caused thereby.

344. Penalty for incorrect description of goods and for under-declaration of weight.

If the contents or weight of a consignment are found to have been incorrectly stated to the disadvantage of the railway, it is entitled, even if the return of the goods be requested, to charge, as a penalty, three times the freight which it would have lost if the incorrectness of the sender's statement had not been discovered. For wagon-load goods in such case the fixed weighing fee of 1 Kr. per wagon is charged, but if the difference does not exceed 5 per cent. of the stated weight, and the bearing capacity of the wagon has not been exceeded by more than 5 per cent., only the weighing fee and single freight for the excess weight is charged. When the excess weight up to 5 per cent. is understood to have been due to natural influences during transit no additional freight is charged.

345. Storage or sale of undelivered goods.

Goods of which, from any cause not attributable to the railway company, delivery cannot be effected, may be either handed over on payment of freight, etc., to a carrier or public warehouse to be stored at expense and risk of owner, notice being sent to the person having disposing power over the goods, or they may be sold without further formality in such a way as seems best in order to cover freight and other charges due on them. In case of perishable goods and those of small value, sale may take place on expiration of time allowed for removal, but in all other cases not sooner than one month after expiration of such period and when the owner, within fourteen days after notice has been sent to him by the railway, fails to pay freight, etc., and ensure removal, or when he cannot be found.

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

AUSTRIA AND HUNGARY.

345. Wagon goods to be handled by owners.

Wagon-load goods for which, according to classification and tariff conditions, the rates of wagon-load Classes B and C and of Special Tariff No. 2 are to be applied must be loaded by the consignor The following goods must be loaded by consignor and unloaded by consignee:—(1) wagon-load goods for which, according to goods classification and tariff conditions, the rates of Special Tariff No. 3 are to be applied; (2) goods to which are to be applied any special rates generally applicable to goods in Classes 1 and 2 when freight is paid on at least 5,000 or 10,000 Kg., respectively, per way-bill and per wagon, and for goods of wagon Class A, when freight is paid on at least 10,000 Kg. per way-bill and per wagon, provided that these rates are reduced by 4 H. per 100 Kg. at least as compared with the rates of Class 1 or Class 2 for lots under 5,000 Kg. per way-bill, or as compared with the rates of wagon-load Class A for lots of 5,000 Kg. per way-bill and wagon; and in so far as it is not provided in the goods tariffs of the various railways that for the wagon-load tariffs in question loading or unloading must be carried out by the railway; (3) consignments containing objects of more than 7 m. in length, or objects weighing more than 750 Kg. apiece, exclusive of full barrels with circular bottoms; (4) full barrels when supported (these being carried in supports only when desired by the sender.)

When goods to be loaded by the sender or unloaded by the consignee are entered with other articles in the same way-bill, then the whole consignment must be loaded by sender and unloaded by consignee.

347. Goods handled by Railway.

Unless in accordance with the foregoing or with other tariff regulations or in conformity with the general traffic regulations or a special agreement, loading and unloading is incumbent on senders and consignees, these operations are performed by the railway, and it rests with the latter to determine the quantity to be loaded in a wagon with one way-bill. If the party concerned wishes to forward any remaining portion of a consignment he must present a separate way-bill for that portion. Senders and consignees may carry out loading and unloading in cases when these operations should be performed by the railway, but only with the consent of the latter. Such permission does not entitle senders or consignees to any claim for rebate or compensation.

348. Wagon load, &c., goods handled by Railway.

When at request of sender or consignee, whose duty it is to load or unload goods, this work is undertaken and carried out by the railway, then the workmen detailed for the work are to be considered, not as agents of the railway, but of the sender or consignee. In such a case the following fees are collected:—

349. Fees charged by Railway for loading and unloading wagon, &c., goods in Austria.

For loading *or* unloading full barrels on supports, even when some of the barrels weigh at least 200 Kg. each, 3 H. per 100 Kg. of the whole consignment.

For loading *or* unloading consignments comprising objects weighing more than 750 Kg. each (exclusive of full barrels with circular bottoms) or measuring more than 7 m. in length, when the objects comprised in such consignments weigh up to 1,000 Kg. each, 6 H. per 100 Kg. of the whole consignment; up to 2,000 Kg. each, 8 H. per 100 Kg. of the whole consignment; over 2,000 Kg. each, 10 H. per 100 Kg. of the whole consignment.

For loading *or* unloading every 100 Kg. of other consignments, 2 H.; minimum per consignment, 5 H.

Tackle and material required for supporting full barrels, such as wedges, nails, clamps and beams, are to be provided by the sender.

350. Loading by sender must be within regulation hours.

In case loading is to be performed by sender it must be effected within regulation hours of service.

351. Use of Railway cranes by the public and charges therefor.

When a railway crane is lent for loading, unloading, transfer, or transhipment of goods by the owner, the following fees are charged unless otherwise provided in the tariff:—

For each time of using of a crane located at the station where required, 4 H. per 100 Kg. moved.

If a transportable crane has to be brought from another station an additional fee of 20 Kr. must be paid in with the order for the crane.

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC.—*continued.*

Austria and Hungary—*continued.*

If a crane is not replaced at the railway's disposal within twenty-four hours a further fee of 5 Kr. per day or part thereof is charged.

352. Wharfage, storage and demurrage charges.

When goods under same way-bill are to be loaded by the railway and are sent in in instalments, the railway is empowered, should the handing-in be prolonged by the sender over twenty-four hours, to collect storage fees as under:—

	Per 100 Kg. per day.
Dangerous Fast goods,	30H.
Other Fast goods,	6H.
Slow goods in open wagons, except certain mineral oils,	4H.
Slow goods, mineral oils (except lubricating oils), wool, hair, cotton, flax, hemp, jute (raw), tow, oily or greasy goods, calcium carbide, etc.,	20H.
Slow goods, all other kinds,	3H.

The above regulation applies when goods to be loaded by the railway are delivered with an incomplete or incorrect way-bill and the error is not corrected within twenty-four hours after the objection was made.

Should the loading of goods by a sender not be effected within time limit, which must be made public by notices and in the despatching offices and in a local newspaper, he must, after its expiration, pay wagon dues or demurrage at the rate of 40H. per wagon per hour. Demurrage is not collected if the security pledged in ordering wagons is forfeited to the railway in consequence of the wagons not being loaded at all. Demurrage is also charged in case of goods loaded by sender which have been delivered with an incorrect or incomplete way-bill and when the correction has not been made within the time limit fixed for loading. When the time limit is exceeded the railway is empowered to unload goods at the cost of the sender and to store them at his expense and risk.

If for consignments which are loaded by the railway and the freight of which is to be paid by the consignor, the amount of freight is not handed in during the hours for receiving and a delay is thereby caused in despatching the traffic, then storage according to tariff is charged for the period from the expiration of the time at which the goods were received from the consignor to the time when the freight is paid in.

353. Time limits for loading by sender.

The loading of goods, to be loaded by a sender, must be effected within twenty-four hours after the wagons have been placed in readiness. In this period the time during which loading is prevented or interrupted through the fault of the railway or its servants (by shunting, train services, etc.), is not counted.

354. Sender must load securely and provide tackle necessary to that end.

A sender in loading goods, in so far as this is incumbent on him, must himself supply the tackle necessary to ensure the safety of the load, and, in addition, he must see that no danger is caused by the loading to the wagon used or the goods loaded or to the safety of the trains, that the load is evenly distributed on the axles, and when open wagons are used that the regulation height, length, and breadth of the loading gauge are not exceeded.

If the loading done by a sender does not comply with the existing regulations the consignment is not accepted for conveyance.

355. Defects discovered *en route* rectified at expense of owner.

Defects in loading discovered in the sending station only after conclusion of the transport contract and which cannot be rectified by the sender, or at least not without considerable delay, and also loading defects discovered during the journey are rectified by the railway as well as possible, the cost being charged forward.

356. Railway must advise arrival of goods.

In the case of goods to be unloaded by the consignee, notice must always be given to the latter, at his expense, in writing, either through post or by messenger, unless some other method of communication has been agreed upon in writing between the railway and the consignee—the time limit within which the goods should be removed being stated in the notice. No notice is sent when the consignee so desires, or in the case of goods stored at the railway.

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC—*continued.*

Austria and Hungary—*continued.*

357. Fee for advising arrival of goods.

The arrival of goods is advised to consignee by messenger or post, at option of the railway, unless other arrangements are made. For sending advice of arrival a charge of 6H. is made.

In the case of ordinary goods the notice must be sent out, at latest, after the arrival of the goods and when they are ready for removal. In the case of Fast goods, provided extraordinary circumstances do not make a longer term unavoidable, the notice must be sent out within two hours. These terms do not include Sundays and holidays, from 12 o'clock noon, and working days, from 6 p.m. to the commencement of the working hours of the following day.

358. Penalty for declaring wrong description or under-weight and for over-loading.

When the contents of a consignment are incorrectly given or the weight of a wagon load under-estimated or when a wagon loaded by a consignor is overloaded, there is charged (apart from the subsequent payment of any difference in freight and of compensaton for any damage caused or of any penalty provided under criminal or police regulations) an additional freight (as penalty), which is to be paid to the railways taking part in the carriage, and the amount of which is fixed as follows:—

When explosives or inflammable goods, etc., are handed in with an incorrect or incomplete declaration of contents or the precautions prescribed by regulations are neglected, then the amount of additional freight (penalty) is 12 Kr. per Kg. of the gross weight of the whole package. In all other cases of incorrect declaration of contents the additional freight, provided the incorrect declaration of contents does not imply a diminution of freight, is 1 Kr. per way-bill, and, otherwise, double the difference between the freight from station of consignment to destination for the contents as declared and as ascertained, with a minimum of 1 Kr.

In the event of the weight of a wagon load being under-declared, the additional freight (penalty) is double the difference between the freight for the declared and ascertained weights for the distance from station of consignment to destination. In the event of overloading beyond registered tonnage of a wagon loaded by a consignor himself the additional freight (penalty) amounts to six times the freight from station of consignment to station of destination for the weight in excess of the legal tonnage. This rule is also applicable to objects, freight of which is not calculated according to weight. In particular, if freight is to be calculated according to loading area, then the additional freight is made out in the following way:—First of all, the freight, according to the loading area of the wagon used, is regarded as freight for the maximum loading weight allowed in each case, the amount of the charge so ascertained for the maximum loading weight is applied in calculating the overweight and the amount of freight arrived at for the overweight multiplied by six. When, simultaneously, too low a declaration of weight is made and a wagon is overloaded, then the additional freight for too low a declaration of weight and also that for overloading are charged. Additional freight for overloading is charged (*a*) in the case of wagons bearing only *one* inscription showing the load allowed, if the tonnage or carrying capacity so indicated is exceeded by more than 5 per cent., and in the case of wagons bearing two inscriptions, viz., "tonnage" (normal load) and "carrying capacity" (maximum load) if the load exceeds the carrying capacity in any degree.

Additional freight is not charged in (*a*) a case of incorrect declaration of weight if the railway is bound to weigh; (*b*) in a case of incorrect declaration of weight or of overloading if the sender has asked in the way-bill that the goods be weighed by the railway; (*c*) in a case of overloading during transit on account of the influence of the weather, if the sender proves that in loading the wagon he did not exceed the tonnage thereon indicated; (*d*) and in case of an increase in weight during transit if the sender shows that the same is due to effects of weather.

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC—*continued.*

Austria and Hungary—*continued.*

In the event of a wagon being overloaded and if such overloading is detected by the sending station or by an intermediate station the mode of procedure is as follows:—

(*a*) The overload is unloaded even when an increase in weight has been caused by effects of weather. Freight is calculated on the basis of the weight of the quantity remaining in the wagon. The goods unloaded are handled and treated in pursuance of the terms of regulation applicable to goods, of which delivery cannot be effected by the railway (dealt with hereafter). For the overweight unloaded, freight is charged at the rate applied to the principal load as far as the intermediate station, unless the goods are reloaded according to (*d*) hereafter.

(*b*) For unloading overweight the usual unloading fee is charged.

(*c*) For overloads lying at intermediate stations a period of six days is allowed free of storage. This period commences with the midnight following the sending of the request for instructions to the forwarding station. After expiration of the six days' period the following special storage fees are charged:—If the goods are among those which the railway is empowered to send in open wagons, 4 H. per 100 Kg. per day, and for all other goods, 3 H. per 100 Kg. per day, with a minimum charge of 5 H. per consignment in both cases.

(*d*) (1) If an overload lying at an intermediate station is to be sent on or back at the request of the sender it is treated as a separate consignment; (2) if, however, the weighing of the load was expressly asked for by the sender, but the request could not be complied with at the sending station, then, if it is decided that the goods be sent back to the original sending station, freight is charged, on the actual weight of the overweight unloaded, at the rate of special tariff 3; and (3) under similar conditions the sender may be allowed to load the discharged overweight, if it does not consist of coal, roots, or root shavings, on to another load of similar nature coming from the same forwarding station and passing, in any case, through the intermediate station. The sender must then in the first instance underload the second wagon by the amount of the goods which he desires to add to it at the intermediate station, and he must enter and sign the following statement, as to stopping at the intermediate station, in the proper space in the way-bill, "It is requested that the railway load.....Kg..... at present lying in..... station." Freight in this case is calculated for the whole load, that is, including the quantity to be loaded on the way, from the sending station to destination, and, in addition to this, the usual fee fixed in the tariff will be charged for loading the quantity in question.

If the overloading of a wagon is only detected in the station of destination, then freight is charged on the excess load at the same rate as for the rest of the load.

The additional freight is a charge upon the consignment.

If portion of a consignment of hay or straw is removed at an intermediate station on account of the load slipping, and if, on instructions from the sender, it is returned to the sending station, then freight for the actual weight of the portion removed is charged at the rate of Special Tariff No. 3.

The sender or consignee, respectively, is liable for all damage (expense) which may be caused during transit in consequence of improper or excessive loading of wagons by the sender or his servants, or in consequence of the slipping of a load on a wagon loaded by the sender, and further, for all damage caused to the railway by injury to its vehicles, loading apparatus, or in any other way, by loading or unloading effected by the sender or consignee or their servants or during the carrying out of such operations.

For the interruption of journey caused by transferring or arranging load or unloading overweight, demurrage at rate of 3.60 Kr. per wagon per day is charged from the time of stoppage of a wagon to its re-forwarding.

LOADING, UNLOADING, AND REMOVAL OF TRAFFIC—*continued.*

Austria and Hungary—*continued.*

359. Unused space or tonnage of a wagon loaded by sender may be utilised by Railway.

If in loading by the sender neither the full space nor full tonnage of a wagon is utilised, the railway has the right to make additions to the load.

360. Time limits for removal of goods.

Goods unloaded by the railway must be removed by owners within the free storage time, which is not less than twenty-four hours after despatch of notice of arrival. The time within which goods unloaded by consignee are to be unloaded and removed is fixed by each railway and properly announced. If advice note of arrival is sent by post the time begins not earlier than three hours after the note was posted.

The free storage period on the Austro-Hungarian Railways is as follows:—

For valuable Fast goods, . . .	3 hours.
For all other Fast goods, . . .	48 ,,
For Slow goods, such as hay, straw, chemicals, wool, hair, flax, hemp, raw jute, rags, rope, etc., . .	24 ,,
For Slow goods—mineral oils (excepting lubricating), ...	48 ,,
For Slow goods, all others, . . .	4 days.

When goods are not stored by the railway (*i.e.*, "Station Restante"), or if the consignee has not sent a written order to the effect that notice of arrival shall not be sent him, the free storage time begins in the case of Fast goods of all kinds, and for hay, straw, wool, flax, etc., and mineral oils (except lubricating) (1) when notice is sent by post and on notice given by telegraph with the time when such notice was despatched, and (2), when notice is sent by hand, with the time when the notice so sent was delivered or when a genuine attempt at such delivery was made. In the case of all Slow goods other than those defined above, the free storage period begins on the day as fixed by the date of the advice note, which consequently, unless a Sunday or holiday, counts as the first day of the free period for goods to be stored by the railway, and, for goods the consignee of which has asked in writing that notice of arrival shall not be sent him, the time of free storage begins with the arrival of the goods. If Sundays or holidays fall in the free storage times for Fast and Slow goods unloaded by the railway and of which advice note of arrival is sent, then the free storage times as defined, except that for valuable express goods, are increased by those days.

For goods to be unloaded by consignee (in so far as their storage is permitted and no other provision is made in special regulations) no free storage time is allowed in addition to the unloading and collecting time allowance.

The charge for storage of goods not removed by consignee from a station within time limits are the same as those defined for storage prior to despatch of goods from forwarding station

For goods stored at a sending station until it is possible to forward them the storage fee amounts to 4H. per 100 Kg. per day, with a minimum charge per consignment of 5H.

If wagons are not placed in readiness for unloading, the time allowed for unloading does not begin until the day they are so placed. The railway may have goods not unloaded in time by consignee removed from the wagons at his risk and expense. On the other hand the railway must defray the cost if a consignee has attempted in good time, but in vain, to remove the goods, and if, after notice of arrival having been issued, goods are not placed at disposal of consignee at latest within one hour after arrival of the carrier to fetch them away.

In case of great press of traffic, the railway may increase storage and demurrage charges and shorten time allowed for unloading as well as time for free storage.

361. Sale of undelivered goods.

In the event of delivery being prevented, the railway must, without delay, advise the sender. Perishable goods may be sold, but notice of the sale must be sent to the consignor by registered letter giving information as to time and place of sale. The result of the sale must also be advised by registered letter to the consignor and to the consignee in case the latter has paid the freight and other charges on the consignment.

CONSIGNOR'S LOADING IMPLEMENTS AND WARM AND COLD PROTECTIVE MATERIALS.

FRANCE.

362. Conveyance of consignor's loading, &c., implements.

Pieces of wood and wedges used by a Consignor to separate packages during transit, under common Special Tariff No. 125 (*i.e.*, *Empty Package Tariff*) are carried back free to point of departure, and are subject only to Registration and Receipt Stamp charges. They must bear the name of the original Consignor and of the station to which they are to be returned. A Consignee in returning such tackle must supply proof by means of a way-bill of not more than four months date that it had actually been used with goods over the journey indicated on the way-bill and that it is being sent back to the station whence it came. The Consignee of the goods with which the tackle was used, and the Consignor of the returned tackle must be one and the same person.

The Regulations do not contain any information as to conveyance of warm and cold protective materials.

BELGIUM.

363. Conveyance of consignor's loading, &c., implements and protective materials.

No information contained in Regulations as to conveyance of Consignor's loading, etc., implements and warm and cold protective materials.

GERMANY.

364. Conveyance of consignor's loading, &c., implements and protective materials.

Loading appliances used by a sender, such as head beams, scaffolding, partitions, poles, stools, supports, flooring boards, props, struts, chains, wedges, and the like are carried free by the railway on the outward journey with load to destination, and on the return journey to the station whence the goods were sent (under conditions similar to those applying to private covers), but, in the case of consignments of meat, they are sent carriage free only when wagon-load freight is charged for the consignment in question.

Materials such as hay, straw, matting, turf mould, manure, covers, felt, mats, cloths, iron cylinders filled with hot water and the like, up to five per cent. of the actual weight of an accompanying consignment of defined perishable traffic which the materials are intended to protect, are forwarded and returned carriage free by the railway, and treated in other respects like private wagon covers and loading appliances. The carrying power of the wagon, inclusive of the weight of those protective materials, may not be exceeded. The Consignor must state in the way-bill the weight of the consignment chargeable with freight, otherwise freight will be calculated for the gross weight, including the protective material loaded with the goods.

HOLLAND.

365. Conveyance of consignor's loading, &c., appliances.

Loading requisites, such as cheese stands or trays, trestles, props, stages, and the like objects supplied by a sender for stowing or supporting goods in wagons during transit are carried free by the railway on the outward journey with the goods, and are returned free of carriage to the station whence the traffic came, but subject to a Registration Fee of Fl. 0·30 under the same conditions as apply to private wagon covers.

When, however, the returned loading requisites are consigned as express goods or under insurance for value or time of delivery the foregoing favourable conditions do not apply, and conveyance takes place only under the ordinary conditions of fast or *slow* goods in partial wagon-loads.

The Regulations do not contain any provisions as to conveyance of warm and cold protective materials.

366. Non-liability of Railway for consignor's loading, &c., appliances.

The railways are not liable for damage occurring to loading appliances when carried free on the outward or return journey.

DENMARK.

367 Conveyance of consignor's loading, &c., implements and protective materials.

No information in Regulations as to conveyance of consignor's loading, etc., materials and warm and cold protective materials.

AUSTRIA AND HUNGARY.

368. Conveyance of consignor's loading, &c., implements and warm and cold protective materials.

Loading appliances supplied by Consignors, such as scaffolding, partitions, boards, beams, flooring, etc. (provided they are not more than seven metres long), blocks, chains, ropes, cords, wedges, struts, hooks, etc., and also covers, felt sheets and straw mats sent for the protection of mineral water against cold, and the covers and mattresses for the protection of oranges and lemons from the effects of cold are forwarded by the railway free of carriage with the goods to the Consignee, and also carried free on the return journey when the things are sent back by the Consignee to the owner as Slow Goods within three months. The appliances and protective materials are delivered to the Consignee at the station of arrival with the goods and must be properly entered by the Sender in the way-bill. In returning the appliances and protective materials, the Consignee, besides showing the way-bill of the forward journey for stamping, must present a way-bill made out to the address of the owner and enter thereon, "To be sent carriage free." If this entry is absent or the way-bill for the original forward journey is not at once presented when the things are handed in for return to the owner, then the full tariff rate will be charged. In the months of November to April, inclusive, straw is conveyed free up to the weight of 300 Kg. with consignments of eggs and potatoes, if not less than 5,000 Kg. of these commodities is sent or freight paid on at least that weight. The carrying power of a wagon must not be exceeded, including the weight of the loading appliances and protective materials. When protective materials are sent with goods, if the weight of the latter is not shown separately, then freight is calculated for the gross weight of the consignment, inclusive of the protective materials loaded with the goods.

369. Non-liability of Railway for consignor's loading appliances when returned free.

As regards loss, diminution, damage, or non-observance of conveyance (or delivery) time limit in returning appliances and protective materials, the railway is responsible only when they are conveyed at the ordinary tariff rate.

COVERING AND UNCOVERING OF GOODS.

FRANCE.

370. Supply of covers

The general rule is that Consignors may supply their own covers, or covers hired from a private firm, for protection of goods carried under general regulations or conditions of special tariffs in open wagons. In case covers are hired from private firms, Consignors may, through the agency of station-masters, apply to firms approved of by the railway company, for the hire of the covers, which the company will take steps to insure at rates agreed upon in contracts made between it and the private firms. Applications for the hire of covers must be made at the same time as applications for the wagons which they are intended to protect. Covers supplied by Consignors must bear, in plain letters, indication sufficient to allow of them being returned.

371 Return conveyance of private covers.

The covers are carried free on the return journey, and are subject only to registration fees (10c.) and fiscal duty, if any.

372. Charge for Railway covers.

When, on request of a Consignor, covers belonging to the railway are used, the following charge for hire is usually made:—50c. per cover of 35 sq. metres area plus ½c. for every Km. travelled with the protected load, and with a minimum charge of Fr. 1 per cover.

373. Placing and removal of covers.

Covers used for protection of goods carried in open wagons under regulations or conditions of Ordinary and Special Tariffs must be placed and removed at the risk and expense of the owner of the goods

BELGIUM.

374. Supply of covers and charge therefor.

The railways place covers at the disposal of Consignors at a charge of Fr. 2 per cover for protection of goods charged at the rates applicable to Class 3 when they are forwarded in open wagons, and also for goods in Class 4 and those coming under Special Tariffs Nos. 2, 5, 13, 14, 15, 16, 20, 21, 22, 23, 24, 25, 26, 36, 37, and 40—with the exception of certain defined goods, such as lime in bulk. A Consignor may provide and place covers for his goods, in which case no additional charge is made.

375. Placing of covers.

The railway does not accept any responsibility for the placing of covers on load by senders unless the work is done under the special supervision of a railway agent, which must be requested on the way-bill and for which a charge of 30c. per 1,000 Kg. is made.

376. Return conveyance of covers.

Covers are returned to forwarding station by slow train on payment of a registration fee of 50c. per consignment.

GERMANY.

377. Supply of covers.

The loan of covers to a sender, at his request, is only made by the railway in so far as they are available and provided no damage to them from the nature of the goods loaded is to be feared in the judgment of the railway officials or despatching station. The spreading of covers lent to a sender lies within the option of the latter.

378. Charge for Railway covers.

When goods not given in the list of Special Tariff Wagon-loaded Goods and articles which cannot be got through the side doors of closed wagons (whether parcel or wagon-loaded goods) are to be forwarded in open wagons with a cover, because of either Traffic or Police Regulations, or Customs or Revenue requirements, or sender's express direction, then a fee as given below is charged for loan of covers by the railway. If ordinary parcel goods, goods in the general wagon-loaded class and those included in the special tariff for wagon-loads are sent in an open wagon provided with a cover, then cover hire is charged only when a sender makes a specific written request in the way-bill for the use of an open wagon with a cover.

The fee for hire of wagon covers, above referred to, amounts for every 100 Km. of the whole transport stretch begun and for every wagon to, (*a*) when two covers at most are used, M. 1·50, (*b*) for every additional cover 0·50 M.—Minimum charge, M. 2·50.

379. Demurrage charges for Railway covers.

When covers are not returned by a Consignee at latest on expiration of the unloading time limit, and further, if a sender returns unused, covers ordered by him, or does not hand over for conveyance the goods for which they were to be used until after expiration of the loading time allowance, then, for each cover and for each day of delay commenced, a demurrage charge of 50 Pf. will be made. This charge will not, however, be taken into account for the days for which demurrage is levied for the wagons on which the covers were to be or have been used.

380. Return conveyance of private covers.

Private covers sent by Consignors for the protection of wagon-loads are carried free by the railway on the outward journey with the load to its destination, and on the return journey, loose, to the station whence the goods were sent, under the following conditions:—

1. The covers must be provided with a clear and durable inscription of the name and address (railway station) of the owner.
2. The Sender must note on the way-bill that the covers are sent for protection of the load.
3. The carrying power of the wagon, inclusive of the weight of the covers, must not be exceeded.
4. The covers will be delivered to the Consignee with the load at station of destination.
5. The covers must be handed in as Slow Goods for return to the owner within three months after arrival, together with the way-bill, stamped by the despatching station, referring to the original load. On the way-bill accompanying the covers must be entered the words "Forward, carriage free."

COVERING AND UNCOVERING OF GOODS—*continued.*

Germany—*continued.*

Private wagon covers are also sent carriage free on the journey from a destination station to a departure station of goods which they are intended to cover, provided they are returned on the load to the station whence they were forwarded. In such case the covers are to be handed in as Slow Goods with a way-bill directed to the Goods Department of the station from which the goods are to be sent, and containing the following particulars:—"To be forwarded carriage free. For the purpose of covering the consignment of goods from..... (Consignor), of ..... (address), to ..... (Consignee), of ..... (address)." No liability is undertaken by the railway for loss, damage, or delayed delivery of the covers. Covers so sent remain in the station where they are received until required for use, without payment of storage fee. On the return journey the usual conditions as to forwarding on load apply.

381. Non-liability of Railway for private covers.

6. No liability is undertaken by the railway for loss, damage, or non-observance of conveyance time limits of private covers carried free before or after being used on a load.

HOLLAND.

382. Supply of covers.

Goods in Classes "B" and "C" are carried in open and uncovered wagons, but the railways are empowered to carry them in covered wagons without their liability being affected thereby. Consignors have the right to cover goods in these two classes at their own expense, with covers supplied by themselves. In so far as covers belonging to the railway are available, and if it is not laid down in the classification that senders must provide covering for goods sent, covers may be hired to Consignors by the railway for the purpose of protecting goods forwarded in open wagons. The application, stating number of covers wanted, must be entered in the way-bill. In complying with such a request the railway, however, undertakes no liability with regard to damage arising from the risk which the sender in hiring the covers wishes to avoid.

383. Placing and removal of covers.

Covers hired by the railway to Consignor must be spread over and on the goods by the latter, and any damage caused to covers in that operation must be made good by the sender.

384. Charge for Railway covers.

The fee for hire of covers from the railway is Fl. 1·60 per cover for the first 225 Km. and Fl. 0·80 per cover for every additional 225 Km. or part.

For covers provided by a Consignor the following regulations apply:—

1. On the cover in clear and indelible letters must be shown the name and address (railway station) of the owner.

2. Covers must be entered in the way-bill and are delivered to Consignee at destination with the goods.

385 Conveyance of private covers.

3. Private covers are carried free with load on the outward journey. If, however, loose covers are ordered to a station for the purpose of covering goods to be sent from that station, then a registration fee of Fl. 0·50 is charged.

4. Covers are also carried free on the return journey on payment of a registration fee of Fl. 0·50.

When, however, covers are consigned as Fast Goods or under insurance for value or time of delivery, the foregoing favourable conditions are not applicable, and conveyance takes place only under the ordinary conditions of Express or Slow Goods in partial wagon load.

386. Non-liability of Railway for private covers.

Railways are not liable for damage or injury to private covers carried free during outward or return journey.

DENMARK.

387. Supply of covers by Railway and charge for same.

When closed wagons, or open wagons protected by a cover, are used for conveyance of goods at wagon-load rates, the State Railway makes an additional charge of 40 ore per wagon plus 10 ore for every 10 Km. or part of 10 Km. of the entire conveyance distance.

In the case of the South Funen Railway the additional charge is 30 Ore per wagon plus 10 Ore for every 10 Km. or part of the conveyance distance.

COVERING AND UNCOVERING OF GOODS—*continued.*

Denmark—*continued.*

If small goods exceed 4·8 metres in length or are exceptionally bulky the railway is empowered to load them in open wagons, which, on the request of the Consignor and at his expense, may be covered with tarpaulins, the extra charge for which is the same as in the case of covering of wagon-load goods.

The Regulations do not contain any provisions as to privately owned wagon covers.

AUSTRIA AND HUNGARY.

389. Supply of covers.

Covers for protection of goods which under regulations are forwarded in open wagons are, on written request of Consignor, provided by the railway in so far as they are available, and when, in the judgment of the despatching office, there is no fear of their being damaged by the articles to be covered.

390 Charge for Railway covers.

The charge for hire of railway covers is made per wagon irrespective of the number of covers used for each wagon and amounts to 10 Kr. for distances up to 200 Km., and 2 Kr. for every additional 100 Km. begun. This charge is made for the whole stretch of transport (except for narrow-gauge lines, for which it is calculated separately) on the basis of Kilometre distances used for calculating the conveyance time limit. When the conveyance of goods under cover is not compulsory on the railway, but is nevertheless desirable in order to comply with customs or working regulations, the fee for hire of covers is charged even when the sender has not asked that the goods shall be covered.

391 Conveyance of private covers.

The following conditions apply to the conveyance of wagon covers supplied by consignors:—

(1.) Only such covers as bear the name and address (railway station) of the owner in permanent and legible characters are admitted; (2.) the covers when protecting a load are carried free. On the return journey, when the covers are sent back within three months by Consignee to the Owner, as Slow Goods, addressed to the original forwarding station, a charge of 40 H. per cover, inclusive of handling expense and Hungarian Transport Duty, is collected by the railway sending the covers back. Privately owned covers protecting goods during transit are delivered at station of destination to the Consignee along with the goods. The Consignee must, when returning the covers, besides showing the way-bill of the original forward journey, present a way-bill made out to the address of the Owner and including an entry "To be carried at reduced rate." If this entry be omitted or if the way-bill for the original forward journey is not at once presented when the covers are being returned, then the full tariff rate is charged.

PRIVATE GOODS WAGONS.

FRANCE.

392. Use of private wagons.

The owners of private branches, and even other consignees, may be authorised by the railway companies to use, if they prefer, their own carrying stock, but the companies are not obliged to accept this strange stock. Private undertakers let out this special stock to those requiring it, and ensure the transport at their risk. The owners of private branches have not to pay housing or location charge for these vehicles. The companies make for all traffic conveyed in privately owned wagons an allowance of 2c. per Km. per wagon. Some of the railways charge for the return of the empty wagon, but reserve the right to use the stock, allowing the owner 2c. per Km. per wagon so used.

393. Loading and unloading.

The regulations as to loading and unloading wagons belonging to the railway apply also to wagons belonging to private individuals; but for the latter, the demurrage fees in respect of delay in loading or unloading are only one-half the ordinary charge—*i.e.*, 5 Fr. per wagon for each of the three first

PRIVATE GOODS WAGONS—*continued.*

France—*continued.*

periods of twenty-four hours, and 6 Fr. per wagon for every adidtional period of twenty-four hours, instead of 10 Fr and 12 Fr., respectively, charged for the wagons owned by the railway.

394. Reduction in rate in certain cases.

On the Nord line, under special Tariff No. 2, consignments of oats (30 T. wagon-loads), oil seeds, poppy and arachide seeds (35 T wagon-loads), rice (unshelled rice, 35 T wagon-loads), wheat, maize, barley, "meslin," buck-wheat, and rye, loaded in sacks or in bulk, in 40 T wagons, supplied by consignors or consignees, and entering or leaving over points (from or to conceded lines connected with the system or private branch lines joined by points), a reduction of rate (Table E) is made of 5 per cent. plus as many times 1 per cent., as there are 40 T wagons, in the consignment, with a maximum of 16 wagons. The reduction does not extend to Accessory Expenses. The number of wagons serving as basis for calculating the reduction to be applied may comprise all the wagons forwarded simultaneously by the same consignor from one station to several consignees served by the same arrival station.

395. Return of empty wagons.

Wagons used as above described sent back empty to the point from whence they were sent loaded are conveyed free, and are subject only to registration and fiscal fees. Wagons returned empty to a point other than the one whence they were forwarded when loaded or sent empty to take in a load are rated as follows:—Up to 200 Km., per Km., 20c. per wagon; over 200 Km., per Km., in addition, 12c. per wagon.

Free transit is allowed in those two cases for a distance equal to or less than the distance travelled with load upon the Nord system. When the distance travelled empty exceeds the distance travelled when loaded the additional distance will be charged for at the rates above. The abatement is made by way of refund on production of the outward and return receipts of not more than six months' date.

396. Housing fee.

When empty wagons remain in a station in consequence of stoppage of work, the persons or firms in whose name they are registered must pay a stationing fee of 50c. per vehicle per day. The railway has the right to send such wagons to any neighbouring station they think fit for stationing. Wagons belonging to private individuals, and wagons hired to them by the company are free of branch-line fees, and are not subject to indemnity for delay (demurrage).

BELGIUM.

397. Use of private wagons.

Certain vehicles used for special goods are privately owned.

398. Reduction in rate when private wagons used.

Reduced rates, which vary according to description of goods carried and length of haul, are allowed when privately-owned wagons are used. The reduction is usually by a class.

GERMANY.

399. Use of private wagons and housing.

Wagons specially fitted for conveyance of certain goods, and the use of which is reserved to private individuals, whose names are printed on the wagons, are housed by the railway administration. Tank or cistern wagons are included, and the regulations define the fluids that may be carried in them. Only the following goods are accepted for conveyance with other private goods in private wagons, viz., those of an unusual weight or shape, and goods of a perishable nature or with other peculiarities which require wagons of a special design or fitting, such as beer, butter, manure (except artificial), ice, fish, fresh meat, fruit and vegetables, cheese, margarine, milk, wet grains, etc.

400. Conveyance of empty wagons.

Empty private goods wagons are forwarded free of charge. A charge is, however, made for forwarding empty wagons for purpose of housing them, or changing their station.

401. Charges for goods conveyed in private wagons.

Goods conveyed in private wagons are charged actual weight and at the rate of the class to which they belong, but provided that for tank wagons the minimum charge shall be as for 10,000 Kg. per wagon and that, if the dead weight of the wagon used is

PRIVATE GOODS WAGONS—*continued.*

Germany—*continued.*

greater than the ascertained taxable weight of goods, then one-third of the greater dead weight of the wagon is to be added to the taxable weight of the goods, and provided that for private wagons, other than tank or cistern, the minimum charge shall be as for 2,000 Kg per wagon, according to the appropriate separate parcel class, but, if the dead weight of the wagon used exceeds 15,000 Kg., and the taxable weight of the load is less than that, then one-third of the wagon weight in excess of 15,000 Kg. is to be added to the taxable weight of the load, unless the load is more than 15,000 Kg., in which case one-third of the difference only between weight of load and wagon is added to the taxable weight.

HOLLAND.

402. Use of private wagons.

Private wagons are used for conveyance of oil (tank wagons), beer, and street manures by slow train and for Fish by fast train.

403. Charges for goods conveyed in private wagons.

There is no reduction made in rates when private wagons are used.

DENMARK.

404. Use of private wagons.

On the State railways some senders, of perishable goods especially, have their own vehicles.

405. Reduction in rate when private wagons used.

The rates charged for conveyance of goods in private wagons are the usual or ordinary ones, but the senders get an abatement or allowance of from 1 to 2 ore per Km. of the distance run by such wagons loaded.

On the South Funen Railway there is only one case of wagons privately-owned. When these are used, the owner gets an allowance of 2 ore per Km.

AUSTRIA.

406 Use of private wagons.

In the wagon sheds of the Austrian State railways wagons belonging to various private shippers are accommodated, particularly those intended for conveyance of beer, petroleum, and spirits (tank wagons).

407. Charges on goods conveyed in private wagons.

Tank wagon-loads are treated same as in Germany as regards charging, no allowance being made for private ownership. Private wagons of other descriptions are subject to special agreement, in which, as a rule, freight is charged (at ordinary rates) on a minimum weight.

408. Return of empty wagons.

Private wagons are returned free over an equal length of the railway by which conveyed loaded, within a period of two months.

HUNGARY.

409. Use of private wagons.

Certain special wagons are privately owned, especially tank wagons for petroleum, alcohol, etc.

410. Charges for goods conveyed in private wagons.

No reduction is made in rates when private wagons are used.

REFRIGERATOR VANS.

FRANCE.

411. When used and by whom provided.

Provisions may be conveyed over the Paris, Est, Etat, Midi, Nord, Orleans, Ouest, and Paris-Lyons-Mediterranean systems in refrigerator wagons, supplied by consignors or consignees, or in flat trucks hired out by a railway company, and equipped with ice chests by the hirers.

412. Admission by Railway of private refrigerator wagons

The transport of provisions in private or hired refrigerator wagons is subject to the general and particular conditions of the tariffs applied, in so far as the latter are not contrary to the following general regulations:—

Refrigerator wagons must be registered by one of the six large French railway companies, by the State railways, or by a foreign railway company whose

REFRIGERATOR VANS—*continued.*

France—*continued.*

rolling stock is allowed over the French system, and this registration renders the persons or enterprises in whose name it is obtained, liable to the railways for the admission, circulation, loaded or empty, upkeep, storage, etc., of the refrigerator wagons, under the terms of the regulations provided.

Plans of vehicles and conditions of construction to be submitted for approval to the railway under which it is desired to register.

Applicants to give railways the means of fulfilling these conditions notably as regards materials employed in construction. Expenses connected with this control are borne by the applicants.

When refrigerator wagons are intended to run over several systems, they must be registered under the minimum loading gauge of the big French systems, and must in all cases comply with the terms of the Convention of Berne with regard to rolling stock.

Refrigerator vans must comply with all the conditions prescribed by railways over whose systems they are to run, for admission of vehicles to fast trains, and must be supplied with all the fittings (continuous brakes, heat conduction, electric installation, or connections, etc.). In the case of wagons fitted with screw brakes, the apparatus must be placed in a compartment accessible on both sides of the line, and in which the brake man can sit down or stand up.

The springs, axles, oil-boxes, wheels, brakes, etc., must possess all the guarantees of safety required by the railway in its new rolling stock.

The railway reserves the right of refusing or having replaced, at any time, portions, the safety of which is not sufficiently guaranteed.

Refrigerator vans must bear on each side inscriptions showing names of persons or enterprises in whose name they were registered, the name of the railway admitting them to circulation, and that of the station to which they are attached, the tare, maximum load, number, and, if necessary, the nature of the goods for which they are specially intended.

Refrigerator vans, the tare of which will exceed 12,500 Kg. will be subject to the tax of 10c. per ton and Km., over and above the rate charged for the goods carried in it, for the excess tare weight.

Refrigerator wagons are registered and admitted to circulation only after their acceptance by the railway to which they are presented. Reasons for refusal are given in case of dispute as to acceptance.

Persons and firms desiring registration must state each system, both French and foreign, over which they wish the van to run. If found satisfactory, the words "Accepted for traffic over the systems of . . ." is printed on the wagon in plain characters.

In case of changes in the conditions of admission of fast transit vehicles to one of the systems named such modifications or additions are made at the expense of the persons or firms registering the wagons. Should the parties concerned refuse to carry out this work, then the inscription on the wagons in question is modified accordingly.

413. Regulations as to circulation and upkeep of private refrigerator wagons.

Refrigerator vans are to be handed over to the railway in good running order, with their oil-boxes full.

Consignor and consignee must report, together with the railway's agents, at stations of departure and arrival, the state in which the vans are received or delivered by the railway, and, in the absence of a contradictory report, the statements of the railway's agents are to be accepted.

The railway's agents are empowered to refuse to allow refrigerator vans to circulate if not sufficiently secured.

In course of transit, refrigerator vans are inspected by the railway's servants, like other rolling stock.

Oil is added during transit by and at the expense of the railway.

Persons or firms registering refrigerator vans must keep the same in good repair.

Upkeep of parts essential to safety to be done exclusively by the railway in whose name wagons are registered.

If a van requires repairs urgently during transit such repairs are done by the railway on whose system the van happens to be at the time and at the expense of the persons or firms in whose name the van is registered. The net cost of such repairs is charged, plus additional cost of transport from the place where the damage occurred to the workshops, and from thence to the station where the van is once more put into service.

In the case of parts of refrigerator vans which are different to the parts of vans belonging to the railway with which they are registered, the parties registering vans must hold a certain number of such parts in readiness for the use of the railway. These conditions apply in all cases to axles, even when vans are of the type adopted by the registering railway. Transport of such parts is at the rates of commercial tariffs.

If it is necessary to tranship goods, the expenses of the operation are added to cost of transport.

Wagon marks may not be altered, and no change made in accepted wagons without sanction of the registering railway.

No indemnity is payable by the railway for wagons stored during repair, but repairs must be completed as rapidly as possible.

Refrigerator vans sent to the railway shops, either for repairs or inspection, are carried at slow speed, and at the rate of 10 centimes per wagon per Km. to and from the shops at the expense of owners. This charge is not made when damage is due to a fault of the railway.

Goods may not be admitted to station until refrigerator vans have been placed at loading point.

414. Transport of goods in private refrigerator wagons.

Loading and unloading of refrigerator vans are effected by consignors and consignees at their own risk, and at the places designated for the purpose by the station authorities. A sum of 30c. per ton for each operation of loading or unloading is accordingly deducted from cost of transport, including accessory fees.

Each of the operations of loading and unloading must be effected within six hours. This term, in the case of loading, runs from the time when the advice that wagons have been placed in readiness at station of departure was delivered to consignor, and in the case of unloading, from the time when advice of arrival of wagon was delivered to consignee. These advices may be sent by telegraph, telephone, telephoned message, or express, subject to a fee of 15 centimes.

Telephonic messages are confirmed by entry in a special register kept by the company.

If consignor or consignee or their repreesentative is present at arrival of train conveying the full or empty wagon, or if he has given general instructions, in writing, to the effect that he is not to be advised of arrival, the advice note will not be sent, and the term will run from the time when the wagon was placed, ready for loading or unloading respectively.

Transport of refrigerator vans is only accepted for one single consignee to one destination.

Consignors must seal outer doors and openings of wagons.

415. Charge for conveyance of empty refrigerator wagons.

Rates for empty refrigerator vans, returning or outgoing:—

1. Fast transit, 20c. per wagon per Km.
2. Slow transit, free, on payment of registration fee and receipt stamp.

416. Rates for goods carried in refrigerator wagons.

Provisions carried in refrigerator vans are taxed at rate of fast or accelerated tariffs, and at rates of slow transit tariffs, under which transport in refrigerator vans is allowed.

417. Weight charged for.

The rate is charged on the weight of the goods, with minimum of 4,000 Kg. per refrigerator wagon, except in the cases stipulated in the tariffs for transport in refrigerator vans.

418. Ice carried in refrigerator wagons.

The ice contained in the reservoirs is carried free, on condition that the consignee of the goods does not take delivery of it.

419. Allowance made in cost of transport of private refrigerator wagons.

A deduction of 0·02 Fr. from the cost of transport is allowed per refrigerator van and per Km. for the distance corresponding to the rate applied to refrigerator vans circulating, either loaded or empty, and either returning empty or going to take up load.

This allowance is made to consignors or consignees who have fulfilled the conditions with regard to registration, etc.; it is also made to firms leasing out refrigerator vans, if such firms have registered their vans under the same conditions.

REFRIGERATOR VANS—*continued.*

France—*continued.*

Nevertheless the allowance is not made:

1. In the case of consignments carried in wagons hired from the railways.

2. In the case of empty refrigerator vans conveyed free.

3. In the case of refrigerator vans registered by foreign railways.

420. Demurrage on private refrigerator wagons.

When the periods fixed either for loading or unloading of wagons, have expired, a stationing fee (demurrage) is charged per wagon by the railways, as follows:—

For the first delay of twenty-four hours, 5 Fr.

For each subsequent indivisible period of twenty-four hours, 6 Fr.

421. Storage of unused private refrigerator wagons.

Should empty refrigerator wagons, in consequence of lack of work, remain in a station, the persons or firms in whose names they have been registered must pay a fee of 25c. per vehicle and per day.

The railway may direct these wagons to be placed at any convenient station.

Their conveyance to that station is free, and is subject to no allowance.

422. Fish traffic carried in refrigerator wagons

Fresh shell-fish, crustaceans, oysters, and fish may be carried in refrigerator or ice wagons supplied by consignors or consignees or hired from one of the railway companies. Consignments are charged at a minimum weight of 3,000 Kg. per wagon, but the consignor may load with the principal consignment other consignments, to be discharged at intermediate stations. Such additional consignments are, however, only accepted for stations where the train conveying the refrigerator wagon delivers provisions. The consignor or his representative must open and close the doors of the refrigerator wagon on departure and arrival and at intermediate stations. If the empty weight of the refrigerator wagon is more than 12,500 Kg. the charge for the excess of dead weight, fixed by the preceding special regulations, will be added to the charge for the principal consignment.

423. Notice to Railway of intended use of refrigerator wagons.

When a refrigerator wagon is to be used, under the terms of the preceding general regulations, the owner of the wagon must notify the station six hours before departure of the train designated for conveyance of the goods. This wagon will be stationed, and will pay the fees, provided, if, for any cause not attributable to the railways, it cannot be forwarded by the train designated. When the wagon has been unloaded at the destination of the principal consignment it will be stationed unless the owner requires that it be put out of use, sent to another station, or used for another consignment.

424. Charge for conveyance of empty wagons.

Refrigerator wagons returning empty or going to take up load and conveyed by fast train are charged as follows:—

Up to 200 Km., 20c. per Km. per wagon.
200 to 300 Km., 12c. per Km. per wagon (added).
300 to 400 Km., 10c. per Km. per wagon (added).
Over 400 Km., 4c. per Km. per wagon (added).

The foregoing special regulations as to fish traffic are contained in *Chaix* edition of October, 1906, and apply to the Etat, Midi, Orleans, and P.L.M. systems, but confined to one year on the Orleans and P.L.M. connections from date of being put into effect, unless the time be extended by public notice.

425. Fruits and vegetables carried in refrigerator wagons on Nord Railway.

On the Nord system, mushrooms, gherkins, fruits (such as lemons, strawberries, olives, oranges, raisins, etc.), vegetables, and melons, when sent in refrigerator wagons supplied by consignor or consignee,

REFRIGERATOR VANS—*continued.*

France—*continued.*

or in refrigerator chests fixed in wagons *hired from the company* are subject to the conditions first described herein, except as regards the following provisions:—

426. Charge for conveyance of empty refrigerator wagons.

1. Empty refrigerator wagons returning or going to take up load are conveyed by *fast transit* up to 200 Km. at 20c. per Km. per wagon, and for each Km. over 200 at 12c. per Km. per wagon, and by *slow* transit, gratis, on prepayment of registration and receipt stamp fees, and subject to conditions of slow transit tariffs.

427. Conveyance of fittings used with fruit and vegetable traffic.

Fittings which are to be, or have been, used on arrival of provisions are carried free.

428. Rebate on refrigerator wagons used.

2. A deduction from cost of transit of 2c. per Km. per refrigerator wagon is allowed over the distance corresponding to the tax applied to refrigerator wagons travelling loaded over the railway; the same reduction is allowed for refrigerator vans travelling empty, and which are subject to a charge for conveyance.

429. Regulations for hire of flat trucks for conveyance of owner's refrigerator chests.

3. The company hires out flat trucks, which consignors can arrange for conveyance of produce in refrigerator chests, the hiring fee being 25c. per truck per day.

4. The time for which such trucks are hired must not be less than thirty consecutive days.

5. The trucks are hired on presentation beforehand of an application from consignors or consignees to the nearest railway station. This application must be accompanied by a plan showing the kind of appliances to be installed on the trucks, the dimensions and weight of such appliances, and the date on which the trucks are to be placed at applicant's disposal for fitting up. When fitting is completed, the station agent takes the necessary steps to obtain the company's sanction to put the truck in circulation, which is only given after it has been labelled "Registered for circulation," and marked with the weight of the vehicle, including the fittings.

6. The hiring fee begins from the day on which the trucks are placed at disposal of the applicant for the purpose of fitting up, and it ceases from the day on which the trucks are returned in the state in which they were placed at the hirer's disposal—that is to say, without fittings. Hiring fees are collected monthly by the stations which receive the application for the wagons.

7. The foregoing regulations (1 and 2) relative to refrigerator wagons apply also to the trucks hired out, as defined in paragraph 3-6.

BELGIUM.

430. Refrigerator wagons not used.

Refrigerator wagons are not used in Belgium.

431. Supply of ice for refrigeration

Ice reservoirs and the ice supplied by the sender to accompany freights of beer, are carried free in ordinary wagons with a complete load of at least 5,000 Kg. or on payment for that weight In no case may the total weight of the barrels of beer and the ice and reservoirs or containers exceed the normal tonnage of the vehicles employed. Consignors are bound to state in the way-bill the weight of the barrels of beer, to be used in calculating the freight. When this is not done, freight is charged on the gross weight of the load, including the ice and reservoirs. When the return of ice and reservoirs to the point of departure is effected by slow train, it is subject to a registration fee (only) of 50c. per consignment.

REFRIGERATOR VANS—*continued.*

GERMANY.

432. Refrigerator wagons not used.

Refrigerator vans are not used in Germany.

433. Supply of ice for refrigeration.

Ice required for protection of perishable produce (in transit in ordinary wagons) is not supplied by the railway.

In the transit of beer, fresh fish, fresh fruit, and other defined commodities, it is provided that ice for keeping the goods in cool condition and ice tanks up to 5 per cent. of the actual weight of a consignment are forwarded carriage free and returned free. The ice tanks sent with wagon-loads of beer and the ice required to preserve the load during transit (the percentage not being defined) are similarly dealt with. In such cases no responsibility is undertaken by the railway for loss, damage, or delayed delivery of the protective materials. For wagon-loads of beer the carrying power of the wagon, inclusive of the protective materials, may not be exceeded. The consignor must state the taxable weight of the consignment in the way-bill, otherwise freight will be calculated for the gross weight of the consignment, including the protective materials loaded with the goods.

HOLLAND.

434. When used and by whom provided.

On the Dutch State and Dutch Central Railways, butter is conveyed by refrigerator vans owned by the company, the necessary ice being supplied by the company.

435. Charge for ice supplied by railway.

A special additional charge is made in such cases of Fl. 0·20 per 50 Kg.

Railways are, however, not bound to carry goods in refrigerator wagons nor liable when foreign railways, on account of incomplete wagon-loading, send the goods through in ordinary wagons.

Cheese is conveyed in special vans (painted white, but not refrigerated), for which no extra charge is made.

436. Ice supplied by sender.

When beer is sent in wagon-loads consignors may supply and load with the traffic ice in reservoirs for keeping it cool. The latter is carried free on outward journey and also on the return journey, but subject for the latter to a registration fee of Fl. 0·50. The carrying powers of the wagons used may not be exceeded by the total weight of a consignment, including ice and reservoirs; and consignors must enter the weight of the latter in the way-bill separately from the weight of the beer, in default of which freight is calculated for the gross weight, including the ice and reservoirs.

DENMARK.

437. When used, and by whom provided.

Refrigerator vans, white-painted wagons, and ordinary wagons owned by the railway are used for conveyance of perishable produce.

438. Supply of ice for refrigeration.

The railways supply the ice for refrigeration, charging for it 20 ore per 100 Kg., or part thereof of consignment weight, with a minimum charge of 8 kroner and maximum of 12 kroner per wagon.

AUSTRIA.

439. When used, and by whom provided.

The State railways have special wagons of their own for transport of milk and meat only. Those for the former traffic are provided with stands and pierced sides, and, for the latter, are provided with refrigerating apparatus.

440. Supply of ice for refrigeration.

The ice for refrigerator wagons is obtained by the railway, from a private firm, and supplied to consignors of traffic at a fixed cost, which is collected by the railway with the transit charges. The rate of cost is according to length of journey to be made, and varies from 9 to 15 Heller for 10 Kg of meat conveyed. Regulations as to conveyance of ice are the same as in Hungary—shown hereafter—as regards fruit, vegetables, and other perishable goods—the only provision is that they must be forwarded in ventilated wagons.

REFRIGERATOR VANS—*continued.*

HUNGARY.

441. When used, and by whom provided.

Perishable produce is transported in specially constructed vehicles belonging to the State railway.

442. Supply of ice for refrigeration.

Ice for preserving goods during transit must be provided by the consignors. Ice sent by a consignor with beer in *wagon-loads* of at least 5,000 Kg. and the necessary ice-containers are carried free of charge. The same conditions as to ice apply to beer sent in consignments of at least 2,500 Kg. per way-bill in specially fitted wagons. If fresh meat and dead poultry are sent in consignments of at least 2,500 Kg. per way-bill, then the quantity of ice which the railway judges to be sufficient is loaded and conveyed with the ice-containers, free of charge. The railway is not liable for loss, damage, or delay on the return journey. When fresh meat and dead poultry are conveyed as fast goods in smaller quantities than 2,500 Kg. but not less than 1,500 Kg., then the transit of ice used is charged for at the reduced fast goods rate. The tonnage of a wagon must not be exceeded, including the weight of protective materials used. If, when protective material is sent with goods, the weight on which the calculation of freight is to be based is not given in the way-bill, then freight is calculated for the total gross weight of the consignment, inclusive of the protective materials loaded with the goods.

TIME LIMITS FOR CONVEYANCE.

FRANCE.

443. Fixing of time limits

Traffic of all kinds by slow transit is forwarded, carried and delivered from station to station, within the terms fixed by Ministerial Decrees, of which the following are extracts:—Traffic will be forwarded during the day following that on which it is consigned. The duration of the journey in the case of slow transit is calculated at the rate of twenty-four hours per indivisible fraction of 125 Km. Surplus distances up to and including 25 Km. are not reckoned.

444. Limits for slow transit.

On about seventy specified sections of lines for partial or complete journeys in either direction, the duration of transit is reduced to twenty-four hours per indivisible fraction of 200 Km. for slow traffic charged at the rates of and classified in Series 1, 2, 3 and 4 of the General Tariffs of each company, and in general for all goods, provisions, and objects of any kind which, though classified in series other than the above, are charged at the rates of Series 4 on request of the consignors. Traffic charged as above, when passing directly from one of the specified sections to another specified one on the same railway, is likewise carried within twenty-four hours per indivisible fraction of 200 Km. as if the conveyance were effected upon one and the same section. When slow traffic is carried successively over sections on which it would be entitled to the accelerated transit above referred to, and over other sections on which accelerated transit does not apply, the total time of transit is calculated by adding the partial periods applying to each of the sections under the different time scales, provided, however, that the total period so arrived at does not exceed the time fixed for the whole journey under the ordinary scale.

445. Prolongation of time limits for goods passing from one railway to another.

For traffic passing from one railway system to another, through a station common to both, the *forwarding* (*i.e.*, despatch during the day following that on which goods are consigned) will be counted only from the station of origin, and *once only*, but a period of one day is allowed for transmission from one railway system to another, the time of transit for *each* company remaining fixed as under the regulations given above. The time of transmission between railway systems terminating in the same locality in two separate stations connected by railway lines is two days, but, with this exception, the conditions named in the preceding sentence apply in such cases. (See separate table of times of Slow Transit attached).

Consignments of Slow goods are placed at disposal of consignees on the day following that of their actual arrival at station of destination.

TIME LIMITS FOR CONVEYANCE—*continued.*

France—*continued.*

446. Prolongation of time limits under special tariffs.

With regard to Slow Transit traffic forwarded under the terms of Special Tariffs, in the absence of anything to the contrary in the tariffs, the railways may prolong by five days the regulation periods, without this supplementary period entailing any action for indemnity. When several special tariffs (local or through) are consolidated or combined, the extensions of time specified in those tariffs are not cumulative. The longest of such extensions is alone applied.

447. Prolongation of time limits when Consignor delays loading of wagons.

In the case of wagon-loads of slow goods consigned under the terms of Special Tariffs, when a consignor has not indicated in his application for wagons the date on which he decides that they should be placed at his disposal, the time of transport is reckoned from the day after the receipt of the application, provided it was received before the station closed. In case specific dates on which wagons will be required are indicated in a consignor's application, the transport time runs from each such indicated date, provided the first of them is subsequent to that of receipt of the application.

The times fixed as above are augmented by the delays which may occur in loading wagons if the latter has not been effected by the consignor within the times fixed by regulations.

448. Calculation of time limits for private siding goods.

For wagon-load goods destined for private branch lines or sidings, a railway company's time of transit on its line expires at the moment when it has placed wagons conveying goods at the junction for disposal of the owners of the private sidings. Conversely in the case of goods coming from private sidings the railway company's transit period runs from the moment that the wagons are placed at its disposal for conveyance at the point of junction with its line. As regards goods in less than wagon-loads (*i.e.*, parcel goods), which have to be transhipped at the railway station nearest to a private siding, or at the junction with it, the forwarding and transport periods are calculated as if the said goods were delivered or received in such station or junction.

Tables of time of transit of Slow Train Traffic from Station to Station.

NOTE.—The foregoing tables present directly the calculation of times for consignments by Slow transit on one and the same system.

TIME LIMITS FOR CONVEYANCE—*continued.*

France—*continued.*

(It may, however, be used to calculate the times for consignments carried over several lines conceded to different companies and connected without break of continuity with each other. In this case the method of procedure is as follows:—Count separately for each distinct railway the time shown for "Conveyance," add to the total thus obtained *one* day for forwarding at the original departure station, and increase this last total by one day for every junction connecting the distinct railways. The gross total obtained by means of this calculation is the result desired—not including day of consignment and day of delivery. The Circle Railway round Paris is, in all respects, considered as a distinct line, except that in the case of through transit only one day of supplementary time is allowed for the two junctions connecting the Circle with the other railways. The times shown in the foregoing tables do not include the period required to comply with Customs formalities.

Many of the Special Tariffs contain provisions varying the normal time limits allowed for conveyance. These variations are given hereafter where such Special Tariffs are used for purpose of comparison with Irish rates).

449. Time limits for fast transit.

Traffic consigned by fast transit is sent off by the first passenger train comprising carriages of all classes and corresponding with the destination of the traffic, provided that it has been presented for registration at least three hours before departure of the train in question, in default of which it will be held over until the next departure. This regulation is not, however, obligatory in the case of Express and Mail trains on which the companies allow, in exceptional cases, second and third-class carriages and which have been expressly designated either in the rate books submitted for Ministerial approval of alterations in the service or in the notices acquainting the public of the train service. The railway companies may, at their own request, be authorised to admit small parcels to their Express or Mail Trains proper, provided that the same treatment is accorded to all consignors under the same conditions. For fast train traffic passing from one railway system to another, through a station common to both, the time allowed for transmission is three hours reckoned from the arrival of the train bringing them to the junction, and re-forwarding the traffic from that point is effected by the first passenger train comprising carriages of all classes leaving after the expiration of that term. The time allowed for transmission between railway systems ending in the same locality in two distinct stations communicating by rails will be six hours, not including the time during which the stations are closed. (This time is from 8 p.m. to 6 a.m. in summer, and from 8 p.m. to 7 a.m. in winter, except in cases where special regulations are made relative to produce, etc., for market). Special regulations (not given) apply to transmission over the Circle Railway between Railway termini in Paris. Longer terms than the foregoing may be granted by the Minister of Public Works in the case of various stations on each railway system, on the application of the General Traffic Inspectors and with consent of the companies provided such term does not exceed eight hours.

Consignments of fast train traffic are placed at disposal of consignees at station of destination two hours after arrival of the train by which conveyed.

BELGIUM.

450. Time limits for slow transit.

Slow goods are delivered at their destined station within a limit of four days, beginning with the first hour of the day following that of acceptance, in so far as the application of Special Tariffs is not subject to a prolongation of the time allowed for conveyance. The regulation transit period is held to be observed for goods to be delivered at domicile by the railway, by their presentation at consignee's address, and for goods to be delivered at a railway station by the sending of an advice of arrival to the consignee or by the handing of this advice to the postal or telegraphic service, and all this before the expiration of the before-mentioned time limit. When a consignment is

TIME LIMITS FOR CONVEYANCE—*continued.*

Belgium—*continued.*

sent "bureau restant" to a consignee whose address is not given on the way-bill, the time limit of transit is held to be observed when, before its expiration as above defined, the notice advising arrival is drawn out and held at the disposal of the party concerned.

451. Prolongation of time limits. The time allowed for transport is increased by twenty-four hours when it includes a Sunday or legal holiday, and by forty-eight hours when it includes both. The legal holidays are, 1st January, Ascension Day, 21st July, 15th August, 1st November, Christmas day, and Easter and Whit Mondays.

452. Suspension of time limits in certain cases. The time limits are entirely suspended during the course of Customs, Fiscal or Police formalities and also during any temporary interruption of transit preventing the commencement or continuation of the transport, not resulting from any fault imputable to the railway.

453. Time limits for express transit. Express consignments (under Tariff No. 1) are despatched by the first passenger train arranged by the railways and leaving at least half an hour after acceptance of the goods for transit at the station of departure. They are delivered at the arrival station at the same time as the passengers, or in case of a connection, by the next train arranged. Packages which are unwieldy or difficult to load, or which may impede the progress of the passenger train are not admitted to such trains and are consequently not accepted under the conditions of Tariff No. 1, *i.e.*, as Express goods. Packages presented for transit at town offices of railways are forwarded to the station of departure by the first cart or porter leaving within half an hour at least after acceptance. In the case of Express goods (as with Slow goods) not deliverable by the railway at the domicile, the transit period is observed when, before its expiration, the advice of arrival of the goods has been entrusted to the post or telegraph or has been sent to the consignee.

454. Time limits for fast transit. Consignments by Fast transit (intermediate between Slow and Express transit) under Tariff No. 2 and deliverable at domicile by the railway are forwarded to the consignee after the expiration of the following time limits reckoned from the first hour of the day following that of their acceptance for transport:—For prepaid packages of 5 Kg. and under (with the exception of dangerous packages, which are not allowed in passenger trains), 24 hours; for all other packages, 48 hours. In the case of goods not deliverable by the railway at the domicile, the termination of the time limit is observed as for Slow and Express goods.

GERMANY.

455 Publication of ordinary time limits. Conveyance time limits must be published in the tariffs and the following maximum periods (which are those actually in force, except as otherwise provided in special tariffs) must not be exceeded:—

456. Time limits for fast transit.

For Fast goods—

Time of forwarding, ...	1 day.
Time of transport for every 300 Km. or part thereof, ...	1 ,,

457. Time limits for slow transit.

For Slow goods—

Time of forwarding, ...	2 days.
Time of transport—up to 100 Km., .	1 day.
Time of transport—for every 200 Km. or part thereof after first 100 Km., .	1 ,,

When traffic passes from one railway to another in connection with each other, then the period of transit is calculated on the total distance between the station of consignment and of destination, while the time allowed for forwarding is reckoned once only irrespective of the number of railway systems traversed in transport.

458. Extension of time limits in certain cases. Railway authorities may, with sanction of the Board of Inspection, fix additional periods in the following cases:—(1) for goods which the railway undertakes to carry (*i.e.*, cart) to or from places situated off the railway line; (2) for unusual traffic conditions, when it is admissible to fix the additional periods in exceptional cases with the sanction of the Board of Inspection, and (3) for transmission to lines of a different gauge.

TIME LIMITS FOR CONVEYANCE—*continued.*

Germany—*continued.*

459. Publication of extended time limits. Additional time allowances must be properly made public. It must plainly appear from the public notices by what authority they have been granted or whether sanction is reserved.

In the latter case the sanction subsequently received must be published within eight days in a special notice. The fixing of extended time allowances is of no effect when the Board of Inspection refuses its sanction or when the sanction is not made public at the right time.

460. Time limits for slow transit. The conveyance time limits begin, except as mentioned in the sentence next succeeding, with the midnight following the acceptance of the goods together with the way-bill by the railway, and is held to have been observed when before its expiration the goods have been delivered by the railway to the consignee or to such person to whom delivery can be legally affected at domicile or place of business, or, in case such delivery is not agreed to or is expressly forbidden, if within the said period, written notice of arrival of the goods is posted to consignee or actually handed to him by other means. When, however, a railway accepts for transit, wagon-loads of traffic which cannot be despatched immediately, it may, with consent of the authorities, arrange with the sender that the conveyance time limits shall date from the day of actual despatch of the goods by rail, in which case the sender must formally agree and the railway must, without delay, inform him of the date of despatch. For goods which are stored by the railway and for such goods as a consignee has requested, in writing, that notice of arrival shall not be sent to him, the conveyance time limit is deemed to have been observed when the goods have been placed ready for collection at the arrival station.

461. Suspension of time limits in certain cases. The conveyance time allowance ceases to run during Excise, Customs, or Police examination and during interruption in transit not due to the fault of the railway and by which the commencement or continuation of railway transport is temporarily prevented.

462. Prolongation of time limits. If the day following that on which goods are handed in is a Sunday or holiday, then in the case of ordinary Slow goods, the conveyance time limits do not begin until the following working day.

463. Time limits for Express transit. The conveyance time limits for *Express* goods are as follows:—

Time of forwarding, ...	½ day.
Time of transport for every 300 Km. begun, ...	½ ,,

The time limit begins for goods received during the forenoon at 12 o'clock mid-day, and for goods received during the afternoon at 12 o'clock midnight, and it is held to have been observed when the goods were forwarded as quickly as possible by the trains allotted to the purpose.

The calculation of conveyance time limits is based upon the distances given in the kilometre tables or in the station tariff tables, deduction being made of any additional Kms., which may be included for particular routes, junction lines, river passages, etc., therein.

HOLLAND.

464. Publication of time limits. Railway authorities publish in their tariffs the time of conveyance for traffic over their lines.

The conveyance time limits for Fast and Slow goods are made up of the time for conveyance and that for despatch taken together, and the following limits must not be exceeded:—

For Fast goods—

465. Time limits for fast transit.

Time of despatch, ...	1 day.
Time of transport for every 300 Km. or part thereof, ...	1 ,,

For Slow goods—

466. Time limits for slow transit.

Time of despatch, ...	2 days.
Time for transport for the first 100 Km.,	1 day.
Time for transport for every additional 200 Km. or part thereof, . . .	1 ,,

TIME LIMITS FOR CONVEYANCE—*continued.*

Holland—*continued.*

467. Prolongation of time limits.

When the goods pass from one railway to another railway connected with it, the time for conveyance is calculated according to the whole distance between the forwarding and the receiving stations. The time for despatch is counted once only, without regard to the number of railways over which traffic is to take place.

468. Extension of time limits authorised under certain conditions.

For markets or other occasions which may have an unusual effect upon traffic, the railway authorities may, with the consent of the Minister of Waterways, Commerce and Industry, or under his reservation, decree and give notice of longer time limits. Such notice must state whether sanction has been already given or is reserved. In the latter case the sanction subsequently obtained must be announced within eight days in a special notice. The extended period does not come into force if the subsequent Ministerial approval is not accorded or if it is not announced within the fixed period of eight days. The conveyance period commences at midnight after handing-in of goods and stamping of way-bill, and it is deemed to have been observed when the goods have been delivered by the railway before expiration of the time, to the consignee or at the place where he carries on his business or to the persons designated by him, or, if goods are not deliverable at domicile by the railway, when within the fixed period after arrival of the goods at their station of destination a written advice of their arrival has been posted to consignee or delivered into his hands by any other means. For goods sent "Station Restante" the conveyance period is held to have been observed when the goods lie ready for removal at the arrival station within the fixed time limits.

469. Prolongation of limits when Sundays and holidays intervene.

The conveyance period is extended not only by Sundays and holidays, but also by time necessary for carrying out Customs and Excise formalities and by the time during which transit is stopped through no fault of the railway and thus commencement or continuation of transport is temporarily prevented.

470. Conveyance time limits for parcels.

As regards conveyance period for parcels, each consignment of not more than 10 Kg. in weight handed in in the morning at a forwarding station half an hour before departure of the first train must be delivered at the station of destination on the evening of the same day, and every such consignment handed in before 12 o'clock mid-day at a forwarding station must be delivered at its destination at latest before 12 o'clock mid-day on the following day.

471. Procedure in case of obstructed transit.

When traffic over a railway is temporarily prevented by superior force or accident, the sender is not bound to wait until the obstacle to transit is removed. He can withdraw from the transit contract entered into by him, but he is bound to recoup the railway, if the cause of obstruction is not attributable to the latter, for advances made and costs incurred for loading and unloading the goods and freight over the distance already carried. When, through obstruction of traffic, conveyance over the route prescribed by a consignor or selected by the railway is impossible, but not so over another though longer route, then it is a matter for the railway authorities, due regard being paid to the Government regulations in the interests of general traffic, to decide whether it is more to the interest of the parties concerned to wait until the obstruction is removed, to carry the goods to their destination by another route at the expense of consignor or consignee, or to ask for further instructions from the sender as to the manner of forwarding his goods.

DENMARK.

472. Time limits for fast transit.

The fixed conveyance time limits are:—

For Fast goods, 24 hours, with an addition of 12 hours for every 200 Km. or part thereof that the traffic is transported.

473. Time limits for slow transit.

For Slow goods, 48 hours, with an addition of 24 hours for every 200 Km. or part thereof that the traffic is transported. For goods coming under the lowest wagon-load class and for used packages (*i.e.*, returned empties) charged at reduced rates, the conveyance period is doubled. When articles which

TIME LIMITS FOR CONVEYANCE—*continued.*

Denmark—*continued.*

cannot be loaded through the side doors of a closed wagon are sent as general goods, and when explosive goods are conveyed as Slow goods, the conveyance period is extended by eight days. The time fixed for conveyance begins at midnight, after the stamping of the way-bill, and is observed when the goods have, within the period, arrived at the station of destination, and in as far as the railway is obliged to deliver them to consignee or advise him of their arrival, when they are handed over to the person concerned or information given him of their arrival. For goods addressed "Station Restante" the conveyance time limits are observed when the goods are placed at the disposal of the consignee at the station within those limits.

474. Prolongation of time limits.

The foregoing conveyance periods are extended by twelve and twenty-four hours, respectively, for every time fiords or rivers, over which there are no regular bridges, are crossed.

The conveyance period does not include holidays, the time required for Customs or Police formalities, nor the time during which transit is stopped without any fault on the part of the railway and thus commencement or continuation of transport is temporarily prevented.

475. Extension of time limits, and publication thereof.

The Railway may, under unusual traffic conditions and with or under reservation of sanction of the authorities, temporarily extend the conveyance time limits, but public notice thereof must be given.

476. Time limits for perishable goods at slow goods rates.

The conveyance time limits for transit of easily perishable goods which the railways undertake to carry at Fast goods train speed for Slow goods rates is the same as if the traffic were carried by Slow trains, and for like traffic which the railways undertake to carry at the quickest speed allowed by the time-table (but not in Express trains) for an addition of 50 per cent. to ordinary Slow goods rates, the conveyance time limits are as for ordinary Fast goods.

477. Time limits for slow traffic under lowest tariff.

For traffic coming under Tariff 6 (*i.e.*, bones, fresh fodder, cullet, stable manure, straw, hay, clay, bog ore, sea-shells, stone, bricks, coal, sugar beet, rough timber, turf, empty barrels, etc., carried in wagon-loads) the conveyance time limits for ordinary Slow goods are doubled. If a sender wishes to have such traffic conveyed within ordinary time limits he must pay a higher rate, *i.e.*, Tariff No. 5.

478. Procedure in case of obstructed transit.

If a stoppage occurs on a line of transit and goods cannot be conveyed to destination along another route, the railway must procure fresh instructions as to disposal from the sender, who can then cancel the transit contract provided he recoups the railway in case it is not to blame, for the expenses of preparation made for conveyance of the traffic, together with the cost of handling, and must pay the freight for the distance already covered. When traffic can be forwarded by another route it is for the railway to decide whether it is in the interest of the sender that conveyance should be effected by that route or whether the goods should be held and the sender's instructions obtained. If a sender is not in possession of the duplicate way-bill, no alteration can be made as regards consignee or station of destination in fresh instructions given by him.

AUSTRIA AND HUNGARY.

479. Publication of time limits.

Conveyance time limits must be published in the tariffs, and the following maximum periods (which are those actually in force, except as otherwise provided in special tariffs) must not be exceeded:—

For Express Goods—

Time of forwarding, ...	1 day.
Time of transport—for every 300 Km. or part thereof, ...	1 ,,

480. Time limits for fast transit.

For Slow Goods—

Time of forwarding, ...	2 days.
Time of transport—up to 100 Km., .	1 day.
Time of transport—for every 200 Km. or part thereof after first 100 Km., .	1 ,,

481. Time limits for slow transit.

TIME LIMITS FOR CONVEYANCE—*continued.*

Austria and Hungary—*continued.*

Instructions as to tariff or despatch given by a sender in the way-bill are taken as an indication of the route to be followed, and the conveyance time limits are calculated for the route so indicated.

When transport passes from one railway to another in connection with each other, then the period of transit is calculated on the total distance between the station of consignment and of destination, while the time allowed for forwarding is reckoned once only, irrespective of the number of railway systems traversed in transport.

The conveyance time limits begin (except as mentioned in the sentence next succeeding) with the midnight following the acceptance of the goods, together with the way-bill by the railway, and are held to have been observed when, before expiration, the goods have been delivered by the railway to the consignee or to such person to whom delivery can be legally effected to domicile or place of business, or, in case such delivery is not agreed to or is expressly forbidden, if, within the said period, written notice of arrival of the goods is posted to consignee or actually handed to him by other means. When, however, a railway accepts for transit wagon-loads of traffic which cannot be despatched immediately, it may, with the consent of the authorities, arrange with the sender that the conveyance time limits shall date from the day of actual despatch of the goods by rail, in which case the sender must formally agree and the railway must, without delay, inform him of the date of despatch. For goods which are stored by the railway and for such goods as a consignee has requested, in writing, that notice of arrival shall not be sent to him, the conveyance time limit is deemed to have been observed when the goods have been placed ready for collection at the arrival station.

482. Extension of time limits in certain cases.

Railway authorities may, with sanction of the Board of Inspection, fix additional periods in the following cases:—(1) for goods which the railway undertakes to carry (*i.e.*, cart) to or from places situated off the railway line; (2) for unusual traffic conditions, when it is admissible to fix the additional periods in exceptional cases with the sanction of the Board of Inspection; (3) for secondary railways and for transit to railways with a different gauge; (4) when the goods have to be sent over a river where there is no bridge, or over a junction connecting two of the lines of railway participating in the transport of the goods; (5) and in addition for the passage from one railway to another or even from one line to another of the same railway administration an extension of conveyance limits may be granted, amounting to not more than six hours for Fast goods and twelve hours for Slow goods for each passage.

483. Publication of additional time limits.

Additional time allowances must be properly made public. It must plainly appear from the published notices by what authority they have been granted or whether sanction is reserved. In the latter case the sanction subsequently received must be published within eight days in a special notice. The fixing of extended time allowances is of no effect when the Board of Inspection refuses its sanction or when the sanction is not made public at the right time.

484. Suspension of time limits during Customs formalities and interruption of traffic

The conveyance time allowance ceases to run during Excise, Customs or Police examination, and during interruptions in transit not due to the fault of the railway and by which the commencement or continuation of transport is temporarily prevented.

485. Prolongation of time limits when a Sunday or holiday intervenes.

If the day following that on which goods are handed in is a Sunday or holiday, then in the case of ordinary Slow goods, the conveyance time limits do not begin until the following working day.

COLLECTION AND DELIVERY OF GOODS BY RAILWAY.

FRANCE.

486 Organisation of carting arrangements.

All the large railways have arrangements for cartage of goods at their principal stations. If goods are to be carted on arrival an entry to that effect must be made on the way-bill by the sender,

COLLECTION AND DELIVERY OF GOODS BY RAILWAY—*continued.*

France—*continued.*

otherwise they will be consigned to station only. On the Nord system, which has a total of 737 stations and halting places, cartage is organised for delivery of Slow goods at 238 of them, serving 502 cities, towns, villages or districts excluding Paris. Collection of goods is effected at only 78 of the stations excluding Paris. The rates charged for cartage vary considerably, and are apparently governed by local conditions at each place.

487. Cartage charges for slow goods in provinces.

The cartage distances on the Nord line vary from 1 Km. to 15 Km. for slow goods. The following is an analysis of the cartage rates:—

SLOW GOODS.

Distance in Km.	No. of Localities.	Rate per 1,000 Kg.			Minimum Charge per Consignment.	
		Lowest.	Highest.	Prevailing.	Lowest.	Highest
		Fr.	Fr.	Fr. Fr.	Fr.	Fr.
1	158	1·50	5·00	2·00–3·00	0·20	0·75
2	112	2·00	5·00	3·00–4·00	0·25	0·60
3	77	2·00	6·00	4·00–5·00	0·30	1·50
4	46	3·50	12·00	4·00–6·00	0·40	1·25
5	38	5·00	12·00	5·00–6·00	0·40	2·00
6	27	6·00	12·00	6·00–8·00	0·70	2·00
7	14	6·00	14·00	8·00–10·00	0·75	1·50
8	14	7·00	15·00	8·00–11·00	0·75	2·00
9	9	6·00	15·00	10·00–14·00	1·00	1·50
11	2	10·00	12·00	—	0·70	1·00
12	4	10·00	12·00	—	0·70	1·00
15	1	8·00	—	—	1·00	1·00

The conditions of cartage by Nord Railway of Slow Goods in the Provinces are as follows:—Rates are fixed per indivisible 10 Kg. The minimum rate for each locality is collected for every consignment which, at the rate of the price fixed per 1,000 Kg. would produce a less cost.

488. Increased cartage charges for certain commodities.

The following goods are charged double cartage rates:—(1.) Liquids and goods subject to double toll and Excise, except barrels and half barrels, boxes and baskets of wines, spirits, and other liquids destined to localities for which there exist special cartage rates for such goods. There are 68 such localities on the Nord system. (2.) Furniture and other goods weighing less than 200 Kg., under the volume of 1 cubic metre. (3.) Inflammable, explosive, or corrosive substances; and (4.) Pictures, statuary, art objects, and gold and silver plate.

Fifty per cent. is added to cartage rates for plate glass, the dimensions of which do not exceed 2·50 m. long by 1·50 m. broad. Plates of larger dimensions are carted only by special agreement, as are also the following goods:—Machines, vehicles, or apparatus travelling on its own wheels, hay and straw in unpressed bales, indivisible masses heavier than 1,000 Kg., goods of all kinds in bulk, objects, the dimensions of which exceed 6·50 m. in length and 2 m. in breadth. For masses in a greater weight than 500 Kg., loading and unloading of drays in the town must be effected by Consignors or Consignees at their own expense and risk. Goods in boxes, frames, crates, or trays, the unpacking of which is effected piecemeal from the dray at the Consignee's door, are subject to an additional charge of 1 Fr. per 1,000 Kg. Goods taken to domicile and not delivered owing to absence of Consignee, wrong address, or refusal, are brought back to station and charged cartage on return same as on outward journey. Time

allowances for delivery are not binding on the railway in case of overcrowding (*i.e.*, congestion of traffic).

At a few of the provincial stations there are some modifications of cartage rates for specific commodities.

489. Cartage charges for slow goods in Paris.

The Nord Railway system's scale of charges for cartage of slow goods in Paris (which is divided into two zones, consisting broadly of the districts on the right and left respectively of the Seine) is as under:—

DELIVERY AT DOMICILE.

—	Under 1,500 Kg.	Over 1,500 Kg.	
	Per 1,000 Kg.	Max. Charge.	Per 1,000 Kg.
1. *Goods in General.*			
Sent direct to Domicile—			
1st zone, ...	5·00	6·00	4·00
2nd zone, ...	6·00	7·50	5·00
Addressed to Station and carted by order of Consignee—			
1st zone, ...	6·00	7·60	5·00
2nd zone, ...	7·00	9·00	6·00
2. *Cereals.*			
Sent direct to Domicile—			
1st zone, ...	4·00	4·50	3·00
2nd zone, ...	5·00	5·25	3·50
Addressed to Station and carted by order of Consignee—			
1st zone, ...	5·00	6·00	4·00
2nd zone, ...	6·00	6·75	4·50
Flour.			
Sent direct to Domicile—			
1st zone, ...	4·00	3·75	2·50
2nd zone, ...	5·00	4·50	3·00
Addressed to Station and carted by order of Consignee—			
1st zone, ...	5·00	5·25	3·50
2nd zone, .	6·00	6·00	4·00

4. *Parcels containing Perfumes, Essences, Varnish, and other Liquids* subject to toll:—In bottles of less than 3 Decilitres Fr. 15·00 per 1,000 Kg.

N.B.—When cartage is prepaid on departure, the charges for zone 1 are always applied irrespective of the zone in which the Domicile is situated.

Collection at Domicile:—

	Fr.
Rate per 1,000 Kg., ...	5·00

Cartage to Station of Goods delivered in branch offices of the railway:—

Rate per 1,000 Kg., ...	5·00

Cartage from Domicile or Branch Offices of Export Goods:—

Rate per 1,000 Kg., ...	3·50

All the foregoing Paris cartage rates are governed by the general conditions which follow:—The time allowed for collection or delivery of goods in Paris is two days, exclusive of holidays, but this may be extended in case of overcrowding which does not arise from any act of the railway, and which is notified to the Superintendent (Commissaire de Surveillance Administrative), twenty-four hours in advance, together with a report in proof of the fact. In case of collected goods and delivery of those originally addressed to station, the time allowance of two days runs from time of receipt of the written order for cartage. Goods brought by Consignors to city offices of the railway are only subject to a time allowance of twenty-four hours. Goods of which delivery at domicile has been ordered by Consignor will not be presented to Consignee on Sundays or holidays, when a written request to that effect has been made either by the Consignor on his Consignment Declaration or by the Consignee. Such a request completely liberates the railway from the consequences of the non-delivery of the goods on a Sunday or a holiday. Unless by consent of Consignee goods cannot be collected or delivered at domicile before 7 a.m. or after 7 p.m. Goods taken to domicile and not delivered, from any cause not the fault of the railway, are brought back to the station, cartage for the return journey being charged at same rate as for the outward journey. Cartage is charged on a minimum weight of 100 Kg., and over 100 Kg. per indivisible fraction of 10 Kg.

490. Increased cartage charges for certain commodities.

The following goods are charged 50 per cent. over ordinary cartage rates:—Those not weighing 200 Kg. below the volume of one cubic metre, but not more than if charged at a rate calculated at 200 Kg. per cubic metre; explosive, inflammable, corrosive, and other dangerous substances or liquids; art objects and plate glass, which does not exceed 2·50 × 1·50 metres in dimensions; indivisible masses weighing from 250 to 3,000 Kg., and objects from 6·50 to 10 metres in length or 2 metres in breadth. (Barrels of liquid not more than 900 Kg. in weight are not, however, subject to any increase in rate of cartage.) When indivisible masses do not exceed 1,500 Kg. and are loaded on or unloaded from railway carts or drays by owners they are charged ordinary cartage rates. Objects exceeding 1,500 Kg., although charged 50 per cent. extra for cartage, must always be handled outside the railway station by the Consignors and Consignees.

Goods in crates, frames, boxes, or trays, the unpacking of which is performed piece by piece from the cart or dray at the Consignee's door, are subject to an addition of Fr. 2·00 per 1,000 Kg. Goods in bulk which, either on demand of Consignor or Consignee or in accordance with commercial usage or police regulations, are not unloaded by simply turning up the cart, are subject to an addition of Fr. 1·00 per 1,000 Kg., with the exception of the goods named hereafter, for which the extra cartage charge is Fr. 2·00 per 1,000 Kg., viz.:—Growing trees and shrubs, slates, empty carboys, empty bottles, slabs of cement or stone, tiles and panels of earthenware or terra-cotta, empty demijohns, wrought iron objects, tinware, moulded castings, fruits, slabs of marble, furniture, lithographic stones, pottery, empty jars, and terra-cotta pipes.

Cartage of the following goods is subject to special arrangement:—Indivisible masses of more than 3,000 Kg. each, objects exceeding 10 metres in length or 2 metres in breadth, plate glass exceeding 2·50 m. × 1·50 m. in dimensions, objects which on account of their volume, their weight, or their nature, require special apparatus for loading and unloading; agricultural machinery and implements not packed, hay and fodder in unpressed bales, games, theatrical goods, vehicles or apparatus on its own wheels, live animals not intended for food purposes, except small animals which are considered as market provisions, and goods to be collected or delivered beyond the city boundaries.

491. Cartage charges for coal and coke in Paris.

Coal and coke carried by the Nord Company from certain specified places under Special Tariff (No. 7) are carted to domicile in Paris at the following rates, which include cost of transfer from railway truck to dray.

Suresnes, 8 to 9 Km., ..	3·25	4·00	5·50	5·90

The foregoing rates apply to coal and coke to be carted to one Consignee with drays of at least 3,400 Kg. capacity. They include unloading by tilting up the cart in the Consignee's yard, without any further handling. The railway company is not bound to drive its vehicles when laden with coal or coke into yards which are not paved or metalled, or where the slope is dangerous, or when the width of the street or yard does not admit of the carts being turned.

492. Increased cartage charges under exceptional conditions.

When the streets to be traversed, in order to reach the Consignee (*i.e.*, place of delivery), have slopes of more than 3% to 5%, the cartage rates are increased by 50 per cent., and they are doubled when the journey involves gradients of more than 5%. The railway company do not undertake to carry coal and coke in tip-carts of less capacity than 3,400 Kg. When the contents of a railway wagon have to be divided between several Consignees the above rates of cartage are increased by 1 Fr. per 1,000 Kg., with a minimum load of 3,400 Kg. Delivery is effected from 6 a.m. in summer and 7 a.m. in winter and 6 o'clock p.m. at the option of the company, which is not bound to deliver at any fixed hour.

In the Provinces, Fast Goods, subject during transit by rail on the Nord system to an increase of 50 per cent. are subject to the same increase of cartage charges, and goods returned to station undelivered are charged same cartage rate in return journey as on forward journey.

493. Cartage charges for fast goods in Paris.

The following are the cartage charges in Paris of Fast Goods carried over the Nord Railway:—

Collection and Delivery at Domicile.

	c.

COLLECTION AND DELIVERY OF GOODS BY RAILWAY—*continued.*

France—*continued.*

Parcels, Fast Goods, and Postal Packages are, on demand of Consignor, collected at domicile at the same rates and on the same conditions as if they had been handed in at the city offices when they are consigned in complete van-loads, provided in this case that the total charge collected for cartage from domicile to station is not less than 10 Fr. per one-horse van carrying a maximum load of 1,000 Kg., and 20 Fr. for a two-horse van carrying a maximum of 2,000 Kg. Postal packages handed in at the city offices specified for the purpose are always carried free from these offices to the station.

The following are the general conditions of application of the Paris Cartage Tariff:—On departure, parcels and fast goods handed in at the company's city offices or collected at domicile, are carried to the station and forwarded by rail at latest 24 hours after being handed in at the city offices or within 48 hours of receipt by the railway station of the order for collecting them at the domicile. On arrival, parcels and fast goods are delivered at Consignee's domicile within the time allowed by the Ministerial Decree of 16th March, 1884, *i.e.*, 5 hours for provisions destined for the central markets, and 10 hours for other goods.

These two periods are counted from the actual arrival of the regular train effecting carriage of the goods, but in calculating the second period night hours are deducted in accordance with Decree of the 12th June, 1866. For consignments originally addressed to station and subsequently delivered at domicile by order of Consignee, the time allowed by the Ministerial Decree of 16th March, 1884, runs from the moment when the order for delivery at domicile when received at the station. Goods for which delivery at domicile has been prescribed by Consignor will not be handed to Consignee on Sundays or holidays when a written request to that effect has been made by the Consignor on his declaration of consignment, or by the Consignee. A request so made completely liberates the company from the consequences of the non-delivery of fast goods on Sundays or holidays. Goods taken to Consignee's domicile and not delivered for any reason not the fault of the company, are brought back to station and charged cartage rate on the return journey same as on the forward journey. The following goods are charged 50 per cent. additional to the cartage rate in the tariff:—Provisions and objects not weighing 200 Kg. under the volume of 1 cubic metre, provided that in no case the charge to be collected is greater than for 200 Kg. per cubic metre at the ordinary rate of cartage; art objects and plate glass which do not exceed 2·50 m. × 1·50 m. in dimensions; indivisible masses weighing from 500 Kg. to 1,500 Kg., but in this case the extra charge is not made when loading on dray at Consignor's house or unloading from dray at Consignee's house is effected by either the sender or the receiver; goods in crates, chests, boxes, or trays, and goods to be arranged specially as in slow transit.

494. Cartage charges of fast goods in the provinces.

Cartage of Fast goods is organised to 502 Provincial localities on the Nord Railway system, the distance varying from 1 to 22 Km.. The charges are made according to seven divisions of weight as follow:—

From 0 to 3 Kg., Inclusive.
„ 3 to 5 Kg. „
„ 5 to 10 Kg. „
„ 10 to 20 Kg. „
„ 20 to 30 Kg. „
„ 30 to 40 Kg. „
Over 40 Kg. per 100 Kg., calculated from 10 to 10 Kg.

The charges are not reckoned on any fixed scale. The amount for like weights carted similar distances vary considerably according to local circumstances, as is shown by the following analysis of the published tariff:—

NOTE.—THE LETTERS "L," "H," AND "P," IN THE HEADINGS OF THE APPENDED TABLE DENOTE RESPECTIVELY, "LOWEST," "HIGHEST," AND "PREVAILING" CHARGES.

Distance.	No. of Localities.	0-3 Kg.			3-5 Kg.			5-10 Kg.			10-20 Kg.			20-30 Kg.			30-40 Kg.			Over 40. Kg. (Per 100 Kg.)

494 *continued.*

COLLECTION AND DELIVERY OF GOODS BY RAILWAY—*continued.*

BELGIUM.

495 Organisation of cartage arrangements.

On the Belgian State railways, cartage arrangements are organised at 195 stations. At 14 of the stations the carting area applies to a radius of 3 Km. from the Hotel de Ville, and, with three or four exceptions, where there are special delimitations, at all others the carting area applies to a radius of 3 Km. from the railway station.

496. Cartage Charges for Express Fast and Slow Goods.

The cartage charges are as follow:—Collection at domicile per consignment and indivisible fraction of 100 Kg. of goods (not exceeding 500 Kg. per indivisible mass) in Tariffs 1, 2, and 3 (*i.e.*, Express, Fast, or Slow Goods), 30c. Delivery at domicile of slow goods parcels of 500 Kg. at most, per indivisible fraction of 10 Kg. in the Brussels area, 5c., in other localities, 3c.—rounded off to the 10c. above. Express and fast goods addressed to consignee's domicile are delivered free.

For delivery at domicile, on consignee's request, of goods addressed "Bureau Restant" and for re-delivery at domicile for any reason attributable to the consignee the following charges are made:—

Express or Fast Goods—

Prepaid parcels of 5 Kg. and under, . .	20 c.
Prepaid parcels from 5 to 10 Kg., Express .	30 c.
Do. do. Fast, .	20 c.
Non-prepaid parcels of 10 Kg. and under, .	30 c.
Express parcels of more than 10 Kg., per Kg., the charge being rounded off to the 10 c. above, with minimum of 40 c., . . .	3 c.
Fast or Slow parcels of more than 10 Kg. ,per indivisible fraction of 10 Kg., the charge being rounded off to the 10 c. above, and with minimum charge as for 100 Kg. .	
In Brussels area, ...	5 c.
In other localities, ...	3 c.
Prepaid Express parcels of 5 Kg., at most, and of an urgent description, arriving at a railway station and delivered at domicile on demand of consignor outside carting area, or more than 3 Km from a station, per indivisible fraction of 1 Km. reckoned from station.	20 c.

497. Increased charges under exceptional conditions.

Express parcels weighing, at most, 15 Kg. delivered at domicile on demand of consignor or consignee outside regulation hours, in each case charged a supplementary tax of 25 c.

Delivery in cellar of Express, Fast, or Slow Goods destined for consignee's consumption—Goods in barrels per 10 Kg., min. 100 Kg., 5 c.

Goods in sacks, chests or baskets per 10 Kg., min. 100 Kg., . . 2½c.

This is an additional charge to be paid direct to carter.

Cartage of goods intended for exhibition and of materials to be used for installation of such exhibits is charged as follows:—

Collection—Per 100 Kg. or per consignment of less weight, ...	30
Delivery—	
Express Goods, 0 to 5 Kg., . . .	20
,, ,, 5 to 10 Kg., . . .	30
,, ,, over 10 Kg., per Kg., .	3
Fast Goods, 0 to 10 Kg., . . .	10
,, ,, 11 to 20 Kg., . . .	15
,, ,, 21 to 50 Kg., . . .	20
,, ,, 51 to 100 Kg., . . .	30
,, ,, above 100 Kg., per 10 Kg. to Brussels and Liege, . .	4
,, ,, above 100 Kg., per 10 Kg. to other places, ...	3
Slow Goods—In Brussels area, per 10 Kg.,	5
,, ,, In other localities, per 10 Kg.,	3

498. Cartage regulations for slow goods

The following are the general conditions applying to cartage of goods:—Collection is restricted to consignments loaded in wagons by the railway companies, but the companies do not undertake to collect merchandise such as furniture or other goods in bulk, explosives, butchers meat and offal, vehicles, packages in ice, exceeding 300 Kg. or the dimensions of which are such that they cannot be loaded into closed wagons, or packages of glass or crockery weighing more than 300 Kg. Collection of indivisible masses of more than 500 Kg. is not obligatory. It is done only when the station of departure has at its disposal suitable means of carting, and, when no inconvenience to the service is caused thereby, the decision as to which is exclusively reserved to the railway companies. The same applies to the case of goods exceeding 6 m. in length.

COLLECTION AND DELIVERY OF GOODS BY RAILWAY—*continued.*

Belgium—*continued.*

Requests that goods shall be collected by the railway must be made twenty-four hours in advance. They may be made in writing or verbally at the Goods Transit office. Such applications must give besides the sender's address the nature of the goods, the number of the packages, the destination, and the approximate weight. If a request be made in the form of an open letter to the stationmaster of the *State Railway* it need not be stamped. Goods are collected in accordance with the sender's directions before shop doors, or in courtyards, vestibules, enclosures, or other places accessible to the drays, provided that they are within a distance of 100 metres at the most of the public carriage-road. In buildings occupied by several tenants, packages of 25 Kg and less may, in exceptional cases and when no inconvenience is thereby caused to the service (a matter of which the railway companies are sole judges), be collected at the door of the apartments occupied by the sender. The fee for collection at domicile is always enforced in case of consignments of Slow Goods presented at town offices. For goods of large volume and packages exceeding the normal length of carrying stock, the charges for collection are calculated according to the weight on which rail transport is reckoned. Goods collected at the sender's house are loaded on wagons by the railway company on the conditions indicated in the tariff. Collection charges are calculated evenly to the next 10 c. above.

The railway companies undertake the delivery at domicile only of consignments for which collection at domicile is provided as above-defined and within like limits, nevertheless, incomplete loads loaded in a station or at a siding by or with the help of the consignor's employes may, with the exception of certain goods defined above, be delivered by the railway at domicile. Apart from the exceptions determined by the special condition hereafter detailed, delivery at domicile is confined to the localities where cartage service is organised and within the limits of the areas served. In the case of full loads it is only done when a demand to that effect has been entered on the way-bill. No deduction is made in the rates fixed by the tariff for Express and Fast Goods when the delivery at domicile is not effected either because such consignments are sent "Bureau Restant" or because they are destined to localities where there is no organised cartage service, or because the consignee resides outside the limits of the cartage area. In case of consignments of Slow Goods in incomplete loads destined to localities where cartage is organised, the cartage charge is levied officially as indicated in the tariff, unless the way-bill contains one of the following notes:—"To remain in Bureau," "To remain in Railway Station," "To remain in Station," "In transit," "For Export," etc.

499. Increased cartage charge for certain commodities.—Periods of delivery.

The cartage charge for delivery in domicile of voluminous goods and goods which exceed normal length of carrying stock is calculated according to the weight (*i.e.*, actual weight, plus 50 per cent.) on which rail transport is reckoned, a minimum charge as for 100 Kg. being made. Delivery at domicile, save as hereafter described, is carried out during the following periods:—From 1st April to 30th September, from 7 a.m. to 9 p.m., and from 1st October to 31st March, from 8 a.m. to 9 p.m. Goods carted for delivery are deposited according to the consignee's directions before the doors of shops, in the same places as are defined for the collection of goods. Carters will, in addition, on demand of consignee, place, in the latter's cellar, goods destined for his private consumption, an extra charge (already specified) for this service being payable direct to the carter. In localities where cartage is organised, delivery at domicile of consignments of Express Goods takes place immediately after the arrival of the trains during the hours fixed by the general regulations as above, within a radius of 3 Km. from the station, and also throughout the whole extent of the radius provided

COLLECTION AND DELIVERY OF GOODS BY RAILWAY—*continued.*

Belgium—*continued.*

for each locality. Express packages arriving outside the hours fixed by the general regulations are not delivered at domicile until the next morning during the first hour. The sender may, however, insure immediate delivery of such parcels by making a request to that effect on the way-bill or on the address of the package. The special delivery fee to be prepaid by the sender is already specified. In localities where a cartage service is not organised, delivery of Express Goods at domicile is limited to packages of 15 Kg. to be delivered within a radius of 3 Km. from the station

500. Increased cartage charges under exceptional conditions.

Prepaid packages of 5 Kg. and under may, on demand in writing from the sender be delivered in domicile by Express messenger on payment of supplementary fee defined and applicable beyond the radius of 3 Km. from the station and beyond the limit of ordinary cartage. This fee is distinct from the fee to be collected for delivery after 9 p.m., and the railway company may require a deposit in respect of it. When the sender has not asked on the way-bill that the goods shall be delivered in domicile by special messenger, packages of Express goods of 5 Kg. and less and prepaid by means of adhesive stamps, to be delivered outside the limit of the free express delivery are treated as regards delivery like prepaid packages of 5 Kg. and less under Fast Goods tariff. Consignments of express goods addressed "Bureau Restant" capable of being delivered at domicile are, on demand of the consignee, delivered during the hours fixed by the general regulations immediately upon receipt, at the station, of the request for delivery. Prepaid packages of Fast Goods of 5 Kg. at most, destined to a locality where the cartage service is not organised, are delivered at domicile without special fee within a radius of 3 Km. from the station. Beyond this distance and for packages destined for a place situated outside the area served by carters, the railway companies reserve to themselves the power of announcing the arrival of the package by means of a notice sent to or delivered at domicile through post, no fee being charged for such notification.

501. Cartage service on Sundays and holidays.

No goods are collected by the State railway on Sundays, nor on the days of Ascension, Assumption, All Saints, or Christmas. Delivery of goods is, as a rule, suspended on those days during the whole day, except for Express parcels.

GERMANY.

502. Organisation of cartage arrangements.

The general regulations provide that the railways may, when they deem it advisable, engage carters to collect and deliver goods in places where stations are situated, or to and from remote localities. The carters are held to be railway employees.

In case of Express Goods the railways are empowered to send an advice note instead of delivering the goods by carter. If, in case of goods destined for a place not on the railway line or for a station where goods traffic is not organised, no arrangements have been made for their further transmission by the railway authorities the railway must, if measures for their immediate forwarding have not been taken by the sender or consignee, either send notice to consignee in accordance with the regulations or forward the goods through a carter or by other means to the place of destination at the expense and risk of the sender. As regards delivery of goods it is provided that, in so far as the unloading of goods from wagons, in pursuance of the general regulations or of the tariff under which they are carried or in accordance with a special arrangement, is performed by the railway, the latter decides whether the goods so unloaded are to be delivered at the consignee's house or whether an advice of arrival is to be sent to him. In stations for which goods are delivered to consignees the fact must be announced by notices posted in the despatching stations. In the case of Fast Goods carried on the Imperial Prussian Railway, provided extraordinary circumstances do not make a longer period unavoidable, delivery at consignee's house must be effected within six hours after arrival. This period does not include Sundays and holidays from 12 o'clock noon, and working days from 6 p.m.

503. Cartage service on Sundays and holidays.

COLLECTION AND DELIVERY OF GOODS BY RAILWAY—*continued.*

Germany—*continued.*

to the commencement of the working hours of the following day. Fast Goods are, however, only delivered from stations announced by the railway authorities. In notices the delivery charges must also be announced. Consignees who desire to fetch their goods themselves or who wish to employ a carter other than the one employed by the railway must intimate this in writing to the goods office in good time—at any rate before the delivery of the goods and (on demand of the goods office) with credible attestation of their signatures. The permission to consignees to fetch their goods themselves, or by a carter other than the one employed by the railway, may be curtailed or withdrawn by the railway in the interests of general traffic, and with the consent of the State Supervising Authority. Goods are delivered on payment of any freight or other charges that may be payable on them in return for an acknowledgement of receipt of them. Further declarations, in particular as to receipt in good order or punctual receipt, may not be asked for by the railways.

504. Cartage charges for slow and fast goods in Berlin.

The following are the rates of cartage in Berlin:—

(*a*) For conveyance from the station to the house or to the place of business of consignee—

—	Up to 50 Kg.	From 51 Kg. to 100 Kg.	For each remaining 50 Kg. or part thereof.
	Pf.	Pf.	Pf.
Slow Goods, ...	30	40	15
Fast Goods, ...	60	80	30
Bulky Goods, ...			
Fragile Goods, ...			

(*b*) For conveyance from house or place of business of consignee to the stations, 5 Pf. is added in each case to the figures shown for delivery of goods.

505. Increased charges under exceptional conditions.

(*c*) For carrying goods in a house to or from the first, second, etc., storey, or placing goods in a cellar, or removing them therefrom (when they can be carried by one man), a supplementary charge of 10 Pf. is made for each 50 Kg.

506. Cartage charges for slow and fast goods in the Provinces.

At all other large stations cartage is organised and the charges for collection or delivery are generally—

—	Up to 50 kg.	For each remaining 50 kg. or part thereof.
For slow goods, ...	25 pf.	15 pf.
For fast, bulky, and fragile goods, .	50 pf.	30 pf.

HOLLAND.

507. Organisation of cartage arrangements.

Railways are empowered to collect Fast and Slow Goods on request of consignor, and to deliver goods at consignee's address if a request be made on the way-bill to that effect. Parcel goods, both Slow and Fast, may be delivered officially by the railway unless the sender through some entry on the way-bill (*e.g.*, "Station Restante") expresses the wish that the goods be collected by the consignee.

508. Cartage charges for fast and slow goods.

The charge for collecting and delivering Fast and Slow Goods is stipulated in the tariffs, and, under ordinary circumstances, may not exceed for each operation 5 cents. per 50 Kg., with a minimum per consignment of 30 cents. for delivery and of 50 cents. for collection. The railways make known in their tariffs, in what places and for what charges they undertake the collection and delivery of goods. Goods

COLLECTION AND DELIVERY OF GOODS BY RAILWAY—*continued.*

Holland—*continued.*

in wagon-loads are only collected or delivered by the railway by special agreement with the latter.

The following are the actual rates charged for cartage at some of the larger railway stations:—

Collection and delivery of Fast and Slow goods—

	Collection and Delivery.
Amsterdam (Central), Apeldoorn, Arnhem, The Hague, Helder, Leyden, Nijmegen, Rotterdam and Utrecht.	0.03 Fl. per unit of 50 Kg. (fractions of unit reckoned as whole), with minimum of 0.15 Fl. per consignment.
Haarlem, . . .	Per consignment of 150 Kg., 0.15 Fl. Above the same per 50 Kg., 0.05 Fl.
Alkmaar, Hilversum and Naarden Bussum.	Per consignment of 100 Kg., 0.10 Fl. Above same per 50 Kg., 0.05 Fl.
Schiedam, . . .	Per consignment of 150 Kg., 0.12 Fl. Above same per 50 Kg., 0.04 Fl.

Special arrangements with senders or receivers of goods as regards collection and delivery at a lower rate than that of the published general tariff may be made for the cartage of large quantities or by subscription, provided that under similar circumstances the same favourable conditions are granted to everybody.

509. Increased cartage charges under exceptional conditions.

In exceptional circumstances, such as the difficulties of conveyance owing to ice or storm during transit by water or through snow or frost during transport by land, railways are entitled to raise their existing collection and delivery tariff, but to not more than double the existing amount, and may wholly or partially suspend the collection and delivery of Fast and Slow goods during the time such exceptional circumstances are prevailing. The railways undertake collection and delivery only in so far as their means permit. If they are not in a position to undertake the work notice is given accordingly to consignors and consignees. If prepaid consignments are in question, for which delivery charge has been paid by the sender, the amount so paid is refunded to him.

Applications for collection must be made in writing to the forwarding station on forms provided for the purpose and obtainable at stations. The application must state name of sender, place at which goods are to be collected, the number, description and contents of the packages, the approximate weight and destination. Apart from any special agreement between the sender of the goods and the railway Fast and Slow Goods, for collection of which notice has been handed in before 3 p.m., are fetched, at latest, in the course of the following day. Fast Goods are given precedence if this has any effect on the time of forwarding. Delivery of Slow Goods is effected in the order of their arrival and registration, and unless under peculiar circumstances, or under great pressure of traffic within twenty-four hours after arrival at station of destination. Fast Goods which arrive in the forenoon are, under like reservations, delivered on the same day, and those arriving in the afternoon are delivered during the forenoon of the following day. Collection and delivery of goods by the railway does not extend further than the built portion of the commune to which the station belongs, or than a radius of 3 Km. around the station, as a central point, as regards out-of-the-way places. Dwellings or business places which cannot be reached with horses and carts along hard carriage roads may be excluded from cartage service even within the foregoing limits. Articles of unusual dimensions or weight, dangerous articles, goods liable to breakage on account of their nature or manner of packing or subject to injury, and traffic loaded and unloaded by owners will not be collected

COLLECTION AND DELIVERY OF GOODS BY RAILWAY—*continued.*

Holland—*continued.*

or delivered. Goods to be collected must be placed in readiness on a level with the ground and in close proximity to the public road or canal. If, on arrival of the cart or boat intended to collect them, the goods are not placed in readiness, the employees of the railway are empowered to take back the cart or boat, while the person at whose request it was supplied is bound to pay the fee for collection reckoned according to the goods which were to have been collected. Inspection of external appearance of collected goods and ascertainment of their weight takes place at the railway station. If on inspection it seems that the consignment does not comply with the regulations, notice of the fact is sent to the consignor, and the goods remain lying at the risk and expense of the sender until the regulations have been complied with or the goods taken back. In delivery, goods need not be brought further than the ground floor of the dwelling, store, or office of the consignee situated on a public highway or canal. Consignors and consignees must assist in loading and unloading of carts or boats when packages weigh more than 50 Kg. each. For carrying back to a station goods which, in consequence of incomplete address or refusal to accept, cannot be delivered, the sender is charged the rate of the usual delivery fee.

510. Cartage service on Sundays and holidays.

Collection and delivery of Fast and Slow Goods on Sundays and generally observed Christian holidays is in accordance with the regulations of the railways, although the law provides that, except it be otherwise ordered in exceptional cases by the Minister of Waterways, Commerce and Industry, they need not be. Consignees who themselves cart goods away, or who desire to employ for that purpose carters other than those appointed by the railway, must give notice in writing to the Goods Office in question in good time before the arrival of the goods, and on demand of the officials of the Goods Office supply trustworthy proofs of the genuineness of their signature. The competence of the consignee to cart away his goods himself, or through the agency of a third party may be limited or cancelled in the interest of general traffic with the sanction of the Minister of Waterways, Commerce and Industry. Railway authorities are empowered to have goods destined to a place not situated on the railway line conveyed to their destination by a carter or by any other agency they may choose, at the expense and risk of the consignor when no measures have been adopted for the direct further conveyance of them. The same rule applies to goods intended for railway stations which are not open for goods traffic. Railways are liable for persons whose services they employ in carting traffic undertaken by them.

DENMARK.

511. Organisation of cartage arrangements.

From stations where cartage is organised, parcel goods carried at Express rate and Fast Goods rate are delivered free within the fixed boundaries. For all other goods a cartage charge is made in accordance with the scale of charges posted up in the Goods Office of each station and to be produced by the railway company's carters on demand. Goods are deemed to be delivered when unloaded in front of consignee's house or warehouse and he has been notified of the fact. Goods which, on account of their nature, cannot be conveyed on ordinary carts with other goods and objects weighing more than 500 Kg. as well as goods which cannot be calculated to cover cost of cartage are not delivered by the railway.

When in a place where the railway has organised cartage a consignee desires to cart his own goods he must make a written application to that effect on a form supplied by the railway. The application must include all goods arriving for the consignee in question. In the case of large stations, the railway, after publication of a preliminary notice, may arrange that applications can only be received and cancelled quarterly on payment of a registration fee of 1 Kr. per quarter.

512. Cartage charges.

The average cartage charge is 25 Ore per 100 Kg.

COLLECTION AND DELIVERY OF GOODS BY RAILWAY—*continued.*

COLLECTION AND DELIVERY OF GOODS BY RAILWAY—*continued.*

AUSTRIA AND HUNGARY.

513. Organisation of cartage arrangements.

The general regulations as to collection and delivery are practically identical with those applying to Germany.

When the railway collects or delivers goods the cartage fees must be notified in sending stations, and the carters must carry with them the tariff and show them on demand.

514. Cartage charges in Austria

The following are the rates of cartage in Vienna, Salzburg, Prague, and Krakau.

(*a*) Vienna.

To or from the Vienna (K.E.B.) station.

To or from the Districts.	FAST GOODS.			SLOW GOODS.			
	Kg.	26–50 Kg.	Every additional 10 Kg.	1–50 Kg.	51–100 Kg.	Every additional 100 Kg.	3,000–5,000 Kg. per 100 Kg.
	Heller.	Heller.	Heller.	Heller.	Heller.	Heller.	Heller.
VI., VII., XII., XIV., XV., XVI., ..	40	55	10	40	50	35	20
I. to V., VIII., IX., XVII., XX., .. (The postal delivery districts II. 6 and XVII./2 are excepted).	50	65	12	50	60	45	30
X., XI., XIII., XVIII., XIX., ... (The postal delivery districts XI./2, XVIII./5, XIII./7–10, XVIII/2–4, XIX/2–5, are excepted).	70	85	16	70	80	55	36

Austria—*continued.*

515. Increased cartage charge for certain commodities.

Consignments for 3,000 to 5,000 Kg. must be unloaded in one place and by the same party concerned.

For bulky goods, pianos and iron safes, the cartage charge is increased by 50 per cent.

516. Increased cartage charges under exceptional conditions.

Parcels of goods weighing not more than 50 Kg. each will be delivered in cellar or upper storey on payment of a supplementary charge of 10 H. per 50 Kg. begun, with a minimum charge of 20 H.

In case of Fast Goods there is no such charge.

(*b*) Rates between Salzburg Railway Station and the town of Salzburg (except Monchsberg, Kapuzinerberg and the districts of Müln, Nonnthal and Riedenburg):—

GENERAL TARIFF.	EXCEP. TARIFF.
Fast goods, stamped packages, Traveller's luggage, and express goods.	Dead calves, dead game, unpacked (except hares and game birds).
1–20 Kg.—10 Heller. For every additional 10 Kg. begun 5 Heller.	20 Heller each.
Minimum charge for a consignment—20 Heller.	—

(*c*) To and from Prague station and the following city and suburban districts:—

—	Fast goods.	Parcels per 100 Kg.	Bulky goods.	Wagon loads of 5,000 Kg. and upwards.
	H.	H.	H.	H.
Old town: Graben, Zeltnergasse, Untere Neustadt, Poric, Karolimenthal.	24	20	30	16

Alt. Lieven, ...	60	40	60	30

Austria—*continued.*

The minimum charge is:—

For Quick goods, 40 Heller; and for Slow Goods the charge as for 100 Kg.

For an additional charge of 10 Heller per 50 Kg. begun, parcels, at request of the party, will be delivered in cellar or on a storey higher than the ground floor.

(*d*) To and from Krakau Station.

—	Fast or Slow Goods per 100 Kg.
	Heller.
Between Krakau and inner town and suburbs on hither side of the Kanneliter and Starowislna-Gasse.	24
Other suburbs outside the same, ...	30

Parcels of 50 Kg. and under and capable of being carried by a man will be delivered in cellar or upper floor for a fee, in addition, of 10 Heller per 50 Kg. begun.

517. Cartage arrangements and charges in Hungary.

As regards Hungary, the only information available is that in large towns the delivery of parcel goods, only, is effected by Expediteurs on basis of a special tariff, particulars of which were not given.

LIABILITY OF RAILWAYS.

FRANCE.

518 Compensation for delay in transit.

519. Limit to compensation under certain tariffs and conditions.

Delay to traffic beyond the fixed conveyance time limits does not entitle a Consignee to compensation when he suffers no loss, but when such delay has been prejudicial he is entitled to integral damages. The Commercial Code defines that a railway company owes no reparation for loss beyond what can be judged intrinsically.

In some exceptional cases the French railways have fixed a maximum compensation for which they may be held liable in event of delay in transit. Tariffs made for produce brought into Paris markets by special trains contain a clause under which delays

LIABILITY OF RAILWAYS—*continued.*

France—*continued.*

of less than 12 hours in transit render the railways liable for indemnities which, in the case of the Nord line, for example, are limited to one-third of the freight for a delay of from 3½ to 4½ hours, two-thirds of the freight for a delay of from 4½ to 5½ hours, and the full amount of the freight for a delay exceeding 5½ hours. The full rights of sender and consignee are reserved when a delay of such traffic exceeds 12 hours.

520. Extent of liability of railway in internal transit.

Under a law dated 14th March, 1905 (known as "Rabier's Law"), amending article 103 of the Commercial Code, any variation by any Convention of the responsibility imposed by that article on carriers in general, and railways in particular, as to loss or damage of goods carried, is prohibited. The original effect of Article 103 had been greatly modified in the course of time by Judicial and Ministerial Decrees, and railways, through the operation of indemnifying conditions attached to special tariffs, had practically freed themselves from liability except in cases of proved wilful negligence, in respect of traffic carried under those tariffs. The prohibition contained in "Rabier's Law" is formal, and under it railways are forbidden to stipulate in advance in any freight bill or other document that they will not be responsible for loss or damage of any goods entrusted to them for conveyance. Neither may they do it, generally, by their published rates, nor by private agreement with any particular Consignor. The law applies to all interior transit and extends to conveyance by cart as well as transit on inland waterways, but excludes sea transit. Any agreement modifying responsibility between Carrier and Owner of traffic or contained in the conditions of a duly confirmed rate in existence at the passing of the Act of 14th March, 1905, was thereby annulled. The law, however, admits of a Carrier entering into a contract limiting the amount of liability for indemnity in case of loss or damage.

521. Onus of proof in case of loss or damage to goods.

A railway, in order to establish irresponsibility, must now prove by precise facts that loss or damage of goods really resulted from inherent properties in the goods, from superior force, or from fault of the Consignor.

BELGIUM.

522. Compensation for delay in transit.

Under Article 3 of the Transport Law of 1891 a carrier is responsible for the arrival within regulation time limits of goods to be carried, except in the case of accident or overwhelming circumstances, and, under Article 34 it is provided that the fact that traffic has exceeded normal proportions will be considered a case of overwhelming circumstances. General regulation No. 26 of the Belgian State Railway provides that, in case of delay in transit, the indemnity payable by the railway is limited to one-fifteenth of the cost of transit per day of delay with a minimum of 50c., and provided that the amount of the indemnity does not exceed the amount of the cost of transit, and that the owner of the goods shall not be obliged to furnish proof of loss. When the delay affects only a portion of a consignment the indemnity is reduced *pro rata* to the portion delayed. If delivery does not take place within the fortnight following the expiration of the time allowed for conveyance the sender or consignee is entitled to the indemnity provided in case of loss of the goods.

523. Onus of proof in case of loss or damage to goods.

Under Article 4 of the Transport Law a Carrier is answerable for damage or loss of goods if he does not prove that the damage or loss arose from some extraneous cause that cannot be imputed to him.

Under Article 40 of the Transport Law the party concerned retains his right to indemnity for injury under the Common Law if he proves that losses or damage to goods did not result in special circumstances which justified the railway in declining responsibility even in cases where under Articles 37, 38, and 39 the liability of the railway is limited and certain risks dealt with under heading of "Non-liability of Railways" are imposed on owners of goods.

LIABILITY OF RAILWAYS—*continued.*

Belgium—*continued.*

524. Extent of liability of Railway in internal transit.

General Regulation No. 26 of the Belgian State Railway provides that in the event of total or partial loss the railway reimburses the value of the articles lost in accordance with the commercial price current at the time in the place of *consignment*, and also the expenses of transit and Customs incurred for the goods not delivered.

In the event of damage, the railway pays the integral amount of the depreciation. It also surrenders the expenses of storage and of a second delivery at domicile involved by a demand by the consignees for counter verification by the railway of consignments deliverable at domicile.

525. Liability of contracting Railway in case of through booking.

Under Article 5 of the Transport Law a Carrier guarantees the action of an intermediate Carrier to whom he hands goods to be conveyed, but Article 34 provides that the tariffs or regulations cannot modify for the benefit of the Railway Authorities the conditions and extent of the responsibility laid upon them except in the case of international transports respecting which the Belgian Railway Authorities are free to stipulate that they shall not be held liable for events occurring outside their country except within the limits in which foreign railway authorities are similarly bound.

526. Interest in delivery of goods.

Under Article 41 of the Transport Law a Consignor is at liberty to estimate when handing in goods and on payment of a proportionate fee, an interest in delivery (*i.e.*, an estimate of the injury that would be sustained if goods were lost, damaged, or delayed. In case of loss, damage, or delay he has the right not only to the ordinary indemnity, but to damages up to the amount of his declaration of interest provided he establishes the fact of injury.

527. Fees payable in respect of interest in delivery

General Regulation No. 26 of the Belgian State Railway fixes the supplementary fee payable in respect of declaration of interest in delivery at Fr. 1 per consignment and per indivisible sum of 500 Fr. If the declared estimate exceeds the injury really suffered the indemnity is reduced to the amount of the latter.

528. Limit of compensation under certain tariffs and conditions

Under Article 44 of the Transport Law the railways have the power to offer the public special tariffs at reduced rates, fixing a maximum indemnity payable by the railway in the case of loss or damage. The application of such special conditions must be accepted expressly or tacitly by the Consignor.

Article 45 of the Transport Law provides that, notwithstanding any stipulations limiting the liability of the railways, the amount of compensation is regulated by the Common Law where the cause of the damage was a fraud or fault of the railway or its agents.

Under regulation applying to special tariff No. 10 (Class A.), which relates to products, etc., destined for Exhibitions, either private or Governmental, and carried at reduced rates it is provided that in consideration of the reduced rate the indemnity to be paid by the railway in case of failure to carry out the transport contract is limited in case of loss or damage to one-half the indemnity which might be due in accordance with the terms of general regulations.

GERMANY.

529. Compensation for delay in transit.

The railways are responsible for loss incurred through non-observance of conveyance time limits unless the delay be due to an occurrence which was neither caused nor could be prevented by the railway. If compensation is to be paid for non-observance of conveyance time limits the following indemnities may be claimed without proof of detriment, provided the delay exceeds 12 hours.

Delay up to 1 day, inclusive,	.	1/10th	of freight.
,, ,, ,, 2 days,	,,	2/10ths	,, ,,
,, ,, ,, 3 ,,	,,	3/10ths	,, ,,
,, ,, ,, 4 ,,	,,	4/10ths	,, ,,
For a greater period,	.	5/10ths	,, ,,

and, when detriment is proved, the amount of loss up to the total sum of the freight may be claimed.

LIABILITY OF RAILWAYS—*continued.*

Germany—*continued.*

If "interest in delivery," described hereafter, has been declared, then the following increased indemnities are payable without proof of detriment, should the delay exceed 12 hours:—

Delay up to 1 day, inclusive,	.	2/10ths of freight.
,, ,, ,, 2 days, ,,	.	4/10ths ,, ,,
,, ,, ,, 3 ,, ,,	.	6/10ths ,, ,,
,, ,, ,, 4 ,, ,,	.	8/10ths ,, ,,
For a greater period,	.	The entire freight.

and, when detriment is proved, the amount of the total loss can be claimed.

In both of these cases the amount of the indemnity may not exceed the amount of interest declared. If the railway proves that no detriment has been suffered owing to the delay, then no compensation is paid.

530. Extent of liability of railway in internal transit.

531. Onus of proof in case of loss or damage to goods

The railway is liable (except as provided under heading relative to "Non-liability") for injury whether by loss, diminution, or damage of goods occurring during the time between their acceptance and transit, and until delivery, unless the injury be caused by a fault or instructions of the owner not to be imputed to the railway, or by superior force, or defects in packing not visible, or by the nature of the goods themselves—particularly by internal decay, diminution, or ordinary leakage. If a place not situated on the railway is named on the way-bill as place of destination then the liability of the railway as carriers extends only to the last railway station. In the case of such consignments to remote places where, however, the railway has made arrangements for their further transit the railway's liability extends over the entire transport.

If compensation is to be paid by the railway on the transport contract for total or partial loss of goods, the current commercial value, or, in the absence of that, the current value is to be estimated of goods of the same nature and quality in the place whence the goods were forwarded and at the time when they were accepted for transit, plus the sum already paid for duty and other expenses, and also for freight. Goods are regarded as lost without any further proof when their delivery is delayed more than 30 days after expiration of conveyance time limit.

In the event of damage to goods the depreciation to value arrived at as above described, is to be compensated. If, however, the goods have been carried under a special tariff limiting the amount of the railway's liability, then the amount of compensation to be paid must be correspondingly reduced.

Release from liability may not be claimed by the railway on the basis of non-liability regulations if the damage was incurred through the fault of the railway.

If detriment is caused by deliberate or gross carelessness on the part of the railway, then compensation for the total detriment may be claimed in all cases.

532. Liability of contracting railway in case of through booking.

The railway which accepted goods with way-bill for transit is responsible for the carrying out of the transit even on other railways until the goods are delivered to the Consignee. Every railway following, in accepting the goods with the original way-bill, thereby enters into the freight contract and undertakes the same responsibility to carry out the transit of the goods according to the contents of the way-bill.

533 Interest in delivery of goods fees chargeable therefor and compensation in case of loss, &c.

A sender may declare interest in delivery in the way-bill, in which case an additional charge is levied at the rate of 2·5 Pf. per Km. for every 1,000 Marks of the amount declared as interest calculated in indivisible units of 10 Marks and 10 Km. each—with a minimum payment of 40 Pf. for the whole journey. If in accordance with any special tariff the amount of compensation is limited to a maximum sum no declaration of interest in excess of that sum may be made. If a declaration of interest in delivery has been made, then, in the event of loss, diminution, or damage of the goods, there may be claimed in addition to ordinary compensation an indemnity for further damages up to the amount declared.

LIABILITY OF RAILWAYS—*continued.*

Germany—*continued.*

534. Limit to compensation under special tariffs and conditions.

Railways may, under special tariffs, fix the maximum amount of compensation in case of loss, diminution, or damage, provided the special tariffs show a reduction in carriage rates on the usual railway tariffs, and provided the same maximum amount applies to the whole distance, but in case of deliberate or gross carelessness of the railway such limitation does not apply.

HOLLAND.

535. Compensation for delay in transit.

Railways are responsible for the damage resulting from exceeding the "delivery" (or conveyance) time limits unless they can show that the delay was caused by superior force or peculiar circumstances not due to the railway, its officials, or employees. By acceptance of the goods by a Consignee or by a person authorised by him, and by payment of cost of carriage, all claims for exceeding conveyance time limits are cancelled if they are not made within eight days after delivery or after payment of cost of carriage. Compensation is paid by the railway for exceeding conveyance time limits without proof that damage has been caused by the delay (*a*) in the case of Slow goods when the delay amounts to more than one to three days, one-fourth of the freight; more than three to eight days, one-third of the freight, and more than eight days, one-half the freight. (*b*) In the case of Fast goods, when the delay is more than twelve to twenty-four hours, one-fourth of the freight; more than one to three days one-third of the freight, and more than three days one-half of the freight. (*c*) In the case of parcels delivered at domicile, when the delay exceeds six to twelve hours, one fourth of the freight; twelve to twenty-four hours, one-third of the freight, and more than twenty-four hours one-half of the freight. If larger compensation is demanded by a claimant he is bound, on demand of the railway authorities, to prove the injury actually resulting from the delay in conveyance. The amount of compensation to be paid in such a case is fixed in proportion to the damage proved, care being taken that the maximum amount to be paid is—(*a*) when interest in delivery is declared, the sum declared; (*b*) when there is no declaration of interest in delivery and the delay is not more than twenty-four hours, one-half the freight, and if it is more than twenty-four hours, the whole of the freight. When the railway or its officials or employees have designedly acted wrongly the limitation of liability for delayed transit to the maximum mentioned above cannot be invoked.

536. Interest in delivery of goods, and fees chargeable therefor.

When interest in delivery has been declared, the railways are entitled to charge in addition to the freight, a premium at the rate of one cent for every 10 Fl. of the sum declared, counted by units of 10 Fl., for the first 150 Km. or part which the goods are carried by each railway or tariff union, one half cent for the next 225 Km. or part travelled, and one half cent. for every further 375 Km. or part, with a minimum charge of 10 cents, amounts being rounded off to the five cents above.

537. Extent of liability of railway in internal transit and onus of proof in case of loss or damage.

Except as provided under heading of "non-liability" railways are responsible for the damage suffered through loss or injury of goods from the time when they were accepted for conveyance or the transport contract was entered upon until the delivery of the goods, in so far as they do not show that such loss or damage has occurred through superior force or on account of the nature of the goods themselves, such as through internal decay, shrinkage, ordinary leakage, and the like, or through imperfect packing, not visible outside, or through the fault or neglect of the sender or his carter. The liability of the railways for loss or damage of goods, before a way-bill has been stamped is not hereby modified in so far as it is based on legitimate grounds. Goods not delivered within four weeks after expiration of conveyance time limits are regarded as lost.

If goods are accepted for a destination not on the railway, or a connecting railway, then the railway is not liable for the entire conveyance, but only for transport to the point where the goods leave the railway line, but when a railway has an organised

LIABILITY OF RAILWAYS—*continued.*

Holland—*continued.*

system of cartage and delivers the goods to such places, it is liable for throughout conveyance to destination.

If in consequence of the foregoing conditions railways become liable to payment of compensation the latter is governed by the following principles:—For total or partial loss, in calculating the amount of damage the basis taken is the commercial value of the goods for which compensation is claimed, or, in default of this, the value which goods of the same kind and quality would have had at the time and place of acceptance of the goods for transit by the railway, the amount of dues, expenses or Revenue Duty not paid in consequence of the loss being deducted.

538. Limit to compensation under certain conditions.

In calculating compensation the value may not be set higher than 60 cents per Kg. gross weight accepted, unless a higher value is expressly declared in writing on the way-bill. In the case of a higher value being declared the sum so declared constitutes the maximum of compensation to be paid. In such cases the sender pays in addition to the ordinary freight a premium of 1/10th per 1,000 of the value declared for every 100 Km. or part thereof which the goods have to travel in local or direct traffic, with a minimum of 10 cents, the amount to be calculated evenly to the next five cents above. In the event of *damage*, the depreciation in the value of the goods caused thereby is compensated as follows:—(*a*) To the full amount if the value of the goods ascertained in the manner already described is less than or equal to 60 cents per Kg. gross weight or higher declared value, and (*b*) if the value of the goods is greater than 60 cents per Kg. gross weight or the higher declared value the compensation shall only amount to the same proportion of the diminution in value as the maximum of 60 cents per Kg., or the higher declared value bears to the ascertained commercial value. When the railway, its officials, or employees have designedly acted wrongly, then the limitation of liability to normal indemnification or to the declared value of the goods cannot be invoked.

539. Liability of railway in case of through booking.

If the Railway Authorities accept goods with a way-bill in accordance with which the journey must be made over different railways connected with each other, the carriers for the whole journey are not the total number of authorities of the railways which have taken over the goods with the way-bill, but only those of the first railway, and the railway which last undertook to convey the goods with way-bill, are liable. The authorities of intermediate railways are only held accountable when it is proved that the damage for which compensation is claimed occurred on their lines.

Exemptions from liability stipulated under heading of "Non-liability" (given hereafter) do not apply if it is proved that the damage arose from a fault of the railway or its staff.

DENMARK.

540. Compensation for delay in transit.

The railway is responsible for any damage due to the conveyance time limits being exceeded, unless they can prove that the delay was caused by circumstances beyond their control. If the time limits are exceeded a refund of half the cost of carriage may be demanded without proof of loss being shown. If loss is proved, then a refund of the total cost of carriage can be demanded. Should interest in delivery have been declared by the sender a refund of the total amount of carriage can be demanded when time limits are exceeded without submitting proof of loss, and if loss is proved, full compensation can be demanded, but in neither case is the indemnification to exceed the declared amount of interest in delivery. Claims for compensation for late delivery are not entertained unless made at latest within seven days after the date of receipt of goods.

541. Interest in delivery of goods and fees chargeable therefor.

When the way-bill contains a declaration of interest in delivery of the goods indemnification in respect thereof must be paid by the railway company if total or partial loss or damage of the goods occurs, such compensation for loss of interest to be in addition to the ordinary compensation for loss or damage. This additional indemnification must not, however, exceed the amount declared in the way-bill. A fee, in addition to the freight, is charged on declaration of interest in delivery at the rate of one-half per cent. on the declared amount for every 200 Km. or part thereof of the journey, with a minimum charge of 40 Ore.

LIABILITY OF RAILWAYS—*continued.*

Denmark—*continued.*

542. Extent of liability in internal transit and onus of proof in case of loss or damage.

Except as provided under heading of "Non-liability," railways are responsible for total or partial loss or damage of goods from the moment they have received them for conveyance until delivery has taken place. They can only be freed from this responsibility by proving that the damage has been caused by the fault of the owner of the goods, by an order from him for which the railway is not responsible, or by the natural condition of the goods, especially inner decay, diminution, or ordinary leakage, or by superior force. When goods are destined for a place not on the railway the latter's responsibility stops at the last railway station.

When a railway is obliged under the foregoing conditions to give compensation for total or partial loss of goods it is calculated according to their ordinary value in trade, or in lieu thereof according to the usual value which goods of the same kind had in the place from which they were despatched at the time of handing in for conveyance, and the railway must also recoup the owner any sums previously paid by him for Customs Duty, as well as for carriage. If goods are not delivered within 30 days after expiration of conveyance time limits the owner is entitled to consider them lost without giving further proof. In a case of damage the railway must pay full compensation for the decrease in value which the goods have sustained.

Notwithstanding any limitations of a railway's liability compensation for full damage (including loss of interest in delivery) can be demanded in all cases where the damage has been done wilfully or by gross negligence on the part of the railway.

AUSTRIA AND HUNGARY.

543. Regulations same as in Germany.

MEM.—The text of the regulations as to liability of railways is precisely the same for Austria and Hungary as for Germany. In the paragraph of the latter dealing with fees for declaration of interest in delivery, for "Marks" and "Pfenninge" read "Kroner" and "Heller" in applying it to Austro-Hungary.

NON-LIABILITY OF RAILWAYS (i.e., "OWNER'S RISK.")

FRANCE.

No liability attaches to railways for loss or damage of goods in interior transit arising from:—

544. Inherent defects in goods.

Inherent defect in the goods, *i.e.*, when the damage arises from a defect or fault in or of the goods or from *a cause belonging to their very nature* without there being any blame on the carrier, or when deterioration is due to a germ contained in the goods, to fermentation, to spontaneous combustion, to damp, rust of steel or iron castings, to leakage of liquids through defective stopping or to bad quality of casks (porous wood, insufficient hooping; etc.).

545. Unavoidable accidents.

Act of God and chance accident which may be assimilated and are taken to consist of events that the most vigilant human foresight cannot prevent or foresee, *e.g.*, inundation, snowdrifts, damage arising from intense or unseasonable frost, accidental burnings, and robbery with violence. This latter does not include ordinary theft, which is considered as a want of surveillance by the railway company.

NON-LIABILITY OF RAILWAYS—*continued.*

France—*continued.*

546. Consignor's fault.

547. Loading and unloading by owner.

548 Defective packing.

549. Special method of transport requested.

Sender's fault, the chief cases of which may be grouped, as regards goods, under three heads: viz.:—(*a*) damage occurring before a railway takes charge of goods, for the ascertainment of which the railway has the right to examine goods on being handed in, but the carrier cannot use this pretext to decline in advance all responsibility and dispense himself from giving all care to the goods because they have been already damaged; (*b*) the consignor is solely responsible when it is proved that damage has arisen from loading or unloading undertaken by him or the consignee or when it results from insufficient packing.

(*c*) And the sender must also assume risk if loss or damage arises from special method of conveyance asked for by him, *i.e.*, disordered or loose packing, transport in open wagons when a closed one should be used.

BELGIUM.

550. Unavoidable accidents.

No indemnity is due by a railway even in the event of insurance if loss, damage, refusal, or delay is the result of accident or overwhelming circumstances or due to any extraneous cause which cannot be imputed to the administration.

The railway companies are not answerable either for loss or damages nor for the risks to which are exposed, during the journey:—

551. Goods in wagons sealed by sender or in open wagons.

Goods contained in wagons travelling under the seal of the sender, provided the seals are intact.

Objects placed in vehicles carried and goods which, on the formal written request of the sender, are carried in uncovered wagons though the regulations provide that they shall be loaded into a closed wagon or one covered with a tilt.

552. Goods accompanied by sender or his agent.

Goods which, in accordance with the regulations or agreement, are convoyed by the sender or his employees.

553. Inherent defects in goods.

Goods considered to be subject to damage by reason of their own nature or from the mere fact of being transported by rail, and which comprise marble or stone in slabs, crystals, goblets, glass, crockery and porcelaines, stoneware pipes and pottery, and pipes, gutters, and pottery in terra cotta unpacked, fresh meat and hides, fresh fish, eggs, fresh fruit and vegetables, ice, greasy rags and greasy cotton waste and all products subject to spontaneous combustion, explosion, or decomposition, in particular the railways are not answerable for rust or the oxidisation of metals.

554. Defective packing.

Goods which, at the formal request of the sender, are carried without packing or with insufficient packing when, by reason of their nature, they should be properly packed.

555. Goods unloaded by consignee.

The railway is not answerable for damages, or for missing packages or short weight of goods unloaded by a consignee if they have been loaded by the sender without supervision of the railway staff, unless such deficiency has been pointed out to the agent of the railway at the moment of unloading or when the wagon was delivered to the consignee. Counter verification by the railway should be demanded before the unloading has been commenced, it being understood that in the case of freights placed at the request of consignee on the thoroughfares of quays or docks in port towns, the counter verification cannot take place unless the unloading is effected within the regulation period provided by the tariff, or at the very least on the day on which the wagons were put in position.

556. Waste in weight of certain defined goods.

The railway companies claim an allowance of 2 per cent. for waste on the road in the weight of liquid goods or goods delivered in a moist state, as well as in the case of the following dry goods:—liquorice wood, dye woods—grated or ground, barks, fruits, hops, hard oils, roots, soaps, fresh tobacco—in leaves, chop tobacco, horns, leather, furs, fats, wool, hoofs, bones (whole or ground), hides, dried fish, tendons of animals, and fresh putty. An allowance of 5 per cent. is required for coke and of 1 per cent. for all other dry goods. When several packages are entered on the same way-bill the allowance is calculated separately

NON-LIABILITY OF RAILWAYS—*continued.*

Belgium—*continued.*

for each of them unless the weight cannot be ascertained. The allowance is not made if the party concerned proves that the waste did not arise from the nature of the goods.

557. Goods stored in the open air.

The railway undertakes no responsibility as to total or partial loss or injury from fire, theft, or other cause, of goods stored in the open air whether due or not to the working of the railway.

GERMANY.

558. Defective packing.

The sender of goods is responsible for declared defects in packing and for defects not visible outside and must not only suffer loss caused thereby, but, should it so happen, make good in addition loss caused thereby to the railway. If a declaration has not been made, the sender is held responsible for visible defects in packing, only when found guilty of sharp practice.

559. Conveyance in open wagon.

The railways are not liable when by regulation or agreement made in the way-bill with the consignor goods are forwarded in open wagons and injury arises from that mode of travel, but this does not include excessive loss of weight or the loss of whole parcels.

560. Goods covered by consignor.

When at sender's request the covering of goods is left to him, the railway is not liable further than in the case of transit by open wagons, even in case of goods which, according to the tariff applied, should not be forwarded in open wagons.

561. Absence or insufficiency of packing.

When goods requiring protective packing are under declaration by sender on way-bill handed in for transit unpacked or insufficiently packed and damage arises from risks attaching to absence or insufficiency of packing.

562. Loading and unloading by owner.

When the sender or consignee undertakes the loading or unloading of goods and damage arises from risks attaching to loading or unloading or insufficient transfer of loads.

563. Inherent defects in goods.

When goods, on account of their peculiar nature, are liable to special risk of total or partial loss or to injury, particularly through breakage, rust, internal decay, extraordinary leakage, drying up or spilling, and damage arises from this risk.

564. Waste in weight of certain defined goods.

In the case of goods which by reason of their nature regularly suffer loss of weight during transit, the liability of the railway for loss of weight is excluded up to the following limits, viz.:—2 per cent. in the case of fluid and moist goods and of certain dry goods, such as roots, cut tobacco, soaps, fresh fruit, wool, skins and hides, hops, etc., and 1 per cent. in the case of dry goods not specially designated. The exclusion of liability does not come into effect if the loss is not caused by the nature of the goods or if the standard adopted does not correspond to the nature of the goods or other circumstances of the case. In the event of the total loss of the goods, no deduction is made for loss of weight.

565. Free return conveyance of damaged cast iron goods.

When cast-iron goods or cast-iron parts of other goods which, under sender's declaration in the way-bill, are sent unpacked or insufficiently packed and are damaged during transit, the damaged portions will, at request of sender or consignee, be returned to sending station, carriage free, provided interest in delivery is not entered. The request for free carriage is to be entered on the way-bill.

566. Goods accompanied by sender or his agent.

When goods are under regulations, tariff or agreement with sender, accompanied by an attendant, and damage arises from risks which the presence of the attendant is meant to obviate.

567. Circumstantial assumption of cause of damage.

The circumstances being taken into account, if damage sustained could have arisen from one of the six dangers mentioned above, it is assumed that it arose from that danger.

568 Restricted goods incorrectly described by sender.

If objects which are excluded from transit or are only accepted for transit under certain conditions are handed in under incorrect or inexact descriptions, or if precautions for the safety of such articles are not taken by the sender, then the liability of the railway under the terms of the transport contract ceases.

NON-LIABILITY OF RAILWAYS—*continued.*

HOLLAND.

Railways are not liable—

569. Conveyance in open wagon.

As regards goods sent in open wagons for injury arising from risk connected with that mode of conveyance. The tariffs show what goods are carried in open wagons (for which a lower rate is charged) and the consignor is deemed to be satisfied with such mode of conveyance when he does not expressly demand in an entry on the way-bill the conveyance of his goods in a closed wagon or wagons covered with tarpaulins. (The railway in the latter case is entitled to apply a higher rate than that stipulated in the tariff). When goods which would otherwise be carried in covered wagons are, in accordance with a special agreement, carried in open wagons, then obvious diminution in weight or the loss of whole packages cannot be considered as arising from the risk attaching to this mode of conveyance.

570. Absence or insufficiency of packing.

As regards goods which, notwithstanding that their nature requires that they should be protected against loss or damage by means of proper packing during transit, are sent unpacked or insufficiently packed in accordance with a declaration in the way-bill by the sender, the railway is not responsible for damage arising from the risk attaching to want of packing or to insufficient packing.

571. Loading and unloading by owner.

In the case of goods which, in consequence of tariff conditions or agreement with the sender, are loaded by the latter and unloaded by the consignee, the railway is not responsible for damage arising from the risk attached to loading and unloading or to defective or unsuitable loading. The consignor and consignee are, on the other hand, accountable for the damage which, in consequence of or at the time of loading, may have been inflicted on the railway's rolling stock.

572. Inherent defects in goods.

As regards goods which, from their nature, are exposed to the risk of being wholly or partially lost or of being damaged, especially through breakage, rust, internal decay, extraordinary leakage, spontaneous combustion, etc., the railways are not liable for the damage arising from that risk. They are therefore not liable for (*a*) damage to dangerous articles, such as sulphuric acid, aqua fortis, and other corrosive or easily inflammable stuffs; (*b*) breakage of fragile goods, such as fragile furniture, glass, iron castings, stone pitchers, empty and full, bottles and glass, carboys, loose loaf sugar, cheeses, etc.; (*c*) ordinary leakage, that is to say, the drainage of liquids through the joints or other openings of casks without external injury; (*d*) the spoiling of liquids or other substances which ferment easily or are liable to decay or to suffer by frost or heat; (*e*) the rusting of metals; (*f*) the diminution of weight of fresh or salt fish, oysters, fruit and vegetables.

573. Free return conveyance of damaged cast-iron and lead goods.

Unpacked iron castings and unpacked lead goods damaged during transit are, if the consignor or consignee requests it, sent back gratis to the forwarding station. Similarly the carriage is free of pieces sent by the consignor to replace damaged iron and lead goods.

574. Goods accompanied by sender or his agent.

In the case of goods sent under escort the railway is not responsible for damage arising from the risk which the presence of the attendant was meant to obviate.

575. Circumstantial assumption of cause of damage.

In all the foregoing cases it is assumed that the damage which could arise from a risk for which the railway is not responsible arose actually from such risk unless the contrary is proved.

576. Waste in weight of certain defined goods.

The railway is not responsible for undeweight in goods if, for the entire distance travelled, the deficiency, in case of dry goods, is not more than 1 per cent., and in the case of moist goods (under which are included bread, grated or ground dye-wood, bark, roots, liquorice, cut tobacco, fats, soaps, thick or solid oils, leaf tobacco, sheep's wool, skins, hides, leather, fresh and dried fruit, grain, seeds, roots for sugar-making, turnips, intestines, horns, hoofs, bones (ground or not), dried fish, hops, and fresh putty), if the deficiency is not more than 2 per cent. of the just weight as ascertained at the sending station and

NON-LIABILITY OF RAILWAYS—*continued.*

Holland—*continued.*

entered in the way-bill. These percentage diminutions in weight are applicable to every separate freight item accurately entered and shown with its weight in the way-bill. The percentage diminutions are not taken into account in the weight deficit to be compensated for by the railway when and in so far as it is shown that the loss under the prevailing circumstances did not arise from the nature of the goods or that these percentages in the given case are not in proportion to the kind of goods or the prevailing circumstances. The railway authorities may, however, in the case of goods loaded by the sender or unloaded by the consignee and with consent of the Minister of Waterways, Commerce and Industry, fix a higher percentage exemption from liability for diminution in weight than 2 per cent., and this in accordance with the nature of the goods.

DENMARK.

577. Defective packing.

The sender bears the consequences of declared deficiencies in packing as well as of any such deficiencies not outwardly visible. He is also responsible for damage to the railway company's property caused by the deficiencies in packing. If no declaration has been made, the sender is only responsible for outward visible deficiencies when he is guilty of intention to defraud.

578. Marking of goods.

The railway bears no responsibility for mistakes which are caused by want of marking of goods or by confusion with older marks thereon.

The railway company is not responsible in the following cases:—

579. Conveyance in open wagon.

For goods which, in accordance with the regulations or agreement with the sender, are conveyed in an open wagon in so far as the damage is caused by risk connected with that kind of conveyance.

580. Absence or insufficiency of packing.

For goods which, according to the sender's declaration on the way-bill, are received unpacked or not properly packed, although by their nature they need packing for protection against whole or partial loss or damage during the journey, in so far as the damage is caused by want of packing or the packing being in a defective condition.

581. Loading and unloading by owner.

For goods, of which loading or unloading, according to regulations or special agreement with the sender, are carried out by sender or consignee, respectively, in so far as the damage is caused by the special risk connected with the loading and unloading.

582. Inherent defects in goods.

For goods which, according to their peculiar or natural condition, are specially liable to whole or partial loss or damage, especially to breakage, rust, inner decay, unusual leakage, drying up or blowing away, in so far as the damage is caused by one of these things.

583. Goods accompanied by sender or his agent.

For goods which, according to the regulations or by special agreement with the sender, shall be accompanied by an attendant, in so far as the damage is caused by the special risk, for the avoidance of which the attendance was provided.

584. Circumstantial assumption of cause of damage.

If damage which has taken place can be due, in the circumstances, to one of the above-mentioned causes, the railway company must in any case ascertain the probability thereof.

585. Restricted goods incorrectly described by sender.

When goods which under regulations are not accepted for conveyance or are received by the railway only under certain conditions are handed in with an incorrect or inaccurate statement of contents or when the sender neglects to observe the prescribed conditions, the railway company is absolved from all responsibility in connection with the freight agreement.

586. Waste in weight of certain defined goods.

The railway company is not responsible for loss of weight of goods which, owing to their natural condition, lose weight, as a rule, during conveyance, except when the loss exceeds the undermentioned

NON-LIABILITY OF RAILWAYS—*continued.*

Denmark—*continued.*

regulation allowance, viz., 2 per cent. for fluid and moist goods and the following dry goods:—grated or ground dye-wood, bark, roots, liquorice wood, cut tobacco, fats, soaps and stiffened oils, fresh fruit, fresh tobacco leaves, sheep's wool, hides, skins, leather, dried and baked fruits, sinews, horn and hoofs, bones (whole and ground), dried fish, hops, and fresh putty. For all other dry goods of the kind mentioned the regulation allowance as to loss of weight in transit is 1 per cent. In case several packages of goods have been conveyed on the same way-bill the percentage is made out separately for each package when its weight is given on the way-bill or can be estimated otherwise. The foregoing limitations do not come into force when it can be proved that the loss under the circumstances in question is not caused by the nature of the goods or that the prescribed percentage of allowance in weight cannot be applied owing to the nature of the goods or the special circumstances of the case, and when goods have been absolutely lost during transit no deduction can be made by the railway for loss of weight.

587. Goods refused

Goods, the acceptance or removal of which is refused by consignee or cannot be effected before expiration of time limits for removal as well as those of which the consignee cannot be found, remain at the latter's risk and expense.

588. Goods stored in the open air.

For goods which, under regulations, must be stored in the open air, the railway does not accept responsibility for their being forthcoming after expiration of time allowed for their removal.

AUSTRIA AND HUNGARY.

589. Regulations same as in Germany.

Mem.—The text of the regulations as to non-liability of railways is practically the same for Austro-Hungary as for Germany.

CLAIMS, Etc., IN RESPECT OF GOODS LOST, DAMAGED, OR OVERCHARGED.

FRANCE.

590. Effect of unreserved acceptance of goods by Consignee.

Until the year 1888 all action against a carrier was barred by the receipt of the goods and payment of freight, etc., charges without reservation.

591. Time limits for ascertainment of damage, notification of complaints and entering legal proceedings.

The law now grants three days (holidays excluded) for the ascertainment of any damage in transit and the notification of complaints. It also extends from six months to one year the limitation of delay in a suit for loss or damage of goods, and provides a special limitation of five years for all other suits arising out of a contract of conveyance, this particularly applying to a rectification of charges. This five years limitation runs from the day on which a consignment was booked, and, in case of loss, from the date on which it should have been delivered.

592. Verification of freight accounts.

In France special agencies called "Untaxing Agencies" undertake for merchants the verification of railway freight accounts, and the pointing out of errors and losses discovered. The companies, on their part, have all their traffic accounts audited, and rectify the charges when they discover an error to their profit or loss.

593. Transit complaints to State Supervising Authority.

The State controls the commercial working of the railways by a Controller General and Principal and Detail Inspectors. Besides, special agencies, called Commissaires of Administrative Inspection, are placed at the same time under the Inspectors of Commercial working, and are located permanently at the principal stations. Their mission is, each in his own district, to watch over the observance of laws and regulations of the railway working, to report irregularities or accidents, to receive complaints and representations, and to draw up a summons of infringement or contravention.

CLAIMS, ETC., IN RESPECT OF GOODS LOST, DAMAGED, OR OVERCHARGED—*continued.*

BELGIUM.

594. Effect of unreserved acceptance of goods by Consignee.

The acceptance by the Consignee of objects carried invalidates all action against the carrier, except in the case of special reservations or damage not outwardly visible.

595. Reservations as to apparent damage or loss.

Reservations or claims should, in the case of apparent damage or loss, be formulated in writing and addressed to the carrier on the second day at latest after receipt of the goods, and in the case of delay, within a period of seven days at most, not including the day of receipt. If a claim be preferred against the railway it must be accompanied by the way-bill, and in the case of packages of 60 Kg. and under prepaid by railway stamps, by the docket, or receipt given to the consignor at the time of acceptance of goods.

596. Examination of damaged goods by railway.

The Consignee is bound to permit immediate examination of goods transported, if damage or partial loss is reported by the carrier on delivery.

597. Damage or defect not outwardly visible.

In the case of concealed damage or defect in the interior of the goods carried, the Consignee's claim may still be admitted if it be formulated in writing and addressed to the carrier within a period not exceeding seven days, not including the day of receipt, and if it be proved that the damage or defect occurred before delivery. This exception does not, however, apply if examination of the goods has been offered by the railway on delivery to the Consignee or his representative. No action can be taken against the railway except on points which have been made the subject of a reservation or special claim.

Should the consignee require the examination of goods which externally appear undamaged, before accepting delivery of same, the goods must be sent back to the station, to be examined in presence of the Station-master, or of his deputy. Should such examination not disclose any deficiency or damage, the cost of re-delivery at domicile will have to be borne by the consignee.

598. Time limits for entering legal proceedings, &c.

All actions arising from a contract for transport of goods, with the exception of such as arise from an act dealt with by the penal law, are prescribed after six months in the case of inland freights, and after a year in the case of international freights. The prescript runs in the case of total loss or delay from the day when the transit should have been effected, and in the case of partial loss or damage from the day of delivery of the goods. In the event of a wrong application of tariff or of error of calculation of charges the prescript runs from the day of payment.

599. Right of consignor or consignee to claim goods lost and subsequently recovered.

The Consignor or Consignee may reclaim lost goods which have been recovered on returning the indemnity received for the loss, after deducting the indemnity for delay. He forfeits this right if he neglects to reclaim the goods within 15 days after they have been offered to him by the railway company.

GERMANY.

600. Party entitled to bring claim.

The enforcement of rights with regard to the railway arising from a transit contract lies only with the party having the disposal of the goods carried. If the sender cannot produce the duplicate of the way-bill, the receipt form, or a certificate from the despatching station to the effect that such a document was not issued, he can only make good his claim with the consent of the Consignee, unless he can prove that the Consignee has refused to receive the goods.

601. Procedure in furnishing claims.

Rights asserted otherwise than by legal procedure must be put forward in writing, accompanied by a certificate of the value of the goods, and, when the way-bill has been handed to the Consignee, by the way-bill also. The railways are bound to inquire into such claims as soon as possible, and, unless a friendly agreement is come to, to settle them in a decree in writing.

602. Effect of unreserved acceptance of goods by consignee.

If the freight and other charges on goods have been paid, and the goods accepted, then all claims against the railway arising out of the transit contract are extinguished. The following are, however, excep-

CLAIMS, ETC., IN RESPECT OF GOODS LOST, DAMAGED, OR OVERCHARGED—*continued.*

Germany—*continued.*

tions:—(1.) Claims for compensation for damage caused by deliberate or gross carelessness on the part of the railway. (2.) Claims for compensation for delay, if made in writing on the fourteenth day at latest, not including the day of acceptance. (3.) Claims for compensation for deficiencies which have been ascertained by the railway before the Consignee has accepted the goods (as hereafter described), or which should have been ascertained, but were not, owing to the fault of the railway. (4.) Claims for compensation for defects which were not visible on acceptance of the goods, but on the following conditions—(*a.*) immediately after the discovery of the defect and within one week after acceptance of the goods, an application for inspection of the goods, as prescribed by regulations, with a view to establishing the existence of the defect, must be made either by way of legal procedure or by inspection of the goods by experts, or in writing to the railway; (*b.*) The party concerned must prove that the defect was caused during the period between the acceptance of the goods for transit and their delivery. A Consignee is at liberty to refuse acceptance of goods, even after acceptance of way-bill and payment of freight, until his application for the establishment of defects reported by him have been attended to. Reservations made on acceptance of goods are of no avail unless made with consent of the railway. When, of several articles entered on a way-bill, some are missing on delivery, the Consignee may omit from his acknowledgment of receipt the articles not delivered, making special reference thereto.

603. Claims arising on through interior traffic.

Claims arising from a freight contract affecting several railways can only be preferred against the first railway or against the railway which last took over the goods with the way-bill, or against the railway on whose line the damage took place. The claimant may choose between the railways designated above. The right of choice is forfeited once the claim is preferred.

604. Inquiry *re* loss, deficiency or damage of goods.

In all cases of loss, deficiency, and damage the Railway Administration must at once institute a thorough inquiry, record the result of the same in writing, and communicate it to the parties concerned, at their request. In particular, if a deficiency or damage of goods is discovered or suspected by the railway or asserted by the party concerned, then the railway must without delay determine in writing the condition of the goods, the extent of the damage, and, as far as possible, the cause and the time of the deficiency or damage. A statement, in writing, must also be drawn up in the event of loss. In determining cases of deficiency or damage the evidence of disinterested witnesses, and, in so far as the circumstances demand it, of experts, and also of the rightful owner should be taken. The expenses entailed by the services of experts in the determination of cases of deficiency and damage are not borne by the railway when the deficiency or damage to the goods having been asserted by the owner, such assertion is not upheld by the inquiry, or when only a deficiency or damage already reported by the railway is established. All parties concerned have the right without prejudice to the procedure described above to have the determination of deficiency or damage of goods carried out by experts nominated by the courts or other competent authority. The railway is also to be summoned to such inquiry, even when the experts are not nominated by the courts.

605. Right of consignor or consignee to claim goods lost and subsequently recovered.

When a party receives compensation for goods lost he may make a *proviso* in the receipt that in the event of the goods being recovered within four months after the expiration of the delivery time limit, notice shall be immediately sent him by the railway. An acknowledgment of this *proviso* is to be issued by the railway. Within thirty days after the recovery of the goods the person entitled to compensation may demand that the goods shall be sent, at his option, either to the place from where they were despatched or to the destination named in the way-bill, free of charge on repayment of the sum received in compensation. When the before-mentioned *proviso* has not been made, or when the person entitled to compensation has not made the request for delivery within thirty days, or, finally, if the goods are not recovered until four months after the expiration of the delivery time limit, the railway has the absolute disposal of the recovered goods.

606. Time limits for entering claims, &c.

Claims against the railway for loss, diminution, damage, or delayed delivery of goods become obsolete after one year. The term of limitation begins, in the case of damage or diminution, with the close of the day on which delivery took place, and, in the case of total loss or delayed delivery, with the expiration of the delivery time limit. The term of limitation is stayed by the receipt of a claim in writing by the railway. If a decree is given against the claim the term of limitation recommences with the day on which the railway made known its decision in writing to the claimant, returning to him, at the same time, any documents by which he sought to make good his claim. Further applications either to the railway or to the higher Authorities cause no stay to the time of limitation. For breaking the term of limitation the usual legal provisions are complied with. The claims mentioned above may, after expiration of the term of limitation, be considered only when the loss, diminution, damage, or delayed delivery has been previously notified, or when the notification of the same has been despatched to the railway.

It is deemed to be equivalent to notification to the railway when application is made for judicial establishment of proof, or when the matter at issue has been intimated to the railway through a suit pending between the Sender and the Consignee, or a subsequent purchaser of the goods, for loss, diminution, damage, or delayed delivery. The provisions as to limitation do not apply when a railway has deliberately caused the loss, diminution, damage, or delayed delivery of the goods.

HOLLAND.

607. Inquiry *re* depreciation or injury of goods.

When goods appear to suffer from depreciation or injury the railway officials are bound to ascertain, in presence of witnesses, and, if possible, of the owners, the weight and state in other respects, and, if necessary, to have the damage suffered determined by experts. When the owner of the goods desires to arrange, by amicable settlement, the compensation to be paid by the railway, he must, for the receipt or taking back of the goods, recognise the findings of the Report as just and send in his claim for compensation. If a judicial examination of the goods is necessary, it is effected, at the request of one of the parties, by experts to be nominated and sworn in by the President of the Divisional Court, or, in places where this is not established, by the Cantonal Judge. Every application for compensation must be accompanied by a document showing the value of the goods, and, when the goods have been already received, by the way-bill as well. Applications must be replied to and settled as soon as possible by the railway.

608. Effect of unreserved acceptance of goods by consignee

Goods carried, delivered, and accepted and cost of carriage paid, all legal complaint against the company is thereby cancelled, if the defect was *not* visible on the outside. For loss or injury not outwardly visible on delivery, the railway *may* be held responsible, even after delivery and payment of carriage, provided the loss or injury be ascertained in the manner prescribed by the Commercial Code Book. In the case of loss or damage to goods, the railway must institute a detailed inquiry, and must supply the parties concerned, on request, with a complete written statement of the result of the inquiry.

609. Right of consignor or consignee to claim goods lost and subsequently recovered.

On receipt of compensation for damage, the party concerned may demand that if the lost goods be recovered later on, he shall be informed of the fact. In that case an acknowledgment of his request must be given to him. Within four weeks after receipt of the above-mentioned advice note, the party concerned may demand that the recovered goods shall be delivered to him free at the place named in the way-bill. He is then bound to return the compensation paid to him, after deduction of the sum due to him by way of compensation for delayed delivery.

610. Time limits for entering claims, &c.

The conditions of the common law apply to the extinction of claims as to loss, depreciation, and injury.

DENMARK.

611. Party entitled to bring claim.

Only the person having disposing power over goods is entitled to bring claims in respect thereof against a railway company before a Court of Justice. If the Sender cannot produce the original duplicate way-bill he can only commence a law suit with the Consignee's assent.

612. Procedure in furnishing claim.

All claims for loss or damage of goods must be set forth in writing, and must be accompanied with a statement of the value of the goods, and by the way-bill, if it has been given to the Consignee by the railway company. The railway must further the settlement of claims as much as possible, and give a written answer thereto unless a compromise is arrived at.

613. Effect of unreserved acceptance of goods by consignee.

When freight and other charges on goods are paid and the goods received by Consignee all responsibility connected with the transit contract is removed from the railway company, except as follows:—(1.) When a claimant can prove that damage was caused wilfully, or by gross negligence on the part of the railway. (2.) In case of delayed delivery, when claim is made within seven days after the goods have been received. (3.) When damage to goods has been ascertained by examination by the railway company (*in accordance with Law* 35) before delivery of goods to a Consignee, or which ought to have been so ascertained, and it is the fault of the railway that this was not done. (4.) When damage was not outwardly visible, and ascertained after the goods were received by Consignee, but only under the following conditions—(*a.*) That at once the damage is discovered, and, at the latest, seven days after the goods have been received, the person concerned must take the necessary steps to have the damage ascertained in accordance with the rules in Law 35; and (*b.*), that the person concerned can prove that the damage was done between the time of handing in the goods for conveyance and the time of delivery. If it has been possible to make an examination of the condition of the goods at the station of destination, and the railway company have declared themselves willing to make such examination the regulations under this paragraph (No. 4) have no force. Even if a Consignee has received the way-bill and paid freight it is open to him to refuse to receive the goods, as long as, according to his statement, no examination has been made with regard to damage, the existence of which he asserts. When upon delivery of goods any of the packages named in a way-bill are missing the recipient can, by special mention, except them from his receipt.

614. Inquiry *re* loss, deficiency or damage of goods.

In all cases where goods have been diminished or damaged the railway company must at once make a close examination, and set forth in writing its results, which, upon request, are communicated to those concerned. The railway company shall specially do this when they themselves discover or suspect that goods are diminished or damaged, or when the owner of them asserts that this is the case, in order to decide the condition of the goods and the extent of the damage, and, also, so far as possible the cause and the time at which it took place. The same applies when goods are lost altogether. For the purpose of such inquiry, unwilling persons and special experts may be called in, and, if possible, the owner of the goods also. It is open to all concerned to take legal steps to estimate the damage to goods.

615. Right of consignor or consignee to claim goods lost and subsequently recovered.

A person who receives compensation for lost goods can, in the receipt, make a reservation that he shall at once be notified by the railway company if the goods should be found within the kingdom, or if they are found outside the kingdom within four months after the time limit for delivery. He can then within thirty days after such notification demand that the goods be delivered to him free of charge, according to his own choice, either at the starting point or the destination given in the way-bill, provided that he repays the compensation already given him by the railway. If reservation is not so made,

Denmark—*continued.*

or if the owner of the goods does not claim them within 30 days after notice, or, lastly, if the goods are found outside the kingdom more than four months after the delivery time limit, the railway company may dispose of the found goods as they wish.

616. Time limits for entering claims, &c.

Claims for compensation for whole or partial loss, for damage, and for delayed delivery become extinct when not admitted by the railway company within a year, unless the necessary steps to make the claims good have been taken beforehand by means of complaints properly made. Claims for wilful damage or gross negligence are, however, only extinguished after the lapse of three years. In case case of damage or partial loss of goods the period within which claims must be made dates from the day of delivery, and in case goods have been completely lost or delivery has been delayed from the day upon which the delivery time limits expired.

Claims which become extinct, as above, cannot be brought into force in the form of a counterclaim or protest.

AUSTRIA AND HUNGARY.

617. Regulations same as in Germany.

MEM.—The regulations as to claims, etc., in respect of goods lost or damaged on the Austro-Hungarian Railways are practically the same as those applying to the German Railways.

LIVE STOCK TRAFFIC.

FRANCE.

Animals by Quick Transit.

618 Rates for animals by quick transit.

The rates to be charged for the transit of animals are fixed as follows:—

	Per head and km.
Oxen, cows, bulls, horses, mules, asses, colts, draught animals, hinds, stags and deer, ...	0·16 Fr.
Calves, pigs, roebucks, ...	0·06 Fr.
Sheep, lambs, goats, ...	0·03 Fr.

Persons accompanying the animals travel in the company's carriages, and pay according to the places which they occupy.

Nevertheless, the animals mentioned above, when placed in crates supplied by the consignors, the weight of which, including packing, does not exceed 150 Kg. per crate, are rated *according to weight*, in accordance with the rates and conditions of the general Tariff for Goods and Merchandise by quick transit.

The rate is charged on *double* the weight of the animals and the crates containing them.

619. Rates for animals over 5,000 Fr. declared value.

Animals the declared value of which exceeds 5,000 Francs are rated one-half more than the rate fixed by the general tariff for animals of the same species.

620. Liability of Railway in case of accident.

In the event of accident to animals in the course of transit the liability of the companies is limited to 5,000 Fr. per head if the consignment note does not mention a larger sum.

Accessory Charges.

621. Registration fee.

For the registration of animals the following fee is charged:—

A fixed fee of 10 c. per consignment.

For animals using several lines conceded to different companies this fee is only collected at the forwarding station.

LIVE STOCK TRAFFIC—*continued.*

France—*continued.*

622. Loading and unloading fees.

For the handling (loading and unloading) of animals the following charges are collected:—

	Per head.
	Fr.
Oxen, cows, bulls, horses, mules, asses, colts, draught animals, hinds, stags and deer,	1·00
Calves, pigs, and roebucks,	0·40
Sheep, lambs, and goats,	0·20

623. Conveyance and delivery time limits.

Animals sent by quick transit and carried and delivered from station to station within the times fixed by the Ministerial Decrees and arising from Ministerial decisions approving of the service of trains.

Animals sent by quick transit will be sent off by the first passenger train comprising carriages of all classes, and corresponding with their destination, provided that they have been presented for registration at least three hours before the time of departure of that train, in default of which they will be kept back till the next departure.

Nevertheless, this rule is not obligatory in the case of express and mail trains, into which the companies allow, in exceptional cases, second and third class carriages, and which have been expressly designated, either in the rate books submitted for ministerial approval at alterations in the service, or in the notices acquainting the public with the service of trains.

For animals passing from one system to another over a common station the time for transmission will be three hours, reckoned from the arrival of the train bringing them to the junction, and re-forwarding from that point will be effected by the first passenger train comprising carriages of all classes leaving after the expiration of that term.

The time allowed for transmission between systems ending in the same locality in two distinct railway stations communicating by rails will be six hours, not including the time during which the stations are closed, and it will be of the same duration between the different termini of Paris until the quick transit service between the said termini shall have been organised on the Circle Railway, the remaining conditions of the first paragraph of the present Article being still applicable to the two latter cases.

A longer term may be granted by the Minister of Public Works in the case of various stations on each system on the application of the general Traffic Inspectors and with consent of the companies, provided such term does not exceed eight hours.

Consignments are placed at disposal of consignee at the station two hours after arrival of train.

624. Disinfection fees.

Fees for disinfection same as in slow transit.

Animals by Slow Transit.

625. Rates for animals by slow transit.

The maximum rates to be charged on all the large railways for the slow transit of animals are as follows:—

	Per head and per Km.
	c.
Oxen, cows, bulls, horses, mules, asses, colts, draught animals, hinds, stags and deer,	10
Calves, pigs, and roebucks,	4
Sheep, lambs, and goats,	2

The working rates per head on all large railways *except the State line* are apparently those defined as Special Tariffs for each system (particulars of which

LIVE STOCK TRAFFIC—*continued.*

France—*continued.*

are shown hereafter for the Nord and Ouest Railways). On the State Railway the working rates per head are (according to analysis of the mileage table) as follows:—

Distance.	Horses, Oxen, and other large animals.	Calves, Pigs, &c.	Sheep, Lambs, and Goats.
	c.	c.	c.
0 to 60 Km., per Km., ..	10	4	2
61 to 100 Km., per Km., ..	8·75	3·5	1·75
101 to 200 Km., per Km., ..	7·5	3	1·5
201 to 300 Km., per Km., ..	7	2·8	1·4
Over 300 Km., per Km., ..	8	3·2	1·6

Persons accompanying the animals travel in the companies' carriages, conforming to the regulations in force, and paying third-class fare.

Nevertheless, the animals named above, when placed in crates supplied by the consignor, the weight of which, inclusive of packing, does not exceed 150 Kg. per crate, are taxed by weight, in conformity with the rates and conditions of the general goods tariff series 1.

The charge is made on *double the weight* of the animals and of the crates which contain them.

626. Rates for animals over 5,000 francs declared value.

Animals the declared value of which exceeds 5,000 Fr. are rated one-half more than the cost fixed by the tariff applicable to animals of the same species.

627. Liability of Railway.

In case of accident to animals during transit, the liability of the companies will be limited to 5,000 Fr. per head if the consignment note does not mention a higher value.

Small animals such as:—

628. Rates for small animals in crates, &c.

Cats, guinea-pigs, squirrels, birds, monkeys, when placed in cages or baskets provided by the consignors, are taxed by weight, in conformity with the rates and on the conditions of the general goods tariff series 1. The charge is made on double the weight of the animals and of the cages or baskets containing them.

629. Acceptance of animals for transit.

Transit of horses and cattle is only undertaken at stations and for stations provided with loading platforms.

These stations will be indicated either by special notices or by the notices indicating the service of trains to the public. Stations at present open to the transit of horses and cattle, both at departure and arrival, are indicated besides in the alphabetical list of names of stations.

The superior authority reserves the right to determine at which stations loading platforms shall be established for horses and cattle.

Accessory Charges.

630. Registration fees.

For the registration of animals the following charges are made:—

A fixed charge of 10 c. per consignment.

For animals making use of several lines conceded to different companies this fee will only be charged at the sending station.

631. Loading and unloading fees.

For the handling of animals the following fees are charged:—

	Per head.
	Fr.
Cows, oxen, bulls, horses, mules, asses, colts, draught animals, hinds, stags and deer,	1·00
Calves, pigs, and roebucks,	0·40
Sheep, lambs, and goats,	0·20

LIVE STOCK TRAFFIC—*continued.*

France—*continued.*

These fees are made up as follows:—

	Per head.
Oxen, cows, &c.	
Loading on departure, . . .	0·50
Unloading on arrival, . . .	0·50
Calves, pigs, roebucks.	
Loading on departure, . . .	0·20
Unloading on arrival, . . .	0·20
Sheep, &c.	
Loading on departure, . . .	0·10
Unloading on arrival, . . .	0·10

The loading and unloading of dangerous animals, for which special precautions are prescribed by the police regulations, are effected by and at the expense of the consignors and consignees. Nothing is charged for this double operation.

Animals are not subject to any station charges.

632. Junction tranship fees.

At the junction stations of one railway with another railway conceded to a different administration, and with which exchange of rolling stock is possible, the following fees, to be equally divided between the two companies, are charged:—

Oxen, cows, horses, &c., 0·40 per head.

Calves, pigs, and roebucks, 0·20 per head.

Sheep, lambs, and goats, 0·10 per head.

Nothing is added to the transmission fees thus fixed for handling charges (loading and unloading) in junction stations.

Nevertheless, when the transmission is effected between two lines between which the exchange of rolling stock is impossible, the fees for loading and unloading fixed in the preceding article are charged without any additional transmission fee being added.

The re-loading of dangerous animals is effected by and at the expense of the parties interested, and nothing is charged for this operation, but in case of transmission without re-loading from one system to another 40 c. per head is charged for transmission.

633. Lairage fees.

Animals which have not been fetched on arrival are placed in pound at the expense, risk, and peril of their owner.

Pound expenses are paid on a statement of expenditure being furnished.

634. Accessory fees for small animals.

Animals in crates, cages, or baskets, transported and taxed by weight in conformity with the regular tariffs are subject in so far as accessory expenses are concerned, to the same rates and conditions as slow transit goods.

635. Conveyance time limits.

Animals of all kinds, by slow transit, are forwarded, carried, and delivered from station to station within the terms fixed by the Ministerial Decrees, extracts from which are given below:

Animals of all kinds sent by slow transit will be forwarded during the day following that on which they were consigned.

The duration of the journey in the case of slow transit consignments will be calculated at the rate of twenty-four hours per indivisible fraction of 125 kilometres.

Surplus distances up to and including 25 Km. will not be reckoned. Thus, 150 Km. will count as 125 Km., 275 as 250, &c.

On the lines or sections of certain specified systems in either direction, for partial or complete journeys, the duration of the transit will be reduced to twenty-four hours per indivisible fraction of 200 Km. for animals.

Animals passing directly on the same system from one of the above-mentioned lines to another of the same will be likewise carried within twenty-four hours per indivisible fraction of 200 Km., as if the carriage were effected upon one and the same line.

LIVE STOCK TRAFFIC—*continued.*

France—*continued.*

For animals which would make use successively of lines on which they would enjoy the right of accelerated carriage, and others on which they would enjoy no such right, the total time of transit will be calculated by adding the partial periods connected with each of the lines under the different management, provided, however, that this total period does not exceed twenty-four hours per indivisible fraction of 125 Km., surplus distance up to 25 Km. inclusive, not being reckoned.

For animals passing from one system to another over a common station the time of forwarding will only be counted from the station of origin, and once only; but the companies are allowed a period of one day for transmission from one system to another, the time of transit for each company remaining fixed.

The time of transmission between railways ending in the same locality in two separate stations connected by railway lines will be two days, the other conditions of the first paragraph of the present Article being applicable in the latter case.

Consignments will be placed at disposal of consignee on the day following that of their actual arrival at the station.

636. Time limits for receiving and delivering animals.

From 16th March to 15th October the stations will be open for the reception and delivery of animals for slow transit from six o'clock in the morning at the latest, and closed not earlier than six o'clock in the evening.

From the 16th October to 15th March they will be opened at seven o'clock in the morning at latest, and closed at earliest at five o'clock in the evening.

On Sundays and holidays the acceptance and delivery of live animals may be effected up to ten o'clock in the morning.

637. Disinfection fees.

By way of disinfecting fees, when such disinfection is prescribed by the regulations, the following charges are made:—

40 c. per horse, colt, ass, mule.

30 c. per ox, bull, cow, hind, stag, deer.

15 c. per calf, pig, roebuck.

05 c. per sheep, lamb, goat.

Nevertheless, for consignments from one sender the fee may not exceed 2 Fr. per wagon with one floor, and 3 Fr. per wagon with two floors.

The fee of 2 Fr. per wagon of one floor and 3 Fr. per double-floored wagon is charged when, by request of the consignor, a wagon is specially reserved for the animals, whatever be their number.

Whatever the number of companies taking part in the transit, the fee is only charged once, unless there be any transfer of load; such transfer cannot be imposed upon the consignor except at frontier stations and junctions of two lines, between which the exchange of rolling stock is impossible.

The charges fixed above are also due when the animals enumerated in the present Article are carried in crates, cages, or baskets.

638. Intermediate station traffic and "soudure" tariffs.

The Regulations for Goods Traffic apply to live stock.

639. Horses for Shows.

Animals admitted to Agricultural Shows patronised by the State, Departments or Communes, Horses admitted to Horse Shows organised by Equestrian Societies of recognised public utility, or subsidised by the State or the Departments.

On the Nord Railway animals admitted to agricultural shows patronised by the State, the Departments or the Communes, as well as horses admitted to horse shows organised by equestrian societies of recognised public utility, or subsidised by the State or the Departments, pay on the outward journey the full rate of the tariff applicable to them without reduction. Foals, however, accompanying brood mares sent to horse shows only pay on the outward journey half the tariff applicable to the mother.

LIVE STOCK TRAFFIC—*continued.*

France—*continued.*

They are carried *free on return* to the original point of departure within fifteen days from the close of the exhibition or show on payment only of registration fee and receipt stamp, plus the ordinary expenses of loading and unloading according to the general tariff, except in the cases provided for below.

640. Attendants for Show horses.

Attendants of horses, admitted to horse shows, also pay full fare on the outward journey, and are carried *free on return* at the rate of one man per horse or per brood mare accompanied by its foal, in the same class of carriage as on the outward journey, on condition that they carry a paper proving their identity issued by the president or director of the show of the equestrian society which organised the latter, and bearing the date stamp of the station which issued the outgoing ticket.

When animals are sent successively to several shows or exhibitions they are returned direct and carriage free from the extreme point reached by them on the Nord system to the initial point of their departure on that system.

The return of animals which formed part of one single consignment *on the outward journey* may be effected in portions of the original consignment.

641. Loading, unloading and free return conveyance of Show horses.

The loading of animals into wagons on departure and their unloading on arrival are performed by the consignors and consignees at their own expense and risk.

In order to enjoy free conveyance of their animals on the return journey consignors must produce:—

1. The receipt, or in case of successive consignments to several shows, the receipts showing that they have paid on the outward journey the full tariff pertaining to their consignments.

2. The admission cards to the show of the animals to be re-forwarded.

The present tariff is not applicable:

To animals of exceptional height or size, or which, by reason of their nature, have to be loaded into special wagons.

With regard to the transit of animals, consignors must notify departure stations of the consignments to be sent off at least forty-eight hours beforehand, and *in writing.*

642. Special tariffs for quick transit.

Special tariffs, chiefly for interior conveyance, are in operation for various descriptions of animals by Quick and Slow Transit. The following are examples of these tariffs:—

Quick Transit.

Nord Line—

A.—For horses, colts, fillies, ponies, and mules in consignments of three head at least.

B.—For all kinds of animals in full wagon loads.

The Bases of the rates for the above are as follows:—

Distance	A. Per Head.	B. Per Sq. m. of Floor Area.
	c.	c.
Up to 100 Km., per Km. ...	13	5
101 to 200 Km., per Km. added.	10	3·3
Over 200 Km., Per Km. added.	5	1·5

LIVE STOCK TRAFFIC—*continued.*

France—*continued.*

Animals are to be loaded and unloaded by owner at his risk, and if an owner is not present to take delivery on arrival, the railway company will unload and place the animals at livery, charging for the service—

50c. per head for large animals;
20c. per head for sheep and pigs;
10c. per head for small animals.

The foregoing tariffs are not applicable to animals exceeding the undermentioned values per head:—

	Fr.
Horses, bullocks, and other large animals, .	1,500
Calves, pigs, and other animals of medium size,	300
Goats, fat sheep, and other small animals, .	60

Ouest Line.

Horses, colts, mules, asses, bulls, cows, and bullocks in minimum consignments of three head, or paying for that number. Rate, 13c. per head per Km.

Animals to be loaded and unloaded by and at risk of owner. This rate is applicable only to animals not exceeding 1,500 Fr. per head in value.

State Line.

I. Horses and all other large animals in minimum consignments of three head:—

Rate and conditions of loading and unloading same as on Ouest line (given above).

II. Pigs and calves in minimum consignments of eight animals, or paying for that number:—

Rate, 5c. per head per Km.

Loading and unloading to be done by and at risk of owner.

III. Lambs, ewes, fat sheep, and goats in minimum consignments of sixteen head:—

Rate, 2½c. per head per Km.

Loading and unloading to be done by and at risk of owner.

IV. Complete wagon-loads of any kind of animals.

Rate:—

Up to 40 Km., 20 Fr. per wagon.
41 to 100 Km., 50c. per wagon per Km. added.
101 to 200 Km., 45c. per wagon per Km. added.
201 to 300 Km., 40c. per wagon per Km. added.
Over 300 Km., 35c. per wagon per Km. added.

Loading and unloading to be done by and at risk of owner.

For all the above State Line Rates the limits of value of animals are the same as on the Nord line.

Slow Transit.

Nord Line.

643. Special tariffs for slow transit.

A.—Lambs, ewes, fat sheep, goats and pigs not exceeding 50 Kg. each in weight, in consignments of less than twenty head.

B.—Above-named animals in consignments per complete wagon reckoned at a minimum of four head per square metre of floor area.

C.—Horses, mules, colts, and asses, bulls, bullocks, cows, calves, and large pigs in consignments per complete wagon, without limit of number per square metre of floor area.

Bases of Scales A, B, C:—

Distance.	Per Head. A.	Per Head. B.	Per Sq. m. of Floor Area. C.
	c.	c.	c.
0 to 50 Km., ..	1	0·5	3¼ per Km.
51 to 100 Km, ..	0·8	0·4	3¼ per Km. added
101 to 150 Km., ..	0·4	0·2	2¾ per Km. added
151 to 200 Km., ..	0·2	0·1	2¼ per Km. added
201 to 250 Km., ..	0·2	0·1	1¾ per Km. added
251 to 300 Km., ..	0·2	0·1	1¾ per Km. added

LIVE STOCK TRAFFIC—*continued.*

France—*continued.*

Under General Regulations an addition of 2 per cent. is made to charges calculated on above bases.

A. is applicable with a minimum charge of 3 Fr. per consignment.

B. and C.—Applicable with a minimum charge of 3 Fr. per wagon.

Animals sent under above rates must be loaded and unloaded by and at the risk of owner. If the owner is not present to take delivery on arrival the company will unload and place at livery, charging for the service the same as for quick traffic under Special Tariffs.

Special Regulations for the Conveyance of Live Animals by Slow Transit.

Requests for a supply of rolling stock are subject to the conditions laid down in the general tariffs. Consignors are bound, in addition, to state in their application the number and nature of the animals which they are to have carried, and also their destination.

Consignments sent under the present tariff are carried in ordinary cattle wagons, with the exception of stall wagons, which are reserved for quick transit.

The company is not bound to supply consignors with any wagons except the cattle vans at its command, without any obligation as regards capacity.

Consignments are accepted only in so far as the departure and arrival stations are supplied with an entrainment platform for animals sent by slow transit.

The loading of animals and their unloading on arrival are effected by consignors and consignees at their own risk.

Consignors may load into each wagon, at their own risk, as many head of cattle as they think proper.

Consignors must, during transit, bestow upon their animals the care necessary to insure their preservation.

In the case of animals rated per head, the rate to be applied is that of Table A., calculated on the number of head comprising a consignment, unless it be to the interest of the consignor to pay that of Table B., with minimum of four head per sq. metre of superficial area of interior of the cattle vans placed at disposal of the consignors.

In the case of animals rated per sq. metre, the rate to be applied is that of Table C., calculated likewise according to the internal surface area of the cattle vans placed at disposal of the consignors.

The inside surface area of cattle vans is calculated in sq. metres, rounding off to the even metre above fractions of half a sq. metre and over, and not counting fractions of less than half a square metre.

When a consignment necessitates the use of several wagons, and when there remains over a surplus of animals less than a full wagon-load, this surplus is rated, according as it is of advantage to the consignor, either at the rates of Tables A, B, and C, or at the rates of the general tariff, according to circumstances, calculated upon the actual capacity of the rolling stock used.

In any case the whole consignment is governed by the regulations of the special tariff.

When a full wagon contains animals rated differently, the rate of the highest tariff will be applied.

Consignors or their agents may travel in the same train as their animals in the proportion of one person to every loaded wagon.

Places are, therefore, placed at their disposal in sufficient numbers in a third class compartment, or, in default of this, in the guard's van.

Free travelling is allowed, both going and coming, in the proportion of one person per consignment of two or three wagons, rated under Table B, and of one wagon rated under Table C, and in the proportion of two persons per consignment of four wagons or more, rated under Table B, and of two wagons and upwards rated under Table C.

Apart from the foregoing, third class tickets are issued to the other persons accompanying the animals.

LIVE STOCK TRAFFIC—*continued.*

France—*continued.*

In pursuance of the foregoing conditions there is issued, both going and returning, on presentation of the receipt issued to the consignor, a single journey coupon valid for a third class compartment, or, in default of the latter, for the guard's van.

On the return journey, a return coupon is given on production of the same receipt.

The period for which the return coupon is available is limited to 8 days, reckoned from the day of departure of the consignment.

Permits are not transferable, and are intended for the exclusive use of the actual attendants on their employer's cattle (herds or grooms); they are not available if the bearer takes his seat in any but a third class compartment. Bearers are bound to give proof of their identity on demand of any of the company's agents.

If the holder of a permit stops, on the return journey, at any place before his destination (forwarding station of animals), and in violation of the instructions on his permit, he loses his right to free travelling over the distance still to be covered, and he must leave his permit at the station at which he stopped.

Dogs belonging to attendants are also carried free in the proportion of two dogs to every person entitled to a free pass.

These dogs are strictly prohibited from entering waiting-rooms. They must be muzzled, and, as far as possible, placed in the dog boxes in the vans.

In default of these they are placed with the cattle attendants.

Nevertheless, they are not allowed into a third class compartment with the drovers unless it contains no other passengers.

The supplementary time limits provided under Article 2 of the Conditions of Application common to all special tariffs does not apply to the carriage of live animals named under the present tariff, which must be effected within the time fixed by the Ministerial Decrees in force.

In the event of delay, the company is not responsible for injury actually suffered by consignors or consignees except to the amount of the whole or part of the cost of transit, deductions being made in the following manner:—

If the delay is four hours and a half, the indemnity may not exceed two-thirds of the cost of carriage.

If the delay exceeds five hours and a half, the indemnity may not exceed the total cost of carriage.

Nevertheless, when the delay exceeds 24 hours, the rights of consignors are reserved.

Live animals may be carried in vans supplied by the consignors. Such wagons are subject to the conditions for transit of goods in wagons belonging to private persons.

Ouest Line.

	(*a*)	(*a*)	(*a*)	(*a*)	(*a*)

I. Horses, colts, fillies, mules, and asses in minimum lots of eight head:—

0 to 100 Km.,	8c.	per head	per Km.	
101 to 200 Km.,	7c.	per head	per Km.	added.
201 to 300 Km.,	5c.	per head	per Km.	added.
301 to 800 Km.,	2c.	per head	per Km.	added.

II. Horses and asses for human food in minimum		(*b*)	(*b*)	(*b*)	(*b*)

lots of six head, and bulls, bullocks, cows, and heifers in minimum lots of eight head.

0 to 100 Km.,	6c.	per head	per Km.	
101 to 150 Km.,	5c.	per head	per Km.	added.
151 to 200 Km.,	4c.	per head	per Km.	added.
201 to 250 Km.,	3·5c.	per head	per Km.	added.
251 to 300 Km.,	3c.	per head	per Km.	added.
301 to 400 Km.,	2·5c.	per head	per Km.	added.
401 to 800 Km.,	2c.	per head	per Km.	added.

LIVE STOCK TRAFFIC—*continued.*

France—*continued.*

(*c*) (*c*) (*c*)

III. Bullocks, cows, and heifers for pasturing and fattening, in minimum lots of ten head.

0 to 100 Km., 4c. per head per Km.
101 to 200 Km., 3·5c. per head per Km. added.
201 to 300 Km., 2·5c. per head per Km. added.
301 to 800 Km., 1·5c. per head per Km. added.

(*d*) (*e*)

IV. Pigs and calves in minimum lots of twenty-four head.

0 to 100 Km., 3c. per head per Km.
101 to 150 Km., 2c. per head per Km. added.
151 to 200 Km., 1·25c. per head per Km. added.
201 to 800 Km., 1·25c. per head per Km. added.

(*f*) (*f*) (*f*)

V. Goats, fat sheep, ewes, and lambs in minimum lots of fifty head.

0 to 80 Km., 5c. per head per Km.
81 to 800 Km., 2c. per head per Km. added.

All animals under above tariffs must be loaded and unloaded by and at the risk of owner. In the absence on arrival of owner or his representative, animals will be unloaded and placed at livery by the railway, the following charges being made for such service:—

50c. for each horse, colt, filly, mule, ass, bull, bullock, cow, or heifer.
25c. for each pig or calf.
10c. for each ewe, fat sheep, lamb, or goat.

(*a.*) Rate reduced one-third when the height of the animals does not exceed 1·45 m., but the total charge must not be less than as for eight horses. Colts and fillies are considered as such when their age is less than three years.

(*b.*) Rate reduced one-fourth when the height of the animals does not exceed 1·30 m., but the total charge may not be less than as for eight bullocks.

(*c.*) This rate applies to bullocks, cows and heifers only when they are sent to pasture for fattening.

(*d.*) Rate reduced one-third for small and lean pigs destined for finishing and not more than 50 Kg. each in weight, and reduced one-half for sucking pigs not exceeding 30 Kg. each in weight, but, in the latter case, the total charge per consignment must not be less than as for twenty-four large pigs. The reduction of one-third for lean pigs does not apply to consignments for Paris, Argenteuil, Versailles, or Poissy.

(*e.*) Considered as calves when aged under one year.

(*f.*) Rate reduced 20c. per head for lambs, ewes, and fat sheep in lots of 200, or paying for that number, but with a minimum charge of 50c. per head.

State Line.

Animals of all kinds in complete wagon-loads. The bases of the rate is not shown in the Tariff Book, but the charge is as under for the following specific distances:—

Up to 40 Km., 12 Fr. per wagon.
100 Km., 28c. per Km. per single-floored wagon for the whole distance.
200 Km., 26c. per Km. per single-floored wagon for the whole distance.
300 Km., 400 Km., 500 Km., and upwards } 24c. per Km. per single-floored wagon for the whole distance.

The foregoing charges are increased by 50 per cent. when wagons with two floors are used, and by 100 per cent. when wagons with three floors are used.

The rates do not apply to animals exceeding 5,000 Fr. per head in value.

Animals must be loaded and unloaded by and at risk of owner.

LIVE STOCK TRAFFIC—*continued.*

BELGIUM.

HORSES, CATTLE, ETC.

644. Acceptance for transit and ordering of vehicles

The tariff for passenger train only applies to horses, asses, mules, ponies, and colts, and in so far as the distance to be covered is at least 75 kilometres, or that the points of departure and arrival are the termini of the train's journey.

Freights should be notified at least forty-eight hours in advance. This period is doubled in the case of consignments necessitating the use of more than five wagons.

Nevertheless the railway companies do not guarantee to supply boxes within these time limits, and orders are attended to in the order of their receipt.

The other regulations as to ordering of wagons, conditions of loading and demurrage charges with regard to the acceptance of full loads under Slow Goods tariff are also applicable to these consignments.

The animals should be entrained at least one hour before the start of the train.

Animals may be accepted at the railway stations at hours outside the limits laid down by general regulations, provided they are to travel by a night train.

Horses and cattle to travel by slow goods train are not accepted on Sundays or on Ascension Day, the Assumption, All Saints, and Christmas Day.

645. Attendant on Animals.

Free transit is allowed to one attendant per consignment or per wagon, provided he travels in the box or in the wagon. When animals are not accompanied by an attendant, the consignee is advised of arrival either by express messenger or telegraph. In the former case a charge of 50 c. is made for distances within 3 Km. radius of the station, beyond which limits a charge of 20 c. per Km. reckoned from the station is made, and in the latter case the consignee has to pay the cost of the telegram.

646. Rates for Horses.

Freights, whether by passenger or goods train, are charged at the rates shown hereafter.

When a consignment comprises, per wagon, more than *three* horses per passenger and more than *eight* horses by goods train, every horse above three (passenger train) and eight (goods train) is subject to a supplementary fee equal to one-half the price charged for one horse.

Mules, colts, ponies, and asses carried either by passenger or goods train are assimilated for the purpose of applying the tariff of transport, namely:—

One mule, 1 or 2 colts or ponies equal 1 horse.
Two mules, 3 or 4 colts, ponies or asses equal 2 horses.
Three mules, 5 or 6 colts, ponies or asses equal 3 horses.
Four mules, 7 or 8 colts, ponies or asses equal 4 horses, and so on.

Colts and ponies measuring more than 1.30 m. are rated as horses.

If the sender desires it, and if the total journey is at least 75 kilometres, horses, asses, mules, ponies and colts are, within limits compatible with the exigencies of the service, carried in goods trains for one part of the journey and in passenger trains for another part. This being so, there is levied, independently of the charge for goods train, from the point of departure to the destination, a supplementary charge equal to half the charge fixed by the passenger rate tariff for the journey effected by passenger train.

This charge may in no case, however, be greater than the fee which would have been payable on the freight by passenger train for the entire journey.

647. Rates for Cattle.

Transports only take place by goods train and are divided into three categories:—

1.—1 or 2 bulls, oxen, bullocks, cows or heifers; 1 to 5 fat pigs or calves; 1 to 10 thin pigs, sheep or goats; 1 to 30 sucking pigs.

2.—3 or 4 bulls, oxen, bullocks, cows or heifers; 6 to 10 fat pigs or calves; 11 to 20 thin pigs, sheep or goats; 31 to 60 sucking pigs.

3.—A wagon-load of large or small cattle.

LIVE STOCK TRAFFIC—*continued.*

Belgium—*continued.*

As fat pigs are rated animals weighing more than 50 Kg.; as thin pigs, animals weighing more than 20 and up to 50 Kg.; and as sucking pigs, animals weighing 20 Kg. and under.

The charges of categories 1, 2 and 3 are applicable to freights composed of different species of animals, according as the quantities charged for in a wagon do not exceed 30, 60 and 100 units, respectively, it being understood that each head of cattle represents the following number of units:—

	Number of units in the category.		
	1st	2nd	3rd
Bulls, oxen, and cows, ..	15	15	12½
Heifers, bullocks, ...	15	15	10
Fat pigs and calves, ...	6	6	4
Thin pigs, ...	3	3	2½
Sheep and goats, ...	3	3	1⅔
Sucking pigs, ...	1	1	1

Consignors may, but at their own peril and risk, load into a wagon as many head as they wish.

However, the prices in the third category are subject to an increase in the case of consignments of animals containing, per wagon, more than 100 units. For freights not composed of different kinds of animals the number of 100 units corresponds to:—8 bulls, cows or oxen; 10 heifers or bullocks; 25 fat pigs or calves; 40 thin pigs; 60 sheep or goats; 100 sucking pigs. This increase is fixed for every unit or fraction of a unit above 100 at ½ per cent. of the price in the third category.

647*a*. Rates for small animals in baskets, crates, &c.

Small animals of the sheep, goat, or pig species handed in for conveyance in baskets or open crates are conveyed at fast goods rates. They are not permitted in passenger trains. Dogs, sucking pigs, and small domestic animals in cages, baskets or boxes are accepted for transit as express or fast goods. Birds, pigeons, and small farmyard animals presented in cages, baskets, or crates are accepted for transport on the conditions of express, fast or slow goods.

The cages, baskets, and crates returned empty by goods train within 48 hours of the delivery of the animals, and by the same route as on the outward journey are only subject to a registration fee of 20 c. per original consignment. Such empty packages are subject to ordinary tariff rates if (*a*) they are not removed to destination within eight hours after receipt of the advice of arrival; (*b*) if a declaration of interest in delivery is made in respect of them; (*c*) if the railway is required to collect or to deliver at domicile, or (*d*) if a consignment is subject to disbursement or reimbursement charges.

648. Loading, unloading and removal of animals

The entraining and detraining of animals is effected exclusively by and on the entire responsibility of the consignors and consignees. The same applies to unloading, re-loading and weighing, when these operations are required by the Customs authorities at the frontier.

The railway companies may forbid all unloading or re-loading during transit.

The animals, accompanied by an attendant, must be removed within two hours after arrival; animals not so accompanied must be removed, at latest, two hours after notice of arrival has been handed to the consignee or his representative. After this time limit, they will be put in the pound at the expense, risk, and peril of the sender, or if the railway authorises their remaining in the wagon, a demurrage fee for the use of the rolling stock will be charged as in the case of goods traffic.

649. Conveyance, time limits.

Consignments of horses, asses, mules, ponies and colts are forwarded as the railway companies think best, either (*a*) by the first ordinary passenger train run by the railways, unless it be advantageous, from the point of view of rapidity, to forward them by goods train; (*b*) by trains specially reserved for the purpose.

The animals must be delivered at the station at least an hour before the departure of the train which is to convey them.

Animals, in general, are carried by mixed trains or by the goods trains run by the railway companies, and starting *at least* one hour after acceptance at the goods office.

The period allowed to the railway for delivering consignments at their destined station is forty-eight

LIVE STOCK TRAFFIC—*continued.*

Belgium—*continued.*

hours, beginning with the first hour of the day following that of acceptance, not including the supplementary delay of three hours allowed for each point of exchange with the conceded railways.

649*a*. Special Trains.

If application be made 48 hours in advance horses and other animals may be forwarded by special train at ordinary slow transit rates, provided the minimum charge over each railway travelled on amounts to at least 160 fr., or represents not less than fr. 5.25 per Km. of the whole journey. This minimum is increased by accessory fees and disinfection charges.

650. Indemnity for delayed transit of animals.

In the event of delay in transit, the indemnity for live animals is the whole cost of transit after a delay of more than six hours in placing them at the disposal of the owner.

651. Non-liability of Railway.

The railways are not responsible for accidents on the railway during transit, such as escapes, falls, shocks, suffocation, want of food and other accidents of the kind which befall animals.

652. Disinfection fees.

The following charges are made for disinfection of vehicles used for conveyance of animals:—

Horses and Cattle—

Per single-floored wagon, 1.25 Fr.

Per double-floored wagon, 2.50 Fr.

653. Animals for Exhibition and for breeding.

Animals for exhibition and brood mares going for service.

Rates of transit—

Outward journey—without any reduction in rate or accessory fees.

Return journey, carriage free. The following charges only are made:—For registration, 20c.; advice note of arrival, if necessary, 10c.; for disinfection, 1.25 Fr.

Foals accompanying brood mares to and from the stud are forwarded either by fast or slow goods train at 50 per cent. reduction on ordinary tariff rates, but pay full accessory charges.

Conditions.

Animals destined for exhibitions or shows, either private or under the patronage of the Government or the Communes, must be addressed to the president or secretary of the executive committee, and application for the special tariff must be expressly made on the way-bill.

On the return journey they must be accompanied by the way-bill of the outward journey and a special way-bill, bearing the stamp of the exhibition and stating that the animals are being sent back to the exhibitor.

Consignments must be returned by the same mode of transit (*i.e.*, according to tariff) as on the outward journey. They only enjoy free carriage on the route followed in the first instance.

The way-bills drawn up for consignments back should mention at the top the name of the exhibition in favour of which the special tariff is allowed.

Consignments of mares sent to service may be carried, both coming and going, at quick transit *for the whole distance*. Nevertheless, the railway has the right to refuse to carry such consignments in certain trains designated by it.

The transit of mares returning, in order to be effected free, must take place within *three months* and be accompanied by a service certificate from the owner of the stallion.

Only half the indemnity payable under the ordinary regulations is recoverable in the event of loss or damage to animals forwarded under this special tariff.

654. Rates for animals.

The following are the rates for horses, mules, ponies, foals and asses by Quick transit:—

	Horses.		
	1.	2.	3.
	c.	c.	c.
0 to 75 Km. per Km., ..	26	39	52
76 to 150 Km. per Km. added,	20	30	40
151 to 200 Km., „ „	12	18	24
201 to 400 Km., „ „	8	12	16
Station Terminal. ..	Fr. 5·00	Fr. 7·50	Fr. 10·00

For each horse above three in a consignment, one-half the above charge for one horse is made. In calculating the number of animals other than horses, one mule or one or two foals, ponies, or asses are taken as the equivalent of one horse.

LIVE STOCK TRAFFIC—*continued.* Belgium—*continued.*

For horses, mules, ponies, foals and asses, by Slow transit, the charges are:—

—	Horses.							
	1.	2.	3.	4.	5.	6.	7.	8.
	c.	c.	c.	c.	c.	c.	c.	c.
0 to 75 Km., per Km., ..	12	18	24	30	36	42	48	54
76 to 150 Km., per Km., added,	9	13·5	18	22·5	27	31·5	36	40·5
151 to 200 Km., per Km. added,	6	9	12	15	18	21	24	27
201 to 400 Km., per Km., added,	4	6	8	10	12	14	16	18
Station Terminal, ...	Fr. 3·00	Fr. 4·50	Fr. 6·00	Fr. 7·50	Fr. 9·00	Fr. 10·50	Fr. 12·00	Fr. 13·50

For any horses above eight in a consignment, one-half the charge as for one horse is made.

The same equivalent reckoning is made for mules, etc., as in Quick transit.

For cattle in the three categories named in the regulations the following rates for Slow transit are charged:—

—	First Category.	Second Category.	Third Category.
	c.	c.	c.
0 to 75 Km., per Km.,	12	18	24
76 to 150 Km., per Km. added,	9	13·5	18
151 to 200 Km., per Km. added,	6	9	12
201 to 400 Km., per Km. added,	4	6	8
Station Terminal, ..	Fr. 3·00	Fr. 4·50	Fr. 6·00

For any number of "Units" in a wagon-load in excess of 100, a charge equal to ½ per cent. of that for the third category, as above, is made.

Under each of the foregoing scales of rates the minimum charge is as for 5 Km.

655. Special tariffs. There are no special rates, other than those given herein for exhibition animals, shown in the tariff books obtained.

655a. Tariff of accessory fees. Registration fee—charged per consignment, . 20c.
Interest in Delivery—fee charged per indivisible Fr. 500 of interest declared, . . Fr. 1.00

GERMANY.

GENERAL REGULATIONS.

656. Acceptance for transit. The forwarding of live animals cannot be refused in so far as:—

1. The forwarding conditions applicable and other general regulations of the railway have been complied with.

2. The forwarding is possible with the ordinary means of transport.

3. Circumstances which may be regarded as superior force do not prevent forwarding.

657. Rates for stall wagons. The regulations as to freight on horses conveyed in private stall-wagons apply also to the forwarding of horses in stall-wagons belonging to the railway, but if the exclusive use of such wagon is required, freight is charged on the total number of stalls in the wagons.

658. Rates for animals in cages, boxes, &c. Provided the rate per load (in the case of breeding animals 70 per cent. of the rate per load), according to the animal tariff, is not cheaper, the following charges are calculated:—

(*a*) For breeding animals, 70 per cent. of Quick (or Fast) small goods rate.

(*b*) For other animals, including wild animals, the full Quick (or Fast) small goods rate.

The minimum amounts fixed for Quick (or Fast) goods are also calculated in the cases of breeding animals.

Germany—*continued.*

659. Transport of owner's tackle. Tackle is carried free on the outward journey and also returned free on condition that the articles are marked with owner's name and station, are noted in the way-bill, and are consigned as Slow goods immediately after removal of the animals at destination. The burden to be loaded in each wagon includes tackle and must not be exceeded; no liability is undertaken by the railway for loss, damage or delay on return journey. If there is any delay about consigning the tackle back, proof must be given of its having been used on outward journey. Tackle marked as described may be sent free to the station whence the animals are to be forwarded, returning with them. No storage fee is charged on it while waiting for the consignment of animals.

660. Loading and unloading accommodation. According as stations are intended, under the terms of the tariff, for cattle traffic to a limited or unlimited extent, they must be supplied with apparatus enabling the animals to be properly loaded and unloaded according to the terms of consignment.

On the surface of wooden loading platforms must be fixed, at suitable intervals, narrow laths with rounded edges to ensure secure footing for the animals. The surface of permanent platforms must not slope more than 1 in 8, that of moveable apparatus not more than 1 in 3.

Loading gangways must be sufficiently wide and provided with protective rails of at least 20 cm. in height at both sides, and with laths as for loading platforms. Measures must also be taken to prevent animals being forced off at the sides.

661. Watering and feeding accommodation. At stations where there is constant heavy cattle traffic and also at the watering stations or in the neighbourhood of the same, enclosed spaces (called "bays" or "bawns") for the temporary accommodation of cattle must be provided, and an adequate proportion of them must be covered in. These enclosures to be provided by the railway must contain fountains or have the water laid on, and must contain such appliances as will admit of tying up, feeding and watering the animals. They must be sub-divided into compartments in which animals of different species can be separated, and also large animals (horses, colts, ponies, cattle, mules, asses, and the like) from small animals (pigs, calves, sheep, goats, dogs, poultry, and the like); this condition does not apply to mother animals suckling their young. The floor must be so constructed that thorough cleansing is possible.

662. Stabling animals. For the temporary housing of the animals in covered yards a forage fee fixed in the tariff may be charged. This fee covers the use of appliances for feeding and watering the animals.

663. Wagons used for animals. Animals must be forwarded in covered wagons or wagons with high sides. In the months of January, February and December open trucks may only be supplied on demand of the sender.

Wagons with several floors may only be used when they have lattice work sides; the latter must contain a sufficient number of thick boards or be provided with solid doors so that the animals are protected from draughts from below, and that dung and straw cannot fall out.

LIVE STOCK TRAFFIC—*continued.*

Germany—*continued.*

The lower body of the wagon only may be used for carrying single animals which have fallen ill during the journey.

The clear width of wagons used for carrying large animals must be at least 2.60 metres.

When covered wagons are used to carry cattle, such wagons are to be selected as have, on the sides or fronts, two openings (which can be closed at will) of at least 0.40 m. by 0.30 m., and the doors of which are provided with apparatus which enables them to be left open to the extent of 0.35 m. in the case of large and 0.15 m. in the case of small animals. If the doors remain open during the journey, the openings must be protected by boarding of 1.50 m. in height or by a lattice work frame.

Open wagons, when used for carrying large animals, must have sides of at least 1.50 m. above the level of the floor, and when used for carrying small animals the sides must be at least 0.75 m. in height.

Appliances for tying up the animals, such as iron rings, etc., must be fitted in the wagons.

The loading area in square m. of every wagon to be used for carrying animals must be painted outside, and in the case of double floored and sub-divided wagons in such a way that the area of each compartment is plainly shown.

As regards old wagons, variations from the foregoing conditions as regards construction may be sanctioned by the National Inspection officials, with the approval of the Imperial Railway Office.

664. Receptacles for small animals.

Cages, boxes, baskets, sacks or other receptacles used for conveying animals must be sufficiently roomy and airy. Animals may not be delivered gagged for transit.

Cages, etc., must have a thick floor and solid walls up to a height which will prevent the wagon being soiled by dung or straw. Receptacles consisting altogether or in part of lattice, must be so constructed that the animals cannot force parts of their bodies through, and so high that the animals can easily stand upright therein. Cages, etc., after use, may not be used again unless after a thorough cleansing. Further, all cages, etc., to be used on journeys which will probably last more than thirty-six hours must be provided with suitable arrangements for watering, and, in the case of small animals, for feeding, unless the sender has provided otherwise for feeding and watering at stations *en route*. The floor of receptacles must be covered with straw, hay, sand, peat litter or shavings. In loading, care must be taken that sufficient fresh air can penetrate to the receptacles; in particular, other goods may not be placed on top of cages, boxes, baskets, etc., and the latter may not be placed one on top of the other unless, by an arrangement of laths or the like, an open space of at least 3 clear cm. is kept between the floor of the upper and the cover of the lower receptacle.

665. Overcrowding of animals.

In fixing the greatest number of animals to be loaded in a wagon, it is laid down, as a rule, that large beasts shall not stand pressed against each other and against the walls of the wagon. This is held to be complied with when a man can move about among the animals when loaded. In the case of transverse loading, sufficient room must be left between the animals and the walls of the wagon in order to avoid injury by rubbing to the heads or tails of the cattle. Small animals must be allowed room enough to lie down. The decision as to whether these conditions have been fulfilled rests with the station officials then on duty.

Large and small cattle and animals of different species may only be loaded in the same wagon when each species is separated from the other by railings, boards, or lattice work. The foregoing limitations do not apply to the carriage of mother animals suckling their young.

The floors of open wagons and covered wagons with lattice work walls may not be strewn with inflammable material.

666. Method of conveyance

Live animals are forwarded in cattle trains, goods trains, and passenger trains to be specified by the railway authorities.

Cattle trains must travel over sections of the line which have a large regular traffic in cattle on certain

LIVE STOCK TRAFFIC—*continued.*

Germany—*continued.*

days to be announced by the railway authorities (at regular intervals), or according to requirements and in accordance with the service fixed for each time-table period; they must be so arranged that the time of waiting for cattle to and from connected lines is limited as much as possible. In drawing up the time-table, a delay at the watering stations sufficient to water the cattle must be arranged.

667. Special trains.

If so many cattle are to be forwarded that twenty axles are required, then, in the absence of other opportunities of forwarding, a special cattle train must be sent off.

668. Speed of cattle trains.

The average speed of cattle trains, apart from the power of the National Inspection officials to sanction other arrangements, must not be less than 25 km. per hour. If the traffic regulations of the main lines or service of trains on branch lines present any obstacle to this speed, the latter must be reduced accordingly.

The delays to be provided at watering stations are not taken into account in calculating the average speed.

669. Watering and feeding during transit

All animals, the forwarding of which from departure station to destination takes more than twenty-four hours, must be fed and watered by sender before loading. In the case of journeys of more than thirty-six hours, animals must be fed and watered, at latest, after the lapse of thirty-six hours, the animals being unloaded for the purpose. Unloading and reloading of the animals rests with the sender; when these operations, by request of the sender, are performed by the railway, or when the latter's staff help in the work, the usual fees may be charged. The further carriage of the animals may not take place until after the lapse of at least six hours.

670. Watering and feeding stations.

For the feeding and watering of these animals certain stations are to be provided with the necessary appliances as required. These stations (so-called watering stations) are fixed by the Imperial Railway Office after consultation with the Federal Governments concerned and are to be published in the tariffs.

671. Shunting of loaded wagons.

Shunting of wagons loaded with animals must only be effected in case of the most urgent necessity, and violent bumping must be absolutely avoided.

672. Handling of receptacles containing small animals.

A receptacle containing animals must not, during loading or unloading, be knocked, thrown, or tossed about.

673. Lamps for attendants at night.

When animals are carried by night, the attendants accompanying them must be provided with good lanterns. The use of highly inflammable oil, such as petroleum, etc., is forbidden.

GENERAL TARIFF CONDITIONS FOR LIVE ANIMALS.

674. Acceptance for transit.

Live animals are only accepted for transit when forwarding by the regular means of conveyance is possible.

675. Sick animals.

Transit of sick animals may be refused. The exclusion of animals from transit on account of the risk of spreading disease is governed by the existing sanitary regulations.

676. Attendants with animals.

In forwarding live animals, the management of the railway may require them to have an attendant. Attendants must, unless the stationmaster permits exceptions to be made, take their places in the cattle-wagon and superintend the animals during transit. When straw, hay, or other inflammable stuffs are in the wagons, smoking is forbidden therein, nor may lighted cigars or tobacco pipes be taken into them. In the case of small animals, no attendant is required if they are handed in in portable properly closed cages.

Large animals in wagon-loads are only accepted with an attendant; at least one attendant must be sent to every three wagons in a consignment. In the case of small animals (pigs, calves, sheep, goats, geese, etc.)

LIVE STOCK TRAFFIC—*continued.*

Germany—*continued.*

in wagon-loads and in the case of separate animals, large or small, the presence of an attendant is left to the option of the forwarding station.

When several wagons of different consignments from one sender consigned to the same station are collected during the journey into one train, then a number of the attendants may be withdrawn, provided that not more than three wagons fall to the care of each remaining attendant. The difference of fares will be returned afterwards on demand.

677. Non-liability of Railway. The liability of the railway for loss or damage is not affected should the presence of an attendant be dispensed with. In particular, the railway does not undertake any liability for damage which would not have occurred had an attendant been present.

678. Conveyance of attendants. One attendant will be allowed at the rate of 2 Pf. per kilometre for every consignment, and for every wagon if the consignment consists of several. The attendants must travel in the cattle wagons. Should this not be necessary or not feasible, they will be carried, at the option of the railway authorities, either in luggage vans or in goods wagons or in a compartment of the lowest class in the train.

So far as space admits, attendants beyond this number are allowed to travel in goods, express and cattle trains. When passenger compartments are required they must pay the fare of the class in question. Otherwise, they are charged at the rate of 2 Pf. per kilometre and are given a place in the luggage or goods van, unless they prefer to travel in the cattle wagon.

679. Loading and unloading of animals The sender must himself undertake to load the animals into the wagons, and also to see that they are safely secured and to provide the necessary materials for securing them. The receiver must unload.

680. Fodder for animals in transit. The food required for the animals during transit, and the implements necessary for feeding them, also the gear used in transferring the animals, even though it be taken off them while in the wagon, and the hand luggage of the attendants will be forwarded free in the cattle wagons. These matters must be seen after by the attendants themselves. Other luggage or goods may not be placed by the sender in the wagons loaded with cattle, but must be handed in for regular despatch at the station of departure. When handed in as express goods, articles of this kind will, when requested, be sent on, if possible, by the trains used by the cattle. When goods or luggage are taken contrary to regulations, then double the express freight for the distance over which they are carried is to be charged, and if the name of the station where they were taken in cannot be ascertained, then double the express freight for the whole distance travelled by the cattle is to be charged.

681. Watering of animals. By desire of the sender, water will be held in readiness for the animals at convenient stations on payment of a telegram fee of 25 Pf. per consignment for every preliminary notice, and a further fee of 1 M. per wagon for supplying the drinking water, provided the train waits long enough to allow of the animals being watered.

The stations convenient for watering the animals must be ascertained at the station of departure.

682. Disinfection of wagons. For the disinfection of railway wagons which have been used for the transport of horses, mules, asses, cattle, sheep, goats, pigs, and of the implements used in transit, disinfection fees as follows are charged:—For a single-floored wagon, 1 M.; for a double-floored wagon, 2 M.; but for separate consignments of small animals, 10 Pf. per head, with a maximum of 50 Pf. per consignment.

683. Payment of freight. In the case of consignments of animals sent on despatch notes or luggage bills, the fare must always be paid at the place of departure and payment on delivery is not allowed. In the case of consignments on way-bill, it is left to the judgment of the railway to allow consignments to be accepted not prepaid and carriage forward and to fix the conditions under which this is admissible.

These conditions are to be ascertained at the forwarding station.

LIVE STOCK TRAFFIC—*continued.*

Germany—*continued.*

684. Littering materials. In accordance with the Working Regulations the following are to be regarded as inflammable materials and must therefore not be used for littering animals in transit in open wagons:—straw, chaff, and litter in the nature of grass; on the other hand, moist sawdust, with or without a mixture of sand and turf litter, if previously moistened with water, may be used. Among open wagons within the meaning of this regulation are included wagons which, though they have a solid roof, have sides composed of laths (double storied wagons).

685. Method of despatch. Animals are despatched in accordance with the tariff and on the basis of a despatch note drawn out by the railway and handed to the sender, or on the basis of a way-bill.

The office at which delivery and despatch are effected depends upon the arrangements of the forwarding and receiving railway.

Animals unaccompanied are only sent with way-bills, unless handed in as luggage.

The number of animals consigned is to be stated on the despatch note or the way-bill.

In accordance with the regulations laid down by the various railway administrations, either passes, special permits, or railway tickets constitute the authority of attendants to travel.

Breeding animals must be consigned on a special form, for which a charge of 1 Pf. each or 75 Pf. per 100 is made.

686. Acceptance for transit The railway is bound to announce by what trains the transit of animals is effected. The acceptance of separate consignments depends upon the room available.

Information as to the trains by which consignments are ordinarily sent, according to their nature and the direction to be taken, can be obtained at the railway stations.

In the case of trains not adapted for the carriage of animals or for the kinds of animals in question, the railway may, on request of the sender (and at intermediate stations, of the accompanying attendant) permit the carriage of animals in such trains if they see fit, on payment of an additional freight fee of 50 per cent.

The request is to be put down on the way-bill or despatch note or otherwise put down in writing. If not confined to certain specific trains or routes, the following entry is to be made: "Entitled to travel in trains at excess rates."

The railway may rule that the acceptance of live animals may not be allowed on Sundays and holidays or only at certain hours.

On Sundays and holidays no animals will be accepted for transit. Exceptions to this rule may be sanctioned by the authorities of the forwarding railway.

Animals must be brought in good time to the railway station, some of them at least one hour before departure of the train.

687. Removal of animals. On arrival at their destination the animals will be delivered over to the consignee on receipt of his note of acknowledgment and on the despatch note or way-bill being handed over. Animals must be unloaded and driven away at latest two hours after they are placed in readiness and after the expiration of the time required for any business connected with the Customs or Revenue offices.

688. Stallage fees After the period above defined, the railway is empowered to stable the animals at the cost of the sender. Stallage per head and every hour begun is charged as follows:—For horses, ponies, but not foals, 50 Pf. each. For oxen, cows, bullocks, heifers, foals, and asses, 10 Pf. each. For smaller animals, 5 Pf. each.

689. Demurrage fees. Should it be possible to allow animals not removed within two hours to remain in the wagons at the station, demurrage per wagon and per every twenty-four hours begun is charged as follows—For the first twenty-four hours, 2 M. For the second, 3 M., and for every additional twenty-four hours, 4 M.

LIVE STOCK TRAFFIC—*continued.*

Germany—*continued.*

690. Ordering of wagons.

Orders for wagons for the carriage of live animals are to be directed, as a rule, in writing, to the station in which the loading is to take place. In the order, which is to be dated and signed, the number and kind of wagons, covered or open, stall, cattle or double-floored wagons, the destination, day, and if possible, the hour of loading, as well as the number and species of the animals and the size of the wagons are to be stated.

If the sender requires the exclusive use of a wagon for the transit of single animals, this must be declared in writing, if possible, when the order is given.

See the Accessory Fees Tariff for (*a*) fees for carrying out supplementary instructions and (*b*) fees for recession from contract on account of an impediment in the transport.

691. Conveyance time limit for animals.

The delivery time limit comprises the time of despatch and transit taken together, and may not exceed

1. Time of despatch, ... 1 day.
2. Time of transit for every 300 kilometres begun, ... 1 ,,

The time limit begins with the midnight following the stamping of the way-bill or issue of despatch note, and is deemed to have been observed when the animals are placed in readiness for removal at their destined station within that period.

The course of the delivery time limit is interrupted (in addition to the cases provided for Customs or Police formalities) during the stay of the animals at the drinking stations and also during veterinary inspection of the animals.

692. Applicability of goods regulations to transit of animals

In other respects the provisions as to regulations for the conveyance of goods apply to the transit of animals.

A declaration of interest in delivery of animals sent with a despatch note is of legal effect only when the declaration is entered on the despatch note by the despatching office of the departure station. The fees for such declaration are 0.2 Pf. per 10 marks and 10 Km., uneven amounts being rounded off to the 10 Pf. above, with a minimum charge of 40 Pf.

693. Principle on which freight is calculated

Freight is calculated according to the loading area of the wagons used (loading rate) or according to the number of head loaded into one wagon (head rate), whichever is the cheaper.

When head rate is reckoned, the railway has the right to load several suitable consignments (also goods and luggage) into the one wagon.

If wagons are ordered for the exclusive use of single animals, then the full loading freight (70 per cent. of the full loading freight in the case of breeding animals) is charged.

If a consignment consists of animals subject to different tariffs, then separate calculations are made out according to those tariffs, if, for the animals under the highest tariff, the head rate for all the animals or the full loading freight does not work out cheaper. Breeding animals will, in this case, be deemed a special tariff class.

If wagons are ordered for the exclusive use of animals, then, if animals under different tariffs comprise the consignment, the full loading freight (70 per cent. of it in the case of breeding animals) according to the highest tariff to which any of the animals are subject is charged.

In calculating the freight, no regard is paid to whether open or covered wagons are used.

The use of wagons with several floors cannot be allowed for the transit of individual animals.

Both freight and attendant's fare will be rounded off, once for every consignment, to the even 10 Pf., sums under 5 Pf. not being counted at all, and of 5 Pf. or upwards at the full 10 Pf.

694. Rates for wagon-loads.

The loading rate is divided into the following classes:—

L 1, for horses and ponies, but not foals.

L 2, for other large animals, such as cattle, mules, asses, foals (horses up to one year) and the like, and also small animals, such as pigs, calves, sheep, goats, dogs, geese, etc., in wagons with one floor.

L 3, for small animals in wagons with several floors.

LIVE STOCK TRAFFIC—*continued.*

Germany—*continued.*

When a wagon of a different loading area is used to that ordered, freight is calculated according to the loading area of the wagon used.

Fractions of a square metre are rounded off to the full sq. m., space up to ·50 sq. m. not being counted at all, and over that being counted as the full sq. m.

When several wagons are used for one consignment the fractions of a sq. m. are rounded off for each wagon, except as hereinafter provided.

When double-floored wagons with apparatus for altering the loading area are used, then freight is calculated at the loading rate of Class L 3 for the area of the compartments used. The area limits of the wagons are marked on the outside of the latter; loading otherwise than within these limits is forbidden.

If, for the transit of horses and large animals, wagons are used in which, by reason of the position of the brake box, the full area cannot be utilised, then freight is calculated on the loading area less 2 sq. m., unless the loading area for horses and other large animals is not specially indicated on the wagon.

When a wagon with several floors is supplied instead of the single-floored wagon ordered, then the rates for a single-floored wagon are charged; in this case only the lower space may be loaded.

When several single-floored wagons are supplied instead of double-floored wagons ordered in good time, the loading area of the wagons supplied will be added together and not rounded off, the sum halved and the result rounded off, space over 0.50 sq. m. being counted as a full sq. m., for the area so arrived at the loading rate for double-floored wagons will be calculated.

When only one single-floored wagon is sent instead of one double-floored wagon, the freight for single-floored wagons is charged.

695. Head rates.

Head rate is divided into the following classes:—

S 1, for horses and ponies, but not foals.

S 2, for other large animals, cattle, mules, asses, foals (horses up to one year) and the like.

S 3, for calves (up to six months), pigs, sheep, goats and dogs.

S 4, for sucking pigs, lambs, kids, and other small animals (each one not weighing more than 35 kg.).

The head rate for small animals (S 3 and S 4) will be charged when they are forwarded in certain trains, of which notice will be posted at the stations. When individual small animals are sent in trains reserved for the transit of large animals, at least the freight for one large animal (S 2) will be charged.

696. Special rates for breeding animals.

For breeding animals, only 70 per cent. of the wagon rate or head rate is charged, whichever is the cheaper.

When for small animals at least the freight for one large animal is to be charged, then, in the case of breeding animals, only 70 per cent. of this minimum freight is to be reckoned.

Any minimum special rates provided are to be charged in full for breeding animals.

The reduction to 70 per cent. of full rate is limited to:—

Horses, cattle, pigs, sheep and goats without any restriction as to age.

Breeding animals are deemed to be such systematically bred animals as are suitable or will be suitable on reaching maturity, for the purpose of continuing their own race (or species) or of improving the breed.

The reduction is allowed in the following cases:—

1. When the animal is travelling to serve or be served or is being sold for one of these purposes.

2. When the animal at its destination is to be exhibited at inspections, shows, trials (except races), sales of breeding animals or markets which are organised or initiated by the authorities or by associations for the purpose of promoting the good breeding of animals.

3. When the animal at its destination is to be turned out on grass.

4. When the animals sent under the conditions of 1, 2 or 3 are sent home again.

LIVE STOCK TRAFFIC—*continued.*

Germany—*continued.*

Where breeding associations or private breeding establishments exist, which are empowered by the central agricultural authority (Board of Agriculture, etc.) at the place of departure to award certificates, the reduction is granted on the certificate of the breeding association or private breeding establishment showing that the animal is entered on their stud books, either independently or with its dam. The certificate may consist of an extract from the stud book.

In all other cases the reduction will be based upon a certificate as to the character of the animal carried as a breeding animal, issued by the central agricultural authority of the place of departure, or by an agricultural society empowered to issue certificates, or by an official veterinary surgeon. In the case of consignments coming from a foreign country, this certificate may be issued by the agricultural association or official veterinary surgeon at the frontier station competent to do so.

Moreover, in the case of stud horses, the reduction is made on presentation of a certificate as to the character of the animal as a breeding animal, issued by the authorities of a Government stud or by the Secretary of the Union Club in Berlin.

In addition to the certificate mentioned above, the consignor must hand in at the despatching station a signed application for the reduction in the form prescribed in an Appendix to the General Regulations in which is stated the species, race (breed), sex, colour, age, and peculiar characteristic of the animal, and also the purpose for which it is being sent by rail. The application form may also be used for the certificates above referred to.

When the necessary information (application and certificate) cannot be supplied at the station of departure, the full freight is charged. The difference in freight is refunded to the consignee if within three months after the completion of the railway transit he makes an application for refund to the railway authorities of the arrival station, accompanied by a signed declaration and a certificate in accordance with regulations already defined. Proof of the animal being a breeding animal may also be supplied in such cases by a certificate issued by the central agricultural authority at the station of arrival, or by an agricultural association authorised by it.

If improper advantage is taken of the reduction in rate, the difference in freight is to be collected and excess freight to the amount of double the difference to be paid.

697. Special rates for horses and foals going to pasture.

For the transit of horses and foals going to pasture and thence back to the station of departure, only 70 per cent of the loading or head rate is charged, whichever comes cheaper.

In consigning the animals a certificate is to be presented from some central agricultural authority (Board of Agriculture, etc.), or from some agricultural society empowered by the former to issue certificates, to the effect that the animals are pasture animals.

In the case of an improper use of the reduction, the provisions as to excess freight and penalty come into force.

698. Private horse boxes.

Private animal wagons are wagons specially fitted up for the transit of certain animals, for the use of the private individuals whose names are painted on the wagons. Permission to store such a wagon lies with the railway administration in whose wagon-shed the wagon is to be housed.

Private animal wagons are only allowed for the carriage of horses (private horse boxes).

699. Special rates for horses in private boxes.

For horses travelling in private boxes, the special rates contained in the tariff will be charged. They are classified as follows:—

For 1 animal.
For 2 animals travelling in one wagon.
For 3 animals travelling in one wagon.
For every additional animal travelling in the same wagon.

LIVE STOCK TRAFFIC—*continued.*

Germany—*continued.*

Seventy per cent. of the freight according to the last section is charged for stud horses and foals if they are accompanied on consignment by the certificates prescribed.

700. Freight charged for empty horse boxes.

Empty private animal wagons are forwarded free. Freight is, however, charged for the transit of empty wagons for purposes of storage or change of station.

701 Freight charged for additional animals loaded during journey.

If a consignor is permitted to load some additional animals to his consignment during the journey, then the freight for the additional animals is calculated separately, unless the reckoning for the original number to the intermediate station and the further reckoning for the final number comes cheaper.

702. Freight in case of unloading of portion of consignment during journey.

If a consignor is permitted to unload a portion of his consignment during the journey, freight is counted as follows:—

(*a*) For the unloaded animals, freight from the station of consignment to the intermediate station; and

(*b*) For the remaining animals, the freight from the station of consignment to the destination.

If the freight for the total number as far as the intermediate station and for the remainder thence to the destination works out cheaper, then the latter reckoning is adopted.

Tariff of Accessory Fees not already defined.

703. Fees for executing supplemental orders.

The charges made in addition to the freight for the distance travelled by the consignment are:—

1. When freight is reckoned per head,
   (*a.*) Horses and ponies, ... 50 Pf.
   (*b.*) Large animals (cattle, mules, asses, foals, etc.), ... 30 Pf.
   (*c.*) Pigs, calves, sheep, goats, dogs, . 10 Pf.
   (*d.*) Sucking pigs, lambs, kids, and other small animals, ... 5 Pf.

2. When freight is reckoned per wagon, 5 M. per wagon.

The expenses are not charged when, in delivery of a consignment to a consignee other than the one named, the destination remains unaltered, or if the consignment is sent carriage paid from the destination, or an intermediate station to the sending station again, or to another station.

704. Additional fees arranging transport and unloading in case of difficulties in transit.

In addition to the freight for distance travelled by the consignment:—

1. For horses and large cattle, per head, 30 Pf.

2. For small animals, per head, . . 5 Pf.
   Maximum for one wagon, . . 3·00 M.

705. Accessory fees, general regulations.

1. The minimum accessory fee collected is 10 Pf.; when this amount is exceeded (apart from the case of excess freight for declaration of interest on delivery), amounts under 5 Pf. are not taken into account, and amounts of 5 Pf. upwards are counted as 10 Pf.

2. When, from reasons connected with traffic, goods have to be transferred from one wagon into several wagons, accessory fees for one wagon only are charged.

3. When several single-floored wagons are supplied instead of one double-floored wagon, accessory fees for one double-floored wagon only are charged.

4. Variations from the conditions and rates of the foregoing tariff are published in the local tariffs, or by notices posted in the despatching offices.

LIVE STOCK TRAFFIC—*continued.* Germany—*continued.*

Tariff for Live Animals on Prussian State Railways.

706. Rates for truck loads.

The loading rates, which comprise distance rates and consignment fees, are calculated as follows:—

(*a*) Distance rates per sq. m. and km.

CLASS OF LOAD.							
L 1.	L 2.			L 3.			
Horses and ponies, but not foals.	*Other large animals*, such as cattle, mules, asses, foals (horses up to one year), and the like; also *small animals*, pigs, calves, sheep, goats, &c., in *single-floored wagons.*			*Small animals in double-floored wagons.*			
East (the distances marked red on the map and eastern connections).	*West* (the distances marked black on the map and western connections).	For distances of		Added to the rate for	For distances of		Added to the rate for
Pf.	Pf.	Km.	Pf.	Km.	Km.	Pf.	Km.
2.5	3	1-100	2	—	1-100	2.67	—
		101-200	1·75	100 (200 pf.)	101-200	2.33	100 (267 pf.)
For traffic between East and West, see note on pp. 41, 42 of the Tariff.		201-300	1·5	200 (375 pf.)	201-300	2	200 (500 pf.)
		301 and upwards.	1	300 (525 pf.)	301 and upwards.	1.33	300 (700 pf.)

(*b*) Consignment fees for all classes: per square metre. . . . 40 Pf.

Example:

1 double-floored wagon of small animals (L3), 22 sq. m. loading area, sent 500 km.
22 times 10.06 M. = 221.32 M.

Total freight (rounded off and including consignment fees) = 221 M., 30 Pf.

707. Head rates.

The head rates, which consist of distance rates and consignment fees, are calculated as follows:—

CLASSES:														
S 1.				S 2.			S 3.			S 4.				
Horses, ponies, but not foals.				Other large animals (cattle mules, asses, foals, &c.).			Calves (up to six months), pigs, sheep, and goats.			Sucking pigs, lambs, kids, and other small animals (not more than 35 kg. each).				
Distance rate per km.		Consignment fees.		Distance rate per km.		Consignment fees.	Distance rate per km.		Consignment fees.	Distance rate per km.			Consignment Fees.	
For one animal.	For each additional head.	For the first 4 head, each.	For each additional head.	For one animal.	For every additional head.	For every animal.	For the first 10 head, each.	For every additional head.	For every head.	For one animal.	For each additional head up to 10.	For every 5 additional head.	Up to 10 head each.	For every additional 5 head.
In Pfenninge.														
20	5	100	80	10	3	60	2	1	20	2	0.5	1.5	10	50

The minimum freight for each class is:—

Class S 1, ... 3 M.
Class S 2, ... 2 M.
Class S 3 and S 4, ... 30 Pf.

Example:—

19 sucking pigs (S. 4) sent 500 Km. 500 times 9·5 Pf. = 4,750 Pf.
Consignment fee, . . 200 Pf.

Total freight = 4,950 Pf. = 49.50 M.

708. Rates for animals in stall wagons.

(1.) Horses, etc., in specially constructed wagons are subject to the following special rates:—

Distance Rate per Km.		Consignment Fee.
For One Head.	For each additional Head loaded in a Wagon.	Per Head.
30 Pf.	1 Pf.	1 M.

(2.) The minimum freight is 3 M. per consignment.

709. Special rates.

For cattle (including calves), sheep, and goats in wagon loads, *from* all stations in Silesia in the administrative districts of Breslau, Kattowitz, and Posen *to* given stations, the total rates, provided they apply only to the above-mentioned species, will be reduced as follows:—

For cattle (including calves) by 25 per cent.
For sheep and goats by 50 per cent.

For pigs in wagon-loads *from* all State railway stations in the provinces of Silesia, Posen, Brandenburg, Pomerania, East and West Prussia to given stations, the total rate will be reduced until further notice by 50 per cent.

The pigs must be unloaded at the receiving station, and driven away from the railway station, or be brought to the slaughter-house.

710. Transit in unusual trains.

The excess freight charged for the use of trains not intended for carrying any animals or the particular kind of animals in question amounts to 50 per cent. of the distance rate; the consignment fee is not increased

LIVE STOCK TRAFFIC—*continued.*

Germany—*continued.*

Supplementary Tariff of Accessory Fees.

711. Disinfection fees.

The disinfection fee for wagons disinfected at the following stations:—Berlin central cattle yard, Breslau cattle yard, and yard for non-fat cattle (Magerviehof, lit, "thin cattle yard").

(*a.*) For one single-floored wagon, . . 2 M.
(*b.*) For one double-floored wagon, . . 3 M.

When several single-floored wagons are supplied instead of one double-floored wagon ordered in good time, the fee under *b.* will be charged, 3 M.

The disinfecting fee charged for wagons unloaded on the Dessau-Worlitz Railway and disinfected at the State Railway station at Dessau is—

(*a.*) Per wagon, ... 1·50 M.
(*b.*) For small animals in separate consignments, per consignment, . . 1 M.

Fee for disinfecting wagons on the Eisern-Siegener line is—

(*a.*) For one single-floored wagon, . . 1·50 M.
(*b.*) For one double-floored wagon, . . 3·00 M.

In the case of small animals in separate consignments, per head, 20 Pf. Maxmum per consignment, 1 M.

In traffic with Berlin central cattle yard, Breslau cattle yard, and "thin" cattle yard, the disinfection fee for wagons is, however, generally collected at the sending station. The fee for disinfection requested by the consignor before loading the wagons is also collected at the sending station.

Stallage. Demurrage.

712. Stallage fees.

Temporary accommodation of cattle, to be immediately forwarded by rail or which have just arrived by rail, in stations or their neighbourhood or in the closed and covered premises attached to the drinking stations Myslowitz, Schneidemuhl, Schoppinitz, is *free of charge, provided the cattle do not remain for longer than twelve hours in those premises.* If they remain longer than that time, then stallage per head and per twelve hours begun is charged for the additional period as follows:—

(*a.*) For horses and other large animals, 10 Pf.
(*b.*) For small animals (pigs, sheep, calves, goats, lambs, etc.), . . 2 Pf.

Minimum fee for the total number of animals housed at once, 1 M.

713. Watering animals.

For watering the cattle, fees will be charged without distinction between part and full loads for each wagon, and the amount of these fees is posted up in the various stations.

HOLLAND.

The transport of live animals is carried out in accordance with the statements for the transport of goods, in so far as those are applicable to this transport, and when the following special statements do not affect it. Also the additional statements—in *general* as well as *special*—for the transport of goods, hold good for the transport of live animals, in so far as they can be applied to this transport, and they have not been affected by the following statements:—

714. Acceptance for transport.

Live animals are only accepted for transport from and to stations indicated for that purpose in the tariffs.

LIVE STOCK TRAFFIC—*continued.*

Holland—*continued.*

Each consignment must be accompanied by a bill of lading, signed by the sender in the prescribed form.

Forms of bills of lading can be obtained at the stations.

With live animals, which in consequence of general, provincial, or municipal regulations may not be transported except when accompanied by certain documents, the consignor is obliged to hand over these papers at the station of departure together with the bill of lading, in which latter they must be set out; he is responsible for the completeness and validity of these documents. All expenses which may eventually occur in consequence of their incompleteness or invalidity must be borne by the consignors, and the owners of the animals are always responsible for this.

715 Cleaning and disinfecting.

Consignors of horses and cattle must pay for the cleaning and disinfecting of the wagons, as mentioned in the general tariff of additional expenses.

716. Exclusion of diseased animals.

The Secretary of the Board of Works is authorised, in case of murrain, to stipulate that in certain stations to be indicated by him, no cattle at all may be accepted for transport, or only on conditions to be settled by him.

Diseased animals, and animals coming from places where murrain is epidemic, are not accepted for transport.

The Secretary of the Board of Works is authorised, having heard the directors of the railways, to grant exemption from this prohibition in favour of scientific experiments.

717. Loading, unloading, fastening, and unfastening of animals.

Loading, unloading, fastening, and unfastening the animals has to be done by, and on the account of, and at the risk of, consignors or consignees. The consignor is obliged, before the train starts, to make sure that the animals he is sending away are properly fastened, and everything required for this purpose must be provided by him.

In each wagon as many animals may be loaded as possible without harming the others, and without exceeding the carrying power of the wagon. If there is a dispute about the number of animals allowed to be loaded in one wagon, the railway official on duty decides.

Unloading and loading again at an intermediate station of animals which are destined for a more distant station is forbidden, but can, at the request of the parties concerned, and for special reasons in exceptional cases, be allowed by the stationmaster of the intermediate station, on the temporary surrender of the coupon of the bill of lading given to the attendant.

718 Attendants with animals

In all cases of transport of live animals other than those packed in baskets, boxes, etc., the directors of the railway company have the right to exact attendance.

When the stationmaster does not allow an exception to the rule, the attendants must take their places in the wagons in which the animals are loaded, and keep guard over them during the transport.

If the transport takes place with attendance, the name of the attendant is filled in by the consignor or the consignee on the bill of lading itself as well as on the coupon.

With consignments consisting of one or more wagon loads, free transport is granted to an attendant for each wagon-load, either in the cattle wagon, or in a third class compartment—save the following exception for the attendants of horses in horse boxes—at the discretion of the stationmaster.

If the attendants want a place in a higher class carriage, they must pay the full fare for it.

Free transport is granted to the attendants of horses in horse boxes, only when they actually travel in them.

LIVE STOCK TRAFFIC—*continued.*

Holland—*continued.*

If the transport takes place without attendance, the way-bill must contain clear and exact information as to the consignee and the place of destination, and also the words "Station Restante."

Further, the consignor is obliged to warn the consignee of the consignment, in order to enable the latter to receive the consignment immediately after the arrival of the train.

719 Watering animals.

For watering the animals there must be, if necessary, at the stations indicated by the Secretary of the Board of Works, after having consulted the directors of the railway company, pails and water at the disposal of the attendants. The rate of payment for the use of pails and water is set forth in the tariffs.

720. Return of animals when transport temporarily stopped.

When the transport along the railroads is temporarily stopped by unavoidable circumstances or by accident the consignor or the attendant may demand the return of the live animals, but is obliged to pay the railway company if the delay is not their fault, besides the fare for the distance covered, the costs of the preparations for unloading according to the "General Tariff of additional expenses."

If the consignor, excluding the above-mentioned cases, desires the return of the live animals at an intermediate station of the way to be covered, and the railway officials grant his desire, then, besides the fare due for the way already covered, he must pay a penalty settled in the General Tariff for additional expenses.

721. Acceptance of horses for transit.

The number of horses that may be transported by a train is settled by the directors of the railway company, who also indicate the trains by which this transport may take place. Other trains can also be indicated for this transport by the Secretary of the Board of Works after having consulted the directors of the railway company.

722. Mode of conveyance.

The transport takes place in horse or cattle trucks or in horse boxes, and further in freight, mixed, or passenger trains. Transport by express train never takes place.

On the notification of the trains by which the transport can take place, the number of horses and foals that can be transported by it is stated.

723. Horses of different consignors loaded together.

The railway company has the right to place the horses of different consignors together except when the contrary has been expressly desired, in which case the freight for the whole wagon will be charged.

724. Payment of freight.

The freight for horses has to be paid at the station of departure on exchange for a receipt.

725. Despatch of horses.

If the horses have been loaded at least *one* hour, in case of a passenger train or a mixed train, and at least two hours, in case of a freight or cattle train, before the departure of a train indicated for such transport, and the freight due for the transport has been paid, the transport has to take place by this train, except when through this the maximum number of units allowed for the train should be exceeded. When the train starts in the night or in the morning before seven o'clock notice of the intention of despatching must have been given the preceding evening before eight o'clock.

Consignments for intermediate stations must be arranged beforehand with the stationmaster.

726. Application for boxes.

Horse boxes must be applied for at the principal stations at least 48 hours, and at the intermediate stations 72 hours, before the departure of the train.

For horses transported in horse-boxes or cattle trucks, the stipulations for the transport of other animals hold good in this respect.

Trucks or boxes applied for are placed at the consignors disposal as soon as they arrive, and according to the order in which the applications have been received at the station of despatch.

LIVE STOCK TRAFFIC—*continued.*

Holland—*continued.*

727. Security against demurrage.

With requests for boxes the railway company has the right to demand a deposit of Fl. 5 per box.

If the applicant does not make use of the wagons placed at his disposal at the time arranged for, the deposit is not given back to him.

728. Demurrage for delayed loading.

If the loading is not finished and ready for despatch within the time fixed, demurrage on the truck or box is charged according to the "General Tariff of Accessory Fees."

729. Time limits for removal of horses after unloading.

Trucks or boxes containing horses are put ready at the place of unloading within three hours at the most after arrival at the place of destination. The horses are delivered on return of the receipt or on the delivery of the discharge note. They must be taken away one hour at the utmost after the truck or box has been brought to the place for unloading.

730. Expense incurred and demurrage for delay in removal of animals.

After this term has elapsed the railway company is authorised to charge expenses incurred in caring horses, even when the horses remain standing at the station in the open air.

The demurrage for horses that have not been led away within the prescribed time is mentioned in the "General Tariff of Additional Expenses."

The railway company have the right to have these horses unloaded and stabled at the expense and risk of the party concerned.

731. Acceptance of cattle, &c., for transit.

The number of animals other than horses that may be transported by train is fixed by the railway company, who also indicate the trains by which this transport takes place. Other trains may be indicated for such transport by the Secretary of the Board of Works after communication with the directors of the railway. The transport is effected in cattle wagons or in other wagons destined for it, and by cattle, freight, and mixed trains. Transport in passenger trains takes place by exception, transport with express trains in no case.

In the notification of trains by which transport as above may take place the number of animals that may be conveyed by each train is specified.

732. Loading of small animals.

The railway company have the right to load small animals of different senders together, except when the contrary is specially desired, in which case the rate for the whole wagon shall be charged.

733. Payment of freight.

The freight has to be paid at the station of departure against receipt.

734. Despatch of cattle, &c.

If the animals have been loaded at least *one* hour, with a passenger or mixed train, and at least two hours, with a freight or cattle train, before the departure of a train indicated for this transport and the fare for the transport is paid, the transport has to take place by this train, save when through this the maximum number of units allowed for the train should be exceeded. When the train starts in the night or in the morning before seven o'clock, notice of the intention of despatching must have been given the preceding evening before eight o'clock.

735. Ordering of trucks and security against demurrage.

The trucks must be ordered 24 hours in advance. Trucks ordered are placed at the disposal of consignors as soon as they arrive, and in the order in which the requests for them have been received at the station of departure.

With orders for trucks the railway company has the right to ask a deposit of Fl. 2·50 per truck.

If the person ordering the trucks does not make use of them when placed at his disposal at the time fixed the deposit is not given back to him.

736. Demurrage for delayed loading.

If the loading is not finished and ready for despatch within the time fixed, demurrage is exacted according to the "General Tariff of Accessory Fees."

LIVE STOCK TRAFFIC—*continued.*

Holland—*continued.*

737. Time limit for removal of animals after unloading. Three hours at the utmost after having arrived at the place of destination the loaded trucks are put ready at the place of unloading. The animals are delivered on return of the receipt or discharge note. They have to be taken away one hour at the utmost after the loaded truck has been put ready at the place of unloading.

738. Demurrage for delay in removing animals. After this time has elapsed the railway company is authorised to unload the animals and stable them elsewhere at the expense and risk of the consignors, or to demand payment for a caretaker when the animals are allowed to remain in or at the station. The demurrage for animals that have not been taken away within the prescribed time is mentioned in the "General Tariff of Accessory Fees."

739. Animals in baskets, cages, &c. Live animals of small size, shut up by the sender in his own baskets, cages, kennels, or sacks, when the consignment is not offered and freighted as a wagon-load, can be accepted as parcels and transported at a fare calculated for twice the real weight. An exception is made to this rule with reference to solipedous animals, ruminants, and pigs, which can not be treated otherwise than according to the tariff for cattle, except such as for which in virtue of Article 4 of the Royal Decree of May the 26th, 1888 (Staatsblad No. 86) an alteration of Articles 1 and 2 of that Decree is permitted, and which shall be offered for transport in well-kept, clean pens of sufficient space and provided with a waterproof floor. These pens moreover must be provided with fresh straw, and bear the inscription "cattle-breeding"; the capacity of these pens must *not* exceed half a cubic metre (measured on the outside).

740. Liability of railway. The responsibility of the railway company for loss of or damage to horses and other living animals accepted for transport is regulated, except as otherwise stipulated, by the statements set forth in the regulations for the transport of goods.

741. Non-liability of railway. The consignors and consignees are responsible for damage done by their animals to the material of the railway. The consignors are considered to have been satisfied with the trucks, or that part of the truck in which they have loaded their consignments.

The railway company is not responsible for the damage caused by particular risk attaching to animals during transport, such as when loss or damage has been caused by jumping away, falling, knocking, beating, fright, damage between them, choking, or such like, in the unloading or the loading, or during the transport or the stoppage at the station.

They are not responsible either for the damage arising from the risks which the supervision of the attendant is intended to prevent.

In this are included all risks that do not arise from injury caused by the wagon used for transit, for which the railway company is responsible, as well as those which could have been obviated by the proper supervision, tending, and feeding of the animals during transit.

If transport without an attendant is permitted by the railway company the responsibility of the company is not altered. Consequently there is no obligation on it to pay any compensation which it would not have been obliged to pay if an attendant had been present.

742. Compensation for loss or injury. If compensation is payable in case of loss, as well as in case of damage, the value declared by the consignor fixes the maximum of the compensation to be

LIVE STOCK TRAFFIC—*continued.*

Holland—*continued.*

granted. If such a declaration has not taken place the following sums are considered as maxima:—

300 Fl.	for a horse.
125 Fl.	for a fat ox.
90 Fl.	for other cattle.
12 Fl.	for a calf.
36 Fl.	for a fat pig.
15 Fl.	for a lean pig.
4 Fl.	for a sucking pig.
7 Fl.	for a sheep or a goat.
4 Fl.	for a dog.
36 Fl.	per 100 Kg. of other animals.

743. Insurance of exceptional value of animals. When a higher value is declared there is payable, besides the rate according to the tariff, a premium which may not exceed one per thousand of the whole sum declared for each 150 kilometres of the entire distance to be covered, fractions to be calculated at 150 kilometres, with a minimum of 20 cents. per consignment.

The declaration of a higher value has binding force only when it is inserted in writing by the railway official at the station of departure on the receipt for freight charges, or, when the transport takes place with a way-bill, when it is inserted by the sender on the way-bill in the space set apart for it.

The declaration of value must be made separately for each kind of animal mentioned in the way-bill.

744. Animals injured, &c., in transit. Animals that have been injured during transit or before delivery, or have died, must be accepted by the consignee without prejudice to the eventual right to compensation. The injury or the death are mentioned on the receipt for freight charges to be issued by the railway or on the receipted way-bill.

745. Time limits for conveyance. The time limits for conveyance of live animals (except living animals sent as parcels), consists of the time for despatching, the time for transport, and the time allowed for delivery. The time for despatching and that for delivery have been already stated. The time allowed for conveyance is as under:—

If the transport takes place with passenger or mixed trains, and if it begins with the first day train starting in the direction desired, then the animals must arrive at their destination on that day, if it is possible, without endangering the regular course of the trains and if at the junctions corresponding trains for the transport of live stock are indicated. With the same reservation, animals, the transport of which begins with a later train, must arrive at their destination twenty-four hours at the most after the departure of that train.

If the transport takes place with freight or cattle trains, then the time for transport must not be more than twenty-four hours for every 150 kilometres or part thereof, these twenty-four hours being reckoned to begin at midnight after the way-bill has been stamped.

The general goods regulations are applicable to the consequences of exceeding the time of delivery.

746. Declaration of interest in delivery. The declaration of interest in punctual delivery is binding only when it is noted in writing on the receipt for freight charges by the railway official at the station of departure, or, when the consignment is accompanied by a way-bill, when it is inserted by the consignor on the way-bill in the space designated for the purpose.

747. Fees charged for declaration of interest in delivery. The fees charged in respect of Declaration of Interest in delivery are 1 cent. per unit of Fl. 100 and 15 Km., rounded off to the 5 cents. above, with a minimum of 15 cents. per consignment.

LIVE STOCK TRAFFIC—*continued.*

Holland—*continued.*

General Regulations for the calculation of Freight Charges for Live Stock.

So far as the special regulations under *c* and *d* shown hereafter are not applicable, the calculation of the charges for the transport of live stock is as follows:—

748. Rates for wagon loads

The charges (the basis of which is given hereafter) for the transport of live stock by truck loads are calculated according to the capacity of the trucks used, even if, through the fact that trucks of a smaller capacity are not procurable, trucks of a larger capacity have to be supplied. The putting into round numbers of parts of square metres is calculated as follows:—fractions below half a square metre are not counted; fractions of half a square metre and upwards are counted as a metre. When more than one truck is used for one consignment, this applies for each truck.

For the use of a truck with two floors the charge per sq. m. fixed for it is only applied to one floor.

For the use of trucks with two floors of different area the charge is calculated according to the average area of the two floors, except when such a truck is given to the consignor because of scarcity of cattle-trucks with one floor, in which case the charge is calculated for the lower floor, which then alone may be loaded by the consignor.

The charges, which are calculated per square metre of the area of the truck are divided as follows:—

(1) For horses and other big cattle in ordinary trucks.

(2.) For small cattle, as pigs, sheep, lambs, geese, etc.

(*a*) In ordinary trucks.

(*b*) In trucks with more than one floor.

All these charges apply to transport in the trains which are indicated by the Railway Company for the transport of live stock. If the consignor desires transport with other trains and this is allowed, the charges are increased by 50 per cent.

749. Head rates.

For each single head of stock, as well as for any remaining over from a truck load, a separate charge is made when the rate as for a truck load does not come cheaper (see basis of calculation given hereafter).

These head rates are divided as follows:—

(1) For horses and bulls.

(2) For oxen, cows and other cattle, foals, mules, and asses.

(3) For pigs, calves, he and she goats.

(4) For sheep, lambs, pigs of less than 50 Kg. and young pigs.

In the application of these charges three *new-born* calves equal two calves; three lambs, if no higher than 0.68 m. (upper part of the back above the ground), equal two sheep; and two sucking pigs or so called "white little pigs," if no higher than 0.35 M. (upper part of the back above the ground), equal one pig weighing less than 50 Kg.

All these charges apply to transport in trains, which are indicated by the railway company for the transport of live stock. If the consignor desires transport in other trains, and this is allowed, then the charges are increased by 50 per cent.

750. Rates for horses and other animals in horse boxes

For the transport of horses and other animals in horse-boxes, the rates for 1, 2 and 3 heads are charged as mentioned hereafter, and with consignments of more than three heads is calculated thus, that for the remaining one, two, or three heads the rate is charged as mentioned in the tariff.

LIVE STOCK TRAFFIC—*continued.*

Holland—*continued.*

These charges apply to transport in trains which are indicated for the purpose by the railway company.

If the consignor desires transport in other trains and this is allowed, the charges are increased by 50 per cent.

751. Extra loading and partial unloading on journey.

If on the journey extra cattle are loaded, in so far as this can be allowed by the railway company, the extra loaded cattle, even when they belong to the same consignor, are considered as a newly offered consignment and freighted as such.

752. Rates for live stock.

The following are the rates per km. for conveyance of horses and other animals in *stall-wagons* (horse boxes):—

Distance.	One Animal.	Two Animals.	Three Animals.
	Cents.	Cents.	Cents.
0 to 100 Km., per Km., ..	14	21	28
101 to 200 Km., per Km., added,	12	18	24
Over 200 Km., per Km., ,,	10	15	20
Station Terminal.	100	200	300

For all kinds of animals in *full truck loads* the following rates per km. per square metre of the floor area of the wagon used are charged:—

Distance.	Horses and other large Animals.	Small animals (Pigs Sheep, Lambs, &c.)	
		In Trucks with one Floor.	In Trucks with more Floors.
	Cent.	Cent.	Cent.
For any distance per Km., ..	1	0·8	1·25
Station Terminal, per Truck, ..	Fl. 5·00	Fl. 5·00	Fl. 5·00

The following are the head rates per km. charged for conveyance of various kinds of animals in ordinary trucks:—

Distance.	Horse, or Bull.	Ox, Cow, &c., Foal, Mule, or Ass.	Pig, Calf, or Goat.	Sheep, Lamb, or Pig, under 50 Kg. in weight.
	Cents.	Cents.	Cents.	Cents.
0 to 10 Km., per Km., ..	2·5	1·5	0·75	0·375
11 to 64 Km., per Km., added,	2	1·3	0·66	0·33
65 to 100 Km., per Km., ,,	1·33	0·88	0·5	0·25
101 to 450 Km., per Km., ,,	0·65	0·52	0·26	0·13
Station Terminal, ...	60	45	22·5	11·25

Under the above head rate tariffs the following minimum charges per consignment apply:—

For distances from 0 to 100 Km., . . 2 Fl.
For distances from 101 to 200 Km., . . 3 Fl.
For distances from 201 to 450 Km., . . 4 Fl.

753. Special tariffs.

There are no special rates shown in the tariff books obtained.

LIVE STOCK TRAFFIC—*continued.*

Holland—*continued.*

General Tariff of Accessory Fees.

	Details.	Amount.	Unit.
		Fl.	
754. Fee for way-bills.	Way-bills—The price of way-bill forms is, ...	0·01	For each form.
	Stamping of way-bill not printed by the Railway Company, ...	0·05	For every 10.
	Minimum, ..	0·50	
	Filling up the way-bill by the Railway officials, ...	0·05	For every way-bill
755. Fee for cleaning and disinfecting.	Charges for cleaning and disinfecting trucks—For cleaning and disinfecting the trucks as ordered by Royal Decree of the 26th of May, 1888,	0·60	For every truck.
	Also for each horse and each head of cattle this amount is charged, provided, however, that, when such animals are conveyed at the same time by two or more consignors in the same truck, only such part of 60 cents as there are consignors using the same wagon is due on each way-bill.		
	For trucks, horses and cattle, coming from abroad, ...	0·60	For every truck.
	For cleaning and disinfecting places where cattle are loaded and unloaded, in so far as this is required by the general police regulations,	0·60	Per wagon.
756. Fee for unloading on account of temporary disturbance of traffic.	If through temporary disturbance of transport the consignor or the attendant desires re-delivery of his live stock, there is due besides the charge for the distance over which the transport has taken place.		
	(*a*) For horses and large cattle, ..	0·20	Per head.
	(*b*) For small cattle, ...	0·03	Per head.
	Maximum, ...	1·80	For every wagon.
757. Forfeit when animals returned to sender.	The forfeit when animals are returned to a sender at his request amounts to, over and besides the charge according to the tariff for the distance traversed and the eventual cost of hire of the truck :—		
	(*a*) With consignments in small numbers :—		
	1. For horses and large cattle,	0·30	Per head.
	2. For small cattle, ..	0·05	Per head.
	(*b*) With truckloads, .. with a maximum equal to half the charge of the distance still to be covered. If with consignments of small quantities the forfeit amounts to more than for truckloads, the forfeit for truckloads is applied.	5·00	Per truck.
758. Charge for watering.	The fee for the use of pails and water for watering the animals is charged each time, ..	0·025	Per pail.
759. Demurrage fees.	Demurrage, Rent of Trucks :—		
	(*a*) Demurrage for each commenced hour is :—		
	(1) For animals in box cars, ..	0·25	Per head.
	(2) For animals in other trucks,	0·25	Per truck.
	(*b*) Wagon Rent.		
	If the applicant does not use the trucks placed at his disposal within the time fixed or the loading is not finished and ready for despatch within that time then there is due—		
	1. For a box car, ..	5·00	
	2. For another truck,	2·50	

DENMARK.

DANISH STATE RAILWAYS.

760. Maximum wagon-load rates.

The wagon-load rates for conveyance of live animals must not exceed 40 ore per square metre of the wagon's floor space, with an addition of 1.8 Ore per Km. For longer distances the carriage shall be substantially reduced.

761. Excess charge for conveyance in fast trains.

When the animals, by the request of the sender on the way-bill, are conveyed by such ordinary passenger trains which, as a rule, are not intended to convey live animals, or by Fast passenger trains, the freight charge is increased by 50 per cent. and 100 per cent., respectively.

LIVE STOCK TRAFFIC—*continued.*

Denmark—*continued.*

762. Modes of Conveyance.

Live animals can be sent either in whole wagon-loads or singly; in both cases the consignment should be accompanied by the proper way-bill.

763. Infected Animals.

Animals suffering from infectious disease must not be received for conveyance. Animals otherwise diseased, the railway company can refuse to convey or make their conveyance conditional upon their being sent in whole wagon-loads.

The Working Regulations fix the conditions under which certain kinds of animals (dogs, small animals and fowl, wild animals, etc.,) are received for conveyance.

764. Attendants with Animals.

The railway company can demand that live animals in whole wagon-loads shall be accompanied by attendants who can look after them on the journey. In this case the attendants get free conveyance from the start to the destination and return, 3rd class. The attendants must be grown-up men. Women, children, and men who are evidently incapable of taking proper care of animals are not allowed as attendants.

765. Treatment of Animals.

It is the duty of the employees of the railway company to see that the animals, both during loading and unloading, and during the journey, are properly treated and not exposed to unnecessary hardships. The requirements, in above respect, which are demanded by the stationmaster concerned, or during the journey by the guard of the train, or by a ship's captain, must be carried out by the senders and their employees and also by the attendants of the animals. What is further required is fixed by the Working Regulations.

All cases of rough ill-treatment or other cruel and bad treatment of the animals shall be reported to the police by the employees of the railway company. If animals, during the journey, are found to be suffering, whether from want of sufficient room, on account of bad or unwarrantable tying up or other causes, for instance, want of food or water, and the fault or want cannot be remedied by the accompanying attendants or the railway company's employees without delaying the train, the wagon shall be taken off the train and the animals stabled.

766. Non-liability of Railway.

If the detaching of a wagon owing to the condition of animals contained in it is not due to a fault of the railway company, no claim in respect of it can be made against the railway, nor is the company obliged to refund any portion of the freight charges, but only to convey the animals on to their destination as soon as possible under the usual conditions of transit.

767. Liability of Railway.

The railway company's responsibility for live animals received for transport is fixed by the rules contained in the regulations for conveyance of goods as far as these can be applied to living animals.

The railway company is thus not responsible for the special dangers connected with the conveyance of live animals, and is therefore not specially obliged to give compensation when the loss or injury is due to the animals breaking loose, jumping out of the wagon, falling, knocking themselves, choking or injuring each other, whether this is done during the loading and unloading, during the journey or during stay at the railway station.

The railway company is also not responsible for any injury which could have been prevented by the attendants; under this come especially all injuries brought

about by want of proper attendance, care and feeding. The railway company's employees having assisted with the loading and unloading does not impose any responsibility upon the railway company.

768. Cleansing and disinfecting wagons.

For the cleaning and disinfecting of wagons in which live animals have been conveyed the railway company *cannot demand any remuneration.*

769. Demurrage charges.

Demurrage charges in respect of detention of wagons ordered by a sender, delay of handing in and taking delivery of animals, and in the loading and unloading of them, as well as the time allowed for taking delivery, are fixed by the Working Regulations.

General Working Regulations.

770. Attendants with Animals.

When the railway company demands that animals sent in whole wagon-loads should be accompanied by attendants, a free pass is given to the latter, valid for a journey in 3rd class from the station of despatch to the station of destination and return. Only one free pass can be given for each wagon, even if the wagon is accompanied by several attendants. As regards the granting of free passes and their use, the following rules are in force:—

a. The free pass is made out in the name of the attendant and must not be transferred to anybody else. To be valid for a journey it must be provided with a stamp of date at the starting stations (both on the forward journey and the return journey).

b. The free passes should be asked for at the starting station at least half an hour before the departure of the train in question. Before the departure of the train the attendants shall report themselves to the guard, who will show them their places.

c. The journey must be made in the same train as the one in which the animals are conveyed. The return journey must be made along the shortest route and commenced at least eight days after the free pass was made out. The last-mentioned journey must not be broken on the way or be made by fast trains or superior class of trains. The free pass cannot be made valid for a higher class or for fast trains or superior class of trains by payment of excess fare.

d. Free passes which are not provided with a proper stamp or which are being used by persons other than those in whose names they are made out or for a higher class or other trains than those for which they are in force will be stopped as invalid, and the holder is treated according to the rules concerning persons who travel on a wrong ticket.

e. Attendants with free passes are subject to the rules as to personal disinfection which the railway directors may fix for the prevention of infectious diseases among domestic animals.

f. Attendance of live animals in wagon-loads will be demanded when the conveyance takes a long time, or necessitates putting up for the night, feeding or watering. Consignments in wagon-loads of geese and other unpacked fowl as well as loose small animals, and also wild animals, must be accompanied by attendants.

771. Treatment of animals.

To secure proper treatment of the animals in transit the railway company must see that the rules given below are kept:—

1. The animals must, as a rule, not be put into the wagons earlier than two hours before the fixed time for departure of the train by which the conveyance is to be done. Animals which arrive at the station before this time should, however, be put into the pens if there are such.

2. During the period from November the 1st to March the 31st, and as far as possible during the months of April and May, live animals, in general, should be carried in closed wagons. During the rest of the year conveyance can be made in open wagons.

3. The number of animals put into the wagon must not be greater than will leave them proper room. Small animals must have room to lie down. For the tying up of the animals, thick, soft Manilla rope or thick wound round rope must only be used, and the tying up of boars or other animals must not be done by putting a rope across the upper jaw.

4. Loading together in one wagon of animals of a substantially different kind and size, as well as animals of one kind, which, according to their nature, may hurt each other, is only allowed in wagons specially made for their conveyance, or in the ordinary wagons when the animals, by arrangement of the sender and at his request, are separated by proper strong partitions.

5. When animals are handed in for conveyance in sacks, boxes, baskets, cages, or similar packings, these must be sufficiently roomy and airy.

The openings of sacks must not be tightly drawn together, and every sack shall be provided with an open pipe (tube).

6. When the railway company considers it necessary they can demand that sufficient food shall be brought for the animals. It is conveyed free of charge in the wagons as well as ropes, halters, and other articles for tying up.

7. When the sender by a statement in the Bill of Carriage requests that the animals shall be watered at one of the stations arranged for this the attendants shall look after the unloading and loading of the animals at the watering places.
If they omit this, or if the animals are without attendance, the railway company does the unloading and loading, but without any responsibility for possible damage.

8. If the time fixed for taking delivery of the animals is exceeded (see regulation given later), they will be stalled at the risk and expense of the sender.

772. Ordering of wagons

Arrangements for conveyance of live animals must be made beforehand with the starting station, as a rule, twenty-four hours before the conveyance is to take place. This applies to wagon-load consignments as well as general consignments. For wagon-load consignments a written order must be made for whole wagons on prescribed forms settled for this. These forms shall be supplied with date, the signature and address of the person who gives the order and also information of:—

a. The kind of animals.
b. Where he wishes them to be sent.
c. Day and hour when the wagons are wanted and whether they are wanted for loading on harbour tracks.
d. Number and size of wagons and whether open or closed.

For general consignments, no ordering of wagons can be made, on the other hand, consignors must state to the starting station for how many animals space is wanted. If a sender is not able to do this he is not obliged, however, to send in a written order for a whole wagon, but can state, as near as circumstances will allow, about how many animals he wishes conveyed according to head rate. When ordering whole wagons a sum of 4 Kroner per wagon can be demanded to be deposited as security for demurrage in case the wagons are not used or loaded within the fixed time. If the time fixed for loading is exceeded, demurrage is charged from the time of departure of the train in which the animals should have been conveyed.

773. Demurrage for delayed loading, &c.

If an ordered wagon is not used, the following rules as to demurrage are in force:—

Demurrage for twenty-four hours is charged when a wagon is countermanded the same day as it is ordered

LIVE STOCK TRAFFIC—*continued.*

Denmark—*continued.*

for, or when the countermand is received at latest at the time when the wagon should have been delivered for disposal.

Further, demurrage is charged from the midnight after the receipt of the wagon order until information is received that the ordered wagon is not wanted, or until the railway company, in some other way, has disposed of the wagon, at the most, however, for forty-eight hours.

If a wagon is countermanded thirty hours before the time when it should have been placed at disposal of a consignor, demurrage is not charged. Sundays and holidays are counted when an ordered wagon is not used.

774. Loading of animals.

Animals which are to be sent by train should be loaded within the time fixed by the station. The loading of the wagons is the sender's duty, who also has to look after the tying up of the animals in the wagons and the necessary articles for tying up, ropes, halters, etc.

Concerning general consignments, the railway company shall, in as far as their other business permits, assist with the loading and unloading as well as the tying up of the animals. Animals which are conveyed according to head rates shall be marked distinctly and the marks stated in the bill of carriage.

For animals which are sent in whole wagon-loads the railway company can demand marking.

775. Conveyance time limits.

The times fixed for conveyance are:—

a. For animals which are requested to be sent by fast trains or passenger trains not conveying animals, ... 12 hours
with an addition for every conveyance distance of 150 km. or part thereof, . . 12 hours

b. For animals which are conveyed in goods trains, mixed trains and passenger trains conveying animals, ... 24 hours
with an addition for every conveyance distance of 120 km. or part thereof, . . 12 hours

The times fixed for conveyance according to *a* and *b* are extended by twelve and twenty-four hours, respectively, every time fiords or rivers, over which there are no regular bridges, are crossed, and also by the time which is spent at the watering stations. They are, however, calculated as given in the goods regulations.

776. Unloading and removal of animals.

On arrival at the station of destination the waybills and the animals are delivered in return for receipt when freight and other expenses have been paid.

The railway company is not obliged to give information of the arrival of the animals. The unloading of the wagons is the duty of the addressee. The railway company is, however, entitled to have this done at the risk and expense of the addressee if the latter does not effect unloading immediately after the wagon has been placed in position for this purpose. The animals shall be removed from the railway company's premises three hours after their arrival. If this is not done the animals will be stalled at the risk and expense of the sender. If animals are stalled on the railway company's premises, stallage money is charged as follows:—For every twenty-four hours or part thereof—for horses and mules, 30 ore per head. For horned cattle and asses, 20 ore per head. For other animals, 10 ore per head, exclusive of payment for fodder.

777. Application of goods traffic regulations.

The fixed regulations given for the conveyance of goods apply also to the conveyance of live animals in so far as they are applicable to the same.

778. Rates for conveyance by ordinary and fast passenger trains

The rates given for conveyance of live animals in goods trains and mixed trains are used as follows for calculating the charges for conveyance by passenger or quick trains:—If live animals, by a statement in the Bill of Carriage, are requested to be sent by ordinary or fast passenger train, and this is granted by the railway company, the worked-out freight is increased by 50 and 100 per cent. respectively.

The rates thus increased for conveyance by ordinary or fast passenger train are charged for whole conveyance distances even if the conveyance is made only on a part of the journey by those trains.

LIVE STOCK TRAFFIC—*continued.*

Denmark—*continued.*

779. Extra loading and partial unloading during journey

If a consignment of live animals is completed during the journey, in so far as this, according to the railway company's judgment, can be allowed, the animals loaded during the journey are considered as a fresh consignment and the freight calculation is made accordingly. If the sender is allowed to unload some of the consignment during the journey the freight is calculated as if such part had formed a separate consignment between the points of loading and unloading.

780. Rates for wagon-loads.

The freight charges for animals in whole wagon-loads are made for each separate wagon.

For every square metre of the wagon's floor space, without regard to whether the wagon is open or closed, the following charges are made:—

For the first 60 Km.,	.	.	.	1.8 Ore per Km.
,, next ,,	.	.	.	1.5 ,, ,,
,, ,, ,,	.	.	.	1.2 ,, ,,
,, ,, ,,	.	.	.	1.1 ,, ,,
For the following Km.,	.	.	.	1.0 ,, ,,

to which there is a fixed addition of 40 ore per square metre. The basis of the calculation is the wagon floor space allowed. Parts of a whole metre under 0.5 square metre are not counted; parts of 0.5 square metre or more count a whole metre.

If the railway company, owing to special circumstances, should be obliged to give a larger wagon than ordered, and the sender, notwithstanding this, still insists on despatch, the carriage is calculated on the floor space of the wagon that is given. For the use of wagons with several floors a double freight is charged without regard to the number of floors.

781. Head rates.

Live animals sent singly are charged at head rates calculated at the same conveyance rate and constant per sq. m. as for truck-loads, but reckoning the space occupied per head by each species of animal according to the floor area defined in the following table.

There is a charge for each of:—

—	Freight per	Minimum area charged for.
	Sq.m.	Sq.m.
(*a*) Horses and mules exceeding 1·4 m. in height.	3·0	4·0
(*b*) Horses and mules up to 1·4 m. in height. Large horned cattle of weight over 400 kg.	2·2	4·0
(*c*) Asses, horned cattle (ordinary) of weight over 200 kg. up to 400 kg.	1·8	3·0
(*d*) Young cattle and fat calves of weight over 50 kg. to 200kg. Fat pigs of weight over 160 kg.	0·9	3·0
(*e*) Medium pigs of weight over 80, up to 160 kg.	0·6	2·0
(*f*) Small swine and young pigs of weight over 40 and up to 80 kg; calves of weight up to 50 kg.; goats, sheep, and lambs of weight over 40 kg.	0·5	2·0
(*g*) Young pigs, goats, sheep, and lambs of weight up to 40 kg.	0·3	1·0

When judging whether an animal belongs to either one or other of these classes, to which it, according to its kind, should belong, the above-mentioned weights and height measurements guide the decision, not the chosen description.

782. Special trains.

Special trains by order are only given in so far as it is convenient for the railway company.

The freight is the usual one. No special train is given, however, except the minimum of payment fixed in passenger regulations, is secured (*i.e.*, 3 Kr. per Km., with a minimum of 75 Kr. when the conveyance takes place between 6 a.m. and 10 p.m., with an addition of one-third these charges when the conveyance is between 10 p.m. and 6 a.m. In both cases a deposit of 30 Kr. as security must be made whether the special train is used or not).

783. Special Tariffs.

There are no special rates shown in the tariff books obtained.

AUSTRIA AND HUNGARY.

General Traffic Regulations.

794a. Regulations as in Germany.

NOTE.—Many of the Austro-Hungarian regulations are identical with those of Germany. Only the supplementary working regulations in Austro-Hungary are here given; for the others see the German regulations.

795. Loading of live stock.

With regard to the acceptance and forwarding of live stock, the provisions of laws and official enactments, in so far as these affect sender or consignee, must be observed by the latter.

Slaughter animals must not be sent together with breeding or farm animals, and may not be loaded into the same railway wagons with the latter. In accordance with this the sender must, in the space marked "Contents" provided in the way-bill, state in addition to the species of the animals, whether the latter are for slaughter, breeding, or ordinary farm purposes. Slaughter animals must not be consigned on the same way-bill with breeding or farm stock.

Animals may not be consigned in hobbles, or in sacks, cages, boxes and the like, unless these receptacles are sufficiently roomy and ventilated. Large animals (cattle, except calves up to one year old, horses, mules, asses) may not press against each other or against the walls of the wagon, and sufficient room must be left to small animals to lie down. Small and large cattle and animals of different species may only be loaded in one and the same wagon when placed in separate compartments made of beams, planks or

LIVE STOCK TRAFFIC—*continued.*

Austria and Hungary—*continued.*

laths. Sucking calves with their mothers may, however, be loaded together with other cows in the same wagon compartment.

Inflammable material may not be used to litter the floors of wagons carrying cattle when the wagons are open or have lattice work walls, or of wagons, the doors of which are to remain open during transit. The following materials are regarded as inflammable and consequently not to be used:—Straw, chaff and grass litter, but sawdust sprinkled with water, with or without sand, also peat litter if previously moistened with water, may be used.

796. Overcrowding of animals in loading.

Overcrowding railway wagons with animals by the sender is regarded as cruelty to animals, and consequently senders guilty of the same are punishable under the laws and enactments applicable. In Austria the Order of the Ministry of the Interior of 15th February, 1855, applies, in which cruelty to animals is forbidden by law. The order is worded as follows:—

"Any person who publicly mishandles animals in a vexatious manner, whether such animals are his own property or not, is punishable by the Political Authorities and in places where there is a representative of the Imperial Police authorities, he is punishable by the latter in pursuance of Par. 11 of the Imperial Order of 20th April, 1854."

"Should certain kinds of ill-treatment occur frequently or be customary in commercial traffic, then the local authorities may issue special prohibitions against the same."

The railway's agents are, in consequence of these official enactments, instructed to take steps in order that senders who are bound under the regulations to load their live stock may not overcrowd the cattle vans, and if these measures prove ineffectual to report the matter to the proper authority.

797. Liability of sender.

The sender is responsible for all damage arising from the non-observance of these prescriptions and must indemnify the railway for any expenses incurred thereby.

798. Attendants with live stock.

With the exception of small animals in cages, live stock are, as a rule, only accepted for transit when at least one attendant is sent with each consignment; when several consignments are sent in the same wagon to the same destination, then one attendant is sufficient for the whole wagon.

Should the consignment consist of several wagon-loads, at least one attendant to three wagons must be sent in the case of large animals; in the case of small animals, one attendant is enough, irrespective of the number of wagon loads.

In the case of consignments of horses, for conveyance by passenger trains, the presence of an attendant can, under no circumstances, be dispensed with. If consignments consist of several wagon loads, an attendant may be required for each wagon.

When the proper number of attendants are not sent with consignments of live stock, or if no attendants are sent, and if the sending station dispenses with the service of attendants, the sender must make and sign the following declaration in the space allotted for the purpose in the way-bill.

"Instead of the.....attendants required by the railway, no / only..... attendants are supplied."

(Signature).

The fares for live stock attendants are shown in the tariff regulations given hereafter.

799. Fodder for animals in transit.

Animals accompanied by attendants may be supplied with a store of food which, in the judgment of the sending station, is sufficient for their use during transit. The weight of the food supply need not, however, be included in the weight of the consignment as given in the way-bill.

Any tackle connected with the animals and also the usual hand luggage of the drovers may be carried free under the care of the latter in the same wagon as the animals.

LIVE STOCK TRAFFIC—*continued.*

Austria and Hungary—*continued.*

Other luggage or goods may not be taken into the wagon, but must be specially consigned in the usual way.

800 Ordering of wagons.

The regulations as to goods wagons apply to the ordering of wagons for the conveyance of live stock.

801. Disinfection fees.

For the disinfection of railway wagons the fees under the Tariff of Accessory Fees are charged.

802. Loading and unloading.

Small consignments of live stock in receptacles, also consignments of single small animals may, at the discretion of the despatching station, be loaded or unloaded by the railway.

803. Liability of owner

The sender or consignee is liable for all damage done by the animals to railway vehicles or station fittings during loading, unloading, or trans-shipment, if such damage is deemed extraordinary, *i.e.*, not caused by ordinary wear and tear, and also for all other damage caused by the animals in so far as it is not due to a fault of the railway.

804. Method of despatch.

Animals may only be despatched with way-bills.

If a consignor wishes to send horses (also breeding horses), colts, or mules by fast train, and if the railway agrees to this arrangement, he must enter on the way-bill above the address the words "By fast train."

For horses (also breeding horses), colts, or mules stall wagons will be supplied so far as they are available without any special application being made by the sender, and without payment of any special fee.

For horses (also stud horses), colts, and mules sent as slow goods the railway supplies stall wagons at the charge of the additional freight, 50 per cent., fixed in the Tariff Regulations, in so far as such wagons are available, and if they are asked for by the sender on the way-bill in the space reserved for the purpose.

805. Acceptance for transit.

The time during which animals are accepted for transport on Sundays and holidays is the same as that for goods, unless it be extended by notice posted in stations.

806. Demurrage and stabling fees.

Demurrage and stabling fees are fixed in the Tariff of Accessory Fees.

If animals arrive at destination after six o'clock in the evening the time allowed for removing them commences not earlier than six o'clock on the following morning.

When consignments of live stock are detained on the journey in consequence of official instructions not due to any fault of the railway, and if the delay of wagons thus caused amounts to more than twenty-four hours, then the special fee for demurrage fixed for such a contingency in the Tariff of Accessory Fees is charged.

807. Payment of freight.

Transport charges for horses, colts, and mules must be paid on consignment.

For other animals the transport charges may, at the choice of the sender, be put down to the account of the consignee.

808. Conveyance time limits.

The German Live Stock Regulations are applicable.

If horses are accepted for transit with a quick goods way-bill by a certain passenger train this fact is noted by the railway on the way-bill, and also on any receipt form which may be made out.

Tariff Conditions.

809. Sender may select area or weight tariff.

1. If floor area rates exist for the transit of live animals then the sender must declare whether the consignment is to be sent by the floor area or the weight tariff.

LIVE STOCK TRAFFIC—*continued.*

Austria and Hungary—*continued.*

810. Attendants with animals

2. Persons accompanying live animals, if they travel in the cattle wagon or in a carriage indicated to them by the station-master of the sending or junction station in the same train in which the cattle are forwarded, are given, the following reduction in fare for the journey:—

(*a*) If three or more wagons are sent on one way-bill, then one attendant for every three wagons is carried free. When an attendant is sent with the wagons exceeding three or a multiple of three, the regulations in the following paragraph are applied:—

(*b*) If a consignment only consists of one or two wagons, or if more attendants are sent with a consignment than are carried free according to (*a*), then the attendant sent with a consignment of one or two wagons or the additional attendants must pay a fare of 2·3 H. per person and Km., including Austrian railway ticket duty and Hungarian transport duty or Treasury stamp duty. This fare is calculated on the distance in Km. of the transport of the animals, and amounts up to 5 H. are omitted; 5 H and over counted as 10 H.

If, however, the fare on the basis of the above unit rate comes dearer than the regular fare for third class in a passenger train, then the attendants pay the latter amount.

3. Persons accompanying consignments of animals, for the transit of which a separate wagon is not required, do not enjoy a reduction in fare; they must pay the third class fare for passenger trains if they take their seats by direction of the station-master of the sending station or junction in the cattle van or in a truck.

4. The food supply for animals in transit is sent free.

5. If horses (also stud horses), foals, ponies, and mules are sent, on request of the sender with the permission of the railway, by express trains, then the quick goods rates, plus 50 per cent., are charged for them.

811. Rates for horses, ponies and mules.

1. The rates when consigned as quick goods are as follow:—

Distance.	1 Head.	2 Head.	3 or more, per head.
Austria—	H.	H.	H.
1 to 50 Km., per Km., ..	24	34	14
51 to 150 Km., per Km. added,	23	33	13
151 to 300 Km., per Km. ,, ..	22	32	12
Over 300 Km., per Km. ,, ..	20	30	10
Hungary—any distance, ..	28	36	17
Manipulation charge, per head,	14	28	14

812. Normal weights of horses, ponies and mules.

2. When consigned as slow goods, freight is calculated on the bases of the following normal weights at the rates of Class II. Goods—for one horse, foal, pony, or mule, 1,400 Kg., for two or more horses, foals, ponies, or mules, when consigned with one way-bill and in one wagon, per head, 700 Kg.

3. If animals of these species, sent as slow goods, travel in stall wagons, then the freight as above, plus 50 per cent., is charged.

4. Freight for foals and ponies in crates or boxes is charged on the gross weight rounded off, when sent as quick goods, at the ordinary quick goods rates, and as slow goods at the rates of Class I. Goods.

813. Special rates for stud horses.

1. The following rates for stud horses only apply when they are expressly asked for by the sender in

LIVE STOCK TRAFFIC—*continued.*

Austria and Hungary—*continued.*

the way-bill, and when certificates according to the provisions of the following paragraph are sent in:—

2. The vouchers presented may either be certificates issued by an authorised association for the whole distance travelled or an official attestation.

3. When the foregoing conditions are complied with stud horses are carried at the following rates:—

(*a*) When consigned as quick goods with one way-bill:

Load per wagon:—

Of 1 horse,	15·1 H. per Km.
Of 2 horses,	21·2 H. per Km.
Of more than 2 horses, per head,	9·1 H. per Km.

(*b*) When consigned as slow goods, if at least three head per way-bill and wagon are consigned, the rate is 5·6 H. per Km. per head.

If less than three stud horses are sent with one way-bill, then the following rates are applied:—

	Per Wagon and Km.
For 1 horse,	10 H.
For 2 horses loaded in one wagon,	12 H.

Freight at these rates includes handling fee

4. On the Hungarian lines the usual transport duty for quick and slow goods, 7 per cent. and 5 per cent. respectively, must be added to the foregoing rates.

5. If animals of the above kinds are sent by request of the consignor in stall wagons, then slow goods rates, plus 50 per cent., are charged.

814. Compensation for loss or injury of Stud Horses.

6. In fixing damages for loss, depreciation, or injury, when the reduced rates as under Par. 3 are applied, the ordinary commercial value or ordinary value of a horse is taken as not more than 600 Kr.

815. Normal weight of horned cattle.

1. For the animals mentioned below the following normal weights are taken:—

Kind of Animal.		Normal Weight in Kg.
1 sucking calf,		60
1 one-year old calf,		170
1 bull, ox, or cow,		840
2 bulls, oxen, or cows,	When consigned with one way-bill,	1,400
3 ,, ,,		1,680
4 or 5 ,, ,,		1,960
Consignments of 6 or more bulls, oxen or cows, with one way-bill, per head,		340

If doubts are raised as to the normal weight on which freight is to be charged the animals are to be weighed, and freight charged on them at the following weights:—Up to and including 70 Kg. per head as sucking calves, from 70 to 170 Kg. as one year old calves, and over 170 Kg. per head as bulls, oxen, or cows.

816. Rates for horned cattle.

2. For the foregoing normal weights freight is applied as follows:—

When consigned as quick goods, the ordinary quick goods rates.
,, slow goods, rates of Class II.

817. Swine Classification.

1. In the way-bill swine are to be entered separately according to the following classes:—

Up to 20 Kg. as sucking pigs.
Over 20 and up to 40 Kg. as young pigs.
Over 40 and up to 90 Kg. as unfinished pigs.
Over 90 Kg. as fat pigs.

2. Freight for swine not consigned in crates, &c., if the weighing is done by the railway before consignment, is calculated on the weight so determined. If, however, the railway does not carry out such

LIVE STOCK TRAFFIC—*continued.*

Austria and Hungary—*continued.*

weighing before consignment, then the following normal weights are taken as the basis of freight:—

Kind of Animal.	Normal Weight in Kg.
Sucking pigs,	20
Young pigs,	30
Unfinished pigs,	60
Fat pigs,	170

818. Normal weights of Swine.

In both cases freight on not less than 1,200 Kg. per way-bill is charged.

3. If the weighing takes place at the sending station or at a station on the journey, then the weight, when ascertained on a weigh-bridge, is reduced by ten per cent., and when on another weighing machine by five per cent., but maintaining the minimum weight of 1,200 Kg. per way-bill.

4. A weighing fee is not charged for weighing pigs by the railway with a view to calculating their freight.

819. Rates for Swine.

5. When consigned as quick goods the ordinary rates for quick goods are charged; but when consigned as slow goods the rates of Class II., unless another rate is prescribed in the tariff.

6. For swine in receptacles (boxes, crates, baskets, sacks), freight for the gross weight of the consignment is charged at the following rates:—

As quick goods, ordinary quick goods rates.
As slow ,, (in boxes or crates with solid walls) the rates of Class II., in baskets or sacks at the rates of Class I.

820. Sheep, Goats, Asses and other small animals.

1. For the following animals not contained in receptacles, but simply consigned, freight will be reckoned according to the fixed normal weights:—

If, however, less than twenty head of one or several of the following animals are consigned with one way-bill as slow goods, then, for every head less than twenty, 20 Kg. are to be added to the weight arrived at according to the normal weights, or, if the weight of the animals actually consigned, calculated at double the normal weights comes to less, then the latter is to be made the basis of calculation of freight.

Kind of Animal.	Normal Weight in Kg.
Lambs, kids,	30
Sheep, rams, wethers, goats, he goats,	40
Asses,	170

821. Normal weights of Sheep, Goats, Asses or other small animals.

If doubts are raised as to the classification the animals are to be weighed and classed as follows:—

822. Rates for sheep, goats, asses and other small animals.

Sheep and goats up to 30 Kg. as lambs or kids; sheep and goats over 30 Kg. as sheep or goats.

3. When sent as quick goods the ordinary quick goods rate is charged, and when sent as slow goods the rate of Class II. Goods, unless another rate is prescribed in the tariff.

4. The freight for small animals sent in boxes, crates, baskets, sacks, and the like, and for asses and dogs similarly packed, is calculated according to the gross weight rounded off, when sent as quick goods at the ordinary quick goods rate, and when sent as slow goods, at the rates of Class I. Goods.

823. Breeding animals.

For breeding animals the following reduced rates are charged under the following conditions:

1. The application of these rates is to be expressly prescribed by the sender in the way-bill.

2. At consignment a certificate is to be presented from one of certain defined officials or bodies, and which, in addition to the stamp of the said authority, must also contain a description of the sender and consignee, the names of sending and receiving stations, date, and number and kind of animals.

LIVE STOCK TRAFFIC—*continued.*

Austria and Hungary—*continued.*

824. Rates for breeding animals.

3. For breeding cattle consigned as slow goods the following freight is charged, irrespective of the number sent:—

Kind of Animal.	Rate per Km. in Heller.
Sucking calves, one-year-old calves, per head,	1·58
Bulls or cows, per head,	3·16
Lambs, sheep, wethers, kids, mother-goats, he-goats, sucking pigs, young pigs, per head,	0·52

The rates also apply to breeding animals sent in coops, crates, baskets, &c.

In the freight according to these rates the handling fee is included, but the transport duty for Hungarian lines must be added.

For breeding cattle of the foregoing species, when sent as quick goods, the reduced quick goods rate is charged on the fixed normal weights.

825. Compensation for loss or injury of breeding animals.

4. For the purpose of fixing compensation in the case of loss, depreciation, or injury, when the rates as under paragraph 3 are applied, for the animals named below the ordinary commercial value or ordinary value is taken as not higher than the following amounts:—

For 1 sucking calf or one year old calf,	25 Kr.
For 1 bull or 1 cow,	200 Kr.
For 1 sheep, 1 wether, or 1 lamb	20 Kr.
For 1 goat, 1 he-goat, or 1 kid,	20 Kr.
For 1 pig, 1 young pig, or 1 sucking pig,	35 Kr.

826. Animals for exhibitions.

The transit of live animals to and from exhibitions is effected, on request of the Exhibition Committee and with consent of the railways concerned, under the following conditions:—

1. A request for the application of the special tariff must be made by the sender in the way-bill.

2. The way-bill of transit to the show must be accompanied by a certificate from the Show Committee, giving the name of the sender and a description of the animals going to the show.

3. The way-bill for the animals returning from the show, and from the original receiving station to the original sending station must be accompanied by the way-bill of transport to the show. Both way-bills must contain a statement from the Show Committee to the effect that the animals were exhibited at the show, but not sold or otherwise disposed of.

4. Consignments, whether going or returning, must not be debited with charges on delivery; the collection of any costs arising from driving the animals may, however, be effected subsequently.

827. Rates for animals sent to exhibitions.

For the following animals, when sent as slow goods, or for their transit to the show and their return from the original destination to the original sending station, the following rates are applied, with the addition of the Hungarian transport duty for transit on Hungarian lines.

Kind of Animal.	Rates per Head and Km. in Heller.
Horses, foals, ponies, and mules, one animal,	6·86
Not less than two animals,	3·44
Asses, bulls, oxen, and cows,	3·16
One year old calves and fat swine,	1·58
Sucking calves, unfinished swine, goats, he-goats, sheep, wethers, rams,	0·52
Young pigs, sucking pigs, kids, and lambs,	0·26

For small animals the above rates also apply when consigned in baskets, boxes, sacks, etc.

LIVE STOCK TRAFFIC—*continued.*

Austria and Hungary—*continued.*

In these rates handling fee is included.

For the animals named, when sent as quick goods, the foregoing rates are charged, plus 50 per cent. To the rates so determined the transport duty of Hungarian railways is to be added.

For horses, ponies, and mules sent as slow goods, and by request of the sender, in stall wagons, the freight according to the foregoing rules, plus 50 per cent. is charged.

828. Compensation for loss or injury of exhibition animals.

For the purpose of fixing compensation for loss, depreciation, or injury, when the foregoing rates are applied, the ordinary commercial value or ordinary value of the following animals is taken as not more than the following amounts:—

One horse,	600 Kr.
One foal, up to one year, one pony, mule, or ass,	200 Kr.
One bull, ox, or cow,	200 Kr.
One fat ox,	300 Kr.
One sucking calf or one-year old calf,	25 Kr.
One fat pig,	90 Kr.
One unfinished pig, or young pig,	35 Kr.
One sucking pig, up to three months,	10 Kr.
One goat, he-goat, kid, sheep, ram, wether, or lamb,	20 Kr.
100 Kg. of other animals,	100 Kr.

829. Demurrage fees.

In the case of live stock when loaded by sender:—When the loading and despatching are not completed by the time agreed upon with the sending station when ordering the wagons.

In the case of live stock unloaded by consignee:—When unloading is not completed within the time fixed by Traffic and Tariff Regulations.

In case a consignment to be unloaded by consignee has had to be detained owing to obstacles in transport and the sender is consequently asked for further instructions, or in case of the detention of a consignment of live stock in consequence of official instructions, not due to any fault of the railway.

Demurrage amounts to:—In the two last-named cases 3·60 Kr. per wagon and day.

In the other cases, 40 H. per wagon and hour.

Note.—Demurrage is not collected if the security pledged on ordering wagons is forfeited to the railway in consequence of the wagons not being loaded at all.

830. Stallage and lairage fees.

For animals permitted to remain in the station after expiration of the regulation time allowed for removal, the following charges are made per head and per hour, or part of an hour:—

For horses, colts, ponies, mules, and asses,	30 H.
For bulls, oxen, and cows,	10 H.
For calves, sucking pigs, young pigs, pigs, lambs, sheep, wethers, kids, and goats,	6 H.

If the animals remain in the wagons demurrage is charged instead of stabling fee.

831. Watering fees.

For every time that animals are watered during transit the following fees are charged:—

1. For bulls, oxen, and cows, per head,	20 H.
Minimum per consignment,	50 H.
2. For other animals:—	
When ordinary wagons are used, per wagon,	50 H.
When double-floored wagons are used, *per floor*, and when divided into compartments, irrespective of the number of compartments used,	50 H.

LIVE STOCK TRAFFIC—*continued.*

Austria and Hungary—*continued.*

The fees under "2" are doubled when no attendant is sent with the consignment.

No special fee is charged for watering animals conveyed in the "drums" of pig wagons.

Animals are watered by employees of the railway.

832. Fee for sprinkling pigs.

The fee for each time that pigs are sprinkled in the stations designated for the purposes, whether the same is effected by the railway's servants alone or with the assistance of the attendant on the animals, amounts to:—

For every ordinary wagon, ... 50 H.
When double-floored wagons are used, for every floor, ... 50 H.

The animals are sprinkled only when the way-bill accompanying the consignment contains a note by the sender that this is to be done, and when the station in which it is to be effected is expressly mentioned in the way-bill.

833. Fee for littering wagons in Hungary.

When bulls, oxen, and cows are consigned in Hungarian stations, the floors of the wagons in which the animals are to be carried are to be strewn with a layer of sand of about 1 to 2cm. in depth. Cinders may be used for this purpose only when sand is not available in the loading or transhipment station.

For this, when the work is done by the railway's servants, a fee of 2 Kr. is charged for each wagon.

If the sender desires a similar strewing of the floor in the case of calves and pigs consigned at Hungarian stations, and if the railway complies with the request, then the charge for strewing one ordinary wagon or one floor of a double-floored wagon is 2 Kr. When both floors of a double-floored wagon are used the fee is 3 Kr.

These fees are not charged when the sender strews the wagons with material supplied by himself.

834. Fee for supplying hobbling ropes in Hungary.

Live calves consigned in Hungarian stations, if not forwarded in wagon loads, must, in accordance with official regulations, be sent hobbled. A charge of 20 H. per head is made per animal for supplying hobbles.

These hobbles are only supplied by the railway, and consequently they may not be supplied by parties themselves.

835. Disinfecting fees.

In the transportation of animals the following disinfection fees (irrespective of distance) are charged:—

For bulls, oxen, cows, horses, colts, ponies, mules, and asses, irrespective of the number of animals loaded in a wagon, for calves, lambs, sheep, wethers, kids, goats, sucking pigs, young pigs, and full-grown pigs, if at least four head are loaded in one wagon:—

For one four-wheeled ordinary wagon or for a double-floored wagon when only one floor is used, irrespective of the number of compartments used, should the floor have several compartments, the fee is 3 Kr.

For an ordinary wagon with more than four wheels or for a double-floored wagon when both floors are used, irrespective, too, of the number of compartments used, should each floor have several compartments, including the "drum," the fee is 5 Kr.

When less than four head of calves, lambs, sheep, wethers, kids, goats, sucking pigs, young pigs, or pigs, per head, 80 H. When live animals are sent in baskets, cases, crates, etc., per head, 10 H. Minimum per consignment, 40 H. Maximum per wagon —the fees shown above for full wagons.

If the consignor of animals demands the re-disinfection of already disinfected wagons supplied by the railway, then the ordinary fees are to be charged for the second disinfection.

A special charge is not made for disinfecting the places, gangways, enclosures, and apparatus used in loading and unloading animals.

The disinfection fee is only charged once, irrespective of whether one or several railways participate in transit. An exception is, however, made in the case of consignments which, for reasons not the fault of the railway, for example, official instructions, have to be trans-shipped, in which case the disinfection fee is also charged for the fresh wagon supplied, and also in the case of consignments to or from narrow-gauge lines, for which a disinfection fee is charged both for the narrow and broad-gauge railways.

If a consignor asks for double-floored wagons for the conveyance of pigs, lambs, goats, or calves, and

LIVE STOCK TRAFFIC—*continued.*

Austria and Hungary—*continued.*

if wagons of another build are supplied to him, then only the disinfection fee for a double-floored wagon is charged, viz., 5 Kr.

When live stock are consigned by one sender in one sending station to several consignees in one and the same station of destination, and if all the animals can be loaded in one wagon, then only the disinfection fee for one wagon is charged for all the consignments.

Similarly, only the disinfection fee for one wagon is charged if several consignors in the same sending station send live stock to one consignee to one station, and the animals can be loaded in one wagon.

836. Special rates in Austria.

On the Austrian State railways the following special rates are in operation:—

For horses, foals, mules, horned cattle, pigs, sheep, and goats in wagon-loads by Slow trains.

Rate per Km. per Sq. metre of loading area, including Station and Service Terminals, and subject to conditions of the General Regulations.

Distance.	Horses, Foals, and Mules.	Horned Cattle.		Pigs, Sheep, and Goats.	
		Between all Stations.	To Wien, Penzing, and Nussdorf.	Single-floored Wagon.	Double floored-Wagon.
Km.	Heller.	Heller.	Heller.	Heller.	Heller.
1– 50	3·2	1·8	1·8	2·0	3·0
51–150	2·4	1·7	1·6	1·9	2·8
151–300	2·0	1·6	1·5	1·8	2·6
Over 300	1·6	1·5	1·3	1·2	1·8

For breeding animals in wagon-loads by Slow trains:—Rate, 20 Heller per wagon per Km. for all distances, including Station and Service Terminals, and subject to conditions of General Regulations.

837. Special rates in Hungary.

On the Hungarian State Railways the following special rates are in operation:—

I. Horses, cattle, etc., in any number:—
Charged normal weight at Exceptional Tariff V.

Note.—For horses, foals, and mules, when the total normal weight exceeds 4,600 Kg., the consignment is charged for as 4,600 Kg. If sent in a stall-wagon 50 per cent. extra is charged.

For horned animals, pigs, etc., if the charges of Exceptional Tariffs VI. or VII. comes cheaper the latter are to be applied.

II. Horned cattle and small animals in wagon-loads—all stations—per Sq. m. . . . Charged at Exceptional Tariff VI.

Note.—Excess animals over a wagon-load are charged at Exceptional Tariff V.

III. Pigs, sheep, goats, and small animals in wagon-loads—all stations to Budapest and Köbánya—per Sq. m. . . . . Charged at Exceptional Tariff VII.

Note.—The rate applies only to double-floored wagons, fully loaded, and for delivery at stations named.

Bases of Exceptional Tariffs above-named:—

—	V. Per Tonne.	VI. Per Sq. metre.	VII. Per Sq. metre.
	Heller.	Heller.	Heller.
1 to 200 Km., per Km.	9·4	1·56	1·30
201 to 600 Km., per Km.	8·4	1·40	1·16
Station Terminal, added ..	120·0	20·00	20·00

The above Tariffs are for Slow Transit Traffic only and the conditions of ordinary tariffs apply.

APPENDIX No. 2.

REVISED TABLES of COMPARISON of Irish with Continental Railway Rates prepared by the Department of Agricultural and Technical Instruction, and handed in by Mr. PHILIP MACNULTY, Transit Inspector, during his examination on the 12th March, 1908.

NOTES.

The Irish Rates used in the Tables of Comparison, except those relating to sulphate of copper (Comparisons Nos. 27*a* and 27*b*), are those recorded in the rate books as being *permanently* in force. As regards sulphate of copper (for spraying potatoes)—for the past three seasons the Irish railways, generally, have at the instance of the Department of Agriculture and Technical Instruction for Ireland reduced the rates from Class I to Class C plus 25 per cent. Those reduced rates have, in the circumstances and as an exception, been adopted for the purposes of comparison.

In most instances, exceptional (or reduced) rates in Ireland carry the condition of transit at "owner's risk."

The 5-ton and 10-ton consignments which apply generally on Continental railways as clearly defined units of weight for wagon-load goods have been adopted in order to comply with the Vice-Regal Commission's request for a comparison of Irish Rates *with Continental Rates*. The desired comparison could not be obtained by using as a standard the units of 2-ton, 3-ton, 4-ton, 5-ton, 6-ton, &c., lots which apply on one or other of the Irish railways.

The comparisons have been limited to a maximum of 10 tons per consignment, as Ireland is usually regarded as "the country of small consignments."

Where a recorded Irish railway rate used for comparison purposes includes cartage, an amount in respect thereof has been deducted and the net figures brought into the tables. The amounts deducted were 1*s.* 3*d.* per ton for Dublin; 1*s.* per ton for Belfast, and 10*d.* per ton for all other places.

Names of Continental Railways, the Rates of which have been used in Tables of Comparison.

FRANCE, ...	Nord Railway.

APPENDIX No. 3.

EXPLANATORY MEMORANDUM, furnished by Mr. P. MACNULTY, Department of Agriculture, on the subject of the publication of Continental Railway Rates, referred to during his examination on the 12th March, 1908.

Department of Agriculture and Technical
Instruction for Ireland,
13, Upper Merrion-street, Dublin,

25th March, 1908.

DEAR MR. SHANAHAN,

I am in receipt of your favour of the 23rd instant relative to Belgian Railway Rate Books, and now enclose copy of a translation of the portion of the Catalogue of Publications, on the authority of which I understood* Mr. Acworth to say that a Belgian trader would have to purchase a library of thirty-four books in order to have a complete list of Interior tariffs. As will be seen from the translation, twenty-seven of the publications he referred to relate to Exceptional *Provisional Tarriffs*, and all of them, except one list for which ten centimes is charged, are distributed *gratis* to persons interested. They relate chiefly to unusually large consignments of products of mines, quarries, ironworks, etc. Of the remaining seven publications, one is the Rate Book given to me by the Belgian State Railway Authorities as that containing their ordinary and special Interior Tariffs and those relating to through booking with certain privately-owned railways, another contains *Traffic Regulations*, another is a *Distance Book*, two relate to *Routes and Distances* for traffic between the State railways and privately-owned railways above referred to, the sixth is a record of *private railway stations, private junctions, etc.*, and the seventh contains *Regulations* relative to traffic with Netherlands and French frontier points, etc.

I hold, therefore, that the information upon which my statement to the Commission, that the Belgian State Railway ordinary and special rates for interior transit were contained in a small book purchaseable at small cost, was based is substantially correct. I shall endeavour to obtain copies of the publications showing the provisional tariffs, and if I succeed will have pleasure in sending them to you for submission to Mr. Acworth. I shall also adopt the suggestion as to the footnote to the minutes and an explanation for inclusion in the Appendix to my evidence.

Yours truly,

(Signed), PHILIP MACNULTY.

Geo. E. Shanahan, Esq.,
Secretary,

Viceregal Commission on Irish Railways,
13, St. Stephen's Green, N.,
Dublin.

*Q 42636. Appendix to Fourth Report.

LIST OF RATES published by BELGIAN STATE RAILWAY ADMINISTRATION; copies of which are for sale in all State Railway Stations. Those who wish may subscribe with a view to regularly receive copies of all the coming rates and supplements published by the Administration, or some of these publications. To do this, they should send a written request to the station nearest their dwelling, stating exactly the rate they wish.

* This tariff can only be distributed to those persons interested. However, the public may consult the tariff in offices of Railway stations.

APPENDIX No. 4.

LIST of Complaints as to traffic arrangements in connection with the transit of Cattle, furnished to the Commission by Mr. WILLIAM FIELD, M.P., on behalf of the Irish Cattle Traders' and Stockowners' Association.

Year 1903.

March.—Complaint of refusal to book cattle from Donabate.

April 2nd.—Complaint that on the Wednesday week previous, cattle loaded at Ballybrophy did not arrive in Dublin until 9½ hours after loading. Distance, 71 miles.

The day following, cattle from Gort arrived 18 hours after loading, distance, 132 miles. *April 7th*—wrote the Department.

April 16th.—Complaint as to condition of loading-bank at Birr. Complaint that a Stationmaster on G. S. & W. line refused to load cattle because they had not arrived four hours before time fixed for starting train. Complaint that at last Boyle fair horses were loaded at 12 o'clock because the officials stated that the train would start at 1 p.m. The train started at 4.30 p.m. and arrived in Dublin after 4 o'clock a.m. the next day. Complaint that at the last three fairs at Enniscorthy there was not sufficient wagons for the traffic. Result—live stock left standing on the banks for three hours, and some horses did not arrive in Dublin till after 12 p.m.

April 23rd.—Complaint that cattle loaded on Friday last at Loughrea at 12.30 p.m. arrived in Dublin at 12.30 a.m. following day. Distance, 118 miles.

Cattle and sheep loaded 22nd inst. at Tinahely, 9.40 a.m., reached Harcourt-street 6.45 p.m. Distance, 59 miles.

April 30th.—Last Saturday, at Enniscorthy, cattle ready for loading between 7 and 8 o'clock were not trucked until 12 o'clock owing to absence of wagons. Live stock missed shipping.

May 14th.—Complaint *re* stoppage of usual special to Kells fair.

May 28th.—Complaint of absence of wagons at last Kildare fair and want of facilities for loading at all times.

June 4th.—Complaint as to absence of loading accommodation, generally, on the G. N. line, and Ardee in particular.

Sept. 3rd.—Complaint that at last Ballina fair there were no porters to assist in loading.

Complaint as to absence of sufficient number of wagons at last Ballinasloe fair.

Complaint that trader was told to have cattle at Kilcock station before 10 o'clock. Two wagons did not arrive till 5 o'clock p.m. at Liffey Junction.

Sept. 30th.—Complaint that cattle loaded at Mullingar at 12.30 a.m. did not arrive at North Wall till 8.30 p.m., and although the Scotch boat was delayed 30 minutes it was missed, and so was the market.

October 13th.—October 1st—horses loaded at Boyle at 3 p.m. did not arrive at Liffey Junction till 3 a.m. next day. Distance, 112 miles. Delay caused by absence of wagons.

October 20th.—Train from Dublin to Naas left Kingsbridge at 6 a.m. instead of 5.30. Reached Naas 7.45. Fair nearly over. Two wagons of sheep loaded at Oldcastle at 10 o'clock on 16th. Should have gone by the 10.30 special. Were not sent by that train; arrived at Cavan, 10 p.m.; nearly 12 hours after loading. Distance, 21 miles. Saturday week, cattle booked L.N.W. for shipping passed Junction for M.G.W. yard at 7.50 p.m. Came back to L.N.W. bank at 8.50. Some beasts down.

October 27th.—September 24th, two wagons of cattle were loaded at Roscommon for Ballyhaunis at 3.30 p.m. Two men were left at that station waiting for the stock. Did not arrive until 7 a.m. on the 25th. Complainant stated he would have put in a claim only the company owed him a lot of claims and would pay none. Complaint also made as to want of pen accommodation at Ballyhaunis.

Year 1904.

March 24th.—Complaint: cattle booked at Tinahely on 23rd inst. at 10 a.m. did not arrive in Prussia-street till 9 p.m.

March 30th.—Cattle booked, March 30th, from Maryborough at 8.45 a.m. did not arrive in Dublin till 8 p.m.

April 5th.—Claim made against company for killing several beasts injured in transit.

July 1st.—Mr. Clifford paid £12 10*s.* compensation by the M.G.W. to satisfy claim of £31. Writ was issued before even this sum was paid.

July.—Letter from Tullow Town Commissioners complaining of want of loading facilities.

July 22nd.—Complaint of M. G. W. R. Co. charging 3*s.* 6*d.* for one sheep from Drumree.

July 29th.—Complaint that cattle loaded last Monday at Killucan reached Mullingar at 10 a.m., but did not arrive in Dublin till after 6 p.m. and missed the Manchester market.

August 5th.—Complaint that 27 lambs were brought to Amiens-street at 9.30 a.m. for the 10.30 train to Gormanstown were not sent till the 6.15 p.m. train. Reason given, no special notice had been given.

August 25th.—Cattle loaded at Maynooth and Kilcock at 12 noon on 22nd instant arrived at North Wall 7 p.m. Missed boat.

September 15th.—Complaint of want of through rates from Tuam to Kilmessan. Had to walk stock from Enfield, — miles.

Sept. 22nd.—Complaint of absence of facilities at Broadstone on Wednesday *re* porterage assistance.

October 6th.—Complaint *re* delay of sheep from Birr, resulting in loss of market.

October 13th.—Cattle loaded, 7th October, at Ballinasloe at 3 p.m. started at 5 p.m., reached Hill of Down 6 a.m. on the 8th inst., 53 miles, 13 hours.

Cattle loaded same day and place, 5 p.m., reached Enfield 8 a.m. following day, 65 miles, 15 hours.

Cattle loaded, Moate, 12th October, at 7 p.m. reached Liffey Junction at 4.30 p.m. One beast dead and four lying down.

October 20th.—Complaint as to the G. S. & W. Co. taking off the Thurles train.

Complaint of trader who loaded six wagons of cattle at Abbeyleix that his stock were delayed and, in consequence, the boat was missed. He stated that he saw the train with the stock passing by Maryborough 30 minutes before the Rathkeale special passed there, but that this latter consignment reached Dublin first and in time for the boat.

Complaint as to condition of Maynooth loading-bank.

Complaint that the last train leaving Oldcastle was 3.15 p.m. This compelled men often to stop over night to finish business, or leave it unfinished.

October 27*th.*—Last Tuam fair four wagons of cattle did not reach Enfield until fourteen hours after loading. Stock *via* G. S. & W. sent more expeditiously

Two wagons of cattle loaded at Tuam on 18th inst. at 2 p.m. did not arrive at Gibbstown till the day following at 5 p.m., 149 miles, 27 hours.

Complaint as to delay from Maynooth and also as to the loading-bank there. Trader stated that he walked the cattle to Kilcock, 5 miles, to avoid this bank.

Complaint of want of assistance in unloading at the L.N.W. yard.

November 3*rd.*—October, 29th, nine wagons of cattle booked from Tralee to Athenry by the 6.30 p.m. passenger train arrived the following day at 7 o'clock a.m. Several beasts injured; one died. Action taken against the Company dismissed.

November 10*th.*—Complaint of absence of wagons at Mallow on 31st October. Stock of two wagons had to remain all night in fields and missed both boat and market.

November 17*th.*—Complaint that beast was killed at Cabra station, having got down on the rails owing to unprotected state of loading bank. Compensation paid after long delay and correspondence.

November 24*th.*—Complaint that there was no through rates from Fethard to Shrewsbury.

December 29*th.*—Complaint of absence of assistance in unloading at L.N.W. yard.

Complaint made by trader that on the 5th inst. cattle were delayed at Enfield owing to absence of wagons. He was again disappointed on the 12th inst. although he gave notice. The result of delay was that the stock was unable to stand the journey. One beast had to be killed in Manchester, and having disposed of eighteen cattle at £21 10*s.* the cheque for payment was stopped by purchaser owing to the condition in which the beasts were found to be.

Year 1905.

Jan. 12*th.*—Complaint as to loading facilities at L.N.W. yard.

Complaint as to absence of assistance and wagons at Tipperary, December 10th. Cattle delayed from 8 a.m. till 4 p.m. in consequence.

Jan. 19*th.*—Complaint that last November men were sent to Hazelhatch between 12 a.m. and 1 a.m. to meet cattle from train. Did not arrive till 7 a.m. The station was closed and the man had to stay on the roads all night.

Complaint that cattle have to be loaded at Ballybrophy at 6 p.m., and do not leave till 3 a.m., standing all the time.

Jan. 19*th.*—Complaint as to excess fare paid from Fethard to Thurles owing to absence of through rate from Fethard to Shrewsbury.

Complaint of delay at L.N.W. yard, which resulted in missing boat.

February 28*th.*—Complaint that on 28th January last Moate Stationmaster refused to take on cattle wagons although a goods train passed that station that day. Cattle kept till Monday morning.

March 2*nd.*—Complaint as to the loading bank at Enfield. Resolution carried in favour of having banks with pens similar to the system in vogue on the Liverpool Station of the Yorkshire and Lancashire Co. Public attention directed to the bad arrangement at Cabra, Kilkenny, Thurles, Tipperary, Kilmallock, Charleville, Abbeyleix, Buttevant, Knocklong, Fermoy, Midleton, Rathkeale, Killarney, Mullingar, Ballinasloe, and Maynooth.

March 12*th.*—Letter to the Department at to loading banks.

March 30*th.*—Complaint of delay in forwarding cattle from Ennis to Maynooth on the 28th inst.

Public protest against consignment notes by which the carrying companies practically relieve themselves of all liability.

May 4*th.*—Cattle loaded Longford, 13th April, at 4 p.m., started for Drumree at 7 p.m., reached Mullingar at 10 p.m., Clonsilla at 1.30 a.m., and Drumree at 4 a.m. although a special had been promised.

June 15*th.*—Claim made against the G. S. & W. owing to trader missing market through the default of the Company to run a special.

August 3*rd.*—Complaint as to rates from Cashel to Dublin.

September 7*th.*—Cattle and sheep loaded at Kilcock at 11 a.m. did not arrive at Liffey Junction till 9.30 p.m. on the 6th.

September 24*th.*—On 16th inst. a trader desired to through-book sheep from Castlerea to Navan. Refused, although he had done so only one month previous. He had to walk his sheep 17 miles because of the refusal of the Company.

October 12*th.*—On 11th September sheep loaded at Tuam for Gibbstown. One wagon with 32 sheep did not arrive till between 2 and 3 on the 13th; four others arrived on the 12th, about 3 a.m., the time expected.

November 2*nd.*—Complaint that the cost of carrying a lamb from Enfield to Carberry, a little over 6 miles, was 3*s.* 11*d.* The first class passenger fare for that journey is 1*s.* 4*d.*

Year 1906.

January 11*th.*—Complaint that a trader called upon Manager of G. S. & W. and arranged on the 4th inst. to have cattle and one wagon of sheep taken by special from Birr on the 10th. Stock arrived in time, but were not taken. Did not arrive in Cabra till 5.30 a.m. on the 11th, and could not be sold on account of their condition.

February 22*nd.*—G. S. & W. Ry. refused to give a special for 25 wagons of stock.

Complaint that trader arranged with Stationmaster at Charleville to take his stock from Kilmallock on 10th inst. This was not done, although the cattle were loaded at Kilmallock at 9.30 a.m. on the 10th. The stock arrived in Dublin at 6 a.m. on the 11th.

April 12*th.*—On the 29th March, at Loughrea, at 2 a.m., 24 wagons were filled and the engines ready, and although requested to proceed on the journey did not do so until nearly 3 p.m. 200 cattle were left on the platform owing to the absence of wagons. Cattle fell during the journey and had to be unloaded.

April 28*th.*—Received copy of note which trader had to sign before being allowed to travel with cattle train. Under the note the company is held free from any liability for any accident, no matter what the cause.

May 3*rd.*—Two wagons of cattle loaded at Westport on the 27th ult. at 10 a.m. did not reach the Liffey Junction till the 28th at 2 a.m.

June 7*th.*—Request to G. S. & W. to fix through head rates for sheep from Tullamore, Birr, and Roscrea to London, Liverpool and Manchester.

September 6*th.*—Complaints as to sending cattle from Trim to Dublin.

September 27*th.*—Six wagons of cattle loaded at Balla at 7.45 a.m. on the 24th inst. reached Dunboyne at 10.10 p.m. Five of the cattle were down in the wagons. Some were injured; one has since died and was sold for £3 2*s.*, the price of the skin.

Cattle loaded at Moate for Dublin at 8 a.m. arrived at Liffey Junction at 5 p.m. and were given to trader's men at 8 p.m. Some of the cattle were in a bruised condition. Committee at present considering the question of prosecuting the Company for cruelty to animals.

October 4th.—Complaint as to the stoppage of the market train on Wednesday from Maryboro'. Cattle have now to be sent on Tuesdays, or by passenger train on Wednesday.

Complaint as to want of train facilities from Roscrea to Maryboro'.

October 11th.—245 sheep in 8 wagons booked and loaded at Ballinasloe before 9.30 a.m. reached Enfield 5.35 p.m. and kept in wagons from that till 10 p.m., although men were there from 3 p.m. to meet the stock. As a protest, at the next fair he walked his cattle from Ballinasloe. Company lost £24 freight, and the complainant saved nearly half that amount.

October 18th.—Complaint that on 4th June fifty cattle, booked from Wexford to Liverpool, delayed in unloading at Dublin, with the result that the boat was missed and also market.

Complaint *re* absence of day service for live stock on G. S. & W. system.

Cattle have to be loaded at 6 p.m. at such stations as Thurles and Templemore, and are kept standing in the wagons waiting for the arrival of the night train from Mallow. This, of itself, is cruelty to animals, and the Committee is in communication with the Society for the Prevention of Cruelty to Animals to prosecute.

Complaint that there is no assistance given in loading on G. S. & W. system as a result of cutting down the staff.

Complaint that on the 9th a trader had ordered wagons to take cattle from Trim to Dublin. Stock arrived 30 minutes before the time fixed for starting train. Stock not taken—all wagons full. Cattle had to wait four hours.

APPENDIX No. 5.

EXPLANATORY MEMORANDUM, furnished to the Commission by the Manager of the Midland Great Western Railway, in connection with the Statement transmitted by the Granard Urban District Council. (Appendix No. 13, Volume I., Minutes of Evidence).

GRANARD URBAN DISTRICT COUNCIL'S COMPLAINTS.

Appendix 13 of Volume I. of the Minutes of Evidence contains a statement by the Granard Urban District Council, which states that the entire district of Granard, Castlepollard, &c., are without railway communication, that through rates for goods are unsatisfactory, and that there is no uniform rate for live stock. Also that a remarkable case of undue preference is shown in more than one instance.

These places are served from Ballywillan and Float stations respectively, and with regard to the rates, both through and local, they are on the same basis as the other parts of the railway, and I am not aware of any undue preference.

The resolution further asks that the limited mail service should be given to Cavan Line as at present to Sligo, but this is a matter for the Post Office to determine.

APPENDIX No. 6.

EXPLANATORY MEMORANDUM, furnished to the Commission by the General Manager of the Great Northern Railway (Ireland), in connection with Mr. Harold Barbour's Statement as to Flax Rates, etc. (Appendix No. 18, Volume II., Minutes of Evidence).

GREAT NORTHERN RAILWAY CO. (IRELAND),
GENERAL MANAGER'S OFFICE,
DUBLIN, *2nd July*, 1908.

VICEREGAL COMMISSION ON IRISH RAILWAYS.

SIR,

Referring to your letter, 1005-08, of the 22nd ult., addressed to Mr. Tatlow, the only two matters that appear in the Appendices to the evidence that was given before the Viceregal Commission on Irish Railways to which I consider I need give a written reply are the Flax Rates quoted by Mr. Harold Barbour and the supplementary abstract presented by Mr. Whelan of Monaghan.

I enclose a memorandum in relation to the Flax Rates, and I have written you per separate letter in reply to Mr. Whelan.

I am, Sir,

Your obedient servant,

(Signed) HENRY PLEWS,
General Manager.

G. E. Shanahan, Esq., Secretary,
Viceregal Commission on Irish Railways,
13, St. Stephen's-green, Dublin.

GREAT NORTHERN RAILWAY CO. (IRELAND).

RAILWAY RATES FOR FLAX IN THE CONTINENTAL COUNTRIES AS COMPARED WITH THE RAILWAY RATES IN IRELAND.

Mr. Harold Barbour, of Lisburn, did not appear to give evidence before the Viceregal Commission on Irish Railways: but an abstract of the evidence which he was supposed to give appears as Appendix No. 18, page 580, of the Second Blue Book of the Minutes of Evidence.

Mr. Barbour sets out the rates that are said to be in operation for flax in France, Belgium, and Holland, as compared with the rates for the Great Northern (Ireland) for more or less comparative distances.

He remarks that "the rates for France do not include loading and unloading: and that an addition of 7½*d.* per ton is charged for forwarding." That in the case of Belgium the traffic has to be loaded on the wagons by the senders or their agents, and discharged by the receivers. It must also be borne in mind that these are slow transit rates, and that for a quick transit, which would be equivalent to the service given in Ireland, the rates would be very nearly doubled.

These foreign rates are therefore simply charges including only the provision of wagons and the haulage, every other service having to be performed by outsiders, at an additional expense.

In the case of the Irish rates, they include loading, unloading, covering and uncovering, and also the provision of warehouses for the storage of the flax. It follows that, to make a proper comparison, the amount included in the Irish rate for service terminals, loading and unloading, covering and uncovering, in accordance with the Act of 1892, should be deducted from the Irish rates.

Assuming Mr. Barbour's figures to be correct, after deducting the proper amount in respect of the services included in the Irish rates, we have the following comparisons for flax:—

(*a.*) The rate for flax from Tanderagee to Hilden (24 miles) is 4*s.* 7*d.* per ton, as compared with the Belgian rate of 4*s.* 1*d.* for 25 miles.

(*b.*) The rate from Katesbridge to Hilden (24½ miles) is 5*s.* 1*d.* per ton, as against 5*s.* 1½*d.* for 21 miles on the French railways, and 4*s.* 1*d.* on the Belgian railways for 25 miles.

(*c.*) From Monaghan to Hilden the rate is 8*s.* 10*d.* per ton for 45 miles, as compared with 8*s.* 9½*d.* in France for the same distance, and 6*s.* 6*d.* in Belgium for 43½ miles.

(*d.*) From Strabane to Hilden, for 75 miles, the rate is 11*s.* 10*d.* per ton, as compared with 9*s.* 9*d.* on the Belgian railways for 74½ miles.

NOTE.—The Irish and French rates are for lots under two tons, and the Belgian rates for less than five tons.

If account is here taken of the additional expenditure to which the Irish railways are subjected in providing warehouses and other terminal accommodation for dealing with this flax traffic, there is no great disparity between the foreign and the Irish rates, even upon Mr. Barbour's own figures, but if the question of time is taken into account, the Irish rates are considerably lower than those on the Continent.

The Belgian rates appear to be lower than the rates in France; and having regard to the different circumstances under which the Irish railways have been constructed, as compared with Belgium, the regulations as regards working that prevail in Ireland, and the difference in the volume of traffic in the two countries, it could not be expected that the traffic in Ireland could be carried as cheaply as in Belgium.

If the Irish railways had the volume of through traffic that passes over, say, the Belgian lines, they could, no doubt, afford to carry their local traffics at rates lower than presently exist. Unfortunately, however, the Irish companies are solely dependent upon their local traffic, not being in the happy position of having, in addition, a large volume of trans-Continental traffic, such as that which supports the Belgian and French Railways.

(Signed) HENRY PLEWS,

General Manager.

General Manager's Office,
Dublin, *3rd July*, 1908.

APPENDIX No. 7.

EXPLANATORY MEMORANDUM, furnished to the Commission by the Manager of the Midland Great Western Railway, in connection with the Statement of Grievances transmitted by the Roscommon Traders' Association (Appendix No. 27, Volume II., Minutes of Evidence).

ROSCOMMON TRADERS' COMPLAINTS.

With regard to the statement of grievances communicated by the Roscommon Traders' Association, which was forwarded to me by the Secretary of the Commission, on the 22nd May, 1907, and which is printed in the Appendix to the Minutes of Evidence, Volume II., I beg to say, with reference to complaint No 1, as to delay in the delivery of goods. There are two goods trains to Roscommon, one due to arrive about 3.30 a.m., by which goods, except heavy goods, such as meal, flour, bran, &c., are forwarded and are ready for delivery the first thing in the morning. The second goods train, by which heavy goods traffic is conveyed is the 1.30 a.m. from Dublin (which is due at Roscommon at 5 o'clock the next day.

(2.) Storage for goods traffic. The goods store is ninety-six feet by eighteen feet, and will accommodate five or six wagons, and is quite sufficient for all traffic which is not loaded direct from the wagons to carts. In regard to heavy traffic, there is a siding which accommodates seventeen wagons, where goods are directly loaded from and unloaded into the carts. I am sorry to say this is sometimes blocked owing to the unduly long time the traders keep the wagons loaded. The railway companies suffer very greatly from this cause and do not get the proper use of their wagons. The loading bank accommodation at Roscommon provides room for loading and unloading thirty-two wagons at any one time. This is in addition to the cattle bank, which accommodates forty five wagons.

(3.) I cannot admit that Roscommon is badly treated in regard to rates. The rates are based on the same scale as the line generally. The rate for artificial manure in 6-ton lots from North Wall, is 8*s.* 11*d.* per ton, the distance being ninety-eight miles, while, to Westport it is 9*s.* 7*d.*, and not 6*s.* 3*d.* as stated. There is, also, in operation to Roscommon a rate of 8*s.* per ton in 50-ton lots. I presume the Roscommon Traders' Association has taken the information from the same book as was referred to in the examination of Rev. John Garry (Q. 7865-7874), in which the charge to Westport is given as 6*s.* 3*d.*, but this is not the actual rate but the amount which the manure manufacturer adds to the price of his goods for carriage.

(4.) Complaints as to sending away returned empties. We are only too anxious to get the empties away in order to have the use of our station accommodation, but the difficulty is to obtain consignment notes from the traders. The neglect is not caused by the railway company, and we have a grievance that our banks are used for storage of returned empties for a very considerable period.

(5 and 6). Passenger train service. It is true that the first train from Roscommon does not arrive in Dublin till 2.15 p.m. There are four trains each way daily, which, I think, cannot be regarded as unreasonable, considering the population to be served. The train due at Broadstone at 2.15 serves the whole of the railway, and in connection with the train service to our Mayo Line I may mention that until the 1st February, 1901, there was no connection by the evening train from Dublin, leaving at 4.15 to stations west of Castlerea, but this train, at the strong desire of the district, was then run on to Westport and Ballina at a considerable cost to the company, and I am sorry to say the number of passengers travelling by that train do not warrant the expense involved but we have continued it for the convenience of the public.

In regard to there being two trains to Dublin, leaving Roscommon within an hour of each other, as already explained in the case of Galway, the reason is that one of them is the limited mail train, the times of which are subject to the Postmaster-General. There is a considerable difference in the hours they arrive in Dublin, the ordinary train being a stopping one, serving the whole of the railway, and arriving in Broadstone at 9.5 p.m., and from long experience we find this suits the general convenience of the public. The limited mail train is due in Dublin at 7.12 p.m.

APPENDIX No. 8.

EXPLANATORY MEMORANDUM, furnished to the Commission by the Great Southern and Western Railway, through the Irish Railway Committee, in connection with Sir Alec. W. Shaw's letter of October 12th, 1907. (Appendix No. 34, Volume II., Minutes of Evidence).

GREAT SOUTHERN AND WESTERN RAILWAY.

Reply to Appendix No. 34, page 601, of the Second Report.

Mr. Shaw complained to Mr. Acworth that he is handicapped in sending goods from the South to the North of Ireland by not having through rates, and enclosed docket for a consignment of 3 cwt. lard, sent from Limerick to Larne, which was charged at the rate of 67*s.* per ton, the total charges being 10*s.* 2*d.*

Mr. Shaw can, by making a request to either of the railway companies in Limerick, get a through rate to almost any station in Ireland to which he may require it. He is no more handicapped in this respect in sending traffic through Ireland than to England. We have not through rates from Limerick to all the English stations, but wherever through rates are required they are arranged.

To do what Mr. Shaw considers should be done, viz., to issue through rates between each pair of stations in Ireland, would mean an enormous amount of useless and wasteful expense.

The particular transaction that Mr. Shaw refers to took place during the strike of carters and dock labourers in Belfast in July last year, and as goods could not be carted across Belfast, the consignment in question, after it arrived at the Great Northern Railway Station in Belfast, was forwarded by rail to Antrim and handed over to the Midland Company there, from whence it was conveyed to Larne, so that the charges were exceptional, because of the exceptional circumstances.

I may say, that from enquiries made, this appears to be the first consignment which was sent to Larne, and although we do not think that a business in lard from Limerick to Larne is likely to be developed, having regard to the fact that there are pig-curing establishments associated, not only with Larne itself, but with Belfast, Ballymena, and other centres within comparatively short distances of Larne, yet we have arranged through rates in case there should be further consignments between the points.

APPENDIX No. 9.

MEMORIAL, regarding a proposed station at Ballinascaula Bridge, between Kilmallock and Knocklong, addressed to the Directors of the Great Southern and Western Railway by a large number of residents in Kilfinane, Kilmallock, Bruff, and other places in that district; and correspondence between the Commission and the Secretary of the Company on the subject.

I.

To the Directors of the Great Southern and Western Company.

GENTLEMEN,—We, the undersigned, are to request that you would give us a station at Ballinascaula Bridge, which is situated midway between Kilmallock and Knocklong stations on the Great Southern and Western Railway line. The country around this place, which is thickly populated and prosperous, and the neighbouring towns of Bruff and Kilfinane and the villages of Elton and Knockaney would find this by far the most convenient and nearest point to get on the railway. Big and numerous fairs are held at Bruff, Knockaney, Elton, Kilfinane, and Ballinvreena, and cattle dealers frequently come down from Cork and other places to buy cattle privately on the rich lands of this district. It would be a great saving of time and of injury to the cattle if they could be put on the train at Ballinascaula. There are six creameries within easy distance of this place, one at Ballinvreena, one at Stockeens, one at Bulgaden, two at Kilfinane, and one at Gormanstown. The shopkeepers of the towns and villages mentioned already, as well as the creamery managers, have reason to complain of the long cartage of goods to and from the present railway stations.

Persons desirous of going to Cork or Limerick think twice before they start seeing the long journey by car that is before them, especially when going to Limerick. If persons desirous of going to Limerick can make up their minds to go at all, what they do is: they drive the whole way rather than keep a horse waiting for nine or ten hours at Bruree. Once on the road they think it as well to drive twenty-four miles as twelve, thereby avoiding the great inconvenience and danger of keeping a man and horse away from home for practically an entire day. Your company is losing by the present arrangements; many people who would travel by train don't travel because of the inconvenience of doing so; they keep to the horse or car or bicycle. Many persons are getting goods by road at present from Limerick who would get them by train if they had a near station. Cattle that might be boxed at the proposed station must now be trained from Kilmallock or Knocklong, or walked perhaps into Limerick or some other far distant place. Coals must be carried from Kilmallock or Knocklong, and if brought to the proposed station it would mean a bigger mileage for the railway company. The same applies to the cattle traffic.

Taking all these things into account, our loss in the way of time and inconvenience, and your loss in the way of traffic that might be substantially increased, we

confidently hope that you will give very grave and serious consideration to our proposal.

If we only chose to wait a little while we have no doubt that our wishes should be fully realised under the present Government's projected scheme for managing Irish affairs.

Mr. George Hartigan, who owns the land near Ballinascaula Bridge, will give a site for a new station at a nominal rent.

(Signed), JOHN CARRICK, P.P., V.F.,
Kilfinane.

(Here follow the signatures of 154 residents in Kilfinane, Kilmallock, Bruff, and other places in the district).

II.

GREAT SOUTHERN AND WESTERN RAILWAY COMPANY, IRELAND,

Kingsbridge, Dublin,
27*th July*, 1907.

Proposed Station at Ballinascaula Bridge.

DEAR SIR,—Referring to my letter* of the 15th inst., and the Memorial received by me signed by yourself and others regarding the above subject, I beg to inform you that my Directors went into this matter when on their recent tour of Inspection, and it was considered that any traffic likely to offer would not warrant the company in going to the expense of erecting a station at this place.

I am, dear Sir,

Yours respectfully,

(Signed), FRAS. B. ORMSBY,
Secretary.

The Rev. George Quain, P.P.,
The Presbytery,
Bulgaden,
Kilmallock,
Co Limerick.

* (An acknowledgement.)

III.

VICEREGAL COMMISSION ON IRISH RAILWAYS,
15, St. Stephen's Green, N.,
Dublin,
11*th February*, 1908.

345-08.

SIR,—Referring to your letter of the 2nd September last to the Rev. G. Quain, P.P., Kilmallock, returning a Memorial regarding a proposed station at Ballinascaula Bridge, between Kilmallock and Knocklong on the Great Southern and Western Railway, addressed to your Directors by a large number of the residents in Kilfinane, Kilmallock, Bruff, and other places in the district, I am directed to inform you that a copy of the Memorial in question has been furnished to the Viceregal Commission on Irish Railways for such action as may be deemed necessary in the circumstances.

As this matter has, apparently, already received the consideration of your company, the Commission will be glad to be favoured with any observations thereon which they may wish to offer.

I am, Sir,

Your obedient servant,

(Signed), GEO. E. SHANAHAN,
Secretary.

F. B. Ormsby, Esq.,
Secretary,
Great Southern and Western Railway,
Kingsbridge, Dublin.

IV.

GREAT SOUTHERN AND WESTERN RAILWAY,
Secretary's Office,
Kingsbridge Terminus,
Dublin,
13*th February*, 1908.

L.

SIR,—I beg to acknowledge receipt of your letter of the 11th instant regarding the Memorial praying for the erection of a station at Ballinascaula Bridge, between Kilmallock and Knocklong, and to say that the subject matter of your communication shall have attention.

I am, Sir,

Your obedient servant,

(Signed), FRAS. B. ORMSBY,
Secretary.

The Secretary,
Viceregal Commission on Irish Railways,
13, St. Stephen's Green, N.,
Dublin.

V.

Secretary.

Geo. E. Shanahan, Esq.,
Secretary,
Viceregal Commission on Irish Railways,
13, St. Stephen's Green, N.,
Dublin.

APPENDIX No. 10.

CORRESPONDENCE relative to the proposed re-opening of Mountjoy Station on the Great Northern Railway, forwarded by Mr. A. Hamilton, representative of the Omagh Board of Guardians, in connection with his evidence on this subject, submitted to the Commission on the 13th January, 1908.

I.

Reply of G. N. R. Co. (I.) to A. Hamilton's letter, asking grounds of refusal to re-open Mountjoy Station.

GREAT NORTHERN RAILWAY CO. (IRELAND),
Amiens-street, Dublin,
29th May, 1895.

No. 132.

DEAR SIR,—I am in receipt of your letter of 28th inst., and in reply beg to state that the objections to the re-opening of the Mountjoy station asked for by you are that our receipts, when the station was opened, were so small that they did not pay the wages of the staff, and on account of the Board of Trade requirements, a station could not be provided now without involving outlay which there does not appear to be any reasonable prospect the receipts would justify.

The date on which the Directors will next be inspecting that portion of the line has not yet been fixed.

Yours faithfully,

HENRY PLEWS,
Secretary.

A Hamilton, Esq.,
Secretary.

II.

Letter from A. Hamilton to Secretary, Great Northern Railway Co.

Mountjoy,
Omagh,
5th June, 1895.

DEAR SIR,—I have to thank you for your letter of 29th ulto.

I have been requested to write again to ask if you will be good enough to give me notice of the time the Directors will visit the Mountjoy old station, as one or two representative persons of the district would attend, with a view of supplying them with information in connection with our application.

It is hoped that the Board of Trade would not insist upon the construction of elaborate works, as the people of the locality do not wish any expensive accommodation. They merely wish certain trains to stop by signal or on notice.

I am informed that the old station—the one shown on the Parliamentary plans—did pay, but that the other one did *not*, being very unsuitable and out of the way, and it is also said that the former station (the one we wish re-opened) was closed in consequence of some annoyance or supposed annoyance given to the then stationmaster—a Mr. Dawson. At all events there is evidence forthcoming to show that Mr. Dawson threatened that before long he would have the station closed, and it is believed that he so poisoned the minds of the then Directors (who did not look into matters so fully as now) that they first altered the station, putting it a mile further down, and then seeing that the latter did not pay, closed it also.

Apologising for the further trouble.

Yours faithfully,
(Signed), A. HAMILTON.

H. Plews, Esq.,
Secretary, G. N. R. Co.,
Amiens-street,
Dublin.

III.

Letter forwarding Memorial to the Secretary, Great Northern Railway Company (Ireland).

Mountjoy,
Omagh,
4th January, 1896.

DEAR SIR,—I beg to forward for your perusal and that of your Directors the enclosed Memorial for the re-opening of Mountjoy railway station—not the one nearest Newtownards, which you informed me your Directors inquired into, but the one nearer Omagh.

I trust the Directors will give this Petition their favourable consideration, as the inhabitants and persons who would travel by that station feel strongly upon the subject, and are determined to spare no trouble or expense in having the matter brought fully before the Directors, and with this object in view, the Committee in charge of the matter have instructed me to give you every possible information, as they think that if the facts were known your Directors would not have, without some railway facilities, a district so large and populous and so likely to make a station "pay," and lying along a line where, for a distance of ten miles, there is no station, although one was shown upon the original plans and was actually worked for years, and the ground still available, upon the sole ground that some twenty years ago another station about a mile off in a quite unsuitable place did not "pay."

(Signed), A. HAMILTON,
Hon. Sec.

H. Plews, Esq.,
Secretary, G. N. R. Co.,
Amiens-street.
Dublin.

IV.

(Memorial referred to above.)

To the Directors of the Great Northern Railway Co. (Ireland).

The MEMORIAL of the Inhabitants of the District of Mountjoy, Omagh, and other persons interested, whose names are signed in the schedules hereto.

Humbly Showeth—

1. That Memorialists have been informed and believe that before the portion of the railway now forming part of the Great Northern Railway between Omagh and Londonderry was constructed, the required plans and specifications lodged as prescribed by the Act of Parliament showed that a station was to be constructed at Mountjoy, situate in the townland of Tatraconaghty, between the station at Omagh and that at Newtownstewart adjacent to the Metal Bridge.

2. That such station was, on the opening of the line for public traffic, worked, and so continued for several years.

3. That after being used for several years this station was discontinued and another opened in lieu thereof about a mile further north (towards Newtownstewart), but after some time this station was also closed, because, as Memorialists believe, it was found to be unsuitable, being a place in every way inferior to the original station, but Memorialists believe that it was greatly against the wish of the inhabitants of

the district that the original station was discontinued, and while they believe that the last station did not pay, the former one did, or *would* had it been continued.

4. The distance between Omagh and Newtownstewart is ten miles, which Memorialists believe is the longest space without a station in all the Great Northern Company's lines, and thus trains are obliged to stop at Newtownstewart and Omagh a much longer time than would be required if there were a station at Mountjoy, as the line could be signalled "clear" at Mountjoy, where at present unnecessary delay must take place until all the distance of ten miles between Omagh and Newtownstewart is clear.

5. Mountjoy is the centre of one of the most thickly populated rural districts in Ireland, is adjacent to the Irish and Presbyterian Churches, and about a mile from the R.C. Church. There are four flourishing shops in the neighbourhood and a Post Office within a few perches. The shops on an average employ four or five horses on the road constantly carting goods from other places, almost all of which would be carried by rail if a goods station were opened, thus adding considerably to the price of the goods, and farmers are also deprived of a cheap and already available means of transit of farm produce. Many persons, we have no doubt, would travel through this station if it were opened, several every day, but a great number weekly, going to markets, fairs, etc.

6. Although the station is not quite midway between Omagh and Newtownstewart, being nearer Omagh, yet it is by far the most suitable and convenient place, being situate at or near the junction of some seven public roads (the place is locally called "The Cross Roads"), and excursion parties numbering hundreds leave the neighbourhood every year recently, who would, no doubt, travel by rail rather than drive if the station were available, and some of your Memorialists have frequently heard Clergymen and Ministers express regret that even for such purposes, if for no greater, the station were not open.

7. The River Strule (a tributary of the Foyle) flows past this station, within a quarter of a mile of it. This river is very popular for trout, salmon, and perch fishing, many persons coming for the season from England and other places for fishing, and we have no doubt whatever large numbers of persons would avail themselves of the railway instead of (as they have hitherto done) being obliged to drive by car or walk; and there can be no doubt that if facilities were offered to the public, a greatly increased number would go by rail than now do otherwise. Persons starting at Omagh could quit the station at Mountjoy and fish down to Newtownstewart and there take the train home again, in like manner those from Newtownstewart direction. In addition to this, there are limestone and freestone quarries in the vicinity which would no doubt be developed, and Rash Wood adjoins, where carting of timber is continually going on. There are also extensive corn and other mills in the neighbourhood, the owners whereof would, no doubt, avail themselves of the station if a goods station were finally opened. It is not, however, the desire of your Memorialists to ask your company to go further than a passenger station at present.

8. The inhabitants of the district have been for years anxious to have this station re-opened, and have memorialised your company previously.

9. Memorialists have heard that the reason for closing the station many years ago was that it did not pay, but we submit that the receipts *now* would be very much larger in places like this than then. It is well known that people travel much more by rail now than when this station closed many years ago, and many persons would now send their families to be educated in Omagh and such centres, who, several years ago, would not have done so, by rail.

10. So convinced are some of your Memorialists of the utility of the station for the general public that one of them, Mr. John Conway, has offered to give your company a guarantee to indemnify them against loss, and has also offered to give rent free for twelve months a house for a Porter situate very near the station.

11. The ground originally intended, and shown on the plans, for the station remains in your company's possession, and we are anxious to save your company all possible trouble and expense, and therefore would be satisfied if your company would at least open the station for passenger traffic by the *Slow* trains, and if inconvenient to your officials, would be satisfied if certain stipulated trains would stop by Signal given either at Mountjoy or at the booking office.

(Signed), ANDW. HAMILTON,

Hon. Secretary, Committee.

Mountjoy,

Omagh,

4th January, 1896.

(Here follow 571 signatures of Residents and interested persons).

VI.

Resolution of the Omagh Angling Club.

OMAGH ANGLING CLUB,

3, Abbey-street,

Omagh,

July 20th, 1908.

Re Railway Station.

Mr. A. Hamilton.

DEAR SIR,—The members of the Club are most anxious for the success of the movement in favour of opening a station at Mountjoy. Apart from the undoubted benefit such would confer upon the people of the district, we would also point out that the Club, comprising some fifty members, would take advantage of the train accommodation, Mountjoy, as every person knows, being the centre of the finest stretches on the Strule. The town of Omagh itself would also reap some benefit from the influx of angling tourists who would avail themselves of the increased facilities offered by the G. N. R. for reaching such an eligible stretch of water.

Signed on behalf of the Committee,

A. KINNEAR, *Hon. Treasurer.*

VI.

Resolution of the North Cappagh Society

NORTH CAPPAGH CO-OPERATIVE AGRICULTURAL AND DAIRY SOCIETY, LTD.,

Drumbreen, Mountjoy,

Omagh.

Resolution passed at Meeting of 22nd July, 1898.

Resolved—

"That we the Committee of North Cappagh Agricultural and Dairy Society, Ltd., earnestly desire the re-opening of Mountjoy railway station in the interests not only of our Society, but in the interests of the whole of the people of the large district surrounding it. Being affiliated with the Irish Agricultural Organisation Society, and therefore having no hostile or selfish object in vew, we do with confidence appeal to the Directors of the Great Northern Railway Co. to assist us and through us the great Organisation that is doing such good work for the agricultural work throughout Ireland."

Signed on behalf of the Committee,

JOHN MARSHALL, *Secretary.*

VII.

Letter from A. Hamilton to Secretary, Great Northern Railway Co. (Ireland), giving additional reasons for re-opening.

MOUNTJOY CO-OPERATIVE AGRICULTURAL AND DAIRY SOCIETY, LTD.,
Mountjoy,
Omagh,
15*th August*, 1898.

Re Mountjoy Railway Station.

DEAR SIR,—Reverting to the Memorial of the inhabitants of the district of Mountjoy dated and sent you on 4th January, 1896, and the correspondence subsequent thereto, I am directed by the Committee in charge of the matter, as also by the Committee of the above Society, to again beg your Directors to re-open this station.

In addition to the grounds stated in the Memorial, which was retained by your predecessor, two creameries have been established in the district which would be served by this station, viz., Mountjoy, which has been erected just beside where the station plot of ground lies, and North Cappagh in another part of the same district. The Committee of the latter Society has also passed a strong resolution calling upon your company to re-open the station.

I need not point out to your Directors that the want of the station would mean a serious loss to our creamery, as not only would the butter and other farm produce be injured by carting, but it would cost us a large sum of money, whereas, so far at least as we see the loss of time and expense to the company would be very small, as we do not require any elaborate or costly arrangements, only such as will enable us to get our butter, etc., sent off at once to the best market, and very simple passenger arrangements.

Expecting that the station will soon be re-opened and knowing the injury done to butter and farm produce by carting, the Committee of the creamery have made no arrangements for carting the butter. We do earnestly hope that your Directors will not continue to refuse the united request of a district which, according to the last Census, contains upwards of 5,300 inhabitants.

Awaiting your reply, which we trust will be favourable.

I remain,

Yours truly,
(Signed), A. HAMILTON.

The Secretary,
G. N. Ry. Co.,
Amiens-street,
Dublin.

VIII.

GREAT NORTHERN RAILWAY CO. (IRELAND),
Dublin,
30*th August*, 1898.

DEAR SIR,—Your letter of the 15th instant has been laid before my Directors, and in reply I am desired to say that they regret they cannot see their way to depart from their former decision in the matter.

Yours faithfully,

(Signed), T. MORRISON,
Secretary.

A. Hamilton, Esq.,
Mountjoy,
Omagh.

IX.

GREAT NORTHERN RAILWAY (IRELAND),
GENERAL MANAGER'S OFFICE.

DUBLIN, *June 21st*, 1901.

G.M.01/3324.

DEAR SIR,

With reference to the interview which your good self and several others interested in the matter of the proposed station at Mountjoy had with my Directors at Omagh on the 6th instant, I have to say that an opportunity was taken of examining the place on our journey, and, the matter having been carefully considered, the Directors, with all the information before them, are compelled to conclude that there would be no such accommodation afforded by the opening of the station as would be commensurate with the cost of construction and maintenance. They regret, therefore, that they do not see their way to comply with the application.

I am,

Yours faithfully,

(Signed), HENRY PLEWS.

Andrew Hamilton, Esq.,
Mountjoy,
Omagh.

APPENDIX No. 11.

EXTRACTS from a book published in 1800 containing resolutions, estimates, reports, &c., relating to a proposed canal from Monasterevan to Castlecomer, handed in by Mr. P. A. MEEHAN, M.P., a representative of the Queen's County County Council, after his examination on the 14th January, 1908.

I.

(Meeting of the Promoters at Maryborough on August 14th, 1800.)

The Hon. W. W. POLE in the Chair.

Resolved—

"That a Canal Navigation, from the Grand Canal at Monasterevan, passing through or near to the towns of Portarlington, Mountmellick, Maryborough, Ballyroan, Ballinakill, Durrow, Ballyragget, and the City of Kilkenny, to the Collieries of Castlecomer, would be highly advantageous to the kingdom in general, and to this county in particular.

"That it appears, from the estimates of Messrs. Sparks and Killally, that the said Canal may be completed for a sum not exceeding £80,000.

"That it would be most convenient for the execution of this undertaking if that sum was divided into 800 shares, and so many shares raised by subscription as may be necessary, together with the aid of Government, to make and complete this Navigation.

"That a subscription be opened for the said shares, and that a committee be appointed to receive the same, and also to prepare a plan and proposal, to be laid before the subscribers for their approbation previous to its being submitted to the consideration of the Directors of Inland Navigation."

. . . . . .

II.

(Meeting of the Committee.)

We, the undersigned, pursuant to our appointment as a Committee, to prepare a plan for the intended Navigation from Monasterevan to Castlecomer, have agreed upon the following resolutions:—

Resolved—

"That it appears to us that the line should commence at or near the first lock on the Grand Canal after it passes the River Barrow, and be continued through the townlands of Clomanny, Kyleemullen, Lea, Bracklin, Portarlington, Corrig, Kilbride, Woodbrook, Tinnekill, Clonterry, Kilnacast, Kilmainham, Billintaggard, Ire, Knockinagrow, Burris, Maryborough, Ballyroan, Rathmoyle, Ballinakill in the Queen's County; Castlemarket, Ballyruscull, Ballinvallagh, Tinnelinton, Sraliough, Garrangolee Finnan, Glen of Ballyragget, Donoughmore, Clonnakee, Fowksrath, Shangannagh, Swistreat, Esker, Kilcollin, Kilmacar, Madeline, Lisnesunchin, Newtown, Bance, Ballyhinnen, Ballycomie, and Castlecomer in the County of Kilkenny.

"That the Canal be of the same dimensions as the Grand Trunk Canal of England, viz., twenty feet wide, and three feet deep.

"That an off-branch be made to the town of Mountmellick, and that other off-branches be also made to the towns of Mountrath, Roscrea, Cashel, or Kilkenny if sufficient subscriptions are raised by those persons immediately interested in the said lines of Navigation."

. . . . . .

III.

(Report on the Engineering merits of the scheme by Mr. John Killally, Dublin, 7-10th June, 1800.)

I have laid out lines of canal of different dimensions from Monasterevan to Maryborough and Mountmellick, a map, sections, and estimates of which I have the honour to lay before you.

From a close examination of the country between Monasterevan and Kilnacast I could not perceive room for any material deviation from Mr. Chapman's line, I therefore depend on him at that place, and by carrying on the level of three locks to the proposed Barrow aqueduct am enabled, with but little difficulty, to enter the town of Mountmellick close to the bridge.

In pursuing the line to Maryborough I return to the rock of Kilnacast, and from thence to within thirty perches of the town meet no obstruction worth mentioning, further than what its high situation prepares me for, namely, the rising of six more locks, making in the whole nine from Monasterevan.

I tried two lines to Maryborough from the two-mile bridge, one to the right, the other to the left of the ridge, the last is the most advisable. To the right you must either keep in the bottoms, where you can have no tap, and are subject to great annoyance from floods, or else on the side of the ridge, which being composed of open gravel will not hold water, besides, by keeping this side you are obliged to take in the Maryborough River as a supply, and have to purchase two mills. By going to the left of the ridge you shorten the distance, have a choice of cutting, and get abundantly supplied free of expense by a small river that comes from Rathleague, and flows into the Treeogue at the two-mile bridge. There appears to me very strong inducements for the prosecution of this Canal. The country it passes through is extremely fertile, and the materials necessary for the work very convenient and abundant.

With respect to the extension of the line from Maryborough towards Kilkenny, I have tried the country for some miles in different directions and find the summit that (in my mind) should be adopted is in Ballyruane, four miles from Maryborough and one from Ballyroan; to ascend this will require nineteen locks from Monasterevan of nine feet fall each. There is a lower pass on the Limerick road about one mile and a half from Maryborough that would require two locks less, but it would be very difficult to bring water to it. The level of Ballyruane may be carried a considerable distance towards Kilkenny by skirting along the hills, and can, in its course, get amply supplied with water.

It is probable that on a more minute examination of the country, considerable improvements may be made in the proposed line of canal to Maryborough. I presume, however, this is sufficiently correct to ground a general estimate on.

IV.

(Extracts from Mr. Mitchell J. Sparks's Report on the Colliery Canal, from Maryborough to Castlecomer, 28th August, 1800.)

The utility of Inland Navigation in general, and the benefits that result to any district through which they run, are now so universally known and acknowledged that it is unnecessary for me to say anything on that subject, while the particular advantages to be derived by the neighbourhood from the canal we have now under consideration must neccessarily be so much better known to the gentlemen residing in the country, and who are consequently better acquainted with local circumstances that I can possibly be renders it unnecessary, nay, would give it rather the appearance of impertinence were I to attempt enumerating them, I shall, therefore, only state that I know of no canal whatever that bids more fair for being of general utility to the nation than this, as it may be extended so as to open navigable communications between the metropolis and the southern counties and thereby bring the great market of the nation in a manner to every man's door, and also by conveying fuel (that grand and indispensable article for the comfort of man as well as for carrying on of manufactures) at a cheap rate to those parts of the country where the poor inhabitants are now in the utmost distress for want of it.

. . . . . .

. . . . . .

Before I close this report it is necessary to state the reason "why the communication has not been made in a direct line from Athy to the Collieries," which is, that it appears by the slightest inspection of the country that the ridge of mountains between Castlecomer and Cooper Hill is so very high as to preclude any possibility of carrying any such scheme into execution, nor is there any practicable line by which communication can possibly be obtained save by the very line of country to which this report refers.

V.

(Resolutions as to the projected Canal from Monasterevan to Castlecomer adopted at a Meeting of the Committee, at Maryborough, on Monday, the 15th of September, 1800.)

First—That it shall be twenty feet wide at the water surface, fourteen feet at the bottom, and three feet deep over Lock Cills; and the locks of such dimensions that boats fifty-five long and six feet wide may navigate it.

Second—That the tolls to be taken shall not exceed upon each ton weight of corn, meal, malt, flour, potatoes, lime, sand, fuel, or manure, one penny per mile.

For each passenger, one penny halfpenny per mile.

And upon each ton of other goods, etc., two pence per mile.

Third—That the entire computed expense being £80,000. The work shall be completed in five years provided two-thirds of that sum, or £53,332 is given by the Directors to the subscribers.

APPENDIX No. 12.

CORRESPONDENCE between the Commission and Mr. PETER GANNON, Baronial Auditor for the Cavan and Leitrim Railway, and representative of the Ballinamore Rural District Council (who gave evidence on the 14th January, 1908), with copy of his report on the accounts of the Cavan and Leitrim Railway to the Treasury and County Council, etc.

I.

VICEREGAL COMMISSION ON IRISH RAILWAYS,
13, St. Stephen's Green, N.,
Dublin,
10*th February*, 1908.

295-08:

SIR,—With further reference to your letter of the 3rd instant as to the Memorandum of matters dealt with in your evidence before the Viceregal Commission on the 14th ultimo, which you have undertaken to furnish for inclusion in the Appendix, I am directed to request that you will be good enough to forward copies of the correspondence between yourself and the Commissioners of Public Works relative to your inspection of books and accounts at the stations of the Cavan and Leitrim Railway in your capacity as Baronial Auditor for that undertaking.

I am, Sir,

Your obedient servant

(Signed), GEO. E. SHANAHAN,
Secretary.

P. Gannon, Esq.,
Drumcowra,
Ballinamore,
Co. Leitrim.

II.

Drumcowra,
Ballinamore
6*th March*, 1908.

495.

SIR,—I hereby enclose copies of correspondence from Board of Works and County Council in connection with the question of auditing the accounts of the Cavan and Leitrim Railway. I also send other facts for inclusion in Appendix, which I intended submitting before the Commission, but was unable to do so owing to the evidently preconceived interruptions of the railway officials. I trust the Commission will take into consideration the above facts and have any notes subjoined inserted in the Appendix.

I have pointed out the company's recent refusal to allow any supervision at the stations, and this in face of the decision of Commission on 14th January last.

I am, Sir,

Yours truly,

(Signed), P. GANNON.

Geo. E. Shanahan, Esq.

P.S.—I also enclose written copy of Baronial Auditor's Report.—P. G.

(Enclosures referred to above.)

III.

CAVAN AND LEITRIM RAILWAY.

Baronial Auditor's Report.

To Treasury and County Council

I beg leave to report that I have, in conjunction with Mr. Prior, who acted for the Cavan section, audited the accounts of the Cavan and Leitrim Railway for the year ended November, 1906.

I have much pleasure in testifying to the neat and methodical manner in which the accounts are kept in the Dublin office.

The receipts from every source amount to £11,605 1*s.* 11*d.*, and the expenditure to £10,603 5*s.* 10*d.*, which leaves a saving on the year's working of £1,001 16*s.* 1*d.*

There has been £600 added to the "Reserve Fund," which now stands at £1,200, and I believe the creation of the fund, if properly used, is by no means imprudent.

The general control and working of the line leaves much to be desired from the standpoint of progress and economy, and it is a matter for regret that the Directors are rather setting the example of extravagance.

The question of Directors' expenses was fixed by a resolution in December, 1900, which was proposed by Dr. Mulcahy and seconded by Mr. Vaugh, and is in effect as follows:—"That the maximum fee to be paid each Director is £1 1*s.* 0*d.* per day, exclusive of train fare."

This resolution does not hold good in practice, as the Directors' bills exceed the maximum by various sums from 4*s.* to 14*s.* 6*d.* each visit to Dublin.

I notice some of the Directors enter "two days" in connection with meetings where one day is claimed by the others. Mr. Clements, Mr. Flynn, and Mr. Macrory are exceptions, none of whom charge the full maximum.

The excess in the other cases is said to represent "car hire," but no such charge is provided for by the resolution.

The retention of the office in Dublin, 87 miles from the company's own line, is scarcely a sensible method of practical economy.

The rent of the Dublin office, together with the Directors' expenses going there, and other minor charges, would much exceed £200 yearly. This amount for one year should equip a suitable office on the company's premises.

If the shareholders were depending for their 5 per cent. profits on the business acumen of a Board capable of such management we might expect a sudden change of both office and Board.

There is an item of expenditure allowed Mr. Wynne, Engineer, £15 15*s.* 0*d.* for going to London to examine sleepers. This I consider excessive by half.

The practice of giving "first class" free passes to representatives of the local papers is rather generous for a rate subsidised railway.

No such practice or custom exists on larger and more independent lines, where the only privilege allowed the press is "single fare for return journey," which should be ample in this case.

There is a reduction of 3*s.* allowed on a consignment of coal. The amount is small, but the principle of individual preference should not be tolerated by the Board. If the rate was too high in this particular case it must be too high for all and should be quashed.

The connection between the Arigna Mining Company and the railway is not, in my opinion, conducive to the welfare of the latter. The Traffic Manager, who controls the carrying power of the railway, is Secretary for, as well as being a shareholder in, the Mining Company.

The eight Directors representing the share capital of the railway company are also shareholders in the Mining Company, and four of them are Directors of that concern.

It must, therefore, be evident that the Board and their manager are more concerned in the Mining Company, which is dependent on itself, than they are in the railway, where a profit is guaranteed by the respective baronies.

In reference to this matter I was informed "that a special train was used carrying hay for the Mining Company; that several milesmen were employed loading it, and that the work was superintended by the Traffic Manager." All of whom are paid by the railway company. I inquired at the Dublin office, but there was no account of a special train having run on the day in question.

I can get respectable evidence to prove that those men and the special train were in the service of the Mining Company, but I cannot vouch for it myself, as the railway company refuse to allow me to examine any accounts "except those in the Dublin office," where it would be impossible to find any omission of the kind, which could only be noticed by inspection at the various offices on the line.

According to Section 18 of the Order in Council "The said Baronies in the said County of Leitrim shall be represented in the direction or supervision of the affairs and finance of the Promoters by any Auditor who may from time to time be appointed for the said respective Baronies, to inspect the books and accounts of the Promoters."

I therefore hold that inspection of the accounts at any and every particular office on the line is not only legal but necessary, as there is no other means of safeguarding the interests of the guarantors.

The Traffic Manager can be found at several public Boards many miles from the railway he is supposed to manage, lecturing on the merits of Arigna coal. The railway is managed in his absence by the Assistant Manager, who is paid £104 per year, this, added to the Manager's salary, makes the total £353 for managing 48½ miles of railway.

In the interests of those concerned I would suggest, that as there is no provision made in the Order in Council for Shareholders' Directors there should be at least a majority of Baronial Directors on the Board.

I would also recommend that the Dublin office be transferred to Ballinamore, and that the existing connection between the two companies should cease.

I have the honour to remain,

Your obedient servant,

(Signed), P. GANNON,
Baronial Auditor.

14*th May*, 1907.

IV.

Accountant's Department,
Office of Public Works,
Dublin,
27*th September*, 1907.

6256-07:

SIR,—I am directed by the Commissioners of Public Works to advert to your report as Baronial Auditor on the accounts of the Cavan and Leitrim Railway for the year ended 30th November, 1906. In it you state that your investigations have been hampered by the refusal of the railway company to allow you to examine any accounts relating to the railway except those in the Dublin office.

In reference to this statement, the Board are advised that no such limitations are placed on your inquiry by Clause 43 of the Order in Council of 1884, and the accounts of the various stations on the line appear to be in the nature of further information reasonably required for the purpose of auditing the accounts within the meaning of Clause 44.

I am, therefore, to suggest that you should report the action of the railway company to the Leitrim County Council, who will doubtless take such steps as may be necessary to safeguard your powers in the matter.

The Board will be glad to know the result of such action as may be taken.

I am, Sir,

Your obedient servant,

(Signed), J. J. HEALY,
For Accountant.

P. Gannon, Esq.,
Ballinamore.

V.

I sent copy of Board's letter to Leitrim County Council, when following resolution was passed:—

(Copy.)

Proposed by P. MASTERSON.

Seconded by P. GAFFNEY, and Resolved:

"That we think it absolutely necessary in pursuance of the instructions he has received from the Joint Committee of the Cavan and Leitrim Railway that the Baronial Auditor, Mr. P. Gannon, should have full and complete access to all books, documents, etc., at the several stations on the line as well as the central office in Dublin for the due performance of his duties as Baronial Auditor."

Copies to be sent to Auditor, Secretary, Cavan and Leitrim Railway and Board of Works.

On receipt of County Council resolution I again wrote on 23rd December, 1907, for the necessary permission, and on 10th February, nearly one month after Viceregal Commission deciding: "That we were within our right in having access to the books on the line," the company wrote as follows:—

"Dublin,
"10*th February*, 1908.

"DEAR SIR,—I brought before my Directors at their last meeting your letter of 3rd inst., making application for access to the accounts kept at the various stations on the line, and in reply I was instructed to send you enclosed copy of resolution, to which my Directors have nothing to add.

"Yours faithfully,

"(Signed), R. R. STEWART.

"To P. Gannon,
"Ballinamore."

Copy of Cavan and Leitrim Railway Resolution.

Proposed by Mr. M'RORY.

Seconded by Mr. CLEMENTS, and Resolved:

"That the County Council be informed that the audit of the accounts is for last year, and that all the original papers connected with that are sent by the said stations to the office in Dublin, and those have been produced to the Auditor, and that no original accounts of that year are in the stations but only the accounts connected with the current month and will come before the Auditor of next year in due course."

VI.

The cases of rebates to which I referred are as follows:—

"Wm. Latimer, from B'more to Belturbet, had 5 head of cattle carried cheaper than the ordinary customer could have had 3 head." This was about April of 1896.

"Jos. Irwin, from Mohill to Belturbet, about same time had the standard rate reduced by 6 or 7 shillings." There were many other cases, but persons giving information would get into trouble. In my abstract of evidence I pointed out where a Director, who is a land agent, travelled *via* Galway en route to Dublin to attend a meeting and included the fare, £1 3*s*. 8*d*., in his bill of expenses. I only wished to show the sole use of keeping the office in Dublin.

I also intended contrasting the company's economy in withholding a pass from the Baronial Auditor, thereby denying the ratepayers' representative any opportunity to supervise or examine the accounts, while at the same time the two County Surveyors and their Assistants had yearly *first* class passes. There are also three Doctors in the district who are so privileged. *There was no account of any of these passes shown to me in Dublin. There was no account of the special train carrying the Mining Company's hay. There was no account of some old sleepers which I knew to be sold*, and yet the company say we are shown everything, a statement which I must flatly contradict.

APPENDIX No. 13.

STATEMENT transmitted by Rev. P. J. DOWLING, C.M., Cork, supplementary to his evidence of the 15th January, 1908, and explanation subsequently furnished by the Manager of the Midland Great Western Railway.

I.

ST. VINCENT'S,
CORK,
January 20th, 1908.

To the Chairman,
Viceregal Commission.

SIR,—Referring to my evidence of Wednesday and the subjoined report taken from the "Freeman" of the 16th ult., I now submit the following additional items in corroboration of my statement about the vegetable industry in Foxford. Report of Evidence:

"Mr. Tatlow wished to say that the figures given by the witness with regard to Foxford, namely, of £2 17*s.* for 17 or 18 cwts. of vegetables, could not possibly be accurate. For any quantity above 3 cwts. the rates were from 12*s.* to 15*s.* for vegetables. Potatoes in wagon-loads were only 7*s.* 6*d.* per ton. There must surely be some mistake.

"Witness then said he had had the figures from the person concerned, and the entry then made in his note-book was before him.

"*Mr. Sexton.*—I suppose it could not be a number of small consignments?—That is the fact as I got it.

"*Mr. Tatlow.*—I must say, besides, that I do not remember ever being asked for special rates of that kind for Foxford. We have done everything possible for the district, and I know very well we would have done it if we had been asked to do so.

"*Lord Pirrie.*—Apparently there might be a great deal of traffic from there if people knew that the rates were as you say.

"*Mr. Tatlow.*—But a man had only to go to the stationmaster to ascertain them.

"Witness said he would wire at once to get the facts."

I have written to the Superioress of the Convent of Foxford, the Sisters in which Convent have been the means of upraising the district, and her reply is as follows:—"Our steward says that your statement is correct and that sum was paid—£2 17*s.* 0*d.* for 17 or 18 cwts. weight of vegetables in 1902, or 1903. We had to give up the vegetable industry, for the carriage was prohibitive." Again, I can now hand you the actual railway dockets for a supply of vegetables and you can see the rate charged is quite different from Mr. Tatlow's figures:—

"M. G. W. Rly. Consignment receipt. Foxford Station. 5/12/'02. Received from the Convent—to deliver at North Wall Station. Ten bags of vegetables, two boxes and one skip ditto. Paid, £1 9*s.* 7*d.*" The weight is given on the consignment docket as 11 cwts. 3 qrs. and 16 lbs.

This does not confirm Mr. Tatlow's statement as to the rate being 12*s.* to 15*s.* a ton for any quantity above 3 cwts. Again the Superioress wired me on Saturday:—"Present rate for vegetables under two tons, 25*s.* 9*d.* per ton; under one ton, 28*s.* 9*d.*" It may be that the rate books show one rate and the customers pay another, but I think I have substantiated my statement as to the rate paid and as to its having crushed an industry very important anywhere, but of exceeding importance for the one thousand poor cottiers of the Foxford district.

I have the honour to be,

Yours truly,

(Signed), P. J. DOWLING, C.M.

P.S.—I enclose railway dockets and telegram.

(Enclosures.)

5/12/02.

1830. Foxford Convent.

Midland Great Western Railway.

Received from Providence Technical Woollen Manufactory, in good order, 10 bags of vegetables, 2 boxes, and 1 skip do. To Mr. J. Simpson. To be delivered at Show Yard not later than 6th December, Ballsbridge Siding.

Carriage Paid. 11 cwts. 3 qrs. 16 lbs.

Signature, A. DURKAN.
Railway Porter.

(42) Midland Great Western Railway.

Consignment Receipt, 91.

Foxford Station, 5th day of 12, '02.

Received from the Convent. Name of the Consignee, J. Simpson. Destination, Ballsbridge, which we promise to deliver at North Wall. Description of goods—Ten bags vegetables, two boxes, and one skip ditto.

Paid, £1 9*s.* 7*d.*

(Signed), J. M'GRINE.

POST OFFICE TELEGRAM OF JAN. 16TH, 1908.

Foxford. 3.30 p.m. 4.4 p.m.

"To Father Dowling, Training College, Drumcondra, Dublin.

"Present rate for vegetables under two tons, 25*s.* 9*d.*; one ton, 28*s.* 9*d.* Providence, Foxford."

II.

This statement having been transmitted to the Manager of the M. G. W. Railway, the following explanations were furnished by him and communicated to Father Dowling:—

MIDLAND GREAT WESTERN RAILWAY OF IRELAND,
Manager's Office,
Broadstone Station,
Dublin,
25th January, 1908.

M 22/311.

SIR,—I duly received your letter of the 21st inst., enclosing extract from letter addressed to the Commission by the Rev. J. P. Dowling, and beg to say I will make inquiry into the charges on the consignment of vegetables referred to and communicate with you further. In the meantime I beg to enclose a list of the rates in operation for vegetables between Foxford and Dublin, from which you will see there is no such rate as £2 17*s.* 0*d.* per ton, and that with the exception of the rate of 25*s.* 9*d.* for new potatoes in boxes the rates vary from 7*s.* 6*d.* to 15*s.* 7*d.* per ton.

I am, Sir,

Your obedient servant,

(Signed), J. TATLOW.

M 25/487.

Viceregal Commission on Irish Railways.

SIR,—With reference to your letters of the 23rd ulto. (Nos. 517-08 and 540-08), and your letter (563-08) of the 31st ulto., regarding charges on vegetables from Foxford to Dublin, having inquired into the matter I find the two entries in question are as follows:—

'Foxford to Ballsbridge (D. & S. E. Ry). Inv. 8. "5/12/02. Convent to J. Simpson, 10 bags, 2 boxes, "1 skip vegetables. 16 cwts. 3 qrs. 16 lbs., at "28*s.* 9*d.*, plus 5*s.*, paid, £1 9*s.* 7*d.*"

"Foxford to Ballsbridge. Inv. 2. 4/12/03. Con-"vent to J. Simpson, 1 box, 28 sacks, 2 skips, 1 "hamper vegetables. 1 ton 12 cwts., at 25*s.* 9*d.*, "plus 5*s.*, paid, £2 9*s.* 3*d.*"

The vegetables were forwarded to the Winter Show of the Royal Dublin Society at Ballsbridge. The charge of 5*s.* is a special charge per ton, with a minimum of 1*s.* per consignment, and is made for the special service over the Loop Line in Dublin to the Siding at Ballsbridge adjacent to the Show Grounds.

It will be seen that the charges are not as stated, £2 17*s.* 0*d.* for 17 or 18 cwts. of vegetables, and that the weight on 5th December, 1902, was 16 cwts. 3 qrs. 16 lbs. In the enclosure which accompanied your letter of the 23rd ulto. it is stated that the weight given on the consignment docket for 5/12/02 was 11 cwts. 3 qrs. 16 lbs., but I am assured that the correct weight was as above. Perhaps you could obtain for me the consignment docket referred to.

I regret very much the Foxford Stationmaster stupidly charged both consignments incorrectly, as they should have been charged at 15*s.* 7*d.* per ton in accordance with the list of rates I sent you with my letter of the 25th January last.

I instructed our District Traffic Inspector to fully investigate the matter. He informs me he called at the Convent and saw the Reverend Mother Superioress and that she stated she commenced to send vegetables to the Winter Show in 1895 and continued regularly until 1903, and that she was then obliged to discontinue owing to the rate charged. Our Inspector asked the Reverend Mother if she had ever applied for special rates or facilities, and she said: "Do you think after the enormous trouble I went to that I would neglect to do so." Our Inspector then asked if she had any letter on the subject, and she answered that she could not remember it was so long ago.

There is no record in our offices of any application having been made, nor does either our Inspector or the Stationmaster, who has been at Foxford for many years, recollect any application.

Our present District Inspector has been in charge of the Mayo district since 1902. I therefore communicated with his predecessor, who held the office from 1894 to 1902, who writes that during all that time he was in close touch with the Foxford Woollen Mills and that he never heard any complaint of want of facilities for the conveyance of vegetables.

I think the Reverend Mother Superioress must be under some misapprehension, as if any application had been made it would have been recorded in my offices at Broadstone, and it would also have been remembered by our Inspectors or Stationmaster. Besides, any such application would have received special attention at headquarters, as we are only too anxious to encourage any new industry upon our system.

As you say that the statement furnished by Father Dowling subsequent to his examination will be printed in the Appendix to the Report, I beg to request that in fairness to my company you will also print my letters in the Appendix along with the Rev. Gentleman's statement.

I am, Sir,
Your obedient servant,
(Signed), J. TATLOW.

Geo. E. Shanahan, Esq.,
Secretary,
Viceregal Commission,
13, St. Stephen's Green, N.,
Dublin.

P.S.—With reference to the statement of rates enclosed you with my letter of the 25th January, I find on further looking into the matter that that list was not quite complete, and I send you herewith a complete list of rates for all vegetables between Foxford and Dublin.—J. T.

(Enclosure.)

MIDLAND GREAT WESTERN RAILWAY.

Rates for Vegetables between Foxford and Dublin, 159 Miles.

Statement to accompany Mr. Tatlow's letter of April 6th, 1908, to Secretary of Viceregal Commission on Irish Railways.

	Station to Station per ton. s.	d.
Potatoes, in bulk, or in sacks,	15	7
Potatoes, in sacks, 6-ton loads, Owner's risk, Owner to load and unload,	7	6
Potatoes, in casks, barrels, hampers, or peds (except between 1st April and 30th June),	15	7
New Potatoes (except grown under glass), from 1st December to 30th June,	25	9
Cabbages, not packed,	15	7
Carrots,	15	7

	Station to Station per ton.
Carrots, for cattle-feeding (not bunched)—	s. d.
6-ton loads, Owner's risk, Owner to load and unload,	11 2
Minimum, 4 tons, Owner to load and unload,	13 2
Less lots, Owner to load and unload,	15 7
Celery, in bundles,	15 7
Mangel Wurzel, in bulk, for cattle-feeding—	
6-ton loads, Owner's risk, Owner to load and unload,	10 2
4-ton lots, Owner to load and unload,	12 0
2-ton lots, Owner to load and unload,	15 0
Less lots, Owner to load and unload,	15 7
Mangel Wurzel, packed,	15 7
Onions (not peeled for pickling),	15 7
Onions (peeled for pickling),	25 9
Parsnips,	15 7
Rhubarb, in bundles,	15 7
Turnips, in bulk, for cattle-feeding—	
6-ton loads, Owner's risk, Owner to load and unload,	10 2
4-ton lots, Owner to load and unload,	12 0
2-ton lots, Owner to load and unload,	15 0
Less lots, Owner to load and unload,	15 7
Turnips, packed,	15 7
Vegetables, desiccated, for Cattle Food,	25 9
Vegetables, dried, in casks, cases, or boxes,	25 9
Vegetables, hothouse, packed,	44 9
Vegetables except as above,	15 7

(Signed), S. S. Leggatt,

Goods Manager's Office,

Broadstone, 6*th April*, 1908.

— —

IV.

The following letter was sent to Mr. Tatlow as to the weight of the consignment of vegetables referred to in his explanation of the 6th April:—

Viceregal Commission on Irish Railways,

13, St. Stephen's Green, N.,

Dublin,

10*th April*, 1908.

656-08:

Sir,—Referring to your letter of the 3rd instant (M 25/487) relative to the Rev. P. J. Dowling's complaint as to excessive charges on vegetables, etc., I am directed to inform you that the weight of the consignment from Foxford to Ballsbridge on the 5th December, 1902, as given in the enclosure to my letter of the 21st January, namely, 11 cwts. 3 qrs. 16 lbs. is correct, as indicated in the original receipt issued by your company at Foxford Station, which has been furnished to the Commission and can be inspected at these offices.

I am to add that the explanation contained in your letter under reply has been communicated to the Rev. P. J. Dowling.

I am, Sir,

Your obedient servant,

(Signed), Geo. E. Shanahan,

Secretary.

J. Tatlow, Esq.,

Manager, M. G. W. Railway,

Broadstone Station,

Dublin.

V.

Mr. Tatlow's reply, as under, was communicated to Father Dowling on the 13th May, 1908.

Midland Great Western Railway of Ireland,

Manager's Office,

Broadstone Station,

Dublin, 12*th May*, 1908.

M 27/300.

Sir,—With reference to your letter (690-08)* of the 6th inst., relative to Father Dowling's complaint as to excessive charges on vegetables, I have made inquiry into the matter, and our people have now been able to trace the other part of the consignment note and it clearly shows the weight as 11 cwt. 3 qrs. 16 lbs. The explanation of our Stationmaster for entering 11 cwt. as 16 is that he was in a hurry and in the dusk of the winter evening read 11 for 16. I am informed the charges were not questioned by the Convent, and if this has been done the mistake could have been rectified at the time. I regret very much the error which was made by our Stationmaster, for which there is really no excuse, and the matter has been suitably taken up with him. I have also given instructions for a refund of the overcharge made being at once given to the senders.

I am,

Sir,

Your obedient servant,

(Signed), J. Tatlow.

G. E. Shanahan, Esq.,

Viceregal Commission,

13, St. Stephen's Green,

Dublin.

*Transmitting copies of the railway dockets, furnished by Father Dowling, on 20th January, 1908.

APPENDIX No. 14.

LETTER handed in by CAPTAIN H. MACTERNAN, D.L., Heapstown, Boyle, County Roscommon, after his examination on the 15th January, 1908, and explanation subsequently furnished by the Manager of the Midland Great Western Railway.

I.

PETER KENNEDY,

Baker and Confectioner,
127, 128 & 129, Great Britain-street,
Dublin,

28*th October*, 1907.

DEAR SIR,—In reply to your favour of 24th inst., I have made inquiries from M. G. W. Ry. Coy., and I find the carriage on 10*s*. worth bread to Boyle would be 2*s*. 3*d*. As this would amount to nearly ¾*d*. per 2 lb. loaf I fear it renders business impossible.

I shall, of course, send you on the bread with pleasure, if you wish, and if you do not consider the cost (3¾*d*. per 2 lb. loaf delivered at Boyle station) too much.

Thanking you for your inquiry.

I am, yours faithfully,

(Signed), PETER KENNEDY.

H. MacTernan, Esq., J.P., D.L.,
Heapstown, Boyle.

II.

VICEREGAL COMMISSION ON IRISH RAILWAYS,
13, St. Stephen's Green, N.,
Dublin,

20*th January*, 1908.

2793-07.

SIR,—Referring to previous correspondence as to complaints, etc., I am directed to state, for your information, that Captain H. MacTernan, Boyle, who was one of the witnesses at the recent sittings in Dublin, on the day following his examination, handed in to the Commission a letter from Peter Kennedy, Baker and Confectioner, Great Britain-street, Dublin, dated 28th October, 1907, intimating that as the result of inquiries made from your company he had ascertained that the carriage to Boyle of 10*s*. worth of bread would be 2*s*. 3*d*., and that as this charge would amount to nearly ¾*d*. per 2 lb. loaf, he feared it rendered business impossible.

The Commission will be glad to be favoured with any remarks which your company may desire to offer on this subject.

I am, Sir,

Your obedient servant,

(Signed), GEO. E. SHANAHAN,
Secretary.

J. Tatlow, Esq.,
Manager,
Midland Great Western Railway,
Broadstone Station,
Dublin.

III.

MIDLAND GREAT WESTERN RAILWAY OF IRELAND,
Manager's Office,
Broadstone Station,
Dublin,

12*th March*, 1908.

M24/22861.

SIR,—With reference to your letter of the 20th January (2793-07) in regard to the evidence given by Capt. MacTernan, Boyle, relative to the charges for carriage of bread from Dublin to Boyle, I presume Capt. MacTernan refers to rate by passenger train, and I understand the quantity which he wishes conveyed to be about 42 lbs. per week. The charge for this quantity by passenger train from Dublin to Boyle would be at half the ordinary Parcels rate at Owner's risk, or 1*s*. 3*d*., the distance being 106 miles, and this rate is on the same basis as that charged by the railway companies generally. We have special rates for bread traffic by passenger train, applying with a minimum of 1 cwt., and if this quantity was obtained by Capt. MacTernan the charge from Dublin to Boyle would be 2*s*., or about ¾*d*. per 4 lb. loaf.

Capt. MacTernan referred to bread from the North of Ireland, but this is conveyed by Goods trains at Goods train rates.

Yours faithfully,

(Signed), JOSEPH TATLOW,
J. E. M.

G. E. Shanahan, Esq.,
Viceregal Commission on Irish Railways,
Dublin.

APPENDIX No. 15.

PETITIONS to the Commission relative to the working of the Letterkenny to Burtonport Railway, handed in by Mr. J W. MANNING, Carrigart, County Donegal, during his examination on the 15th January, 1908.

APPENDIX No. 16.

EXTRACTS from DOCUMENTS as to disinfection of Railway Carriages and Horse Boxes, etc, handed in by Mr. BRIAN E. F. SHEEHY, C.E., Limerick, during his examination on the 16th January, 1908.

I.

Letter from "Daily Mail" of 5th Sept., 1907.

INFECTED RAILWAY CARRIAGES.

To the Editor of the "Daily Mail."

SIR,—To judge from the complaisant tone of the Board of Trade report on railway fatalities, just issued, very few of the accidents recorded are preventable. No doubt this is true of what one may call the surgical fatalities—those that are immediate and obvious. But I venture to make this very report the text for an appeal to our admittedly enlightened railway services to take steps to stop the appalling spread of disease, of which carriages not thoroughly and regularly disinfected are the readiest vehicles.

It is impossible to estimate the "preventable" mortality arising from this source. The number of passengers carried in the United Kingdom exceeds 1,000,000,000 per year. This traffic, strictly speaking, is accommodated in 50,000 carriages, giving, say, twenty thousand persons per carriage per year. There is, of course, no material for framing an estimate of the proportion of these persons who are infectious, but some diseases admittedly are infectious at a stage before they can be recognised, and of so huge a total—more than twenty times the population of the country—it is clear that there must be a large number of cases carried in a condition of unrecognised infection.

The point I wish to press home is this: If the carriages were disinfected, say, after each journey, each passenger's risk in railway travelling would be confined to the chance of his sitting by the side of an infected person during the journey, but if, as I fear is nearer the case, they are never disinfected at all, and if the average persistence of infection in an undisinfected carriage be taken at twelve months, the chance of infection being acquired by a passenger is manifestly four thousand times as great, supposing each carriage to have five compartments. For the deposit in the carriage is the residual infection of such of its 20,000 inmates per year as have been infected, and there must be an enormous increase of risk to individual passengers from this inevitable accumulation of infective matter over the risk which would be run if the carriages were disinfected regularly.

It is this routine disinfection which I venture to urge most earnestly on the companies. Efficient and economical disinfectants are at their service, and the extra work entailed is out of any proportion to the end obtainable. The alternative is simply to permit the unchecked dissemination of infection. The antiseptic treatment of our homes, our schools, and other public buildings is now receiving attention. Surely by the railway companies it should be regarded as a daily and indispensable duty.

Dr. LAUZAN-BROWN, L.R.C.P., L.R.C.S.,
Central London Throat Hospital,
Gray's Inn-road.

297, Goswell-road, E.C.

II.

Extract from weekly "Notice of Special Trains and other arrangements" issued by the Great Southern and Western Railway Co.

DISINFECTION OF HORSE BOXES.

The attention of Station Masters, Inspectors, Head Porters, Loading Porters, and others is again directed to the fact that the above vehicles are not being cleaned and disinfected after use. Every care should be taken to see they are properly attended to, and portions of the Box coming in contact with the animals' heads disinfected.

APPENDIX No. 18.

CORRESPONDENCE relative to Rebates, &c., between the Commission and Mr. J. W. SHEA, J.P., representative of the Tipperary Farmers' Society (who gave evidence on the 16th January, 1908), and explanatory memoranda subsequently furnished by the General Managers of the Great Southern and Western and Dublin and South Eastern Railways.

I.

VICEREGAL COMMISSION ON IRISH RAILWAYS,
13, St. Stephen's Green, N.,
Dublin,
12*th February*, 1908.

224-08:

SIR,—Referring to previous correspondence as to your attendance in Dublin before the Viceregal Commission, I am directed to enclose an unrevised proof of your evidence on the 16th ultimo, and, as regards your answer to question No. 41969 on the subject of Rebates, I am to inquire if the date mentioned by you (21st October, 1907) for the termination of these rebates by the companies concerned is correct. In this connection I am to explain that the Commission had been previously informed that Rebates were withdrawn early in the year, shortly after the Judgment given on the 1st May by the Railway and Canal Commission in the case between the two companies heard in Dublin a month or two previously.

I am to add that if the correct date is the 21st October the Commission will be glad to have corroboration of the date, either documentary or otherwise.

I am, Sir,

Your obedient servant,

(Signed), G. E. SHANAHAN,
Secretary.

J. W. Shea, Esq., J.P.,
Henry-street,
Tipperary.

II.

Henry street,
Tipperary,
24/2/08.

SIR,—I regret being from home when your favour of the 12th inst., reached here, and in reply I beg to inform you, that the rebates allowed by the G. S. & W. Ry. and D. & S. E. Ry. Coys. were paid up to the 21st September, 1907, not the 21st October, 1907, as appears in proof of my evidence.

You will perceive by enclosure that the rate to London from Tipperary for Milk in tins has been reduced 1*d.* per gal., and a rate made for Milk from Tipperary to Swansea, Cardiff, and Newport. Previous to giving evidence no rate was in existence *via* Fishguard and Rosslare to South Wales, and the rate to London was 4*d.* per gallon from Tipperary.

I am, Sir,

Your obedient servant,
(Signed), J. W. SHEA.

(Enclosure.)

GREAT WESTERN RAILWAY,
District Agent's Office,
123, George-street,
Limerick,
February 12*th*, 1908.

1328.

DEAR SIR,—With reference to conversation with Inspector Carroll, the undermentioned rates can be

put in force for Milk from Tipperary if suitable:—

	d.		
Swansea,	2½	per Imp. gallon.—Min. 12 gallons.	
Cardiff and Newport,	2¾	do.,	do.
London and Reading,	3	do.,	do.

Yours truly,

(Signed), J. A. O'KELLY.

P. W. Shea, Esq., J.P.,
Tipperary.

III.

Mr. Shea's statement was transmitted to the Irish Railway Committee, and the subjoined explanatory memoranda have been furnished to the Commission by the General Managers of the Great Southern and Western and Dublin and South-Eastern Railways.

GREAT SOUTHERN AND WESTERN RAILWAY.

Reply to Mr. J. W. Shea's letter of 24th February, 1908, *re* rates for milk in tins, Tipperary to London, Swansea, Cardiff, and Newport.

Mr. O'Shea did not approach this company with regard to the rates for milk, which he refers to.

We were asked by the Great Western Railway Company to agree to through rates to the stations named nine months before he gave evidence, and the figures in Great Western Company's letter of 12th February, 1908, were then agreed to.

We did not believe there would be any traffic, although it was Mr. Shea's opinion that business would result.

He does not send the traffic himself, and no-one appears to want the figures.

IV.

DUBLIN AND SOUTH-EASTERN RAILWAY,

GENERAL MANAGER'S OFFICE.
WESTLAND-ROW STATION,
DUBLIN, *3rd July*, 1908.

R. 6987.

DEAR SIR,

Mr. Tatlow has sent me copy of your letter to him of 26th June, in which you refer to certain complaints or statements against the railway companies published in the Appendices, No. 7 of which has reference to the giving of rebates to traders in the district between Waterford and Limerick Junction.

Mr. J. W. Shea gives correctly, in his letter of 24th February, the date on which the payment of rebates was discontinued by this company and the Great Southern and Western Company.

The date of the Order issued by the Railway Commissioners in the cross case between this company and the Great Southern and Western Company is 11th July, 1907.

Steps were taken to carry out the Order with as little delay as possible, but as the withdrawal of rebates and other matters, referred to in the Order, necessitated meetings between representatives of the Great Southern Company and this company, it was not found possible to bring the actual withdrawal into operation earlier than the 21st September.

Yours faithfully,

(Signed), A. G. REID.

G. E. Shanahan, Esq.,
Vice-Regal Commission on Irish Railways,
13, St. Stephen's Green, N.,
Dublin.

APPENDIX No. 19.

CORRESPONDENCE, relative to the appointment of Arbitrators (Farranfore and Killorglin Railway Act, 1880), handed in by Mr. J. HILLIARD, representative of the Killarney Urban District Council, during his examination on the 17th January, 1908, and explanation on the subject subsequently furnished to the Commission by the Irish Railway Committee.

I.

URBAN DISTRICT COUNCIL OFFICE,
Killarney,

6th November, 1899.

SIR,—I am directed by the Killarney Urban District Council to ask the Board of Trade to appoint Arbitrators to assess the proportions in which the guaranteeing baronies should contribute to the Killorglin Railway under the Killorglin Railway Act, 1880.

I am, Sir,

Your obedient servant,

(Signed), M. HEALY,
Clerk to the Council.

The Assistant Secretary,
Railway Department,
Board of Trade,
London.

II.

URBAN DISTRICT COUNCIL OFFICE,

Killarney,

7th November, 1899.

Farranfore and Killorglin Railway Act, 1880.

DEAR SIR,—I am directed by the Killarney Urban District Council to ask your Directors to request the Board of Trade to appoint Arbitrators to assess and determine the relative proportions in which the guarantee is payable by the different Baronies under the above Act.

In making the request the Council beg to point out that since the last Arbitration (1890) there have been considerable alterations in the Time Tables—the

Barony of Trughenackmy now derives considerably more benefit than that of Magunihy, in which the Killarney Urban District is situate.

Yours truly,

(Signed), M. Healy,

Clerk to the Council.

Fras. B. Ormsby, Esq.,
Secretary,
Great Southern and Western Railway.

III.

Board of Trade,
Railway Department,
7, Whitehall Gardens,
London, S.W.,
13*th November*, 1899.

R. 13900.

Sir,—I am directed by the Board of Trade to refer to your letter of the 6th instant, applying for the appointment of Arbitrators to assess the proportions in which the guaranteeing Baronies should contribute towards the Killorglin Railway under the Killorglin Railway Act, 1880, and in reply I am to point out that Section 26 of that Act provides that it shall be lawful for the Board of Trade (at or upon the request of the company) from time to time to appoint Arbitrators for the purposes indicated in the Section. Under the provisions of the Great Southern and Western Railway (Killorglin Railway Transfer) Act, 1881, the powers of the Killorglin Railway Company were transferred to the Great Southern and Western Railway Company, and the Baronial Guarantees were to remain in force. I am to add that the Board of Trade have from time to time appointed Arbitrators under the Act of 1880 on the request of the Great Southern and Western Railway Company, but that no such request from the company has now reached this Department.

I am, Sir,
Your obedient servant,
(Signed), Francis J. S. Hopwood.

To the Clerk of the Council,
Urban District Council Office,
Killarney.

Great Southern and Western Railway,
Solicitor's Office,
Kingsbridge Terminus,
Dublin, 21*st May*, 1908.

Viceregal Commission on Irish Railways.

Killorglin Railway (Farranfore to Killorglin) Guarantee.

Dear Sir,—Referring to the letter to you of the 14th instant (817-08) from the Secretary of the Commission as regards the evidence given by Mr. John Hilliard, representing the Killarney Urban District Council, on the 17th January last, with reference to the above guarantee, I have, as promised, looked the matter up and beg to state as follows:—

Sections 24, 25 and 26 of the Killorglin Railway Act, 1880, provide as follows:—That for the period thereby granted for the completion of the railway and for 35 years after its opening, the amount required to pay a dividend at five per cent. per annum on the share capital of £60,000, or upon so much thereof as should from time to time be paid up, should become payable by the several Baronies of Magonihy, Iveragh, Corkaguiney and Trughenackmy and that portion of Dunkerron North situate in the Poor Law Unions of Killarney and Caherciveen, rateably and in the proportions to be ascertained by Arbitrators as thereinafter provided. That if during the period of 35 years after opening of the railway the net profits thereof (such net profits to be ascertained by Auditors as by the Act directed) after deducting from the gross receipts the working expenses and interest on Mortgage or Debenture Capital should not amount to a dividend of 5 per cent. per annum upon said sum of £60,000 or upon so much thereof as should be paid up, the sum required to pay such dividend should become payable half-yearly by the said several Baronies and portion of Barony. That the Board of Trade may, upon the request of the Company from time to time by Warrant, appoint as Arbitrators any two of the County Surveyors of the County of Kerry and one other person to be selected by the Board of Trade, and such persons should, by their Award, assess and determine the relative proportions into which such sum should be paid by the several Baronies and portion of Barony, such Arbitrators taking into consideration the benefit or supposed benefit (immediate or prospective) which said Baronies and portion of Barony should, in their opinion, be likley to derive from the formation and opening of the Railway, and the Award of such Arbitrators, or of any two of them, should, when allowed by the Board of Trade by endorsement thereon under the hand of their Secretary, be final and binding.

By the Great Southern and Western Railway (Killorglin Railway Transfer) Act, 1881, the undertaking of the Killorglin Railway Company was transferred to the Great Southern Company, together with the benefit of the said Baronial Guarantee.

By Award, dated 11th June, 1883, under the hands of Mr. William H. Deane, the County Surveyor of the County of Kerry, and Mr. George Posnett, the Arbitrators appointed by the Board of Trade under the Killorglin Railway Act, 1880, and made after a public sitting at Tralee, of which due notice was published, the Arbitrators found that the relative proportions in which the several Baronies and portion of Barony should pay the said dividend were as follows:—Magonihy, three-tenths; Iveragh, three-tenths; Corkaguiny, two-tenths; Trughenackmy, one-tenth; and the portion of the Barony of Dunkerron North, one-tenth. This Award was allowed by the Board of Trade, as per endorsement thereon of their Secretary dated 14th June, 1883.

This Award was acted upon to the year 1890, when the Board of Trade appointed as Arbitrators, Mr. George Posnett, Mr. Singleton Goodwin, the County Surveyor of the Northern Division of the County of Kerry, and Mr. Henry Webster, the County Surveyor of the Southern Division of that County, who, after a public sitting at Tralee, of which due notice was published, made their award, dated the 15th April, 1890, fixing the relative proportions in which the several Baronies and portion of Barony should pay the said dividend as follows:—Magonihy, ten-thirtieths; Iveragh, nine-thirtieths; Corkaguiny, two-thirtieths; Trughenackmy, six-thirtieths, and the portion of the Barony of Dunkerron North, three-thirtieths. This Award was also allowed by the Board of Trade by endorsement of their Secretary thereon, and is still in force.

The Clerk of the Killarney Urban District Council, as representing the Barony of Magonihy, which is situate within that district, by letter of 7th November, 1899, to the Secretary of the Great Southern Company (see copy enclosed), requested that that Company should apply to the Board of Trade to appoint Arbitrators to assess and determine the relative proportions in which the guarantee should be payable by the different Baronies under the Act of 1880, and this letter having been referred to the Solicitors for that Company, I enclose a copy of their letter of 23rd December, 1899, to the Secretary of the Company advising the course which, in their opinion, should be adopted, and acting on the direction of his Board, the Secretary of the Company, on the 15th January, 1900, communicated with the Secretary of the County Council of the County Kerry in accordance therewith, and not having received any reply thereto the Company assumed that the County Council, as representing the major part of the Guaranteeing Area, did not acquiesce in the application of the Urban District Council of Killarney, and no further steps were taken with reference to it.

I understand from the Secretary of the Company that no further application has since been received by him from the Urban District Council of Killarney, or by any other body or person, to have the matter again referred to the Board of Trade or to have the existing award varied.

Yours very truly,

(Signed), CROKER BARRINGTON.

Joseph Tatlow, Esq.,
Railway Clearing House,
5, Kildare-street,
Dublin.

Killarney, *7th November*, 1899.

F. B. Ormsby, Esq.,
Secretary,
Great Southern and Western
Railway, Ireland.

Farranfore and Killorglin Railway Act, 1880.

DEAR SIR,—I am directed by the Killarney Urban District Council to ask your Directors to request the Board of Trade to appoint Arbitrators to assess and determine the relative proportions in which the Guarantee is payable by the different Baronies under the above Act.

In making the request the Council beg to point out that since the last Arbitration (1890) there have been considerable alterations in the Time-Tables, and so the Barony of Truckenackmy now derives considerable more benefit from the line than that of Magonihy, in which Killarney Urban District is situate.

Yours very truly,

(Signed), M. HEALY,
Clerk of the Council.

VIII.

Great Southern and Western Railway,
Solicitors' Office,
10, Ely-place, Dublin,
December 23*rd*, 1899.

Killorglin Railway Baronial Guarantee.

DEAR SIR,—Referring to your letter of the 8th ulto. enclosing letter to you of 7th from the Clerk of the Killarney Urban District Council. (as representing the Barony of Magonihy) requesting the Company to apply to the Board of Trade to appoint Arbitrators to assess and determine the relative proportions in which the Guarantee is payable by the different Baronies under the Killorglin Railway Acts, we beg to state that the existing rate of distribution of the amounts payable by the different Baronies liable to the Guarantee was ascertained by the Award dated 15th April, 1890, of George Posnett and by Singleton Goodwin and Henry Webster, the County Surveyors for the County of Kerry, the Arbitrators appointed for that purpose by the Board of Trade under the provisions of the 26th Section of the Killorglin Railway Act, 1880, and having regard to the lapse of time and to the considerations as provided by that section which should govern the Arbitrators in determining the relative proportions in which the Guarantee should be borne by the different Baronies, we do not think it unreasonable that the Company should accede to the request of the Killarney Urban District Council that application should be made by the Company to the Board of Trade for the appointment of new Arbitrators for the purposes above-mentioned. We think, however, that the Company should forward a copy of the application of Mr. Healy, Clerk of the Killarney Urban Council, to the Clerk of the County Council of the County of Kerry stating that they intended to apply to the Board of Trade as requested, and await their reply.

We return Mr. Healy's letter.

Yours very truly,

(Signed), BARRINGTON & SON.

F. B. Ormsby, Esq.,
Secretary.

APPENDIX No. 20.

STATEMENT, *re* County Leitrim Coal Field, dated 30th January, 1908, furnished by CAPTAIN H. MACTERNAN, D.L., Heapstown, Boyle, County Roscommon.

COUNTY LEITRIM COAL FIELD.

The first mountain I would refer to is Slieve-an-erin (The Iron Mountain). It is the most southerly of the Leitrim mountains; is over to the north of Lough Allen, and contains 2,000 acres. It is about 2½ miles from Drumshambo, at which there is a station of the Leitrim and Cavan Light Railway.

The other mountain is Glackaun. It is about 3½ miles up the Arigna Valley and then runs about 4 miles towards the North-West. It is at the other side of the Valley from what are called the Company's pit, and Loden's and Cullen's pits, which are on the south of the Arigna River. Those pits have a fairly good road to the depot at the Arigna station, but there is no road on which a load could be brought to the station on my side of the river. I have seen very fine coal dug out with "loys" from the side of this mountain.

There is a proposed railway to Sligo, from the present Arigna station, being pushed very strongly by certain parties at present. Mr. Long, late Chief Secretary, pointed out a line 3½ or 4 miles long on the bank of the river up the Arigna Valley, which would enable owners at both sides to get their coal to market. The engineer of the present proposed line promised me this was part of their scheme and would be made. I afterwards saw they left it out of their Bill. I then found they had got options of large tracts of coal-bearing lands, and that the company intend to work the coal and iron ore extensively, and that they intend to make this Valley branch line with their private money. I am very apprehensive about this, as if another owner would, with his coal, be in competition with them they would not, I am sure, allow him to make use of their private-made line. They would hold the key of the Valley. I hear they are going to ask for Government aid. I hope they won't get it, as they are not acting fair, and I believe they are going to ask for a County guarantee. The last guarantee given for the Leitrim and Cavan line made paupers of many poor farmers. It rose to 1*s.* 8*d.* in the pound, an enormous tax I need hardly say.

I thought the only way the proposed line would pay would be by large carriage of coal from the Valley. I don't think the ordinary traffic can pay. I give the towns from the start to Sligo:—

Keadue,	under 200	inhabitants.
Ballyfarnon,	about 300	,,
Riverstown,	about 250	,,
Collooney,	about 500	,,
Ballisodare,	about 200	,,

all miserable towns but Ballyfarnon, which has a good fair, and Collooney, where there are corn and woollen mills.

We burn the Arigna coal here, and it is very fair indeed. We get it from a pit at the other side of the Arigna River, from my lands at Glackaun.

As to the intention of the proposed railway company to become extensive colliers, there is no doubt about it, as the engineer of the line told me so. I am sure that if the short line proposed by Mr. Long were made up the Valley and on the perfectly level bank of the river, coal owners at both sides would run their stuff down to the line and get it taken away to market.

The engineer made me a very *generous* offer for an option of my lands—3*d.* per ton. They mean to make a fortune by having the use of their private line, which nobody else can use.

(Signed), HUGH MACTERNAN.

APPENDIX No. 21.

EXPLANATION furnished by Mr. ALIC. J. P. WISE, Cappoquin, relative to matters referred to during his examination on the 4th January, 1907.

Belleville Park,

Cappoquin, Co. Waterford,

February 8th, 1908.

SIR,—There is one of my answers (in examination before the Viceregal Commission) which I would wish to correct, No. 5984. If the railways were taken over on a basis of 25 years' purchase of their net profits and the money raised in an Imperial guarantee of 3 per cent. the margin would be 1 per cent. in the Capital sum of £40,000,000, or £400,000. If an Irish Authority raised the money at 3½ per cent., one-half per cent., or £200,000.

I beg also to point out that as regards the Great Southern and Western Railway the 25 years' purchase would produce a sum by no means inadequate to meet the present values of the several stocks in the Dublin market.

G. S. & W. Ordinary Stock	86¼	ann. div.
Preference 4%	104	,,
Guaranteed	108½	,,
Debenture	111½	ex. div.

I am,

Yours faithfully,

(Signed), ALIC. J. P. WISE.

Secretary,
Viceregal Commission.

APPENDIX No. 22.

STATEMENTS as to excessive rates for Eggs, etc., transmitted by Messrs. JOSEPH MINCHIN & SONS, Clonmel, on the 14th January, and 21st February, 1908, and explanations in connection therewith, subsequently furnished by the traffic Manager of the Great Southern and Western Railway.

I.

STATEMENT of 14th JANUARY, 1908.

"On 1st April, 1907, we wrote the G. S. & W. Rly. Co., as per copy enclosed, asking them to reduce rates for eggs between Clonmel and Newport and Cahir and Newport, and pointing out that the rate to Bristol from either Clonmel or Cahir, which entails a much longer journey, was, and still is, lower than Newport. We also wrote the Great Western Railway a similar letter. The Great Western Co. wrote us on the 16th April, 1907, quoting us a rate of 30*s.* 10*d.* from Clonmel, and 33*s.* 4*d.* from Cahir, both at Owner's risk. The Great Southern and Western Company, however, would not agree to the rate of 30*s.* 10*d.* per ton from Clonmel, and finally on 3rd June, 1907, they gave us a rate of 31*s.* 8*d.* from Clonmel, O.R., carted. You will see by copy of their letter, 3rd June, which we attach, that they gave this cartage as an excuse for rate being so high over the Bristol rate. On receipt of this letter we wrote to the Great Western people at Newport, asking their rate for cartage on eggs to any part of Newport. They replied on 8th June saying their charge for cartage was 1*s.* 6*d.* per ton to any part of that city. We then wrote Mr. Neale on the 14th June, 1907 (as per copy enclosed), asking him to quote us a station to station rate, and we enclose you copy of his reply dated 17th June, 1907, which speaks for itself. To put the matter plainly, it simply means one cannot get suitable through rates to any part of England unless there are competitive routes thereto. We shall feel obliged if you can help us in this matter, as we resent paying 6*s.* 8*d.* more per ton for a much shorter journey."

(*Copies of Enclosures.*)

(*a*).

JOSEPH MINCHIN & SONS,

33 & 34, Gladstone-street and 3, Old Quay, Clonmel,
1*st April*, 1907.

E. A. Neale, Esq.,
Kingsbridge,
Dublin.

DEAR SIR,—We shall feel obliged if you can see your way to reduce rate for eggs between Clonmel and Newport. The present rate of 36*s.* 8*d.*, C.R., is altogether too high and we cannot ship there regularly in consequence. We might mention that we can book through to Bristol for 25*s.*, O.R., and get the stuff back again into Newport for 10*s.* per ton, which would be a saving of 1*s.* 8*d.* per ton on the through rate. We want to be placed on an equal footing with Cork shippers, who have a rate of 25*s.* per ton, O.R., per the Great Western Railway *via* Fishguard, and as the latter company carry eggs at 8 st. each case as against the 1 cwt. 0 qrs. 14 lbs. charged by your people here, you will see they can beat us hopelessly as regards prices. The present rate from Cahir to Newport is 40*s.* per ton, C.R., as against 33*s.* 4*d.*, O.R., from Tipperary, and as we ship from Cahir also we shall be glad if you will give us a reduction in this rate also.

As the season is now at its height we shall feel obliged for an early reply.

(Signed), J. MINCHIN & SONS,
per J. M.

(*b*).

GREAT SOUTHERN AND WESTERN RAILWAY,
Traffic Manager's Office,
Dublin, 3*rd June*, 1907.

R.E.M. 102917.

DEAR SIRS,—Replying to your letter of 1st instant, I beg to say a rate of 31*s.* 8*d.* per ton, carted, has now been issued between Clonmel and Newport (Mon) *via* Rosslare or Waterford and Fishguard for eggs in boxes, cases or crates, at Owner's risk.

I may add that the rate of 25*s.* in operation with Bristol is a station to station figure.

Yours truly,
(Signed), E. A. NEALE,
per E. W.

Messrs. J. Minchin & Sons,
Clonmel.

(*c*).

JOSEPH MINCHIN & SONS,

33 & 34, Gladstone-street and 3, Old Quay, Clonmel,
14*th June*, 1907.

E. A. Neale, Esq.,
Kingsbridge,
Dublin.

DEAR SIR,—Yours of 3rd instant (R.E.M. 102917) is before us and we note contents. We have been in communication with the Great Western Railway Company since receipt of yours, and they inform us that their rate for cartage on eggs in Newport is 1*s.* 6*d.* per ton. In the face of this your company charge us 6*s.* 8*d.* per ton for cartage. We shall feel obliged if you will quote us a station to station rate, as we are not satisfied to pay 6*s.* 8*d.* per ton more to Newport than to Bristol. It does not encourage us to give you competitive traffic.

Yours truly,
(Signed), J. MINCHIN & SONS,
per J. M.

(*d*).

GREAT SOUTHERN AND WESTERN RAILWAY,
Traffic Manager's Office,
Kingsbridge,
17*th June*, 1907.

R.E.M. 102917.

DEAR SIRS,—With reference to your letter of 14th instant, I beg to inform you that owing to competition the through rates with Bristol are exceptionally low and we could not apply the same figures to other stations in the district which are differently situated.

Yours truly,
(Signed), E. A. NEALE,
per E. W.

Messrs. J. Minchin & Sons,
Clonmel.

II.

The Manager of the Great Southern and Western Railway having been communicated with by the Viceregal Commission as to the above, wrote on 28th January, 1908, that the rates for eggs in boxes, cases, crates, at Owner's risk, with Newport (Mon) were:—

Clonmel, 31*s.* 8*d.* per ton carted } *via* Rosslare
Cahir, 33*s.* 4*d.* do. do. } and Fishguard.

and that he had had the rates carefully gone into and considered them reasonable. Messrs. Minchin & Sons were informed and subsequently furnished the following supplementary statement on 21st February, 1908:—

"We note the Railway Company's reduction, but the grievance still remains. They charge:—

Clonmel to Newport, 31*s.* 8*d.* carted.
Cahir do. 33*s.* 4*d.* do

whereas they charge—

Clonmel to Bristol, 25*s.*
Cahir to Bristol, 30*s.*

with 1*s.* 6*d.* cartage added, and all going through Newport, and much longer mileage. Their reason is given (see ours of 1st April, 1907, to Mr. Neale and his of 14/6/07, copies of which we sent you), being that there was a competitive route to Bristol, whereas there is none to Newport. We do not see the Railway Company's letter to you alters the facts as already put before you. We could point out many more anomalies in the rates of the G. S. & W. R. Co. which tell against the development of Irish trade. For instance:—

Butter, Clonmel to Merthyr-Tydvil, O.R., is 32*s.* 6*d.*
Eggs, do., do., do., 35*s.* 4*d.*

The former being three and a half times the value of the latter. As regards eggs, in this case, too, the mileage is shorter than to Bristol, but there is no competitive route. Hence the exorbitant rate, and we have to sell eggs 1*d.* to 3*d.* per hundred less than Cork shippers for this reason. Again, the rate for Butter, Clonmel to Liverpool, is only 13*s.* per ton as against 25*s.* for eggs, the latter being about one-third the value of the former. In some cases local rates are cheaper than through. For instance, dead poultry, Clonmel to London—through rate, 85*s.* per ton; Clonmel to Waterford, 15*s.* per ton, and Waterford to London, 60*s.* per ton—equals 75*s.* as against 85*s.* through rate. Clonmel to Nottingham, through rate, 87*s.* 6*d.* per ton, Clonmel to Manchester, 55*s.* per ton, Manchester to Nottingham, 21*s.* 3*d.*—equals 76*s.* 3*d.* per ton.

We could point out many such anomalies, and regret we did not send up our Mr. Minchin, junior, to give evidence before the Commission.

III.

A copy of the supplementary statement was furnished to the Manager of the Great Southern and Western Railway, whose reply is subjoined:—

GREAT SOUTHERN AND WESTERN RAILWAY,
Traffic Manager's Office,
Dublin, 4*th April*, 1908.

R.E.M. 102917.

DEAR SIR,—With further reference to your letter of the 22nd February (414-08), I beg to inform you that an exceptional rate of 68*s.* 4*d.* per ton, carted, has now been arranged for Fresh Meat and Dead Poultry between Clonmel and Nottingham *via* Dublin and *via* Waterford and Liverpool or Fishguard.

Yours truly,
(Signed), E. A. NEALE,
per J. H.

Geo. E. Shanahan, Esq.,
Viceregal Commission on Irish Railways,
13, St. Stephen's Green, N.,
Dublin.

. . . . . .

The Commission communicated the above to Messrs. Minchin & Son, who replied as under:—

IV.

JOSEPH MINCHIN & SONS,
33 & 34, Gladstone-street and 3, Old Quay, Clonmel
14*th April*, 1908.

G. E. Shanahan, Esq.,
13, St. Stephen's Green,
Dublin.

DEAR SIR,—Replying to your favours of 25th ulto. and 6th inst., we still maintain that all the rates we quoted you are excessive and are out of all proportion to the commercial value of the article carried. We shall be glad if you will add the particulars furnished you on 21/2/08 to our statement of 14th January. We note the reduction in the Newport rate and would never have been able to obtain same without your assistance. Doubtless the G. S. & W. R. Co. considered the old rate of 87*s.* 6*d.* very reasonable also.

Yours truly,
(Signed), J. MINCHIN & SONS.

APPENDIX No. 23.

STATEMENT as to the effect of Irish Railway Rates on the Willow Industry transmitted by Messrs. M. P. RIORDAN & Co., Limerick, and explanations in connection therewith, subsequently furnished by the Traffic Manager of the Great Southern and Western Railway.

I.

M. P. RIORDAN & Co.,
General Agents
and
Commission Merchants.
8, Cecil-street,
Limerick,
2/3/08.

The Secretary,
Viceregal Commission on Railways,
Dublin.

DEAR SIR,—We now enclose report on the effect of railway rates on the Irish willow industry for the consideration of your Commission.

In case they see fit to include same in the Appendix to the Third Report we trust you will be able to send us a copy or inform us where one can be obtained.

Yours truly,
M. P. RIORDAN & Co.,
Per M. P. Riordan.

In submitting this brief report on the effects of present railway rates on the Irish willow industry we desire to make it clear that we have no wish to indulge in any unreasonable complaints against the railway companies.

During our connection with this industry we have found the railway companies always anxious to oblige us in any way they could, but the excessive rates were always there, a barrier, which even the courtesy or good intentions of officials could not avail against.

The willow industry is in a peculiar condition. Every year vast quantities of whitened willows are imported into Great Britain from the Continent, yet Ireland is by nature peculiarly fitted to be such an extensive willow-producing country that it should be able to supply at least the major portion of the entire amount now being imported.

The advantages of nature are, however, almost nullified by the disadvantages of transit.

Willows, when in a green wet state are very heavy, and the freight for bringing them when in that condition from groves to our works in Limerick is such a drag as to make it almost profitless to try and develop the business.

To illustrate this, we may instance the fact that to

bring the green rods from a grove about 10 miles from Limerick, and very near a country railway station, we found it cheaper to get the crop carted to Limerick by road.

Regarding the export side of the industry, we have found that the cost of getting the peeled manufactured rods into the English and Scotch markets is so great as to make it well nigh impossible to compete with the foreigner.

We will not labour the matter by quoting a mass of figures in order to try and prove what we say, because from experience we know that we are stating absolute facts, but by way of illustration we will say here, that to ship peeled willows to Birmingham costs 60*s.* per ton, or if sent by as much sea as possible, 42*s.* per ton; to land willows into the same market from the Continent the highest cost is only 32*s.* 6*d.* per ton, which shows how much we are handicapped.

Willow groves are frequently near railway stations, from which, as a rule, no traffic originates. It should pay the railway companies to try and foster new business from such places by giving extra low rates for carrying the raw material which grows in their vicinity, and by doing so the companies would create further traffic for themselves when the manufactured willows would be exported to the British markets.

The foregoing brief statement of facts will, we trust, prove that it is next to an impossibility in the fact of existing conditions to profitably develop in Ireland an extensive willow export industry.

The loss is the nation's, because this is a business which, with a little initial nursing, would in a few years give employment to hundreds, and divert into this country the large sums which British buyers are now constrained to send to Continental producers.

(Signed), M. P. Riordan & Co.

The substance of the above statement was communicated to the Traffic Manager of the Great Southern and Western Railway, who furnished the following explanations:—

II.

Great Southern and Western Railway,
Traffic Manager's Office,
Dublin,
March 16th, 1908.

T.M. 38149.

Sir,—With reference to your letter of the 4th instant (461-08) sending extract from a statement furnished by Messrs. M. P. Riordan & Co., Limerick, in regard to the rates for green willows with that place.

The only station we have been asked to quote rates to, so far as can be traced, is Birmingham, and a reduced figure, viz., 45*s.* per ton for osiers—brown or white—in 2-ton lots, at owner's risk, has been put into operation.

I have had the firm called on but the Principal was from home, and on his return I will have him seen again and particulars of what is required obtained, when the matter will have my attention.

I am, Sir,
Your obedient servant,
(Signed), E. A. Neale.

G. E. Shanahan, Esq.,
Secretary,
Viceregal Commission on Irish Railways,
Dublin.

III.

Great Southern and Western Railway,
Traffic Manager's Office,
Dublin,
April 3rd, 1908.

T.M. 49159.

Sir,—Following my letter of the 16th ult. in reply to yours of the 4th idem (461-08).

We have since had Mr. Riordan seen as to his complaint that he was getting willows carted a distance of 10 miles as cheaply as our present rate of 4*s.* 9*d.* per ton. He has not previously complained of the rate or asked any reduction off that figure.

With regard to the cost of getting the manufactured rods into English and Scotch markets. We have had no application for rates to places other than Birmingham, with which we have arranged the reduced rate I have already quoted. It now appears that the condition of 2 tons attached to the rate is one that he is unable to comply with, and I will take up with the other interested companies and endeavour to get the reduced rate made applicable to any quantity.

Of course Mr. Riordan has the advantage of the direct steamer from Limerick to Liverpool and Glasgow, by which he forwards the traffic at very low rates.

I am, Sir,
Your obedient servant,
(Signed), E. A. Neale.

G. E. Shanahan, Esq.,
Secretary,
Viceregal Commission on Irish Railways.

APPENDIX No. 24.

Statements transmitted by Mr. P. Whelan (representative of the Monaghan County Council), containing portions of the abstract of his evidence not dealt with during his examination, on the 13th March, 1908, and explanations in connection therewith, subsequently furnished by the General Manager of the Great Northern Railway (Ireland).

I.

* * * * * * * * * * *

"The late Mr. M'Cann, M.P., stated that the railway rates on agricultural produce from Irish stations to the big towns were over an average of 2*d.* per ton per mile and this only for large lots, and that after the buyer at the local markets had deducted the high transit rates and other charges, the profit remaining to the small producer, after paying his rates and taxes, was often a negative quantity. I venture to say that in no corner of the German Empire could a community be throttled by the overgreed of a railroad corporation as the Irish dairy farmers are. In Mr. Cunningham's book, "Railway Nationalisation" (1906), it is stated the South African railways send fruit, butter, eggs and vegetables, 26 to 50 lbs., in packages, 150 miles or over for 2*s.* 8*d.* per cwt., as against 4*s.* on the Great Northern Railway."

* * * * * * * * * * *

"The present light railways seem to approach more nearly to the Australian development lines than to the light railways of Belgium and Holland, and in my opinion should be made broad gauge to enable wagons to run through without transhipment, after the Swedish system. Mr. C. P. Sandber, writing in *Engineering*, April 27th, 1894, said the 2,000 light lines in Sweden had cost £2,000 per mile, and were strong enough to carry trucks from the national lines

without break of gauge, but with separate light engines. Every transhipment thus saved is equal to a shortening of haulage by 20 miles, in the opinion of the best authorities. In South Africa recently (as reported in the daily papers) a scheme for the railway was rejected in favour of motor transit, on the ground that the initial cost for a railway would be £5,000 per mile, whereas the alterations necessary for motor traffic would only cost £500 per mile. It is reported that the directors of the Cavan and Letitrim Railway and the directors of the Arigna Coal and Iron Mines were favourably impressed with the Renard motor train, and that the latter company has purchased a train for conveying coal from the pits to the railway station. In future it would be well to consider the merits of such a train before spending money on a railway. It is claimed for it that it can be used on any road, and can be controlled as an ordinary motor car, no matter how many carriages may be attached, that it does not need a heavy traction engine, and so does not damage the roads any more than a single motor car. The expense of purchasing land for a track would also be saved.

The tendency in Great Britain and America seems to be to reduce the number of classes of passengers, and in the rest of Europe to maintain the present number; in Germany even to increase it to a fourth class. While the number of classes under the present system is unsatisfactory, they might, perhaps, pay under a reduced system of fares, as previously suggested.

The general effect of the prohibitive tariffs of the Irish railways is to reduce the traffic to a minimum, and the only remedy the directors appear to be able to suggest for this is to encourgae tourists to come into the country, thus substituting an artificial passenger business for the ordinary trade, which has been killed by extortion."

* * * * * * * * * * *

Whether a cheaper tribunal than the Railway Commission is created or not, matters little under the present system. Mr. Acworth's opinion, as expressed in "The Railways and the Trader," that "for a farmer or shopkeeper, with the assistance possibly of the local attorney, to undertake to fight trained railway experts, is only to court defeat," decides the point for me. Mr. Acworth further says, "For every shilling cut by an expeditious tribunal of a rate, it is easy for the railway company to withdraw two shillings' worth of facilities."

The Irish railways pay no passenger tax; the cost of construction is much less than in England, and the wages are smaller and the rents and taxes are much less (there are no cities here like London, Liverpool, Manchester, etc.), and it is thought the mileage taxation by the local authorities is less than in England. In 1904 23 millions odd invested in the Irish railways received between 3 and 4 per cent. dividend, and not 9 millions received more than 4 per cent. What then becomes of the excessive charges? Part, we know, goes as bounties to England.

* * * * * * * * * * *

Excessive Charges Wasted in Bounties to English Goods and Unnecessary Haulage.

Mr. E. A. Pratt, in his "Railways and their Rates," 1906 edition, says the cheaper Continental rate, as compared with the British rate, is caused by the greater length of haulage on the Continent, while Mr. Plews, in his letters to the Press, stated that the long haulage caused the higher rate in Ireland. Mr. Pratt is, I believe, accepted as an authority by the railway companies; therefore, the conclusion we are forced to is that the Irish high rate is partly wasted in unnecessary haulage by diverting traffic from its proper routes to thwart other companies and to force it past its natural port, etc.

Purchase of the Railways by the General Council of County Councils or some Similar Elected Body approved of by the Irish people.

These considerations led my Council to pass unanimously a resolution favouring the purchase and control of the Irish railways by the General Council of County Councils. This resolution was afterwards endorsed by the Derry County Council, and has since been adopted by the General Council itself, with the addition of the words, "or some similar authority elected by and responsible to the Irish people."

Comparison of Prussian System with Control by General Council of County Councils.

We felt that the main cause of the unsuitability of the present railway system to Ireland was that the responsible officials were following the British policy, while from cost of construction onwards the Continental policy seemed best for our circumstances.

In suggesting the General Council we had in mind the Prussian system of government "by an Imperial Railway Board with Provincial Railway Boards and District Councils." The Provincial Boards are bound to consult the District Councils on all important questions affecting the trade of the district, and especially on questions of tariffs. The District Councils may also originate proposals in regard to all railway matters that appear to them of importance for the welfare of their district. "Railway Nationalisation," by Clement Edwards, Esq., M.P.) Sir Bernard Samuelson, in his Report on Foreign Goods Rates to Chambers of Commerce, 1886, said that "railway managers, as well as traders, acknowledge that the District Consultative Councils are of great practical utility in the adjustment of tariffs, and, generally, in the prevention of friction." It will be seen that the General Council and the County Councils, locally, and the Urban District Councils, as consultative bodies, is very similar, indeed, to the Prussian system.

Effect of Purchase Under Act of 1844.

We believe that the railways could be purchased under the Act of 1844, for a little over forty millions, and that 20 per cent. reduction in goods and passengers' tariffs could be made during the first year's working as a unified system, while leaving a substantial sum as a nucleus of a sinking fund.

The pooling of the profits on the London and North Western and the Midland, and on the Great Northern (England), and the Great Central, and the proposed amalgamation of the latter two lines, removes the last argument against unification.

Terms of Act, 1844.

It has been stated that the Act of 1844 can only be enforced against lines paying 10 per cent. dividend. If this were so, it would be easy for any company, if it were so minded, "by watering its stocks," and other methods, to keep its dividends always below 10 per cent., but the Act says, "*Whatever may be the rate of divisible profits,* it shall be lawful for the Lords Commissioners, at any time after the expiration of twenty-one (21) years (1866), to acquire any railway upon giving three calendar months' notice in writing of their intention, and upon payment of a sum equal to twenty-five years' purchase of the annual divisible profits, estimated upon the average of the three then next preceding years." The company has a right, when the profits are less than 10 per cent., to require that it be left to arbitration in case of differences, to determine *what, if any, additional* amount of purchase money shall be paid to the said company, reference being had to the prospects thereof. Could anything be more clear? The lines specially exempted from compulsory purchase, as having been constructed prior to 1844, are in this country, the Dublin and Dregheda, 32 miles, the Belfast and Portadown (Ulster), 25 miles, and the Dublin and Kingstown, 7¾ miles. Those lines were also specially exempted from the powers of compulsory revision of rates under the Act, but they all have been since absorbed by amalgamation, and the amalgamation schemes have been under special railway Acts, every one of which has been made subject to the general Act of 1844. They have been held to be subject to the revision of rates by the Acts of Amalgamation, and, therefore, there is strong reason for believing this affects their purchase also. In any case they are a very small portion of the Irish railway mileage, and could easily be prevented from interfering with the general railway policy.

Father Meehan's proposal to give 3½ per cent. to first-class securities, presumably at their par value, 3½ per cent. on 90 per cent. of second-class securities, and 3 per cent. on 90 per cent. of third-class securities, seems reasonable enough, but it enables the companies

to get outside of the Act of 1844 if they do not agree, and it will be more satisfactory to everybody to keep within the purchase scheme of that Act.

Prospects of the Irish Railways.—Prospects of Irish Lines.

No railway in Ireland in modern times has paid a dividend of 10 per cent. The Dublin and Kingstown did pay 9 per cent. on ordinary stock some years ago, but had to discontinue it, and now only pays 7½ per cent. Mr. Crossley, of the Irish Railway Clearing House, says the future prospects of the Irish Railways are "drastic reduction of railway rates . . . . and reduced dividend on railway investments." These are the future prospects of the Irish lines.

Preference and Debenture Shares.

Preference and debenture shareholders already get preferential treatment in the matter of their dividends, and this is the only preferential treatment that can be be given them within the law. Mr. R. A. Atkins, J.P., Cork, says that "well secured ground rents, with large margins of security, which are quite as safe investments as *any railway securities*, seldom bring more than 25 years' purchase." The Act of 1844 makes no distinction in classes of railway stocks. Our contention, therefore, is that *all* Irish railway securities are subject to 25 years under the Act of 1884, the additional amount, if any, due to them being left to arbitration, having special regard to their future prospects. The only question then remaining being, what shall be given to the stock paying no dividend and to that invested in lines in course of construction. Those might be treated as paying 2 per cent. and 3 per cent., respectively.

Advantages of Unification under Irish Popular Control.

The men, machinery and plant would still be available. Officials would have more time and attention to devote to their duties, and better means of performing them if they were all working under one general management than under the present system. Parliamentary railway contests would cease, law suits between railway companies, such as that of the Great Southern and Western and the Dublin and South Eastern, would be no more. Traffic would not be forced in wrong directions. Facilities would be increased through rates and fares, and lower figures would prevail. There would be no clashing arrangements between rival companies at junction stations. Officials would cease to out-manœuvre one another, and would devote themselves each to the improvement of his own district, and thereby a rivalry of efficiency would take the place of perversity and hostility in working, and the cheap rates and fares of the Continent might be imitated here.

Objection to State Control.

State control or control of the Irish lines by the British Parliament would obviously lead to an extension of the system of "Preferential Bounties," and is therefore objected to as much as the increase of English railway influence here. We would rather maintain the present system with all its defects.

The British Treasury and the Railways.

By the provisions of the recent Land Purchase Act, the British Treasury has the security of the county rates for the payment of the interest on the Land Loan. It will have the same good security for a railway loan, together with the revenue of the railways. When Japan floats a loan in England she does not allow those who take up the loan to interfere with her internal affairs. The bondholders get their interest guaranteed, and the promise of the repayment of the capital in a given time, and they are satisfied.

Objection to British Treasury Influence.

We do not think the British Treasury should require anything more from us. We differ from those witnesses who thought the Treasury should have representation on the Irish Railway Authority. Firstly, for the above reason; secondly, because we know that it is our own money, *i.e.*, money raised from the over-taxation of this country, which is being re-lent to us; thirdly, because we do not think the British Treasury treats us fairly either in seizing the £30,000 annual revenue of the Crown lands, in the matter of the Equivalent Grants, or in the loan of £400,000 to build labourers' cottages in this country, at 3¼ per cent., or ¾ per cent. more than money is lent to England for the same purpose, or taking into account the "free grant," taxing us 13*s.* more in the £100 than England. These things are not of the 17th century. We have also Mr. Micks's views about the Drogheda jam industry, and we therefore cannot agree to Treasury interference in the management of the Irish lines.

Three Methods of Raising the Purchase Money.

We are agreeable to either of three courses:—First, that the Treasury make us a free grant of the amount of money necessary to purchase the lines, in part repayment of the over-taxation of Ireland; second, that the Treasury lend us the money on fair terms, say 2½ per cent., the rate at which they lend to England; third, failing any of the other two courses, that the Act of 1844 should be amended to read, "It shall be lawful for the General Council of County Councils (or some authority similarly elected by and responsible to the Irish people)" where the words "Lords Commissioners" now appear in the purchase clause, thus empowering us to raise the necessary money ourselves, without asking the Treasury for a single farthing. As Parliament must make provision for authorising the guarantee or levy of the purchase money before the expropriation can be effected, the change suggested in the Act of 1844, and other changes to give control to an Irish authority, can then be made.

Payment of Loan.

We think it essential that, whether by a sinking fund or any other method, provision should be made for extinguishing the loan within a reasonable time (say 30 to 40 years). If the best results are to be got out of the Irish railway system, we should like to see the present policy absolutely reversed and remodelled on the Continental system, giving preferential rates on our produce outwards and restricting the preferential rates inwards to those articles which do not compete unfairly with the Irish producer. This would give the English railways the benefit of the traffic over their lines they now get, without committing us to a policy of bankruptcy ourselves. To do this and remedy many other internal grievances the railways must become the absolute property of the people, free from all debt

Present State of Affairs: the Result of the Railway Policy rather than the Managers.

It is only fair to say, in conclusion, that in following the policy they did, Irish managers could hardly have effected much better results, and that some of them having been trained in England, the experience they acquired there, in a policy unsuited to the needs of this country, helped them to bring about the present state of affairs.

* * * * * * * * * * * *

I agree with Father's Meehan's memoranda, and would submit the following confirmatory points:—Directors—(1) At present all real direction is done by the managers, who fix the rates at the Traffic Managers' Conference. (2) Audit Accountant's Office, G.N.R., including auditors at £600, mentioned by Father Meehan, the accountant and 29 clerks receive £3,410. There are also two travelling auditors getting £210 each—£420. Total for auditing accounts, G.N.R. alone, £3,830. If the other three big lines are spending something similar, there should be room for a considerable saving under unification; two cashier's offices, one at Dublin, chief cashier and three assistants, £1,220; Belfast cashier and two assistants, £400; total, £1,620. The cashier's offices might well be amalgamated on this line, and with the general unification saving should result under all these heads. The chief locomotive engineer, G.N.R., receives £650. It is thought the G.S. and W. engineer receives much

more, and in any case only one would be needed under amalgamation. The general manager and seven clerks, G.N.R., receive £2,620, the manager alone £1,800, the goods manager alone £750; nineteen clerks, goods manager's office, Belfast, £1,555; the superintendent of the line £500, and his seventeen clerks £1,510; the superintendent at Omagh and his staff £895; the superintendent at Belfast and his staff £430; the chief engineer receives £1,700; the plant superintendent or rolling stock superintendent £230. And going back to general charges for a moment, the secretary gets £1,000 and his four assistants, £645. All the above are positions which are duplicated by other systems and where a saving could result by unification. I think the Clearing House could be abolished altogether, the only need for it would be to adjust for the English lines, and the English Railway Clearing House could do that. Three canvassers on the G.N.R. receive each £145—£435, and sums are also probably paid elsewhere for such work. All this could be saved similarly for other lines. The law officers of the big companies probably receive £1,000 each per annum. One legal adviser would suffice. On the Great Southern and Western Railway there is a traffic manager in addition to the goods and general managers. The whole system should be managed by a traffic, a finance, and a works department. The Prussian railways are so managed. Three or four commissioners would take the place of the directors, secretaries, chief engineers, and managers. The numerous traffic superintendents might be reduced to four—one for each province—if these are found to be necessary.

Great Northern Railway:—

Soap for Lavatories.—Now purchased from Vinolia Co. London. Why not from an Irish house?

Carriage Window Blinds.—Now purchased from W. S. Laycock, Sheffield. Why not in Ireland?

Platform Luggage Barrows.—Now purchased and made in England. Why not these at home here?

Clothing for Staff.—The uniform for all the staff are now made in Bristol. Why not in Ireland?

Lavatory Accommodation.—A great grievance on the north-west section. No lavatory accommodation for third-class passengers, although Mr. Jordan, M.P., called attention to it in the House of Parliament in 1904.

Preference to Ports and Towns.—Belfast is subsidised at the expense of Dublin. On Easter Monday and other holidays, when cheap tickets are given at very low rates to Belfast whilst such are not given to Dublin; also, at page 90 of the G.N.R. public time table, cheap weekly tickets to Derry and Belfast are allowed, while Dublin is not accorded such. This induces the people to go to Belfast and Derry for their necessaries and not to Dublin. Live stock is carried from Strabane to Belfast in passenger train wagons by passenger trains at ordinary goods train rates, but cattle similarly consigned to Dublin are made to wait for the ordinary slow goods train service.

Dead pigs are carried in hampers from Cavan to North Wall, Dublin, for shipment by L. & N W. R. Co. by the 6.30 am. train from Cavan and the 6.40 a.m. train from Enniskillen, both passenger trains at goods train rates, to keep them from the M.G.W.R., and canvassing for this traffic has to be paid for.

Mr. Goulding admitted that engines could be made cheaper in Ireland than they could be imported; we may take it that this is so of carriages and wagons, therefore there would be a saving in works as well as other supplies. A large amount of telegraphing, caused by hauling traffic out of its course, and by want of conveyance amongst other things, could be saved. In offices that could be closed there would be a saving in rent, taxes, light, and repairs. Demurrage charges and the necessary checking of them would be eliminated, as traffic would settle into its normal groove. The general amount of traffic between ports and inland towns and from point to point could be estimated and arranged for, and it would not be necessary to run empty wagons on trains to avoid demurrage charges. Therefore, the train load could be better arranged, traffic would go by the shortest route, the amount of supplies obtained by towns and inland villages from the cities could also be found out and arranged for. Building materials can be obtained as cheaply and of better quality (as far as stone is concerned) in this country than abroad, and more employment could be given by keeping the work and contracts, as far as possible, in this country.

Local Industries Affected.

The present rate for butter from Newbliss to Limerick is 31*s.* 6*d.* per ton, station to station. In Belgium butter is carried over the lines at a rate of a trifle over ½*d.* per ton per mile. In Ireland, on the Great Northern system, the rate is about 2 14-25*d.* per mile. In County Monaghan large tracts of land in the interior of the county are very much in need of lime. The representatives of some five or six parishes seriously affected, applied to the Great Northern Railway Company for facilities to have lime conveyed from stations near the kilns to stations near the affected area. The railway company offered to reduce the existing rate per ton, I believe, in some instances from 1*s.* 8*d.* to 1*s.* per ton. This seemed pretty reasonable, but the railway company added a condition ensuring that the farmers, in order to secure this rate, would have to have carried over this particular line 370 tons inside the year, and also that wagons would be emptied on arrival. The company had not conveyed more than from six to ten tons annually on the same line previously, and as they refused to give either suitable covered wagons or sheds in face of the danger to the lime by rainfall, the people could not accept.

Mr. Whelan's Statement was transmitted to the General Manager of the Great Northern Railway (Ireland), who furnished the subjoined explanatory memorandum:—

II.

Great Northern Railway Co. (Ireland),
General Manager's Office,

Dublin, 2*nd July*, 1908.

Sir,

With reference to your letter of the 25th ultimo, addressed to Mr. Tatlow, in which you enclosed portions of Mr. Whelan's abstract of evidence, said not to have been dealt with during his examination, I beg to say the majority of the subjects mentioned in this memorandum were dealt with by Mr. Whelan in his examination by the Commissioners on the 13th March last; my company's observations thereon are embraced in my proof, and I do not propose to deal with these matters in duplicate.

As regards the further abstracts which are proposed to be printed in the Appendix to the Fourth Report, and which have apparently been prepared since Mr. Whelan gave his evidence, I beg to observe:—

1. That the statement as to fruit, butter, eggs, and vegetables, 26 to 50 lbs. in weight, being carried 150 miles, or over it, on the South African railways at a rate of 2*s.* 8*d.* per cwt., as against 4*s.* on the Great Northern Railway, is incorrect, as the rate on my company's system is 2*s.* 6*d.* per cwt.—less than the alleged charge in South Africa.

2. As regards Mr. Whelan's remarks under the head of "Extensive charges wasted in bounties to English goods and unnecessary haulage," in which I am alleged to have stated that the long haulage caused the high rate in Ireland, there must be some misapprehension in this. I have never made any such statement, as I know quite well that in making rates the mileage rate decreases as the distance increases.

3. As regards that portion of the memorandum in which Mr. Whelan attempts to give the salaries paid to various officers of the company, the figures he gives are incorrect, but in any case I do not propose making any comment upon them, as I propose giving evidence before the Commissioners upon the question of unification of railways.

4. As to Mr. Whelan's complaint that the Company purchase their soap from the Vinolia Company in London, the company deal with these

matters by inviting tenders and accepting the lowest price (other circumstances being satisfactory) in accordance with the usual business principles, and the same remark applies to the clothing of the staff; and as respects platform luggage barrows, I may say that these are not purchased from English firms, but are made on the Company's premises.

5. There is no truth in Mr. Whelan's statement that the Company give an advantage to one port over another. The accommodation provided, and the facilities given, are alike under corresponding circumstances, and are carried out in such a way as to best suit the local public requirements.

6. Mr. Whelan endeavours to show that the Irish railway rates injuriously affect local industries, and gives a figure as a rate for butter from Newbliss to Limerick. Naturally there is no traffic (the Limerick district producing one thousand times more butter than Newbliss), as it would be like carrying coals to Newcastle, but as I have fully shown in my evidence, the rates for butter, both locally and to the English and Scotch markets—which is an important question—are very reasonable, and do not militate against the butter finding a market in England and Scotland.

7. As to Mr. Whelan's remarks with regard to the supply of lime to certain places in the County Monaghan, I will deal with this by way of evidence before the Commission, but I may here say that the Department of Agriculture approached the company, stating that they had received a guarantee from the farmers interested that they would purchase 470 tons of this lime in the year, as a minimum, and would provide sheds for its storage, provided the company would give low rates. To this the company agreed. The sheds, however, were not provided, either by the farmer or by the Department of Agriculture; nevertheless the company applied the reduced rates for twelve months, as a trial, without the sheds, which were never constructed, and only 292 tons of lime were carried in the twelve months.

I am, Sir,

Your obedient servant,

(Signed) HENRY PLEWS,
General Manager

G. E. Shanahan, Esq., Secretary,
Viceregal Commission on Irish Railways,
13, St. Stephen's-green, N., Dublin.

The following supplemental statement was furnished by Mr. Whelan:—

III.

With reference to questions put to me in my evidence before the Commissioners, starting from Question 43466, I would like to say that since my return I have seen some of the cattle wagons run in goods trains and, although the buffers are all spring buffers, the yield in the older wagons is so slight that a sudden stop must cause the wagons to rebound. In the passenger train cattle wagons and in the few newer goods train cattle wagons the springs are altogether different. If the cattle wagons used in goods trains were fitted with the vacuum brake and attached directly to the engine in front of the train this rebounding could not occur.

The rate for butter on the Great Northern Railway, 86 miles, is 18*s.* per ton, or $2\frac{2}{3}d.$ per ton per mile. I regret I cannot trace the original station in my notes, but this is on the authority of "Rates for the Conveyance of Agricultural, Farm, and Dairy Prdouce" issued from Amien's-street Station, Dublin, Great Northern Railway, 1st July, 1904.

The Belgian rates for 80 miles for oats, straw (in bales) and potatoes, third-class per ton (1,000 kilogrammes—128 kilometres)=6 francs 78 centimes=5*s.* $5\frac{1}{4}d.$ and for turnips and hay, fourth class (1,000 kilogrammes—128 kilometres) 4 francs 78 centimes=3*s.* 10*d.*, about.

1,000 kilogrammes equals roughly 1 ton.
128 kilometres ,, 80 miles

I consider it only justice to send you those few explanatory facts, and trust you will succeed in having them placed before the Commission.

IV.

The above statement was communicated to the General Manager of the Great Northern Railway (Ireland), who forwarded an explanation to the effect that as regards wagon buffers his company use the ordinary and usual class of spring buffers on all their wagons. Colonel Plews also intimated that he proposed to deal, in the course of his evidence, with the comparisons of foreign and Irish railway rates.

APPENDIX No. 25.

ABSTRACT of EVIDENCE, furnished by Mr. M. P. O'BRIEN, J.P., Chairman, Edenderry Town Commissioners (since deceased), on 14th March, 1908.

(Mr. O'Brien was not summoned for examination).

I am Chairman of, and represent the Edenderry Town Commissioners. I am in favour of the State buying out the railways, but consider they should be under popular control, in other words they should be controlled by a Committee, consisting of a representative appointed by each County Council in Ireland.

There is no reason why County Councils could not control the railways the same as they do the roads.

The general body of representatives should elect a Working Committee from their numbers, of say—eight members, to be augumented by the Government appointing two representatives, and say, one or two railway experts, the latter to be elected and paid by the Committee so formed

My only reason for objecting to entire State control is that there is too much red tape about all Government appointments, and as a rule, Government officials are not by any means civil to the public. The general body of Government officials in Ireland in any case, do not appear to look upon themselves as public servants at all.

It is very hard to get satisfactory settlement of claims from the railway companies, but it is more so from that excellently worked institution the Post Office, but fortunately the post offices are much more efficient in the discharge of their duties, and there are fewer mistakes or claims to be made against them. So a mixture of Government efficiency blended with a little everyday civility and business discretion should work well.

We are situate on a branch line in Edenderry, and the railway service is very bad. We have two morning trains between Dublin and Edenderry starting before 9.30 o'clock, but we have only one afternoon train leaving Edenderry in the evening at 3 15, and

we have only one afternoon train from Dublin which leaves there at 4.15; and although Edenderry is only thirty-seven and a half miles from Dublin it means that a business man when he goes there (to Dublin), has got to lose his whole day before he can get back again. No doubt there is a train about mid-day which leaves Edenderry at 11.30, and when it keeps time (which is seldom) it reaches Dublin at 3.20, this works out at about eight miles an hour, and it is unnecessary to say that this is not a satisfactory mid-day service.

It may be, and probably is the case, that this branch line does not pay so far as passenger traffic is concerned, but I am sure it pays very well as regards goods traffic.

It is hard to expect the Directors of the Midland Line to run trains that do not pay, and I think that is an argument in favour of State control, because when the railways would be all amalgamated and run with the object of making a common profit, branch lines like this would not be starved as regards accommodation, but would be run as a component part of the whole, and get the same accommodation and facilities as main lines, and not be treated merely as local service.

I imagine that would be one of the benefits of State control, that the whole systems would be pooled, and all districts get equitable service.

With regard to goods traffic on this line, Edenderry is not so badly off as other places on the Midland Line, as we have a good canal service, but so far as rates are concerned the advantages of the canal service is minimised by the fact that an agreement exists between the railway company and the canal company, which, amongst other things, prevents cutting of rates, so that we have not the advantages that we should have from competition.

We have a peat works, and timber industry at Edenderry, which have developed very rapidly within the last few years, and employ a large number of hands, but both owners complain that they are hampered by rates, and they believe they could get better rates out of the canal company if it were not for their agreement with the railway company. It is excessive rates that is killing all young Irish industries.

There has been a general complaint all over the Midland system of the inferior third-class carriages, and of the excessive charges for first and second-class tickets. There are many respectable ladies who cannot afford to travel second-class, especially on long distances, and who, when they travel third, buy a newspaper to place under them on the seat.

I think a witness in the earlier stages of this Commission compared third-class carriages to perambulating hearses. I would not like to do so, because hearses, as a rule, are kept scrupulously clean, which is more than can be said for any of the carriages on the Midland Line.

Before finishing with the Midland Railway Company I wish to say that they are to a certain extent to be excused for their shortcomings, inasmuch as they labour under many disadvantages, and are trading through a very poor district.

I do not purport to give any evidence as to figures, as all this has been fully gone into before by other witnesses, that, I think, would be superfluous on my part to do so.

Speaking of railways generally in Ireland, I consider that under State control, worked on the lines I suggested. they would have a great many progressive business Irishmen on the Central or Working Committee, and that they would bring their business knowledge to bear on their work, and would take the place of the present Directors, who on railway Boards are composed of "Guinea Pigs" rather than business men, and who only have a pocket qualification and not a brain qualification.

The managers under this new Committee would in all likelihood be Irishmen, who understand Irish requirements, and have a knowledge of Irish methods of doing business, and a sympathy with the industrial developments of the country, none of which qualifications most of the present managers have, being mostly Englishmen or Scotchmen who have no sympathy with, or knowledge of the country or its requirements, and don't understand it.

(Signed) M. P. O'BRIEN.

7th March, 1908.

APPENDIX No. 26.

LETTER from the Town Clerk, Gorey, County Wexford, regarding through rates between the principal stations on the Dublin and South Eastern and Great Western Railways; and correspondence thereon between the Commission and the General Managers of the Dublin and South Eastern and Great Southern and Western Railways.

I.

Town Commissioners' Office,
Gorey,

16*th March*, 1908.

SIR,—I am directed by my Commissioners to inform you that they are unanimously in favour of "Through Rates" between principal stations on the Dublin and South Eastern and the Great Western system. Of course this town included as a principal station.

Your obedient servant,

(Signed), DENIS MURPHY,
Town Clerk.

The Secretary,
Viceregal Commission on Irish Railways,
13, St. Stephen's Green, N.,
Dublin.

II.

A copy of this Resolution was forwarded to the General Managers of the Great Southern and Western and Dublin and South Eastern Railways, and the following explanation was subsequently furnished by the latter:—

DUBLIN AND SOUTH EASTERN RAILWAY,
General Manager's Office,
Westland Row Station,
Dublin,

24*th March*, 1908.

R 6987.

DEAR SIR,—Referring to your letter (512-08) of 20th instant, respecting an intimation received by the Viceregal Commission from the Gorey Town Commissioners, I beg to say that through rates have already been put into operation between the principal stations on this Company's railway, including Gorey, and stations on the Great Western system *via* Rosslare.

Yours faithfully,

(Signed), A. G. REID,
Per G. M.

G. E. Shanahan, Esq.,
Viceregal Commission on Irish Railways,
13, St. Stephen's Green, N.,
Dublin.

APPENDIX No. 27.

STATEMENT as to unsuitable train connections for shipping traffic from Banbridge, transmitted to the Commission by Messrs. THOMAS FERGUSON & Co., Limited, Banbridge, and explanations in connection therewith, subsequently furnished by the General Manager of the Great Northern Railway (Ireland).

I.

EDENDERRY FACTORY,

BANBRIDGE, *April 29th*, 1908.

DEAR SIR—

A short time ago the Great Northern Railway Co. made an alteration in the time of departure of their shipping train (that is the train which carries goods for shipment to England, Scotland, or the United States) which will have a very detrimental effect on the trade of this town and district, as a number of manufacturers and merchants in this neighbourhood are largely engaged in cross-Channel and transatlantic trade. We have appealed to both the railway and steamship companies, and each very strongly lays the blame on the other; our present opinion being that the railway company are at fault; but we are quite unable to obtain any redress.

For many years the shipping train left here at 2.35 p.m.; last year it was altered to 1.30 p.m. (in spite of protests), and it is now further altered to 12.40, the result being that we have to hand goods to the railway company at 12 o'clock, noon, the distance to the point of shipment (Belfast) being twenty-five miles, and the shipping companies receive goods from the railway company on rail at the docks up to 7 o'clock, p.m., or on carts up to 8 o'clock. If a matter of this kind is within the scope of your Inquiry we would be very pleased to give you full information. There is no doubt that, if the present train service is allowed to continue, we will lose considerable business in this district, and consequently both employer and employed will suffer.

Yours truly,

(Signed) For Thomas Ferguson & Co., Ltd.,

THOMAS FERGUSON.

The Secretary,

Vice-Regal Commission on Irish Railways,

Dublin.

II.

This complaint was communicated to the General Manager of the Great Northern Railway of Ireland, who replied as under:—

GREAT NORTHERN RAILWAY CO. (IRELAND),

GENERAL MANAGER'S OFFICE,

DUBLIN, *7th May*, 1908.

SIR—

With reference to your letter of the 1st instant (749), I beg to say that the alteration in the running of this Company's shipping train from Banbridge to Belfast has been necessitated entirely by the notification given by the steamboat companies sailing from Belfast that they will not now receive any goods from the companies for shipment same night unless these are delivered before a certain hour. This has limited the time at our disposal for making delivery of traffc from the country for shipment by about one hour, and this alteration has, I believe, been adopted by the steamboat companies to save them from paying overtime to their staff.

We have a very large amount of traffic for shipment at the port of Belfast; some of which has to be conveyed long distances, and we must necessarily land in Belfast that from the short distances at an earlier hour, so as to enable us to cope with that arriving from the more distant stations.

We should have made the departure of our trains from Banbridge a little later, but as the line to Banbridge is a single one, the exigencies of the service compelled us to make the departure of the train 12.40 p.m., as against a former departure at 1.30 p.m.

I am, Sir,

Your obedient servant,

(Signed) HENRY PLEWS,

General Manager.

The Secretary,

Vice-Regal Commission on Irish Railways,

Dublin.

III.

EDENDERRY FACTORY,

BANBRIDGE, *May 20th*, 1908.

DEAR SIR—

We are obliged for your favour of 8th instant, enclosing copy of statement made by the Manager of the Great Northern Railway Co., in which he repeats the assertion already made by that company to us, viz., that the alteration in the time of departure of shipping train from Banbridge to Belfast (in the first instance from 2.35 to 1.30, and in March last from 1.30 to 12.40 p.m.) has been caused by the shipping companies insisting on the traffic being delivered to them at an earlier hour.

We take exception to this statement, and we would point out the following facts for your consideration in connection with Mr. Plews's statement:—For a very considerable period, and at the time that the shipping train left Banbridge at 2.35, many of the shipping companies actually had their sailings at 8 o'clock, and now, when the Great Northern Railway Co. can deliver goods to them up to 8 o'clock on carts, the railway company despatches our train at 12.40. In point of fact whilst they have the same time in which to deliver goods to the shipping companies, they insist on our handing them traffic two hours earlier; we submit that this goes far to disprove the railway company's assertion that the shipping companies are at fault.

In this connection we may mention that the railway company charge us a cartage rate of 1*s.* 4*d.* per ton (total rate 8*s.* 4*d.* for 24½ miles) for taking goods across Belfast, but they actually, in almost every instance, send them on rail to the docks, where they are received by the shipping companies up till 7 o'clock (instead of 8 o'clock on carts); the probable cost of transit across the Central Railway is a few pence per ton for which we pay 1*s.* 4*d.* per ton. Banbridge, as we have already pointed out, is 24½ miles from Belfast, and it certainly appears to be a travesty on railway management to compel us to deliver goods to the railway company at 12 o'clock, noon, which have only to be put on the steamer at 8 o'clock, p.m. Ballymena, on the Midland Railway, is thirty-three miles from Belfast, and their shipping train leaves at 3 o'clock; we think this service, compared with what is given us, is also a very strong argument against the assertion of Mr. Plews, and we believe we are correct in stating that the Midland Railway have not altered any of their trains "owing to the action of the shipping companies." We send you under separate cover a copy of to-day's *Northern Whig*, marked, and you will observe the case for the shipping companies fully set out in the letters from the joint companies to Mr. Plews published therein, which came before the meeting of the Belfast Harbour

Board yesterday, and also the matter is discussed in the speeches of Mr. John Sinclair, and other speeches also published.

Unfortunately it would seem that the Harbour Board does not see its way to interfere in the dispute between the railways and the shipping companies, and for that reason we have brought the matter under your notice and trust that you can assist us. We have built up a very considerable business with the United States, in competition with Belfast, and we feel that this retrograde action on the part of the Great Northern Railway Co. will seriously handicap us and many other shipping firms in the district.

Yours truly,

(Signed) For Thomas Ferguson & Co., Ltd.,

THOMAS FERGUSON.

The Secretary,
Vice-Regal Commission on Irish Railways,
Dublin.

IV.

The substance of this letter was communicated to the General Manager, Great Northern Railway (Ireland), who submitted the following observations:—

GREAT NORTHERN RAILWAY CO. (IRELAND),
GENERAL MANAGER'S OFFICE,

DUBLIN, 12*th June*, 1908.

SIR—

I am in receipt of your favour (875/08) of the 23rd ulto., enclosing further statement from Messrs. Thomas Ferguson and Company, of Banbridge, in regard to the time of departure of the shipping train from Banbridge. I beg to say that when this train left Banbridge at 2.35 p.m. the Belfast Shipping Companies complained that its hour of arrival in that city was not satisfactory to them, as it did not give sufficient time for the loading of the traffic before the arrival of other shipping trains from more distant points, and accordingly at the particular request of the steamboat companies the departure of the train from Banbridge was made to be 1.30 p.m.

Twelve months afterwards the steamboat companies gave notice of their determination to limit the time within which they would accept goods for shipment, and consequently the departure of the train from Banbridge had to be made earlier.

We should not have made the departure earlier by so much as fifty minutes but for the fact that on account of the working of the passenger trains on the single line between Lisburn and Banbridge this was the amount of alteration forced upon us.

I think that the change made by the steamboat companies should have had further consideration before being put into effect. I am in communication with them, and have suggested that there should be a meeting of all the parties concerned to consider whether the assured shipment of traffic at Belfast cannot be obtained with less curtailment of accommodation to the public.

I am, Sir,

Your obedient servant,

(Signed), HENRY PLEWS,

General Manager.

The Secretary,
Vice-Regal Commission on Irish Railways,
13, St. Stephen's Green,
Dublin.

V.

Messrs. Ferguson and Co. were advised of Colonel Plews's further remarks and replied as follows:—

EDENDERRY FACTORY,
BANBRIDGE, *June 25th*, 1908.

DEAR SIR—

We are obliged for your favours of 15th and 24th instant. Referring to the extract from letter of the General Manager, Great Northern Railway Co., enclosed with first-named letter, we would say that if you will kindly refer to our letter of 20th May, you will find that Mr. Plews, in his communication of 12th inst. to you, makes no attempt whatever to refute the statements made therein; he merely falls back on his original position of laying the blame for the alterations in the train service on the demands of the Belfast Shipping Companies for earlier delivery of goods. As we have stated to you in writing the shipping companies absolutely deny the accuracy of Mr. Plews's original statement, and they also as stoutly deny the accuracy of the statement made in the first paragraph of his letter of 12th inst., enclosed to us. We adhere to all the statements made in our letter of 20th ult., and it is quite clear that Mr. Plews is in no position to prove that they are inaccurate.

We are glad to note from the concluding paragraph of the extract from Mr. Plews's letter that he has reconsidered the position of his Company, and that a meeting between the shipping companies and himself is likely to take place. Until the results of this meeting are made public we do not think that any good purpose would be served by our writing you further on the subject, and meantime we thank you for giving us the opportunity of bringing the matter under your notice.

Yours truly,

(Signed) For Thomas Ferguson & Co., Ltd.,

THOMAS FERGUSON.

The Secretary,
Vice-Regal Commission on Irish Railways,
Dublin.

APPENDIX No. 28.

LETTER addressed to the Chairman of the Commission by Mr. WILLIAM FIELD, M.P., on the subject of Railway Nationalisation.

RAILWAY NATIONALISATION.

Blackrock,
8th May, 1908.

To Sir Charles Scotter,
Chairman,
Viceregal Commission on Irish Railways.

DEAR SIR,—As certain suggestions I made to your Commission (where I was most courteously received) have been criticised as impracticable, I desire to focus the attention of the public generally, and more particularly of your Commission, to what is probably the latest example by a State of railway management. But in Ireland the State does not represent the people, and the railways should therefore be managed with the assistance of elected representatives.

A recent number of "Dun's International Review" contains an allusion to the new Transcontinental

route, or the Central Mesa of Mexico, which reads in the following terms:—

"Mexican Railway Merger Complete.

"As this issue goes to press it is announced that the long expected merger of the Mexican Central Railroad system with the National lines of Mexico has been completed. The actual control of the Central was turned over to the Mexican Government on February 28th, and formal announcement of the fact made on the following day. The re-adjustment of securities incident to the merger will be effected through New York banking houses.

"That this important financial operation should be undertaken at this issue is one of the strongest evidences of returning confidence in both American and European financial circles. While about 10,000 miles of railway will, as a result of this transaction, be under the direct control of the Mexican Government, no change is contemplated in the actual administration of any of the lines effected, nor will the result be Government ownership in the sense that many State railway systems are owned and operated. The actual direction of the Central Mexican Railway will remain where it is at present. What the Mexican Government has aimed at and accomplished by the merger is that hereafter it will so control the railway situation in Mexico that it can prevent the establishment of rates prejudicial to Mexican industry or the conclusion of mergers or traffic agreements between other Mexican and American railways that might be to the economic disadvantage of the country."

One could easily imagine this statement of railway affairs was written about Ireland, and if the Government are in earnest in their cheap sympathetic professions to aid economic progress in Ireland they will, I trust, on your recommendation, at least adopt the good example shown in Mexico, with a view to ultimate nationalisation, under popular control, which has lately been successfully carried out in Switzerland.

Again, in the "Times" of Thursday, 5th March last, will be found the following:—

RAILWAYS IN THE BALKANS.

Russian Note to the Powers.

St. Petersburg, *March* 3.

"With reference to the construction of railway lines in the Balkan peninsula, the Russian Government has addressed to its representatives abroad a circular telegram, in which it points out that the Vienna Cabinet, in notifying Russia of the Bosnia-Mitrovitza Railway scheme, declared that its aims in the construction of the projected line were exclusively of an economic character, and directed towards the improvement of communication in the Balkan Peninsula.

"The Russian Government," continues the note, "which has always keenly interested itself in the economic development of the Balkan States and peoples, is of opinion that the construction of railways which connect the different portions of the Peninsula with each other would afford these States free access to the Peninsula and its surrounding seas, and would continue to the peaceful progress of these districts."

Surely if India and the Colonies, under British rule, the Free Republics of Mexico and Switzerland, nearly all the Continental countries, and even the despotic iron rule of the Czar, can accomplish so much to secure the application of my maxim that *Trade and Transit travel together*, it ought not to be impossible under a nominally constitutional form of government to protect the Irish people from the evils arising out of a transport system of private monopoly guaranteed by the State, which unduly taxes the community. If this is allowed to continue it will still further prove the statement of Junius, "That Ireland has been uniformly plundered and depressed."

There is really no responsible Irish Government, for I have shown in my Treasury Tactics Pamphlet that so long as permanent officials and the Treasury practically govern the government, and administer the Ministers as Parliamentary mouthpieces, there is scant hope of financial fair play or railway reform in Ireland.

Faithfully yours,

WILLIAM FIELD.

N.B.—I am sending a copy of this letter to the Press.

APPENDIX No. 29.

SUGGESTED PARLIAMENTARY QUESTION, relative to the Castleblayney, Keady, and Tynan Railway, furnished to the Commission by the Castleblayney Urban Council, and the reply given in the House of Commons by the President of the Board of Trade, on the 18th May, 1908.

Castleblayney Urban Council,
Board Room,
11*th May*, 1908.

SIR,—I have been directed to forward you the enclosed copy of question.

I have the honour to be,
Sir,
Your obedient servant,
(Signed), B. MACARDLE,
Clerk of Council.

The Secretary,
Royal Commission on Irish Railways,
Dublin.

I.

CASTLEBLAYNEY, KEADY, AND ARMAGH RAILWAY.

Questions suggested at the instance of the Castleblayney Urban Council *re* Construction of Castleblayney, Keady and Armagh Railway, and kindly promised to be asked in the House of Commons by Mr. M'Kean, M.P.

(1) What was the time specified for completion in the original Act?

(2) What extensions of time have since been granted to the Company?

(3) Is it a fact that the Works between Keady and Castleblayney have been idle and derelict, with the exception of a few odd days, for over twelve months,

and that there is no sign of the re-starting of the works.

(4) That the work of Arbitration is still incomplete.

(5) That the farmers through whose lands the Works pass suffer severely by trespass, loss of cattle, and want of privacy and protection by reason of the unfinished state of affairs.

(6) Are not many of the roads on which Overhead and Underground Bridges are proposed—and proposed Accommodation Roads—in such a state as to seriously interfere with traffic, and also prevent farmers of the use of Threshing Mills, and such similar conveniences in their farming pursuits?

(7) Can no steps be taken by the Board of Trade to have the Act carried to immediate completion, both in the public interest of the owners above referred to?

Resolved:—"That copies of the questions above suggested be sent to Mr. M'Kean, M.P., Mr. Lardner, M.P., the Chief Secretary for Ireland, the Lord Lieutenant, the Secretary to the Board of Trade, and the Secretary to the Royal Commission on Irish Railways."

II.

(As reported in the *Freeman's Journal*, 19th May, 1908.)

Mr. CHURCHILL.—The time originally specified for the completion of this railway was five years from 8th August, 1900, and it was subsequently extended by Parliament to 29th November, 1909. I am informed by the company that the contractor for the railway commenced work about the beginning of the year 1904, and proceeded therewith until the middle of December, 1907, when he stopped work. He resumed in January last, but the company's engineer having recently advised the Directors that inadequate progress was being made, they are now in a position to take steps to obtain possession of the works and complete them themselves, and this they proposed to do as soon as possible.

Mr. M'KEAN.—Is the right hon. gentleman aware that the state of the facts disclosed in the answer is part and parcel of the practice of railway companies generally in obtaining power which they do not intend to use for the construction of lines which are for the public good, but may be to their own profit, and will he take steps to compel railway companies to make use of the powers given?

Mr. CHURCHILL.—I think the steps I have indicated which will be taken in this case will be effective steps.

Mr. M'KEAN.—But will the right hon. gentleman take steps to make railway companies in general carry out their powers?

Mr. CHURCHILL.—I think that is a question of too wide a scope for me to give an answer at once.

APPENDIX No. 30.

STATEMENT, relative to the necessity for railway communication with Dunmore East, transmitted to the Commission by Mr. I. T. Shipsey, County and District Councillor, on the 3rd July, 1908.

DUNMORE EAST,
Co. WATERFORD,
3rd July, 1908.

SIR,

I am very grateful to the Viceregal Commission on Irish Railways for consenting to receive a written statement from me on the necessity of railway communication with Dunmore East for the development of the fishing industry in this important fishing centre. I would prefer, if it were possible, to be examined before the Commission, that I might fully explain all the circumstances of the case.

The necessity of a railway to Dunmore East has been long felt and recognised. So long ago as 1857 there was a Bill before Parliament to construct the proposed line. Why it was withdrawn I cannot say. In 1889 the Tramore and Waterford Railway Company took up the matter and plans were drawn (which are still in possession of this company) to construct a branch line. Again the project fell through. Four years ago a memorial, signed by all the people of Dunmore and vicinity, without exception, was forwarded to the Department of Agriculture (Fisheries Branch) to help in getting a railway. The Department sent down a representative, Mr. Philip Mulligan, to make enquiries, and he suggested that the memorialists formulate a scheme and submit it to the Department. This, however, was not done. Still feeling the necessity of a railway, the people have been moving actively to realise the project. It has received, this year, the warm and unanimous approval of our county and district councils. The majority of the Waterford Corporation have expressed a wish to pass a resolution in favour of it—so well they might, for whatever trade a railway to Dunmore will bring must necessarily benefit Waterford, its nearest and most important distributing centre—and who knows but Dunmore East might yet be our city's shipping port. There is a strong and general consensus of opinion in favour of this railway scheme. Lord Waterford and all the local gentry, the magistrates and clergy, Catholic and Protestant, approve of it—indeed, all interested in the welfare of Dunmore are agreed that a railway is the only means to attain that end.

As a resident of Dunmore for twenty years, knowing well its needs and necessities, and strongly convinced of its possibilities, I believe the only way to supply these wants and to realise these possibilities, is the construction of the proposed railway. Not to speak of bringing this unrivalled watering place within reach of the outside world and opening a large tourist traffic, the development of the fishing industry is what Dunmore needs most.

On the testimony of skilled and experienced fishermen—English and Scotch as well as Irish—Dunmore East should be one of the best fishing ports on our coast. Instead it holds only a secondary place.

Dunmore East should claim particular attention from the Government, because it has always been a most important fishing port, situated midway on the S.E. coast of Ireland, and remarkable for the abundance and quality of the fish, particularly the famous "black sole" of Dunmore. It has a fine harbour, a splendid pier and quay, built by the Government at a cost of £100,000, accessible at all states of the tide, not only to large fishing boats, but also to trading vessels and steamers, an advantage which cannot be claimed by any other harbour from Kingstown to the Cove of Cork, a distance of 150 miles. Dunmore East being also a well sheltered harbour, affords a safe and convenient base of operations, not only to local boats, but to boats that come there from distant parts of Ireland and various English and Scotch ports. Within a few miles of this coast, from Tuscar Lightship to Mine Head, there are 200 sailing trawlers doing a good trade. These boats, or the great portion of them, would land their fish at Dunmore if there was a railway communication with that port. At present these

boats must take their fish to Milford Haven (150 miles to and back), at great inconvenience and loss of time. The only drawback to a large and prosperous fishing industry in Dunmore is the want of rapid transit of the fish in time for the English and Irish markets. Under existing circumstances large quantities of it have to be conveyed in carts, supplied by local farmers, to Waterford, a distance of 11 miles. This primitive method of conveyance, besides being necessarily slow, taking from three to five hours on the road, is most injurious to the fish, and which, if caught in "large catches," have been frequently thrown in the sea. A paragraph from the *Waterford Evening News*, May 9th, 1908, explains the matter very clearly:—"A serious state of affairs has arisen in connection with the herring fishing in Dunmore East. On Wednesday night ten sailing boats and three steam drifters went to sea and caught a large quantity of fish—about 400 mease—an unusually large take for such a small fleet—with the result that the whole of the fish could not be bought or sent away for want of buyers, and even if there were buyers enough, there would be no means of conveyance, as the present mode of conveying fish by carts is unequal to more than 300 mease. In this condition of things, more buyers from outside will not come to Dunmore, it being too expensive and inconvenient to bring their stock (barrels and boxes) there and thus the fishing industry must remain hampered and undeveloped, to the great loss of the fishermen and others employed in connection with them. About 150 mease is left unsold and is, by this time, thrown into the sea. A railway is the only solution of this difficulty. Outside buyers (at present the fishing must depend on a few local buyers) could then easily send their stock, and no doubt higher prices would be given, and instead of a dozen, 60 or 100 boats would land and dispose of their fish profitably at Dunmore. The herrings on Thursday morning, had to be sold for 3*s*. per mease; 8*s*. is the minimum price to give any profit to the fishermen. The sea off Dunmore is just now teaming with herrings. With railway facilities these herrings and mackerel could be sent to many inland towns of Ireland, where the people never see a sea-fish of any kind."

Now, if better means of transit were provided, I believe the herring, trawl, and mackerel fishery would be largely developed, bringing more trade and prosperity to Dunmore. More buyers would come, creating a keener and more healthy competition and securing a better price for the fish, with the result that a larger fleet of boats would be attracted by the improved condition of things. One of the special functions of our Chief Secretary, as President of the Board of Agriculture, etc. (Fisheries Branch), is the development of agriculture and fisheries—two industries on which the Irish people must mainly depend. Here is an industry that can be developed by a liberal Treasury Grant to aid local effort in promoting a railway scheme. Similar grants have been given to other places of less importance, and, perhaps, not more deserving. A short time ago £20,000 was given by the Treasury to improve Sligo Harbour, £14,000 to Arklow for a like object, and £12,500 was offered by the Government to a railway company to build a railroad, 25 miles long, from Mallaranny to Belmullet, to develop the fisheries there; £63,000 was given some years ago to construct a railway from Skibbereen to Baltimore, a distance of nine miles, for the benefit of the fisheries; £315,000 to construct a railway, 49 miles, to Burtonport, Co. Donegal, etc. Treasury Grants have been given by previous Governments for piers, harbours, and railways, especially by the brothers Balfour, during their Chief Secretaryship. Dunmore never got any subsidy to help her fishing industry, and surely it is time the attention of the responsible minister should be directed to this neglected place.

Dunmore has always paid its share of local and other taxes, and has got nothing in return, and it is a principle of political economy, applied to every country except Ireland, that the rulers of the country should employ some of the taxes paid by the people for the amelioration of the taxpayer.

That a railway to Dunmore would pay, I have no doubt whatever, and, as a proof of my belief in the soundness of the scheme, I am prepared to make a substantial investment in it.

The Waterford and Tramore Railway, which has no fish and very little goods traffic of any kind, depending mainly on passengers and excursions in summer, is paying 5 to 6 per cent. If there was a Waterford and Dunmore East Railway, besides the large volume of fish traffic in spring, summer and autumn—more or less during the whole year round—it would also have its share of passengers and tourists in summer, which to this charming seaside resort, with facilities of access, would be certain to compete in a short time with that of any of our most popular watering places.

I give here quantities of fish taken during some years off our coast:—1905—Herrings, 25,389 cwt., value £5,162 12*s*. 9*d*.; mackerel, 7,751½ cwt., value £433 18*s*. 1*d*.; 1906 and 1907 varies, but substantially the same. Of course, all would increase by having railway facilities.

Trawl fish would average from 12 to 15 cwt. per week per boat, of 30 boats that have signified their intention to unload their fish at Dunmore, in the event of railway facilities. Apart from every other consideration, this would keep the railway going, together with all the other fish traffic.

Our scheme is to apply to the Government for two-thirds of the necessary capital, and raise the remaining third by local shares. If the capital be forthcoming, the Waterford and Tramore Railway Company promised to recommend the making of a branch line to their shareholders, as the following letter of the Chairman, Sir W. G. D. Goff, shows—

11*th December*, 1907.

Dear Sir,

Referring to the interview of the deputation from Dunmore East to-day with the Directors of this Company, on above subject, I am desired to say that should the necessary capital for the construction of the line be obtained, they would be prepared to recommend for the favourable consideration of their shareholders an arrangement for the working of the proposed line to Dunmore.

I am, Sir,

Yours faithfully,

(Signed) W. G. D. GOFF,

Director.

A direct line to Waterford would be more desirable from every point of view—better for the fishing, as it could be sent without changing, direct to the trains for Dublin, Cork, Limerick, London, etc.—better for the passenger traffic, and therefore for the prosperity of the line. A direct route, eleven miles, would, of course, be more expensive—about £90,000—while a connection with the Tramore and Waterford line, about seven miles, would cost about £60,000. The Great Western Railway Company have running powers along the Quay of Waterford.

Besides the traffic mentioned, a good deal of traffic will be attracted by the line—if it be a branch line from Ballymacaw, a good fishing village, and from the good agricultural district through which the line would pass. If it be a direct line to Waterford, it will tap the important fishing town of Passage East, 900 population, also the fine agricultural district towards Waterford City, including the Gaultier Creamery (Co-operative Society), which would have its goods to and from Waterford by this line. The traders of Dunmore East should also be taken into account.

The development of everything, especially fishing, even from Co. Wexford, on the opposite side of the Suir, 20 miles from Waterford City, which is certain to follow the opening by railway of this large and important district of East Waterford, will, I have no doubt, realise the highest anticipations of the promoters of the Dunmore East Railway Project.

I remain,

Your obedient servant

(Signed) ISAAC T. SHIPSEY,

Co. Councillor and District Councillor.

Geo. E. Shanahan, Esq., Secretary,
Viceregal Commission on Irish Railways,
Dublin.

APPENDIX No. 31.

RESOLUTIONS from Public Bodies :—

I.

LETTER from the Secretary of the Irish Trades Union Congress, forwarding Resolution adopted by the Irish Trades Union Congress in Belfast, June, 1908.

Irish Trades Union Congress,
Parliamentary Committee,
Dublin, *June 15th*, 1908.

G. E. Shanahan, Esq.,
Secretary,
Viceregal Commission on Irish Railways.

SIR,—I am instructed to forward you annexed copy of Resolution unanimously adopted at the Fifteenth Annual Irish Trades Union Congress held in Belfast on the 8th to 10th instant, and to request that you will be good enough to bring it before the Viceregal Commission.

I am, Sir,
Your obedient servant,
(Signed), E. L. RICHARDSON,
Secretary.

(*Copy of Resolution.*)

NATIONALISATION OF IRISH RAILWAYS, &c.

"That this Congress desires to reiterate its emphatic opinion that Irish industry is most seriously handicapped by the exorbitant railway rates still charged for the transit of goods, which can only be effectively dealt with by the nationalisation of the Irish canals, inland waterways and railways, a measure which should be immediately undertaken by the Government, as recommended by evidence at the Viceregal Railway Commission. That this Congress reaffirms previous resolutions in favour of the nationalisation of mines."
